CITY OF OREGON CITY
PLANNING COMMISSION
AGENDA

Virtual Meeting
Monday, July 12, 2021 at 7:00 PM

This meeting will be held online via Zoom; please contact planning@orcity.org for the meeting link.

CALL TO ORDER

PUBLIC COMMENT

Citizens are allowed up to 3 minutes to present information relevant to the Planning Commission but not listed as an item on the agenda. Prior to speaking, citizens shall complete a comment form and deliver it to the Chair/City Staff. The Commission does not generally engage in dialog with those making comments but may refer the issue to the City Staff. Complaints shall first be addressed at the department level prior to addressing the Commission.

PUBLIC HEARING

1. GLUA-21-00019/CU-21-00002: The Father's Heart Street Ministry Conditional Use Permit for Warming Shelter

2. The North End Master Plan for the Former Rossman Landfill: GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

COMMUNICATIONS

ADJOURNMENT

PUBLIC COMMENT GUIDELINES

Complete a Comment Card prior to the meeting and submit it to the City Recorder. When the Mayor/Chair calls your name, proceed to the speaker table, and state your name and city of residence into the microphone. Each speaker is given three (3) minutes to speak. To assist in tracking your speaking time, refer to the timer on the table.

As a general practice, the City Commission does not engage in discussion with those making comments.

Electronic presentations are permitted but shall be delivered to the City Recorder 48 hours in advance of the meeting.

ADA NOTICE

The location is ADA accessible. Hearing devices may be requested from the City Recorder prior to the meeting. Individuals requiring other assistance must make their request known 48 hours preceding the meeting by contacting the City Recorder's Office at 503-657-0891.

Agenda Posted at City Hall, Pioneer Community Center, Library, City Website.

Video Streaming & Broadcasts: The meeting is streamed live on the Oregon City's website at www.orcity.org and available on demand following the meeting. The meeting can be viewed on Willamette Falls Television channel 28 for Oregon City area residents as a rebroadcast. Please contact WFMC at 503-650-0275 for a programming schedule.

CITY OF OREGON CITY

Staff Report

625 Center Street
Oregon City, OR 97045
503-657-0891

To: Planning Commission **Agenda Date:** 7/12/2021

From: Assistant Planner Diliana Vassileva

SUBJECT:

GLUA-21-00019/CU-21-00002: The Father's Heart Street Ministry Conditional Use Permit for Warming Shelter

STAFF RECOMMENDATION:

Staff recommends approval of Planning Files GLUA-21-00019/CU-21-00002 with conditions.

EXECUTIVE SUMMARY:

The applicant has requested approval of a conditional Use Permit which would allow The Father's Heart Street Ministry to operate as an overnight warming shelter between the hours of 7 AM and 7 PM on nights when the temperature falls below 33° Fahrenheit including wind chill factor as measured by the National Oceanic and Atmospheric Administration. The existing day use shelter is not part of this conditional use permit request.

BACKGROUND:

The subject site is located at the corner of 12th Street and Washington Street. It is approximately half an acre in size and is zoned Mixed-Use Corridor (MUC-1). The property is developed with The Father's Heart Street Ministry, a day shelter serving no- and low-income populations since 2012. The day shelter use typically requires a conditional use permit within this zone, however, it is a legal non-conforming use in accordance with a similar use determination issued by the Oregon City Planning Division in 2016.

Though the day use shelter is legally non-conforming and grandfathered in, each winter, the applicant requests an emergency Resolution from the City Commission to operate as a nighttime warming shelter on nights that the temperature falls below 33 degrees Fahrenheit (including wind chill). For the past four winters, the Father's Heart has received permission from the City Commission to operate as a nighttime warming shelter via emergency Resolution. Obtaining a conditional use permit would allow the

applicant to operate as an overnight warming shelter between the hours of 7 PM and 7 AM on nights when the temperature falls below 33° Fahrenheit including wind chill factor as measured by the National Oceanic and Atmospheric Administration without having to request an emergency Resolution from the City Commission each year.

Staff finds that applicable conditional use permit criteria have been met or can be met through the Conditions of Approval and recommends that the Planning Commission recommend approval of Planning Files GLUA-21-00019/CU-21-00002 with conditions to the City Commission.

OPTIONS:

1. Recommendation of Approval with Conditions of GLUA 21-000019/CU-21-00002 to the City Commission
2. Denial of GLUA 21-00019/CU-21-00002

TYPE IV STAFF RECOMMENDATION
July 12, 2021

FILE NUMBER: GLUA-21-00019 (General Land Use Application)/CU-21-00002 (Conditional Use Permit)

Submitted: April 19, 2021
Complete: May 18, 2021
120 Day Deadline: September 15, 2021
PC Hearing: July 12, 2021
CC Hearing: TBD

APPLICANT: Marty Gant
The Father's Heart Street Ministry
603 12th Street
Oregon City, OR 97045

OWNER: PDA Properties
Gary Wheeler
34856 E Columbia Avenue
Scappoose, OR 97056

REQUEST: The applicant is requesting approval of a Conditional Use Permit for a warming shelter at The Father's Heart Street Ministry.

LOCATION: 603 12th Street, Oregon City, OR 97045
Clackamas County Map 2-2E-31AA, Tax Lot 2200 and 2300

REVIEWER: Diliana Vassileva, AICP, Assistant Planner

RECOMMENDATION: Approval with Conditions.

PROCESS: Type IV decisions include only quasi-judicial plan amendments and zone changes. These applications involve the greatest amount of discretion and evaluation of subjective approval standards and shall be heard by the city commission for final action. The process for these land use decisions is controlled by ORS 197.763. Notice of the application and planning commission hearing is published and mailed to the applicant, recognized neighborhood association(s) and property owners within three hundred feet. Notice shall be issued at least twenty days pre-hearing, and the staff report shall be available at least seven days pre-hearing. At the evidentiary hearing held before the planning commission, all issues are addressed. If the planning commission denies the application, any party with standing (i.e., anyone who appeared before the planning commission either in person or in writing within the comment period) may appeal the planning commission denial to the city commission. If the planning commission denies the application and no appeal has been received within fourteen days of the issuance of the final decision, then the action of the planning commission becomes the final decision of the city. If the planning commission votes to approve the application, that decision is forwarded as a recommendation to the city commission for final consideration. In either case, any review by the city commission is on the record and only issues raised before the planning commission may be raised before the city commission. The city commission decision is the city's final decision and is subject to review by LUBA within twenty-one days of when it becomes final.

Conditions of Approval

Planning File GLUA-21-00019/CU-21-00002

(P) = Verify that condition of approval has been met with the Planning Division.
(DS) = Verify that condition of approval has been met with the Development Services Division.
(B) = Verify that condition of approval has been met with the Building Division.
(F) = Verify that condition of approval has been met with Clackamas Fire Department.

The following conditions of approval shall be met to the satisfaction of the City prior to the first night of operation as a temporary warming shelter, unless otherwise noted:

1. The warming shelter may operate only between the hours of 7 PM and 7 AM on nights when the outside temperature is predicted to be 33° Fahrenheit, including windchill factor, as measured by the National Oceanic and Atmospheric Administration. (P)

2. Prior to the first night of operation as a warming shelter, the applicant shall obtain all required permits, inspections, and approvals from the Oregon City Building Division and Clackamas Fire. (B/F)

3. The applicant shall finalize the community engagement plan in compliance with all items required by OCMC 17.56.040.H.2. A copy of the finalized community engagement plan shall be provided to the City and to the McLoughlin Neighborhood Association. (P)

4. The applicant shall hold a community meeting to discuss the community engagement plan and provide an opportunity for communication between neighborhood residents and the operators of the shelter. Mailed notice of this meeting shall be provided to property owners within 300 feet, the neighborhood association, and the City. The meeting shall be open to the public and must be held a minimum of once a year thereafter. (P)

5. The applicant shall keep a log of the nights that the temporary warming shelter is operating, which includes the dates of operation, forecasted temperature including wind chill, and number of guests served each night of operation. The log for the prior year of operation shall be provided to the City annually by May 1 of each year and shall be provided to the neighborhood at the required annual community meeting. (P)

I. BACKGROUND:

1. Existing Conditions

The subject site is located at the corner of 12th Street and Washington Street. It is approximately half an acre in size and is zoned Mixed-Use Corridor (MUC-1). The property is developed with The Father's Heart Street Ministry, a day shelter serving no- and low-income populations since 2012. The day shelter use typically requires a conditional use permit within this zone, however, it is a legal non-conforming use in accordance with a similar use determination issued by the Oregon City Planning Division in 2016. Though the day use shelter is legally non-conforming and grandfathered in, each winter, the applicant requests an emergency Resolution from the City Commission to operate as a nighttime warming shelter on nights that the temperature falls below 33 degrees (including wind chill). For the past four winters, the Father's Heart has received permission from the City Commission to operate as a nighttime warming shelter via emergency Resolution. Most recently, in the winter of 2020/2021, The Father's Heart accommodated 49 overnight guests for approximately 43 nights where the temperature fell below 33° Fahrenheit, including windchill factor (total of 2,140 guests served).

Figure 1. Vicinity Map

Figure 2: Existing Conditions – Aerial Image

2. **Project Description**
The applicant has requested approval of a Conditional Use Permit which would allow The Father's Heart to operate as an overnight warming shelter between the hours of 7 PM and 7 AM on nights when the temperature falls below 33° Fahrenheit including wind chill factor as measured by the National Oceanic and Atmospheric Administration.

3. **Permits and Approvals**
The applicant is responsible for obtaining approval and permits from each applicable governmental agency and department at Oregon City including but not limited to the Engineering and Building Divisions.

4. **Public Comment**
Public comments submitted include (Exhibit 3):

- A comment from Clackamas River Water identifying the proposal does not conflict with their interests.

Staff Response: None required.

- A comment from the Oregon City School District identifying the proposal does not conflict with their interests.

Staff Response: None required.

- A comment from the Oregon City Building Division identifying the proposal does not conflict with their interests.

Staff Response: None required.

- A comment received from an unnamed neighborhood resident identified concerns about the location of the existing shelter, and concerns related to personal and property safety.

Staff Response: The existing day use shelter is a legal non-conforming use approved via a 2016 similar use determination and is not part of this conditional use permit. The nighttime warming shelter use will provide houseless community members with an indoor space during nights with extreme weather conditions. Staff has proposed a condition of approval that the applicant is required to hold an annual meeting with the neighboring community and have a community engagement plan in place ensuring that the proposed emergency warming shelter use will not negatively impact neighborhood residents. The community engagement plan provides a mechanism for addressing issues and concerns raised by the community to ensure neighborhood livability is maintained.

Additionally, the Fair Housing Act prohibits discrimination restricting access to housing based on personal circumstances particular race, color, religion, sex, or national origin. The application is for a particular use of land that requires understanding the facts, with respect to the nature and intensity of the proposed use. The application must be analyzed against the applicable approval criteria. The characteristics of or circumstances affecting residents who may choose to reside in the proposed shelter are not relevant to the approval criteria. The individuals who may seek residence are free to seek housing anywhere within the City of Oregon City.

None of the comments provided indicate that an approval criterion has not been met or cannot be met through the Conditions of Approval attached to this Staff Report.

II. ANALYSIS AND FINDINGS:

Municipal Code Standards and Requirements: The following sections of the Oregon City Municipal Code are applicable to this land use approval:

CHAPTER 17.29 MUC MIXED USE CORRIDOR DISTRIC
CHAPTER 17.50 ADMINISTRATION AND PROCEDURES
CHAPTER 17.56 CONDITIONAL USES
CHAPTER 17.58 LAWFUL NONCONFORMING USES, LOTS, STRUCTURES, AND SITES
CHAPTER 17.62 SITE PLAN AND DESIGN REVIEW

CHAPTER 17.29 MUC MIXED USE CORRIDOR DISTRICT

17.29.020 - Permitted uses—MUC-1 and MUC-2.

A. Banquet, conference facilities and meeting rooms;
B. Bed and breakfast/boarding houses, hotels, motels, and other lodging facilities;
C. Child care centers and/or nursery schools;
D. Indoor entertainment centers and arcades;
E. Health and fitness clubs;
F. Medical and dental clinics, outpatient; infirmary services;
G. Museums, libraries and cultural facilities;
H. Offices, including finance, insurance, real estate and government;
I. Outdoor markets, such as produce stands, craft markets and farmers markets that are operated on the weekends and after six p.m. during the weekday;

J. Postal services;
K. Parks, playgrounds, playfields and community or neighborhood centers;
L. Repair shops, for radio and television, office equipment, bicycles, electronic equipment, shoes and small appliances and equipment;
M. Multifamily residential, 3-4 plex residential;
N. One or two dwelling units in conjunction with a nonresidential use, provided that the residential use occupies no more than 50% of the total square footage of the development;
O. Restaurants, eating and drinking establishments without a drive-through;
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning;
Q. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores, marijuana, and similar, provided the maximum footprint for a stand-alone building with a single store or multiple buildings with the same business does not exceed sixty thousand square feet;
R. Seasonal sales;
S. Residential care facilities, assisted living facilities; nursing homes and group homes for over fifteen patients licensed by the state;
T. Studios and galleries, including dance, art, photography, music and other arts;
U. Utilities: Basic and linear facilities, such as water, sewer, power, telephone, cable, electrical and natural gas lines, not including major facilities such as sewage and water treatment plants, pump stations, water tanks, telephone exchanges and cell towers;
V. Veterinary clinics or pet hospitals, pet day care;
W. Home occupations;
X. Research and development activities;
Y. Temporary real estate offices in model dwellings located on and limited to sales of real estate on a single piece of platted property upon which new residential buildings are being constructed;
Z. Transportation facilities;
AA. Live/work dwellings;
BB. After-hours public parking.
Finding: Not Applicable. The applicant has not proposed any permitted uses.

17.29.030 - Conditional uses—MUC-1 and MUC-2 zones.
The following uses are permitted in this district when authorized and in accordance with the process and standards contained in OCMC 17.56:
A. Drive-through facilities;
B. Emergency service facilities (police and fire), excluding correctional facilities;
C. Gas stations;
D. Outdoor markets that do not meet the criteria of OCMC 17.29.020.I;
E. Public utilities and services including sub-stations (such as buildings, plants and other structures);
F. Public and/or private educational or training facilities;
G. Religious institutions;
H. Retail trade, including gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores and any other use permitted in the neighborhood, historic or limited commercial districts that have a footprint for a stand-alone building with a single store in excess of sixty thousand square feet in the MUC-1 or MUC-2 zone;
I. Hospitals;
J. Parking not in conjunction with a primary use on private property, excluding after-hours public parking;
K. Passenger terminals, excluding bus stops;

L. Shelters.

Finding: Applicable. Shelters are defined in OCMC 17.04.1117:

> *"Shelter" means a congregate facility designed to provide overnight sleeping or daytime accommodation to shelter families and individuals offered on a short-term basis. Shelters may offer meals, lodging and associated services on-site, aimed at helping people move towards self-sufficiency. Shelters may include day shelters, transitional shelters, temporary warming shelters and other temporary or permanent spaces made available for sheltering individuals or families. Shelters are not considered bed and breakfast inns/boardinghouses, hotels or motels.*

Additionally, warming shelters are defined in OCMC 17.04.1123:

> *"Temporary warming shelter" means a shelter operating between the hours of seven p.m. and seven a.m. when the outside temperature is predicted to be thirty-three degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration.*

The subject site operates as a day use shelter which is an existing legal non-conforming use which was approved via a similar use determination in 2016 and is not part of this conditional use permit. The applicant has applied for a conditional use permit to allow a warming shelter operating between the hours of 7 PM and 7 AM on nights when the outside temperature is predicted to be 33° Fahrenheit, including windchill factor as measured by the National Oceanic and Atmospheric Administration.

17.29.040 - Prohibited uses in the MUC-1 and MUC-2 zones.
The following uses are prohibited in the MUC district:
A. Distributing, wholesaling and warehousing;
B. Outdoor storage;
C. Outdoor sales that are not ancillary to a permitted use on the same or abutting property under the same ownership;
D. Correctional facilities;
E. Heavy equipment service, repair, sales, storage or rentals (including but not limited to construction equipment and machinery and farming equipment);
F. Kennels;
G. Motor vehicle and recreational vehicle sales and incidental service;
H. Motor vehicle and recreational vehicle repair/service;
I. Self-service storage facilities;
J. Marijuana production, processing, wholesaling, research, testing, and laboratories;
K. Mobile Food Units, except with a special event permit.

Finding: Complies as Proposed. The applicant has not proposed any prohibited uses.

17.29.050 - Dimensional standards—MUC-1.
A. Minimum lot area: None.
B. Maximum building height: Forty feet or three stories, whichever is less.
C. Minimum building height: Twenty-five feet or two stories except for accessory structures or buildings under one thousand square feet.
D. Minimum required interior and rear yard setbacks if abutting a residential zone: Twenty feet, plus one foot additional yard setback for every one foot of building height over thirty-five feet.
E. Maximum allowed setbacks.

1. Front yard: Five feet.
3. Corner side setback abutting street: Thirty feet.
F. Maximum lot coverage of the building and parking lot: Eighty percent.
G. Minimum required landscaping (including landscaping within a parking lot): Twenty percent.
H. Residential minimum net density of 17.4 units per acre, except that no minimum net density shall apply to residential uses proposed above nonresidential uses in a mixed-use configuration or to live/work dwellings.
Finding: Not Applicable. No changes to the existing building or lot are being proposed.

17.29.060 - Dimensional standards—MUC-2.
Finding: Not Applicable. The subject site is zoned MUC-1 and is not subject to the MUC-2 dimensional standards.

CHAPTER 17.50 – ADMINISTRATION AND PROCEDURES

17.50.050 – Pre-application conference.
A Pre-application Conference. Prior to a Type II – IV or Legislative application, excluding Historic Review, being deemed complete, the applicant shall schedule and attend a pre-application conference with City staff to discuss the proposal, unless waived by the Community Development Director. The purpose of the pre-application conference is to provide an opportunity for staff to provide the applicant with information on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal.
1. To schedule a pre-application conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee.
2. At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans.
3. The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the pre-application conference.
B. A pre-application conference shall be valid for a period of six months from the date it is held. If no application is filed within six months of the conference or meeting, the applicant shall schedule and attend another conference before the City will accept a permit application. The Community Development Director may waive the pre-application requirement if, in the Director's opinion, the development has not changed significantly and the applicable municipal code or standards have not been significantly amended. In no case shall a pre-application conference be valid for more than one year.
Finding: Complies as Proposed. The applicant held a pre-application conference on December 9, 2020. The land use application was submitted within 6 months of the pre-application meeting on April 19, 2021.

17.50.055 - Neighborhood association meeting.
Neighborhood Association Meeting. The purpose of the meeting with the recognized neighborhood association is to inform the affected neighborhood association about the proposed development and to receive the preliminary responses and suggestions from the neighborhood association and the member residents.
A. Applicants applying for annexations, zone change, comprehensive plan amendments, conditional use, Planning Commission variances, subdivision, or site plan and design review (excluding minor site plan and design review), general development master plans or detailed development plans applications shall schedule and attend a meeting with the City-recognized neighborhood association in whose territory the

application is proposed no earlier than one year prior to the date of application. Although not required for other projects than those identified above, a meeting with the neighborhood association is highly recommended.

B. The applicant shall request via email or regular mail a request to meet with the neighborhood association chair where the proposed development is located. The notice shall describe the proposed project. A copy of this notice shall also be provided to the chair of the Citizen Involvement Committee.

C. A meeting shall be scheduled within thirty days of the date that the notice is sent. A meeting may be scheduled later than thirty days if by mutual agreement of the applicant and the neighborhood association. If the neighborhood association does not want to, or cannot meet within thirty days, the applicant shall host a meeting inviting the neighborhood association, Citizen Involvement Committee, and all property owners within three hundred feet to attend. This meeting shall not begin before six p.m. on a weekday or may be held on a weekend and shall occur within the neighborhood association boundaries or at a City facility.

D. If the neighborhood association is not currently recognized by the City, is inactive, or does not exist, the applicant shall request a meeting with the Citizen Involvement Committee.

E. To show compliance with this section, the applicant shall submit a copy of the email or mail notice to the neighborhood association and CIC chair, a sign-in sheet of meeting attendees, and a summary of issues discussed at the meeting. If the applicant held a separately noticed meeting, the applicant shall submit a copy of the meeting flyer, postcard or other correspondence used, and a summary of issues discussed at the meeting and submittal of these materials shall be required for a complete application.

Finding: Complies as Proposed. The applicant attended the McLoughlin Neighborhood Association meeting on March 18, 2021.

17.50.090 - Public notices.

All public notices issued by the city announcing applications or public hearings of quasi-judicial or legislative actions, shall comply with the requirements of this section.

A. Notice of Type II Applications. Once the community development director has deemed a Type II application complete, the city shall prepare and send notice of the application, by first class mail, to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The applicant shall provide or the city shall prepare for a fee an accurate and complete set of mailing labels for these property owners and for posting the subject property with the city-prepared notice in accordance with OCMC 17.50.100. The city's Type II notice shall include the following information:

1. Street address or other easily understood location of the subject property and city-assigned planning file number;

2. A description of the applicant's proposal, along with citations of the approval criteria that the city will use to evaluate the proposal;

3. A statement that any interested party may submit to the city written comments on the application during a fourteen-day comment period prior to the city's deciding the application, along with instructions on where to send the comments and the deadline of the fourteen-day comment period;

4. A statement that any issue which is intended to provide a basis for an appeal shall be raised in writing during the fourteen-day comment period with sufficient specificity to enable the city to respond to the issue;

5. A statement that the application and all supporting materials may be inspected, and copied at cost, at city hall during normal business hours;

6. The name and telephone number of the planning staff person assigned to the application or is otherwise available to answer questions about the application;

7. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal.
Finding: Not Applicable. The application is subject to the Type III notice posting requirements.

B. Notice of Public Hearing on a Type III or IV Quasi-Judicial Application. Notice for all public hearings concerning a quasi-judicial application shall conform to the requirements of this subsection. At least twenty days prior to the hearing, the city shall prepare and send, by first class mail, notice of the hearing to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The city shall also publish the notice on the city website within the city at least twenty days prior to the hearing. Pursuant to OCMC 17.50.080.H, the applicant is responsible for providing an accurate and complete set of mailing labels for these property owners and for posting the subject property with the city-prepared notice in accordance with OCMC 17.50.100. Notice of the application hearing shall include the following information:
1.The time, date and location of the public hearing;
2. Street address or other easily understood location of the subject property and city-assigned planning file number;
3. A description of the applicant's proposal, along with a list of citations of the approval criteria that the city will use to evaluate the proposal;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing and that a staff report will be prepared and made available to the public at least seven days prior to the hearing;
5. A statement that any issue which is intended to provide a basis for an appeal to the city commission shall be raised before the close of the public record. Issues must be raised and accompanied by statements or evidence sufficient to afford the city and all parties to respond to the issue;
6. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal;
7. A statement that the application and all supporting materials and evidence submitted in support of the application may be inspected at no charge and that copies may be obtained at reasonable cost at the planning division offices during normal business hours; and
8. The name and telephone number of the planning staff person responsible for the application or is otherwise available to answer questions about the application.
C. Notice of Public Hearing on a Legislative Proposal. At least twenty days prior to a public hearing at which a legislative proposal to amend or adopt the city's land use regulations or comprehensive plan is to be considered, the community development director shall issue a public notice that conforms to the requirements of this subsection. Notice shall be sent to affected governmental entities, special districts, providers of urban services, including Tri-Met, Oregon Department of Transportation and Metro, any affected recognized neighborhood associations and any party who has requested in writing such notice. Notice shall also be published on the city website. Notice issued under this subsection shall include the following information:
1. The time, date and location of the public hearing;
2. The city-assigned planning file number and title of the proposal;
3. A description of the proposal in sufficient detail for people to determine the nature of the change being proposed;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing; and

5. The name and telephone number of the planning staff person responsible for the proposal and who interested people may contact for further information.
Finding: Complies as Proposed. Public notice was mailed to residents and property owners within 300 feet of the subject site, posted on the City's website, emailed to affected departments and agencies, and the subject site was posted with land use notice signs in compliance with this section.

17.50.100 - Notice posting requirements.
Where this chapter requires notice of a pending or proposed permit application or hearing to be posted on the subject property, the requirements of this section shall apply.
A. City Guidance and the Applicant's Responsibility. The City shall supply all of the notices which the applicant is required to post on the subject property and shall specify the dates the notices are to be posted and the earliest date on which they may be removed. The City shall also provide a statement to be signed and returned by the applicant certifying that the notice(s) were posted at the correct time and that if there is any delay in the City's land use process caused by the applicant's failure to correctly post the subject property for the required period of time and in the correct location, the applicant agrees to extend the applicable decision-making time limit in a timely manner.
B. Number and Location. The applicant shall place the notices on each frontage of the subject property. If the property's frontage exceeds six hundred feet, the applicant shall post one copy of the notice for each six hundred feet or fraction thereof. Notices do not have to be posted adjacent to alleys or unconstructed right-of-way. Notices shall be posted within ten feet of the street and shall be visible to pedestrians and motorists. Notices shall not be posted within the public right-of-way or on trees. The applicant shall remove all signs within ten days following the event announced in the notice.
Finding: Complies as Proposed. Notice was posted onsite in accordance with these standards.

CHAPTER 17.56 CONDITIONAL USES
17.56.010 - Permit—Authorization—Standards—Conditions.
A conditional use listed in this title may be permitted, enlarged or altered upon authorization of the Planning Commission in accordance with the standards and procedures of this title. A conditional use permit listed in this section may be permitted, enlarged or altered upon authorization of the Planning Commission or City Commission in accordance with the standards and procedures of this section. Any expansion to, alteration of, or accessory use to a conditional use shall require Planning Commission or City Commission approval of a modification to the original conditional use permit unless authorized in this chapter.
Finding: Applicable. The applicant has requested a conditional use permit for a nighttime warming shelter.

A. Conditional uses, because of their public convenience and necessity and their effect upon the neighborhood shall be permitted only upon the approval of the Planning Commission or City Commission after due notice and public hearing, according to procedure as provided in OCMC 17.50. The applicant shall provide evidence substantiating that all the requirements of this title relative to the proposed use are satisfied, and demonstrate that the proposed use also satisfies the following criteria:
1. The use is listed as a conditional use in the underlying district;
Finding: Complies as Proposed. The subject site is zoned MUC-1 where shelters, including warming shelters, are listed as a conditional use.

2. The characteristics of the site are suitable for the proposed use considering size, shape, location, topography, existence of improvements and natural features;

Finding: Complies as Proposed. The site includes a day shelter which is a legal non-conforming use in accordance with a 2016 similar use determination. Given that the property is already developed with a day shelter use, the emergency warming shelter use is suitable and appropriate. The size, shape, location, topography, existence of improvements and natural features, do not preclude a warming shelter use and the warming shelter use is appropriate given the context of the site and existing use.

3. Development shall demonstrate compliance with OCMC 16.12;
Finding: Not Applicable. Chapter 16.12 is not applicable to the proposal because all site frontages are developed, there is no addition of square footage proposed, and the existing development is adequately served by existing infrastructure.

4. The proposed use will not alter the character of the surrounding area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district;
Finding: Complies as Proposed. The surrounding area is primarily residential with some commercial and institutional uses. The subject site includes a day shelter which is a legal non-conforming use in accordance with a 2016 similar use determination. The proposed night warming shelter is similar to the day shelter use and will not have additional significant impacts to the character of the surrounding area. The proposed nighttime warming shelter will provide houseless community members with a safe place to sleep during extreme weather conditions. The City Commission has approved the warming shelter use under an emergency ordinance for the past four winters, therefore, site conditions and characteristics will remain the same as they have been the past four years, as the proposed conditional use permit would continue the warming shelter use previously approved by the City Commission. Furthermore, no physical modifications to the building or site which would alter neighborhood characteristics are being proposed. The additional warming shelter use will not alter the character of the site or neighborhood, nor preclude surrounding properties from developing and establishing the primary uses allowed in the underlying zone.

5. The proposal satisfies the goals and policies of the city comprehensive plan which apply to the proposed use.
Finding: Complies as Proposed. An analysis of applicable comprehensive plan goals and policies is provided below. The conditional use permit is consistent with the Oregon City Comprehensive Plan.

Section 1: Citizen Involvement
Goal 1.1 Citizen Involvement Program
Implement a Citizen Involvement Program that will provide an active and systematic process for citizen participation in all phases of the land-use decision making process to enable citizens to consider and act upon a broad range of issues affecting the livability, community sustainability, and quality of neighborhoods and the community as a whole.

Policy 1.1.1
Utilize neighborhood associations as the vehicle for neighborhood-based input to meet the requirements of the Land Conservation and Development Commission (LCDC) Statewide Planning Goal 1, Citizen Involvement. The Citizen Involvement Committee (CIC) shall serve as the officially recognized citizen committee needed to meet LCDC Statewide Planning Goal 1.

Goal 1.2 Community and Comprehensive Planning

Ensure that citizens, neighborhood groups, and affected property owners are involved in all phases of the comprehensive planning program.
Policy 1.2.1
Encourage citizens to participate in appropriate government functions and land-use planning.
Policy 1.2.1
Encourage development and refinement of CIC and neighborhood association bylaws that will govern the groups' formation and operations.

Goal 1.3 Community Education
Provide education for individuals, groups, and communities to ensure effective participation in decision-making processes that affect the livability of neighborhoods.
Policy 1.3.1
Encourage training of volunteers involved with the CIC and neighborhood associations.

Goal 1.4 Community Involvement
Provide complete information for individuals, groups, and communities to participate in public policy planning and implementation of policies.

Policy 1.4.1
Notify citizens about community involvement opportunities when they occur.

Goal 1.5 Government/Community Relations
Provide a framework for facilitating open, two-way communication between City representatives and individuals, groups, and communities.
Policy 1.5.1
Support the CIC in initiating and planning events in cooperation with the City on issues of mutual interest. Topics may include such things as working with local schools regarding citizen involvement and stakeholders involved with Comprehensive Plan development and Urban Growth Boundary expansion.

Goal 1.6 CIC Continuous Development
Support the CIC's team spirit and dedication to community involvement to ensure continuous improvement.
Policy 1.6.1
Assist the CIC in finding funding for the Community Involvement Program's current and future development.
Policy 1.6.2
Support an Annual Leadership Development Conference for CIC members, to include updating the CIC strategic plan, if funding is available.

Goal 1.7 Neighborhood Plans
Adopt neighborhood plans that encompass a broad range of concerns for each neighborhood over a five- to ten-year period as refinements of the Oregon City Comprehensive Plan.

Policy 1.7.1
Ensure that neighborhood plans are consistent with the Comprehensive Plan.
Policy 1.7.2

Provide opportunities for property owners, residents, and businesses within the neighborhood to be involved in all phases of the preparation of a neighborhood plan.
Policy 1.7.3
Use the neighborhood plans to make recommendations to city boards, commissions, and agencies regarding public improvements and land-use decisions.
Goal 1.8 Advisory Committees
Establish and support citizen advisory committees and commissions.
Policy 1.8.1
Identify the areas of City government in which the counsel of a formal citizen advisory committee or commission is warranted if funding is available to provide appropriate staff support.
Policy 1.8.2
Solicit and support citizen participation on citizen advisory committees and commissions. Identify desirable expertise from the Portland metro area as needed to best serve the interests of Oregon City.
Finding: Complies as Proposed. Chapter 17.50 of the Oregon City Municipal Code includes provisions to ensure that citizens, neighborhood groups, and affected property owners have ample opportunity for participation in this application. The applicant met with the McLoughlin Neighborhood Association prior to submitting this application and once the application was deemed complete, the City noticed the application to property owners within 300 feet of the subject site, neighborhood associations, and posted the application on the City's website. The applicant additionally posted signs on the subject site. All interested persons have the opportunity to comment in writing or in person through the public hearing process. This policy is met.

Section 2: Land Use
Goal 2.1 Efficient Use of Land
Ensure that property planned for residential, commercial, office, and industrial uses is used efficiently and that land is developed following principles of sustainable development.

Policy 2.1.1
Create incentives for new development to use land more efficiently, such as by having minimum floor area ratios and maximums for parking and setbacks.
Policy 2.1.2
Encourage the vertical and horizontal mixing of different land-use types in selected areas of the city where compatible uses can be designed to reduce the overall need for parking, create vibrant urban areas, reduce reliance on private automobiles, create more business opportunities and achieve better places to live.
Policy 2.1.3
Encourage sub-area master planning for larger developments or parcels, including re-development, where it may be feasible to develop more mixed uses, or campus-style industrial parks, with shared parking and landscaping areas. Allow developments to vary from prescriptive standards if planned and approved under this provision.
Policy 2.1.4
Use redevelopment programs such as urban renewal to help redevelop underutilized commercial and industrial land.
Finding: Complies as Proposed. The proposal will provide for efficient use of land by allowing an existing development to be utilized as both a day shelter and an emergency night-time warming shelter, maximizing efficiency of an existing development to provide vital services.

Goal 2.4 Neighborhood Livability

Provide a sense of place and identity for residents and visitors by protecting and maintaining neighborhoods as the basic unit of community life in Oregon City while implementing the goals and policies of the other sections of the Comprehensive Plan.

Policy 2.4.1
Develop local neighborhood plans to strengthen and protect residential neighborhoods and historic areas from infill development; such as development along linear commercial corridors.
Policy 2.4.2
Strive to establish facilities and land uses in every neighborhood that help give vibrancy, a sense of place, and a feeling of uniqueness; such as activity centers and points of interest.
Policy 2.4.3
Promote connectivity between neighborhoods and neighborhood commercial centers through a variety of transportation modes.
Policy 2.4.4
Where environmental constraints reduce the amount of buildable land, and/or where adjacent land differs in uses or density, implement Comprehensive Plan and zoning designations that encourage compatible transitional uses.
Policy 2.4.5
Ensure a process is developed to prevent barriers in the development of neighborhood schools, senior and childcare facilities, parks, and other uses that serve the needs of the immediate area and the residents of Oregon City.
Finding: Complies as Proposed. The existing day shelter is located within a largely residential neighborhood. The proposed night-time warming shelter will likely not have additional impacts to neighborhood livability beyond any existing impacts associated with the day shelter. The proposed nighttime warming shelter will provide houseless community members with a safe place to sleep and keep warm during extreme weather conditions. The City Commission has approved the warming shelter use under an emergency ordinance for the past four winters, therefore, site conditions and neighborhood livability will remain the same as they have been the past four years, as the proposed conditional use permit would continue the warming shelter use previously approved by the City Commission. Nonetheless, as conditioned within this report, the applicant is required to hold an annual meeting with the neighboring community and have a community engagement plan in place ensuring that the proposed emergency warming shelter use will not negatively impact neighborhood livability. Additionally, the community engagement plan provides a mechanism for addressing issues and concerns raised by the community to ensure neighborhood livability is maintained.

Goal 5.3 Historic Resources
Encourage the preservation and rehabilitation of homes and other buildings of historic or architectural significance in Oregon City.

Policy 5.3.1
Encourage architectural design of new structures in local Historic Districts, and the central Downtown area to be compatible with the historic character of the surrounding area.
Policy 5.3.2
Evaluate the establishment of Historic and Conservation Districts to preserve neighborhoods with significant examples of historic architecture in residential and business structures.
Policy 5.3.3
Promote the designation of qualifying properties outside Historic and Conservation Districts as historic.
Policy 5.3.4

Support the preservation of Oregon City's historic resources through public information, advocacy and leadership within the community, and the use of regulatory tools and incentive programs.
Policy 5.3.5
Support efforts to obtain historic designation at the city, state and national levels for public and private historic sites and districts. Natural and cultural landscapes should also be considered.
Policy 5.3.6
Maintain Oregon City's status as a Certified Local Government in the National Historic Preservation Program.
Policy 5.3.7
Encourage property owners to preserve historic structures in a state as close to their original construction as possible while allowing the structure to be used in an economically viable manner.
Policy 5.3.8
Preserve and accentuate historic resources as part of an urban environment that is being reshaped by new development projects.
Finding: Not Applicable. These goals and policies are implemented through Chapter 17.40 of the Oregon City Municipal Code. Though the subject site is within the McLoughlin Conservation District, it is not an individually designated structure. Furthermore, no building or site modifications are being proposed through this Conditional Use Permit application, therefore, Chapter 17.40 is not applicable.

Goal 9.8 Transportation System
Recognize the importance of the land use-transportation link and encourage businesses to locate in areas already served by the type of transportation system they need.

Policy 9.8.1
Through coordination with TriMet and local employers, encourage and promote the use of mass transit to travel between residential areas and employment areas.
Policy 9.8.2
Participate in regional efforts to encourage employers to promote telecommuting and other flexible work arrangements.
Policy 9.8.3
Assess the feasibility of implementing Transportation Management Associations in the city.
Policy 9.8.4
Promote "shared parking" and transportation demand management techniques such as transit vouchers, car or van pooling, and flexible schedules and telecommuting options to reduce peak hour trips.
Policy 9.8.5
Work with the Oregon Department of Transportation to preserve and improve the capacity of Highway 213 and its intersection with I-205.
Policy 9.8.6
Encourage the provision of multi-modal transportation to support major existing employers.
Policy 9.8.7
Assess methods to integrate the pedestrian, bicycle and elevator transportation modes into the mass transit system.

Section 12: Transportation
Goal 12.1 Land Use-Transportation Connection
Ensure that the mutually supportive nature of land use and transportation is recognized in planning for the future of Oregon City.

Policy 12.1.1
Maintain and enhance citywide transportation functionality by emphasizing multi-modal travel options for all types of land uses.
Policy 12.1.2
Continue to develop corridor plans for the major arterials in Oregon City, and provide for appropriate land uses in and adjacent to those corridors to optimize the land use-transportation connection.
Policy 12.1.3
Support mixed uses with higher residential densities in transportation corridors and include a consideration of financial and regulatory incentives to upgrade existing buildings and transportation systems.
Policy 12.1.4
Provide walkable neighborhoods. They are desirable places to live, work, learn and play, and therefore a key component of smart growth.
Policy 12.1.5
Investigate the possibility of a new street connection between South End Road and Highway 99E between Downtown and New Era.
Policy 12.1.6
Investigate the possibility of a new east-west connection from Highway 213 to Willamette Falls Hospital.

Goal 12.2 Local and Regional Transit
Promote regional mass transit (South Corridor bus, Bus Rapid Transit, and light rail) that will serve Oregon City.

Policy 12.2.1
Explore local and regional transit opportunities that will increase non-single occupancy vehicle travel to prolong infrastructure capacity.
Policy 12.2.2
Target local transit where it is expected to be particularly effective, such as frequent, reliable links between Hilltop, Downtown, Willamette Falls Hospital, the Beavercreek educational and employment centers, and the adjacent neighborhoods.
Policy 12.2.3
Work with TriMet to locate park-and-ride facilities at convenient neighborhood nodes to facilitate access to regional transit.
Policy 12.2.4
Consider establishing a local Transportation Management Association (TMA) to serve area businesses. The TMA would fund a local trolley or bus transit service along the major and minor arterials to reduce the need for widening rightsof-way for additional lanes as well as provide convenient and economical mobility to everyone.
Policy 12.2.5
Advocate for a new regional bus rapid transit and rail transit connections to Oregon City.

Goal 12.3 Multi-Modal Travel Options
Develop and maintain a transportation system that provides and encourages a variety of multi-modal travel options to meet the mobility needs of all Oregon City residents.
Policy 12.3.1
Provide an interconnected and accessible street system that minimizes vehiclemiles-traveled and inappropriate neighborhood cut-through traffic.4
Policy 12.3.2

Provide an interconnected and accessible pedestrian system that links residential areas with major pedestrian generators such as employment centers, public facilities, and recreational areas.
Policy 12.3.3
Provide a well-defined and accessible bicycle network that links residential areas, major bicycle generators, employment centers, recreational areas, and the arterial and collector roadway network.
Policy 12.3.4
Ensure the adequacy of pedestrian and bicycle connections to local, county, and regional trails.
Policy 12.3.5
Promote and encourage a public transit system that ensures efficient accessibility, mobility, and interconnectivity between travel modes for all residents of
Oregon City.
Policy 12.3.6
Establish a truck route network that ensures efficient access and mobility to commercial and industrial areas while minimizing adverse residential impacts.
Policy 12.3.7
Promote the connection and expansion of rail and river transportation services to and through Oregon City.
Policy 12.3.8
Ensure that the multi-modal transportation system preserves, protects, and supports the environmental integrity of the Oregon City community.
Policy 12.3.9
Ensure that the city's transportation system is coordinated with regional transportation facility plans and policies of partnering and affected agencies.
Policy 12.3.10
Develop, if possible, dock facilities along the Willamette River to support a range of public and private boat and water transportation opportunities.
Finding: Complies as Proposed. The existing day shelter is located is located less than ¼ mile away from the Oregon City Transit Center connecting patrons of the shelter to essential transit services. Additionally, the subject site is within walking distance to Downtown Oregon City and other services such as convenience stores, churches, and medical offices. Since many of the shelter's clients are often traveling on foot, access to the shelter and to surrounding essential services is of utmost importance, especially on below-freezing nights when the emergency warming shelter would be open.

B. Permits for conditional uses shall stipulate restrictions or conditions which may include, but are not limited to, a definite time limit to meet such conditions, provisions for a front, side or rear yard greater than the minimum dimensional standards of the zoning ordinance, suitable landscaping, off-street parking, and any other reasonable restriction, condition or safeguard that would uphold the spirit and intent of the zoning ordinance, and mitigate adverse effect upon the neighborhood properties by reason of the use, extension, construction or alteration allowed as set forth in the findings of the Planning Commission.
Finding: Complies with Condition. The definition of temporary warming shelter provides for parameters related to temperature and time of operation:

> *"Temporary warming shelter" means a shelter operating between the hours of seven p.m. and seven a.m. when the outside temperature is predicted to be thirty-three degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration.*

The warming shelter may operate only between the hours of 7 PM and 7 AM on nights when the outside temperature is predicted to be 33° Fahrenheit, including windchill factor as measured by the National Oceanic and Atmospheric Administration. Prior to the first night of operation as a warming shelter, the applicant shall obtain all required permits, inspections, and approvals from the Oregon City Building Division and Clackamas Fire. Additionally, the applicant shall keep a log of the nights that the temporary warming shelter is operating, which includes the dates of operation, forecasted temperature including wind chill, and number of guests served each night of operation. The log for the prior year of operation shall be provided to the City annually by May 1 of each year, and provided to the neighborhood at the required annual community meeting. **Staff has determined that it is possible likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Any conditional use shall meet the dimensional standards of the zone in which it is to be located pursuant to subsection B. of this section unless otherwise indicated, as well as the minimum conditions listed below.
Finding: Complies as Proposed. No new buildings, expansion of the existing building, or any other physical site changes are being proposed with this conditional use permit request. The subject site and existing structure is in compliance with dimensional standards of the underlying zone.

D. In the case of a use existing prior to the effective date of the ordinance codified in this title and classified in this title as a conditional use, any change of use expansion of lot area or expansion of structure shall conform with the requirements for conditional use.
Finding: Complies as Proposed. The existing shelter is a legal non-conforming use existing prior to the effective date of this ordinance. The applicant has proposed to expand the use to include an emergency night warming shelter use, which must conform with the requirements for conditional uses. The applicant has submitted a conditional use permit application demonstrating compliance with applicable standards.

E. The Planning Commission may specifically permit, upon approval of a conditional use, further expansion to a specified maximum designated by the Planning Commission without the need to return for additional review.
Finding: Not Applicable. The applicant has not requested further expansion of the current conditional use being requested.

17.56.020 - Permit—Application.
A. A property owner or authorized agent shall initiate a request for a conditional use by filing an application with the city recorder. The applicant shall submit a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development. The application shall be accompanied by the filing fee listed in OCMC 17.50.080 to defray the costs of publication, investigation and processing.
Finding: Complies as Proposed. The applicant has submitted all required application materials, and the application was deemed complete on May 18, 2021.

B. Before the Planning Commission or City Commission may act on a conditional use application, it shall hold a public hearing thereon, following procedure as established in OCMC 17.50.
Finding: Complies as Proposed. The public hearing procedures established in 17.50 have been followed.

17.56.025 - Minor modifications to legal conditional uses.

Minor modifications to an approved conditional use permit may be permitted. If permitted, the modification shall be reviewed as a minor site plan and design review. A minor modification to an approved conditional use permit is considered one of the following:
A. Modification to a structure for the purpose of enhancing the aesthetics of the building and there is no increase in the interior usable space;
B. Except for shelters, a maximum addition of up to one thousand square feet to a commercial, office, institutional, public, multi-family, or industrial building provided that the addition is not more than thirty-five percent of the original building square footage; or
C. Revisions to parking alignment and/or related vehicle circulation patterns.
Finding: Not Applicable. The proposal does not include a minor modification to a legal conditional use.

17.56.040 - Criteria and standards for conditional uses.
In addition to the standards listed herein in OCMC 17.56.010, which are to be considered in the approval of all conditional uses and the standards of the zone in which the conditional use is located, the following additional standards shall be applicable:
A. Building Openings. The city may limit or prohibit building openings within fifty feet of residential property in a residential zone if the openings will cause glare, excessive noise or excessive traffic which would adversely affect adjacent residential property as set forth in the findings of the Planning Commission.
Finding: Complies as Proposed. There are two existing building entrances: a primary entrance on 12th Street and a rear entrance located in the back of the building facing the parking lot. There is an adjacent residential property developed with an existing residence facing Washington Street. The primary entrance on 12th Street is located more than 65 feet from the adjacent residential property. The back corner of the backyard of the residential property is approximately 40 feet from the rear entrance, however, the entrance is more than 80 feet from the back of the single-family residence located on the property, and more than 115 feet from the front of the single-family residence. Additionally there is an existing fence and landscaping providing an additional buffer between the back entrance and the residential property. The rear entrance does not cause glare, excessive noise, or excessive traffic adversely affecting the adjacent residential property. No comments from the adjacent property identifying concerns about the existing rear entrance have been received. All building openings are existing and no new building openings or any other modifications are being proposed as part of this application. Staff is not recommending that the Planning Commission limit or prohibit existing building openings.

B. Additional Street Right-of-Way. The dedication of additional right-of-way may be required where the city plan indicates need for increased width and where the street is inadequate for its use; or where the nature of the proposed development warrants increased street width.
Finding: Not Applicable. The subject site's frontage is improved and the city has not identified a need for additional right-of-way dedication or increased street width.

C. Public Utility or Communication Facility. Such facilities as a utility substation, water storage tank, radio or television transmitter, tower, tank, power transformer, pumping station and similar structures shall be located, designed and installed with suitable regard for aesthetic values. The base of these facilities shall not be located closer to the property line than a distance equal to the height of the structure. Hydroelectric generation facilities shall not exceed ninety megawatts of generation capacity.
Finding: Not Applicable. No public utility or communication facilities are proposed.

D. Schools. The site shall be located to best serve the intended area, shall be in conformance with the city plan, shall have adequate access, and shall be in accordance with appropriate State standards.
Finding: Not Applicable. The applicant has not requested a conditional use permit for a school.

E. Helipad Landing Facility.
Finding: Not Applicable. The applicant has not requested a conditional use permit for a helipad landing facility.

F. Residential Care Facilities.
Finding: Not Applicable. The applicant has not requested a conditional use permit for a residential care facility.

G. Bed and Breakfast Inns.
Finding: Not Applicable. The applicant has not requested a conditional use permit for a bed and breakfast inn.

H. Shelters.
1. Shelters shall be processed as a Type IV review.
Finding: Complies as Proposed. The application is being processed pursuant to the Type IV process.

2. The shelter shall maintain a written community engagement plan include the following information:
a. Description of purpose and scope of services of the shelter;
b. Population to be housed at the shelter and the process and criteria for the selection of guests;
c. Bed capacity for nightly guests;
d. Hours of operations and curfew, if applicable;
e. 24 hour contact information; and
f. Explanation of how the shelter will address concerns/complaints.
Finding: Complies with Condition. The applicant provided the following responses to each of the items within this section within their narrative:

Description of purpose and scope of services of the shelter:
The Father's Heart consists of a day use shelter (not the subject of this application) and an emergency overnight warming shelter that is contracted with Clackamas County for the purpose of saving lives on winter nights that reach 33F windchill or colder. The Father's Heart emergency night shelter provides shelter from inclement weather, a sleeping mat, blanket, an evening meal, coffee and water.

Population to be housed at the shelter and the process and criteria for the selection of guests:
The Father's Heart provides an emergency overnight warming center/shelter to those living outdoors. The shelter sends out an emergency notification to the emergency contact list of Clackamas County by noon on the day of operation. The shelter operates on a first-come first-served basis.

Bed capacity for nightly guests:
Normally, the emergency overnight shelter has a capacity of 49 guests, which has been modified to a maximum of 13 guests during Covid-19 restrictions, in order to provide adequate social distancing.

Hours of operations and curfew, if applicable:
The emergency night shelter operates from 6 PM to 7 AM. There is a 10 PM curfew for those who have checked in before 10 PM. If a bed is available, The Father's Heart receives new shelter guests at any hour.

24 hour contact information:

The following The Father's Heart staff can be reached 24 hours.

Robin Keating- Executive Director tfhrobin@gmail.com 831-809-3099	Jennifer Morris- Asst. Director & Program Manager tfhjennifer@gmail.com 971-940-5476

Explanation of how the shelter will address concerns/complaints:

The Father's Heart Executive Director and Program Manager are available 24 hours, either in person, by phone or email to address any and all concerns or complaints. In addition, in order to prevent community impacts TFH has adopted a Good Neighbor Policy, which outlines expectations of and to which it holds clients accountable for their behavior in the community (See Attachment F). TFH welcomes conversations with the broader community about any issues that arise because we can't fix it if we don't know it's happening.

The draft community engagement plan was presented to the McLoughlin Neighborhood Association at the March 18, 2021 meeting that the applicant attended.

Prior to the first night of operation as a temporary warming shelter, the applicant shall finalize the community engagement plan in accordance with all items required by this section, and submit a copy of the finalized community engagement plan to the City and provide a copy of the community engagement plan to the McLoughlin Neighborhood Association. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. Shelters shall hold a meeting with the community prior to commencing operation, and a minimum of once a year each year thereafter. The purpose of the meeting is to discuss the community engagement plan and provide an opportunity for greater communication. Mailed notice of the meeting shall be provided to property owners within 300 feet, the neighborhood association, and the City. The meeting shall be open to the public.

Finding: Complies with Condition. The applicant attended the McLoughlin Neighborhood Association on March 18, 2021. Prior to the first night of operation as a temporary warming shelter, the applicant shall hold an additional community meeting to discuss the community engagement plan and provide an opportunity for communication between neighborhood residents and the operators of the shelter. Mailed notice of this meeting shall be provided to property owners within 300 feet, the neighborhood association, and the City. The meeting shall be open to the public and must be held a minimum of once a year thereafter. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.56.060 - Revocation of conditional use permits.

The Planning Commission or the City Commission may initiate administrative action under Chapter 17.50 to revoke any conditional use permit previously issued by the city or, with regard to lands annexed by the city, those such permits issued by the county. The Planning Commission or the City Commission, may revoke such permit upon determining:

A. One or more conditions attached to the grant of the conditional use permit have not been fulfilled; and

B. The unfulfilled condition is substantially related to the issuance of the conditional use permit.

Finding: Applicable. The Planning Commission may initiate administrative action under Chapter 17.50 and revoke this conditional use permit if one or more conditions attached to the grant of this conditional use permit have not been fulfilled and the unfulfilled condition is substantially related to the issuance of the conditional use permit.

17.56.070 - Periodic review of conditional use permits.

A. The City Commission may provide for the periodic review of some or all of the conditional use permits previously issued by the city, or, with regard to lands annexed by the city, those such permits issued by the county. In providing for such review, the City Commission may designate classes of such previously issued permits for which periodic review shall be undertaken.

B. Such review shall be accomplished as an administrative action under Chapter 17.50 and shall be limited to the question of whether additional conditions should be imposed on a conditional use in the light of changing circumstances and more efficient implementation of the city's comprehensive plan.

C. Notwithstanding the provisions of Chapter 17.58, any additional conditions shall be met as a requirement for continued operation of the conditional use.

Finding: Not Applicable. Staff has not identified a need for period review of this conditional use permit.

CHAPTER 17.58 LAWFUL NONCONFORMING USES, LOTS, STRUCTURES, AND SITES

17.58.020 - Lawful nonconforming lots of record.
Lots or parcels lawfully created but which do not now conform to the legal lot standards in this land use code may be occupied by uses otherwise permitted if those uses comply with all other provisions of this land use code.
Finding: Not Applicable. The subject site is not a non-conforming lot of record.

17.58.030 - Lawful nonconforming use.
A use that was lawfully established on a particular development site but that no longer complies with the allowed uses or the standards for those uses in this title may be considered a lawful nonconforming use. Change of ownership, tenancy, or management of a lawfully established nonconforming use shall not affect its lawful nonconforming status. The continuation of a lawful nonconforming use is subject to the following:
A. Discontinuance. If a lawful nonconforming use is discontinued for a period of one year, it shall lose its lawful nonconforming status and the use of the property thereafter shall conform with the existing provisions of this title. If a nonconforming use ceases operations, even if the structure or materials related to the use remain, the use shall be deemed to have been discontinued.
Finding: Complies as Proposed. The subject site includes a day shelter which does not have an existing conditional use permit as required in the MUC-1 zone. In 2016, the City issued a similar use determination confirming the day shelter is a legal non-conforming use. The applicant has obtained and renewed a business license every year since then and the day shelter use has not been discontinued. The day shelter use is a legal non-conforming use which is allowed to continue and is not part of this conditional use permit application.

B. Conformance. If a lawful nonconforming use is converted to a conforming use, no nonconforming use may be resumed.
Finding: Not Applicable. The established legal non-conforming day shelter use has not been converted or proposed to be converted to a conforming use.

C. Destruction of a Non-residential Use. When a structure containing a lawful nonconforming non-residential use is damaged by fire or other causes, the re-establishment of the nonconforming use shall be prohibited if the repair cost of the structure is more then sixty percent of its assessed value.
D. Destruction of a Residential Use. When a structure containing a lawful nonconforming residential use is damaged by fire or other causes, the re-establishment of the nonconforming use shall be permitted.
E. Intentional Destruction. When a structure containing a nonconforming use is removed or intentionally damaged by fire or other causes within the control of the owner, the re-establishment of the nonconforming use shall be prohibited.
Finding: Not Applicable. The existing structure containing a lawful non-conforming use has not intentionally or unintentionally been destroyed. These standards are not applicable to the current proposal.

F. Expansion. No lawful nonconforming use may be replaced by a different type of nonconforming use, nor may any legal nonconforming use be expanded or intensified.
Finding: Not Applicable. Though the applicant is proposing to expand or intensify the non-conforming use, the expansion is not allowed outright and is going through the required conditional use permit land use process.

17.58.040 - Lawful nonconforming structure or site.

A structure or site that was lawfully established but no longer conforms to all development standards of this land use code (such as setbacks) shall be considered lawfully nonconforming. Notwithstanding development standard requirements in this Code, minor repairs and routine maintenance of a lawful nonconforming structure are permitted. The continuation of a lawful nonconforming structure or site is subject to the following:

A. Accidental Destruction. When a nonconforming structure is damaged by fire or other causes, the structure may be rebuilt using the same structure footprint.

B. Intentional Destruction. When a nonconforming structure is removed or intentionally damaged by fire or other causes within the control of the owner, the replacement structure shall comply with the development standards of this title.

C. Expansion. An expansion of a lawful nonconforming structure or site may be approved, conditionally approved or denied in accordance with the standards and procedures of this section.

1. In making a determination on such applications, the decision maker shall weigh the proposal's positive and negative features and the public convenience or necessity to be served against any adverse conditions that would result from authorizing the particular development at the location proposed, and, to approve such expansion, it shall be found that the criteria identified in OCMC 17.58.060 have either been met, can be met by observance of conditions, or are not applicable.

2. Increases in the square footage of a building and/or site improvements which include installation of any additional off-street parking stalls that exceed the threshold of subparagraph C.2.a. below shall comply with the development standards listed in subparagraph C.2.b. The value of the alterations and improvements is based on the entire project and not individual building permits.

a. Thresholds triggering compliance. The standards of subparagraph C.2.b. below shall be met when the value of the increase in square footage of a building and/or increase in off-street parking stalls, as determined by the Community Development Director, is more than seventy-five thousand dollars. The following alterations and improvements shall not be included in the threshold calculation:

1. Proposed alterations to meet approved fire and life safety agreements;

2. Alterations related to the removal of existing architectural barriers, as required by the Americans with Disabilities Act, or as specified in Section 1113 of the Oregon Structural Specialty Code;

3. Alterations required to meet Seismic Design Requirements; and

4. Improvements to on-site stormwater management facilities in conformance with Oregon City Stormwater Design Standards.

Finding: Not Applicable. Though the subject site does include non-conforming elements that are not in compliance with the current code, such as building design, landscaping, and parking lot design, the applicant has not proposed an expansion of a non-conforming structure exceeding the thresholds identified in this section and requiring non-conforming upgrades.

17.58.060 - Process to confirm the legality of a nonconforming use, lot, structure, or site.

Any person may request a Type I or a Type II review to confirm the legality of a nonconforming use, lot, structure or site. In order to confirm that the nonconforming use, lot, structure or site is legal, sufficient evidence shall be submitted to the city determining the following:

A. The nonconforming use, lot, structure or site was established lawfully; and

B. The nonconforming use, lot, structure or site has not become more nonconforming within the past twenty years from the date of application.

The applicant shall provide sufficient evidence to allow the Community Development Director to review and confirm the legality of a nonconforming use, lot, structure or site. An applicant may request a Type I procedure, provided the applicant can provide sufficient evidence to confirm OCMC 17.58.060A. and B. without discretion. If the applicant cannot provide sufficient evidence to determine OCMC 17.58.060A. and B. without discretion, the applicant may apply for a Type II procedure. Applications for a Type II procedures

shall be noticed to the public in a public comment period to gather additional information. If the applicant cannot show that the nonconforming use, lot, structure or site was lawfully established or has not been expanded pursuant to OCMC 17.58.060A. and B. above, the use, lot, structure or site shall be determined to be illegal.

Finding: Not Applicable. The applicant has not requested a review to confirm the non-conforming use. A 2016 determination of similar use confirmed that the existing day shelter use was legally non-conforming, and a business license has been obtained and renewed every year since then. Therefore, the existing day shelter use remains legally non-conforming and is not part of this conditional use permit review.

CHAPTER 17.62 – SITE PLAN AND DESIGN REVIEW

Finding: Not Applicable. The applicant's proposal does not include any physical modifications to the existing building, parking lot, landscaping, or site. The standards in this chapter are not applicable.

CONCLUSION AND RECOMMENDATION:

Based on the analysis and findings as described above, Staff concludes that the proposed development located at 603 12th Street, Oregon City, Oregon 97045, identified as Clackamas County Map 2-2E-31AA, Tax Lot 2200 and 2300 can meet the requirements as described in the Oregon City Municipal Code by complying with the Conditions of Approval provided in this report. Therefore, the Community Development Director recommends approval with conditions, based upon the findings and exhibits contained in this staff report.

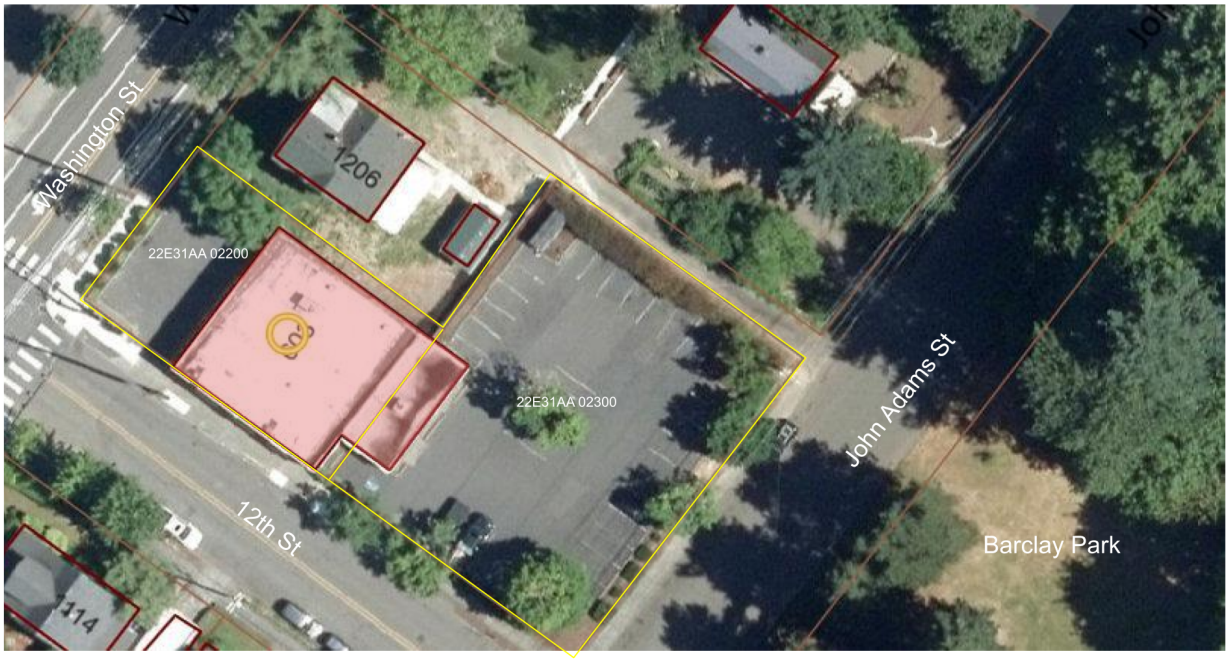
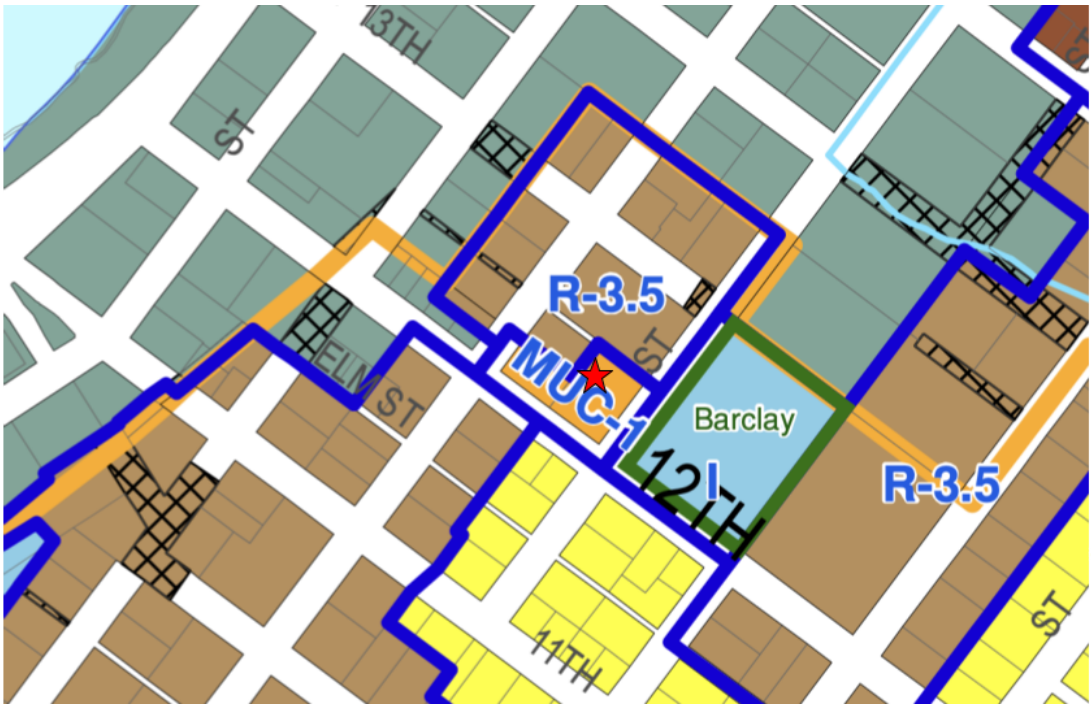
REQUEST: *Conditional Use approval for a temporary emergency night warming shelter at the same location as an existing day shelter.*

LOCATION: *603 12th Street Oregon City, Oregon 97045*
Map 22E31AA Tax lots 2200 and 2300



I. BACKGROUND

Existing Conditions
The proposed temporary night shelter is located in downtown Oregon City at the intersection of 12th Street, Washington Street and John Adams Street, to the west of Barclay Park. It is located in the MUC-1 district. The Father's Heart Street Ministry has been serving no- and low income people in the nearby area since 2012 by operating a day shelter and an emergency night warming shelter at this location. Currently, the proposed temporary emergency night warming shelter can accommodate up to 49 persons. Operations of the proposed emergency night shelter are limited to nights when the forecast temperature falls below 33 degrees Fahrenheit between the hours of 7:00 PM and 7:00 AM. Approval of the day use shelter was granted via a similar use determination in 2016 (see Attachment B). Therefore, the applicant is not seeking approval of the day use shelter as part of this conditional use permit application. Permission to operate the emergency temporary night shelter has been extended by the City Commission until March 31, 2021 (See Attachment E).



Project Description
This project will allow The Father's Heart to continue to provide a temporary nighttime emergency warming shelter on the current site when the local temperature is forecast to fall below 33 degrees Fahrenheit (Including Wind Chill). Because the proposed use is a Shelter, and located in the MUC-1 zone, Conditional Use approval is required. The existing day use shelter, operating since 2012, and in 2016 was approved via a similar use determination in the MUC-1 zone (See Attachment B) is not part of this conditional use request.

III. OREGON CITY MUNICPAL ZONING CODE COMPLIANCE

Municipal Code Standards and Requirements: The following sections of the Oregon City Municipal Code are applicable to this land use approval:

Chapter 17.29 MUC Mixed Use Corridor District
Chapter 17.50 Administration And Procedures
Chapter 17.56 Conditional Uses
The City Code Book is available on-line at www.orcity.org.

Permits and Approvals: The applicant is responsible for obtaining approval and permits from each applicable governmental agency and department at Oregon City including but not limited to the Engineering and Building Divisions.

REQUIRED CODE RESPONSES:

CHAPTER 17.29 MUC MIXED USE CORRIDOR DISTRICT

17.29.030 - Conditional uses—MUC-1 and MUC-2 zones.
The following uses are permitted in this district when authorized and in accordance with the process and standards contained in OCMC 17.56:

A. Drive-through facilities;
B. Emergency service facilities (police and fire), excluding correctional facilities;
C. Gas stations;
D. Outdoor markets that do not meet the criteria of OCMC 17.29.020.I;
E. Public utilities and services including sub-stations (such as buildings, plants and other structures);
F. Public and/or private educational or training facilities;
G. Religious institutions;
H. Retail trade, including gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores and any other use permitted in the neighborhood, historic or limited commercial districts that have a footprint for a stand-alone building with a single store in excess of sixty thousand square feet in the MUC-1 or MUC-2 zone;
I. Hospitals;
J. Parking not in conjunction with a primary use on private property, excluding after-hours public parking;
K. Passenger terminals, excluding bus stops;
L. Shelters.

Applicant's Response: The proposed use of Shelter is a Conditional Use. Specifically, the proposed shelter is for an emergency temporary overnight warming shelter in addition to the existing day shelter use which has been in operation since 2012, and the use of which was approved in 2016 through a similar use determination (See Attachment B).

17.29.040 - Prohibited uses in the MUC-1 and MUC-2 zones.

The following uses are prohibited in the MUC district:

A. Distributing, wholesaling and warehousing;

...

K. Mobile Food Units, except with a special event permit.

Applicant's Response: The proposed Shelter use is not a prohibited use in the MUC-1 zone. This section does not apply.

17.29.050 - Dimensional standards—MUC-1.

A. Minimum lot areas: None.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

B. Maximum building height: Forty feet or three stories, whichever is less.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

C. Minimum required setbacks if not abutting a residential zone: None.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

D. Minimum required interior and rear yard setbacks if abutting a residential zone: Twenty feet, plus one foot additional yard setback for every one foot of building height over thirty-five feet.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

E. Maximum allowed setbacks.

1. Front yard: Five feet.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

2. Interior side yard: None.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

3. Corner side setback abutting street: Thirty feet.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

4. Rear yard: None.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

F. Maximum lot coverage of the building and parking lot: Eighty percent.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

G. Minimum required landscaping (including landscaping within a parking lot): Twenty percent.

Applicant's Response: The applicant does not propose any changes to the existing building or lot. This standard does not apply.

H. Residential minimum net density of 17.4 units per acre, except that no minimum net density shall apply to residential uses proposed above nonresidential uses in a mixed-use configuration or to live/work dwellings.

Applicant's Response: The applicant is not proposing residential development. This standard does not apply.

17.29.070 - Floor area ratio (FAR).

Floor area ratios are a tool for regulating the intensity of development. Minimum FARs help to achieve more intensive forms of building development in areas appropriate for larger-scale buildings and higher residential densities.

A. The minimum floor area ratios contained in OCMC 17.29.050 and 17.29.060 apply to all nonresidential and mixed-use building development, except stand-alone commercial buildings less than ten thousand square feet in floor area.

Applicant's Response: The existing building measures less than ten thousand square feet in floor area. This section does not apply.

B. Required minimum FARs shall be calculated on a project-by-project basis and may include multiple contiguous blocks. In mixed-use developments, residential floor space will be included in the calculations of floor area ratio to determine conformance with minimum FARs.

Applicant's Response: The existing building measures less than ten thousand square feet in floor area. This section does not apply.

C. An individual phase of a project shall be permitted to develop below the required minimum floor area ratio provided the applicant demonstrates, through covenants applied to the remainder of the site or project or through other binding legal mechanism, that the required density for the project will be achieved at project build out.

Applicant's Response: The existing building measures less than ten thousand square feet in floor area. This section does not apply.

CHAPTER 17.50 ADMINISTRATION AND PROCEDURES

17.50.050 – Pre-application conference.

A. Pre-application Conference. Prior to a Type II – IV or Legislative application, excluding Historic Review, being deemed complete, the applicant shall schedule and attend a pre-application conference with City staff to discuss the proposal, unless waived by the Community Development Director. The purpose of the pre-application conference is to provide an opportunity for staff to provide the applicant with information on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal.

1. To schedule a pre-application conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee.

2. *At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans.*
3. *The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the pre-application conference.*

B. *A pre-application conference shall be valid for a period of six months from the date it is held. If no application is filed within six months of the conference or meeting, the applicant shall schedule and attend another conference before the City will accept a permit application. The Community Development Director may waive the pre-application requirement if, in the Director's opinion, the development has not changed significantly and the applicable municipal code or standards have not been significantly amended. In no case shall a pre-application conference be valid for more than one year.*

Applicant's Response: The applicant requested and attended a pre-application conference with City staff, which was held on December 9, 2020. The pre-application conference notes are included with this application package (See Attachment C) The applicant anticipates submitting an application within the six month timeframe. This requirement is met.

17.50.055 - Neighborhood association meeting.

Neighborhood Association Meeting. The purpose of the meeting with the recognized neighborhood association is to inform the affected neighborhood association about the proposed development and to receive the preliminary responses and suggestions from the neighborhood association and the member residents.

A. *Applicants applying for annexations, zone change, comprehensive plan amendments, conditional use, Planning Commission variances, subdivision, or site plan and design review (excluding minor site plan and design review), general development master plans or detailed development plans applications shall schedule and attend a meeting with the City-recognized neighborhood association in whose territory the application is proposed no earlier than one year prior to the date of application. Although not required for other projects than those identified above, a meeting with the neighborhood association is highly recommended.*

B. *The applicant shall request via email or regular mail a request to meet with the neighborhood association chair where the proposed development is located. The notice shall describe the proposed project. A copy of this notice shall also be provided to the chair of the Citizen Involvement Committee.*

C. *A meeting shall be scheduled within thirty days of the date that the notice is sent. A meeting may be scheduled later than thirty days if by mutual agreement of the applicant and the neighborhood association. If the neighborhood association does not want to, or cannot meet within thirty days, the applicant shall host a meeting inviting the neighborhood association, Citizen Involvement Committee, and all property owners within three hundred feet to attend. This meeting shall not begin before six p.m. on a weekday or may be held on a weekend and shall occur within the neighborhood association boundaries or at a City facility.*

D. If the neighborhood association is not currently recognized by the City, is inactive, or does not exist, the applicant shall request a meeting with the Citizen Involvement Committee.

E. To show compliance with this section, the applicant shall submit a copy of the email or mail notice to the neighborhood association and CIC chair, a sign-in sheet of meeting attendees, and a summary of issues discussed at the meeting. If the applicant held a separately noticed meeting, the applicant shall submit a copy of the meeting flyer, postcard or other correspondence used, and a summary of issues discussed at the meeting and submittal of these materials shall be required for a complete application.

Applicant's Response: The applicant is proposing a Shelter in the MUC-1 district, which requires conditional use approval. Therefore, a Neighborhood Meeting with the McLoughlin Neighborhood Associaion is also required. The applicant attended the meeting of the McLoughlin Neighborhood Association neighborhood meeting on March 18, 2021. The McLoughlin Neighborhood Association noticed the meeting according to the requirements of the code. The applicant has submitted a copy of the email confirming that the applicant attended the meeting is included, and a summary of issues discussed at the meeting (See Attachment D).

17.50.100 - Notice posting requirements.

Where this chapter requires notice of a pending or proposed permit application or hearing to be posted on the subject property, the requirements of this section shall apply.

A. City Guidance and the Applicant's Responsibility. The City shall supply all of the notices which the applicant is required to post on the subject property and shall specify the dates the notices are to be posted and the earliest date on which they may be removed. The City shall also provide a statement to be signed and returned by the applicant certifying that the notice(s) were posted at the correct time and that if there is any delay in the City's land use process caused by the applicant's failure to correctly post the subject property for the required period of time and in the correct location, the applicant agrees to extend the applicable decision-making time limit in a timely manner.

B. Number and Location. The applicant shall place the notices on each frontage of the subject property. If the property's frontage exceeds six hundred feet, the applicant shall post one copy of the notice for each six hundred feet or fraction thereof. Notices do not have to be posted adjacent to alleys or unconstructed right-of-way. Notices shall be posted within ten feet of the street and shall be visible to pedestrians and motorists. Notices shall not be posted within the public right-of-way or on trees. The applicant shall remove all signs within ten days following the event announced in the notice.

Applicant's Response: The site will be posted with public notice per the City's requirements prior to the hearing. This requirement will be met when the site has been posted.

17.50.140 – Financial guarantees.

When conditions of permit approval require a permitee to construct certain public improvements, the City shall require the permitee to provide financial guarantee for construction of the certain public improvements. Financial guarantees shall be governed by this section.

A. Form of Guarantee. Guarantees shall be in a form approved by the City Attorney. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued

by a recognized lending institution, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City Engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City Attorney. The guarantee shall be filed with the City Engineer.

B. Guarantees. A permittee shall be required to provide a performance guarantee as follows.

1. Final Approved Design by The City: The City may request the Permittee to submit a Performance Guarantee for construction of certain public improvements. A permitee may request the option of submitting a Performance Guarantee when prepared for temporary/final occupancy. The guarantee shall be one hundred twenty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City Engineer.

2. Complete Design Approval and Established Engineered Cost Estimate: The City may request a permittee to submit a Performance Guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee before public improvements are designed and completed. The guarantee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City Engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City Engineer.

C. Release of Guarantee. The guarantee shall remain in effect until the improvement is actually constructed and accepted by the City. Once the City has inspected and accepted the improvement, the City shall release the guarantee to the permittee. If the improvement is not completed to the City's satisfaction within the time limits specified in the permit approval, the City Engineer may, at their discretion, draw upon the guarantee and use the proceeds to construct or complete construction of the improvement and for any related administrative and legal costs incurred by the City in completing the construction, including any costs incurred in attempting to have the permittee complete the improvement. Once constructed and approved by the City, any remaining funds shall be refunded to the permittee. The City shall not allow a permittee to defer construction of improvements by using a performance guarantee, unless the permittee agrees to construct those improvements upon written notification by the City, or at some other mutually agreed-to time. If the permittee fails to commence construction of the required improvements within six months of being instructed to do so, the City may, without further notice, undertake the construction of the improvements and draw upon the permittee's performance guarantee to pay those costs.

D. Fee-in-lieu. When conditions of approval or the City Engineer allows a permittee to provide a fee-in-lieu of actual construction of public improvements, the fee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City Engineer. The percentage required is to ensure adequate funds for the future work involved in design, bid, contracting, and construction management and contract closeout. The engineer's estimated costs shall be supported by a

verified engineering estimate and approved by the City Engineer. The fee-in-lieu shall be submitted as cash, certified check, or other negotiable instrument acceptable by the City Attorney.

Applicant's Response: No changes to the building exterior or lot are included with this proposal. Therefore Public Improvements are not required and this section does not apply.

17.50.141 – Public improvements – Warranty

All public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period. The warranty is to be used at the discretion of the City Engineer or designee to correct deficiencies in materials or maintenance of constructed public infrastructure, or to address any failure of engineering design.

A. Duration of Warranty. Responsibility for maintenance of public improvements shall remain with the property owner or developer for a warranty period of two years.

B. Financial Guarantee. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, bond, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City Engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City Attorney. The guarantee shall be filed with the City Engineer.

C. Amount of Warranty. The amount of the warranty shall be equal to fifteen percent of the estimated cost of construction of all public improvements (including those improvements that will become owned and maintained by the City at the end of the two year maintenance period), and shall be supported by a verified engineering estimate and approved by the City Engineer. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those improvements.

D. Transfer of Maintenance. The City will perform an inspection of all public improvements approximately forty-five days before the two-year warranty period expires. The public improvements shall be found to be in a clean, functional condition by the City Engineer before acceptance of maintenance responsibility by the City. Transfer of maintenance of public improvements shall occur when the City accepts the improvements at the end of the two year warranty period.

Applicant's Response: The applicant does not propose changes to the exterior of the building or the site. Therefore, public improvements are not required as part of the project. This section does not apply.

CHAPTER 17.56 CONDITIONAL USES

17.56.010 - Permit—Authorization—Standards—Conditions.

A conditional use listed in this title may be permitted, enlarged or altered upon authorization of the Planning Commission in accordance with the standards and procedures of this title. A conditional use permit listed in this section may be permitted, enlarged or altered upon authorization of the Planning Commission or City Commission in accordance with the standards and procedures of this section. Any

expansion to, alteration of, or accessory use to a conditional use shall require Planning Commission or City Commission approval of a modification to the original conditional use permit unless authorized in this chapter.

Applicant's Response: The proposed application for a Shelter in the MUC-1 zone is a conditional use, and therefore, this section applies.

A. Conditional uses, because of their public convenience and necessity and their effect upon the neighborhood shall be permitted only upon the approval of the Planning Commission or City Commission after due notice and public hearing, according to procedure as provided in OCMC 17.50. The applicant shall provide evidence substantiating that all the requirements of this title relative to the proposed use are satisfied, and demonstrate that the proposed use also satisfies the following criteria:

1. The use is listed as a conditional use in the underlying district;

Applicant's Response: The site is located in the MUC-1 district. The proposed use is a Shelter, which is listed as a Conditional Use in that district. Therefore, this section applies.

2. The characteristics of the site are suitable for the proposed use considering size, shape, location, topography, existence of improvements and natural features;

Applicant's Response: The proposed temporary emergency night shelter have been operating at the site since 2012 and the applicant proposes to continue the operations without changes to the site going forward, ensuring that the existing building and site are appropriate and suitable for the proposed use as detailed below:

Size: The existing size of the site is 20,790 sq. ft. and is not proposed to change as part of this application. It is suitable for the proposed use because it provides enough space for the existing building, which is based on the capacity of 49 overnight shelter guests. There is also enough parking on the existing site to accommodate guests who may have a car or bicycle to park, and for staff to park. In addition, the building (approximately 4,637 sq. ft.) only occupies about 22% of the site area, allowing for plenty of room to buffer the surrounding area from lighting, sound and other shelter operations.

Shape: The shape of the existing site is a polygon made up of two rectangles, and will remain the same with this application. The existing shape of the site is appropriate for the existing use because it allows for the existing building to be situated close to the 12th Street side of the site, with a parking lot to the east.

Location: The site is located at 603 12th Street Oregon City, at the intersection of 12th Street and Washington Street. The site's location is well suited for the proposed use, for several reasons. First, it is located in close proximity to downtown Oregon City. Many important destinations for The Father's Heart clientele, such as convenience stores, several churches, Barclay Park, medical offices and other shopping are walkable from here. In addition, the site is located in the lower part of Oregon City. This is particularly important to the shelter's clients because they are usually traveling on foot, and it is far easier to reach than a location on the city bluff. Finally, The Father's Heart is located across the street from a bus stop, which can facilitate non-car travel to and from the Shelter on below freezing nights when the emergency overnight shelter would be open.

Topography: The applicant does not propose to change the topography of the existing site, which is appropriate for the proposed shelter use. While there is a downward slope from east to west, it is not so pronounced that it makes access difficult, or creates other issues.

Existence of improvements and natural features: The main existing improvement on the site is the parking lot and the structure in which the proposed shelter is located. These characteristics are suitable for the use because as noted earlier in this repsonse, the building will not require any improvements to accommodate emergency night shelter clients. The existing parking area is suitable for the proposed use. There are no existing natural features on the site.

3. Development shall demonstrate compliance with OCMC 16.12;

Applicant's Response: OCMC 16.12 includes provisions for minimum public improvements and design standards for development. The requirements of 16.12 do not apply to this project, because no improvements in the right of way are proposed at this time.

4. The proposed use will not alter the character of the surrounding area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district;

Applicant's Response: The area surrounding The Father's Heart includes a mix of uses in downtown Oregon City, with the property itself zoned mixed use corridor (MUC-1), the properties to the north, west and south zoned medium density residential (R-3.5), a property to the east is also zoned mixed use downtown (MUD) and two properties to the south are also zoned low density residential (R-6). The property to the west encompassing Barclay Park is zoned institutional (I). All of the properties in the surrounding area of The Father's Heart are located within the boundaries of the McLoughlin neighborhood association.

Because no changes are proposed to the existing building or site, the proposed project will not significantly alter the character of the surrounding area in a way that substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district. In addition to the overnight emergency shelter, a day shelter has also been operating at this location for several years. The day shelter was approved in 2016 via a similar use determination, and the overnight emergency shelter is currently approved on a temporary basis through an emergency declaration by the City of Oregon City (See Attachment E). Therefore, since the shelter is not expanding its capacity, the conditional use approval to continue the shelter use of the will not have further effects on the character of the area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district. Finally, the overnight emergency shelter is an important neighborhood, Oregon City and Clackamas County social services partner, meeting critical and in some cases, lifesaving needs for some of the most vulnerable populations in the city and county.

The Father's Heart respects and values its neighbors and the ability for the temporary emergency shelter to be located in close proximity to the heart of downtown Oregon City at a location that is accessible to its clients. The Father's Heart maintains a strict Good Neighbor Policy to which clients must adhere in order to receive services that the shelter provides. The Good Neighbor Policy includes the following requirements related to the shelter in order to prevent impacts on the surrounding area:

- Respect our hours of operation by only being on property Tuesday - Fridays, 9:45am to 2:00pm *[or nights when it is below 33 degrees Fahrenheit];*
- No loitering, sleeping or camping on or near The Father's Heart property. This includes the park across the street, the woods (Abernbathy Chapel area), the private alleyway between us and residents, businesses across the street and residents of the McLoughlin neighborhood. Bothering any McLoughlin neighborhood residents will result in the loss of services;
- If one comes by vehicle to receive services, one must park inside the parking lot located at 12th Street/John Adams. No one, not even the owner of the vehicle, may remain in their vehicle;
- No raised voices, music, or any inappropriate behavior on or near the property.
- Sign up for services in the parking lot located at 12th Street/Washington;
- No drugs, drug paraphanelia, or alcohol allowed on property at any time;
- No business transactions of any kind. No exchanging of anything. No suspicious behavior;
- No going behind the building between the office and bike racks;
- All smoking of cigarettes or vaping in the middle of the parking lot only. Use cans for cigarette butts;
- No smpking of marijuana on or near the property;
- No pets of any kind fed on property or left on property;
- Respect EVERYONE.

With the Good Neighbor Policy above actively enforced, the proposed Shelter use, which is a necessary downtown use providing emergency day use and overnight shelter to those in Oregon City living and waiting on the streets for housing, this requirement is met.

5. The proposal satisfies the goals and policies of the city comprehensive plan which apply to the proposed use.

Applicable Comprehensive Plan Goals and Policies for the Father's Heart Conditional Use Permit

Goal 1.1 Citizen Involvement Program *Implement a Citizen Involvement Program that will provide an active and systematic process for citizen participation in all phases of the land-use decision making process to enable citizens to consider and act upon a broad range of issues affecting the livability, community sustainability, and quality of neighborhoods and the community as a whole.*

Policy 1.1.1 - *Utilize neighborhood associations as the vehicle for neighborhood-based input to meet the requirements of the Land Conservation and Development Commission (LCDC) Statewide Planning Goal 1, Citizen Involvement. The Citizen Involvement Committee (CIC) shall serve as the officially recognized citizen committee needed to meet LCDC Statewide Planning Goal 1.*

Policy 1.2.1 *- Encourage citizens to participate in appropriate government functions and land-use planning.*

Policy 1.4.1 - *Notify citizens about community involvement opportunities when they occur.*

Applicant's Response: The applicant respects and appreciates the neighbors in the surrounding area and will ensure that they are involved and listened to over time regarding the emergency overnight shelter use as well as other operations of The Father's Heart. To solicit feedback on the conditional use application, the applicant will meet with the McLoughlin Neighborhood association at their regular meeting on March 18th. The applicant will share information about the project and will listen to feedback and input from the neighbors, and will incorporate this into the project to the best of their ability.

Following approval of the proposed project by the City Commission, the applicant would hold a second meeting for McLoughlin neighborhood residents and property owners prior commencement of the overnight emergency shelter operations (not day use because that use is already approved). The purpose of the second meeting would be to specifically review and hear feedback on the DRAFT Community Engagement Plan outlined in Attachment G of this document.

Goal 2.4 *Neighborhood Livability - Provide a sense of place and identity for residents and visitors by protecting and maintaining neighborhoods as the basic unit of community life in Oregon City while implementing the goals and policies of the other sections of the Comprehensive Plan.*

Policy 2.4.2 *Strive to establish facilities and land uses in every neighborhood that help give vibrancy, a sense of place, and a feeling of uniqueness; such as activity centers and points of interest.*

Policy 2.4.5 *Ensure a process is developed to prevent barriers in the development of neighborhood schools, senior and child care facilities, parks, and other uses that serve the needs of the immediate area and the residents of Oregon City.*

Applicant's Response: The ongoing affordable housing crisis has been exacerbated by the Covid-19 pandemic. Thus, homeless neighbors are a reality in Oregon City as well as every city in the Willamette Valley. The Father's Heart was established in order to provide services to these community members and to help transition them from houselessness to transitional and more permanent housing. In addition to places like parks, convenience stores, libraries, and medical offices, *shelters are essential facilities*. Shelters allow people in need to receive a meal, a shower, clothes, toiletries and overnight shelter in freezing weather and are a critical piece of a city's downtown service infrastructure. The Father's Heart has worked with Clackamas County, the broader Oregon City community and specifically the McLoughlin Neighborhood on ways to run the shelter so that the needs of both clients and neighbors are being met. For this particular application, the operations of the proposed temporary emergency night shelter would be limited to nights when the forecast temperature is below 33 degrees Farenheit (Wind Chill Included). Last season (2019/2020) the emergency night shelter safely sheltered 49 guests overnight for approximately 43 nights (or 2,140 bed nights) while requesting no cost reimbursement from the City of Oregon City. The most immediate way neighborhood livability is being addressed and maintainted is through The Father's Heart Good Neighbor Policy (See Attachment F). The Good Neighbor Policy ensures that clients respect the residential climate of the neighborhood in which the emergency shelter is located. Further, the DRAFT Community Engagement Plan (See Attachment G) provides specific ways that neighbors and community members can provide feedback to Shelter leadership and solve immediate and long term problems. This policy is met.

B. Permits for conditional uses shall stipulate restrictions or conditions which may include, but are not limited to, a definite time limit to meet such conditions, provisions for a front, side or rear yard greater than the minimum dimensional standards of the zoning ordinance, suitable landscaping, off-street parking, and any other reasonable restriction, condition or safeguard that would uphold the spirit and intent of the zoning ordinance, and mitigate adverse effect upon the neighborhood properties by reason of the use, extension, construction or alteration allowed as set forth in the findings of the Planning Commission.

Applicant's Response: The applicant understands that Conditional Use permits will likely stipulate restrictions or "conditions" in a number of areas as outlined in the section above. This criterion is met.

C. Any conditional use shall meet the dimensional standards of the zone in which it is to be located pursuant to subsection B. of this section unless otherwise indicated, as well as the minimum conditions listed below.

Applicant's Response: The applicant is not proposing changes to the site or building exterior as part of this application. Therefore, the dimensional standards of the MUC-1 zone (the zone in which it is located),

D. In the case of a use existing prior to the effective date of the ordinance codified in this title and classified in this title as a conditional use, any change of use expansion of lot area or expansion of structure shall conform with the requirements for conditional use.

Applicant's Response: The Father's Heart emergency night shelter is an existing use which has been in operation since at least 2012 with the City's permission (see Attachment B and Attachment E). No change of use or expansion of lot area or expansion of structure is proposed. However, if a change of use or expansion of lot area or expansion of structure is proposed, they shall conform to conditional use requirements. This criterion is met.

Recently, the City issued an emergency order to continue the operations of the emergency night shelter until March 31, 2021. Because the approval of the emergency night shelter use through the temporary emergency order is expiring, it must meet the requirements for a conditional use Shelter in the MUC-1 zone to continue to operate. Meeting the Conditional Use requirements is the purpose of this application. This criterion is met.

E. The Planning Commission may specifically permit, upon approval of a conditional use, further expansion to a specified maximum designated by the Planning Commission without the need to return for additional review.

Applicant's Response: The applicant understands that the Planning Commission may specifically permit, upon approval of a conditional use, further expansion to a specified maximum designated by the planning commission without the need for additional review. This criterion is met.

17.56.020 - Permit—Application.

A. A property owner or authorized agent shall initiate a request for a conditional use by filing an application with the city recorder. The applicant shall submit a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development. The application shall be accompanied by the filing fee listed in OCMC 17.50.080 to defray the costs of publication, investigation and processing.

Applicant's Response: With this submittal, the applicant is initiating a request for a conditional use. The applicant has met the submittal criteria, which includes: a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development and the filing fee. This requirement has been met.

B. Before the Planning Commission or City Commission may act on a conditional use application, it shall hold a public hearing thereon, following procedure as established in OCMC 17.50.

Applicant's Response: The application is for a Shelter in the MUC-1 zone, which is classified as a Type IV procedure. According to OCMC 17.50, the proposal requires a hearing before the Planning Commission and the City Council. The applicant understands that before these bodies may act on the application, these public hearings must take place. This requirement is met.

17.56.025 - Minor modifications to legal conditional uses.

Minor modifications to an approved conditional use permit may be permitted. If permitted, the modification shall be reviewed as a minor site plan and design review. A minor modification to an approved conditional use permit is considered one of the following:

A. Modification to a structure for the purpose of enhancing the aesthetics of the building and there is no increase in the interior usable space;

Applicant's Response: The proposed application is for initial conditional use approval of a Shelter in the MUC-1 zone. A minor modification is not proposed at this time. However, the applicant understands that modification to a structure for the purpose of enhancing the aesthetics of the building without increase in interior usable space is considered a minor modification. This requirement is met.

B. Except for shelters, a maximum addition of up to one thousand square feet to a commercial, office, institutional, public, multi-family, or industrial building provided that the addition is not more than thirty-five percent of the original building square footage; or

Applicant's Response: The application is for a Shelter use in the MUC-1 zone. The applicant understands that a maximum addition of up to 1,000 SF provided that the addition is less than 35% of the original building square footage for a Shelter use would not be eligible to be considered a minor modification. This requirement is met.

C. Revisions to parking alignment and/or related vehicle circulation patterns.

Applicant's Response: The proposed application is for initial conditional use approval of a Shelter in the MUC-1 zone. A minor modification is not proposed at this time. However, the applicant understands that revisions to parking alignment and/or related vehicle circulation patterns are considered minor modification of a conditional use. This requirement is met.

17.56.040 - Criteria and standards for conditional uses.

In addition to the standards listed herein in OCMC 17.56.010, which are to be considered in the approval of all conditional uses and the standards of the zone in which the conditional use is located, the following additional standards shall be applicable:

...

H. Shelters.

1. Shelters shall be processed as a Type IV review.

Applicant's Response: The applicant's proposal for a Shelter in the MUC-1 zone is being submitted with the understanding that it will be processed as a Type IV review.

2. The shelter shall maintain a written community engagement plan include the following information:

a. Description of purpose and scope of services of the shelter;

b. Population to be housed at the shelter and the process and criteria for the selection of guests;

c. Bed capacity for nightly guests;

d. Hours of operations and curfew, if applicable;

e. 24 hour contact information; and

f. Explanation of how the shelter will address concerns/complaints.

Applicant's Response: The applicant has initially compiled the information below to meet the requirements of the community engagement plan. A draft of this plan was presented to the McLoughlin Neighborhood Association at its March 18th, 2021 meeting. Feedback on the plan will be incorporated and submitted to the City ahead of the first Planning Commission Hearing. A second neighborhood meeting will be held prior to the emergency overnight shelter commencing operations following expiration of the current emergency declaration on March 31, 2021.

Description of purpose and scope of services of the shelter:
The Father's Heart consists of a day use shelter (not the subject of this application) and an emergency overnight warming shelter that is contracted with Clackamas County for the purpose of saving lives on winter nights that reach 33F windchill or colder. The Father's Heart emergency night shelter provides shelter from inclement weather, a sleeping mat, blanket, an evening meal, coffee and water.

Population to be housed at the shelter and the process and criteria for the selection of guests:
The Father's Heart provides an emergency overnight warming center/shelter to those living outdoors. The shelter sends out an emergency notification to the emergency contact list of Clackamas County by noon on the day of operation. The shelter operates on a first-come first-served basis.

Bed capacity for nightly guests:
Normally, the emergency overnight shelter has a capacity of 49 guests, which has been modified to a maximum of 13 guests during Covid-19 restrictions, in order to provide adequate social distancing.

Hours of operations and curfew, if applicable:
The emergency night shelter operates from 6 PM to 7 AM. There is a 10 PM curfew for those who have checked in before 10 PM. If a bed is available, The Father's Heart receives new shelter guests at any hour.

24 hour contact information:

The following The Father's Heart staff can be reached 24 hours.

Robin Keating- Executive Director tfhrobin@gmail.com 831-809-3099	Jennifer Morris- Asst. Director & Program Manager tfhjennifer@gmail.com 971-940-5476

Explanation of how the shelter will address concerns/complaints:

The Father's Heart Executive Director and Program Manager are available 24 hours, either in person, by phone or email to address any and all concerns or complaints. In addition, in order to prevent community impacts TFH has adopted a Good Neighbor Policy, which outlines expectations of and to which it holds clients accountable for their behavior in the community (See Attachment F). TFH welcomes conversations with the broader community about any issues that arise because we can't fix it if we don't know it's happening.

3. *Shelters shall hold a meeting with the community prior to commencing operation, and a minimum of once a year each year thereafter. The purpose of the meeting is to discuss the community engagement plan and provide an opportunity for greater communication. Mailed notice of the meeting shall be provided to property owners within 300 feet, the neighborhood association, and the City. The meeting shall be open to the public.*

Applicant's Response: In addition to participating in the March 18, 2021 McLoughlin Neighborhood Association meeting to meet the requirements of OCMC 17.50, the applicant will also hold a second public meeting with the community prior to commencing operation of the emergency night warming shelter under this CU permit. TFH will hold ongoing community meetings at a minimum of once a year each year thereafter to discuss the community engagement plan and to provide for regular input and communication with the surrounding neighbors. This meeting will be noticed to property owners within 300 feet of the site. In addition, the applicant is participating in the March 4th McLoughlin Neighborhood Association meeting. This requirement will be met once the meeting takes place.

17.56.060 - Revocation of conditional use permits.

The Planning Commission or the City Commission may initiate administrative action under Chapter 17.50 to revoke any conditional use permit previously issued by the city or, with regard to lands annexed by the city, those such permits issued by the county. The Planning Commission or the City Commission, may revoke such permit upon determining:

A. One or more conditions attached to the grant of the conditional use permit have not been fulfilled; and

B. The unfulfilled condition is substantially related to the issuance of the conditional use permit.

Applicant's Response: The applicant understands that the Planning Commission or the City Condition may undertake action to revoke this conditional use permit in accordance with Chapter 17.50 if conditions are not fulfilled and that condition is substantially related to the issuance of the conditional use permit.

17.56.070 - Periodic review of conditional use permits.

A. The City Commission may provide for the periodic review of some or all of the conditional use permits previously issued by the city, or, with regard to lands annexed by the city, those such

permits issued by the county. In providing for such review, the City Commission may designate classes of such previously issued permits for which periodic review shall be undertaken.

B. Such review shall be accomplished as an administrative action under Chapter 17.50 and shall be limited to the question of whether additional conditions should be imposed on a conditional use in the light of changing circumstances and more efficient implementation of the city's comprehensive plan.

C. Notwithstanding the provisions of Chapter 17.58, any additional conditions shall be met as a requirement for continued operation of the conditional use.

Applicant's Response: The applicant understands that the Commission may review this conditional use permit periodically in accordance with Chapter 17.50.

IV. Conclusion

The applicant respectfully concludes that all applicable requirements have been met with this application and looks forward to its approval by the City of Oregon City.

OREGON CITY

August 22, 2016

RE: My Father's Heart Similar Use Determination

To whom it may concern:

The following is a summary of a similar use determination made by the Community Development Director with respect to the "My Father's Heart" day shelter and ministry located at 603 `12th Street in Oregon City.

The initial conversation on the potential for locating the ministry at this location began on or about June 28, 2012 with an exchange of emails from Troy Kay and Teri Gant of My Father's Heart ministry, sent to Planner Pete Walter.

Staff requested information describing the proposed activities, prior use and other details pertaining to the ministry and the site. The site consists of 2 tax lots zoned MUC-1, Mixed Use Corridor 1 with street frontage on Washington, 12th and John Adams. The building was previously used by Clackamas County for a satellite Sheriff's office, and for the Clackamas County Sheriff's Department Community Corrections program.

Father's Heart described itself as a Non-Profit social service agency meeting the needs of no/low income individuals and families in Clackamas County. They are partially funded by Clackamas County and work specifically with Social Services, Community Solutions and Parole/Probation. They also work with Bridges To Change, CSAP, Iron Tribe and NARA, as well as the general public. They provide the following services:

- Clothing Exchange
- Hygiene Items
- Food Boxes (end of the month)
- Counseling
- Self Help Classes
- Computers
- Sack Lunches
- Possible Showers

On June 28, 2012, staff requested the following further information:

- What is the maximum number of people you expect to serve on a weekday / weekend?
- Do you anticipate any special parking needs / requirements?
- How does the sack lunch program function? Is it at a specific time every day or would people be able to come in at any time throughout the day and pick one up?

Staff received the following email response from Pastor Teri Gant:

"We plan on serving approx... 50 -60 people throughout the day, much like any other business.

OREGON CITY

Community Development – Planning

221 Molalla Ave. Suite 200 | Oregon City OR 97045
Ph (503) 722-3789 | Fax (503) 722-3880

There are already 3-4 handicap parking spaces, if needed, so no need for more. There is also an ADA restroom on sight if one should be needed (from previous Sheriff & social service).

We are not open to the public on weekends; closed Saturday thru Monday. We are open 4 days a week; Tuesday thru Friday.

The sack lunch program is usually afternoon. If anyone should need one. However, we are willing to change whatever is needed to comply."

Following discussions with the Deputy City Attorney Jennifer Bragar, with copies and acknowledgment by City Attorney Ed Sullivan, and after reviewing the information provided, the MUC-1 zoning and the permitted uses for the MUC-1 zone, staff's decision was made to treat the proposed use as a permitted use under OCMC 17.29.020.H and P.

H. Offices, including finance, insurance, real estate and government;
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning;

No further planning review was required since a change in use was not occurring. The determination above was made by the Community Development Director based upon the sufficiency of the information provided by the applicant.

OREGON CITY
Community Development Department
695 Warner Parrott Rd | Oregon City OR 97045
Ph (503) 722-3789 | Fax (503) 722-3880

Public Disclosure:
The purpose of a pre-application meeting is to introduce the impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal (City Code 17.50.050). Omissions or failures by staff to identify all relevant applicable land use requirements or how they might affect a proposal may occur, either as a result of a limited pre-application submittal or the consideration of discretionary criteria.

All pre-application conference related communications, including these notes, are informational only. They do not substitute for a public hearing and no land use decision is rendered at this phase. Notwithstanding any representations by City staff at a preapplication conference, staff is not authorized to waive any requirements of the Oregon City Municipal Code, and any omission or failure by staff to recite to an applicant all relevant applicable land use requirements shall not constitute a waiver by the City of any standard or requirement.

Pre-Application Conference Notes
PA-20-45: Father's Heart Conditional Use

Pre-Application Conference Date: **12/9/20**

General Information:

Location: 603 12th Street. Includes taxlots 2200 and 2300

- Zoning: "MUC-1" Mixed Use Corridor
- Proposed Development: Emergency Overnight Warming Shelter use authorization for 49 occupants at a location that has an existing day shelter use. Shelters are a conditional use in the MUC-1 zone. No exterior changes to the building or site are proposed.
- Applicable overlay districts: Historic Overlay (building is not designated)
- Applications anticipated:
  - Conditional Use

Review Process:

Conditional Use review for shelters is a Type IV decision. The Site Plan review will be reviewed also as a Type III - It is the policy of the City of Oregon City that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.

Type IV decisions require a minimum of one public hearing before the Planning Commission and one public hearing before the City Commission and involve the greatest amount of discretion and evaluation of subjective approval standards. Notice shall be issued at least twenty days pre-hearing, and the staff report shall be available at least seven days pre-hearing. At the evidentiary hearing held before the planning commission, all issues are addressed. If the planning commission denies the application, any party with standing (i.e., anyone who appeared before the planning commission either in person or in

writing within the comment period) may appeal the planning commission denial to the city commission. If the planning commission denies the application and no appeal has been received within fourteen days of the issuance of the final decision, then the action of the planning commission becomes the final decision of the city. If the planning commission votes to approve the application, that decision is forwarded as a recommendation to the city commission for final consideration. In either case, any review by the city commission is on the record and only issues raised before the planning commission may be raised before the city commission. This is a Type IV process defined in 17.50.030 - Summary of the city's decision-making processes.

The applicant is entitled to a decision from the city for a decision of approval, approval with conditions or denial within 120 days of deeming the application complete, by state law.

The city commission decision is the city's final decision and is subject to review by LUBA within twenty-one days of when it becomes final.

Background on Existing Use:
In 2012, following discussions with the Deputy City Attorney Jennifer Bragar, with copies and acknowledgment by City Attorney Ed Sullivan, and after reviewing the information provided, the MUC-1 zoning and the permitted uses for the MUC-1 zone, staff's decision was made to treat the Father's Heart proposed use as a permitted use under OCMC 17.29.020.H and P.
H. Offices, including finance, insurance, real estate and government;
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning;
A letter written in 2012 is attached.

Approval Criteria:
All types of shelters are conditional uses in the MUC-1 zone. The applicant can apply for a conditional use for a temporary warming shelter, or can include the day shelter use as well. However, the background on existing use section contains information on the city's determination regarding the existing daytime use. The applicant is not required to include the day use in the applicant but is welcome to do so. The day use may continue operations under the findings from the 2012 letter.

"Shelter" means a congregate facility designed to provide overnight sleeping or daytime accommodation to shelter families and individuals offered on a short-term basis. Shelters may offer meals, lodging and associated services on-site, aimed at helping people move towards self-sufficiency. Shelters may include day shelters, transitional shelters, temporary warming shelters and other temporary or permanent spaces made available for sheltering individuals or families. Shelters are not considered bed and breakfast inns/boardinghouses, hotels or motels.

"Temporary warming shelter" means a shelter operating between the hours of seven p.m. and seven a.m. when the outside temperature is predicted to be thirty-three degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration.

"Day shelter" means a shelter utilized between the hours of seven a.m. and seven p.m. which does not contain sleeping facilities.

Chapter 17.56 Conditional Uses

Your application will need to show compliance with the following criteria:

The planning commission may allow a conditional use, provided that the applicant provides evidence substantiating that all the requirements of this title relative to the proposed use are satisfied, and demonstrates that the proposed use also satisfies the following criteria:

1. The use is listed as a conditional use in the underlying district;
2. The characteristics of the site are suitable for the proposed use considering size, shape, location, topography, existence of improvements and natural features;
3. Development shall demonstrate compliance with OCMC 16.12;
4. The proposed use will not alter the character of the surrounding area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district;
5. The proposal satisfies the goals and policies of the city comprehensive plan which apply to the proposed use. *See attached comprehensive plan goals and policies that apply.*

Conditional use criteria specific to shelters:
H. Shelters.
1. Shelters shall be processed as a Type IV review.
2. The shelter shall maintain a written community engagement plan include the following information:

a. Description of purpose and scope of services of the shelter;
b. Population to be housed at the shelter and the process and criteria for the selection of guests;
c. Bed capacity for nightly guests;
d. Hours of operations and curfew, if applicable;
e. Twenty-four-hour contact information; and
f. Explanation of how the shelter will address concerns/complaints.

3. Shelters shall hold a meeting with the community prior to commencing operation, and a minimum of once a year each year thereafter. The purpose of the meeting is to discuss the community engagement plan and provide an opportunity for greater communication. Mailed notice of the meeting shall be provided to property owners within three hundred feet, the neighborhood association, and the city. The meeting shall be open to the public.

- *The City does not host this meeting or pay for notices, but we can help provide the mailing labels for the notices.*
- *This meeting needs to be held before operations begin, and it might be able to be combined with the required land use neighborhood meeting if all of the requirements of both meetings can be met.*

Transportation

- Transportation analysis will be waived for this request.

Neighborhood Meeting Required:
A meeting with the McLoughlin Neighborhood Association is required for a complete application per Chapter 17.50.055. OCMC 17.50.055 requires that you contact the Neighborhood Association and Citizen Involvement Committee(CIC). Contact info for the CIC is here: https://www.orcity.org/bc-cic

You may schedule your own meeting per 17.50.055: the meeting must be after six p.m. or on the weekend, with notice to the neighborhood association, citizen involvement committee, and all property owners within three hundred feet. If the applicant holds their own meeting, a copy of the certified letter

requesting a neighborhood association meeting shall be required for a complete application. The meeting held by the applicant shall be held within the boundaries of the neighborhood association or in a city facility.

- Please include the Citizen Involvement Committee Chair, Bob LaSalle, in any Neighborhood Association meeting requests, notifications or correspondence. Bob can be reached at jeanbob06@comcast.net

Planning Review and Application Fees

The 2020 Planning applications and fees include:

- Conditional Use: $4,203
- Mailing Labels: $17 – or provided by applicant
- Fees will change in 2021
- There is no process to request a fee waiver, but County or other resources may be helpful
- Planning Fee Schedule

Applications, Checklists and Links:

- Land Use Application
- Oregon City Municipal Code

Planning Division

Kelly Reid, Planner with the Oregon City Planning Division reviewed your pre-application. You may contact Kelly at 503.496.1540 or kreid@oregoncity.org.

Building Division:

You may contact Mike Roberts, our Building Official at 503.496.1517 or by email at mroberts@orcity.org.

Clackamas Fire District:

Questions can be directed to Mike Boumann, Lieutenant Deputy Fire Marshal of Clackamas Fire District #1. You may contact Mr. Boumann at (503)742-2660 or michaelbou@ccfd1.com.

Oregon City Municipal Code Criteria:

The following chapters of the Oregon City Municipal Code (OCMC) may be applicable to this proposal:
OCMC 17.29 – Mixed Use Corridor District
OCMC 17.50 – Administrative Processes
OCMC 17.56 – Conditional Uses
OCMC 17.62 – Site Plan and Design Review
A template for your submittal with the applicable criteria will be been emailed by the City.

Pre-application conferences are required by Section 17.50.050 of the City Code, as follows:
A. Preapplication Conference. Prior to submitting an application for any form of permit, the applicant shall schedule and attend a preapplication conference with City staff to discuss the proposal. To schedule a preapplication conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee. At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans. The purpose of the preapplication

conference is to provide an opportunity for staff to provide the applicant with information on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal. The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the preapplication conference. Notwithstanding any representations by City staff at a preapplication conference, staff is not authorized to waive any requirements of this code, and any omission or failure by staff to recite to an applicant all relevant applicable land use requirements shall not constitute a waiver by the City of any standard or requirement.
B. A preapplication conference shall be valid for a period of six months from the date it is held. If no application is filed within six months of the conference or meeting, the applicant must schedule and attend another conference before the City will accept a permit application. The community development director may waive the preapplication requirement if, in the Director's opinion, the development does not warrant this step. In no case shall a preapplication conference be valid for more than one year.

NOTICE TO APPLICANT: A property owner may apply for any permit they wish for their property. HOWEVER, THERE ARE NO GUARANTEES THAT ANY APPLICATION WILL BE APPROVED. No decisions are made until all reports and testimony have been submitted. This form will be kept by the Community Development Department. A copy will be given to the applicant. IF the applicant does not submit an application within six (6) months from the Pre-application Conference meeting date, a NEW Pre-Application Conference will be required.

Fwd: REMINDER: Membership Meeting, March 18th at 7pm

Jesse A. Buss <jessebuss@gmail.com> Mon, Apr 5, 2021 at 10:53 AM
To: Katelin Brewer-Colie <katelinbrewer@gmail.com>
Cc: Marty Gant <mgant@rconnects.com>

Hi, Katelin:

We haven't used sign-in sheets since we moved away from in-person meetings at the start of COVID. And we don't have any notes, either. If you mean the meeting minutes, those won't be approved until after the next general meeting in early May. You're welcome to contact me after that meeting if you'd like a copy of the approved minutes.

The above having been said, you're welcome to use this email as confirmation that The Father's Heart attended our MNA March general membership meeting and presented on its anticipated application.

Sincerely,

Jesse

RESOLUTION NO. 21-06

A RESOLUTION DECLARING AN EMERGENCY AND EXEMPTING THE FATHER'S HEART STREET MINISTRY FROM PLANNING CODE REQUIREMENTS ON A TEMPORARY BASIS

WHEREAS, Oregon City Municipal Code (OCMC) 2.52.020 defines "emergencies" to include "any man-made or natural event or circumstance causing or threatening loss of life, injury to person or property, human suffering…., and includes, but is not limited to, severe weather"; and

WHEREAS, OCMC 2.52.040(L) authorizes the City, in cases of emergency to "order such other measures as are necessary for the protection of life or property, or for the recovery from the emergency"; and

WHEREAS, the City has received information from Clackamas County health officials and existing homeless service providers that there is a need for additional shelter resources during cold weather events; and

WHEREAS, The Father's Heart Street Ministry (TFHSM) located at 603 12th Street has available resources and space to provided needed shelter during the extremely cold weather (Exhibit A); and

WHEREAS, TFHSM is willing to provide shelter and is not requesting any monetary commitment or reimbursement from the City; and

WHEREAS, the zoning designation of the site requires that overnight use of the facility receive Conditional Use land use approval. TFHSM held a Pre-Application Conference, which is the first step in a Conditional Use process; and

WHEREAS, TFHSM facility has previously been approved to house up to 49 individuals from 6 p.m. to 7 a.m. each day that the outside temperature is 33 degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration during the duration of the emergency; and

WHEREAS, due to current state-mandated COVID-19 restrictions, the current overnight capacity of TFHSM warming shelter facility is 13 individuals, but may change subject to updates to the state COVID-19 restrictions and guidelines; and

WHEREAS, the forecast identifies freezing weather; and

WHEREAS, the forecasted weather events are natural events that threaten the loss of life, injury to person or property or human suffering; and

WHEREAS, the City Commission is concerned that the expected conditions will require immediate shelter needs, response by city staff and other measures that are currently unanticipated.

NOW, THEREFORE, THE CITY OF OREGON CITY RESOLVES AS FOLLOWS:

Section 1. The Oregon City Commission hereby declares an emergency, limited to the Father's Heart Street Ministry (TFHSM) located at 603 12th Street due to forecasted severe cold weather. Consistent with OCMC 2.52.070 and, by this resolution, the Commission declares an emergency from 6 p.m. on January 21, 2021 until 7 a.m. March 31, 2021.

Section 2. Based on the emergency identified above, the City Commission grants to TFHSM an exemption from the Oregon City Zoning Code for the sheltering of individuals from 6 p.m. to 7 a.m. each day the temperature 33 degrees or below, including wind chill factor, for the duration of the emergency, from January 21, 2021 to March 31, 2021. The number of individuals allowed shall not exceed the number of individuals allowed pursuant to the Oregon Health Authority under Section 4, and shall not exceed 49 individuals in any case.

Section 3. TFHSM must be authorized to temporarily provide shelter provided the facilities comply with the City of Oregon City and Clackamas Fire District #1 Temporary Emergency Policy (Exhibit B).

Section 4. TFHSM must comply with COVID-19 regulations by the state and the Oregon Health Authority which will likely limit the number of individuals onsite.

Section 5. City staff shall request, as necessary, any assistance required from other agencies, including the state of Oregon, Clackamas County, Clackamas County Fire District No. 1, the American Red Cross or other agencies.

Section 6. The City Commission adopts the following procedures to prevent, minimize, respond to or recover from the emergency consistent with OCMC 2.52.040:

__X__	L.	Order such other measures as are necessary for the protection of life or property, or for the recovery from the emergency.

Section 6. This resolution shall take effect January 21, 2021.

Approved and adopted at a regular meeting of the City Commission held on the 20th day of January 2021.

ROCKY SMITH, JR., Commission President

Attested to this 20th day of January 2021:

Kattie Riggs, City Recorder

Approved as to legal sufficiency:

City Attorney

December 18, 2020

City Commissioners, Building Division and Fire Department of Oregon City

Thank you once again for allowing us to serve as a temporary emergency shelter during temperatures of 33 windchill or colder. Last season (2019/2020) our Emergency Shelter safely sheltered 49 guests overnight with a total of 2,140 bed nights. This year with COVID safety guidelines in place, we are safely sheltering 13 guests overnight. Although these guidelines have impacted the way we serve, we still continue to serve the most vulnerable in our community, while finding alternatives for those that would put us over our limit of 13.

At the beginning of the pandemic, we were able to place 15 of our guests that are elderly or disabled into hotels through a voucher program. The majority of those are now in transitional or permanent housing. Our Day Center numbers have dropped from an average 120 daily guests to 65 guests. Since then, we have been placing other clients into recovery homes, reentry programs and long-term housing through working with different agencies.

I mention all of the above because those efforts combined with the safety guidelines of COVID have significantly affected the amount of people we serve during the day. We recognize that the COVID safety guidelines allowing 13 to stay overnight will not be enough for the needs of those living unsheltered in our county. We contracted with Clackamas County through the Emergency Solutions Grant to place more of our most vulnerable citizens in hotels with wrap around services. This will allow us to serve more than the 13 allowed to stay safely in our facility.

When we are open for emergency temperatures, we will be taking the utmost precautions to keep our guests as well as our volunteers safe. We are providing a temperature check, questionnaire for possible COVID symptoms and giving each guest their own table, chair and mat to stay at for the evening. One guest at a time may use the restrooms, with the restrooms being sanitized after each use. All guests stay over 6ft. apart and required to wear masks except for eating or while sleeping. Guests remain separated throughout the night in their own area.

All volunteers and staff also have temperature checks, questionnaires for possible COVID symptoms, wear masks at all times and stay 6ft. apart. All hands are washed with soap and water or hand sanitizer frequently and all surfaces are also sanitized with bleach. In addition to this new protocol, TFH continues to meet the requirements for proper supervision, fire watch, and intake forms of HMIS.

We ask for an extension of our emergency warming shelter resolution which ends January 21st. Please grant us an extension from January 22nd through March 31st of 2021 as an emergency warming shelter. We are currently proceeding in the process of the pre app for a conditional use permit at this time. We have completed our first conference held with Planner Kelly Reid.

We are happy to report we have had no signs of COVID related sickness or COVID cases amongst the community we serve, our volunteers or staff since the beginning of COVID.

Sincerely,

Robin Keating, Executive Director
The Father's Heart Street Ministry

"I was hungry
and you gave me something to eat,

I was thirsty
And you gave me something to drink,

I was a stranger
and you invited me in,

I needed clothes
and you clothed me, …"

Matthew 25:35

CLACKAMAS FIRE DISTRICT #1

TEMPORARY EMERGENCY SHELTER POLICY

City of Oregon City and Clackamas Fire District #1 Joint Policy

The following policy is a collaboration between the City of Oregon City Building Official and the Clackamas Fire District #1 Fire Marshal for Temporary Warming Shelter's within the jurisdictional boundary of the Oregon City city limits.

This policy contains the minimal guidelines to allow a building not normally designated as an "R" (Residential) Occupancy (use of a building or structure, or a portion thereof, for sleeping purposes) to be used as a temporary shelter.

Registration:

Each year prior to opening as an emergency shelter the building manager shall contact the City of Oregon City Building Division to request approval. The approval will be subject to an on-site inspection to verify the building meets the minimum requirements of this policy. Written approval will be provided for building(s) being requested to be used as a Temporary Shelter. All buildings are subject to applicable Land Use Regulations and require written approval from the City of Oregon City Planning Division approving the use of the structure as a Temporary Shelter.

Time Limits:

If approved, a building may be used as a temporary shelter for a maximum of ninety (90) days within any twelve (12) month period of time beginning on the first (1st) day of occupancy or as approved by the local authority having jurisdiction. A thirty (30) day extension may be requested and will be reviewed by the authority having jurisdiction and a determination made depending on the weather requiring a need for additional temporary shelters availability.

Maximum Number of Occupants Allowed:

The maximum number of allowable temporary shelter occupants shall be calculated using an occupant load factor of one (1) individual for every thirty-five (35) square feet of room area.

Life Safety Requirements: The following minimum life safety requirements apply to all buildings being used as a temporary shelter.

1. **Fire Sprinklers:**

   It is not necessary for a building to have fire sprinklers installed to allow it to be used as a temporary shelter. However, buildings with an approved fire sprinkler system installed may have sleeping located on any building or floor area.

   In buildings without fire sprinklers installed, the temporary sleeping areas may only be located on the first (ground) or second floor. Sleeping areas are not permitted in basement areas of a non-fire-sprinklered building.

2. **Smoke Alarms and Detection:**

   - All temporary shelter sleeping areas shall be provided with approved smoke alarms or a complete approved smoke detection system.
   - All other areas of the building used for temporary shelter operations shall be equipped with smoke alarms or a smoke detection system as approved by the authority having jurisdiction.
   - Smoke alarms or Smoke Detection may be battery operated.

3. **Carbon Monoxide (CO) Alarms and Detection:**

   - All temporary shelter sleeping areas shall be provided with approved carbon monoxide alarms or a complete approved detection system in buildings that have a carbon monoxide source such as heater, fireplace, furnace, appliance or cooking source that uses, coal, wood, petroleum products and other fuels that emit carbon monoxide as a by-product of combustion. This would include buildings with an attached garage with a door, ductwork or ventilation shalt that communicates with the rooms intended for sleeping.
   - Carbon monoxide maybe battery operated.

4. **Means of Egress (Exits):**

   All floor levels with temporary shelter areas shall have a minimum of two means of egress (exits) from each floor level. All means of egress (exits) paths shall be maintained free of obstructions at all times. Exits from sleeping areas shall be as follows:

   - Sleeping areas located on the ground floor of a temporary shelter with an occupant load of 49 or less shall have at least one (1) exit and at least one(1) window qualifying as an escape or rescue window as defined by the current Oregon Residential Specialty Code.
   - All other floor levels used as temporary shelter sleeping areas that have an occupant load of ten (10) or more shall have at least two (2) exits from the area. The exits

serving the areas shall be separated by a distance equal to at least one-third (1/3) of the longest diagonal distance of the area.

5. **Emergency Evacuation Plan:**
   All temporary shelters shall create and maintain an approved emergency evacuation plan which provides evacuation of all occupants in an emergency event. At a minimum, the emergency evacuation plan shall contain the following:

   - Building floor plans. Building floor plans for each floor of the temporary shelter with sleeping areas clearly identified.
   - Room size. The square footage of all rooms of the temporary shelter.
   - Egress (exit) path. Building floor plans shall clearly show the egress (exit) paths from all areas of the temporary shelter. Egress (exit) path floor plans shall be posted throughout the temporary shelter.
   - Life-safety systems. The emergency evacuation plan shall also include information about the fire sprinkler system, fire alarm system of the smoke detection systems.
   - Location of the required fire extinguishers placed within the building.

6. **Fire Extinguishers:**

   - Appropriately sized fire extinguishers shall be placed adjacent to the means of egress with clearly marked indicators as to the location.

7. **Fire Watch:**

   - During sleeping hours a fire watch shall be maintained continuously. This means at least one responsible person at least 18 years of age shall be awake and assigned this responsibility. The fire watch person shall be equipped with a working flash light and have access to a phone or carry a cell phone on their person.

8. **Smoking or Open Flames:**

   - Smoking shall not be allowed at any time inside the temporary shelter.
   - Open flames shall not be allowed within the temporary shelter except for approved cooking appliance which require a flame for combustion fuel to operate.

9. **Documentation:**

   - Documentation of all fire safety requirements including copies of the temporary shelter evacuation plan shall be maintained on site and shall be available for review at the request of the authority having jurisdiction.

10. **Responsible Person In Charge:**

    - The authority having jurisdiction shall be notified of the Responsible Person In Charge of the temporary shelter and be provided with a means of contact. An alternate Responsible Person In Charge may be listed.

- The responsible Person In Charge is responsible to maintain the list of the aforementioned requirements are complied with.

11. Revocation:

- Failure to maintain the minimum requirements of the policy can result in the temporary shelter approval being revoked by the authority having jurisdiction.

Good Neighbor Policy

We value our location and most importantly our surrounding neighbors. To receive services from The Father's Heart we ask that you show respect to our neighbors by complying with the following guidelines (COVID 19 Phase 1) Those that refuse to comply will not receive services. Your compliance helps us be available to serve you:

- 6ft. distancing between other guests and volunteers at all times inside the facility, surrounding sidewalks and entire property.
- Respect our hours of operation by only being on property on Tuesday – Fridays, 9:45am – 2pm.
- No loitering, sleeping, camping on or near TFH property. This includes the park across the street, the woods (Abernathy Chapel Area), the private alley way between us and residents, the businesses across the street and on property of residents of the McLoughlin neighborhood. Bothering any McLoughlin neighborhood residents will result in loss of services.
- If you come in a vehicle to receive services, you must park inside the parking lot located on 12th St./ John Adams. No one, not even the owner of the vehicle, may remain in their vehicle.
- No raised voices, music or any inappropriate behavior on or near the property.

Service Guidelines

- Sign-up for services in the parking lot located on 12th St./Washington
- No drugs, drug paraphernalia, alcohol allowed on property at any time.
- No business transactions of any kind. No exchanging of anything. No suspicious behavior.
- No going behind the building between office and bike racks.
- All smoking cigarettes or vaping in the middle of parking lot ONLY. Use cans for cigarette butts.
- NO SMOKING OF MARIJUANA ON OR NEAR THE PROPERTY.
- No pets of any kind fed on property or left on property.
- Respect EVERYONE.

The Father's Heart
Street Ministry

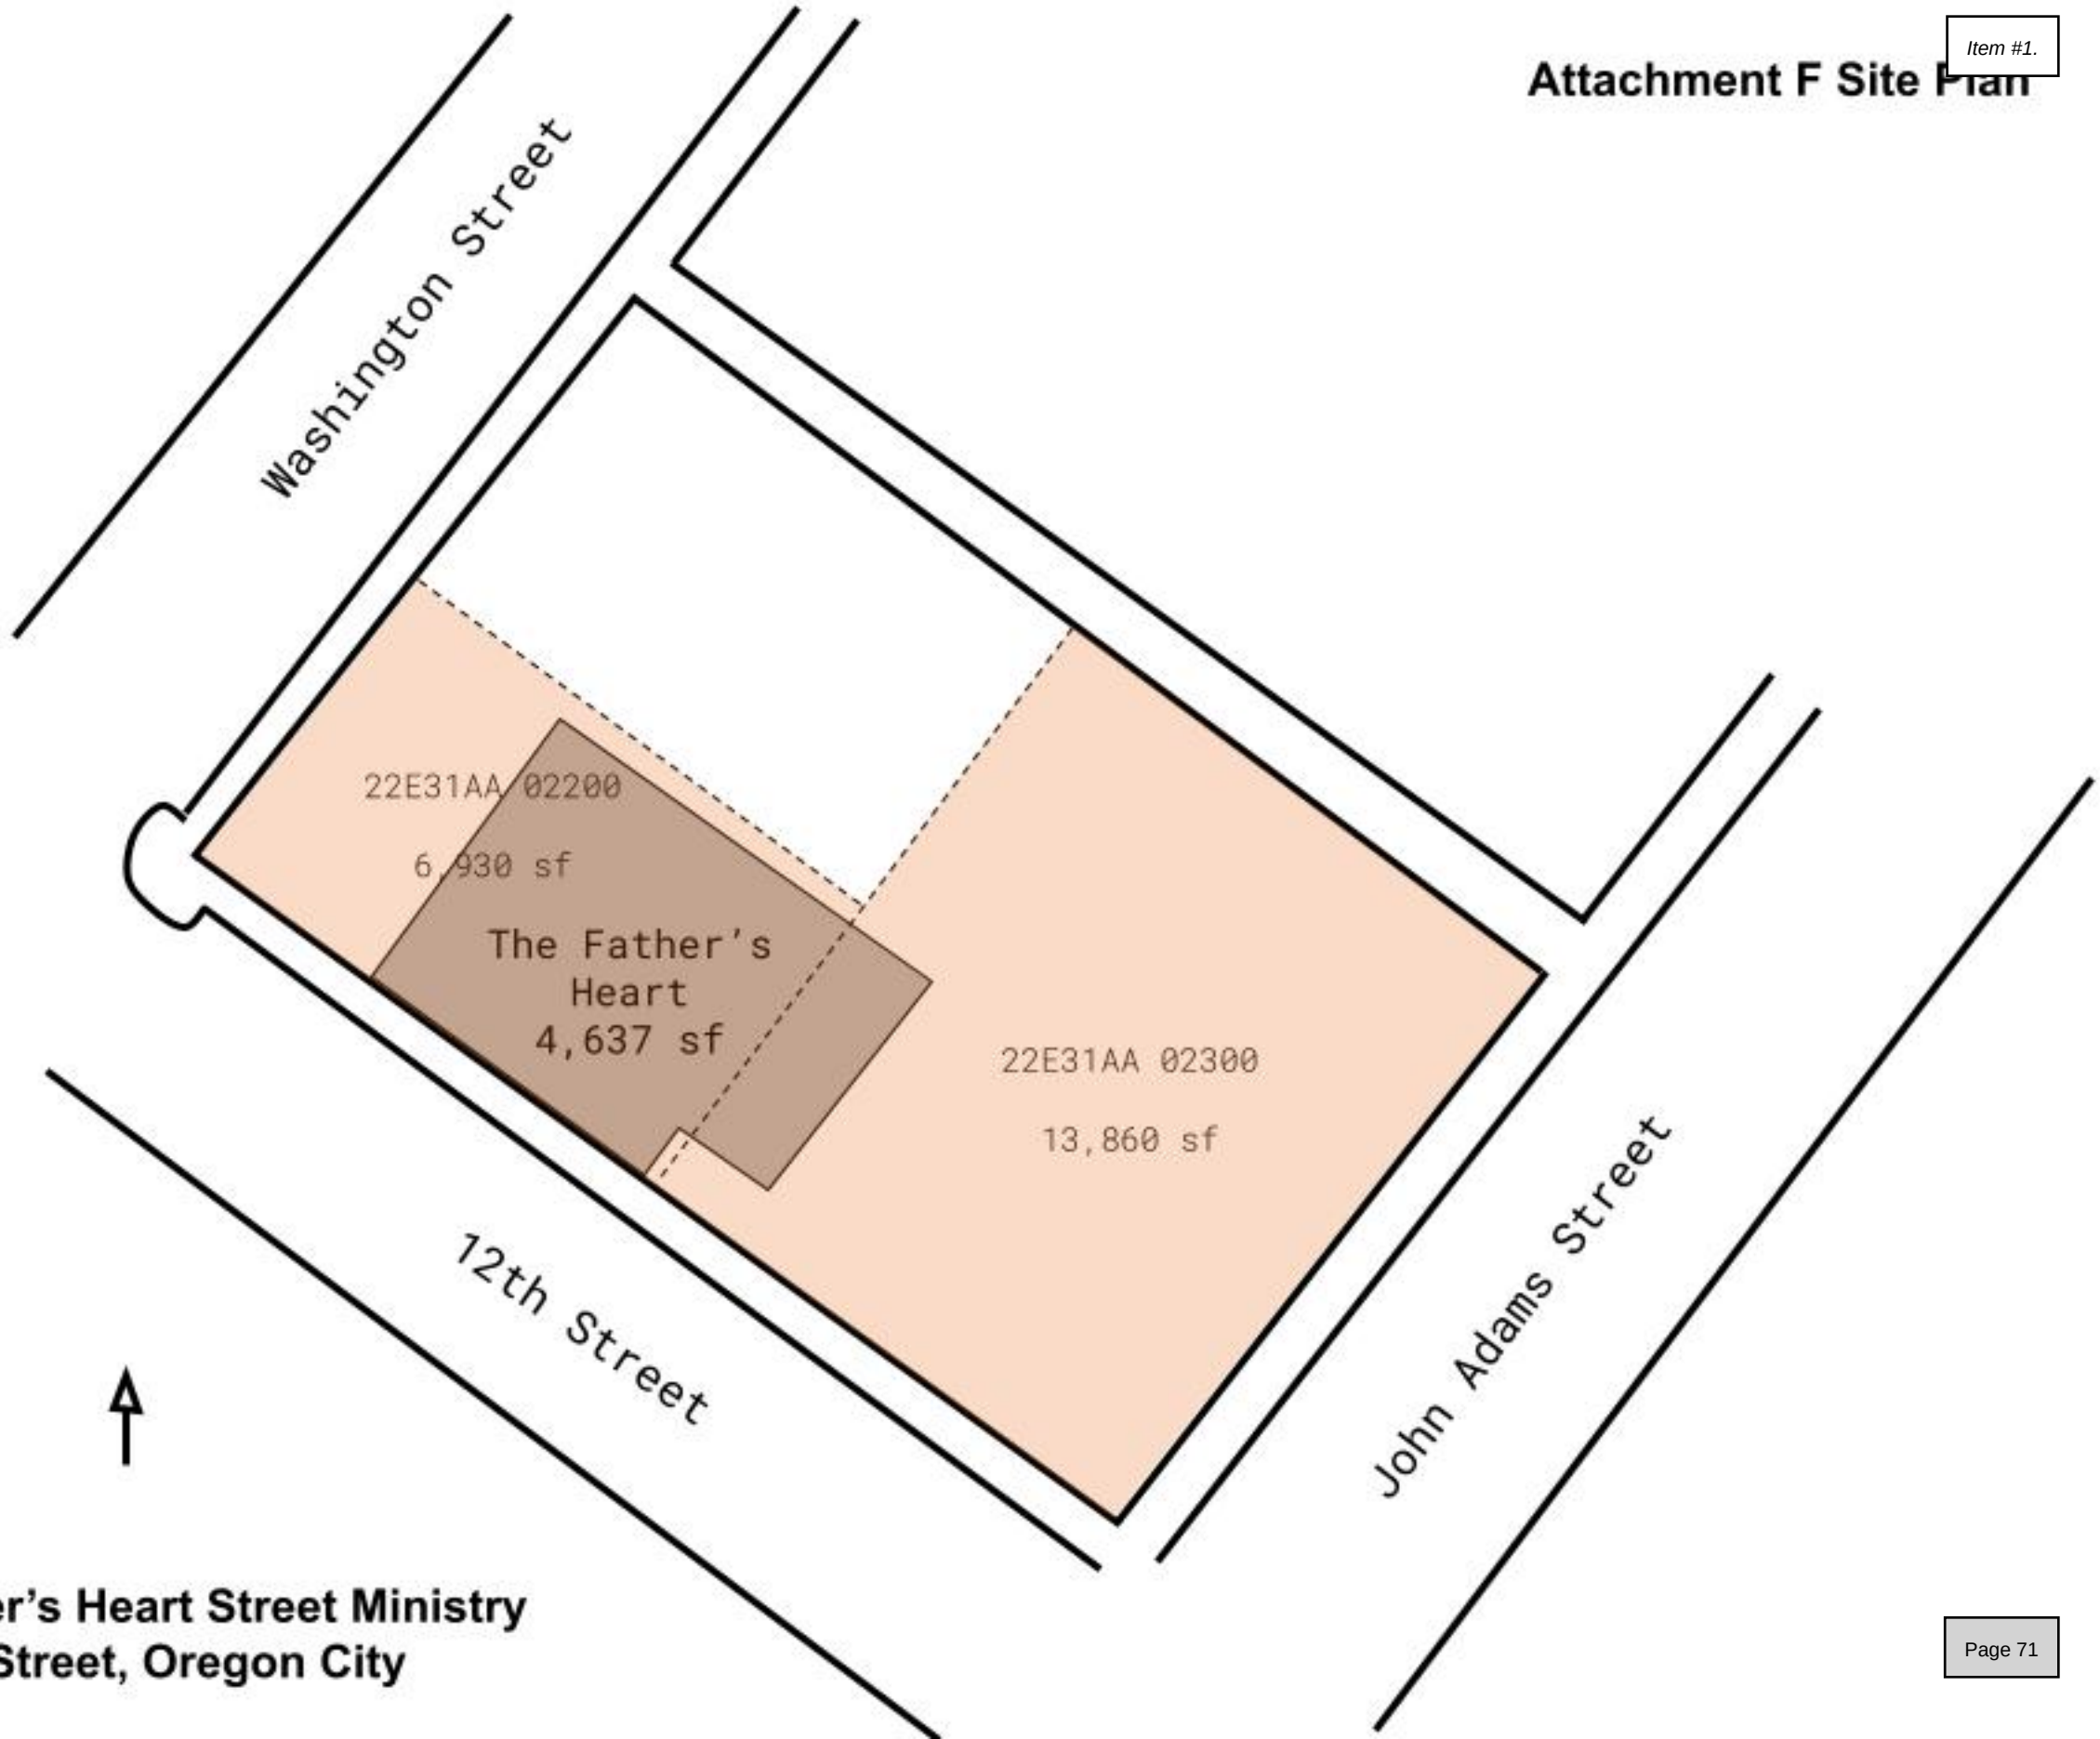
The Father's Heart Street Ministry

TFH is a private, non-profit, Christ based ministry focused on the needed resources of those living and waiting on the streets of Clackamas county for housing.

Resource Center Services for All Guests

All Services Provided with Safe Distancing and Sanitization Precautions

- **COVID 19 Phase 1 Guest Service Hours: 10am-2pm**
  - Take Out Meals and minimal Dine in Meals
  - Mail Pick up
  - Hygiene and Socks
  - Showers by appointment for Clackamas County residents



- **Computer Use by appointment only 2pm-3pm**

We exist to help those living on the streets with their immediate needed resources with respect, dignity and compassion. We know that when you are clothed, fed and showered that recovery, employment, housing, and stability are your next steps. Let us support you by listening, praying and guiding you. There is hope. You were never intended to live alone or unsheltered. God has a plan for your life and we are confident that His plan is good and best.

Vision Statement

"... to be the hands and feet of Jesus"... to be "His Hands Extended in Love" without regard to race, religion, age or gender.

Subject: Re July 12 public hearing /Father's Heart

Hi Diliana,
Thanks for the opportunity to offer our input re Father's Heart hearing.
As owner of a home quite near Father's Heart, I am firmly against Father's Heart maintaining and expanding their current services At Their Existing Location.
I want to be clear that I am not against social service, or specifically their work in the community. However, the current location of their facility is clearly inappropriate.
Personal and Property Safety is a big concern.
Since the FH has been a presence in the neighborhood, both I and my housemates have been both verbally assaulted and physically threatened While in Our Own Yard, by clients of FH who were also in our yard, and not at our invitation.
I have also seen the same clients remove personal items from both my front porch and my garden.
Regardless of the good intentions the founders and employees of FH, they are unable to control the behavior of their clients.
I am not sure how FH gained access for their facility in a residential neighborhood, but the idea of FH maintaining a presence in the current location, and especially expanding services is, in my opinion, not in the best interest of the clients, the facility, the city, or the neighborhood.
There has to be better options.
Thanks again for allowing me to express my opinion.
Sincerely,
A Concerned Neighbor

RE: My Father's Heart Similar Use Determination

To whom it may concern:

The following is a summary of a similar use determination made by the Community Development Director with respect to the "My Father's Heart" day shelter and ministry located at 603 `12th Street in Oregon City.

The initial conversation on the potential for locating the ministry at this location began on or about June 28, 2012 with an exchange of emails from Troy Kay and Teri Gant of My Father's Heart ministry, sent to Planner Pete Walter.

Staff requested information describing the proposed activities, prior use and other details pertaining to the ministry and the site. The site consists of 2 tax lots zoned MUC-1, Mixed Use Corridor 1 with street frontage on Washington, 12th and John Adams. The building was previously used by Clackamas County for a satellite Sheriff's office, and for the Clackamas County Sheriff's Department Community Corrections program.

Father's Heart described itself as a Non-Profit social service agency meeting the needs of no/low income individuals and families in Clackamas County. They are partially funded by Clackamas County and work specifically with Social Services, Community Solutions and Parole/Probation. They also work with Bridges To Change, CSAP, Iron Tribe and NARA, as well as the general public. They provide the following services:

- Clothing Exchange
- Hygiene Items
- Food Boxes (end of the month)
- Counseling
- Self Help Classes
- Computers
- Sack Lunches
- Possible Showers

On June 28, 2012, staff requested the following further information:

- What is the maximum number of people you expect to serve on a weekday / weekend?
- Do you anticipate any special parking needs / requirements?
- How does the sack lunch program function? Is it at a specific time every day or would people be able to come in at any time throughout the day and pick one up?

Staff received the following email response from Pastor Teri Gant:

"We plan on serving approx... 50 -60 people throughout the day, much like any other business.

OREGON CITY
Community Development – Planning
221 Molalla Ave. Suite 200 | Oregon City OR 97045
Ph (503) 722-3789 | Fax (503) 722-3880

There are already 3-4 handicap parking spaces, if needed, so no need for more. There is also an ADA restroom on sight if one should be needed (from previous Sheriff & social service).

We are not open to the public on weekends; closed Saturday thru Monday. We are open 4 days a week; Tuesday thru Friday.

The sack lunch program is usually afternoon. If anyone should need one. However, we are willing to change whatever is needed to comply."

Following discussions with the Deputy City Attorney Jennifer Bragar, with copies and acknowledgment by City Attorney Ed Sullivan, and after reviewing the information provided, the MUC-1 zoning and the permitted uses for the MUC-1 zone, staff's decision was made to treat the proposed use as a permitted use under OCMC 17.29.020.H and P.

H. Offices, including finance, insurance, real estate and government;
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning;

No further planning review was required since a change in use was not occurring. The determination above was made by the Community Development Director based upon the sufficiency of the information provided by the applicant.

RESOLUTION NO. 17-29

A RESOLUTION DECLARING AN EMERGENCY AND EXEMPTING THE FATHER'S HEART STREET MINISTRY AND THE OREGON CITY RETIREMENT CENTER FROM PLANNING CODE REQUIREMENTS ON A TEMPORARY BASIS

WHEREAS, Oregon City Municipal Code (OCMC) 2.52.020 defines "emergencies" to include "any man-made or natural event or circumstance causing or threatening loss of life, injury to person or property, human suffering…., and includes, but is not limited to, severe weather"; and

WHEREAS, OCMC 2.52.040(L) authorizes the City, in cases of emergency to "order such other measures as are necessary for the protection of life or property, or for the recovery from the emergency"; and

WHEREAS, the City has received information from Clackamas County health officials and existing homeless service providers that there is a need for additional shelter resources during cold weather events; and

WHEREAS, The Father's Heart Street Ministry (TFHSM) located at 603 12th Street and the Oregon City Retirement Center (OCRC) located at 515 10th Street, have available resources and space to provided needed shelter during the extremely cold weather (Exhibit A); and

WHEREAS, in conjunction with Clackamas County Housing and Social Services, TFHSM and OCRC are willing to provide shelter in the existing facilities, and is not requesting any monetary commitment or reimbursement from the City; and

WHEREAS, TFHSM facility would house up to 49 individuals from 6 p.m. to 7 a.m. each day that the outside temperature is 33 degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration during the duration of the emergency, from December 6, 2017 to March 15, 2017; and

WHEREAS, OCRC facility would house up to 16 individuals from 6 p.m. to 7 a.m. each day that the outside temperature is 33 degrees or below, including wind chill factor, as measured by the National Oceanic and Atmospheric Administration during the duration of the emergency, from December 6, 2017 to March 15, 2017; and

WHEREAS, the forecast identifies freezing weather; and

WHEREAS, the forecasted weather events are natural events that threaten the loss of life, injury to person or property or human suffering; and

WHEREAS, the City Commission is concerned that the expected conditions will require immediate shelter needs, response by city staff and other measures that are currently unanticipated.

NOW, THEREFORE, THE CITY OF OREGON CITY RESOLVES AS FOLLOWS:

Section 1. The Oregon City Commission hereby declares an emergency, limited to the Father's Heart Street Ministry (TFHSM) located at 603 12th Street and the Oregon City Retirement Center (OCRC) located at 515 10th Street, due to forecasted severe cold weather. Consistent with OCMC 2.52.070 and, by this resolution, the Commission declares an emergency until 7 a.m. Thursday, March 15, 2018.

Section 2. Based on the emergency identified above, the City Commission grants to TFHSM an exemption from the Oregon City Zoning Code for the sheltering of up to 49 individuals from 6 p.m. to 7 a.m. each day the temperature 33 degrees or below, including wind chill factor, for the duration of the emergency.

Based on the emergency identified above, the City Commission grants to OCRC an exemption from the Oregon City Zoning Code for the sheltering of up to 16 individuals from 6 p.m. to 7 a.m. each day the temperature 33 degrees or below, including wind chill factor, for the duration of the emergency.

Section 3. TFHSM and OCRC are authorized to temporarily provide shelter provided the facilities comply with the City of Oregon City and Clackamas Fire District #1 Temporary Emergency Policy (Exhibit B).

Section 4. City staff shall request, as necessary, any assistance required from other agencies, including the state of Oregon, Clackamas County, Clackamas County Fire District No. 1, the American Red Cross or other agencies.

Section 5. The City Commission adopts the following procedures to prevent, minimize, respond to or recover from the emergency consistent with OCMC 2.52.040:

X	L.	Order such other measures as are necessary for the protection of life or property, or for the recovery from the emergency.

Section 6. This resolution shall take effect immediately upon its adoption by the City Commission.

Approved and adopted at the City Commission held on the 6th day of December 2017.

WHEREAS, the forecasted weather events are natural events that threaten the loss of life, injury to person or property or human suffering; and

WHEREAS, the City Commission is concerned that the expected conditions will require immediate shelter needs, response by city staff and other measures that are currently unanticipated.

NOW, THEREFORE, THE CITY OF OREGON CITY RESOLVES AS FOLLOWS:

Section 1. The Oregon City Commission hereby declares an emergency, limited to the Father's Heart Street Ministry (TFHSM) located at 603 12th Street due to forecasted severe cold weather. Consistent with OCMC 2.52.070 and, by this resolution, the Commission declares an emergency from 6 p.m. on November 5th until 7 a.m. January 21, 2021.

Section 2. Based on the emergency identified above, the City Commission grants to TFHSM an exemption from the Oregon City Zoning Code for the sheltering of individuals from 6 p.m. to 7 a.m. each day the temperature 33 degrees or below, including wind chill factor, for the duration of the emergency, from November 5, 2020 to January 21, 2021. The number of individuals allowed shall not exceed the number of individuals allowed pursuant to the Oregon Health Authority under Section 4.

Section 3. TFHSM must be authorized to temporarily provide shelter provided the facilities comply with the City of Oregon City and Clackamas Fire District #1 Temporary Emergency Policy (Exhibit B).

Section 4. TFHSM must comply with COVID-19 regulations by the state and the Oregon Health Authority which will likely limit the number of individuals onsite.

Section 5. City staff shall request, as necessary, any assistance required from other agencies, including the state of Oregon, Clackamas County, Clackamas County Fire District No. 1, the American Red Cross or other agencies.

Section 6. The City Commission adopts the following procedures to prevent, minimize, respond to or recover from the emergency consistent with OCMC 2.52.040:

__X__	L.	Order such other measures as are necessary for the protection of life or property, or for the recovery from the emergency.

Section 6. This resolution shall take effect November 5th, 2020.

Approved and adopted at a regular meeting of the City Commission held on the 4th day of November 2020.

CITY OF OREGON CITY

Staff Report

625 Center Street
Oregon City, OR 97045
503-657-0891

To: Planning Commission **Agenda Date:** 07/12/2021

From: Christina Robertson- Gardiner Senior Planner

SUBJECT:

The North End Master Plan for the Former Rossman Landfill: GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

STAFF RECOMMENDATION:

Approval of GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030) with conditions.

EXECUTIVE SUMMARY:

Summit Development Group is seeking approval of a mixed-use development Master (General Development) Plan at the north end of the Oregon City Downtown. The plan envisions up to a 20-year road map to redevelop the former Rossman Landfill. The Master Plan identifies the long-term vision for redevelopment, including general layout and transportation improvements. All permitted uses in the Mixed-Use Downtown District are allowed, subject to the Master Plan.

This request does not authorize construction onsite, but rather sets the framework for implementation over multiple phases through future Type II development applications.

At the June 28, 202 Hearing, the applicant presented an overview of the Master Plan and identified several conditions that they were currently working with staff to refine and/ or further clarify and requested a continuance to July 12, 2021 to work on these items. Enclosed in this agenda is a memo from the applicant which provides updates to the outstanding items and suggested revisions to the conditions of approval. Staff has reviewed the requested revisions and has found that the applicant has provided sufficient findings to revise the conditions. Staff has incorporated those redline changes in the attached revised staff report.

There are two remaining items that Staff and the applicant are continuing to work though (Transportation vesting calculations and Geologic Hazard Code review of larger walls). Staff and the applicant intend to provide those revisions in a revised agenda which will be posted on Thursday, July 8, 2021.

BACKGROUND:

The North End Master Plan is a proposed to redevelop the former Rossman Landfill with a mixed-use development. This land-use application is a request to approve the General Development Plan (GDP). The GDP will be subsequently implemented through future detailed developed plans that will be guided by this Concept Master Plan. Therefore, this application does not include a request for approval of a Detailed Development Plan (DDP) or any construction at this time. Once approved, the GDP will guide future development within the master plan area to assure long-term regulatory certainty and a high level of predictability for future tenants and developers within the master plan area as well as the community. The GDP provides a detailed framework for development within the master plan area over the next 20 years; although, according to the applicant, build-out of the site is anticipated to occur over the next 5 years or so, though the conditions of approval allow for a longer implementation period. This proposed application includes requests for the following approvals:

- **Master Plan (GDP**): The overall long-term approach to development over 5-20 years.
    - Adjustments to the following development standards:
    - OCMC Chapter 16.12.030 - Blocks—Width
    - OCMC Chapter 17.54.100.2- Retaining Walls
    - OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)
    - OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways

- **Conditional Use:** Request to approve Approval of a Conditional Use for tenant size (E2, S2, C2) and conditional use drive-thru locations (N1, E1,C1,S1,E5)
- **Flood Management Overlay District**: General review for feasibility of development approach.
- **Geologic Hazards Overlay District:** General review for feasibility of development approach.

The applicant, Summit Development Group, seeks approval of The North End Master Plan, a mixed-use GDP to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the master plan. According to the applicant, the plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown but serve as a primary gateway to the north end of the Oregon City Downtown. The master plan features treelined streets, landscaped open spaces, offices, and residences overlooking public plazas and open spaces and will feature a wide variety of shopping, dining, and entertainment spaces. Final building designs will be reviewed by the City and the public in subsequent Type I or II Detailed Development Review (DDP).

There is some flexibility built into the framework approach to the Master Plan (and its conditions) relating to the size and locations of the buildings. DDP applications that vary from the initial approval, as conditioned, will be sent back to the Planning Commission to show compliance to or receive an amendment to the adopted Master Plan.

OPTIONS:

1. Approval with Conditions of GLUA 21-000016
2. Denial of GLUA 21-000016
3. Continue GLUA 21-000016 to July 27, 2021 Planning Commission Hearing

REQUEST: Summit Development Group is seeking approval of a mixed-use development Master Plan at the north end of the Oregon City Downtown. The plan envisions a 20-year road map to redevelop the former Rossman Landfill. No concurrent development applications are being proposed with this application. If the Master Plan is approved, future development applications will be reviewed through the separate Detailed Development Plan review process found in OCMC 17.65 Master Plans and Planned Unit Developments

REVIEWER: Christina Robertson-Gardiner AICP, Senior Planner
Sang Pau, Development Engineering Associate

RECOMMENDATION: Approval with Conditions.

PROCESS: Type III decisions involve the greatest amount of discretion and evaluation of subjective approval standards, yet are not required to be heard by the city commission, except upon appeal. Applications evaluated through this process include conditional use permits. The process for these land use decisions is controlled by ORS 197.763. Notice of the application and the planning commission hearing is published and mailed to the applicant, recognized neighborhood association and property owners within three hundred feet of the subject property. Notice must be issued at least twenty days pre-hearing, and the staff report must be available at least seven days pre-hearing. At the evidentiary hearing held before the planning commission, all issues are addressed. The decision is final unless appealed and description of the requirements for perfecting an appeal. The decision of the planning commission is appealable to the city commission within fourteen days of the issuance of the final

decision. The city commission hearing on appeal is on the record and no new evidence shall be allowed. Only those persons or a city-recognized neighborhood association who have participated either orally or in writing have standing to appeal the decision of the planning commission. Grounds for appeal are limited to those issues raised either orally or in writing before the close of the public record. A city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal. The city commission decision on appeal from the planning commission is the city's final decision and is appealable to the Land Use Board of Appeals (LUBA) within twenty-one days of when it becomes final.

Conditions of Approval

Planning File GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

(P) = Verify that condition of approval has been met with the Planning Division.
(DS) = Verify that condition of approval has been met with the Development Services Division.
(B) = Verify that condition of approval has been met with the Building Division.
(F) = Verify that condition of approval has been met with Clackamas Fire Department.

This approval sets a framework approach to implementation of the submitted plan through future staff level (Type II) review of development applications over multiple phases as directed by the applicant. Each development will be reviewed for approval to the adopted Master Plan and the 2021 Municipal Code over the life of the Master Plan, unless amended.

This approach allows staff, the applicant, and the public a clear road map for what is required, and more importantly, clearly specifies the range of development allowed and the level of review needed for design revisions and transportation improvements. All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan and architectural standards are based on the adopted code. Illustrations, 3D renderings, building sections, and demonstration photos found in the submitted Master Plan application are considered background documentation and are not to be used as future adoption criteria. Additions to or removal of Permitted Uses listed in the Applicant's submittal shall not in themselves constitute a need for an amendment to the Master Plan unless the addition or revision makes changes to the master plan that triggers a need for an amendment through OCMC 17.65.080 Amendments to Plans.

The following Conditions of Approval reflect the suggested revisions submitted in the Applicant's July 2, 2021 Memo. Staff report findings will be updated to reflect the final adopted conditions of approval prior to Planning Commission approval of this application.

1. Future development shall comply with the conditional approval of Planning file GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030) and any amendments within this application. *(P & DS)*
2. The Master Plan approval is a land-use action that approves the general Master Plan layout and development approach based on the requirements set forth in OCMC 17.65 Master Plans and implemented through conditions of approval that are proportional to the proposal. Development onsite requires a public Detailed Development review process to analyze the proposed construction against the criteria in the 2021 Oregon City Municipal Code prior to

construction. The applicant may choose to enter into agreements with funding entities that may place additional requirements on the development. It is up to the applicant to determine if those requirements are consistent with the Conditions of Approval of the adopted Master Plan and submit a Master Plan amendment if needed. (P)

3. All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan. Additions to or removal of uses listed in the Applicant's submittal shall not in themselves constitute a need for an amendment to the Master Plan unless the addition or revision triggers a need for an amendment through a Condition of Approval or OCMC 17.65.080 Amendments to Plans.
4. Unless subsequently amended by the Planning Commission, this Master Plan shall control development on the site for 20 years from the date of the initial adoption of this General Development Plan. Land within the Master Plan is subject to compliance despite any future lot line adjustments or land divisions (P)
5. For each Detailed Development Plan application, the applicant may choose to utilize the 2021 Oregon City Municipal Development Code as adopted at the time of the Master Plan submittal or the Development Code that is applicable at the time a Detailed Development Plan (DDP) is applied for. (P)
6. The proposed development will be reviewed under the adopted Oregon City Municipal Code at the time of each DDP review, along with all applicable conditions. Except for the consolidated Master Plan document that is approved with the adoption of this General Development Plan, Illustrations, 3D renderings, building sections, and demonstration photos found in the submitted Master Plan application shall be considered background documentation and are not to be used as future adoption criteria. (P)
7. Except as listed below approved by the Planning Commission, the applicant is required to show compliance with OCMC 17.65.80 - Amendments to approved plans and all applicable conditions of approval at the time of each DDP application to ensure the proposal is reviewed under the correct review process.
    a. The GDP for the North End Master Plan is a concept plan and is not intended to fix the location of structures on-site, provided they meet all other applicable codes and conditions of approval.
    b. All uses not expressly prohibited within the Mixed-Use Downtown District shall continue to be allowed, provided those uses meet all other applicable code requirements.
    c. At full buildout, on-site parking shall be within the code minimum and maximum requirements.
    d. Variations in parking count prior to full buildout are governed by Condition No. 16.
    e. At full buildout, the site shall have between 500 and 600 residential units.
    f. Building areas can be combined and/or configured in any manner, provided they meet all other applicable codes and conditions of approval. At full buildout, the total building area shall be within 25% of the maximum square footage provided within the GDP and shall continue to meet the minimum FAR requirements and not exceed the maximum approved trip generation. (P)
8. The Confederated Tribes of the Umatilla Indian Reservation submitted comments relating to the need for a cultural survey for the site. A cultural survey is not a requirement found in the Municipal Code. However, the applicant is required to meet applicable state and federal laws with respect to above and below ground cultural resources. (P)
9. The applicant has indicated that all of the residential development will be part of a mixed-use development and not subject to the minimum residential density requirement of the MUD District. If the applicant chooses to build stand-alone residential, the residential density of a minimum net density of 17.4 units per acre applies to the site. (P)

10. The proposed buildings needing a Conditional Use for tenant size (E2, S2, C2) are approved for implementation through the DDP process with the following conditions:
    a. Building E2 is allowed to be used for a single tenant.
    b. Buildings S2 and C2 are subject to the following limitation:
        i. No single retail tenant may occupy more than 85% of leasable square footage.
        ii. This single-tenant percentage limitation does not apply to uses that are otherwise permitted outright in the underlying zone.
11. The proposed conditional use drive-thru locations (N1, E1,C1,S1,E5) are approved for implementation through the DDP process with the following conditions:
    a. At the time of the DDP, drive-thru location N1 shall be redesigned to meet OCMC 17.62 site requirements, including but not limited to ensuring direct pedestrian access from a public or private street that does not cross parking or drive aisles. This redesign may occur as a Type II DDP review if implemented as directed above and will not require a Type III amendment review. Designs that do not meet OCMC 17.62 site requirements will be reviewed as a Master Plan Amendment. All drive-thru locations not identified in the Master Plan approval shall be reviewed through a Type III Master Plan amendment process.
    b. Building E1,C1, S1, E5 are approved for a CU drive-thru and will be reviewed in accordance with the Municipal Code. (P)
12. The following adjustments to the Municipal Code are approved and subject to the conditions found in the Notice of Decision.
    a. OCMC Chapter 16.12.030 - Blocks—Width
        i. Subject to the proposed street and pedestrian connections layout found on the site circulation diagram of page 64 of the application.
    b. OCMC Chapter 17.54.100.2- Retaining Walls
        i. Retaining walls are allowed to exceed heigh limits in areas identified in an exhibit the applicant will submit prior to the June 28, 2021 Planning Commission Hearing with proportional mitigation included.
    c. OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)
        i. Building frontage percentages and location on public or private streets shall meet at a minimum the footprint layout found on the District Plan Map found on page 61 of the application
    d. OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways
        i. Elevated stairways are allowed within the North District.

13. The following items, shown in the submitted Master Plan and design guidelines, shall be implemented through the applicable DDP applications. Mitigation items not included in the list below, not addressed in other conditions of approval, or not required by OCMC criteria, either at the time this Master Plan was submitted or in place at the time of DDP review are not required.

    a. Construction of open space as demonstrated in the figure identified on page 98 of the submitted Master Plan. Open spaces that vary more than 25% in square footage than proposed within the GDP shall be reviewed at a Type III level. All open spaces shall use a combination of hard and soft scaping.
    b. A minimum of 40% of the Central Square plaza area shall consist of a special paving material, which can include brick, precast concrete, pavers, or stone. A maximum of 50% of the plaza area can be concrete paving. A minimum of 5,000 square feet of open space shall be provided that is unimpeded by planting or site elements to create a central gathering space. The central square shall not eligible for any multi-family open space calculation.

c. A minimum of 2 public art or interpretive elements shall be installed in each District (North, South, East, West) and be at least three cubic feet or thirty square feet in size.
d. There shall be a differentiation of private street lighting and parking lot lighting design. Street lighting shall utilize decorated banners or flower baskets on at least 50% of the light standards.
e. Pedestrian wayfinding signage shall be installed in all four districts directing pedestrians to offsite amenities such as End of the Oregon Trail Museum, Amtrak Station, Main Street, and Willamette River.
f. No more than 50% of the proposed multi-family square footage can be constructed and Certificates of Occupancy given without full construction of the proposed Central Square Plaza.
g. The pedestrian connection to the End of The Oregon Trail Museum shall be constructed by the date of final occupancy of C2 within the South District obtain. The record demonstrates that there are multiple feasible alignments for that connection and the final design shall be reviewed through the Type II DDP process as long as it is consistent with the intent of providing an ADA access between the development and the EOT in the same general location as depicted in the adopted Master Plan. The pedestrian connection may utilize portions of city property at the End of the Oregon Trail Museum if allowed by a future public/private agreement and/or with an abutting private property.
h. The Primary east-west Pedestrian way shall have the following elements:
    i. Trees located at 30ft on-center.
    ii. Adjacent to any parking lot area, a 4ft (at maturity) evergreen hedge shall be provided. The design shall allow for periodic breaks in the hedge to provide pedestrian access to the walkway.
    iii. Pedestrian Benches shall be located every 90ft adjacent to trees and planting areas.
    iv. All-weather cover shall be provided through pavilion and trellis elements. A minimum of (2) elements, with a minimum size of 500 sqft, shall be located along the pedestrian way.

i. A minimum of 4 raised pedestrian crossings or tabletop intersections shall be included on-site at final buildout. (P)

14. Prior to receiving approval for any building with a height greater than 45 feet, the applicant must show that the building is not located on a parcel or lot that is closer than 500 feet from the End of the Oregon Trial Museum (EOT). (P)
15. Private streets shall be designed and constructed to the standards required by the city, but those standards may be different than would apply to public streets. The street system, as proposed and conditioned in the Master Plan, can be considered street frontage for the purpose of siting standards in OCMC 17.62 Site Plan and Design Review. Building setbacks are to be taken from the back of the sidewalk (or curb if no sidewalk) along private streets. Small revisions to the street system can be approved through the DDP process if they substantially comply with the Master Plan.(P/DS)
16. The applicant has proposed a sitewide parking approach looking at the sum total of development proposed and parking provided. The parking ratios proposed in the Master Plan (GDP) fall within the minimum and maximum parking standards found in OCMC 17.52.020. At the time of each DDP submittal, the applicant is responsible to demonstrate how they are implementing parking requirements based on the proposed DDP uses. At no time shall the site be more than 40% above parking maximums or 15% below parking minimums per 17.52.020 - Number of automobile spaces required. With the following modifications:

a. Structured parking may be completed and used before the associated use is constructed and is not subject to the limitations above. (P)

17. The Floor Area Ratio for this Master Plan is calculated based on the entire site area subject to the GDP. Each individual phase may or may not meet the minimum requirement but as part of an approved Master Plan. A phase will be permitted to develop below the required minimum as long as each phase demonstrates that the site will meet the minimum FAR requirement at full buildout. (P)
18. The developer for future DDPs shall construct all sidewalks along the frontage of the proposed development, existing and new, ADA compliant per City Standards. (DS)
19. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the city. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards. (DS)
20. Prior to the City construction plan approval or issuance of a grading or building permit associated with the proposed development, the property and building owners shall provide written acknowledgment and statement to assume responsibility for risks associated with development on land with suspected or known contamination. The applicant shall submit a final engineering report to DEQ, the City's Building Official, and the City's Public Works Engineering Development Services for review and approval. The Engineering Investigation Report shall document the following:
    a. Details, as necessary, to address DEQ requirements relative to increased leachate and landfill gas migration due to consolidation of the landfill, penetrating the landfill cap (including alternatives that allow landscaping to address water quality concerns), and limiting sub-landfill aquifer contamination via pile penetration as may be applicable.
    b. Recommendations to minimize risks of negative impacts for proposed building structure, site grading, cuts and fill, foundations, seismic, utility infrastructure including connections between the underground utilities and the building structure, methane gas migration and accumulation including consideration of the gas migration through utility trenches and accumulation in utility infrastructure such as utility pipes, manholes, light pole bases, and junction boxes. (DS)
21. Each individual Detailed Development Plan (DDP) within the master plan area shall provide updated engineered drainage plan(s), drainage report(s), and design flow calculation report(s) stamped and signed by a licensed engineer addressing all items from the Section 9 of the Public Works Stormwater and Grading Design Standards. (DS)
22. Each individual DDP within the master plan area shall include with their drainage report a written modification request for the use of underground detention storage systems per Section 1.6 of the Oregon City Stormwater Grading and Design Standards where use of underground detention storage systems is proposed. (DS)
23. All stormwater facilities proposed to serve the development shall be private except the public stormwater facilities that receive stormwater runoff from the public right-of-way of Washington Street and Abernethy Road. Future DDP developers and property owner(s) shall execute an agreement providing maintenance of and giving Oregon City access to, privately-owned stormwater management facilities and pay associated recording fees. The agreement shall include a site plan identifying all privately-owned stormwater management facilities and an operation and maintenance plan for each type of stormwater facility in accordance with the Public Works Stormwater and Grading Design Standards. The agreement shall run with the land and be applicable to subsequent property owners. The agreement shall be reviewed and accepted by the City prior to occupancy of the associate building(s). (DS)

24. The developer for future DDPs shall obtain a 1200-C (NPDES) permit from the Oregon Department of Environmental Quality (DEQ) for construction activities one acre or greater prior to receiving a permit and beginning construction. (DS)
25. For construction activities requiring Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits, no work will be authorized until the city has received a copy of Oregon State DSL and/or USACE permit(s) or written documentation that no approval from the aforementioned agencies is needed. (DS)
26. For construction activities requiring Oregon State Department of Fish and Wildlife (ODFW) permits, no work will be authorized until the city has received a copy of the ODFW permit or written documentation that no approval from the aforementioned agencies is needed. (DS)
27. The developer for future DDPs shall provide an engineered grading plan prepared by a professional engineer in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards. (DS)
28. The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. The City will not provide construction plan approval until applicable Oregon Department of Transportation and Clackamas County approvals or permits are obtained. (DS)
29. The developer for future DDPs shall submit or address all items in section 16.12.014 of the Oregon City Municipal Code based on the timing requirements contained therein and as deemed applicable by the City. (DS)
30. To fulfill TSP project S5, the development shall provide a 12-foot-wide shared-use path running along the west side of the north-south road (proposed as Market St) which connects Washington Street and Abernethy Road. To fulfill TSP project S44, the development shall provide a 12-foot-wide shared-use path that extends from the “End of the Oregon Trail Interpretive Center” and connects to a north-south road running through the development site. The surface of all shared-use paths shall be paved with all-weather materials as approved by the City. (DS)
31. Roadway improvements, including street widening, frontage improvements and right-of-way dedication along Abernethy Road shall be per requirements of the jurisdiction that has authority over Abernethy Road at the time of construction plan approval. The future developer of DDPs shall provide a 12-foot-wide shared-use path along the site’s frontage on the north side of Abernethy Road to fulfill TSP project S2 and the path may serve to fulfill the sidewalk required on the north side of Abernethy Road if approved by the jurisdiction that has authority over Abernethy Road at the time of construction plan approval. (DS)
32. All roads required to be constructed by the developer, public and private, shall have 12-foot-wide vehicular lanes unless otherwise approved by the City Engineer. (DS)
33. Street Improvements, including street widening, frontage improvements, and right-of-way dedication along Redland Road shall be per the requirements of the Oregon Department of Transportation requirements. (DS)
34. The developer of future DDPs shall provide approved plans with applicable street signs for review by the City prior to installation. All traffic control devices, such as signage, flashing lights/beacons, and traffic signals shall be designed using the MUTCD. (DS)
35. For all new site driveways and intersections that require new traffic signals, the developer of future DDPs shall provide a Traffic Signal Plan conforming to the requirements of the road authority.
36. The developer of future DDPs shall provide street lighting plans with photometric information for all internal roads, Washington Street, Abernethy Road, and Redland Road. Street lighting shall conform with all City standards, specifications, codes, and policies and be approved by Portland General Electric (PGE) prior to receiving a permit and beginning construction. (DS)
37. If it is determined through individual DDP review that public transit improvements are needed, the applicant of that DDP shall provide rider accommodations for transit and/or shuttle rider

facilities (such as benches and structured cover consistent with pedestrian amenities elsewhere on site) along Washington Street and Abernethy Road and on at the intersection of the new north-south road connecting Washington Street and Abernethy Road (Market Street) and 4th Road. (P,DS)

38. Pavement cuts or other improvements made in a City street or alley shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. (DS)
39. The applicant shall submit a request to the Building Division to receive approval for new any new public or private street names and addresses onsite; only approved street names shall be included on the final construction plans. (B)
40. The developer for future DDPs shall provide pedestrian accessways with pedestrian-scale lighting with a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. (DS)
41. The developer for future DDPs shall provide public pedestrian accessways that are Americans with Disabilities Act (ADA) compliant. (DS)
42. All public accessway surfaces shall be paved with all-weather materials as approved by the City. (DS)
43. The future developer of DDPs shall provide a covenant for 24-hour public access over the pedestrian and bicycle accessways and shared use paths and be responsible for the future maintenance and liability. (DS)
44. The developer for future DDPs shall provide a 10-foot-wide public utility easement (PUE) along all property lines fronting existing or proposed public right-of-ways or provide, at a minimum, 10-foot-wide clear space between buildings and the public sidewalk. The developer for future DDPs shall also provide a 10-foot-wide public utility easement (PUE) adjacent the north-south public access road running through the development site, which extends from the Home Depot site and connects to Abernethy Road. In the event that the provision of a public utility easement would create a conflict with achieving compliance with other city codes, the location and width may be adjusted by the City Engineer. In such cases, the applicant shall obtain written acceptance from all utilities for the location and width proposed for said public utility easement. (DS)
45. The developer for future DDPs shall provide public utility easements for the public sanitary sewer mains and water main identified by subsequent conditions of approval. (DS)
46. The future developer of DDP's shall provide an easement over all roads proposed to run through the development site and provide a covenant over them for 24-hour public access and be responsible for their future maintenance and liability. (DS)
47. Improvements constructed by the future developer of DDPs shall be constructed under the inspection and approval of the City. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. The applicant's project engineer also shall inspect the construction. Inspection fees are set by City resolution; see section 16.12.014 of this report. (DS)
48. Underground utilities, waterlines, sanitary sewers, and storm drains proposed to be installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as storm, water, and sanitary sewer, shall be placed beyond the ten-foot-wide public utility easement within private property. (DS)
49. The future developer of DDPs shall provide As-built drawings to be filed with the City Engineer within 90 days of completing improvements. (DS)
50. Permitted hours of construction shall be set forth by the City Engineer in the pre-construction meeting. (DS)
51. All sewer mains within the development site shall be privately owned and maintained except for the first fifty feet of all sanitary sewer mains connecting to the Tri-City sewer trunk which

shall be Oregon City sanitary sewer mains and terminate at an Oregon City sanitary sewer manhole. The developer shall provide capacity calculations to show that the proposed sanitary sewer system can support the full buildout of the development site. (DS)

52. The first phase of the GDP shall extend the existing public water line located within the street serving The Home Depot and loop it through the site to the existing water main within Abernethy Road, and this water main shall be public. The public main shall be protected from potential landfill contaminants in a manner approved by Oregon City. All other mains connecting to this water main shall be private. The developer shall provide capacity calculations to show that the proposed water system can support the full buildout of the development site. The future developer of DDPs shall upsize all water mains along the frontage of Abernethy Road to be 12-inch in diameter. (DS)
53. The future developer of DDPs shall place all new franchise utilities underground. The future developer of DDPs shall relocate all existing overhead utilities adjacent to the property frontage underground unless deemed infeasible by the City and franchise utilities. (DS)
54. Public improvements associated with each DDP are required to be completed and accepted by the City Engineer. Public improvements shall be constructed according to approved final engineering plans prior to occupancy. (DS)
55. The property owner(s) shall sign a Restrictive Covenant Non-Remonstrance Agreement for the purpose of making storm sewer, sanitary sewer, water, or street improvements in the future that benefit the property, and all fees associated with processing and recording the Non-Remonstrance Agreement shall be paid prior to occupancy. (DS)
56. Prior to City construction plan approval or issuance of a grading or building permit associated with the proposed development: The applicant shall submit a final geotechnical engineering report to DEQ, the City's Building Official, and the City's Public Works Engineering Development Services for review and approval. The final Geotechnical Engineering Investigation Report shall document the following:
    a. A comprehensive subsurface investigation,
    b. Settlement calculations and assumed material properties,
    c. Foundation recommendations and capacity calculations,
    d. Pavement and utility construction and maintenance recommendations,
    e. Floor slab and other flat concrete construction and maintenance recommendations,
    f. Surcharge recommendations including dimension and time criteria,
    g. Recommendations for applicable safety measures needed to minimize the risks of excessive differential building settlement, uneven settlements of the non-building areas affecting surface drainage, building and site settlements affecting gravity flow sewers, and methane accumulation and migration.
    h. Recommendations for development to be in compliance with applicable International Building Codes and Oregon Structural Specialty Code.
    i. Evaluation of impacts to the Redland Road and Highway 213 embankment from the site development and appropriate recommendations to mitigate for impacts. The City's geotechnical engineer shall provide a peer review of the final Geotechnical Engineering Report at the applicant's cost. The applicant shall have all comments and requirements from DEQ and the City addressed in the final report as applicable. (DS)
57. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. (DS)
58. Future Detailed Development Plans shall provide scaled drawings showing cross-sections in locations with the greatest proposed cuts and/or fill and provide the approximate volume of cuts and fills. (DS)
59. The applicant shall provide a hydrology report that addresses the effect of the stormwater outfall upon the local watershed. The future developer of DDPs shall a hydrology report to

address the potential impact of the proposed development on wetlands, water resources, and groundwater supply. (DS)

60. The developer's geotechnical engineer shall respond to written comments provided by the City's peer reviewer, and the City's peer reviewer shall agree with the geotechnical evaluation/investigation report submitted for the development prior to issuance of the Building permit. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. (DS)
61. Grading, drainage improvements, or other land disturbances shall be restricted to between May 1 and October 31, unless extended by the City Engineer consistent with 17.44. The developer shall submit a work schedule that has been reviewed and approved by a licensed geotechnical engineer with regard to the viability of completing necessary project goals within the aforementioned time period. Erosion control measures shall be installed and functional prior any soil disturbance. Temporary protective fencing shall be established adjacent to all trees and vegetation designated for protection which are within five feet of a construction area prior to any soil disturbance. (DS)
62. The detailed development plans shall include final grading plans and sections showing proposed cuts and fill relative to the existing ground and landfill. Settlement and slope stability evaluation is required for all cuts and fills. Settlement analysis shall demonstrate surcharge loads will provide the satisfactory long-term performance of proposed streets and infrastructure. (DS)
63. Within Geologic Hazard areas identified by Oregon City, future detailed development plans shall include terraced slopes or retaining walls for slopes or walls greater than seven vertical feet. The terraced slope or wall shall have a maximum vertical height of five feet and a minimum vegetated width of 3 feet between. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. (DS)
64. The developer's geotechnical engineer shall certify, during construction, that the structural fill used on the site meets the provided design specifications and is placed as designed. The certification shall be in writing and shall be signed and stamped by a licensed engineer in the State of Oregon. (DS)
65. Construction of retaining walls over 4 feet in height and terraced walls which create total cut or fill greater than 4 feet in height shall be designed by a licensed engineer qualified for the design of such walls. The developer shall submit engineered stamped calculations for proposed retaining walls showing compliance with applicable building codes. The developer shall provide sliding, overturning, bearing capacity, and global stability design calculation for free-standing retaining walls over 4 feet in height in accordance with the Oregon Structural Specialty Code. (DS)
66. The developer shall retain the services of a licensed geotechnical engineer to conduct inspections prior to and during construction activities that involve the removal or addition of vegetation, building structures, retaining walls, or earth. The geotechnical engineer shall provide reports to confirm that standards from Section 17.44.100 are met. The geotechnical engineer record shall observe all excavations and geologic conditions exposed during construction and document that the conditions are consistent with the conditions assumed in the geotechnical hazard evaluation. If the conditions are different than assumed in the preliminary report, the effect of the new observations shall be evaluated and mitigation provided as required. Additional geologic hazards review may be required at the City's discretion. (DS)
67. The placement of existing utilities underground within areas of landfill and geologic hazards shall be reviewed and approved by the City. (DS)
68. The developer's geotechnical consultant shall review the finalized erosion control plan, construction plans, and stormwater report associated with the development and certify that they are consistent with the conclusions and recommendations stated in their geologic

assessment and geotechnical report. The city's geotechnical consultant shall review the finalized erosion control plan, construction plans and stormwater report and the cost of review shall be paid by the developer. (DS)

69. Areas identified as geologic hazard by the city shall have existing vegetative cover maintained to the maximum extent practicable. (DS)
70. The developer shall submit a waiver of damages, indemnity and hold harmless agreement completed by all owners of property disturbed by the development. (DS)
71. Conditions contained in this report shall not relieve the developer of the duty to comply with any other provision of law. In the case of a conflict, the more restrictive regulation shall apply. (DS)
72. A Performance Guarantee which is equal to 120% of the estimated cost for construction of public improvements as shown in city approved construction plans shall be provided prior to receiving a permit and beginning construction. The estimated costs shall be supported by a verified engineering estimate and approved by the city engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The guarantee shall remain in effect until the construction of all required improvements are completed and accepted by the city. (DS)
73. Maintenance Guarantee equal to fifteen percent of the estimated cost for construction of public improvements as shown in city approved construction plans shall be provided prior to occupancy. The estimated costs shall be supported by a verified engineering estimate approved by the City Engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The maintenance guarantee shall warrant to the City of Oregon City that construction of public improvements will remain, for a period of twenty-four (24) months from the date of acceptance, free from defects in materials and workmanship. (DS)
74. Public services for transportation, fire, sanitary waste disposal and storm-water disposal that are needed at the time of each DDP, shall be made capable by the time each phase of the development is completed. (DS)
75. All on-street parking on private streets with public access easement will be available to the general public. As with all public streets, time restrictions can be added by the city, as needed, through coordination with Oregon City Public Works Department. (P/DS).
76. The applicant has submitted a Master Plan development approach that appears to meet the Flood Overlay District's criteria; however, future DDPs affected by the Flood Overlay District are required to apply for separate DDP submittals to show that each application can comply individually with the Flood Overlay District requirements, including demonstrating that the site can show balanced cut and fill within each application.
77. Areas located in the Natural Resource Overlay District not subject to the Type I exemption process or a Type II NROD boundary verification will require review through a future Type II or Type III Natural Resource Review process when development is proposed that impacts those areas consistent with the provisions of OCMC 17.49 at or prior to the associated DDP review. (P)
78. The applicant has proposed a private street (D street) that appears to be more of a drive aisle for the adjacent parking lot and does not meet the intent of the code. OCMC 17.62.050 (B) Vehicle Access and Connectivity requires "Parking areas shall be located behind the building façade that is closest to the street, below buildings, or on one or both sides of buildings". The applicant has not requested a Master Plan amendment for D Street as part of this Master Plan; therefore, D Street shall be redesigned to meet the design intent of the proposed private Internal Road (with or without fire access) found on page 93 of the applicant's submittal. A sidewalk and street trees shall be included on both sides of D Street. Angled parking or a one-way street could be allowed if deemed safe by the Assistant City Engineer at the time of DDP review. (P)

79. The applicant shall comply with the following applicable Transportation Conditions at each DDP submittal:
    a. The applicant will be required to provide supplemental transportation analyses for each phase of the development that demonstrate the ability of the transportation system to accommodate that phase of the development. In connection with the first detailed development plan submitted by the applicant, the applicant shall obtain new AM peak, PM peak, and mid-day Saturday traffic counts and conduct new operational analyses for the following intersections:
        i. OR99E/Dunes Drive
        ii. Washington Street/Home Depot – Site Access A
        iii. OR213/Redland Road
        iv. Redland Road/Holcomb Boulevard/Abernethy Road
    b. Absent meaningful evidence to the contrary, the new counts and new analyses submitted in support of the detailed development will be presumed to supersede the traffic volume estimates and analyses submitted in the March 2021 TIA.
    c. The following are a non-comprehensive set of issues that should be addressed in additional analyses:
        i. Intersection v/c and queuing must meet applicable standards with each phase. Partial development (some phases of the development) may be permissible without mitigation depending on background traffic and the status of adopted alternative mobility targets.
        ii. Where the applicant is relying on the regional center's two-tiered v/c standard (i.e. 1.10 during the peak hour and 0.99 during the second hour), the applicant will need to provide evidence that both are met. (This is particularly applicable to OR213/Redland Road and OR99E/Dunes Drive, both of which are predicted to exceed 1.10 during a peak hour.)
        iii. A phase or combination of phases that causes traffic volumes at any access point to exceed volumes in this TIA, additional analyses will be required.
        iv. The applicant will need to demonstrate the adequacy of queue storage or undertake appropriate mitigation to resolve queue storage issues at the intersection of Abernethy Road/Holcomb Boulevard/Redland Road in connection with each phase.
        v. The applicant will need to demonstrate that the intersection of OR213/Redland Road meets applicable v/c standards and provides adequate queue storage in connection with each phase.
        vi. The applicant will need to demonstrate that the intersection of OR99E/Dunes Drive meets applicable v/c standards in connection with each phase. Applicant is encouraged to explore the potential for signal timing changes with ODOT or develop other mitigation measures with ODOT.
    d. With each detailed development plan, the applicant will be required to address sight distance requirements in connection with the establishment of any new access to Washington Street or Abernethy Road, including those described in this TIA.
    e. With each detailed development plan, the applicant will be required to address on-site circulation issues. These include, but are not limited to, adequacy of queue storage for drive-through service windows, maneuvering of trucks at loading areas, and maneuvering in parking lots.
    f. With each detailed development plan, the applicant will work with TriMet to provide appropriate sidewalks and bus stop features on or adjacent to the site.
    g. With each detailed development plan, the applicant will be required to update the predicted traffic using the intersection of OR213/Beavercreek Road. The applicant should use the updated value of $380 per peak hour trip rather than the obsolete value

of $219 as used in this TIA. The developer shall participate in funding of this project according to the established formula.

h. If traffic signal warrants are met and cause the installation of a traffic signal at any of the site access points on Washington Street or Abernethy Road, the applicant will bear the full cost of signal design and installation.
i. The applicant shall participate in the funding of improvements for the intersection of OR213/Redland Road (TSP Project D79) in proportion to the development's traffic volume as a percentage of the predicted 2035 traffic volume at the intersection calculated in the TSP. The 2017 TSDC Project List shows a project cost of $10,105,000. Participation shall apply to each phase of the development.
j. The applicant's final share of project costs may be modified as necessary when the detailed development plan is approved to reflect any a modification of the development's trip generation or a change in project costs resulting from revisions to project costs associated with updates to the City's Transportation System Plan or Capital Improvement Program,

80. Prior to Planning Commission approval of the Master Plan, the applicant shall submit a consolidated Master Plan figure or figures that can be the reference document for future DDP review. As there are many figures in the applicant's submittal and there may be future confusion as to what figures were or were not adopted, staff recommends that the applicant review the applicable conditions of approval and create a consolidated plan that references only the detail needed to comply with future DDP applications. A reference to this map will be added as a condition of approval.

81. Post-approval staff recommends that the applicant work with staff to create a DDP summary sheet that allows for ease of DDP review to ensure that all applicable conditions of approval are met.

82. The general and parking lot landscaping for this Master Plan is calculated based on the entire site area subject to the GDP. Each individual phase may or may not meet the minimum site-wide requirement, but the site shall satisfy the minimum requirement at full build-out. A phase will be permitted to develop below the required minimum as long as each phase demonstrates that the site will meet the minimum landscaping percentage requirements at full buildout. (P)

I. BACKGROUND:

1. Existing Conditions

The 65.52-acre subject site is located at 1105 Abernathy Drive in Oregon City, Tax Lot Number 2-2E-29-00902. The property is currently zoned Mixed-Use Downtown and is located outside of the historic downtown overlay but is located within the Urban Renewal District. The site is located over the top of the Rossman Landfill, and includes land that is identified in the City's Natural Resource Overlay District (NROD) due to the presence of Abernethy Creek and wetlands that have been identified on the site. The site also includes areas within the Geologic Hazard Overlay Zone for the presence of slopes over 10%; and lands that are impacted by the 100-year floodplain.

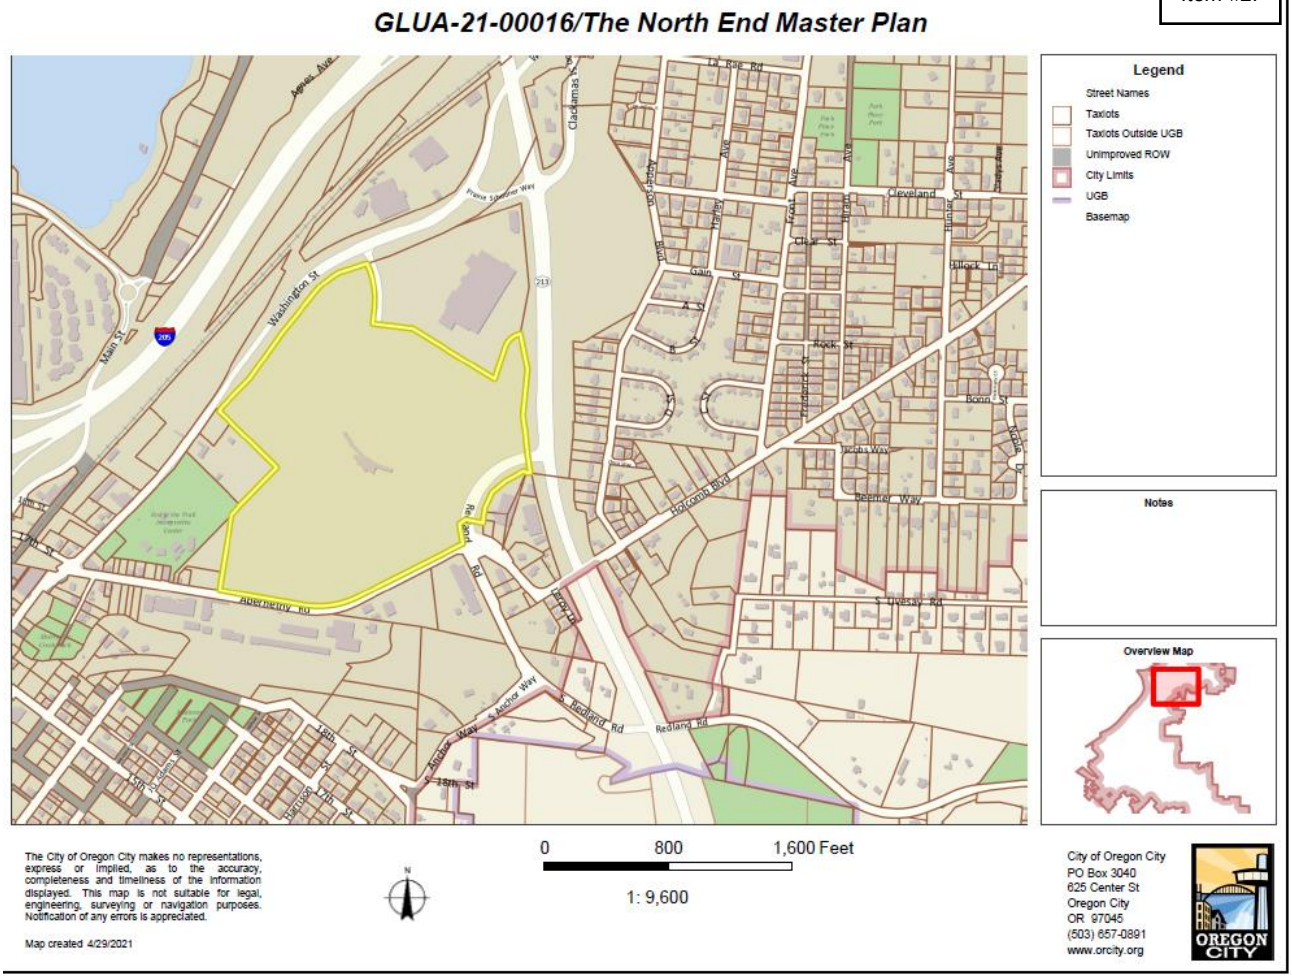

Figure 1. Vicinity Map

Figure 2: Existing Conditions – Aerial Image

2. Project Description

The North End Master Plan is a proposed master plan to redevelop the former Rossman Landfill with a mixed-use development. This land-use application is a request to approve the General Development Plan (GDP). The GDP will be subsequently implemented through future detailed developed plans that will be guided by this Concept Master Plan. Therefore, this application does not include a request for approval of a Detailed Development Plan (DDP) or any construction at this time. Once approved, the GDP guide future development within the master plan area to assure long-term regulatory certainty and a high level of predictability for future tenants and developers within the master plan area as well as the community. The GDP provides a detailed framework for development within the master plan area over the next 20 years; although, according to the applicant, build-out of the site is anticipated to occur over the next 5 years or so, though the conditions of approval allow for a longer implementation period. This proposed application includes requests for the following approvals:

- **Master Plan (GDP**): The overall long-term approach to development over 5-20 years.
    - Adjustments to the following development standards:
    - OCMC Chapter 16.12.030 - Blocks—Width
    - OCMC Chapter 17.54.100.2- Retaining Walls
    - OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)
    - OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways

- **Conditional Use:** Request to approve Approval of a Conditional Use for tenant size (E2, S2, C2) and conditional use drive-thru locations (N1, E1,C1,S1,E5)
- **Flood Management Overlay District**: General review for feasibility of development approach.

- **Geologic Hazards Overlay District:** General review for feasibility of development approach.

The applicant, Summit Development Group, seeks approval of The North End Master Plan, a mixed-use GDP to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the master plan. According to the applicant, the plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown but serve as a primary gateway to the north end of the Oregon City Downtown. The master plan features treelined streets, landscaped open spaces, offices, and residences overlooking public plazas and open spaces and will feature a wide variety of shopping, dining, and entertainment spaces. Final building designs will be reviewed by the City and the public in subsequent Type I or II Detailed Development Review (DDP).

There is some flexibility built into the framework approach to the Master Plan (and its conditions) relating to the size and locations of the buildings. DDP applications that vary from the initial approval, as conditioned, will be sent back to the Planning Commission to show compliance to or receive an amendment to the adopted Master Plan.

All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan. Additions to or removal of uses listed in the Applicant's submittal shall not in themselves constitute a need for an amendment to the Master Plan unless the addition or revision triggers a need for an amendment through a Condition of Approval or OCMC 17.65.080 Amendments to Plans.

Figure 3: Proposed District Site Plan

North District Area

The North District Area is approximately 17.1 Acres of the overall master plan. It is located west of the proposed "Market street" and east of Washington Street. This area is proposed to be developed with a mix of four and five story residential mixed use buildings, retail commercial uses, an entertainment center, the main pavilion, the parking garages along Washington Street, and one of the five drive-thru uses identified within the master plan. Overall, this area would include approximately 524 residential units and 632,789 square feet of building area. This district is compact, served by the main internal plaza, a series of locally placed open spaces, and makes up the most active multi-modal portion of the masterplan area. The North District Area includes four east-west street connections, depicted as 1st, 2nd, 3rd, and 4th Streets, and three north-south street connections, including A Street, B Street, and Market Street in the master plan. The area is located adjacent to Washington Street, which connects directly to the End of the Oregon Trail Interpretive Center, the Amtrak Station, and the rest of Downtown Oregon City. This portion of the site shares similar characteristics with the Oregon City downtown.

East District Area

The East District Area is approximately 16.3 Acres of the overall master plan and would be developed with a mix of small-format commercial retail uses, two drive-thru uses and one of the Anchor Retail uses on site. The area is located adjacent to the nearby Home Depot development and would consist of approximately 155,804 square feet of building area. Surface parking is provided for uses within the East District Area. The main pedestrian path that connects to the North District Area is to the anchor retail areas in the East District as well as two east-west street connections depicted on the master plan as 2nd and 3rd Streets. The East District Area also includes the primary natural resource on the site which remains set aside and protected through the master plan.

Central District

The Central District area makes up approximately 10.6 acres of the overall master plan and will be developed with a mix of small format commercial retail uses, an anchor retail pad and one drive thru use. This area is located between 3rd and 4th Streets east of Market Street. This area would consist of approximately 140,779 square feet of building area. In addition to the streets mentioned previously, this district is served by two north-south streets depicted as C Street and D Street on the master plan. Due to the difference in grades across the site, there are opportunities for lower-level retail uses along D Street at the rear of the anchor retail pad located within this district. Abernethy Road runs along the southern portion of the Central District Area and includes one of the accesses along 4th Street into the master plan site.

South District Area

The South District area makes up 12.6 acres of the overall master plan and includes the last drive thru use within the master plan, a small format grocer, an anchor retail pad and commercial retail uses along both Market Street and D Street. The building area within the South District is approximately 162,326 square feet. The South District Area includes the second access from Abernethy Road along Market Street and includes C Street and D Street as additional east-west connections. The proposed drive thru in this District is at the intersection of 4th Street and Market Street within the master plan. The pedestrian connection to the End of the Oregon Trail interpretive Center is located within the South District Area

Access

There are four proposed access points to the subject site. Proposed Market Street would provide access into the master plan at intersections with both Abernethy to the south and Washington Street to the North. Additionally, proposed 4th Street would connect to Abernethy to the east and Washington Street to the west. Proposed Market Street would satisfy the street connection called for in the Oregon City

Transportation System Plan. All internal streets are proposed to be private with overlaid with public access easements and although different from the typical Oregon City Street cross-section, the internal streets will be designed to mimic and function as public streets. Proposed features include wider sidewalks, street furniture, bulb-outs at intersections, planter strips, and raised crosswalks. The proposed street sections have been designed to provide for safe and efficient connections for all modes of travel within the master plan.

The shared paths called for in the TSP through the project site are proposed to be provided as part of Market Street and through the east-west pedestrian corridor that bisects the site south of the anchor retail site located in the East District Area. These paths would connect into the frontage improvements planned along Abernethy Road, Washington Street, the End of the Oregon Trail interpretive Center, and the internal street systems providing a circuitous bike and pedestrian system that connects all of the internal uses.

Phasing

The project will be developed over several years with the first phase consisting of mass grading, padding, utilities, internal streets, shared-use paths, and frontage improvements. According to the applicant , subsequent phases would likely begin with the construction of retail anchor sites enabling for other on-site improvements and secondary retail. The remaining phases will likely include a mix of commercial retail, entertainment, and mixed-use residential uses as the market demand for those uses is realized. However, the Master plan approval is structured in more of a framework plan approach which will allow phasing to occur in whichever order is ultimately pursued by the applicant through the review of individual Detailed Development Plan applications that will review proportional improvements meeting the Master Plan conditions of approval.

Figure 1.2 Public Access Map

Figure 4: Proposed Access Plan

Figure 5: Proposed Aerial with Conceptual Elevations from Abernethy Blvd.

Staff Overview of Major Project Topics, Decisions

The applicant has submitted for a Concept Master Plan that will govern the development of the site overtime through the approval and development of future Detailed Development Plans (DDP) onsite. No development is approved as part of this application.

The applicant has submitted a proposal that generally meets the intent of the Mixed-use Downtown Zoning District and the Oregon City Municipal Code. The applicant has requested four Master Plan amendments onsite and Conditional use review for several drive-thrus onsite and allowance for larger tenant spaces in three buildings. Staff has reviewed the proposal for compliance with the applicable goals and policies, and intent of the city code sections and has identified proportional mitigation and phasing conditions that enable the project en masse to meet or exceed those goals.

This approval sets a framework approach to implementation of the plan thru future development applications at the Type I or Type II DDP level through the use of clear and objective conditions of approval and the ability to use the 2021 Municipal Code at time future DDP land use submittal. This approach allows staff, the applicant, and the public a clear road map for what is required, and more importantly, clearly specifies the level of review needed for design revisions. All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan. Additions to or removal of uses listed in the Applicant's submittal shall not in themselves constitute a need for an amendment to the Master Plan unless the addition or revision triggers a need for an amendment through a Condition of Approval or OCMC 17.65.080 Amendments to Plans.

The Master Plan approval is a land-use action that approves the Master Plan layout and development approach based on the requirements set forth in OCMC 17.65 Master Plans and implemented through conditions of approval that are proportional to the proposal. The

applicant may choose to enter into agreements with funding entities that may place additional requirements on the development. It is up to the applicant to determine if those requirements are consistent with the Conditions of Approval of the adopted Master Plan, and submit a Master Plan amendment if needed.

3. **Permits and Approvals:** The applicant is responsible for obtaining approval and permits from each applicable governmental agency and department at Oregon City, including but not limited to the Engineering and Building Divisions.

4. **Public Comment**

Public comments submitted include (Exhibit 3):

a. *General Support of the project:* Emma Fleming, DeMaris Beyl, Skip Rotticci, Joanne Gordon, Dave Frazier, Renate Mengelberg. Emma Fleming, DeMaris Beyl,Skip Rotticci, Joanne Gordon,Tonia Lordy,Dave Frazier,Renate Mengelberg,Karen Morey,Richard Ponting,List of supporters submitted by Summit Development, Nick Veroske, Marilyn Morrissey,Dan Fowler,Richard Ponting

- *Jane Troxler,* Ms. Troxler commented on traffic, questioned what buildings were to be demolished (only buildings on project site), and if the city was to be involved in funding the project.
    - Staff response: The application has been reviewed for compliance with the Oregon City Development Code and OCMC Chapter 17.65 Master Plans and Conditions of Approval have been placed on the application that have a nexus to the code and are proportional to the impact. No City funding is part of this review process, but rather to review the applicable development requirements in the Oregon City Municipal Code. The applicant may choose to enter into other agreements with funding entities that may place additional requirements on the development separate from this review.
- *Wes Rogers, Oregon City School District,* Mr. Rogers indicated that the proposal did not conflict with their interests.
- *Chris Long, Oregon City Building Division,* Mr. Long indicated that the proposal did not conflict with their interests.
- The Confederated Tribes of the Umatilla Indian Reservation (CTUIR) submitted comments relating to the need for a cultural survey for the site.
    - Staff Response: A cultural survey is not a requirement found in the Municipal Code. However, the applicant is required to meet applicable state and federal laws relating to above and below ground cultural resources
- *Bob Swartz, Oregon Department of Environmental Quality (DEQ*), provided the following statement. “The Oregon Department of Environmental Quality regulates the closed Rossman’s Landfill through a DEQ solid waste closure permit. The landfill has been closed for 38 years. The landfill is capped with a compacted soil cover. Post-closure activities include groundwater and landfill gas monitoring. DEQ supports redevelopment of closed landfills and intends to enter into a Prospective Purchaser Agreement with two parties planning to purchase portions of the site for development. The property proposed for acquisition is approximately 77 acres and includes two parcels. Summit OC LLC intends to purchase “Parcel I,” (Tax Lot 902), covering approximately 62 acres. OCLD LLC intends to purchase “Parcel II” (Tax Lot 1200), which is approximately15 acres. Details regarding the proposed Prospective Purchaser Agreement can be found here: https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=674&Screen=Load DEQ will work with the businesses who purchase lots

on top of the closed landfill to ensure that development occurs in a safe manner that protects occupants from landfill gas or other environmental concerns associated with a closed landfill."

None of the comments provided indicate that an approval criterion has not been met or cannot be met through the Conditions of Approval attached to this Staff Report.

II. ANALYSIS AND FINDINGS:

Municipal Code Standards and Requirements: The following sections of the Oregon City Municipal Code are applicable to this land use approval:

CHAPTER

CHAPTER 12.04 STREETS, SIDEWALKS, AND PUBLIC PLACES

CHAPTER 12.08 - PUBLIC AND STREET TREES

CHAPTER 15.48 - GRADING, FILLING AND EXCAVATING

CHAPTER 16.04 GENERAL PROVISIONS AND ADMINISTRATION OF LAND DIVISIONS

CHAPTER 16.12 MINIMUM PUBLIC IMPROVEMENTS AND DESIGN STANDARDS FOR DEVELOPMENT

CHAPTER 17.34 MUD MIXED USE DOWNTOWN DISTRICT

CHAPTER 17.41 TREE PROTECTION, PRESERVATION, REMOVAL AND REPLANTING STANDARDS

CHAPTER 17.42 - FLOOD MANAGEMENT OVERLAY DISTRICT

CHAPTER 17.44 - US—GEOLOGIC HAZARDS

CHAPTER 17.49 NATURAL RESOURCES OVERLAY DISTRICT

CHAPTER 17.50 ADMINISTRATION AND PROCEDURES

CHAPTER 17.52 OFF-STREET PARKING AND LOADING

CHAPTER 17.54 SUPPLEMENTAL ZONING REGULATIONS AND EXCEPTIONS

CHAPTER 17.56 CONDITIONAL USES

CHAPTER 17.58 LAWFUL NONCONFORMING USES, LOTS, STRUCTURES, AND SITES

CHAPTER 17.62 SITE PLAN AND DESIGN REVIEW

CHAPTER 17.65 MASTER PLANS AND PLANNED UNIT DEVELOPMENTS

CHAPTER 12.04 – STREETS SIDEWALKS AND PUBLIC SPACES

12.04.005 - Jurisdiction and management of the public rights-of-way.

A. The City has jurisdiction and exercises regulatory management over all public rights-of-way within the City under authority of the City Charter and state law by issuing separate public works right-of-way permits or permits as part of issued public infrastructure construction plans. No work in the public right-of-way shall be done without the proper permit. Some public rights-of-way within the city are regulated by the State of Oregon Department of Transportation (ODOT) or Clackamas County and as such, any work in these streets shall conform to their respective permitting requirements.

C. The City has jurisdiction and exercises regulatory management over each public right-of-way whether the City has a fee, easement, or other legal interest in the right-of-way. The City has jurisdiction and regulatory management of each right-of-way whether the legal interest in the right-of-way was obtained by grant, dedication, prescription, reservation, condemnation, annexation, foreclosure or other means.

D. No person may occupy or encroach on a public right-of-way without the permission of the City. The City grants permission to use rights-of-way by franchises, licenses and permits.

E. The exercise of jurisdiction and regulatory management of a public right-of-way by the City is not official acceptance of the right-of-way, and does not obligate the City to maintain or repair any part of the right-of-way.

Finding: Applicable. The City of Oregon City has jurisdiction over Washington Street. The right of way of Abernethy Road falls under Clackamas County jurisdiction and requires permits from that agency. The right of way of Redland Road falls under ODOT jurisdiction and requires permits from that agency.

12.04.025 - Driveways.

Driveways shall be reviewed in accordance with OCMC 16.12.035. Driveway requirements may be modified through the procedures in OCMC 16.12.013.

Finding: Applicable. See 16.12.035 for more information.

12.04.030 - Maintenance and repair.

The owner of land abutting the street where a sidewalk has been constructed shall be responsible for maintaining said sidewalk and abutting curb, if any, in good repair.

Finding: Applicable. The master plan area abuts a street where there is existing sidewalk (Washington Street). **See findings from 12.04.032 of this report.**

12.04.032 - Required sidewalk repair.

A. When the Public Works Director determines that repair of a sidewalk is necessary, written notice shall be provided to the owner of property adjacent to the defective sidewalk.

B. The notice shall require the owner of the property adjacent to the defective sidewalk to complete the repair of the sidewalk within ninety days after the service of notice. The notice shall also state that if the repair is not made by the owner, the City may do the work and the cost of the work shall be assessed against the property adjacent to the sidewalk.

1. *All sidewalks hereafter constructed in the City on improved streets shall be constructed to city standards and widths required in the Oregon City Transportation System Plan and OCMC 16.12. Sidewalks and curbs are to be constructed according to plans and specifications approved by the City Engineer.*
2. *Sidewalks constructed on unimproved streets shall be constructed of concrete according to lines and grades approved by the City Engineer. On unimproved streets, curbs do not have to be constructed.*

C. The Public Works Director shall cause a copy of the notice to be served personally upon the owner of the property adjacent to the defective sidewalk, or the notice may be served by registered or certified

mail, return receipt requested. If after diligent search the owner is not discovered, the Public Works Director shall cause a copy of the notice to be posted in a conspicuous place on the property, and such posting shall have the same effect as service of notice by mail or by personal service upon the owner of the property.

D. The person serving the notice shall file with the City recorder a statement stating the time, place and manner of service or notice.

Finding: Complies with Condition. The applicant acknowledges the requirement for maintenance and repair of sidewalks along the street frontages. The developer for future DDPs shall make all sidewalk along the frontage of the proposed development, existing and new, ADA compliant per City Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

12.04.050 - Retaining walls—Required.
Every owner of a lot within the City, abutting upon an improved street, where the surface of the lot or tract of land is above the surface of the improved street and where the soil or earth from the lot, or tract of land is liable to, or does slide or fall into the street or upon the sidewalk, or both, shall build a retaining wall, the outer side of which shall be on the line separating the lot, or tract of land from the improved street, and the wall shall be so constructed as to prevent the soil or earth from the lot or tract of land from falling or sliding into the street or upon the sidewalk, or both, and the owner of any such property shall keep the wall in good repair.
Finding: Not Applicable. No retaining walls exist or are proposed on this project adjacent to the public sidewalk.

12.04.100 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standard in effect at the time a right-of-way permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.
Finding: Complies with Condition. Pavement cuts are proposed within Washington Road due to road construction and utility service installation. Pavement cuts or other improvement made in a City street or alley shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. (Also written in findings for 16.12.029. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

12.04.120 - Obstructions—Permit required.

A. Permanent Obstructions. It is unlawful for any person to place, put or maintain any obstruction, other than a temporary obstruction, as defined in subsection B. of this section, in any public street or alley in the City, without obtaining approval for a right-of-way permit from the City Commission by passage of a resolution.

1. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.
2. The applicant shall submit at least the following information in the permitting process in order to allow the City Commission to adequately consider whether to allow the placement of an obstruction and whether any conditions may be attached:

a. Site plan showing right-of-way, utilities, driveways as directed by staff;

b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;
c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);
d. Alternative routes if necessary;
e. Minimizing obstruction area; and
f. Hold harmless/maintenance agreement.

3. If the City Commission adopts a resolution allowing the placement of a permanent obstruction in the right-of-way, the City Engineer shall issue a right-of-way permit with any conditions deemed necessary by the City Commission.

4. Signage that acts as an obstruction is approved through OCMC 15.28

B. Temporary Obstructions.

1. A "temporary obstruction" is defined as an object placed in a public street, sidewalk, road, or alley which is not permanently anchored to another surface such as the pavement, sidewalk, or a building. A "temporary obstruction" includes, but is not limited to, moving containers, and debris dumpsters, and seating.
a. Planters and benches are exempt from permitting unless the City Engineer finds by inspection that the planter or bench is impeding use of the right-of-way. If deemed an impeding use, a planter or bench will comply with the requirements for temporary obstructions.
2. The City Engineer, or designee, is authorized to grant a permit for a temporary obstruction.
3. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.
4. The applicant shall submit, and the City Engineer, or designee, shall consider, at least the following items in the permitting process. Additional information may be required in the discretion of the City Engineer:
a. Site plan showing right-of-way, utilities, driveways as directed by staff;
b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;
c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);
d. Handicap Accessible accessible route complying with Americans with Disability Act (ADA) standards.
e. Alternative routes if necessary;
f. Minimizing obstruction area; and
g. Hold harmless/maintenance agreement.
5. In determining whether to issue a right-of-way permit to allow a temporary obstruction, the City Engineer may issue such a permit only after finding that the following criteria have been satisfied:
a. The obstruction will not unreasonably impair the safety of people using the right-of-way and nearby residents;
b. The obstruction will not unreasonably hinder the efficiency of traffic affected by the obstruction;
c. No alternative locations are available that would not require use of the public right-of-way; and;
d. Any other factor that the City Engineer deems relevant.
6. The permittee shall post a weatherproof copy of the temporary obstruction permit in plain view from the right-of-way.

7. Types

a. A short-term temporary obstruction is allowed for a period of not more than 60 consecutive calendar days. It is permitted with a temporary obstruction in the right-of-way permit.

b. A long-term temporary obstruction is allowed for a period of not more than one year, and it is permitted with a renewable right-of-way permit.

8. Signage that acts as an obstruction is approved through OCMC 15.28

C. Fees. The fee for obtaining a right-of-way permit for either a permanent obstruction or a temporary obstruction shall be set by resolution of the City Commission.

Finding: Not Applicable. No obstructions are proposed within the right of way.

12.04.150 - Street and alley vacations—Cost.

At the time of filing a petition for vacation of a street, alley or any part thereof, a fee as established by City Commission resolution shall be paid to the City. The City Commission, upon hearing such petition, may grant the same in whole or in part, or may deny the same in whole or in part, or may grant the same with such reservations as would appear to be for the public interest, including reservations pertaining to the maintenance and use of underground public utilities in the portion vacated.

Finding: Not Applicable. No vacations are proposed as part of this application.

12.04.170 - Street design—Purpose and general provisions.

All development shall be in conformance with the city's public facility master plans, public works policies, standard drawings and engineering specifications. All streets shall be reviewed and approved by the city engineer prior to construction. All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Finding: Complies with condition. See findings from chapter 16.12 of this report.

12.04.270 - Standard construction specifications.

The workmanship and materials for any work performed under permits issued per this chapter shall be in accordance with the current edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City in accordance with this ordinance, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Street Standard Drawings provide other design details, in which case the requirements of this chapter and the Public Works Street Standard Drawings shall control. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards.

Finding: Complies with Condition. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the city. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 13.12 – STORMWATER MANAGEMENT

13.12.050 - Applicability and exemptions.

This chapter establishes performance standards for stormwater conveyance, quantity and quality. Additional performance standards for erosion prevention and sediment control are established in OCMC 17.47.

A. Stormwater Conveyance. The stormwater conveyance requirements of this chapter shall apply to all stormwater systems constructed with any development activity, except as follows:

1. The conveyance facilities are located entirely on one privately owned parcel;

2. The conveyance facilities are privately maintained; and

3. The conveyance facilities receive no stormwater runoff from outside the parcel's property limits.

Those facilities exempted from the stormwater conveyance requirements by the above subsection will remain subject to the requirements of the Oregon Uniform Plumbing Code. Those exempted facilities shall be reviewed by the Building Official.

Finding: Applicable. Connection to a public stormwater conveyance system is required to serve this master plan.

B. Water Quality and Flow Control. The water quality and flow control requirements of this chapter shall apply to the following proposed uses or developments, unless exempted under subsection C:

1. Activities located wholly or partially within water quality resource areas pursuant to OCMC 17.49 that will result in the creation of more than five hundred square feet of impervious surface within the NROD or will disturb more than one thousand square feet of existing impervious surface within the NROD as part of a commercial or industrial redevelopment project. These square footage measurements will be considered cumulative for any given five-year period; or

2. Activities that create or replace more than five thousand square feet of impervious surface, cumulated over any given five-year period.

Finding: Applicable. The proposed master plan will create more than five hundred square feet of impervious surface.

C. Exemptions. The following exemptions to subsection B of this section apply:

1. An exemption to the flow control requirements of this chapter will be granted when the development site discharges to the Willamette River, Clackamas River or Abernethy Creek; and either lies within the one hundred-year floodplain or is up to ten feet above the design flood elevation as defined in OCMC 17.42, provided that the following conditions are met:

a. The project site is drained by a conveyance system that is comprised entirely of manmade elements (e.g. pipes, ditches, culverts outfalls, outfall protection, etc.) and extends to the ordinary high water line of the exempt receiving water; and

b. The conveyance system between the project site and the exempt receiving water has sufficient hydraulic capacity and erosion stabilization measures to convey discharges from the proposed conditions of the project site and the existing conditions from non-project areas from which runoff is collected.

2. Projects in the following categories are generally exempt from the water quality and flow control requirements:

a. Stream enhancement or restoration projects approved by the City.

b. Farming practices as defined by ORS 30.960 and farm use as defined in ORS 214.000; except that buildings associated with farm practices and farm use are subject to the requirements of this chapter.

c. Actions by a public utility or any other governmental agency to remove or alleviate an emergency condition.

d. Road and parking area preservation/maintenance projects such as pothole and square cut patching, surface sealing, replacing or overlaying of existing asphalt or concrete pavement, provided the preservation/maintenance activity does not expand the existing area of impervious coverage above the thresholds in subsection B of this section.

e. Pedestrian and bicycle improvements (sidewalks, trails, pathways, and bicycle paths/lands) where no other impervious surfaces are created or replaced, built to direct stormwater runoff to adjacent vegetated areas.

f. Underground utility projects that replace the ground surface with in-kind material or materials with similar runoff characteristics.
g. Maintenance or repair of existing utilities.
Finding: Not applicable. The applicant has stated that the master plan area will discharge to all three bodies listed in this section and is located partially within the 100 – year floodplain and seeks an exemption to the flow control requirements. The stormwater report, included as Appendix A to this narrative, concludes that 29.8 acres of impervious surface from the site will outfall into the Abernethy Creek tributary after being treated. The creek tributary extends approximately 520 feet south before entering joining Abernethy Creek and ultimately flowing to the Willamette River. The existing stream channel geometry was estimated based upon available topographic survey and average stream cross sections. Using Civil Tool Pro, HHPR concluded that the Abernethy Creek tributary segment has more than sufficient capacity to convey the 10-yr storm event. The applicant states that flows will remain in the existing creek channel at and downstream of the point of discharge. **Although the master plan area is adjacent to a tributary of the Abernethy Creek and can discharge to the tributary, the city code only grants exemption to development sites which discharge to the Willamette River, Clackamas River or Abernethy Creek; not their tributaries.**

D. Uses Requiring Additional Management Practices. In addition to any other applicable requirements of this chapter, the following uses are subject to additional management practices, as defined in the Public Works Stormwater and Grading Design Standards:
1. Bulk petroleum storage facilities;
2. Above ground storage of liquid materials;
3. Solid waste storage areas, containers, and trash compactors for commercial, industrial, or multi-family uses;
4. Exterior storage of bulk construction materials;
5. Material transfer areas and loading docks;
6. Equipment and/or vehicle washing facilities;
7. Development on land with suspected or known contamination;
8. Covered vehicle parking for commercial or industrial uses;
9. Industrial or commercial uses locating in high traffic areas, defined as average daily count trip of two thousand five hundred or more trips per day; and
10. Land uses subject to DEQ 1200-Z Industrial Stormwater Permit Requirements.
Finding: Complies as conditioned. The applicant proposed development on land with suspected or known contamination (specifically a former landfill site). Construction on a site previously used as a landfill requires the involvement of Oregon DEQ. The applicant has stated, while the stormwater report details how the project can meet the stormwater management requirements, additional management practices will be evaluated and recommended with each subsequent DDP. Future DDP within the master plan area for uses subject to additional management practices will provide supplemental stormwater reports to address compliance with these sections.

Prior to City construction plan approval or issuance of a grading or building permit associated with the proposed development, the property and building owners shall provide written acknowledgment and statement to assume responsibility for risks associated with development on land with suspected or known contamination. The applicant shall submit a final engineering report to DEQ, the City's Building Official, and the City's Public Works Engineering Development Services for review and approval. The Engineering Investigation Report shall document the following:
a. Details, as necessary, to address DEQ requirements relative to increased leachate and landfill gas migration due to consolidation of the landfill, penetrating the landfill cap (including alternatives that allow landscaping to address water quality concerns), and limiting sub-landfill aquifer contamination via pile penetration as may be applicable.
b. Recommendations to minimize risks of negative impacts for proposed building structure, site grading,

cuts and fill, foundations, seismic, utility infrastructure including connections between the underground utilities and the building structure, methane gas migration and accumulation including consideration of the gas migration through utility trenches and accumulation in utility infrastructure such as utility pipes, manholes, light pole bases, and junction boxes.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

13.12.080 - Submittal requirements.

A. Applications subject to stormwater conveyance, water quality, and/or flow control requirements of this chapter shall prepare engineered drainage plans, drainage reports, and design flow calculation reports in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards.

B. Each project site, which may be composed of one or more contiguous parcels of land, shall have a separate valid city approved plan and report before proceeding with construction.

Finding: Complies with Condition. The application package includes a preliminary stormwater report and stormwater plan sheet, prepared by a professional, licensed civil engineer that addresses each of the factors in Subsection A above. Before proceeding with construction, a separate final report will be provided for each project. **See findings from section 13.12.090 of this report.**

13.12.090 - Approval criteria for engineered drainage plans and drainage report.

An engineered drainage plan and/or drainage report shall be approved only upon making the following findings:

A. The plan and report demonstrate how the proposed development and stormwater facilities will accomplish the purpose statements of this chapter.

B. The plan and report meet the requirements of the Public Works Stormwater and Grading Design Standards adopted by resolution under OCMC 13.12.020.

C. The storm drainage design within the proposed development includes provisions to adequately control runoff from all public and private streets and roof, footing, and area drains and ensures future extension of the current drainage system.

D. Streambank erosion protection is provided where stormwater, directly or indirectly, discharges to open channels or streams.

E. Specific operation and maintenance measures are proposed that ensure that the proposed stormwater quantity control facilities will be properly operated and maintained.

Finding: Complies with Condition. The application package includes a preliminary stormwater report and stormwater plans, prepared by a professional, licensed civil engineer, conceptually complies with City standards. The information provided within the report demonstrates that the stormwater management design proposed with the GDP will satisfy the Public Works Stormwater and Grading Design Standards, adequately controls run-off from impervious surfaces. Specific operation and maintenance measures have been suggested and will be provided upon approval and construction of the system during review of individual DDP. New and constructed impervious surfaces will be managed per the Oregon City Stormwater and Grading Design Standards dated March 2020. However, the site is not able to utilize infiltration type facilities during design since the project site was once a landfill and has contaminated soils. Because infiltration would run the risk of mobilizing contaminates in the soils or groundwater, the project will be utilizing underground detention and mechanical treatment methods for stormwater disposal. Stormwater will be treated by proprietary treatment systems, vegetated swales, filtration raingardens and planters across the site. The public frontage improvements will be treated with filtration planters. The proposal conceptually satisfies the Public Works Stormwater and Grading Design. Each individual Detailed Development Plan (DDP) within the master plan area shall provide updated engineered drainage plan(s), drainage report(s), and design flow calculation report(s) stamped and signed by a licensed engineer addressing all items from the Section 9 of the Public Works

Stormwater and Grading Design Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.100 - Alternative materials, alternative design and methods of construction.
The provisions of this chapter are not intended to prevent the use of any material, alternate design or method of construction not specifically prescribed by this chapter or the Public Works Stormwater and Grading Design Standards, provided any alternate has been approved and its use authorized by the City Engineer. The City Engineer may approve any such alternate, provided that the City Engineer finds that the proposed design is satisfactory and complies with the intent of this chapter and that the material, method, or work offered is, for the purpose intended, at least the equivalent of that prescribed by this chapter in effectiveness, suitability, strength, durability and safety. The City Engineer shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use. The details of any action granting approval of an alternate shall be recorded and entered in the City files.
Finding: Complies as conditioned. Due to underlying landfill soils, the civil engineer has proposed an underground detention system for stormwater management. Also, the application is for a masterplan so no stormwater detention system has been proposed to be constructed until future DDP. It is likely that the City Engineer will find that the proposed design is satisfactory and complies with the intent of this chapter; however, this type of stormwater system is considered to be an alternative design by the Oregon City Stormwater Grading and Design Standards. Each individual DDP within the master plan area shall include with their drainage report, a written modification request for the use of underground detention storage systems per Section 1.6 of the Oregon City Stormwater Grading and Design Standards where use of underground detention storage systems is proposed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.110 - Transfer of engineering responsibility.
Project drainage plans shall always have a project engineer. If the project engineer is changed during the course of the work, the City shall be notified in writing and the work shall be stopped until the replacement engineer has agreed to accept the responsibilities of the project engineer. The new project engineer shall provide written notice of accepting project responsibility to the City within seventy-two hours of accepting the position as project engineer.
Finding: Complies with Condition. The drainage plan for the application was prepared by a licensed civil engineer. The applicant understands the requirements that apply should a transfer of engineering responsibility occur during construction of the project. The developer for future DDPs shall have a project engineer and both shall execute a “Developer/Engineer Agreement for Public Works Improvements” and commit to the responsibilities outlined in the agreement. (Required via findings of section 16.12.014) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.120 - Standard construction specifications.
The workmanship and materials shall be in accordance with the current edition of the "Standard Specifications for Public Works Construction," as prepared by the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Stormwater and Grading Design Standards provide other design details, in which case the requirements of this chapter and the Public Works Stormwater and Grading Design Standards shall be complied with.
Finding: Complies with Condition. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the city. (Also written in the findings of section 12.04.270) **Staff has determined that it is**

possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

13.12.140 - Maintenance of public stormwater facilities.
A. A stormwater facility that receives stormwater runoff from a public right-of-way shall be a public facility. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those public stormwater facilities. Access for maintenance of the stormwater facilities shall be provided to the City through the granting of a stormwater easement or other means acceptable to the City.
Finding: Complies as Proposed. Public stormwater facilities are proposed with this development along Washington Street and Abernethy Road. The onsite stormwater facilities are not designed to receive water from the public right-of-way. Upon expiration of the warranty period provided by section 17.50.141, the City will maintain roadside facilities along city ROW.

B. Responsibility for maintenance of stormwater facilities including all landscaping, irrigation systems, structures and appurtenances shall remain with the property owner/developer for two years (known as the warranty period). The owner/developer shall provide the City a separate two-year landscaping maintenance surety bond for one hundred ten percent of the landscaping cost. Transfer of maintenance of stormwater conveyance systems shall occur when the City accepts the stormwater conveyance system.
Finding: Complies as proposed. Public stormwater facilities are proposed with this development along Washington Street and Abernethy Road. The onsite stormwater facilities are not designed to receive water from the public right-of-way. Roadside facilities are required to be under warranty by provisions of section 17.50.141.

13.12.145 - Maintenance of private stormwater facilities.
A. An applicant shall submit an operation and maintenance plan for each proposed stormwater facilities, unless exempted in the Public Works Stormwater and Grading Design Standards. The information in the operation and maintenance plan shall satisfy the requirements of the Public Works Stormwater and Grading Design Standards.
B. Private owners are required to inspect and maintain stormwater facilities on their property in accordance with an approved operation and maintenance plan. A maintenance log is required to document facility inspections and specific maintenance activities. The log shall be available to City inspection staff upon request.
C. Failure to operate or maintain a stormwater facility according to the operation and maintenance plan may result in an enforcement action under Section 13.12.150.
Finding: Complies with Condition. The property owner is aware of their responsibility to maintain stormwater facilities on the private property. A preliminary stormwater report is provided as Appendix A with this application package. The civil engineer has acknowledged this requirement within the report and it will be incumbent upon future DDP developers to provide supplemental stormwater reports consistent with the GDP stormwater plan and provide an operations and maintenance plan for their projects that are compliant with the Public Works Stormwater and Grading Design Standards. All stormwater facilities proposed to serve the development shall be private except the public stormwater facilities that receive stormwater runoff from the public right-of-way of Washington Street and Abernethy Road. Future DDP developers and property owner(s) shall execute an agreement providing maintenance of, and giving Oregon City access to, privately-owned stormwater management facilities and pay associated recording fees. The agreement shall include a site plan identifying all privately-owned stormwater management facilities and an operation and maintenance plan for each type of stormwater facility in accordance with the Public Works Stormwater and Grading Design Standards. The agreement shall run with the land and be applicable to subsequent property owners. The agreement

shall be reviewed and accepted by the City prior to occupancy. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.170 - Permits from other jurisdictions.
A. The Oregon State Department of Environmental Quality (DEQ) currently issues NPDES 1200-C permits for projects that cover areas of one acre or greater. No permit shall be issued for projects of this size (or any other size as modified by DEQ) without a copy of said DEQ permit being on file with Oregon City. DEQ is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DEQ representatives.
Finding: Complies with Condition. The development exceeds 1.0 acre in disturbed area. The developer for future DDPs shall obtain a 1200-C (NPDES) permit from Oregon Department of Environmental Quality (DEQ) for construction activities one acre or greater prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Projects may require Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits. If such permits are required, no permission to construct will be granted until such a time as a copy of such permit is on file with the City or notice is received from those agencies that a permit is not required. DSL/USACE is responsible for enforcing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DSL/USACE representatives.
Finding: Complies as condition. Construction activities associated with the master plan area may impact areas regulated by Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE). For construction activities requiring Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits, no work will be authorized until the city has received a copy of Oregon State DSL and/or USACE permit(s) or written documentation that no approval from the aforementioned agencies is needed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Projects may require Oregon State Department of Fish and Wildlife (ODFW) permits. When ODFW permits are required, no work will be authorized until the receipt of a copy of the ODFW permit. ODFW is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate ODFW representatives.
Finding: Complies as conditioned. Construction activities associated with the master plan area may impact an upstream tributary of Abernethy Creek. For construction activities requiring Oregon State Department of Fish and Wildlife (ODFW) permits, no work will be authorized until the city has received a copy of the ODFW permit or written documentation that no approval from the aforementioned agencies is needed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 15.48 – GRADING, FILLING AND EXCAVATING

15.48.030 Applicability—Grading permit required.
A. A city-issued grading permit shall be required before the commencement of any of the following filling or grading activities:
1. Grading activities in excess of ten cubic yards of earth;
2. Grading activities which may result in the diversion of existing drainage courses, both natural and man-made, from their natural point of entry or exit from the grading site;

3. Grading and paving activities resulting in the creation of impervious surfaces greater than two thousand square feet or more in area;
4. Any excavation beyond the limits of a basement or footing excavation, having an unsupported soil height greater than five feet after the completion of such a structure; or
5. Grading activities involving the clearing or disturbance of one-half acres (twenty-one thousand seven hundred eighty square feet) or more of land.
B. Those fill and grading activities proposed to be undertaken in conjunction with a land use application, including but not limited to subdivisions, planned unit developments, partitions and site plan reviews, are subject to the standards of this chapter. However, a separate grading permit is not required. Approval of the construction plans submitted through the land use application process shall constitute the grading permit required under this chapter.
Finding: Applicable. Fill and grading activities are proposed to be undertaken in conjunction with a land use application. A separate grading permit is not required. Approval of the construction plans submitted through the land use application process shall constitute the grading permit required under this chapter.

15.48.040 - Grading permit exemptions.
The following filling and grading activities shall not require the issuance of a grading permit:
A. Excavation for utilities, or for wells or tunnels allowed under separate permit by other governmental agencies;
B. An excavation below finished grade for basements and footings of a building, retaining wall or other structure authorized by a valid building permit. The placement of any fill material removed from such an excavation requires a grading permit if:
1. It exceeds fifty cubic yards,
2. More than ten cubic yards are removed from the site, or
3. The fill is placed on the site to a depth greater than one foot;
C. Farming practices as defined in ORS 30.930 and farm uses as defined in ORS 215.203, except that buildings associated with farm practices and farm uses are subject to the requirements of this chapter;
D. Excavation for cemetery graves;
E. Sandbagging, diking, ditching, filling or similar work when done to protect life or property during an emergency;
F. Repaving of existing paved surfaces that does not alter existing drainage patterns;
G. Maintenance work on public roads performed under the direction of the city, Clackamas County or Oregon State Department of Transportation personnel.
Finding: Not Applicable. The application does not qualify for an exemption.

15.48.090 Submittal requirements.
An engineered grading plan or an abbreviated grading plan shall be prepared in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards whenever a city approved grading permit is required. In addition, a geotechnical engineering report and/or residential lot grading plan may be required pursuant to the criteria listed below.
A. Abbreviated Grading Plan. The city shall allow the applicant to submit an abbreviated grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards if the following criteria are met:
1. No portion of the proposed site is within the flood management area overlay district pursuant to Chapter 17.42, the unstable soils and hillside constraints overlay district pursuant to Chapter 17.44, or a water quality resource area pursuant to Chapter 17.49; and
2. The proposed filling or grading activity does not involve more than fifty cubic yards of earth.
B. Engineered Grading Plan. The city shall require an engineered grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer if the proposed activities do not qualify for abbreviated grading plan.

C. Geotechnical Engineering Report. The city shall require a geotechnical engineering report in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer who specializes in geotechnical work when any of the following site conditions may exist in the development area:
1. When any publicly maintained facility (structure, street, pond, utility, park, etc.) will be supported by any engineered fill;
2. When an embankment for a stormwater pond is created by the placement of fill;
3. When, by excavation, the soils remaining in place are greater than three feet high and less than twenty feet wide.
D. Residential Lot Grading Plan. The city shall require a residential lot grading plan in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer for all land divisions creating new residential building lots or where a public improvement project is required to provide access to an existing residential lot.
Finding: Complies with Conditions. Preliminary grading plans are provided in civil sheets (C300 thru C307) to demonstrate that the project can be graded in compliance with the applicable city standards. These grading plans will be refined and submitted along with each DDP fled within the master plan. Detailed erosion control plans will be provided with construction drawings at the time of permit review. This standard is not directly applicable to the GDP as no grading permit is request with this GDP approval. The developer for future DDPs shall provide an engineered grading plan prepared by a professional engineer in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 16.12 – MINIMUM PUBLIC IMPROVEMENTS AND DESIGN STANDARDS FOR DEVELOPMENT

16.12.010 - Purpose and general provisions.
The purpose of this chapter is to identify the standards for development in and adjacent to spaces which benefit the public including right-of-way, access to the right-of-way, public off-street pedestrian and bicycle accessways, and easements. All development shall be in conformance with the policies and design standards established by this chapter and with applicable standards in the City's public facility master plans and City design standards and specifications. In reviewing applications for development, the City Engineer shall take into consideration any approved development and the remaining development potential of adjacent properties. All street, water, sanitary sewer, storm drainage and utility plans associated with any development shall be reviewed and approved by the City Engineer prior to construction. All streets, driveways or storm drainage connections to another jurisdiction's facility or right-of-way shall be reviewed by the appropriate jurisdiction as a condition of the preliminary plat and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.
Finding: Complies with Condition. The right of way of Abernethy Road falls under Clackamas County jurisdiction and requires permits from that agency. The right of way of Redland Road falls under Oregon Department of Transportation jurisdiction and requires permits from that agency. Compliance with the "purpose and general provisions" of chapter 16.12 can be met by adhering to the following: The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. The City will not provide construction plan approval until applicable Oregon Department of Transportation and Clackamas County approvals or permits are obtained. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.011 - Applicability.

A. Compliance with this chapter is required for all development including land divisions, site plan and design review, master plan, detailed development plan and conditional use applications and all public improvements that are required in conjunction with a land use decision.

B. Compliance with this chapter is also required for new construction or additions which exceed fifty percent of the existing square footage of all 3-4 plexes, single and two-family dwellings living space. Garages, carports, sheds, and porches may not be included in the calculation if these spaces are not living spaces. Accessory dwelling units are not subject to compliance with this chapter. All applicable 3-4 plexes, single and two -family dwellings shall provide any necessary dedications, easements or agreements as identified in the transportation system plan and this chapter, subject to constitutional limitations. In addition, the street frontage shall be improved to include the following priorities for improvements:

1. Improve street pavement, construct curbs, gutters, sidewalks and planter strips; and

2. Plant street trees.

The cost of compliance with the standards identified in 16.12.011.B.1 and 16.12.011.B.2 is calculated based on the square footage valuation from the State of Oregon Building Codes Division and limited to ten percent of the total construction costs. The value of the alterations and improvements is based on the total construction costs for a complete project rather than costs of various project component parts subject to individual building permits. The entire proposed construction project cost includes engineering and consulting fees and construction costs. It does not include permit fees, recording fees, or any work associated with drafting or recording dedications or easements.

C. *Exemptions.The following are exempt from review by this chapter unless public improvements, driveways, PUEs, or other items regulated by this chapter are proposed.*

1. Minor Site Plan and Design Review applications

2. Work within the right-of-way

3. Lot Line Adjustments and Abandonments

4. Public capital improvement projects

Finding: Applicable. The application is a master plan; therefore, the development shall follow the standards set forth in OCMC 16.12.

16.12.012 - Jurisdiction and management of the public rights-of-way.

The City has jurisdiction and exercises regulatory management over all public rights-of-way as defined and outlined within 12.04 of the Oregon City Municipal Code.

Finding: Applicable. The city has exercised its regulatory management authority by providing findings within this staff report with conditions to be met by the applicant prior to working within all public rights-of-way . Please see findings in 16.12.016 for direction.

16.12.013 - Modifications.

The applicant may request and the review body may consider modification of the standards in this chapter resulting from constitutional limitations restricting the City's ability to require the dedication of property or for any other reason, based upon the criteria listed below and other criteria identified in the standard to be modified. All modifications, except for adjustments approved by the City Engineer for tree preservation purposes pursuant to 16.12.013.A, shall be processed through a Type II Land Use application and may require additional evidence from a transportation engineer or others to verify compliance. Compliance with the following criteria is required:

The applicant proposes one modification to the engineering standards of Subsection 16.12 as explained below: 1. OCMC 16.12.035.C. The standards of this section limit properties to one driveway per street frontage. The project requests approval of four driveway access points along Washington Street and two driveway access points along Abernethy Road.

A. 1. The modification meets the intent of the standard;

Finding: Complies as proposed. That applicant as stated the following: *The site is approximately 62 acres in size and includes approximately 1,091,698 square feet of new commercial, retail, entertainment, and residential uses. Driveway access, under the provisions of 16.12.035.C is limited to reduce conflicts with the traveling public along streets and to ensure adequate space for street improvements including curbs, gutters, sidewalks, planter strips and street trees. The project proposes four driveways along the Washington Street frontage and two additional driveways along the Abernethy Road frontage. There is approximately 1,344 lineal feet of street frontage along Washington Street and approximately 1,320 lineal feet of frontage along Abernethy Road. According to the TIA provided with this application as Appendix C, Washington Street and Abernethy Road are both classified as a Minor Arterial. Section 12.04.195 of the Oregon City Municipal Code requires that the minimum driveway spacing along a Minor Arterial is 175 feet. As proposed within the GDP, the three new site accesses proposed along Washington Street will be positioned at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection. Accordingly, the access spacing proposed within the GDP will comply with the access spacing requirements of the Oregon City Municipal Code. The additional driveways do not hinder the installation of priority street improvements, such as street trees, lighting and sidewalks. This request is consistent with the intent of the driveway standards.*

The City finds that the reasons provided by the applicant meets the intent of the code and concurs with the applicant.

A. 2. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Finding: Complies as proposed. That applicant as stated the following:

The proposed driveways are located along Washington Street and Abernethy Road. The site has a significant amount of frontage along these rights-of-way. The additional driveways exceed the access spacing requirements of the OCMC for streets classified as "minor arterials" in the Oregon City Transportation System Plan (TSP) as described above. Accordingly, the additional driveways will not affect the safety of pedestrians along the right-of-way. The driveways are shown on the Civil Site Plan sheets C200 to C207 of the Civil Plans provided in Appendix B. Site driveways have been located on the site and designed to meet all City requirements for sight distance, driveway spacing, and appropriate traffic control.

The City finds that the reasons provided by the applicant meets the intent of the code and concurs with the applicant.

A. 3. The modification is consistent with an adopted transportation or utility plan; and

Finding: Complies as proposed. That applicant as stated the following:

Table 16.12.035.A identifies 175 feet as the minimum driveway spacing standard for a minor arterial. As discussed previously, three new site accesses are proposed along Washington Street at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/ Redland Road intersection. The driveway approaches are identified in Table 16.12.035.D and require the approaches be a minimum width of 20 feet for two way traffic and a maximum width of 40 feet for commercial and mixed uses. The proposed driveways are compliant with the minimum and maximum driveway widths established in the plan as illustrated in the civil plans (Sheets C200 through C207).

The City finds that the reasons provided by the applicant meets the intent of the code and concurs with the applicant.

A. 4. The modification is complementary with a surrounding street design; or, in the alternative;

Finding: Complies as proposed. That applicant as stated the following:

The additional driveways proposed for the development are complementary to the surrounding street design because the driveways are spaced more than 175 feet apart and located to facilitate safe connections to the surrounding streets and make circulation in and around the master plan area more efficient. Because of the large size of the site and the need to create multiple connections within the site as well as connections to the existing street grid external to the site, the driveways have been placed to maximize pedestrian, vehicle and bicycle connections as well as presenting a design that permits a coherent design for all of the related frontage and sidewalk improvements. Staff concurs with the applicant.

The City finds that the reasons provided by the applicant meets the intent of the code and concurs with the applicant.

A. 5. If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Finding: Not applicable.

The modifications are not being requested for constitutional reasons; therefore, this criterion is not applicable to the proposed GDP.

B. The following modifications shall be processed as a Type I modification by the City Engineer using the criteria in 16.12.13.A.

1. Modifications to driveway location, size, and sharing standards in 16.12.035

2. Modifications to sidewalk and planter strips widths and location in 16.12.016 that preserve existing street trees or trees on private property to ensure compliance with ADA standards

Finding: Complies as proposed. See findings from 16.12.13.A.

16.12.014 - Administrative provisions.

An applicant shall submit the following items to the City and complete the following tasks prior to proceeding with construction of proposed development plans. These items include the following:

- *A. Pre-Design Meeting;*
- *B. Final Engineering Plans, Stamped and Signed by an Oregon Licensed Professional Engineer;*
- *C. Stormwater Report, Stamped and Signed by an Oregon Licensed Professional Engineer;*
- *D. Geotechnical Report, Stamped and Signed by an Oregon Licensed Professional Engineer (if applicable);*
- *E. Engineer's Preliminary and Final Cost Estimates (also may be known as engineer's opinion of probable construction cost);*
- *F. Plan Check and Inspection Fees (as set by City resolution);*
- *G. Certificate of Liability Insurance for City funded public projects contracted by the City (not less than one million dollars single incident and two million dollars aggregate);*
- *H. Preconstruction Meeting;*
- *I. Financial Guarantee(s) per OCMC 17.50.140;*
- *J. Applicable Approvals/Permits from other agencies or entities;*
- *K. Developer/Engineer Agreement for public works improvements.*

An applicant shall submit the following additional items to the City and complete the following tasks prior to completing construction of proposed development plans. These items include the following:

- *L. Project Engineer's Certificate of Completion;*
- *M. Stormwater Operation and Maintenance Easement (if applicable);*

N. Deed of Dedication (Bargain and Sale Deed);
O. Recorded Plat and/or Easements (if applicable);
P. Recorded Non-Remonstrance Covenant Agreement;
Q. Land Division Compliance Agreement (if applicable);
R. Permanent Stabilization and/or Restoration of the impact from the development;
S. Fulfillment of all Conditions of Approval;
T. Payment of all Outstanding Fees;
U. Maintenance Guarantee(s). per OCMC 17.50.141;
V. Indemnity Agreement (if applicable);
W. Completed Punchlist;
X. As-Built Drawings;

Details on individual items required by this subsection can be obtained by contacting Public Works. Many items, such as the engineer's cost estimate and plan check and inspection fee, maybe be submitted in conjunction with documentation for other infrastructure improvements that are done with the development (such as street, sanitary sewer, and water).

Finding: Complies with Condition. The developer for future DDPs shall submit or address all items in section 16.12.014 of the Oregon City Municipal Code based on the timing requirements contained therein and as deemed applicable by the City.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

16.12.015 - Street design—Generally.

Development shall be required to provide existing or future connections to adjacent sites through the use of vehicular and pedestrian access easements where applicable. Development shall provide any necessary dedications, easements or agreements as identified in the Transportation System Plan, Trails Master Plan, and/or Parks and Recreation Master Plan and this chapter, subject to constitutional limitations. The location, width and grade of street shall be considered in relation to: existing and planned streets, topographical conditions, public convenience and safety for all modes of travel, existing and identified future transit routes and pedestrian/bicycle accessways, overlay districts, and the proposed use of land to be served by the streets. The street system shall assure an adequate traffic circulation system with intersection angles, grades, tangents and curves appropriate for the traffic to be carried considering the terrain. To the extent possible, proposed streets shall connect to all existing or approved stub streets that abut the development site. The arrangement of streets shall either:

A. Provide for the continuation or appropriate projection of existing principal streets in the surrounding area and on adjacent parcels or conform to a plan for the area approved or adopted by the City to meet a particular situation where topographical or other conditions make continuance or conformance to existing streets impractical;

B. Where necessary to give access to or permit a satisfactory future development of adjoining land, streets shall be extended to the boundary of the development and the resulting dead-end street (stub) may be approved with a temporary turnaround as approved by the City Engineer. Notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. Access control in accordance with OCMC 16.12.017 shall be required to preserve the objectives of street extensions.

C. Adequate right-of-way and improvements to streets, pedestrian ways, bike routes and bikeways, and transit facilities shall be provided and be consistent with the City's Transportation System Plan. Consideration shall be given to the need for street widening and other improvements in the area of the proposed development impacted by traffic generated by the proposed development. This shall include, but not be limited to, improvements to the right-of-way, such as installation of lighting, signalization, turn lanes, median and parking strips, traffic islands, paving, curbs and gutters, sidewalks, bikeways,

street drainage facilities and other facilities needed because of anticipated vehicular and pedestrian traffic generation.

Finding: Complies as conditioned. The development site fronts three public streets, Washington Street, Abernethy Road, and Redland Road. The arrangement of these streets and their respective intersections is not proposed to change, nor is their location or grade. The location, widths, and grades of the proposed street system provides for the continuation or appropriate projection of existing principal streets in the surrounding area and gives access for future development of adjoining land. The development has proposed improvements along Washington Street and Abernethy Road for all modes of travel to access the subject site. A private internal street system with public access easements is proposed to serve the development and provide a convenient street system for all modes of travel, including pedestrian and bicycle through the subject site; however, it does not fulfil shared-use path projects S5 & S44 identified by the TSP. To fulfill TSP project S5, the development shall provide a 12-foot-wide shared-use path running along the west side of the north-south road (proposed as Market St) which connects Washington Street and Abernethy Road. To fulfill TSP project S44, the development shall provide a 12-foot-wide shared-use path which extends from the "End of the Oregon Trail Interpretive Center" and connects to a north-south road running through the development site. The surface of all shared-use paths shall be paved with all-weather materials as approved by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.016 - Street design.

All development regulated by this chapter shall provide street improvements in compliance with the standards in Table 16.12.016 depending on the street classification set forth in the Transportation System Plan and the Comprehensive Plan designation of the adjacent property, unless an alternative plan has been adopted. The table implements the adopted Transportation System Plan and illustrates the maximum design standards. These standards may be reduced with an alternative street design which may be approved based on the modification criteria in OCMC 16.12.013. The steps for reducing the street design are found in the Transportation System Plan.

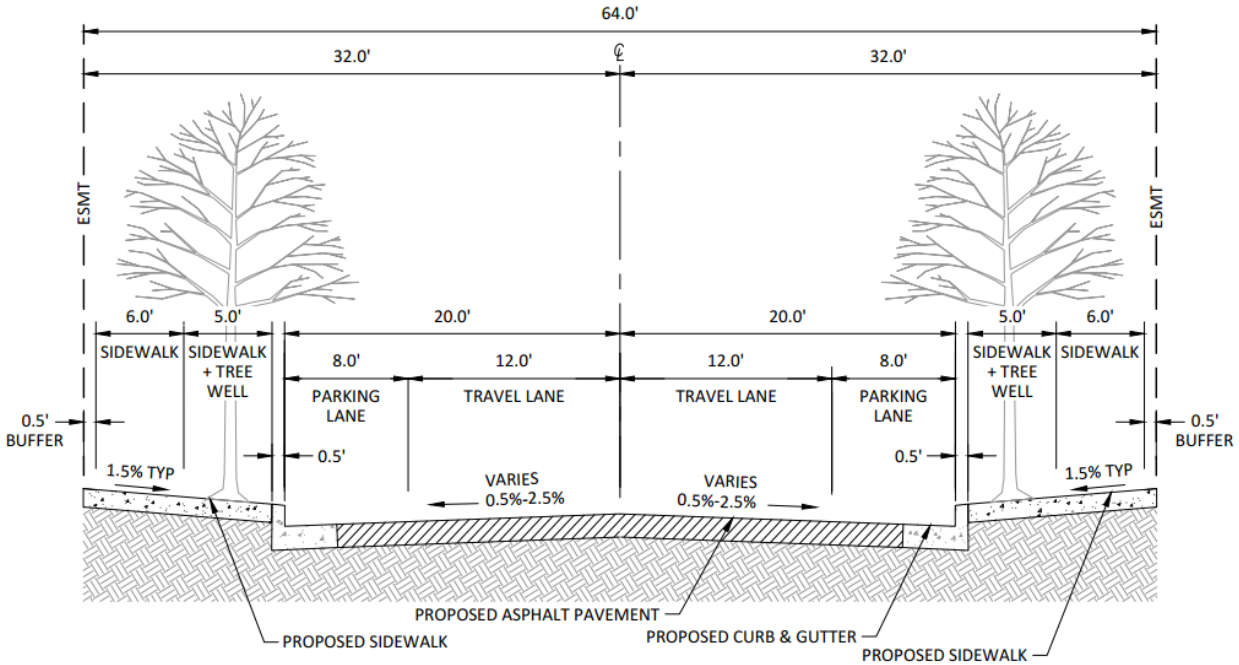
Table 16.12.016 Street Design

Table 16.12.016 Street Design. To read the table select the road classification as identified in the Transportation System Plan and the Comprehensive Plan designation of the adjacent properties to find the maximum design standards for the road cross section. If the Comprehensive Plan designation for lands on either side of the street differs, the wider right-of-way standard shall apply.

Road Classification	*Comprehensive Plan Designation*	*Right-of-Way Width*	*Pavement Width*	*Public Access*	*Sidewalk*	*Landscape Strip*	*Bike Lane*	*Street Parking*	*Travel Lanes*	*Median*
Major Arterial	*Mixed Use, Commercial or Public/Quasi Public*	*116 ft.*	*94 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
	Industrial	*120 ft.*	*88 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*N/A*	*(5) 14 ft. Lanes*	*6 ft.*
	Residential	*126 ft.*	*94 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*

Road Classification	Comprehensive Plan Designation	Right-of-Way Width	Pavement Width	Public Access	Sidewalk	Landscape Strip	Bike Lane	Street Parking	Travel Lanes	Median
Minor Arterial	Mixed Use, Commercial or Public/Quasi Public	116 ft.	94 ft.	0.5 ft.	10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells		6 ft.	8 ft.	(5) 12 ft. Lanes	6 ft.
	Industrial	118 ft.	86 ft.	0.5 ft.	5 ft.	10.5 ft.	6 ft.	7 ft.	(5) 12 ft. Lanes	N/A
	Residential	100 ft.	68 ft.	0.5 ft.	5 ft.	10.5 ft.	6 ft.	7 ft.	(3) 12 ft. Lanes	6 ft.

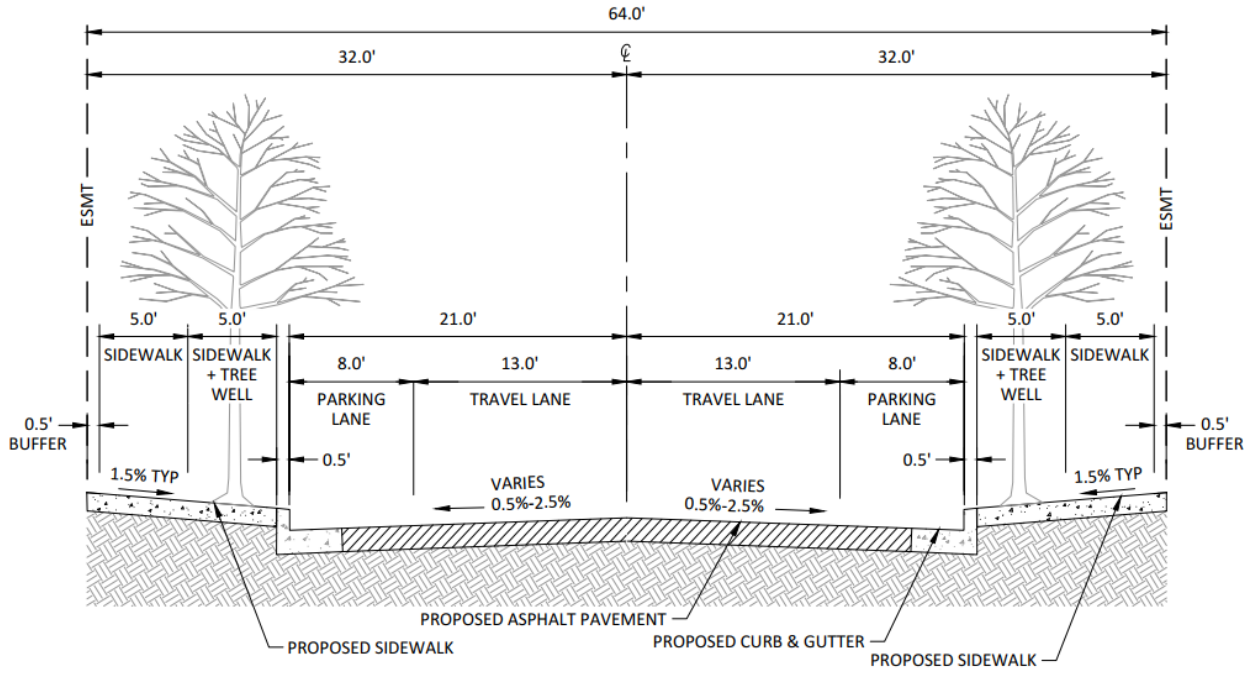
Road Classification	Comprehensive Plan Designation	Right-of-Way Width	Pavement Width	Public Access	Sidewalk	Landscape Strip	Bike Lane	Street Parking	Travel Lanes	Median
Collector	Mixed Use, Commercial or Public/Quasi Public	86 ft.	64 ft.	0.5 ft.	10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells		6 ft.	8 ft.	(3) 12 ft. Lanes	N/A
	Industrial	88 ft.	62 ft.	0.5 ft.	5 ft.	7.5 ft.	6 ft.	7 ft.	(3) 12 ft. Lanes	N/A
	Residential	85 ft.	59 ft.	0.5 ft.	5 ft.	7.5 ft.	6 ft.	7 ft.	(3) 11 ft. Lanes	N/A



Road Classification	Comprehensive Plan Designation	Right-of-Way Width	Pavement Width	Public Access	Sidewalk	Landscape Strip	Bike Lane	Street Parking	Travel Lanes	Median
Local	Mixed Use, Commercial or Public/Quasi Public	62 ft.	40 ft.	0.5 ft.	10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells		N/A	8 ft.	(2) 12 ft. Lanes	N/A
	Industrial	60 ft.	38 ft.	0.5 ft.	5 ft.	5.5 ft.	(2) 19 ft. Shared Space			N/A
	Residential	54 ft.	32 ft.	0.5 ft.	5 ft.	5.5 ft.	(2) 16 ft. Shared Space			N/A

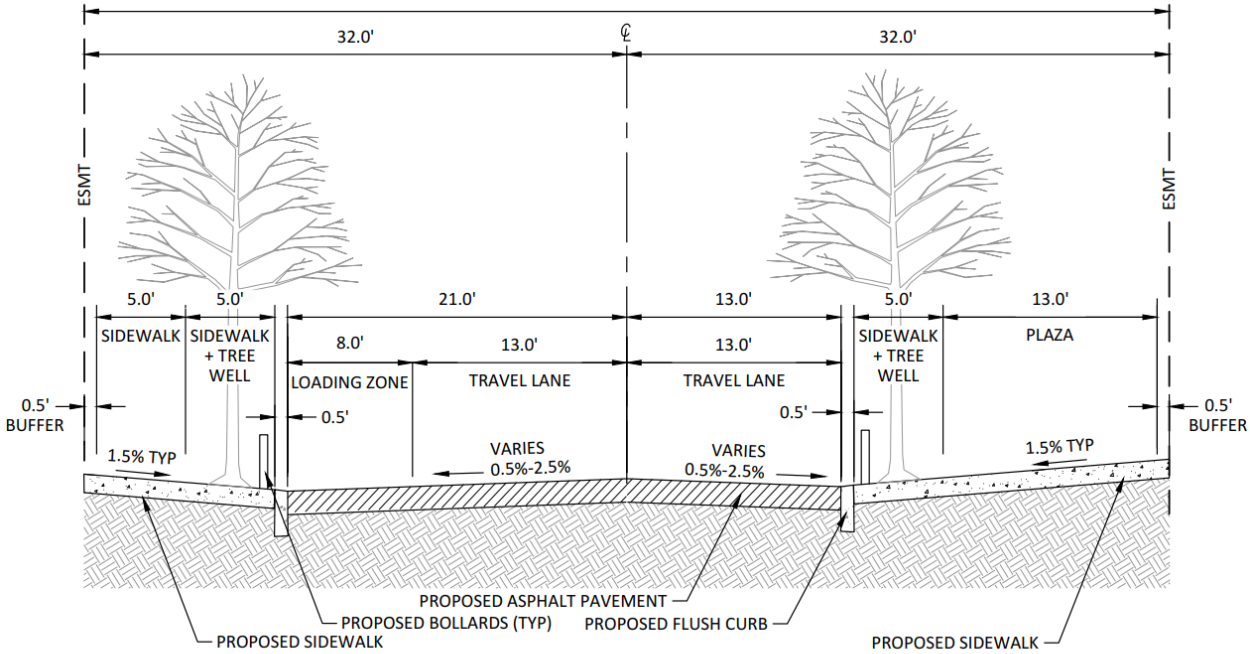
1. Pavement width includes, bike lane, street parking, travel lanes and median.

2. Public access, sidewalks, landscape strips, bike lanes and on-street parking are required on both sides of the street in all designations. The right-of-way width and pavement widths identified above include the total street section.
3. A 0.5 foot curb is included in landscape strip or sidewalk width.
4. Travel lanes may be through lanes or turn lanes.
5. The 0.5 foot public access provides access to adjacent public improvements.
6. Alleys shall have a minimum right-of-way width of twenty feet and a minimum pavement width of sixteen feet. If alleys are provided, garage access shall be provided from the alley.
7. A raised concrete median or landscape median shall be utilized for roads identified to have access restrictions.
8. A public utility easement (PUE) shall be provided on both sides of the right-of-way or public access easement on private property as identified in 16.12.85.



Finding: Complies with Condition. The development site fronts three public roadways: Washington Street, Abernethy Road, and Redland Road. Access into and out of the site are proposed along Washington Street and Abernethy Road. Frontage improvements along Redland Road are not proposed with the General Development Plan. Washington Street and Abernethy Road are both classified as Minor Arterials in the Oregon City TSP. All internal streets are proposed to be private and have adequate pavement width to support 2-way automobile traffic, emergency vehicles (as deemed necessary by Clackamas Fire District Number 1) and sidewalk widths which are ADA compliant.

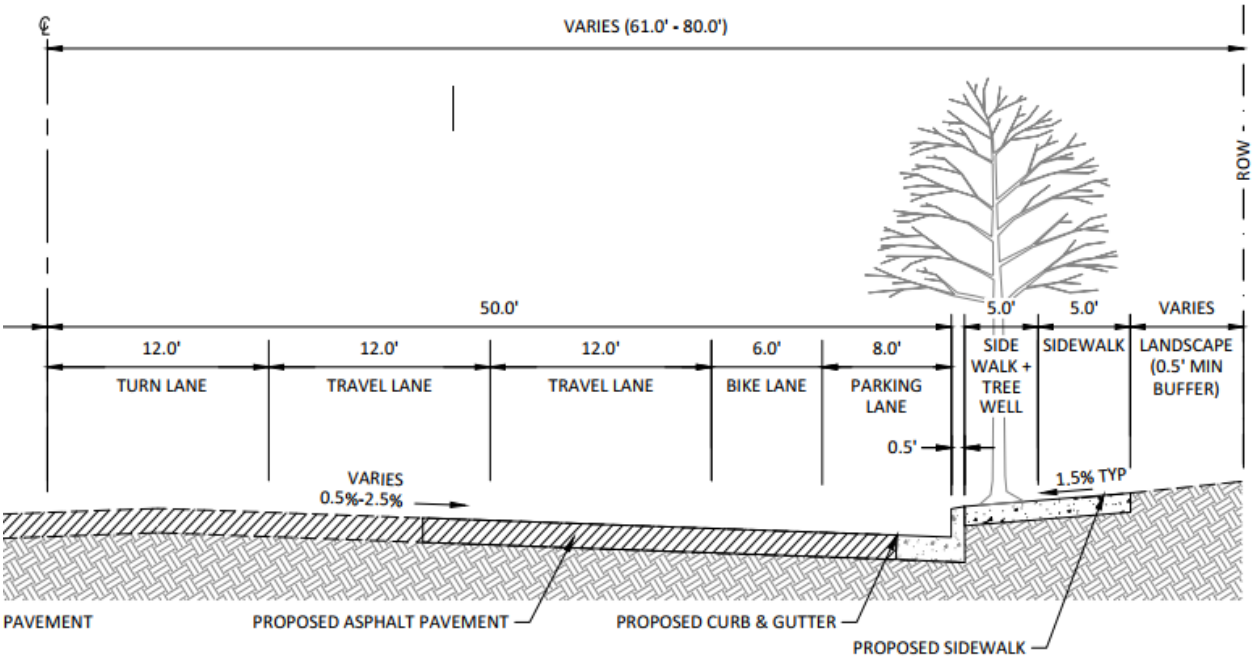
The applicant has proposed the following street sections for private internal streets to comply with Table 16.12.016.



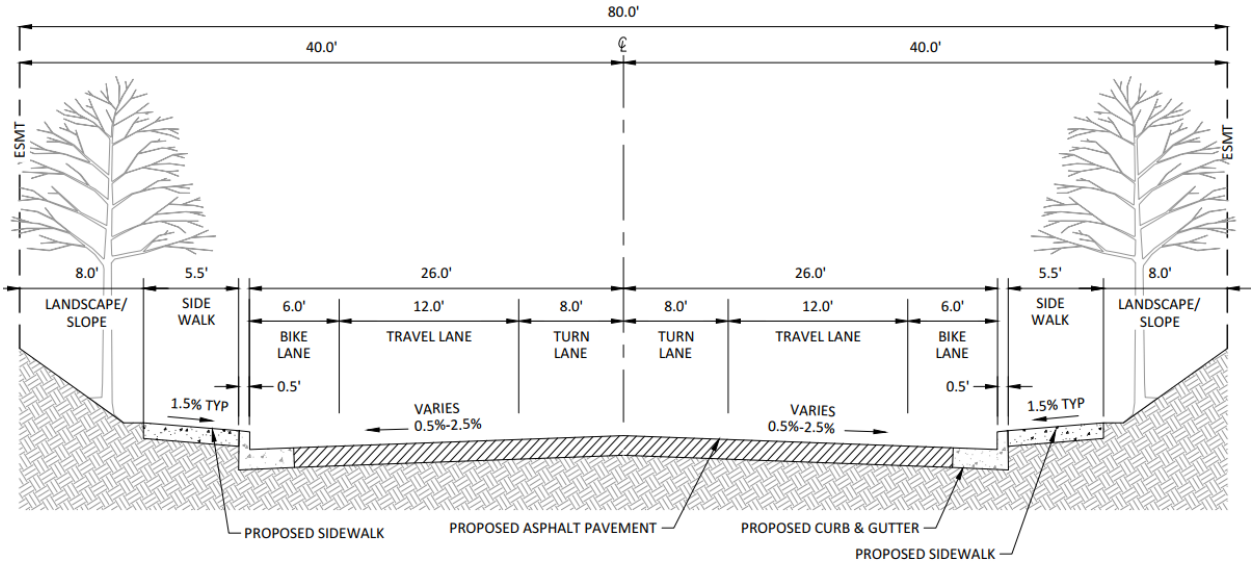
INTERNAL ROADS

N.T.S.

INTERNAL ROADS (W/ FIRE ACCESS)



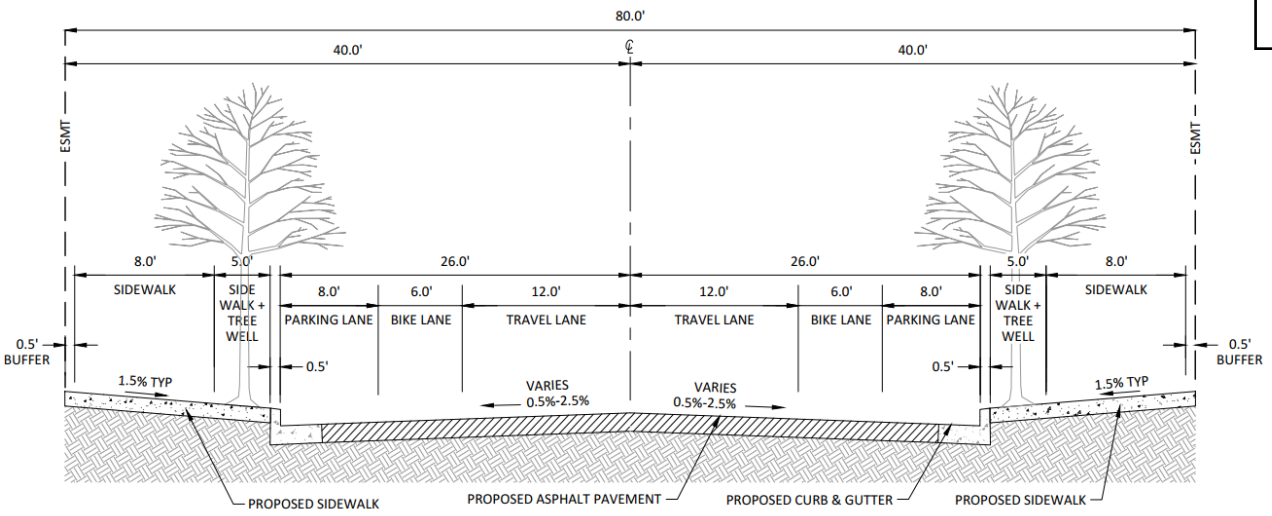
N.T.S.



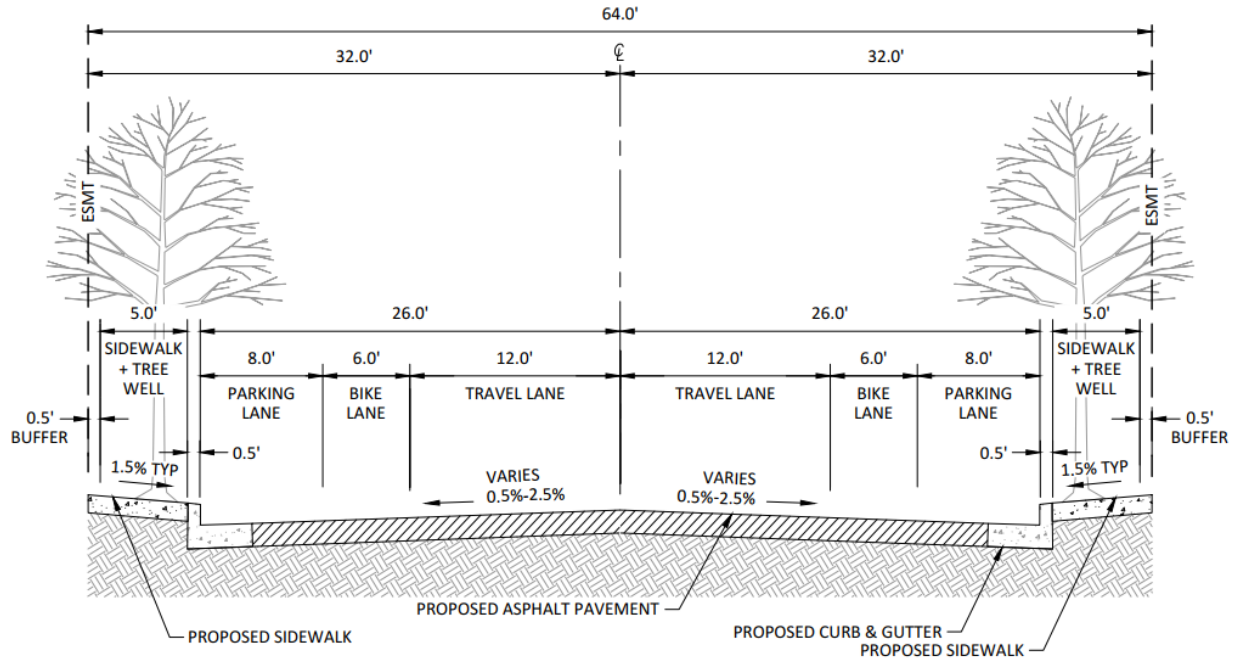
PLAZA FIRE ACCESS ROAD

N.T.S.

The applicant has proposed the following improvements for Washington Street which complies with Table 16.12.016.



The applicant has proposed the following internal street for a the primary north-south streets connecting Washington Street and Abernethy Road



MARKET STREET (SECTION 1)

N.T.S.

MARKET STREET (SECTION 2)

N.T.S.

MARKET STREET (SECTION 3)

N.T.S.

Abernethy Road is owned and maintained by Clackamas County. Roadway improvements, including street widening, frontage improvements and right-of-way dedication along Abernethy Road shall be per requirements of the jurisdiction that has authority over Abernethy Road at the time of construction plan approval. The future developer of DDPs shall provide a 12-foot-wide shared-use path along the site's frontage on the north side of Abernethy Road to fulfill TSP project S2 and may serve to fulfill the sidewalk required on the north side of Abernethy Road if approved by the jurisdiction that has authority over Abernethy Road at the time of construction plan approval.

The development has proposed private roads with lane widths which do not match city standards (13' vs 12'). All roads required to be constructed by the developer, public and private, shall have 12-foot-wide vehicular lanes unless otherwise approved by the City Engineer.

Redland Road is owned and maintained by ODOT. Street Improvements, including street widening, frontage improvements and right-of-way dedication along Redland Road shall be per Oregon Department of Transportation requirements. See findings from 16.12.033 for related findings. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

A. Sidewalks. The applicant shall provide for sidewalks on both sides of all public streets, on any private street if so required by the decision-maker, and in any special pedestrian way within the development. Both sidewalks and curbs are to be constructed to City standards and at widths set forth above, and according to plans and specifications provided by the City Engineer. Exceptions to this requirement may be allowed in order to accommodate topography, trees or some similar site constraint. In the case of major or minor arterials, the decision-maker may approve a development without sidewalks where sidewalks are found to be dangerous or otherwise impractical to construct or are not reasonably related to the applicant's development. The decision-maker may require the applicant to provide sidewalks concurrent with the issuance of the initial building permit within the area that is the subject of the development application. Applicants for partitions may be allowed to meet this requirement by providing the City with a financial guarantee per OCMC 16.12.110.

Finding: Complies as proposed. The applicant proposes the installation new sidewalks on both sides of all new private streets that are interior to the development and along the frontages of Washington Street and Abernethy Road where ½ street improvements have been proposed. There are no sidewalk improvements along either side of Redland Road, presumably because it does not include any access or development immediately adjacent to the facility. The proposed sidewalk improvements will be constructed to City standards and are illustrated in the civil plans attached to this application as Appendix B. **See findings from the beginning of this section for required street improvements along streets fronting this development.**

B. Pedestrian and Bicycle Accessways Routes. If deemed appropriate to extend pedestrian and bicycle routes, existing or planned, the decision-maker may require the installation of separate pedestrian and bicycle facilities.

Finding: Complies as proposed. Bike and Pedestrian routes are identified throughout the development and along the site's frontage with Washington Street and Abernethy Road as illustrated in sheets C110 and C111 of the civil plans attached to this application as Appendix B. All other bike lanes and pedestrian access routes are identified in Chapter 4 of the proposed Development Plan submitted by the applicant.

C. Street Name Signs and Traffic Control Devices. The applicant shall install street signs and traffic control devices as directed by the City Engineer. Street name signs and traffic control devices shall be in conformance with all applicable City regulations and standards.

Finding: Complies with Condition. Street names provided by the applicant for the GDP are only for reference. Clackamas County maintains and operates traffic signals within Oregon City. The developer of future DDPs shall provide approved plans with applicable street signs for review by the City prior to installation. All traffic control devices, such as signage, flashing lights/beacons, and traffic signals shall be designed using the MUTCD. For all new site driveways and intersections that require traffic signals, the developer of future DDPs shall provide a Traffic Signal Plan conforming to requirements of the road authority. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Street Lights. The applicant shall install street lights which shall be served from an underground source of supply. Street lights shall be in conformance with all City regulations.

Finding: Complies with Condition. This is an application for approval of the GDP. No actual physical improvements will be constructed with approval of this request. The applicant is aware of the requirements to install street lights consistent with City regulations. Future applications for DDP

approval will be accompanied by formal street lighting plans consistent with these provisions. The developer of future DDPs shall provide street lighting plans with photometric information for all internal roads, Washington Street, Abernethy Road and Redland Road. Street lighting shall conform with all City standards, specifications, codes, and policies and be approved by Portland General Electric (PGE) prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Any new street proposed with a pavement width of less than thirty-two feet shall be processed through OCMC 16.12.013 and meet minimum life safety requirements, which may include fire suppression devices as determined by the Fire Marshall to assure an adequate level of fire and life safety. The modified street shall have no less than a twenty-foot wide unobstructed travel lane.
Finding: Not Applicable. None of the streets within the proposed GDP include a pavement width of less than thirty-two feet. Therefore, this criterion is not applicable to the proposal.

F. All development shall include vegetated planter strips that are five feet in width or larger and located between the sidewalk and curb unless otherwise approved pursuant to this chapter. All development shall utilize the vegetated planter strip for the placement of street trees or place street trees in other acceptable locations, as prescribed by OCMC 12.08. Development proposed along a collector, minor arterial, or major arterial roads may place street trees within tree wells within a wider sidewalk in lieu of a planter strip. In addition to street trees per OCMC 12.08, vegetated planter strips shall include ground cover and/or shrubs spaced four feet apart and appropriate for the location. No invasive or nuisance plant species shall be permitted.
Finding: Complies with Condition. Alternative Street plans were provided by staff for the public street improvements and all internal streets are proposed to be private. Vegetated planter strips are provided between the sidewalk and curb or behind the sidewalk when matching an existing public street section. Interior to the site, street trees are provided along all newly proposed streets adjacent to or within the development. See section 16.12.016 regarding requirements for vegetated planter strips located between the sidewalk and curb for the placement of street trees. See section 12.08 regarding placement of street trees. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. Vehicle and pedestrian access easements may serve in lieu of streets when approved by the decision maker and only where dedication of a street is deemed impracticable.
Finding: Not Applicable. The GDP includes a street plan and does not require vehicle and pedestrian access easements in lieu of street dedication. New private streets along with primary and secondary pedestrian access routes are provided through the site to meet provisions of the TSP. The applicant will dedicate required right-of-way when the GDP is approved and after completing the proposed ½ street improvements to the adjacent rights of way. The decision maker has not approved access easements in lieu of streets nor has dedication of a street been deemed impracticable.

H. Vehicular and pedestrian easements shall allow for public access and shall comply with all applicable pedestrian access requirements.
Finding: Complies as proposed. The applicant proposes to provide pedestrian access easements to the public for private streets and pedestrian ways included within this development.

16.12.017 - Street design—Access control.
A. A street which is dedicated to end at the boundary of the development or in the case of half-streets dedicated along a boundary shall have an access control granted to the City as a City controlled plat restriction for the purposes of controlling ingress and egress to the property adjacent to the end of the dedicated street. The access control restriction shall exist until such time as a public street is created, by dedication and accepted, extending the street to the adjacent property.

Finding: Not Applicable. No new streets with dead ends are proposed for this development. Ingress and egress from adjacent properties will be from fully dedicated streets.

B. The City may grant a permit for the adjoining owner to access through the access control.
Finding: Complies as proposed. The development site is surrounded by right-of-way on three sides. The proposed GDP provides for pedestrian connections throughout the site, to the End of the Oregon Trail Interpretive Center, and to adjacent public rights-of-way.

C. The plat shall contain the following access control language or similar on the face of the map at the end of each street for which access control is required: "Access Control (See plat restrictions)."
Finding: Not Applicable. This proposal is for the approval of the GDP. No land division is proposed with this application. Therefore, this standard does not apply.

D. Said plats shall also contain the following plat restriction note(s): "Access to (name of street or tract) from adjoining tracts (name of deed document number[s]) shall be controlled by the City of Oregon City by the recording of this plat, as shown. These access controls shall be automatically terminated upon the acceptance of a public road dedication or the recording of a plat extending the street to adjacent property that would access through those Access Controls."
Finding: Not Applicable. This proposal is for the approval of the GDP. No land division is proposed with this application. Therefore, this standard does not apply.

16.12.018 - Street design—Alignment.
The centerline of streets shall be:
A. Aligned with existing streets by continuation of the centerlines; or
B. Offset from the centerline by no more than five feet, provided appropriate mitigation, in the judgment of the City Engineer, is provided to ensure that the offset intersection will not pose a safety hazard.
C. Driveways that are at least twenty-four feet wide shall align with existing or planned streets on adjacent sites.
Finding: Complies as Proposed. The civil plans attached as Appendix B, have been designed to this standard. The proposed private street into the site will match that centerline. This new private street aligns with the existing street stubbed on the north side of the development site. The proposed street alignments meet the City requirements. This standard is met.

16.12.019 - Traffic sight obstructions.
All new streets shall comply with the Traffic Sight Obstructions in Chapter 10.32.
Finding: Complies as Proposed. Currently, there is not a formal landscape plan provided with this application. The applicant and design team are aware of these requirements and are not proposing any obstructions (such as fences) within the sight lines of the accesses for those entering or exiting the public right-of-way. Future DDPs are expected to satisfy these standards with their submittal. The applicant is aware of their obligation to maintain sightline visibility.

16.12.020 - Street design—Intersection angles.
Except where topography requires a lesser angle, streets shall be laid out to intersect at angles as near as possible to right angles. In no case shall the acute angles be less than eighty degrees unless there is a special intersection design. An arterial or collector street intersecting with another street shall have at least one hundred feet of tangent adjacent to the intersection unless topography requires a lesser distance. Other streets, except alleys, shall have at least fifty feet of tangent adjacent to the intersection unless topography requires a lesser distance. All street intersections shall be provided with a minimum curb return radius of twenty-five feet for local streets. Larger radii shall be required for higher street classifications as determined by the City Engineer. Additional right-of-way shall be required to

accommodate curb returns and sidewalks at intersections. Ordinarily, intersections should not have more than two streets at any one point.

Finding: Complies as Proposed. All proposed intersections have been designed to intersect at a right angle to other streets as illustrated in the civil plan sheets C200 through C207 within Appendix B to this application. Intersection angles to the public right-of-way were designed to be at 90 degrees except for the connection to Washington Street which is at an existing angle of 82 degrees. There is more than 100 feet of tangent at all intersections to the public right-of-way. A minimum of 25-foot curb return is proposed to be provided at all intersections to the public right-of-way.

16.12.021 - Street design—Grades and curves.

Grades and center line radii shall conform to standards approved by the City Engineer.

Finding: Complies as Proposed. The proposed street design has been designed to meet the grades and curves to the Oregon City Street Design Standards provided by the City Engineer.

16.12.022 - Street design—Development abutting arterial or collector street.

Where development abuts or contains an existing or proposed arterial or collector street, the decision maker may require: access control; screen planting or wall contained in an easement or otherwise protected by a restrictive covenant in a form acceptable to the decision maker along the rear or side property line; or such other treatment it deems necessary to adequately protect residential properties or afford separation of through and local traffic. Reverse frontage lots with suitable depth may also be considered an option for residential property that has arterial frontage. Where access for development abuts and connects for vehicular access to another jurisdiction's facility then authorization by that jurisdiction may be required.

Finding: Complies as proposed. The development site abuts three Minor Arterials, Washington Street, Abernethy Road, and Redland Road. However, vehicular access is proposed to only Washington Street and Abernethy Road via private roads. This project is not a development that is in need of protection from through or local traffic. Vehicular access connections along the site's frontage with Abernethy Road is in Clackamas County's jurisdiction and the applicant is aware that there is a need to obtain approvals from them for new access. Redland Road is under ODOT's jurisdiction, but no new access is proposed along Redland Road. To the extent that this provision applies to future DDP's the applicant will comply.

16.12.023 - Street design—Pedestrian and bicycle safety.

Where deemed necessary to ensure public safety, reduce traffic hazards and promote the welfare of pedestrians, bicyclists and residents of the subject area, the decision maker may require that local streets be so designed as to discourage their use by nonlocal automobile traffic.

The City Engineer may require that crosswalks include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities. These curb extensions can increase the visibility of pedestrians and provide a shorter crosswalk distance as well as encourage motorists to drive slower. The City Engineer may approve an alternative design that achieves the same standard for constrained sites.

Finding: Complies as proposed. All new streets and frontage improvements have been designed to be compliant with the Oregon City street design requirements as informed by City staff and located to be consistent with the Oregon City TSP. DDP for development of each phase of the project will be submitted in the future. Appendix B demonstrates that all new streets and street frontages have been designed to have crosswalks which include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities.

16.12.024 - Street design—Half street.

Half streets, while generally not acceptable, may be approved where essential to the development, when in conformance with all other applicable requirements, and where it will not create a safety hazard. When approving half streets, the decision maker shall first determine that it will be practical to require

the dedication of the other half of the street when the adjoining property is divided or developed. Where the decision maker approves a half street, the applicant shall construct a half street with at least twenty feet of pavement width and provide signage prohibiting street parking so as to make the half street safe until such time as the other half is constructed. Whenever a half street is adjacent to property capable of being divided or developed, the other half of the street shall be provided and improved when that adjacent property divides or develops. Access control may be required to preserve the objectives of half streets.
When the remainder of an existing half-street improvement is completed it shall include the following items: dedication of required right-of-way, construction of the remaining portion of the street including pavement, curb and gutter, landscape strip, sidewalk, street trees, lighting and other improvements as required for that particular street. It shall also include at a minimum the pavement replacement to the centerline of the street. Any damage to the existing street shall be repaired in accordance with the City's "Pavement Cut Standards" or as approved by the City Engineer.
Finding: Not Applicable. This application does not propose any half streets.

16.12.025 - Street design—Cul-de-sacs and dead-end streets.
The City discourages the use of cul-de-sacs and permanent dead-end streets except where construction of a through street is found by the decision maker to be impracticable due to topography or some significant physical constraint such as geologic hazards, wetland, natural or historic resource areas, pre-existing dedicated open space, pre-existing development patterns, arterial access restrictions or similar situation as determined by the decision maker. This section is not intended to preclude the use of curvilinear eyebrow widening of a street where needed.
A. When permitted, access from new cul-de-sacs and permanent dead-end streets shall be limited to a maximum of twenty-five dwelling units.
Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

B. Cul-de-sacs and permanent dead-end streets shall include pedestrian/bicycle accessways to meet minimum block width standards as prescribed in OCMC 16.12.030.
Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

C. Cul-de-sacs shall have sufficient radius to provide adequate turn-around for emergency vehicles in accordance with fire district and city adopted street standards.
Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

D. Permanent dead-end streets shall provide public street right-of-way/easements sufficient to provide a sufficient amount of turn-around space complete with appropriate no-parking signs or markings to accommodate waste disposal, sweepers, emergency and other long vehicles in the form of a hammerhead or other design to be approved by the decision maker.
Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

E. In the case of dead-end stub streets that will connect to streets on adjacent sites in the future, notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. A dead-end street shall include signage or barricade meeting Manual on Uniform Traffic Control Devices (MUTCD).
Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

16.12.026 - Street design—Alleys.
Alleys with public access easements on private property shall be provided in the Park Place and South End concept plan areas for the following districts R-5, R-3.5, R-2, MUC-1, MUC-2 and NC zones unless other permanent provisions for private access to off-street parking and loading facilities are approved by the decision maker. All alleys intended to provide access for emergency vehicles shall be a minimum width of twenty feet. The corners of alley intersections shall have a radius of not less than ten feet and shall conform to standards approved by the City Engineer. Access easements and maintenance agreements shall be recorded on affected properties.
Finding: Not Applicable. The subject site is not located within the Park Place or South End concept plan areas, nor is it or will it be zoned R-5, R-3.5, R-2, MUC-1, MUC-2, or NC. This standard does not apply.

16.12.027 - Street design—Off-site street improvements.
During consideration of the preliminary plan for a development, the decision maker shall determine whether existing streets impacted by, adjacent to, or abutting the development meet the applicable design or dimensional requirements. Where such streets fail to meet these requirements, the decision-maker shall require the applicant to make proportional improvements sufficient to achieve conformance with minimum applicable design standards required to serve the proposed development.
Finding: Compiles as conditioned. In response to Section 17.65, the applicant has included a complete TIA with this GDP proposal. The TIA evaluated the total impacts to the transportation system from the proposed full buildout of the GDP area and identifies the facility improvements that are recommended to serve the proposed development. The applicant adopts the recommendations and the improvements proposed in the TIA. However, the applicant has not addressed city TSP projects which might be associated with this project. Redland Road and Highway 213 are Oregon Department of Transportation (ODOT) roads and must be improved per ODOT requirements if improvements are triggered during DDP review.

16.12.028 - Street design—Transit.
Streets shall be designed and laid out in a manner that promotes pedestrian and bicycle circulation. The applicant shall coordinate with transit agencies where the application impacts transit streets as identified in OCMC 17.04.1310. Pedestrian/bicycle access ways shall be provided as necessary to minimize the travel distance to transit streets and stops and neighborhood activity centers. The decision maker may require provisions, including easements, for transit facilities along transit streets where a need for bus stops, bus pullouts or other transit facilities within or adjacent to the development has been identified.
Finding: Complies as conditioned. The applicant is proposing to install pedestrian and bicycle facilities throughout the development consistent with the Oregon City street design standards and in locations called for in the Oregon City TSP as discussed earlier. The applicant is aware that future tenants and businesses within the master plan area can benefit from transit facilities located within the development. According to the TIA provided as Appendix C, "local transit service is already provided by TriMet in the immediate site vicinity by the following two bus lines:

- TriMet Line 79 (Clackamas/Oregon City): Provides service between Clackamas Town Center and Oregon City Transit Center, with bus stops conveniently located along Washington Street right at the traffic signal with the Home Depot/site access street. Weekday and weekend service is generally provided at 40-minute headways.
- TriMet Line 154 (Willamette/Clackamas Heights): Provides service that connects the Clackamas Heights area up along Holcomb Boulevard with the Oregon City Transit Center, with additional service to the West Linn area via Willamette Falls Drive. Bus stops are conveniently located

along Abernethy Road at the traffic signal with Redland Road and at the west end of the property frontage. Only weekday service is provided at 1-hour headways.

Additionally, The North End master plan site is just over three-quarters of a mile from the Oregon City Transit Center located in the downtown core of Oregon City at Main Street and 11th Street. This means that visitors, residents, and employees associated with the master plan area can walk (or use Bus Route 79) to the Oregon City Transit Center and access a variety of other bus lines that serve the area. There has not been any requests from TriMet for any easements or other transit improvements at this time. If it is determined through individual DDP review that transit improvements are needed, the applicant of that DDP shall provide accommodations for transit facilities along Washington Street and Abernethy Road and the new north-south road connecting Washington Street and Abernethy Road (Market Street) such as new bus stops, bus pullouts or other transit facilities within the development. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.029 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standards in effect at the time the permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.
Finding: Complies with Condition. Underground utility extensions are proposed within Washington Street. The applicant acknowledges that it is their responsibility to restore any pavement that is damaged during the excavation process. Pavement cuts or other improvement made in a City street or alley shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.030 - Blocks—Width.
The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features.
All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted Transportation System Plan. The maximum block spacing between streets is 530 feet and the minimum block spacing between streets is 150 feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the City Engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every 330 feet. The spacing standards within this section do not apply to alleys.
Finding: Complies as proposed.
The applicant has provided the following Response: *The proposed GDP does not include any land division that would normally be used to create new blocks; however, the GDP does identify specific uses that require large areas of land and provides for an underlying street system that creates connectivity between uses both on and off site. The street plan responds to several factors including the desire for a new collector level street through the GDP area, efficient and safe connections to the external street system, topographical differences between the site and the existing surrounding street network and the desire to create a mixed use, multimodal live work environment within the project area. These unique factors atop a reclaimed landfill and within a floodplain and NROD overlay make it difficult for future land divisions to comply with these block spacing standards. However, as the street plan in Appendix B*

demonstrates and as discussed above, takes into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features as required by this criterion. For all these reasons, the applicant has requested a modification to the block length standards under the provisions in 17.65.070 later in this narrative.

Staff concurs with the design approach for the block width along Washington Street due to the limitations presented by the existing topography of the site. The applicant has a pedestrian accessways every 330 feet along Washington Street. Internal streets are proposed to be spaced between five hundred thirty feet and one hundred fifty feet. Some streets connecting to Abernethy Road which have more than five hundred thirty feet between centerlines. For those streets, the applicant has requested a modification per 17.65.070. Staff concurs with the design approach for the block width along Abernethy Road (see findings from 17.65.070).

16.12.031 - Street design—Street names.

Except for extensions of existing streets, no street name shall be used which will duplicate or be confused with the name of an existing street. Street names shall conform to the established standards in the City and shall be subject to the approval of the City.

Finding: Complies with Condition. New street names will be requested later in conjunction with future street construction and site development through the DDPs and will conform to this standard. The applicant shall submit a request to the Building Division to receive approval for new any new public or private street names and addresses onsite; only approved street names shall be included on the final construction plans. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.032 – Public off-street pedestrian and bicycle accessways.

Pedestrian/bicycle accessways are intended to provide direct, safe and convenient connections between residential areas, retail and office areas, institutional facilities, industrial parks, transit streets, neighborhood activity centers, rights-of-way, and pedestrian/bicycle accessways which minimize out-of-direction travel, and transit-orientated developments where public street connections for automobiles, bicycles and pedestrians are unavailable. Pedestrian/bicycle accessways are appropriate in areas where public street options are unavailable, impractical or inappropriate. Pedestrian and bicycle accessways are required through private property or as right-of-way connecting development to the right-of-way at intervals not exceeding 330 feet of frontage; or where the lack of street continuity creates inconvenient or out of direction travel patterns for local pedestrian or bicycle trips.

Finding: Complies as Proposed. Private streets are proposed to provide internal circulation of the master plan area. All proposed street improvements along the site's frontage as well those private streets proposed internally are provided with appropriate bicycle and pedestrian improvements. In addition, the master plan includes additional shared use amenities called for in the Oregon City TSP to provide safe and convenient access within the site, to surrounding streets, and to the End of the Oregon Trail Interpretive Center. The onsite bicycle and pedestrian circulation system provide for safe and convenient connections between uses within the GDP, to open spaces, the plaza, and to the surrounding streets. Chapter 4 of the proposed development application and Appendix B, includes the pedestrian and bicycle accessways in compliance with this standard. **See findings from 16.12.030 regarding pedestrian accessway intervals.**

A. Entry points shall align with pedestrian crossing points along adjacent streets and with adjacent street intersections.

Finding: Not applicable. There are currently no adjacent pedestrian crossing points along the site's frontage.

B. Accessways shall be free of horizontal obstructions and have a nine foot six inch high vertical clearance to accommodate bicyclists. To safely accommodate both pedestrians and bicycles, accessway right-of-way widths shall be as follows:
1. Accessways shall have a fifteen-foot wide right-of-way with a seven-foot wide paved surface with a minimum four-foot planter strip on either side.
2. If an accessway also provides secondary fire access, the right-of-way width shall be at least twenty-four feet wide with a - sixteen foot paved surface between four-foot planter strips on either side.
Finding: Complies as Proposed. None of the proposed pedestrian and bicycle accessways are obstructed within the development and are proposed with more than the minimum vertical clearance. The width of the proposed accessway that bisects the property from east to west is 22 feet, more than the 15-foot width required by this standard. Future and site specific DDPs can accommodate a 7-foot-wide paved surface and 4-foot planter strip in compliance with this criterion.

C. Accessways shall be direct with at least one end point of the accessway always visible from any point along the accessway. On-street parking shall be prohibited within fifteen feet of the intersection of the accessway with public streets to preserve safe sight distance and promote safety.
Finding: Complies as conditioned. The applicant has stated that easements are not used to provide vehicular access to lots adjacent to the subject site. However, the north-south road proposed with the development is intended to provide access to the property north of the development site. The applicant shall provide an easement over all roads proposed to run through the development site and provide a covenant over them for 24-hour public access and be responsible for their future maintenance and liability. The applicant shall provide a public access easement over all private roads and shared use paths proposed to run through the development site that allows for 24-hour public access.

D. To enhance pedestrian and bicycle safety, accessways shall be lighted with pedestrian-scale lighting. Accessway lighting shall be to a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. Street lighting shall be provided at both entrances.
Finding: Complies as conditioned. No specific site lighting is proposed with the GDP. The applicant is aware of this standard and the proposed street plan and accessway plan in the GDP. The developer for future DDPs shall provide pedestrian accessways with pedestrian-scale lighting with a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. Street lighting will be provided per findings from 16.12.016. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Accessways shall comply with Americans with Disabilities Act (ADA).
Finding: Complies with Condition. The proposed accessways are already provided with sufficient width to meet ADA with on-site sidewalks ranging between 5 and 22 feet. All future DDP applications will provide this level of design for pedestrian walkways which comply with ADA code requirements. As designed and located on the site, each accessway or street affords a grade and width that can satisfy ADA requirements at the time of DDP approval. The developer for future DDPs shall provide public pedestrian accessways which are Americans with Disabilities Act (ADA) compliant. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

F. The planter strips on either side of the accessway shall be landscaped along adjacent property by installation of the following:
1. Either an evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average; and

2. Ground cover covering one hundred percent of the exposed ground. No bark mulch shall be allowed except under the canopy of shrubs and within two feet of the base of trees; and
3. A two-inch minimum caliper tree for every thirty-five -feet along the accessway. Trees may be planted on either side of the accessway, provided they are spaced no more than thirty-five feet apart; and
4. In satisfying the requirements of this section, evergreen plant materials that grow over forty-two inches in height shall be avoided. All plant materials shall be selected from the Oregon City Native Plant List.
Finding: Complies as Proposed. The proposed on-site access ways were designed to be compliant with these standards to ensure there was adequate space in the cross sections, as shown in the preliminary high level landscape plans, to accommodate all of these planting requirements. For example, the cross section for "Market Street" provides a width of fve feet that can easily accommodate these planting requirements. The applicant for each new DDP will further refne the design to ensure that the detailed requirements of these standards are reflected in the detailed landscape plans. Trees are proposed to be provided along the accessways except where they cross private streets, drive aisles, or interfere with parking.

G. Accessways shall be designed to prohibit unauthorized motorized traffic. Curbs and removable, lockable bollards are suggested mechanisms to achieve this.
Finding: Complies as Proposed. The supplemental landscape design guidelines include provisions within the master plan to ensure that the accessways are differentiated from motorized traffic with different materials and require minimum hardscape, softscape, and furniture requirements. Chapter 5 of the application provides specific details related to the landscape and material requirements. If necessary, the applicant has proposed to place bollards located to ensure that there are no unauthorized motor vehicles on the accessways.

H. Accessway surfaces shall be paved with all-weather materials as approved by the City. Pervious materials are encouraged. Accessway surfaces shall be designed to drain stormwater runoff to the side or sides of the accessway. Minimum cross slope shall be two percent.
Finding: Complies as conditioned. The layout of the proposed development shows pedestrian and bicycle accessways with proper materials. However, some accessways have not been provided where required by other conditions within this staff report. All public accessway surfaces shall be paved with all-weather materials as approved by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

I. In parks, greenways or other natural resource areas, accessways may be approved with a five-foot wide gravel path with wooden, brick or concrete edgings.
Finding: Not Applicable. No accessways are currently proposed in the subject areas as part of this GDP.

J. The decision maker may approve an alternative accessway design due to existing site constraints through the modification process set forth in OCMC 16.12.013.
Finding: Not Applicable. The GDP does not propose any alternative accessway designs. If such designs are later requested through a DDP application, the applicant will be required to meet this standard as well as the design guidelines that are approved with this GDP.

K. Ownership, liability and maintenance of accessways. To ensure that all pedestrian/bicycle accessways will be adequately maintained over time, the City Engineer shall require one of the following:
1. Dedicate the accessways to the public as public right-of-way prior to the final approval of the development; or

2. The developer incorporates the accessway into a recorded easement or tract that specifically requires the property owner and future property owners to provide for the ownership, liability and maintenance of the accessway.

Finding: Complies with Condition. The applicant has indicated that they would provide public access easements throughout the master plan area for any private street, accessway, or sidewalk. This standard will be required to be met with individual DDP plan approval. The future developer of DDPs shall provide a covenant for 24-hour public access over the pedestrian and bicycle accessways and be responsible for the future maintenance and liability. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.033 - Mobility standards.

Development shall demonstrate compliance with intersection mobility standards. When evaluating the performance of the transportation system, the City of Oregon City requires all intersections, except for the facilities identified in subsection E below, to be maintained at or below the following mobility standards during the two-hour peak operating conditions. The first hour has the highest weekday traffic volumes and the second hour is the next highest hour before or after the first hour. Except as provided otherwise below, this may require the installation of mobility improvements as set forth in the Transportation System Plan (TSP) or as otherwise identified by the City Engineer.

A. For intersections within the regional center, the following mobility standards apply:

1. During the first hour, a maximum v/c ratio of 1.10 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

3. Intersections located on the Regional Center boundary shall be considered within the Regional Center.

B. For intersections outside of the Regional Center but designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:

1. During the first hour, a maximum v/c ratio of 0.99 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

C. For intersections outside the boundaries of the Regional Center and not designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:

1. For signalized intersections:

a. During the first hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.

b. During the second hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.

2. For unsignalized intersections outside of the boundaries of the Regional Center:

a. For unsignalized intersections, during the peak hour, all movements serving more than twenty vehicles shall be maintained at LOS "E" or better. LOS "F" will be tolerated at movements serving no more than twenty vehicles during the peak hour.

D. For the intersection of OR 213 & Beavercreek Road, the following mobility standards apply:

1. During the first, second & third hours, a maximum v/c ratio of 1.00 shall be maintained. Calculation of the maximum v/c ratio will be based on an average annual weekday peak hour.
E. Until the City adopts new performance measures that identify alternative mobility targets, the City shall exempt proposed development that is permitted, either conditionally, outright, or through detailed development master plan approval, from compliance with the above-referenced mobility standards for the following state-owned facilities:
I-205/OR 99E Interchange
State intersections located within or on the Regional Center Boundaries
1. In the case of conceptual development approval for a master plan that impacts the above references intersections:
a. The form of mitigation will be determined at the time of the detailed development plan review for subsequent phases utilizing the Code in place at the time the detailed development plan is submitted; and
b. Only those trips approved by a detailed development plan review are vested.
2. Development which does not comply with the mobility standards for the intersections identified in OCMC 16.12.033 shall provide for the improvements identified in the Transportation System Plan (TSP) in an effort to improve intersection mobility as necessary to offset the impact caused by development. Where required by other provisions of the Code, the applicant shall provide a traffic impact study that includes an assessment of the development's impact on the intersections identified in this exemption and shall construct the intersection improvements listed in the TSP or required by the Code.
Finding: Complies with Condition. John Replinger, the City's contract transportation engineer, reviewed the applicant's TIA and provided the following findings and conditions of approval in his letter dated June 17, 2021 (Exhibit 4) The relevant materials consisted of the Traffic Impact Analysis Report (TIA), dated March 23, 2021. The TIA was prepared under the direction of Brian J. Dunn, PE of Kittelson & Associates.

The TIA supports the master plan for the site west of the Home Depot, south of Washington Street and north of Abernethy Road. The development will include a mix of uses including retail and residential. A key feature is a collector-level street connecting Washington Street and Abernethy Road. Four other site access points are proposed. The TIA identifies the impacts of full development of the site predicated on build-out in 2025 and appears to demonstrate the full development can be constructed if identified mitigation measures are completed. Each phase in the development will be reviewed for compliance with transportation performance measures during detailed development plan review.

Additional transportation analyses and updated traffic data may be required during detailed development plan review as specified in the conditions of approval. Later phases of the development may be delayed if mitigation measures cannot be implemented to meet existing transportation performance standards. The TIA provides a basis upon which the master plan can be evaluated and can serve as the basis for additional analysis.

I find that the TIA provides an adequate basis upon which to assess the impacts of the proposed master plan. It will serve as a basis for subsequent analyses undertaken in support of detailed development plans for individual phases of the development.

The TIA does not, however, provide for mitigation that allows the applicant to show that the system is adequate to accommodate the development, although appropriate mitigation appears feasible. The applicant will need to undertake additional analysis in connection with the detailed development plan for each phase that demonstrates adequacy of the transportation system to accommodate each phase. This will require a commitment to mitigation measures allowing applicable performance measures, including v/c and queue storage, will be met.

It is important to note that the TIA is based on the assumption that full development will occur by 2025. If development is extended beyond that date, new analyses will be required with new background traffic associated with the new completion year.

1. The applicant shall comply with the following Transportation Conditions:
    a. The applicant will be required to provide supplemental transportation analyses for each phase of the development that demonstrate the ability of the transportation system to accommodate that phase of the development. In connection with the first detailed development plan submitted by the applicant, the applicant shall obtain new AM peak, PM peak, and mid-day Saturday traffic counts and conduct new operational analyses for the following intersections:
        i. OR99E/Dunes Drive
        ii. Washington Street/Home Depot – Site Access A
        iii. OR213/Redland Road
        iv. Redland Road/Holcomb Boulevard/Abernethy Road
    b. Absent meaningful evidence to the contrary, the new counts and new analyses submitted in support of the detailed development will be presumed to supersede the traffic volume estimates and analyses submitted in the March 2021 TIA.
    c. The following are a non-comprehensive set of issues that should be addressed in additional analyses:
        i. Intersection v/c and queuing must meet applicable standards with each phase. Partial development (some phases of the development) may be permissible without mitigation depending on background traffic and the status of adopted alternative mobility targets.
        ii. Where the applicant is relying on the regional center's two-tiered v/c standard (i.e. 1.10 during the peak hour and 0.99 during the second hour), the applicant will need to provide evidence that both are met. (This is particularly applicable to OR213/Redland Road and OR99E/Dunes Drive, both of which are predicted to exceed 1.10 during a peak hour.)
        iii. A phase or combination of phases that causes traffic volumes at any access point to exceed volumes in this TIA, additional analyses will be required.
        iv. The applicant will need to demonstrate the adequacy of queue storage or undertake appropriate mitigation to resolve queue storage issues at the intersection of Abernethy Road/Holcomb Boulevard/Redland Road in connection with each phase.
        v. The applicant will need to demonstrate that the intersection of OR213/Redland Road meets applicable v/c standards and provides adequate queue storage in connection with each phase.
        vi. The applicant will need to demonstrate that the intersection of OR99E/Dunes Drive meets applicable v/c standards in connection with each phase. Applicant is encouraged to explore the potential for signal timing changes with ODOT or develop other mitigation measures with ODOT.
    d. With each detailed development plan, the applicant will be required to address sight distance requirements in connection with the establishment of any new access to Washington Street or Abernethy Road, including those described in this TIA.
    e. With each detailed development plan, the applicant will be required to address on-site circulation issues. These include, but are not limited to, adequacy of queue storage for drive-through service windows, maneuvering of trucks at loading areas, and maneuvering in parking lots.

f. With each detailed development plan, the applicant will work with TriMet to provide appropriate sidewalks and bus stop features on or adjacent to the site.
g. With each detailed development plan, the applicant will be required to update the predicted traffic using the intersection of OR213/Beavercreek Road. The applicant should use the updated value of $380 per peak hour trip rather than the obsolete value of $219 as used in this TIA. The developer shall participate in funding of this project according to the established formula.
h. If traffic signal warrants are met and cause the installation of a traffic signal at any of the site access points on Washington Street or Abernethy Road, the applicant will bear the full cost of signal design and installation.
i. The applicant shall participate in the funding of improvements for the intersection of OR213/Redland Road (TSP Project D79) in proportion to the development's traffic volume as a percentage of the predicted 2035 traffic volume at the intersection calculated in the TSP. The 2017 TSDC Project List shows a project cost of $10,105,000. Participation shall apply to each phase of the development.
j. The applicant's final share of project costs may be modified as necessary when the detailed development plan is approved to reflect any a modification of the development's trip generation or a change in project costs resulting from revisions to project costs associated with updates to the City's Transportation System Plan or Capital Improvement Program,

16.12.035 - Driveways.
A. All new development, redevelopment, and capital improvement projects shall meet the minimum driveway spacing standards identified in Table 16.12.035.A. Minor Site Plan and Design Review do not follow these standards unless a request is made to modify the driveway.

Table 16.12.035.A Minimum Driveway Spacing Standards

Street Functional Classification	*Minimum Driveway Spacing Standards*	*Distance*
Major Arterial Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single and two-family dwellings*	*175 ft.*
Minor Arterial Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single and two-family dwellings*	*175 ft.*
Collector Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single and two-family dwellings*	*100 ft.*
Local Streets	*Minimum distance from a street corner to a driveway and between driveways*	*25 ft.*

The distance from a street corner to a driveway is measured along the right-of-way from the edge of the intersection (on the same side of the road) right-of-way to the nearest portion of the driveway and the distance between driveways is measured at the nearest portions of the driveway at the right-of-way.
Finding: Complies as proposed. There is approximately 1,344 lineal feet of street frontage along Washington Street and approximately 1,320 lineal feet of frontage along Abernethy Road. According to the TIA, Washington Street and Abernethy Road are both classified as a Minor Arterial. The Oregon City Municipal Code requires that the minimum driveway spacing along a Minor Arterial is 175 feet. As proposed within the GDP, the three new site accesses proposed along Washington Street will be positioned at equal spacings of approximately 500 feet relative to the signalized intersection at

Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection. Accordingly, the access spacing proposed within the GDP will comply with the minimum driveway spacing standards above.

B. All detached single and two family dwellings shall have driveways which meet the minimum distance standards except when the lot size is smaller than the minimum distance required. When minimum distance cannot be met due to lot size or due to the location of an overlay district, the driveway shall be located as far away from the intersection as possible as approved by the City Engineer.
Finding: Not applicable. Detached single and two family dwellings have not been proposed and are not allowed per the zoning designation the development property.

C. Nonresidential or multi-family residential use driveways that generate high traffic volumes as determined by a traffic analysis shall be treated as intersections and shall adhere to requirements of OCMC 16.12.020.
Finding: Complies as Proposed. The development has proposed driveways will comply with the requirements of OCMC 16.12.020 which requires them to intersect with adjacent streets at right angles. This standard is met.

D. Only one driveway is allowed per street frontage classified as a local street and in no case shall more than two driveways (one per frontage) be allowed for any single-family attached or detached residential property, duplex, 3- 4 plex, or property developed with an ADU or internal conversion with multiple frontages, unless otherwise approved by the City Engineer.
Finding: Complies as Proposed. The proposal would provide four new driveways along Washington Street and two new driveways from along Abernethy Road. The proposed driveways are justified by the size of the project site and the amount of traffic expected to be generated at build-out. The applicant is seeking approval of the additional driveways through modification provisions of OCMC Subsection 16.12.013.

E. When a property fronts multiple roads, access shall be provided from and limited to the road with the lowest classification in the Transportation System Plan whenever possible to minimize points of access to arterials and collectors. Access shall not be provided on Arterial or Collector roads unless there is no other alternative. At the discretion of the City Engineer, properties fronting a collector or arterial road may be allowed a second driveway, for the creation of a circulation pattern that eliminates reverse maneuvers for vehicles exiting a property if applied for and granted through procedures in OCMC 16.12.013. All lots proposed with a driveway and lot orientation on a collector or minor arterial shall combine driveways into one joint access per two or more lots unless the City Engineer determines that:
1. No driveway access may be allowed since the driveway(s) would cause a significant traffic safety hazard; or
2. Allowing a single driveway access per lot will not cause a significant traffic safety hazard.
Finding: Complies as Proposed. The site fronts three streets: Washington Street, Abernethy Road, and Redland Road. All three streets are classified as Minor Arterials. The GDP proposes vehicle access from both Washington Street and Abernethy Road. A modification has been requested above under 16.12.013 to allow the site to be served with more than one driveway. Both streets share the same classification in the Transportation System Plan. The additional driveways will not create a significant traffic safety hazard by leaving sufficient distance between driveways to avoid any safety concerns. Each driveway is designed to meet the design specifications of Table 16.12.035.A.

F. All driveway approaches shall be limited to the dimensions identified in Table 16.12.035.D.

Table 16.12.035.D Driveway Approach Size Standards

Property Use	*Minimum Driveway Approach Width*		*Maximum Driveway Approach Width*
Single-Family	*10 feet*		*24 feet*
Duplexes	*12 feet*		*24 feet*
3-4 Plexes	*12 feet*		*36 feet*
Multi-Family	*18 feet*		*30 feet*
Commercial, Industrial, Office, Institutional, Mixed Use, and/or Nonresidential	*One-Way 12 feet*	*Two-Way 20 feet*	*40 feet*

Driveway widths shall match the width of the driveway approach where the driveway meets sidewalk or property line but may be widened onsite (for example between the property line and the entrance to a garage). Groups of more than four parking spaces shall be so located and served by driveways so that their use will not require backing movements or other maneuvering within a street right-of-way other than an alley.

Finding: Complies as proposed. As demonstrated on the attached site plans (sheets C200 through C207) within the civil sheets provided as Appendix B, the proposed driveways serving the site along Washington Street include two 24-foot driveways from Washington Street into the parking garages and a private street connection for "4th Street". The proposed driveways serving the site along Abernethy Road include two private street connections for "Market Street" and "4th Street". The proposed widths of all new driveways fall between the minimum and maximum driveway approaches for commercial, industrial, office, institutional, mixed use, and nonresidential sites, as established in Table 16.12.035.D. Two-way traffic circulation is proposed in the parking lot design.

G. The City Engineer reserves the right to require a reduction in the number and size of driveway approaches as far as practicable for any of the following purposes:
1. To provide adequate space for on-street parking;
2. To facilitate street tree planting requirements;
3. To assure pedestrian and vehicular safety by limiting vehicular access points; and
4. To assure that adequate sight distance requirements are met.
a. Where the decision maker determines any of these situations exist or may occur due to the approval of a proposed development for non-residential uses or attached or multi-family housing, a shared driveway shall be required and limited to twenty-four feet in width adjacent to the sidewalk or property line.

Finding: Not Applicable. No restrictions are proposed by the City Engineer.

H. For all driveways, the following standards apply.
1. Each new or redeveloped curb cut shall have an approved concrete approach or asphalted street connection where there is no concrete curb and a minimum hard surface for at least ten feet back into the property as measured from the current edge of sidewalk or street pavement to provide for controlling gravel tracking onto the public street. The hard surface may be concrete, asphalt, or other surface approved by the City Engineer.
2. Any driveway approach built within public right-of-way shall be built and permitted per City requirements as approved by the City Engineer.
3. No driveway with a slope of greater than fifteen percent shall be permitted without approval of the City Engineer.

Finding: Complies as proposed. The proposed driveways can satisfy these standards as demonstrated on the attached site plans (sheet C200 through C207). The project engineer proposes asphalted approaches for each driveway, adjacent to the existing adjoining roadway. The driveways are not

provided on slopes greater than fifteen percent. Furthermore, because the driveway approaches are constructed within the public right-of-way, the applicant acknowledges that they must be constructed to the City's standards and approved by the City Engineer. The driveways were designed in compliance with City standards by a licensed civil engineer.

I. Exceptions. The City Engineer reserves the right to waive these standards or not allow driveway access, if the driveway(s) would cause a significant traffic safety hazard. Narrower or wider driveway widths may be considered where field conditions preclude use of recommended widths. When larger vehicles and trucks will be the predominant users of a particular driveway, turning templates may be utilized to develop a driveway width that can safely and expeditiously accommodate the prevalent type of ingress and egress traffic.
Finding: Not Applicable. No exemptions are proposed.

16.12.065 - Building site—Grading.
Grading of building sites shall conform to the State of Oregon Structural Specialty Code, Title 18, any approved grading plan and any approved residential lot grading plan in accordance with the requirements of OCMC 13.12,15.48, 16.12 and the Public Works Stormwater and Grading Design Standards, and the erosion control requirements of OCMC 17.47.
Finding: Applicable. Please refer to the findings within sections 13.12,15.48, 16.12 & 17.47 of this report.

16.12.085 - Easements.
The following shall govern the location, improvement and layout of easements:
A. Utilities. Utility easements shall be required where necessary as determined by the City Engineer. Insofar as practicable, easements shall be continuous and aligned from block-to-block within the development and with adjoining subdivisions or partitions.

b. Specific public utility easements for water, sanitary or storm drainage shall be provided based on approved final engineering plans conforming to the requirements found within the applicable Design Standards.

Finding: Complies with Condition. There will be some public utilities within the development property. The developer for future DDPs shall provide public utility easements for the public sanitary sewer mains and water main identified by subsequent conditions of approval. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

c. Specific Conveyance of public utility easements for gas, electric, telecommunication, and fiberoptic shall be required where necessary as determined by the City Engineer. The City Engineer will require the easement unless it is found that the utility can be placed in a different location or can be placed in a smaller easement than what is required. The easement shall be located adjacent to all public right of ways or public access easements within private property. In the event that the provision of a public utility easement would create a conflict with achieving compliance with another part of the code, the location and width may be adjusted by the City Engineer.
    a. The easement shall be 10 feet in the R-10, R-8, R-6, R-5, R-3.5, R-2, GI, and CI zones
    b. The easement shall be a minimum of 5 feet in the NC, HC, I, C, MUC-1, MUC-2, MUE, MUD, and WFDD zones
        i. The applicant shall obtain a written determination from all utilities that the minimum 5 foot PUE coupled with use of a minimum of a 5 foot area under the

public sidewalk or parkway area is sufficient to serve the development. Where the minimum width is deemed inadequate, a modification shall be required.

c. An applicant may seek a modification to the public utility easement dedication requirement using 16.12.013.

The applicant has proposed to Utility easements with individual DDP approvals and based on locations provided within the final engineering plans. The developer for future DDPs shall provide a 10-foot-wide public utility easement (PUE) along all property lines fronting existing or proposed public right-of-ways or provide, at a minimum, 10-foot-wide clear space between buildings and the public sidewalk**.** The developer for future DDPs shall also provide a 10-foot-wide public utility easement (PUE) adjacent the north-south public access road running through the development site which extends from the Home Depot site and connects to Abernethy Road. In the event that the provision of a public utility easement would create a conflict with achieving compliance with other city codes, the location and width may be adjusted by the City Engineer. In such cases, the applicant shall obtain written acceptance from all utilities for the location and width proposed for said public utility easement. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Unusual Facilities. Easements for unusual facilities such as high voltage electric transmission lines, drainage channels and stormwater detention facilities shall be adequately sized for their intended purpose, including any necessary maintenance roads. These easements shall be shown to scale on the preliminary and final plats or maps. If the easement is for drainage channels, stormwater detention facilities or related purposes, the easement shall comply with the requirements of the Public Works Stormwater and Grading Design Standards.
Finding: Complies as proposed. The applicant has proposed to provide easements for unusual facilities with DDP approval and include any required maintenance roads.

C. Watercourses. Where a development is traversed or bounded by a watercourse, drainageway, channel or stream, a stormwater easement or drainage right-of-way shall be provided which conforms substantially to the line of such watercourse, drainageway, channel or stream and is of a sufficient width to allow construction, maintenance and control for the purpose as required by the responsible agency. For those subdivisions or partitions which are bounded by a stream of established recreational value, setbacks or easements may be required to prevent impacts to the water resource or to accommodate pedestrian or bicycle paths.
Finding: Complies as proposed. Abernethy Creek runs along the east edge of the site and another natural resource area is located in the northwest edge of the site. Easements for these areas have been proposed to be provided to the responsible agency with DDP approval. No element proposed under this GDP would preclude or inhibit conformance with this standard at the time of DDP review and approval.
See findings from Chapter 17.49 of this report for additional requirements.

D. Access. When easements are used to provide vehicular access to lots within a development, the construction standards, but not necessarily width standards, for the easement shall meet City specifications. The minimum width of the easement shall be 20 feet. The easements shall be improved and recorded by the applicant and inspected by the City Engineer. Access easements may also provide for utility placement.
Finding: Complies as conditioned. The applicant has stated that easements are not used to provide vehicular access to lots adjacent to the subject site. However, the north-south road proposed with the development is intended to provide access to the property north of the development site. The future developer of DDPs shall provide an easement over all roads proposed to run through the development

site and provide a covenant over them for 24-hour public access and be responsible for their future maintenance and liability. The future developer of DDPs shall provide a public access easement over all private roads proposed to run through the development site that allows for 24-hour public access. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Resource Protection. Easements or other protective measures may also be required as the Community Development Director deems necessary to ensure compliance with applicable review criteria protecting any unusual significant natural feature or features of historic significance.
Finding: Complies as proposed. The applicant is aware that the Community Development Director may require easements to protect any significant natural features located within the subject site. The most likely candidate for this protection is the Abernethy Creek riparian area. The applicant will comply with this standard at the appropriate time as determined by the applicant and the City.
See findings from Chapter 17.49 of this report for additional requirements.

16.12.090 - Minimum improvements—Procedures.
In addition to other requirements, improvements installed by the applicant either as a requirement of these or other regulations, or at the applicant's option, shall conform to the requirements of this title and be designed to City specifications and standards as set out in the City's facility master plan and Public Works Stormwater and Grading Design Standards. The improvements shall be installed in accordance with the following procedure:
A. Improvement work shall not commence until construction plans have been reviewed and approved by the City Engineer and to the extent that improvements are located in County or State right-of-way, they shall be approved by the responsible authority. To the extent necessary for evaluation of the proposal, the plans may be required before approval of the preliminary plat of a subdivision or partition. Expenses incurred thereby shall be borne by the applicant and paid for prior to final plan review.
Finding: Complies with Condition. Commencement of improvement work is further restricted by requirements of section 16.12.014. **See section 16.12.014 of this report for associated findings.**

B. Improvements shall be constructed under the inspection and approval of the City Engineer. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. Where required by the City Engineer or other City decision-maker, the applicant's project engineer also shall inspect construction.
Finding: Complies with Condition. The applicant acknowledges that the improvements must be inspected and approved by the City Engineer and that the expenses incurred thereby shall be their responsibility. Improvements constructed by the future developer of DDPs shall be constructed under the inspection and approval of the City. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. The applicant's project engineer also shall inspect construction. Inspection fees are set by City resolution, see section 16.12.014 of this report. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Erosion control or resource protection facilities or measures are required to be installed in accordance with the requirements of OCMC 17.47, 17.49 and the Public Works Erosion and Sediment Control Standards.
Finding: Compiles with Condition. See findings from section 17.47, 17.49 of this report.

D. Underground utilities, waterlines, sanitary sewers and storm drains installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the ten-foot wide public utility easement within private property as defined in OCMC 16.12.85.A.2.

Finding: Compiles with Condition. Underground utilities, waterlines, sanitary sewers and storm drains proposed to be installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the ten-foot-wide public utility easement within private property. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer upon completion of the improvements.
Finding: Complies with Condition: The applicant acknowledges that physical and digital copies of as-built construction documents must be fled with the City Engineer upon completion of improvements on site. However, the GDP does not involve any construction activities on site. The as-builts will be provided for utilities that are constructed with approved DDP's. The future developer of DDPs shall provide As-built drawings to be filed with the City Engineer within 90 days of completing improvements. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

F. The City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods.
Finding: Complies with Condition. The applicant acknowledges that the City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods. Permitted hours of construction shall be set forth by the City Engineer in the pre-construction meeting. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.095 - Minimum improvements—Public facilities and services.
The following minimum improvements shall be required of all applicants for a development, unless the decision-maker determines that any such improvement is not proportional to the impact imposed on the City's public systems and facilities:
A. Transportation System. Applicants and all subsequent lot owners shall be responsible for improving the City's planned level of service on all public streets, including alleys within the development and those portions of public streets adjacent to but only partially within development. Applicants are responsible for designing and providing adequate vehicular, bicycle and pedestrian access to their developments and for accommodating future access to neighboring undeveloped properties that are suitably zoned for future development. Storm drainage facilities shall be installed and connected to off-site natural or man-made drainageways. Upon completion of the street improvement survey, the applicant shall reestablish and protect monuments of the type required by ORS 92.060 in monument boxes with covers at every public street intersection and all points or curvature and points of tangency of their center line, and at such other points as directed by the City Engineer.
Finding: Complies as proposed. The applicant acknowledges the required contributions to the public transportation system adjacent to the project and has proposed to construct frontage improvements along the sites frontage as well as several projects listed within the TSP as described previously. Preliminary utility plans have been provided with the GDP to demonstrate that the proposed master plan can comply with City Standards for each of these facilities. See civil sheets C110, C111, and C400 thru C407 for specific details. All streets adjacent to the proposed development are being improved to provide pedestrian, vehicular, and bicycle access to the development and connecting to the surrounding streets and properties. This includes sidewalks, bike lanes, street lighting, and the required paved street width and right-of-way dedication. Stormwater facilities are shown with the preliminary public improvement plans.

B. Stormwater Drainage System. Applicants shall design and install drainage facilities within a development and shall connect the development's drainage system to the appropriate downstream storm drainage system as a minimum requirement for providing services to the applicant's development. The applicant shall obtain county or state approval when appropriate. Applicants are responsible for extending the appropriate storm drainage system to the development site and for providing for the connection of upgradient properties to that system. The applicant shall design the drainage facilities in accordance with City drainage master plan requirements, OCMC 13.12 and the Public Works Stormwater and Grading Design Standards.

Finding: Complies as proposed. The development has proposed construction of storm mains along Washington Street, Abernethy Road and internal roads to support future connection of upgradient properties to the public stormwater system. See findings from section 13.12 for the design of stormwater management facilities to serve the development.

C. Sanitary Sewer System. The applicant shall design and install a sanitary sewer system to serve all lots or parcels within a development in accordance with the City's sanitary sewer design standards, and shall connect those lots or parcels to the City's sanitary sewer system, except where connection is required to the county sanitary sewer system as approved by the county. Applicants are responsible for extending the City's sanitary sewer system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development. The applicant shall obtain all required permits and approvals from all affected jurisdictions prior to final approval and prior to commencement of construction. Design shall be approved by the City Engineer before construction begins.

Finding: Complies with Condition. The GDP includes a preliminary utility plan to serve the site by connections to existing sanitary sewer main within the street that currently serves The Home Depot and a Tri-City sanitary sewer truck within Abernethy Road. Sanitary facilities are proposed to be extended through the site to feed all proposed structures within the master plan. All sewer mains within the development site shall be privately owned and maintained except for the first fifty feet of all sanitary sewer mains connecting to the Tri-City sewer trunk which shall be Oregon City sanitary sewer mains and terminate at an Oregon City sanitary sewer manhole. The developer shall provide capacity calculations to show that the proposed sanitary sewer system can support full buildout of the development site. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Water System. The applicant shall design and install a water system to serve all lots or parcels within a development in accordance with the City public works water system design standards, and shall connect those lots or parcels to the City's water system. Applicants are responsible for extending the City's water system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development.

Finding: Complies with Condition. As demonstrated on the preliminary utility plan provided in civil sheets (C400 thru C407) and attached as Appendix B, the project will extend an existing public water line located within the street serving The Home Depot and loop it through the site to serve all the proposed buildings within the master plan. The first phase of the GDP shall extend the existing public water line located within the street serving The Home Depot and loop it through the site to the existing water main within Abernethy Road and this water main shall be public. The public main shall be protected from potential landfill contaminants in a manner approved by Oregon City. All other mains connecting to this water main shall be private. The developer shall provide capacity calculations to show that the proposed water system can support full buildout of the development site. The future developer of DDPs shall upsize all water mains along the frontage of Abernethy Road to be 12-inch in diameter. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Street Trees. Refer to OCMC 12.08, Street Trees.
Finding: See findings from section 12.08.

F. Bench Marks. At least one bench mark shall be located within the subdivision boundaries using datum plane specified by the City Engineer.
Finding: Not applicable. This application does not include a request for subdivision approval. This standard does not apply. No construction is proposed with the masterplan. Future DDP will be require to provide at least one bench mark.

G. Other Utilities. The applicant shall make all necessary arrangements with utility companies or other affected parties for the installation of underground lines and facilities. All new utilities shall be placed underground unless the respective franchise agreements allow otherwise or unless it is physically or technically impossible to comply with applicable standards. Existing electrical lines and other wires, including but not limited to telecommunication, street lighting and fiberoptic, shall be relocated underground.

1. Exemptions to relocation of existing overhead utilities to underground for property development as follows (Only one exemption criteria is required to be exempt from this requirement):

a. No transmission or feeder lines shall be relocated underground unless approved by the City Engineer.
b. Properties with less than 1.0 acre of land area shall not be required to relocate existing overhead utilities unless required by the franchise utility.
c. Properties with less than 200 feet of frontage on any individual roadway shall not be required to relocate existing overhead utilities unless required by the franchise utility.
d. Land divisions with 5 or fewer subdivided lots shall not be required to relocate existing overhead utilities unless required by the franchise utility.

2. The exemptions in G.1. do not apply if properties within the same block were required to relocate the overhead utilities within the past 10 years. In those cases, the existing overhead utilities shall be relocated underground.
3. When any franchise utility (electric, gas, telecommunication, fiberoptic, street lighting or similar utility) is installed along an existing or new roadway, the utility shall be installed within the existing or proposed public utility easement unless it is physically or technically impossible.
4. These requirements do not apply to work by a franchise utility for improvement, repair, alteration or addition to their existing systems.
Finding: Complies with Condition. The applicant acknowledges this requirement. The project will locate new franchise utilities underground and extend them through the site. Actual utility locations will be coordinated with the utility companies and constructed with approval of individual DDPs. The future developer of DDPs shall place all new franchise utilities underground. The future developer of DDPs shall relocate all existing overhead utilities adjacent to the property frontage underground unless deemed infeasible by the City and franchise utilities. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

H. Oversizing of Facilities. All facilities and improvements shall be designed to City standards as set out in the City's facility master plan, public works design standards, or other City ordinances or regulations. Compliance with facility design standards shall be addressed during final engineering. A development may be required to modify or replace existing offsite systems if necessary to provide adequate public facilities. The City may require oversizing of facilities to meet standards in the City's facility master plan or to allow for orderly and efficient development. Where oversizing is required, the applicant may

request reimbursement from the City for oversizing based on the City's reimbursement policy and funds available, or provide for recovery of costs from intervening properties as they develop.
Finding: Not Applicable. The public improvements associated with the GDP have been designed to City standards. The need to oversize any public facilities for this project has not been identified by staff.

I. Erosion Control Plan—Mitigation. The applicant shall be responsible for complying with all applicable provisions of OCMC 17.47 with regard to erosion control.
Finding: See findings from section 17.47 of this report

16.12.100 - Same—Road standards and requirements.
A. The creation of a public street and the resultant separate land parcels shall be in conformance with requirements for subdivisions or partitions and the applicable street design standards of this Chapter. However, the decision-maker may approve the creation of a public street to be established by deed without full compliance with the regulations applicable to subdivisions or partitions where any of the following conditions exist:
1. The establishment of the public street is initiated by the City Commission and is declared essential for the purpose of general traffic circulation and the partitioning of land is an incidental effect rather than the primary objective of the street;
2. The tract in which the street is to be dedicated is within an isolated ownership either not over one acre or of such size and characteristics as to make it impossible to develop building sites for more than three dwelling units.
Finding: Applicable. Please refer to the findings in chapter 16.12.016 within this report for applicable street design standards required for the public street created by the proposed development.

B. For any public street created pursuant to subsection A of this section, a copy of a preliminary plan and the proposed deed shall be submitted to the Community Development Director and City Engineer at least ten days prior to any public hearing scheduled for the matter. The plan, deed and any additional information the applicant may submit shall be reviewed by the decision-maker and, if not in conflict with the standards of Title 16 and Title 17, may be approved with appropriate conditions.
Finding: Not Applicable. The applicant has not proposed the creation of a public street to be established by deed without full compliance with the regulations applicable.

C. The design and construction of public streets shall be per the standards found in this chapter and the most recent version of any City Design and Construction Standards.
Finding: Not Applicable. The applicant has not proposed the creation of a public street to be established by deed without full compliance with the regulations applicable.

16.12.105 - Same—Timing requirements.
A. Prior to applying for final plat approval, the applicant shall either complete construction of all public improvements required as part of the preliminary plat approval or guarantee the construction of those improvements. Whichever option the applicant elects shall be in accordance with OCMC 17.50.140.
Finding: There are no land divisions proposed with the GDP. This standard is not applicable. Public improvements will be constructed with individual approval of DDP's for the site. **See findings from OCMC 17.50.140 regarding timing of construction of improvements and guarantee for construction of improvements.**

B. Construction. The applicant shall construct the public improvements according to approved final engineering plans and all applicable requirements of this Code, and under the supervision of the City Engineer. Under this option, the improvement shall be complete and accepted by the City Engineer prior to final plat approval.

Finding: Complies as conditioned. The applicant acknowledges that the public improvements must be constructed according to the approved final engineering plans and all applicable requirements of the Oregon City Municipal Code. Those plans will be fled with individual requests for DDP approval for the site. Public improvements associated with each DDP are required to be completed and accepted by the City Engineer. Public improvements shall be constructed according to approved final engineering plans prior to occupancy. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.110 -Public improvements—Financial guarantees.
A. To ensure construction of required public improvements, the applicant shall provide the City with a performance guarantee in accordance with OCMC 17.50.140.
Finding: Please see findings from Section17.50.140 of this report.

B. After satisfactory completion of required public improvements and facilities, all public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period as prescribed in OCMC 17.50.141.
Finding: Please see findings from Section17.50.141 of this report.

16.12.120 Waiver of Remonstrance
The review authority may require a property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district where it deems such a waiver necessary to provide needed improvements reasonably related to the impacts created by the proposed development. To ensure compliance with this chapter, the review authority may require an applicant to sign or accept a legal and enforceable covenant, contract, dedication, easement, performance guarantee, or other document, which shall be approved in form by the City Attorney.
Finding: Complies with Condition. The applicant acknowledges the City's authority to require the property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district. The property owner(s) shall sign a Restrictive Covenant Non-Remonstrance Agreement for the purpose of making storm sewer, sanitary sewer, water or street improvements in the future that benefit the property, and all fees associated with processing and recording the Non-Remonstrance Agreement shall be paid prior to occupancy. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 17.41 – TREE PROTECTION, PRESERVATION, REMOVAL AND REPLANTING STANDARDS

17.41.020 - Tree protection—Applicability.
1. Applications for development subject to OCMC 16.08 (Land Divisions) or OCMC 17.62 (Site Plan and Design Review) shall demonstrate compliance with these standards as part of the review proceedings for those developments. Compliance with this chapter is required from the date a land use application is filed until a land division is recorded or other development approval is final.
2. For public capital improvement projects, the City Engineer shall demonstrate compliance with these standards pursuant to a Type I process.
3. Tree canopy removal greater than twenty-five percent on areas with greater than twenty-five percent slope, unless exempted under OCMC 17.41.040, shall be subject to these standards.
4. A heritage tree or grove which has been designated pursuant to the procedures of OCMC 12.32 shall be subject to the standards of this section.
5. A tree that has been planted pursuant to this section shall remain or shall be replaced with a new tree if removed.

Finding: Not Applicable. This is an application for approval of The North End master plan GDP, no development is being proposed for approval with this application. No tree removal is proposed with this request, and this standard is not expressly applicable to the overall GDP review. It is noted, however that this site is a reclaimed landfill and there are very few trees on the site outside of the resource areas. Requests for individual DDP's will be subject to the requirements of this chapter and be required to demonstrate conformance with these standards under a site-specific development plan conditions of approval. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 17.42 – FLOOD MANAGEMENT OVERLAY DISTRICT

17.42.020 - Applicability.

A.This chapter shall apply to development in the flood management overlay district, which may also be referred to as the "floodplain overlay district" in this code. The flood management overlay district includes all areas of special flood hazards and all flood management areas within the city. The overlay district restricts the uses that are allowed in the base zone by right, with limitations, or as provisional uses.

B. The flood management areas which have been mapped include the following locations:

1. Land contained within the one hundred-year floodplain, flood area and floodway as shown on the Federal Emergency Management Agency flood insurance maps dated June 17, 2008, including areas of special flood hazard pursuant to Section 17.42.040 and the area of inundation for the February 1996 flood; and

2. Lands that have physical or documented evidence of flooding within recorded history based on aerial photographs of the 1996 flooding and/or the water quality and flood management areas maps.

C. The standards that apply to the flood management areas apply in addition to state or federal restrictions governing floodplains or flood management areas.

Finding: Applies. The North End master plan is located within the Flood Management Overlay Zone as illustrated in the figure 2.3, therefore, these standards are applicable to future development requested with DDP approval. For the purposes of this request, building locations within the GDP have been proposed based on the 1996 flood inundation lines also illustrated below so that any flooding that can be expected on site in a similar event will primarily only affect the proposed parking areas within the master plan area. For example, the areas that were flooded in 1996 along Abernethy Road are proposed to be developed with surface parking lots, and the areas within that were inundated along Washington Street will be developed with mixed-use housing that is located on top of three proposed parking structures. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

Figure 6 Flood Overlay District.

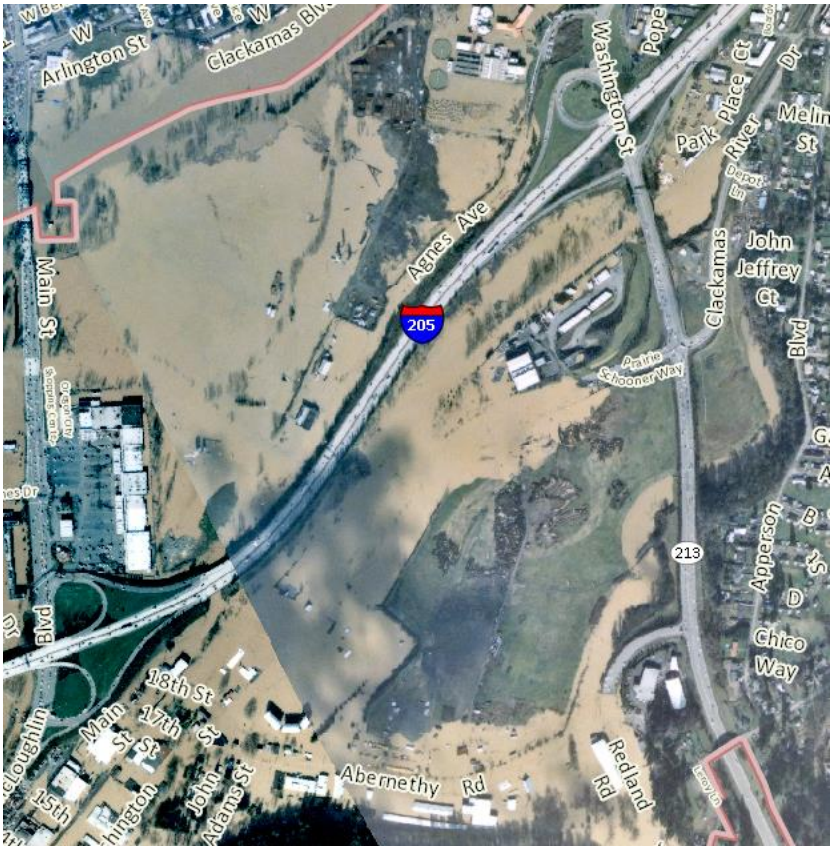


Figure 7 1996 Flood Inundation

17.42.040 - Compliance.

No structure or land shall hereafter be constructed, located, extended, converted or altered without full compliance with the terms of these floodplain regulations and other applicable regulations. Violations of the provisions of this chapter by failure to comply with any of its requirements (including violations of conditions and safeguards established in connection with conditions) shall constitute a civil infraction. Any person who violates this chapter or fails to comply with any of its requirements shall be subject to the enforcement procedures of this code per OCMC 1.20 Civil Infractions and 1.24 Code Enforcement. Nothing herein contained shall prevent the city from taking such other lawful action as is necessary to prevent or remedy.

Finding: Complies as Proposed/Conditioned. The uses proposed within the GDP are all uses that are either outright allowed in the zone or conditionally allowed within the MUD zone district in compliance with this criterion. The GDP does not propose any of the prohibited uses within the master plan area. The preliminary grading illustrated in civil sheets C300 thru C-307, attached to the staff report illustrate that based on the grading plan and the proposed development in the GDP, there will be no net increase of fill within the floodplain on site.

The Cut/Fill balance exhibits are also provided within the preliminary stormwater report. The GDP as submitted does not permit any development that would otherwise be prohibited by the floodplain overlay zone. The remaining sections of this Chapter include standards that are specific to construction, materials, and methods. The GDP does not provide a level of detail to demonstrate compliance with these standards. The applicant recognizes that all future development within the flood management overlay zone is subject to these requirements and will ensure that they are designed to meet these specific approval criteria with the submission of individual DDP's. Staff find that applicant has submitted a development approach that appears to meet the Flood Overlay District's criteria, However, future DDPs affected by the Flood Overlay District are required to apply for separate DDP submittals to show that each application can comply individually with Flood Overlay District requirements, including demonstrating that the site can show balanced cut and fill within each application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 17.44 – GEOLOGIC HAZARDS

17.44.025 *- When required; regulated activities; permit and approval requirements.*
No person shall engage in any of the following regulated activities within the adopted Oregon City Geologic Hazards Overlay Zone as defined in section 17.04.515 of the Oregon City Municipal Code without first obtaining permits or approvals as required by this chapter:

A. Installation or construction of an accessory structure greater than 500 square feet in area;

B. Development of land, construction, reconstruction, structural alteration, relocation or enlargement of any building or structure for which permission is required pursuant to the Oregon City Municipal Code;

C. Tree removal on slopes greater than 25 percent where canopy area removal exceeds 25 percent of the lot.

D. Excavation which exceeds two feet in depth, or which involves twenty-five or more cubic yards of volume;

The requirements of this chapter are in addition to other provisions of the Oregon City Municipal Code. Where the provisions of this chapter conflict with other provisions of the Oregon City Municipal Code, the provisions that are the more restrictive of regulated development activity shall govern.

Finding: Applicable. The North End Master Plan is a proposed master plan to redevelop the former Rossman municipal waste Landfill with a mixed-use development. The General Development Plan (GDP) application proposes a 62-acre mixed use development. The fill slopes around the perimeter of the landfill are included in the geologic hazard overlay zone due to steep slopes. The application proposes numerous structures meeting Criteria A. The proposed develop involves grading and disturbance to the site which meets criteria B. The proposed develop also involves cut and fill in excess of two feet in depth and 25 cubic yards of volume which meets criteria D. Therefore, the provisions of Chapter 17.44 are applicable. The GDP provides a framework for future development and additional permitting and geologic hazards review of detailed development plans will be required under this framework.

17.44.030 *- Procedures.*

No building or site development permit or other authorization for development shall be issued until the plans and other documents required by this chapter have been reviewed and found by the review authority to comply with the requirements of this chapter.

A. Where the development is part of a land use permit application, review shall occur in the manner established in Chapter 17.50 for review of land use decisions.

B. Where the development is part of a limited land use permit application, review shall occur in the manner established in Chapter 17.50 for review of limited land use decisions.

C. Where the development is solely part of a grading permit or building permit, the city engineer may allow review to occur in the manner established in Title 15, Chapters 15.04 and 15.48 if the application meets Section 17.44.060 development standards.

D. For any other proposed development not otherwise subject to review as a land use or limited land use permit application, review shall occur in the manner established in Chapter 17.50 for limited land use decisions.

Finding: Complies proposed. The development is undergoing review per the applicable chapters of the Oregon City Municipal Code prior to issuance of building or site development permits.

17.44.035 *- Exemptions.*

The following activities, and persons engaging in same, are EXEMPT from the provisions of this chapter.

A. An excavation which is less than two feet in depth, or which involves less than twenty-five cubic yards of volume;

B. A fill which does not exceed two feet in depth or twenty-five cubic yards of volume;

C. Structural alteration of any structure of less than five hundred square feet that does not involve grading as defined in this chapter;

D. Installation, construction, reconstruction, or replacement of utility lines in city right-of-way, or public easement, not including electric substations;

E. The removal or control of noxious vegetation;

F. Emergency actions which must be undertaken immediately to prevent an imminent threat to public health or safety, or prevent imminent danger to public or private property. The person undertaking emergency action shall notify the building official on all regulated activities associated with any building permit or city engineer/public works director on all others within one working day following the commencement of the emergency activity. If the city engineer/public works director or building official determine that the action or part of the action taken is beyond the scope of allowed emergency action, enforcement action may be taken.

Finding: Not Applicable. The application does not meet any of the criteria for an exemption to the geologic hazard code 17.44.

17.44.050 *Development - Application Requirements and Review Procedures and Approvals.*
Except as provided by subsection B of this section, the following requirements apply to all development proposals subject to this chapter:
A. A geological assessment and geotechnical report that specifically includes, but is not limited to:
1) Comprehensive information and data regarding the nature and distribution of underlying geology, the physical and chemical properties of existing soils and groundwater; an opinion of site geologic stability, and conclusions regarding the effect of geologic conditions on the proposed development. In addition to any field reconnaissance or subsurface investigation performed for the site, the following resources, as a minimum, shall be reviewed to obtain this information and data:
a) The State of Oregon Department of Geology and Mineral Industries (DOGAMI) in Bulletin 99, Geology and Geological Hazards of North Clackamas County, Oregon (1979), or in any subsequent DOGAMI mapping for the Oregon City area;
b) Portland State University study entitled "Environmental Assessment of Newell Creek Canyon, Oregon City, Oregon" (1992);
c) Portland State University study, "Landslides in the Portland, Oregon, Metropolitan Area Resulting from the Storm of February 1996: Inventory Map, Database and Evaluation" (Burns and others, 1998);
d) DOGAMI Open File Report O-06-27, "Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from LIDAR Imagery and Aerial Photographs" (Madin and Burns, 2006);
e) "Preliminary Geologic Map of the Oregon City Quadrangle, Clackamas County, Oregon" (Madin, in press);

Finding: Complies as conditioned. The application has provided the applicable information for 17.44.050.A.1 but additional information will be required due to the underlying landfill.
Prior to City construction plan approval or issuance of a grading or building permit associated with the proposed development: The applicant shall submit a final geotechnical engineering report to DEQ, the City's Building Official, and the City's Public Works Engineering Development Services for review and approval. The final Geotechnical Engineering Investigation Report shall document the following:
a. A comprehensive subsurface investigation,
b. Settlement calculations and assumed material properties,
c. Foundation recommendations and capacity calculations,
d. Pavement and utility construction and maintenance recommendations,
e. Floor slab and other flat concrete construction and maintenance recommendations,
f. Surcharge recommendations including dimension and time criteria,
g. Recommendations for applicable safety measures needed to minimize the risks of excessive differential building settlement, uneven settlements of the non-building areas affecting surface drainage, building and site settlements affecting gravity flow sewers, and methane accumulation and migration.
h. Recommendations for development to be in compliance with applicable International Building Codes and Oregon Structural Specialty Code.
i. Evaluation of impacts to the Redland Road and Highway 213 embankment from the site development and appropriate recommendations to mitigate for impacts. The City's geotechnical engineer shall provide a peer review of the final Geotechnical Engineering Report at the applicant's cost. The applicant shall have all comments and requirements from DEQ and the City addressed in the final report as applicable.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

2) Information and recommendations regarding existing local drainage, proposed permit activity impacts on local drainage, and mitigation to address adverse impacts;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.2

3) Comprehensive information about site topography;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.3

4) Opinion as to the adequacy of the proposed development from an engineering standpoint;

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

5) Opinion as to the extent that instability on adjacent properties may adversely affect the project;

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. (Also written in the finding for *17.44.050.A.4.*) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

6) Description of the field investigation and findings, including logs of subsurface conditions and laboratory testing results;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.6

7) Conclusions regarding the effect of geologic conditions on the proposed development, tree removal, or grading activity;

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. (Also written in the finding for *17.44.050.A.4.*) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

8) Specific requirements and recommendations for plan modification, corrective grading, and special techniques and systems to facilitate a safe and stable site;

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. (Also written in the finding for *17.44.050.A.4.*) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

9) Recommendations and types of considerations as appropriate for the type of proposed development:

a. General earthwork considerations, including recommendations for temporary and permanent cut and fill slopes and placement of structural fill,
b. Location of residence on lot,
c. Building setbacks from slopes,
d. Erosion control techniques applicable to the site,
e. Surface drainage control to mitigate existing and potential geologic hazards,
f. Subdrainage and/or management of groundwater seepage,
g. Foundations,
h. Embedded/retaining walls,
i. Management of surface water and irrigation water, and
j. Impact of the development on the slope stability of the lot and the adjacent properties.

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. (Also written in the finding for *17.44.050.A.4.*) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

10) Scaled drawings that describe topography and proposed site work, including:
a. Natural physical features, topography at two or ten-foot contour intervals locations of all test excavations or borings, watercourses both perennial and intermittent, ravines and all existing and manmade structures or features all fully dimensioned, trees six- inch caliper or greater measured four feet from ground level, rock outcroppings and drainage facilities;
b. All of the features and detail required for the site plan above, but reflecting preliminary finished grades and indicating in cubic yards whether and to what extent there will be a net increase or loss of soil.
c. A cross-section diagram, indicating depth, extent and approximate volume of all excavation and fills.

Finding: Complies with Condition. Scaled drawings provide preliminary grading for the GDP. Future Detailed Development Plans shall provide scaled drawings showing cross sections in locations with greatest proposed cuts and/or fill and provide approximate volume of cuts and fills. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

11) For properties greater than 1 acre, a preliminary hydrology report, prepared by a suitably qualified and experienced hydrology expert, addressing the effect upon the watershed in which the proposed development is located; the effect upon the immediate area's stormwater drainage pattern of flow, the impact of the proposed development upon downstream areas and upon wetlands and water resources; and the effect upon the groundwater supply.

Finding: Complies with Condition. The applicant shall provide a hydrology report that addresses the effect of the stormwater outfall upon the local watershed. The future developer of DDPs shall a hydrology report to address potential impact of the proposed development on wetlands, water resources and groundwater supply. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.050.B. *Review Procedures and Approvals require the following:*
1) Examination to ensure that:
a) Required application requirements are completed;

b) Geologic assessment and geotechnical report procedures and assumptions are generally accepted; and

c) All conclusions and recommendations are supported and reasonable.

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.B.1

17.44.050.B.2 *Conclusions and recommendations stated in an approved assessment or report shall then be directly incorporated as permit conditions or provide the basis for conditions of approval for the regulated activity.*

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.B.2

17.44.050.B.3 *All geologic assessments and geotechnical reports shall be reviewed by an engineer certified for expertise in geology or geologic engineering and geotechnical engineering, respectively, as determined by the City. The City will prepare a list of prequalified consultants for this purpose. The cost of review by independent review shall be paid by the applicant.*

Finding: Complies with Condition. The developer's geotechnical engineer shall respond to written comments provided by the City's peer reviewer and the City's peer reviewer shall agree with geotechnical evaluation/investigation report submitted for the development prior issuance of building permit. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.050.C*. The city engineer may waive one or more requirements of subsections A and B of this section if the city engineer determines that site conditions, size or type or development of grading requirements do not warrant such detailed information. If one or more requirements are waived, the city engineer shall, in the staff report or decision, identify the waived provision(s), explain the reasons for the waiver, and state that the waiver may be challenged on appeal and may be denied by a subsequent review authority.*

Finding: Not Applicable. The City Engineer has not waived any of the requirements as all requirements apply to this application.

17.44.060 *Development Standards.*

Notwithstanding any contrary dimensional or density requirements of the underlying zone, the following standards shall apply to the review of any development proposal subject to this chapter. Requirements of this chapter are in addition to other provision of the Oregon City Municipal Code. Where provision of this chapter conflict with other provision of the Oregon City Municipal Code, the provisions that are more restrictive of regulated development activity shall govern.

17.44.060.A *All developments shall be designed to avoid unnecessary disturbance of natural topography, vegetation and soils. To the maximum extent practicable as determined by the review authority, tree and ground cover removal and fill and grading for residential development on individual lots shall be confined to building footprints and driveways, to areas required for utility easements and for slope easements for road construction, and to areas of geotechnical remediation.*

Finding: Complies as Proposed. Slopes within the proposed master plan development are existing fill slopes and natural topography is limited.

17.44.060B *All grading, drainage improvements, or other land disturbances shall only occur from May 1 to October 31. Erosion control measures shall be installed and functional prior to any disturbances. The*

City Engineer may allow grading, drainage improvements or other land disturbances to begin before May 1 (but no earlier than March 16) and end after October 31 (but no later than November 30), based upon weather conditions and in consultation with the project geotechnical engineer. The modification of dates shall be the minimum necessary, based upon the evidence provided by the applicant, to accomplish the necessary project goals. Temporary protective fencing shall be established around all trees and vegetation designed for protection prior to the commencement of grading or other soil disturbance.
Finding: Complies with Condition. Grading, drainage improvements or other land disturbances shall be restricted to between May 1 and October 31, unless extended by the City Engineer consistent with 17.44. The developer shall submit a work schedule which has been reviewed and approved by a licensed geotechnical engineer with regard to the viability of completing necessary project goals within the aforementioned time period. Erosion control measures shall be installed and functional prior any soil disturbance. Temporary protective fencing shall be established adjacent to all trees and vegetation designated for protection which are within five feet of a construction area prior to any soil disturbance. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.C *Designs shall minimize the number and size of cuts and fills.*
Finding: Complies with Condition. The detailed development plans shall include final grading plans and sections showing proposed cuts and fills relative to the existing ground and landfill. Settlement and slope stability evaluation is required for all cuts and fills. Settlement analysis shall demonstrate surcharge loads will provide satisfactory long-term performance of proposed streets and infrastructure. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.D *Cut and fill slopes, such as those for a street, driveway accesses, or yard area, greater than seven feet in height (as measured vertically) shall be terraced. Faces on a terraced section shall not exceed five feet. Terrace widths shall be a minimum of three feet and shall be vegetated. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. Except in connection with geotechnical remediation plans approved in accordance with the chapter, cuts shall not remove the toe of any slope that contains a known landslide or is greater than twenty-five percent slope. The top of cut or fill slopes not utilizing structural retaining walls shall be located a minimum of one-half the height of the cut slope from the nearest property line.*
Finding: Complies with Condition. Within Geologic Hazard areas identified by Oregon City, future detailed development plans shall include terraced slopes or retaining walls for slopes or walls greater than seven vertical feet. The terraced slope or wall shall have a maximum vertical height of five feet and a minimum vegetated width of 3 feet between. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.E *Any structural fill shall be designed by a suitably qualified and experienced civil or geotechnical engineer licensed in Oregon in accordance with standard engineering practice. The applicant's engineer shall certify that the fill has been constructed as designed in accordance with the provisions of this chapter.*
Finding: Complies with Condition. The developer's geotechnical engineer shall certify, during construction, that structural fill used on the site meets the provided design specifications and is placed as designed. The certification shall be in writing and shall be signed and stamped by a licensed engineer in the State of Oregon. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.F *Retaining walls shall be constructed in accordance with the Oregon Structural Specialty Code adopted by the State of Oregon.*
Finding: Complies with Condition. Construction of retaining walls over 4 feet in height and terraced walls which create total cut or fill greater than 4 feet in height shall be designed by a licensed engineer qualified for the design of such walls. The developer shall submit engineered stamped calculations for proposed retaining walls showing compliance with applicable building codes. The developer shall provide sliding, overturning, bearing capacity, and global stability design calculation for free standing retaining walls over 4 feet in height in accordance with the Oregon Structural Specialty Code. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.G *Roads shall be the minimum width necessary to provide safe vehicle and emergency access, minimize cut and fill and provide positive drainage control. The review authority may grant a variance from the City's required road standards upon findings that the variance would provide safe vehicle and emergency access and is necessary to comply with the purpose and policy of this chapter.*
Finding: Complies as Proposed. The proposed roads shall meet the standards in OCMC 16.12

17.44.060.H *Density shall be determined as follows*

1) For those areas with slopes less than twenty-five percent between grade breaks, the allowed density shall be that permitted by the underlying zoning district;

2) For those areas with slopes of twenty-five to thirty-five percent between grade breaks, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;

3) For those areas with slopes over thirty-five percent between grade breaks, development shall be prohibited except as otherwise provided in subsection I 4 of this section.

Finding: Complies as Proposed. Slopes greater than 25% within areas proposed for development are artificial fill slopes created to contain the landfill. The preliminary development plan shows the slopes will be regraded and supported by structures.

17.44.060.I *For properties with slopes of twenty-five to thirty-five percent between grade breaks:*

1) For those portions of the property with slopes of twenty-five to thirty-five percent, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;

2) An individual lot or parcel with slopes between twenty-five and thirty-five percent shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.

3) No cut into a slope of twenty-five to thirty-five percent for the placement of a housing unit shall exceed a maximum vertical height of 15 feet for the individual lot or parcel.

4) For those portions of the property with slopes over thirty-five percent between grade breaks:

a. Notwithstanding any other City land use regulation, development other than roads, utilities, public facilities and geotechnical remediation shall be prohibited; provided, however, that the review authority may allow development upon such portions of land upon demonstration by an applicant that failure to permit development would deprive the property owner of all economically beneficial use of the property. This determination shall be made considering the entire parcel in question and contiguous parcels in common ownership on or after January 1, 1994, not just the portion where

development is otherwise prohibited by this chapter. Where this showing can be made on residentially zoned land, development shall be allowed and limited to one single-family residence. Any development approved under this chapter shall be subject to compliance with all other applicable City requirements as well as any applicable State, Federal or other requirements;

b. To the maximum extent practicable as determined by the review authority, the applicant shall avoid locating roads, utilities, and public facilities on or across slopes exceeding thirty-five percent.

Finding: Complies as Proposed. Slopes greater than 25% within areas proposed for development are artificial fill slopes created to contain the landfill. Final detailed development plans will be required to address the proposed walls structures and stability.

17.44.060.J *The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report.*

Finding: Complies with Condition. The developer shall retain the services of a licensed geotechnical engineer to conduct inspections prior to and during construction activities which involve removal or addition of vegetation, building structures, retaining walls or earth. The geotechnical engineer shall provide reports to confirm that standards from Section 17.44.100 are met. The geotechnical engineer record shall observe all excavations and geologic conditions exposed during construction and document that the conditions are consistent with the conditions assumed in the geotechnical hazard evaluation. If the conditions are different than assumed in the preliminary report, the effect of the new observations shall be evaluated and mitigation provided as required. Additional geologic hazards review may be required at the City's discretion. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.K *At the City's discretion, peer review shall be required for the geotechnical evaluation/investigation report submitted for the development and/or lot plans. The peer reviewer shall be selected by the City. The applicant's geotechnical engineer shall respond to written comments provided by the City's peer reviewer prior to issuance of building permit.*

Finding: Complies with Condition. The developer's geotechnical engineer shall respond to written comments provided by the City's peer reviewer and the City's peer reviewer shall agree with geotechnical evaluation/investigation report submitted for the development prior issuance of building permit. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. (Also written in findings for 17.44.050.B.3) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.060.L *The review authority shall determine whether the proposed methods of rendering a known or potential hazard site safe for construction, including proposed geotechnical remediation methods, are feasible and adequate to prevent landslides or damage to property and safety. The review authority shall consult with the City's geotechnical engineer in making this determination. Costs for such consultation shall be paid by the applicant. The review authority may allow development in a known or potential hazard area as provided in this chapter if specific findings are made that the specific provisions in the design of the proposed development will prevent landslides or damage. The review authority may impose any conditions, including limits on type or intensity of land use, which it determines are necessary to assure that landslides or property damage will not occur.*

Finding: Complies with Condition. The developer's geotechnical engineer shall respond to written comments provided by the City's peer reviewer and the City's peer reviewer shall agree with geotechnical evaluation/investigation report submitted for the development prior issuance of building

permit. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. (Also written in the finding for 17.44.060.K) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.070 *Access to Property.*

A. Shared private driveways may be required if the city engineer or principal planner determines that their use will result in safer location of the driveway and lesser amounts of land coverage than would result if separate private driveways are used.

B.Innovations in driveway design and road construction shall be permitted in order to keep grading and cuts or fills to a minimum and to achieve the purpose and policy of this chapter.

C. Points of access to arterials and collectors shall be minimized.

D. The city engineer or principal planner shall verify that adequate emergency services can be provided to the site.

Finding: Complies as Proposed. The GDP shows multiple access points and internal streets appropriate for the proposed multi-use development.

17.44.080 *Utilities.*

All new service utilities, both on-site and off-site, shall be placed underground and under roadbeds where practicable. Every effort shall be made to minimize the impact of utility construction. Underground utilities require the geologic hazards permitting and review prescribed herein.

Finding: Complies with Condition. The placement of existing utilities underground within areas of landfill and geologic hazards shall be reviewed and approved by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.090 *Stormwater Drainage.*

The applicant shall submit a permanent and complete stormwater control plan. The program shall include, but not be limited to the following items as appropriate: curbs, gutters, inlets, catch basins, detention facilities and stabilized outfalls. Detention facilities shall be designed to City standards as set out in the City's drainage master plan and design standards. The review authority may impose conditions to ensure that waters are drained from the development so as to limit degradation of water quality consistent with Oregon City's Title III section of the Oregon City Municipal Code Chapter 17.49 and the Oregon City Public Works Stormwater Management Design Manual and Standards Plan or other adopted standards subsequently adopted by the City Commission. Drainage design shall be approved by the city engineer before construction, including grading or other soil disturbance, has begun.

Finding: Complies with Condition. The GDP provided a Stormwater Management Report. Final development plans will require the stormwater plans to be refined for the final proposed development. The developer's geotechnical consultant shall review the finalized erosion control plan, construction plans, and stormwater report associated with the development and certify that they are consistent with the conclusions and recommendations stated in their geologic assessment and geotechnical report. The city's geotechnical consultant shall review the finalized erosion control plan, construction plans and stormwater report and the cost of review shall be paid by the developer. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.100. *Construction Standards.*
During construction on land subject to this chapter, the following standards shall be implemented by the developer:
17.44.100.A *All development activity shall minimize vegetation removal and soil disturbance and shall provide positive erosion prevention measures in conformance with OCMC Chapter 17.47 – Erosion and Sediment Control.*
Finding: Complies with Condition. The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. (Also written in findings from 16.12.010) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.100.B *No grading, clearing or excavation of any land shall be initiated prior to approval of the grading plan, except that the city engineer shall authorize the site access, brush to be cleared and the location of the test pit digging prior to approval of such plan to the extent needed to complete preliminary and final engineering and surveying. The grading plan shall be approved by the city engineer as part of the city's review under this chapter. The developer shall be responsible for the proper execution of the approved grading plan.*
Finding: See findings from chapter 15.48.

17.44.100.C *Measures shall be taken to protect against landslides, mudflows, soil slump and erosion. Such measures shall include sediment fences, straw bales, erosion blankets, temporary sedimentation ponds, interceptor dikes and swales, undisturbed buffers, grooving and stair stepping, check dams, etc. The applicant shall comply with the measures described in the Oregon City Public Works Standards for Erosion and Sedimentation Control (Ordinance 99-1013).*
Finding: Not applicable. The application is for approval of the GDP and does not request approval for any actual construction activities. Therefore, a detailed erosion control plan or permit is not required. The applicant has proposed to provide applicable erosion control plan per requirements of the OCMC with subsequent DDP applications.

17.44.100.D *All disturbed vegetation shall be replanted with suitable vegetation upon completion of the grading of the steep slope area.*
Finding: Not applicable. The application is for approval of the GDP and does not request approval for any actual construction activities. Therefore, a detailed erosion control plan or permit is not required. The applicant has proposed to provide applicable erosion control plan per requirements of the OCMC with subsequent DDP applications.

17.44.100.E *Existing vegetative cover shall be maintained to the maximum extent practicable. No grading, compaction or change in ground elevation, soil hydrology and/or site drainage shall be permitted within the drip line of trees designated for protection, unless approved by the City.*
Finding: Complies with Condition. Areas identified as geologic hazard by the city shall have existing vegetative cover maintained to the maximum extent practicable. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.100.F *Existing perennial and intermittent watercourses shall not be disturbed unless specifically authorized by the review authority. This includes physical impacts to the stream course as well as siltation and erosion impacts.*

Finding: See findings from chapter 17.49 of this report.

17.44.100.G *All soil erosion and sediment control measures shall be maintained during construction and for one year after development is completed, or until soils are stabilized by revegetation or other measures to the satisfaction of the city engineer. Such maintenance shall be the responsibility of the developer. If erosion or sediment control measures are not being properly maintained or are not functioning properly due to faulty installation or neglect, the City may order work to be stopped.*
Finding: Not applicable. The application is for approval of the GDP and does not request approval for any actual construction activities. Therefore, a detailed erosion control plan or permit is not required. The applicant has proposed to provide applicable erosion control plan per requirements of the OCMC with subsequent DDP applications.

17.44.100.H *All newly created lots, either by subdivision or partition, shall contain building envelopes with a slope of 35% or less.*
Finding: Complies as Proposed. The GDP does not show building envelopes with slopes of 35% or greater.

17.44.100.I *The applicant's geotechnical engineer shall provide special inspection during construction to confirm that the subsurface conditions and assumptions made as part of their geotechnical evaluation/investigation are appropriate. This will allow for timely design changes if site conditions are encountered that are different from those anticipated.*
Finding: Complies with Condition. The developer shall retain the services of a licensed geotechnical engineer to conduct inspections prior to and during construction activities which involve removal or addition of vegetation, building structures, retaining walls or earth. The geotechnical engineer shall provide reports to confirm that standards from Section 17.44.100 are met. The geotechnical engineer record shall observe all excavations and geologic conditions exposed during construction and document that the conditions are consistent with the conditions assumed in the geotechnical hazard evaluation. If the conditions are different than assumed in the preliminary report, the effect of the new observations shall be evaluated and mitigation provided as required. Additional geologic hazards review may be required at the City's discretion. (Also written in findings for 17.44.060.J) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.100.J *Prior to issuing an occupancy permit, the geotechnical engineer shall prepare a summary letter stating that the soils- and foundation-related project elements were accomplished in substantial conformance with their recommendations.*
Finding: Complies with Condition. The developer's geotechnical engineer shall certify, during construction, that structural fill used on the site meets the provided design specifications and is placed as designed. The certification shall be in writing and shall be signed and stamped by a licensed engineer in the State of Oregon. (Also written in findings from 17.44.060.E) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.120 *- Liability. Approval of an application for development on land subject to this chapter shall not imply any liability on the part of the city for any subsequent damage due to earth slides. Prior to the issuance of a building permit, a waiver of damages and an indemnity and hold harmless agreement shall be required which releases the city from all liability for any damages resulting from the development approved by the city's decision.*

Finding: Complies with Condition. The developer shall submit waiver of damages, indemnity and hold harmless agreement completed by all owners of property disturbed by the development. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.130 *- Compliance.*
Nothing contained in this chapter shall relieve the developer of the duty to comply with any other provision of law. In the case of a conflict, the more restrictive regulation shall apply.
Finding: Complies with Condition. Conditions contained in this report shall not relieve the developer of the duty to comply with any other provision of law. In the case of a conflict, the more restrictive regulation shall apply. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 17.47 – EROSION AND SEDIMENT CONTROL

17.47.030 - Applicability.
A. This chapter, which may also be referred to as "erosion control" in this Code, applies to development that may cause visible or measurable erosion on any property within the city limits of Oregon City.
B. This chapter does not apply to work necessary to protect, repair, maintain or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies, provided that after the emergency has passed, adverse impacts are mitigated in accordance with applicable standards.
Finding: Not applicable. The application is for approval of the GDP and does not request approval for any actual construction activities. Therefore, a detailed erosion control plan or permit is not required. The applicant has proposed to provide applicable erosion control plan per requirements of the OCMC with subsequent DDP applications. **The entirety of this chapter is not applicable for the GDP.**

CHAPTER 17.34 MUD MIXED USE DOWNTOWN DISTRICT

17.34.020 - Permitted uses.
Permitted uses in the MUD district are defined as:
A. Banquet, conference facilities and meeting rooms;
B. Bed and breakfast/boarding houses, hotels, motels, and other lodging facilities;
C. Child care centers and/or nursery schools;
D. Indoor entertainment centers and arcades;
E. Health and fitness clubs;
F. Medical and dental clinics, outpatient; infirmary services;
G. Museums, libraries and cultural facilities;
H. Offices, including finance, insurance, real estate and government;
I. Outdoor markets, such as produce stands, craft markets and farmers markets that are operated on the weekends and after six p.m. during the weekday;
J. Postal services;
K.. Repair shops, for radio and television, office equipment, bicycles, electronic equipment, shoes and small appliances and equipment;
L. Multifamily residential, 3-4 plex residential;
M. 1 or 2 units in conjunction with a nonresidential use provided that the residential use occupies no more than 50% of the total square footage of the development;
N. Restaurants, eating and drinking establishments without a drive through;
O. Services, including personal, professional, educational and financial services; laundry and dry-cleaning;
P. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores provided the maximum footprint of a freestanding building with a single store does not exceed sixty thousand square feet (a freestanding building over sixty thousand square feet is allowed as long as the building contains multiple stores);
Q. Seasonal sales;
R. Residential care facilities, assisted living facilities; nursing homes and group homes for over fifteen patients licensed by the state;
S. Studios and galleries, including dance, art, photography, music and other arts;

T. Utilities: Basic and linear facilities, such as water, sewer, power, telephone, cable, electrical and natural gas lines, not including major facilities such as sewage and water treatment plants, pump stations, water tanks, telephone exchanges and cell towers;
U. Veterinary clinics or pet hospitals, pet day care;
V. Home occupations;
W. Research and development activities;
X. Temporary real estate offices in model dwellings located on and limited to sales of real estate on a single piece of platted property upon which new residential buildings are being constructed;
Y. Transportation facilities;
Z. Live/work dwellings;
AA. After-hours public parking;
BB. Marinas;
CC. Religious institutions.
DD. Mobile food units outside of the downtown design district.

Finding: Complies as Conditioned. The proposed GDP proposes retail, office, residential and entertainment uses all of which are listed as permitted uses in the zone. The GDP includes a request to approve eight conditional uses for the site, including five drive-thru uses and three anchor retail facilities that will exceed sixty thousand square feet within a freestanding building. All of these uses are listed as permitted conditional uses and are addressed below under the applicable conditional use criteria. Please see findings in OCMC 17.56 Conditional Uses for conformance with the Conditional use criteria. All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan. Additions to or removal of uses listed in the Applicant's submittal shall not in themselves constitute a need for an amendment to the Master Plan unless the addition or revision triggers a need for an amendment through a Condition of Approval or OCMC 17.65.080 Amendments to Plans.

17.34.030 - Conditional uses.
The following uses are permitted in this district when authorized and in accordance with the process and standards contained in OCMC 17.56.
A. Drive-through facilities;
B. Emergency services;
C. Hospitals;
D. Outdoor markets that do not meet the criteria of OCMC 17.34.020.I.;
E. Parks, playgrounds, play fields and community or neighborhood centers;
F. Parking structures and lots not in conjunction with a primary use on private property, excluding after-hours public parking;
G. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies and specialty stores in a freestanding building with a single store exceeding a foot print of sixty thousand square feet;
H. Public facilities such as sewage and water treatment plants, water towers and recycling and resource recovery centers;
I. Public utilities and services such as pump stations and sub-stations;
J. Distributing, wholesaling and warehousing;
K. Gas stations;
L. Public and or private educational or training facilities;
M. Stadiums and arenas;
N. Passenger terminals (water, auto, bus, train), excluding bus stops;
O. Recycling center and/or solid waste facility;
P. Shelters, except within the Downtown Design District.
Finding: Finding: Complies as Conditioned. The proposed GDP proposes retail, office, residential and entertainment uses all of which are listed as permitted uses in the zone. The GDP includes a request to approve eight conditional uses for the site, including five drive-thru uses and three anchor retail facilities that will exceed sixty thousand square feet within a freestanding building. All of these uses are listed as permitted conditional uses and are addressed below under the applicable conditional use criteria.
Please see findings in OCMC 17.56 Conditional Uses for conformance with the Conditional use criteria

17.34.040 - Prohibited uses.
The following uses are prohibited in the MUD district:
A. Kennels;
B. Outdoor storage and sales, not including outdoor markets allowed in OCMC 17.34.030;
C. Self-service storage;
D. Single-Family attached and detached residential units and duplexes;
E. Motor vehicle and recreational vehicle repair/service;
F. Motor vehicle and recreational vehicle sales and incidental service;
G. Heavy equipment service, repair, sales, storage or rental[2] (including but not limited to construction equipment and machinery and farming equipment);
H. Marijuana production, processing, wholesaling, research, testing, and laboratories;
I. Mobile food units within the downtown design district unless a special event has been issued.
Finding: Compiles as Proposed. The applicant is not prosing any prohibited uses.

17.34.060 - Mixed-use downtown dimensional standards—For properties located outside of the downtown design district.

Finding: Complies as Proposed. The applicable dimensional standards for The North End master plan are met in the proposed GDP as illustrated in the table below, except where modifications have been requested under the provisions of 17.65.070. Future DDP's will be individually reviewed for compliance with the dimensional standards of the zone subject to consistency with the GDP to ensure that the overall master plan satisfies these requirements as proposed.

The applicant is aware of the 45' height limitation for properties within 500' of the End of the Oregon Trial Museum (EOT) and have design the future buildings to meet this requirement. However, this standard applies to all buildings on a property if any portion of the property is within 500'. Given that a large portion of the site is not within 500 feet of the End of the Oregon Trial Museum (EOT), the applicant plans on further dividing the site to separate out the area subject to the height limitation section of the MUD District. Prior to receiving approval for any building with a height greater than 45 feet, the applicant must show that the building is not located on a parcel or lot that is closer than 500 feet from the End of the Oregon Trial Museum (EOT).

The street system, as proposed and conditioned in the Master Plan, can be considered street frontage for the purpose of siting standards in OCMC 17.62 Site Plan and Design Review. Building setbacks are to be taken from the back of the sidewalk (or curb if no sidewalk) along private streets. Small revisions to the street system can be approved through the DDP process if they substantially comply with the Master Plan.

The applicant has indicated that all of the residential development will be part of a mixed-use development and not subject to the minimum residential density requirement of the MUD District. if the applicant chooses to build stand-alone residential, the residential density of a minimum net density of 17.4 units per acre applies to the site.

Standard	Requirement	Proposed	Notes
Min. Lot Area	None	62+ Acres	Standard met by the GDP
Min. Floor Area Ratio	0.3	0.49	Standard met by the GDP
Min. Building Height	25 feet	Varies	Standard met by the GDP
Max. Building Height	75 / 45 feet	Varies	The 45-foot height requirement applies to those portions of the site located within 500 feet of the End of the Oregon Trail Interpretive Center. A subsequent land division may be needed to separate this area from the rest of the site as the City interprets this standard to apply to the entire property as a single lot.
Min. Setbacks	None	Varies	Standard met by the GDP
Max. Setbacks	20 feet	Varies	Many of the buildings are located within this setback to an internal private street. Future land divisions within the GDP will need to locate property lines in accordance with these standards on site. The GDP locates buildings as close to the existing Washington street frontage as possible, however, buildings located along the Abernethy Road frontage are setback outside of the floodplain and a modification to this standard has been requested as allowed by the provisions in 17.65.070.
Max. Coverage	90%	~26%	Standard met by the GDP
Min. Residential Density	None		Does not apply to residential developments above retail in a mixed-use development.
Min. Landscaping	10%	~11.5%	Standard met by the GDP

17.34.080 - Explanation of certain standards.
A. Floor Area Ratio (FAR).
1. Purpose. Floor area ratios are a tool for regulating the intensity of development. Minimum FARs help to achieve more intensive forms of building development in areas appropriate for larger-scale buildings and higher residential densities.
2. Standards.
a. The minimum floor area ratios contained in OCMC 17.34.060 and 17.34.070 apply to all nonresidential and mixed-use building developments.
b. Required minimum FARs shall be calculated on a project-by-project basis and may include multiple contiguous blocks. In mixed-use developments, residential floor space will be included in the calculations of floor area ratio to determine conformance with minimum FARs.
c. An individual phase of a project shall be permitted to develop below the required minimum floor area ratio provided the applicant demonstrates, through covenants applied to the remainder of the site or project or through other binding legal mechanism, that the required density for the project will be achieved at project build out.

Finding: Complies as Conditioned. In compliance with this standard, the FAR for the GDP is calculated based on the entire site area subject to the GDP except for the Abernethy Creek NROD buffer area, which is not included in density calculations. With this site area reduction, the site area comprises 2,464,613 square feet. The development proposed under this GDP comprises 1,091,698 square feet for a total proposed FAR of 0.49:1, meeting the required minimum FAR of 0.3:1. Each individual phase may or may not meet the minimum requirement but as permitted by this section, a phase will be permitted to develop below the required minimum as long as each phase demonstrates that the site will meet the minimum FAR requirement at full buildout. This is a request for the approval of the GDP which satisfies the requirements for FAR across the overall site. The FAR requirements apply to this development under the standards above. Future applications for DDP should be consistent with the GDP approval to ensure the project remains compliant with this standard.

B. Building Height.
1. Purpose.
a. The Masonic Hall is currently the tallest building in downtown Oregon City, with a height of fifty-eight feet measured from Main Street. The maximum building height limit of fifty-eight feet will ensure that no new building will be taller than the Masonic Hall.
b. A minimum two-story (twenty-five feet) building height is established for the downtown design district overlay sub-district to ensure that the traditional building scale for the downtown area is maintained.
Finding: Complies as Proposed. The site is not located within the downtown design district. As proposed in the GDP, all development is within the allowed height limits and will demonstrate continuing compliance with the height maximums at each DDP approval. The applicant is aware of the 45' height limitation for properties within 500' of the End of the Oregon Trial Museum (EOT) and have design the future buildings to meet this requirement. However, this standard applies to all buildings on a property if any portion of the property is within 500'. Given that a large portion of the site is not within 500 feet of the End of the Oregon Trial Museum (EOT), the applicant plans on further dividing the site to separate out the area subject to the height limitation section of the MUD District. Prior to receiving approval for any building with a height greater than 45 feet, the applicant must show that the building is not located on a parcel or lot that is closer than 500 feet from the End of the Oregon Trial Museum (EOT).

CHAPTER 17.49 – NATURAL RESOURCES OVERLAY DISTRICT

17.49.040 - NROD permit and review process.
An NROD permit is required for those uses regulated under OCMC 17.49.090, Uses Allowed under Prescribed Conditions. An NROD permit shall be processed under the Type II development permit procedure, unless an adjustment of standards pursuant to OCMC 17.49.200 is requested or the application is being processed in conjunction with a concurrent application or action requiring a Type III or Type IV development permit.
Finding: Complies as Conditioned The applicant submitted two Type I NROD Permit Exemption and Boundary Verifications. 1. NROD 20-0022 (Exhibit 6) reviewed the NROD areas within the DEQ soil cap and found that the soil cap is considered impervious surface and serves to prevent erosion of soil cap (clay/silt layer) and is not viable NROD area/cannot accommodate vegetated corridor plant growth. 2.

NROD 21-0004 (Exhibit 7) exempting the existing imperious Washington Street and Abernethy Road from the Natural Resources Overlay District. Other areas identified as orange in the map below will require review though a future Type II or Type III Natural Resource Review process when development is proposed in that area. Any development areas impacted by the Natural Resources Overlay District will be reviewed for compliance with this section at the DDP level.

The applicant has also identified a wetland and or stream along Washington Street (orange area below) that could be further reduced in size and location based on a wetlands delineation or could be impacted by the development of Washington Street improvements. Any development areas impacted by the Natural Resources Overlay District will be reviewed for compliance with this section either before or at the DDP level, which could involve mitigation requirements or a notice of the delination report if a reduction or elimination is warranted through a future Type II Land Use Review.

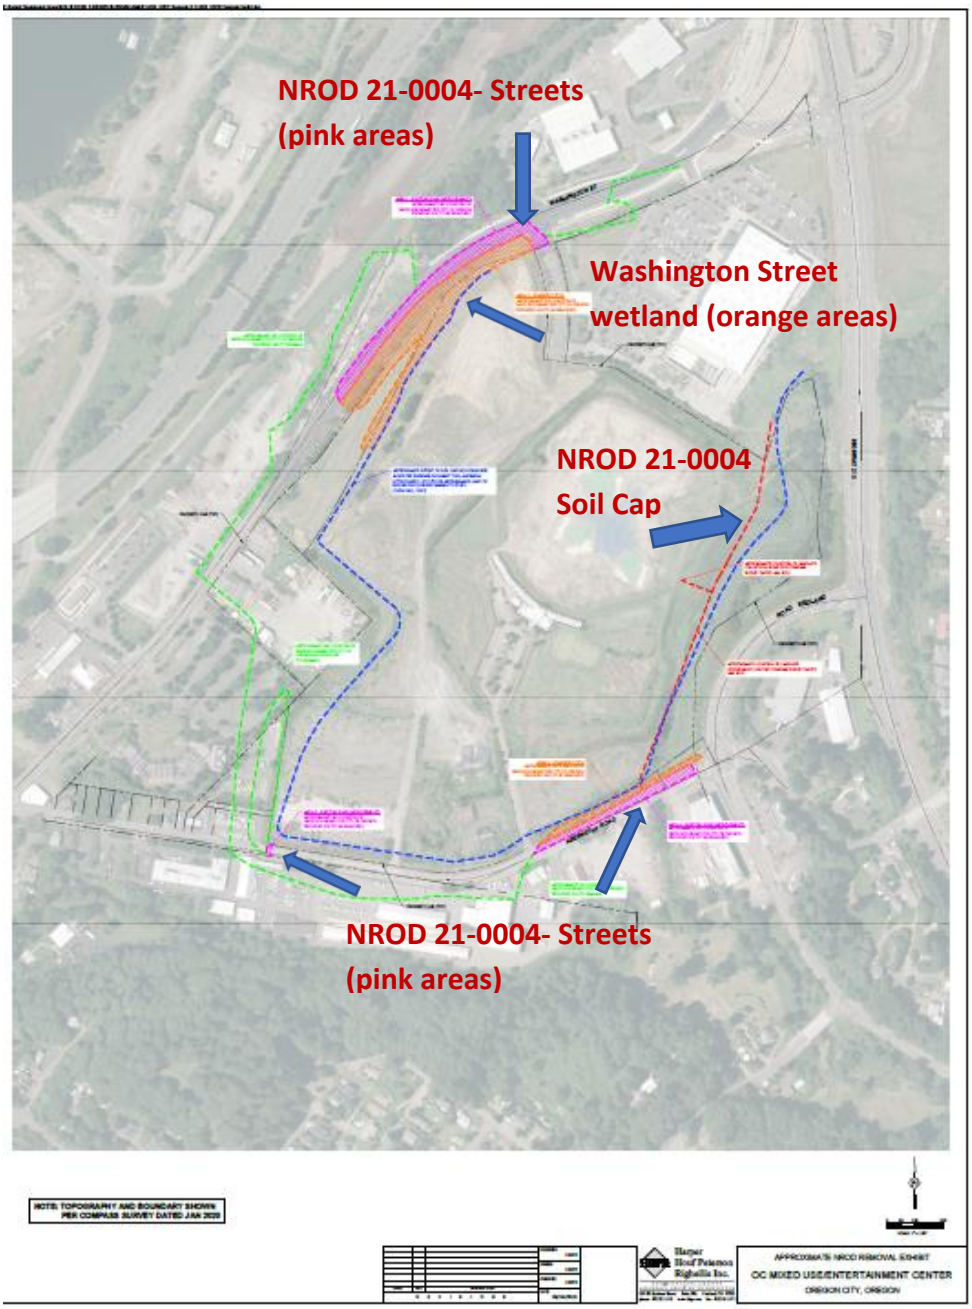

Figure 6 Natural Resource Overlay District- Type I Exemption locations

CHAPTER 17.50 – ADMINISTRATION AND PROCEDURES

17.50.050 – Pre-application conference.

A Pre-application Conference. Prior to a Type II – IV or Legislative application, excluding Historic Review, being deemed complete, the applicant shall schedule and attend a pre-application conference with City staff to discuss the proposal, unless waived by the Community Development Director. The purpose of the pre-application conference is to provide an opportunity for staff to provide the applicant with information

on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal.

1. To schedule a pre-application conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee.

2. At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans.

3. The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the pre-application conference.

B. A pre-application conference shall be valid for a period of six months from the date it is held. If no application is filed within six months of the conference or meeting, the applicant shall schedule and attend another conference before the City will accept a permit application. The Community Development Director may waive the pre-application requirement if, in the Director's opinion, the development has not changed significantly and the applicable municipal code or standards have not been significantly amended. In no case shall a pre-application conference be valid for more than one year.

Finding: Complies as Proposed. The applicant held a pre-application conference (PA 20-50) for this proposal on December 29, 2020.

17.50.055 - Neighborhood association meeting.

Neighborhood Association Meeting. The purpose of the meeting with the recognized neighborhood association is to inform the affected neighborhood association about the proposed development and to receive the preliminary responses and suggestions from the neighborhood association and the member residents.

A. Applicants applying for annexations, zone change, comprehensive plan amendments, conditional use, Planning Commission variances, subdivision, or site plan and design review (excluding minor site plan and design review), general development master plans or detailed development plans applications shall schedule and attend a meeting with the City-recognized neighborhood association in whose territory the application is proposed no earlier than one year prior to the date of application. Although not required for other projects than those identified above, a meeting with the neighborhood association is highly recommended.

B. The applicant shall request via email or regular mail a request to meet with the neighborhood association chair where the proposed development is located. The notice shall describe the proposed project. A copy of this notice shall also be provided to the chair of the Citizen Involvement Committee.

C. A meeting shall be scheduled within thirty days of the date that the notice is sent. A meeting may be scheduled later than thirty days if by mutual agreement of the applicant and the neighborhood association. If the neighborhood association does not want to, or cannot meet within thirty days, the applicant shall host a meeting inviting the neighborhood association, Citizen Involvement Committee, and all property owners within three hundred feet to attend. This meeting shall not begin before six p.m. on a weekday or may be held on a weekend and shall occur within the neighborhood association boundaries or at a City facility.

D. If the neighborhood association is not currently recognized by the City, is inactive, or does not exist, the applicant shall request a meeting with the Citizen Involvement Committee.

E. To show compliance with this section, the applicant shall submit a copy of the email or mail notice to the neighborhood association and CIC chair, a sign-in sheet of meeting attendees, and a summary of issues discussed at the meeting. If the applicant held a separately noticed meeting, the applicant shall submit a copy of the meeting flyer, postcard or other correspondence used, and a summary of issues discussed at the meeting and submittal of these materials shall be required for a complete application.

Finding: Complies as Proposed. The applicant met with the CIC on February 1, 2021 in lieu of meeting with the Two Rivers Neighrbhood Association as they were not able to meet in person or have the ability to hold digital meetings during COVID-19 restriction. A link to the meeting video can be found in the staff report exhibits.

17.50.090 - Public notices.
All public notices issued by the city announcing applications or public hearings of quasi-judicial or legislative actions, shall comply with the requirements of this section.
B. Notice of Public Hearing on a Type III or IV Quasi-Judicial Application. Notice for all public hearings concerning a quasi-judicial application shall conform to the requirements of this subsection. At least twenty days prior to the hearing, the city shall prepare and send, by first class mail, notice of the hearing to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The city shall also publish the notice on the city website within the city at least twenty days prior to the hearing. Pursuant to OCMC 17.50.080.H, the applicant is responsible for providing an accurate and complete set of mailing labels for these property owners and for posting the subject property with the city-prepared notice in accordance with OCMC 17.50.100. Notice of the application hearing shall include the following information:
1.
The time, date and location of the public hearing;
2. Street address or other easily understood location of the subject property and city-assigned planning file number;
3. A description of the applicant's proposal, along with a list of citations of the approval criteria that the city will use to evaluate the proposal;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing and that a staff report will be prepared and made available to the public at least seven days prior to the hearing;
5. A statement that any issue which is intended to provide a basis for an appeal to the city commission shall be raised before the close of the public record. Issues must be raised and accompanied by statements or evidence sufficient to afford the city and all parties to respond to the issue;
6. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal;
7. A statement that the application and all supporting materials and evidence submitted in support of the application may be inspected at no charge and that copies may be obtained at reasonable cost at the planning division offices during normal business hours; and
8. The name and telephone number of the planning staff person responsible for the application or is otherwise available to answer questions about the application.
C. Notice of Public Hearing on a Legislative Proposal. At least twenty days prior to a public hearing at which a legislative proposal to amend or adopt the city's land use regulations or comprehensive plan is to be considered, the community development director shall issue a public notice that conforms to the requirements of this subsection. Notice shall be sent to affected governmental entities, special districts, providers of urban services, including Tri-Met, Oregon Department of Transportation and Metro, any affected recognized neighborhood associations and any party who has requested in writing such notice. Notice shall also be published on the city website. Notice issued under this subsection shall include the following information:
1. The time, date and location of the public hearing;

2. The city-assigned planning file number and title of the proposal;
3. A description of the proposal in sufficient detail for people to determine the nature of the change being proposed;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing; and
5. The name and telephone number of the planning staff person responsible for the proposal and who interested people may contact for further information.
Finding: Complies. A public notice was sent to all properties within 300 feet of the site and signs were placed on the property within 20 days of the scheduled hearing. Copies of the public notice and affidavit of sign posting are in the record.

17.50.100 - Notice posting requirements.
Where this chapter requires notice of a pending or proposed permit application or hearing to be posted on the subject property, the requirements of this section shall apply.
A. City Guidance and the Applicant's Responsibility. The City shall supply all of the notices which the applicant is required to post on the subject property and shall specify the dates the notices are to be posted and the earliest date on which they may be removed. The City shall also provide a statement to be signed and returned by the applicant certifying that the notice(s) were posted at the correct time and that if there is any delay in the City's land use process caused by the applicant's failure to correctly post the subject property for the required period of time and in the correct location, the applicant agrees to extend the applicable decision-making time limit in a timely manner.
B. Number and Location. The applicant shall place the notices on each frontage of the subject property. If the property's frontage exceeds six hundred feet, the applicant shall post one copy of the notice for each six hundred feet or fraction thereof. Notices do not have to be posted adjacent to alleys or unconstructed right-of-way. Notices shall be posted within ten feet of the street and shall be visible to pedestrians and motorists. Notices shall not be posted within the public right-of-way or on trees. The applicant shall remove all signs within ten days following the event announced in the notice.
Finding: A public notice was sent to all properties within 300 feet of the site and signs were placed on the property within 20 days of the scheduled hearing. Copies of the public notice and affidavit of sign posting are in the record.

17.50.140 – Financial guarantees.
When conditions of permit approval require a permitee to construct certain public improvements, the City shall require the permitee to provide financial guarantee for construction of the certain public improvements. Financial guarantees shall be governed by this section.
A. Form of Guarantee. Guarantees shall be in a form approved by the City Attorney. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City Engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City Attorney. The guarantee shall be filed with the City Engineer.
B. Performance Guarantees. A permittee shall be required to provide a performance guarantee as follows.
1. After Final Approved Design by The City: The City may request the Permittee to submit a Performance Guarantee for construction of certain public improvements. A permitee may request the option of submitting a Performance Guarantee when prepared for temporary/final occupancy. The guarantee shall be one hundred twenty percent of the estimated cost of constructing the public improvements as

submitted by the permittee's engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City Engineer.

2. Before Complete Design Approval and Established Engineered Cost Estimate: The City may request a permittee to submit a Performance Guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee before public improvements are designed and completed. The guarantee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by *the permittee's engineer and approved by the City Engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City Engineer.*

C. Release of Guarantee. The guarantee shall remain in effect until the improvement is actually constructed and accepted by the City. Once the City has inspected and accepted the improvement, the City shall release the guarantee to the permittee. If the improvement is not completed to the City's satisfaction within the time limits specified in the permit approval, the City Engineer may, at their discretion, draw upon the guarantee and use the proceeds to construct or complete construction of the improvement and for any related administrative and legal costs incurred by the City in completing the construction, including any costs incurred in attempting to have the permittee complete the improvement. Once constructed and approved by the City, any remaining funds shall be refunded to the permittee. The City shall not allow a permittee to defer construction of improvements by using a performance guarantee, unless the permittee agrees to construct those improvements upon written notification by the City, or at some other mutually agreed-to time. If the permittee fails to commence construction of the required improvements within six months of being instructed to do so, the City may, without further notice, undertake the construction of the improvements and draw upon the permittee's performance guarantee to pay those costs.

D. Fee-in-lieu. When conditions of approval or the City Engineer allows a permittee to provide a fee-in-lieu of actual construction of public improvements, the fee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City Engineer. The percentage required is to ensure adequate funds for the future work involved in design, bid, contracting, and construction management and contract closeout. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City Engineer. The fee-in-lieu shall be submitted as cash, certified check, or other negotiable instrument acceptable by the City Attorney.

Finding: Complies as conditioned. A Performance Guarantee which is equal to 120% of the estimated cost for construction of public improvements as shown in city approved construction plans shall be provided prior to receiving a permit and beginning construction. The estimated costs shall be supported by a verified engineering estimate and approved by the city engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The guarantee shall remain in effect until the construction of all required improvements are completed and accepted by the city. The City engineer has not allowed the permittee to provide a fee-in-lieu of the actual construction of public improvements. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.50.141 – Public improvements – Warranty

All public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period. The warranty is to be used at the discretion of the City Engineer or designee to correct deficiencies in materials or maintenance of constructed public infrastructure, or to address any failure of engineering design.

A. Duration of Warranty. Responsibility for maintenance of public improvements shall remain with the property owner or developer for a warranty period of two years.

B. Financial Guarantee. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, bond, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City Engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City Attorney. The guarantee shall be filed with the City Engineer.

C. Amount of Warranty. The amount of the warranty shall be equal to fifteen percent of the estimated cost of construction of all public improvements (including those improvements that will become owned and maintained by the City at the end of the two year maintenance period), and shall be supported by a verified engineering estimate and approved by the City Engineer. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those improvements.

D. Transfer of Maintenance. The City will perform an inspection of all public improvements approximately forty-five days before the two-year warranty period expires. The public improvements shall be found to be in a clean, functional condition by the City Engineer before acceptance of maintenance responsibility by the City. Transfer of maintenance of public improvements shall occur when the City accepts the improvements at the end of the two year warranty period.

Finding: Complies as conditioned. Maintenance Guarantee equal to fifteen percent of the estimated cost for construction of public improvements as shown in city approved construction plans shall be provided prior to occupancy. The estimated costs shall be supported by a verified engineering estimate approved by the City Engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The maintenance guarantee shall warrant to the City of Oregon City that construction of public improvements will remain, for a period of twenty-four (24) months from the date of acceptance, free from defects in materials and workmanship. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 17.52 OFF-STREET PARKING AND LOADING

17.52.010 - Applicability.
The construction of a new structure or parking lot, or alterations to the size or use of an existing structure, parking lot or property use shall require site plan review approval and compliance with this chapter. This chapter does not apply to single-family attached, detached residential dwellings and duplexes.
Finding: Applies. The proposal includes a Concept Master Plan for a commercial property. The standards of this chapter are applicable to the project review. The project proposes a combination of parking structures and surface parking lots to satisfy minimum off-street parking requirements of the OCMC and serve the needs of future businesses and residents in the master plan at the time of each DDP applciaotn for new development, a parking analysis will be performed. A phasing condition of approval has been added to ensure that orderly project phasing can occur that does not leave the site greatly over or under parked at phase.

17.52.020 - Number of automobile spaces required.
A. The number of parking spaces shall comply with the minimum and maximum standards listed in Table 17.52.020. The parking requirements are based on spaces per one thousand square feet net leasable area unless otherwise stated.

Table 17.52.020		
LAND USE	*PARKING REQUIREMENTS*	
	MINIMUM	*MAXIMUM*
Multifamily Residential	*1.00 per unit*	*2.5 per unit*
3-4 Plex Residential	*2.00*	*4*
Hotel, Motel	*1.0 per guest room*	*1.25 per guest room*
Correctional Institution	*1 per 7 beds*	*1 per 5 beds*
Senior housing, including congregate care, residential care and assisted living facilities; nursing homes and other types of group homes	*1 per 7 beds*	*1 per 5 beds*
Hospital	*2.00*	*4.00*
Preschool Nursery/Kindergarten	*2.00*	*3.00*
Elementary/Middle School	*1 per classroom*	*1 per classroom + 1 per administrative employee + 0.25 per seat in auditorium/assembly room/stadium*
High School, College, Commercial School for Adults	*0.20 per # staff and students*	*0.30 per # staff and students*
Auditorium, Meeting Room, Stadium, Religious Assembly Building, movie theater,	*.25 per seat*	*0.5 per seat*

Retail Store, Shopping Center, Restaurants	*4.10*	*5.00*
Office	*2.70*	*3.33*
Medical or Dental Clinic	*2.70*	*3.33*
Sports Club, Recreation Facilities	*Case Specific*	*5.40*
Storage Warehouse, Freight Terminal	*0.30*	*0.40*
Manufacturing, Wholesale Establishment	*1.60*	*1.67*
Light Industrial, Industrial Park	*1.3*	*1.60*

1. Multiple Uses. In the event several uses occupy a single structure or parcel of land, the total requirements for off-street parking shall be the sum of the requirements of the several uses computed separately.

Finding: Complies as Conditioned. The Master Plan (GDP) includes a mix of uses, and parking has been calculated based on the square footages for each use separately. The North End master plan is a proposed 1,091,698 square feet of mixed-use development that includes 524 residential units, (3) anchor retail facilities, and a mix of smaller retail and entertainment uses on a 62-acre site. Table 17.52.020 requires a minimum of 4.1 parking spaces per 1,000 sf of retail which includes stores, restaurants and drive thru uses; .25 spaces per seat for movie theaters; and 1 space per unit for the multi-family residential units. Based on the proposed programming in the master plan, and the requirements of Table 17.52.020, the site is required to provide a **minimum of 3,366 onsite parking spaces**. Table 17.52.020 also establishes the maximum allowed number of spaces at 5.0 parking spaces per 1,000 sf of retail which includes stores, restaurants and drive thru uses; .5 spaces per seat for movie theaters, and 2.5 spaces per unit for the multi-family residential units proposed on site. Based on the proposed programming in the master plan, the **maximum number of allowed spaces would be 5,923 spaces**.

Per 17.52.020.A.3, fractional results less than one-half are disregarded. Other results round up, requiring an additional space. The master plan proposes to provide 3,225 parking stalls within the parking structures and parking lots, and another 531 parallel parking stalls along the internal private street system for a total of **3,756 parking stalls proposed on-site**. Therefore, the master plan proposes parking that exceeds the minimum number of required parking spaces, but less than the maximum number allowed. Parking will be evaluated again with each application for DDP approval. This standard is satisfied. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

2. Requirements for types of buildings and uses not specifically listed herein shall be determined by the Community Development Director, based upon the requirements of comparable uses listed.

Finding: Complies as Proposed. A determination by the Community Development Director is not needed for this application. The parking requirements for the uses proposed within the master plan are listed in minimum and maximum parking standards of Table 17.52.020.

3. Where calculation in accordance with the above list results in a fractional space, any fraction less than one-half shall be disregarded and any fraction of one-half or more shall require one space.

Finding: Complies as Proposed. Fractions were rounded in accordance with this chapter.

4. Fleet vehicle parking shall be accommodated within the maximum parking ratio, except that in GI, CI, and MUE zones, fleet vehicle parking may be included in a parking lot in addition to the maximum number of permitted parking spaces.

Finding: Complies as Proposed. Fleet vehicle parking was not considered within the GDP. This provision is not applicable with this request but may be considered when considering applications for DDP's.

5. A change in use within an existing habitable building located in the MUD Design District or the Willamette Falls Downtown District is exempt from additional parking requirements. Additions to an existing building and new construction are required to meet the minimum parking requirements for the areas as specified in Table 17.52.020 for the increased square footage.
Finding: Complies as Proposed. This is an application for approval of a GDP for a mixed-use development. All parking has been calculated based on the sum of the requirements for all proposed uses on site. The applicant has proposed a sitewide parking approach looking at the sum total of development proposed and parking provided. At the time of each DDP submittal, the applicant is responsible to demonstrate how they are implementing the proposed parking calculations. At no time shall the site be more than 25% above parking maximums or 15% below parking minimums per 17.52.020 - Number of automobile spaces required

B. Parking requirements can be met either onsite, or offsite by meeting one or multiple of the following conditions:
1. Parking may be located on the same site as the associated use which it is supporting.

Finding: Complies as Conditioned. All proposed required parking spaces are located on the private property developed with The North End master plan. The Master Plan process reviews the parking requirements for the full site build-out and not for any specific DDP. At the time of each DDP review of a new building- the parking requirements will be reviewed based on the total parking requirements of the master plan and not for any specific development. The applicant has proposed a sitewide parking approach looking at the sum total of development proposed and parking provided. At the time of each DDP submittal, the applicant is responsible to demonstrate how they are implementing the proposed parking calculations. At no time shall the site be more than 25% above parking maximums or 15% below parking minimums per 17.52.020 - Number of automobile spaces required. Hoverer, the applicant has also proposed a serious of structured parking garages as bases for the mixed-use multifamily development above them, and mostly likely will be built as a package with phased DDP for the mixed- use development on top. To ensure that the applicant is not restricted in utilizing the built structured parking before the associated development above, structured parking associated with any use may be completed and used before the associated use is constructed and is not subject to the 15% or 25% limitation. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

2. Mixed Uses. If more than one type of land use occupies a single structure or parcel of land, the total requirements for off-street automobile parking shall be the sum of the requirements for all uses, unless it can be shown that the peak parking demands are actually less (e.g. the uses operate on different days or at different times of the day). In that case, the total requirements shall be reduced accordingly, up to a maximum reduction of fifty percent, as determined by the Community Development Director.
Finding: Complies as Proposed. This is an application for approval of a GDP for a mixed-use development. All parking has been calculated based on the sum of the requirements for all proposed uses on site. Further, the minimum requirements are exceeded as discussed above so a reduction is not necessary. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. Shared Parking. Required parking facilities for two or more uses, structures, or parcels of land may be satisfied by the same parking facilities used jointly, to the extent that the owners or operators show that the need for parking facilities does not materially overlay (e.g., uses primarily of a daytime versus nighttime nature), that the shared parking facility is within one thousand feet of the potential uses, and provided that the right of joint use is evidenced by a recorded deed, lease, contract, or similar written instrument authorizing the joint use.

Finding: Complies as Proposed. The applicant indicated that parking on site will be shared across the development. Individual DDP requests will include shared parking agreements and easements as required. The site includes a mix of uses, each with designated spaces. The applicant has not proposed to reduce the number of stalls onsite based on decreased peak demands due to the mix of uses onsite. The applicant has proposed a sitewide parking approach looking at the sum total of development proposed and parking provided. At the time of each DDP submittal, the applicant is responsible to demonstrate how they are implementing the proposed parking calculations. At no time shall the site be more than 25% above parking maximums or 15% below parking minimums per 17.52.020 - Number of automobile spaces required. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

4. On-Street Parking. On-street parking may be counted toward the minimum standards when it is on the street face abutting the subject land use. An on-street parking space shall not obstruct a required clear vision area and it shall not violate any law or street standard. On-street parking for commercial uses shall conform to the following standards:

a. Dimensions. The following constitutes one on-street parking space:

1. Parallel parking: twenty-two feet of uninterrupted and available curb;

2. Forty-five and/or sixty-degree diagonal parking: Fifteen feet of curb;

3. Ninety-degree (perpendicular) parking: Twelve feet of curb.

4. Public Use Required for Credit. On-street parking spaces counted toward meeting the parking requirements of a specific use may not be used exclusively by that use, but shall be available for general public use at all times. Signs or other actions that limit general public use of on-street spaces are prohibited.

Finding: Complies as Conditioned. On street parking within the internal publicly accessible private streets has been included in the parking calculations above. On street parking is based on the parallel parking standard listed above. All on-street parking on private streets with public access easement will be available to the general public. As with public streets, time restriction can be added, as needed overtime, through coordination with Oregon City Public Works Department. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Reduction of the Number of the Minimum Automobile Spaces Required. Any combination of the reductions below is permitted unless otherwise noted.

1. Downtown Parking Overlay. The minimum required number of parking stalls is reduced within the Downtown Parking Overlay by fifty percent.

2. Transit Oriented Development. For projects not located within the Downtown Parking Overlay District, the minimum required number of parking stalls is reduced up to twenty-five percent when:

a. In a commercial center (sixty thousand square feet or greater of retail or office use measured cumulatively within a five hundred foot radius) or

b. When adjacent to multi-family development with over eighty units or

c. Within 1,320 feet of an existing or planned public transit street and within 1,320 feet of the opposite use (commercial center or multi-family development with over eighty units).

3. Tree Preservation. The Community Development Director may grant an adjustment to any standard of this requirement provided that the adjustment preserves a designated heritage tree or grove so that the reduction in the amount of required pavement can help preserve existing healthy trees in an undisturbed, natural condition.

4. Transportation Demand Management. The Community Development Director shall reduce the required number of parking stalls up to twenty-five percent when a parking-traffic study prepared by a traffic engineer demonstrates alternative modes of transportation, including transit, bicycles, and walking, and/or special characteristics of the customer, client, employee or resident population will reduce expected vehicle use and parking space demand for this development, as compared to standard Institute of Transportation Engineers vehicle trip generation rates and further that the transportation demand management program promotes or achieves parking utilization lower than minimum city parking requirements.

A transportation demand management (TDM) program shall be developed to include strategies for reducing vehicle use and parking demand generated by the development and will be measured annually. If, at the annual assessment, the City determines the plan is not successful, the plan may be revised. If the City determines that no good-faith effort has been made to implement the plan, the City may take enforcement actions.

Finding: Complies as Proposed. The GDP does not seek a reduction to the number of minimum automobile spaces required under these provisions.

5. The minimum required number of stalls may be reduced by up to ten percent when the subject property is adjacent to an existing or planned fixed public transit route or within one thousand feet of an existing or planned transit stop.

Finding: Complies as Proposed. The GDP does not seek a reduction to the number of minimum automobile spaces required under these provisions.

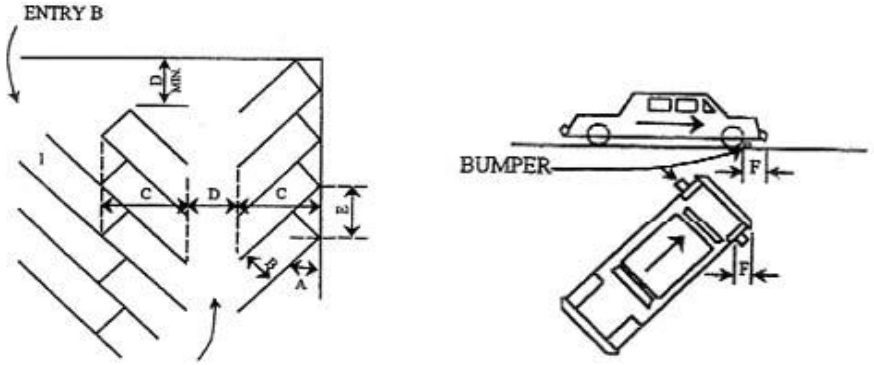
17.52.030 - Standards for automobile parking.

A. Access. Ingress and egress locations on public thoroughfares shall be located in the interests of public traffic safety and meet requirements of OCMC 16.12.035. Groups of more than four parking spaces shall be so located and served by driveways so that their use will require no backing movements or other maneuvering within a street right-of-way other than an alley.

Finding: Complies as Proposed. The layout of the parking applicant submitted a transportation study prepared by Kittleson and Associates, which indicates that the layout of vehicle parking on the proposed site provides circulation and maneuvering, which enables all vehicles to enter and exit the site in a forward motion through any one of the driveway access points along Washington Street or Abernethy Road.

B. Surfacing. Required off-street parking spaces and access aisles shall have paved surfaces adequately maintained. The use of pervious asphalt/concrete and alternative designs that reduce storm water runoff and improve water quality pursuant to the City's stormwater and low impact development design standards are encouraged.

Finding: Complies as Proposed. The applicant has proposed paved surfaces for all off-street parking spaces and access aisles. Paving is proposed for all vehicle areas on the site. Pervious asphalt/concrete are not currently proposed but are not prohibited by the master plan and could be proposed with individual DDP's. The applicant acknowledges the requirement to maintain the paved surfaces. over time. This standard will be reviewed for compliance at the time of each DDP application.



C. Drainage. Drainage shall be designed in accordance with the requirements of OCMC 13.12 and the City public works stormwater and grading design standards.
Finding: See findings from section 13.12 of this report.

D. Dimensional Standards.
1. Requirements for parking developed at varying angles are according to the table included in this section. A parking space shall not be less than seven feet in height when within a building or structure, and shall have access by an all-weather surface to a street or alley. Parking stalls in compliance with the American with Disabilities Act may vary in size in order to comply with the building division requirements. Up to thirty-five percent of the minimum required parking may be compact, while the remaining required parking stalls are designed to standard dimensions. The Community Development Director may approve alternative dimensions for parking stalls in excess of the minimum requirement which comply with the intent of this chapter.

PARKING STANDARD
PARKING ANGLE SPACE DIMENSIONS

A Parking Angle		*B Stall Width*	*C Stall to Curb*	*D Aisle Width*	*E Curb Length*	*F Overhang*
0 degrees		*8.5*	*9.0*	*12*	*20*	*0*
30 degrees	*Standard* *Compact*	*9'* *8'*	*17.3'* *14.9'*	*11'* *11'*	*18'* *16'*	
45 degrees	*Standard* *Compact*	*8.5* *8.5*	*19.8'* *17.0'*	*13'* *13'*	*12.7'* *11.3'*	*1.4*
60 degrees	*Standard* *Compact*	*9'* *8'*	*21'* *17.9'*	*18'* *16'*	*10.4'* *9.2'*	*1.7*
90 degrees	*Standard* *Compact*	*9'* *8'*	*19.0'* *16.0'*	*24'* *22'*	*9'* *8'*	*1.5*

All dimensions are to the nearest tenth of a foot.

Finding: Complies with Condition. The applicant indicates that **a**ll stalls shown on the civil site plans have been designed to meet the minimum dimensions required for standard or compact stalls. Parking is primarily angled at 90 degrees, but there are locations along the north and east edge of the development where angled parking is proposed. The civil site plans (sheets C200 through C207) attached to this application provides the dimensions for parking stalls and circulation to demonstrate that development within the master plan area can comply with these standards. DDP's may propose

compact spaces within their design provided the minimum parking requirements for the overall site are met. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

2. Alternative parking/plan. Any applicant may propose an alternative parking plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. In such situations, the Community Development Director may approve an alternative parking lot plan with variations to parking dimensions of this section. The alternative shall be consistent with the intent of this chapter and shall create a safe space for automobiles and pedestrians while providing landscaping to the quantity and quality found within parking lot landscaping requirements.
Finding: Not Applicable. The project does not seek approval of an alternative parking plan. This standard is not applicable.

E. Carpool and Vanpool Parking. New developments with seventy-five or more parking spaces, excluding projects where seventy-five percent or more of the total floor area is residential , and new hospitals, government offices, group homes, nursing and retirement homes, schools and transit park-and-ride facilities with fifty or more parking spaces, shall identify the spaces available for employee, student and commuter parking and designate at least five percent, but not fewer than two, of those spaces for exclusive carpool and vanpool parking. Carpool and vanpool parking spaces shall be located closer to the main employee, student or commuter entrance than all other employee, student or commuter parking spaces with the exception of ADA accessible parking spaces. The carpool/vanpool spaces shall be clearly marked "Reserved - Carpool/Vanpool Only."
Finding: Complies with Condition. The master plan provides more than 75 parking spaces on site and this provision is applicable. The location of carpool, vanpool, and ADA spaces will be designated with individual DDP's. ADA parking has been identified within the GDP for each building to demonstrate that the site is able to comply with dimensional standards for ADA spaces, but those locations are not intended to be formally set with this request. It appears that Carpool, vanpool, and ADA spaces can be accommodated on site. This standard will be reviewed for complaince at the time of each DDP application. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.52.040 - Bicycle parking standards.
B. Number of Bicycle Spaces Required. For any use not specifically mentioned in Table A, the bicycle parking requirements shall be the same as the use which, as determined by the Community Development Director, is most similar to the use not specifically mentioned. Calculation of the number of bicycle parking spaces required shall be determined in the manner established in OCMC 17.52.020 for determining automobile parking space requirements. Modifications to bicycle parking requirements may be made through the site plan and design, conditional use, or master plan review process.

*TABLE A Required Bicycle Parking Spaces**

Where two options for a requirement are provided, the option resulting in more bicycle parking applies. Where a calculation results in a fraction, the result is rounded up to the nearest whole number.

USE	*MINIMUM BICYCLE PARKING*	*MINIMUM BICYCLE PARKING - COVERED - The following*

		percentage of bicycle parking is required to be covered
Multi-family (five or more units)	*1 per 10 units (minimum of 2)*	*50% (minimum of 1)*
Correctional institution	*1 per 15 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Nursing home or care facility	*1 per 30 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Hospital	*1 per 20 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Park-and-ride lot	*1 per 5 auto spaces (minimum of 2)*	*50% (minimum of 1)*
Transit center	*1 per 5 auto spaces (minimum of 2)*	*50% (minimum of 1)*
Parks and open space	*1 per 10 auto spaces (minimum of 2)*	*0%*
Public parking lots	*1 per 10 auto spaces (minimum of 2)*	*50% (minimum of 1)*
Automobile parking structures	*1 per 10 auto spaces (minimum of 4)*	*80% (minimum of 2)*
Religious institutions, movie theater, auditorium or meeting room	*1 per 10 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Libraries, museums	*1 per 5 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Preschool, nursery, kindergarten	*2 per classroom (minimum of 2)*	*50% (minimum of 1)*
Elementary	*4 per classroom (minimum of 2)*	*50% (minimum of 1)*
Junior high and High school	*2 per classroom (minimum of 2)*	*50% (minimum of 2)*
College, business/commercial schools	*2 per classroom (minimum of 2)*	*50% (minimum of 1)*
Swimming pools, gymnasiums, ball courts	*1 per 10 auto spaces (minimum of 2)*	*30% (minimum of 1)*
Retail stores and shopping centers	*1 per 20 auto spaces (minimum of 2)*	*50% (minimum of 2)*

Retail stores handling exclusively bulky merchandise such as automobile, boat or trailer sales or rental	*1 per 40 auto spaces (minimum of 2)*	*0%*
Bank, office	*1 per 20 auto spaces (minimum of 2)*	*50% (minimum of 1)*
Medical and dental clinic	*1 per 20 auto spaces (minimum of 2)*	*50% (minimum of 1)*
Eating and drinking establishment	*1 per 20 auto spaces (minimum of 2)*	*0%*
Gasoline service station	*1 per 10 auto spaces (minimum of 2)*	*0%*

** Covered bicycle parking is not required for developments with two or fewer parking stalls.*

Finding: Complies as Conditioned All of the uses proposed within the GDP are listed in table A which prescribes the minimum number of bicycle parking spaces required for the site. The GDP does not provide the level of detail required to satisfy this standard but there is adequate space on the site to accommodate required bicycle parking. Future applications for DDP approval are expected to provide detailed plans that satisfy this requirement. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Design Standards.

1. Bicycle parking facilities shall be in the form of a lockable enclosure onsite, secure room in a building onsite, a covered or uncovered rack onsite, or within the adjacent right-of-way.

2. Bicycle parking areas shall be clearly marked or visible from on-site buildings or the street. If a bicycle parking area is not plainly visible from the street or main building entrance, a sign shall be posted indicating the location of the bicycle parking area. Indoor bicycle parking areas shall not require stairs to access the space. If sites have more than one building, bicycle parking shall be distributed as appropriate to serve all buildings.

3. All bicycle racks shall be designed so that:

a. The bicycle frame is supported horizontally at two or more places.

b. The user is not required to lift the bicycle onto the bicycle rack.

c. Each bicycle parking space is accessible without moving another bicycle.

d. It is a minimum of thirty inches tall and eighteen inches wide between the two points of contact.

e. Provides an area of six feet by two feet per bicycle.

g. All bicycle racks and lockers shall be securely anchored to the ground or to a structure.

Finding: Complies as Conditioned. The GDP does not provide the level of detail required to satisfy these design standards but there is adequate space on the site to accommodate required bicycle parking and meet the design standards. Future applications for DDP approval are expected to provide detailed plans that satisfy these requirements. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.52.060 - Parking lot landscaping.

A. Applicability. Unless otherwise specified, construction of new parking lots and alterations of existing parking lots shall comply with parking lot landscaping standards. Parking lot landscaping requirements within this section do not apply to parking structures or parking garages, except landscaping as required in OCMC 17.62.

Finding: Complies as Conditioned. The project is subject to parking lot landscaping standards. However, the GDP provides high level landscape drawings that show that required parking lot landscaping can generally satisfy these provisions. No modifications to the parking lot landscaping is requested with the GDP approval. Subsequent requests for DDP approval will require the applicant to provide more detailed landscape plans that meet these provisions as well as the landscape design guidelines proposed with the overall master plan. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Development Standards.

1. The landscaping shall be located in defined landscaped areas that are uniformly distributed throughout the parking or loading area.

2. All areas in a parking lot not used for parking, maneuvering, or circulation shall be landscaped.

3. Parking lot trees shall be a mix of deciduous shade trees and coniferous trees. The trees shall be evenly distributed throughout the parking lot as both interior and perimeter landscaping.

4. Required landscaping trees shall be of a minimum two-inch minimum caliper size (though it may not be standard for some tree types to be distinguished by caliper), planted according to American Nurseryman Standards, and selected from the Oregon City Street Tree List or approved by an arborist;

5. At maturity, all of the landscaped area shall be planted in ground cover plants, which includes grasses. Mulch (as a ground cover) shall only be allowed underneath plants at full growth and within two feet of the base of a tree and is not a substitute for ground cover.

6. Landscaped areas shall include irrigation systems unless an alternate plan is submitted, and approved by the Community Development Director, that can demonstrate adequate maintenance;

7. All landscaping shall be installed according to accepted planting procedures, according to American Nurseryman Standards.

C. Perimeter Parking Lot Landscaping and Parking Lot Entryway/Right-of-Way Screening. Parking lots and associated drive aisles shall include a five-foot wide landscaped buffer where the parking lot abuts the right-of-way and/or adjoining properties. In order to provide connectivity between non-single-family sites, the Community Development Director may approve an interruption in the perimeter parking lot landscaping for a single driveway where the parking lot abuts property designated as multi-family, commercial or industrial. Shared driveways and parking aisles that straddle a lot line do not need to meet perimeter landscaping requirements.

1. The perimeter parking lot are[a] shall include:

a. Trees spaced a maximum of thirty feet apart (minimum of one tree on either side of the entryway is required). When the parking lot is adjacent to a public right-of-way, the parking lot trees shall be offset from the street trees;

b. An evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average. The hedge/shrubs shall be parallel to and not nearer than two feet from the right-of-way line. The required screening shall be designed to allow for free access to the site and sidewalk by pedestrians. Visual breaks, no more than five feet in width, shall be provided every thirty feet within evergreen hedges abutting public right-of-ways.

D. Parking Area/Building Buffer. Except for parking lots with fewer than five parking stalls, parking areas (excluding drive aisles with no adjacent parking) shall be separated from the exterior wall of a structure, exclusive of pedestrian entranceways or loading areas, by one of the following:

1. Minimum five-foot wide landscaped planter strip (excluding areas for pedestrian connection) meeting the standards for perimeter parking lot area landscaping; or:

2. Minimum seven foot sidewalks with shade trees spaced a maximum of thirty feet apart in three-foot by five-foot tree wells.

E. Interior Parking Lot Landscaping. Surface parking lots with more than five parking stalls shall include at least forty-five square feet of interior parking lot landscaping per parking stall to improve the water quality, reduce storm water runoff, and provide pavement shade. Pedestrian walkways or any impervious surface in the landscaped areas are not to be counted in the percentage. Fractions shall be rounded up when calculating the required number of plantings. Interior parking lot landscaping shall include:

a. A minimum of one tree per four parking spaces.

b. A minimum of 1.5 shrubs per parking space.

c. No more than eight contiguous parking spaces shall be created without providing an interior landscape strip between them. Landscape strips shall be provided between rows of parking shall be a minimum of six feet in width and a minimum of ten feet in length.

Finding: Complies as Conditioned. The plans are high level and do not get to the level of detailed design needed to demonstrate compliance with specific details; however, future applications for DDP's within the master plan area are required to meet the provisions of the OCMC as well as the landscape design standards in Chapter 5: Master Plan Design Guidelines of this application. The GDP landscape plans generally show how the landscape standards can be met with future development. Landscaping is proposed in all areas not specified for parking, maneuvering, or circulation. The landscape design guidelines reinforce the standard that all trees within the landscape are 2-inch caliper or greater. The required parking lot landscaping considered the need for 45 square feet of landscaping for each parking space and anticipates trees spaced according to the OCMC requirements listed above. Ground cover is required across the site where improvements are not constructed filling in the gaps between trees and shrubs. The plans illustrate a variety trees within a minimum 5-foot buffer around the perimeter of each parking lot and shows adequate space for hedges/shrubs. Perimeter landscaping is provided along all parking areas. The GDP high level landscape plans and preliminary design were developed by a Kurt Lango, a certified landscape architect who also authored the landscape design guidelines. Each application for DDP approval will be required to provide greater detail and satisfy both sets of requirements. This standard will be reviewed for complaince at the time of each DDP application. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

F. Alternative landscaping plan.

Any applicant may propose an alternative landscaping plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. Alternative plans may include the use of low impact development techniques and minimized landscaping requirements. In such situations, the Community Development Director may approve variations to the landscaping standards of OCMC 17.52.060 in accordance with A and/or B below.

1. General Review Standard. The alternative shall meet the standards in OCMC 17.62.015- Modifications that will better meet design review requirements.

Finding Complies as Conditioned: Alternative landscape plans may be requested with future DDP applications, but the GDP illustrates that it is possible to satisfy these requirements. Each application for

DDP approval will be required to provide greater detail and satisfy both sets of requirements. This standard will be reviewed for complaince at the time of each DDP application.

2. Credit for Pervious/Low Impact Development. The Community Development Director may count up to fifty percent of the square footage of any pervious hardscaped landscape material within a parking lot that is designed and approved pursuant to the City's adopted stormwater and low impact development design standards toward minimum landscaping requirements for the site. (This includes porous pavement detention, open celled block pavers, porous asphalt, porous concrete pavement, porous turf, porous gravel, etc.).

Finding: Not applicable. Credit for Pervious/Low Impact Development may be requested with future DDP applications, but the GDP illustrates that it is possible to satisfy these requirements. Each application for DDP approval will be required to provide greater detail and satisfy both sets of requirements. This standard will be reviewed for complaince at the time of each DDP application.

17.52.080 - Maintenance.

The owner, tenant and their agent, if any, shall be jointly and severally responsible for the maintenance of the site including but not limited to the off-street parking and loading spaces, bicycle parking and all landscaping which shall be maintained in good condition so as to present a healthy, neat and orderly appearance and shall be kept free from refuse and debris.

All plant growth in interior landscaped areas shall be controlled by pruning, trimming, or otherwise so that:

a. It will not interfere with the maintenance or repair of any public utility;

b. It will not restrict pedestrian or vehicular access; and

c. It will not constitute a traffic hazard due to reduced visibility.

Finding: Complies as Proposed. The applicant's narrative identified that the landscaped areas will be maintained by the owner in accordance with this section.

17.52.090 - Loading areas.

B. Applicability.

OCMC 17.52.090 applies to uses that are expected to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week. The City Engineer and decision maker shall determine through site plan and design review the number, size, and location of required loading areas, if any.

Finding: Not applicable. The development does not propose loading areas to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week.

Applicable. The development proposes loading areas to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week.

C. Standards.

1. The off-street loading space shall be large enough to accommodate the largest vehicle that is expected to serve the use without obstructing vehicles or pedestrian traffic on adjacent streets and driveways. Applicants are advised to provide complete and accurate information about the potential need for loading spaces because the City Engineer or decision maker may restrict the use of other public right-of-way to ensure efficient loading areas and reduce interference with other uses.

Finding: Not applicable. The development does not propose loading areas to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week.

Finding: Complies as proposed. Though off-street loading space(s) are proposed, the applicant has provided accommodations for the largest vehicle that is expected without obstructing vehicles or pedestrian traffic on adjacent streets and driveways.

2. Where parking areas are prohibited between a building and the street, loading areas or drive isles are also prohibited.

Finding: Not applicable. The development does not propose loading areas to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week.

Finding: Complies as proposed. Loading space(s) are proposed outside of areas where parking is prohibited.

3. The City Engineer and decision maker, through site plan and design review, may approve a loading area adjacent to or within a street right-of-way when all of the following loading and unloading operations conditions are met:

a. Short in duration (i.e., less than one hour);

b. Infrequent (less than three operations daily between 5:00 a.m. and 12:00 a.m. or all operations between 12:00 a.m. and 5:00 a.m. at a location that is not adjacent to a residential zone);

c. Does not obstruct traffic during peak traffic hours;

d. Does not interfere with emergency response services; and

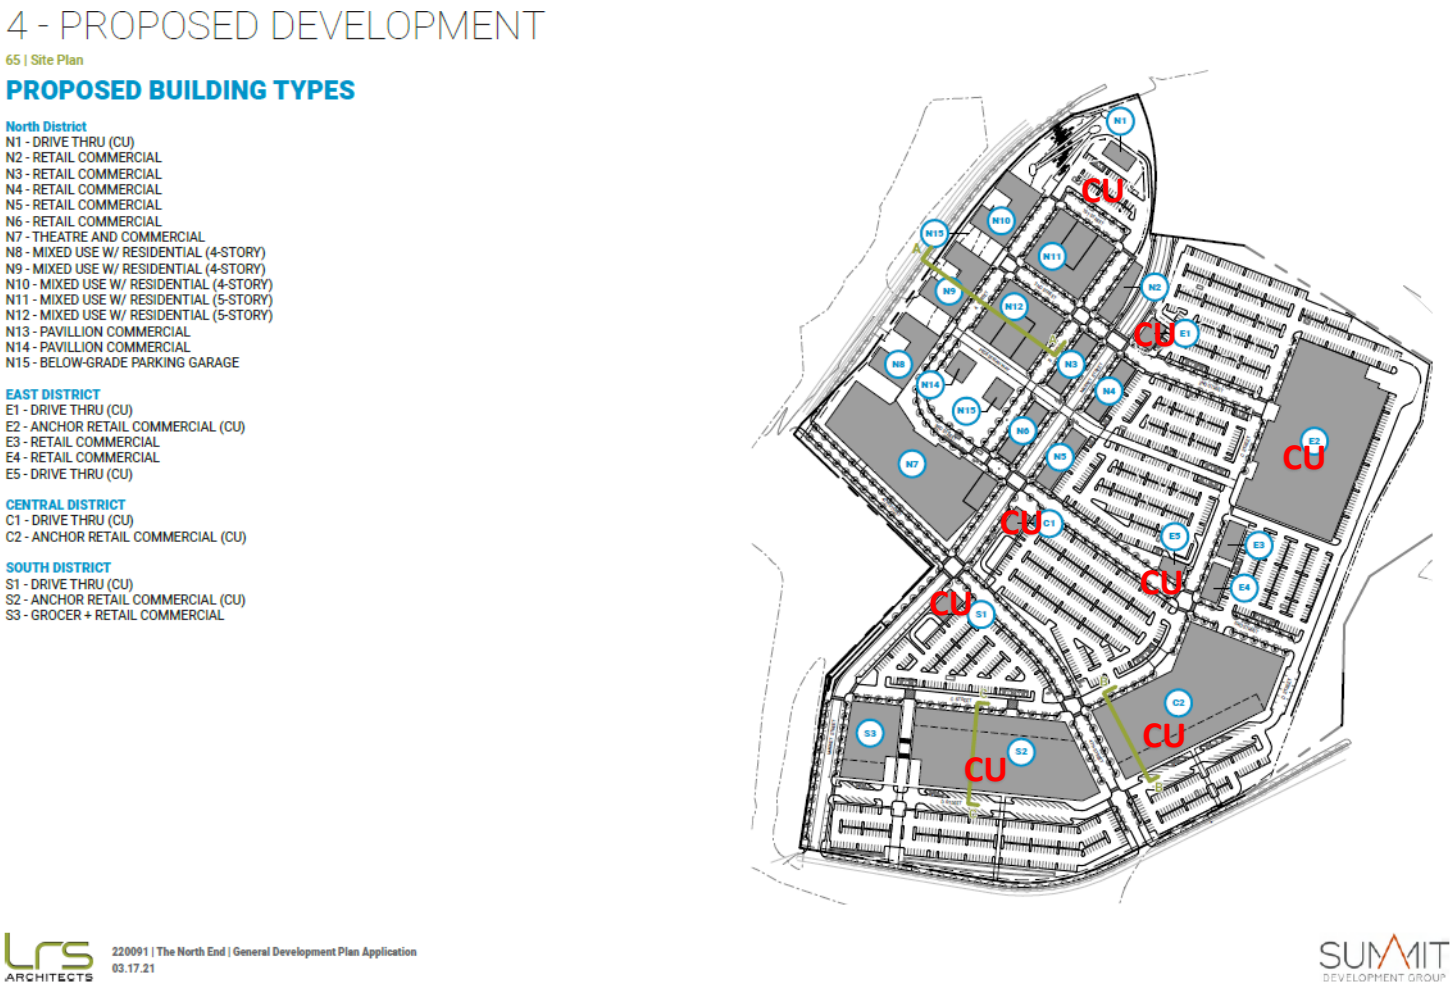
e. Is acceptable to the applicable roadway authority.

Finding: Not applicable. The development does not propose loading areas adjacent to or within a street right-of-way. **Finding: Complies as proposed.** The development has proposed a loading area adjacent to or within a street right-of-way. The City Engineer and decision maker have approved a loading area adjacent to or within a street right-of-way.

The following loading and unloading operations conditions shall be met:

a. Less than one hour;
b. Less than three operations daily between 5:00 a.m. and 12:00 a.m. or all operations between 12:00 a.m. and 5:00 a.m. at a location that is not adjacent to a residential zone;
c. Does not obstruct traffic during peak traffic hours; and

d. Does not interfere with emergency response services.



Chapter 17.54 – SUPPLEMENTAL ZONING REGULATIONS

This chapter regulates accessory structures and uses, projections from buildings, setback exceptions, fences, hedges, walls, and retaining walls, marijuana businesses, mobile food units, and home occupations. Individual developments within the master plan may propose some of the items regulated within this chapter through individual DDP requests. With the exception of section 17.54.100 that pertains to the regulation of Fences, hedges, walls, and retaining walls, those requests should be consistent with these provisions. A modification under the provisions of 17.65.070 is requested to the maximum allowed height of retaining walls to address the anticipated walls necessary to make a pedestrian connection to the End of the Oregon Trail Interpretive Center. Because of the difference in grade around the site as a result of berms and fill associated with the former Rossman Landfill, retaining walls will need to exceed the 8.5 foot height requirement. This is a condition specific to this site. The modification is discussed under Chapter 17.65.

17.54.100 - Fences, hedges, walls, and retaining walls.
A. A fence, hedge, wall, retaining wall, or combination thereof may be located on real property, not within the right-of-way, subject to all of the following:
1. A fence, hedge, wall, retaining wall, or combination thereof located in front of a building may be up to 3.5 feet in total height as measured from the finished grade at any point on the fence.
2. A fence, hedge, wall, located next to, or behind the forward most building, or within more than forty feet of the right-of-way, whichever is less may be up to:
a. Six feet in total height for residential properties with less than five units as measured from the finished grade at any point on the fence; or
b. Eight feet in total height for all other uses as measured from the finished grade at any point on the fence.
3. A retaining wall or combination of a fence, hedge, wall located next to and behind the forward most building, or within more than forty feet of the right-of-way, whichever is less, may be up to (as measured from the finished grade) 8.5 feet in height from the finished grade.
4. Fences, hedges, and/or walls located within two feet above a retaining wall, as measured on a horizontal plane, shall be measured together for the purposes of determining height.
5. Property owners shall ensure compliance with the traffic sight obstruction requirements in Chapter 10.32 of the Oregon City Municipal Code.
6. Retaining walls completely below the elevation of the right-of-way may be up to six feet in height.
7. Minimum fall protection required by the building official, such as railings, is not included in the height of a retaining wall but must comply with the fence height requirements.

Finding: Complies with Condition. With the exception identified below, future development requests will be consistent with these provisions and reviewed at time of DDP. A modification under the provisions of 17.65.070 is requested to the maximum allowed height of retaining walls to address the anticipated walls necessary to make a pedestrian connection to the End of the Oregon Trail Interpretive Center. Because of the difference in grade around the site as a result of berms and fill associated with the former Rossman Landfill, retaining walls will need to exceed the 8.5 foot height requirement. This is a condition specific to this site. The modification is discussed under Chapter 17.65 and Conditions of Approval have been added to the staff report that addresses this request. **Staff has determined that it is**

possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

1. The proposed buildings needing a Conditional Use for tenant size (E2, S2, C2) are approved for implementation through the DDP process with the following conditions:
    a. Building E2 is allowed to be used for a single tenant.
    b. Buildings S2 and C2 are subject to the following limitation:
        i. No single tenant may occupy more than 70% of leasable square footage. (P)
2. The proposed conditional use drive-thru locations (N1, E1,C1,S1,E5) are approved for implementation through the DDP process with the following conditions:
    a. At the time of the DDP, drive-thru location N1 shall be redesigned to meet OCMC 17.62 site requirements, including but not limited to ensuring direct pedestrian access from a public or private street that does not cross parking or drive aisles. This redesign may occur as a Type II DDP review if implemented if implemented as directed above and will not require a Type III amendment review. Designs that do not meet OCMC 17.62 site requirements will be reviewed as a Master Plan Amendment. All drive-thru locations not identified in the Master Plan approval shall be reviewed through a Type III Master Plan amendment process.

b. Building E1,C1, S1, E5 are approved for a CU drive-thru and will be reviewed in accordance with the Municipal Code. (P)

A. Conditional uses, because of their public convenience and necessity and their effect upon the neighborhood shall be permitted only upon the approval of the Planning Commission or City Commission after due notice and public hearing, according to procedure as provided in OCMC 17.50. The applicant shall provide evidence substantiating that all the requirements of this title relative to the proposed use are satisfied, and demonstrate that the proposed use also satisfies the following criteria:

1. The use is listed as a conditional use in the underlying district;

Finding: Complies as Condition. The North End master plan includes pads for five drive thrufacilities. It has not been determined what these drive thru uses are; however, they would likely include drive through eating and drinking facilities such as coffee stands or restaurants, or personal services like banks. The master plan also proposes three anchor retail facilities. Drive-thrus and retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies and specialty stores in a freestanding building with a single store exceeding a foot print of sixty thousand square feet are permitted as Conditional Uses within the Mixed Use Downtown Zoning District according to Section 17.34.030 (A and G).

2. The characteristics of the site are suitable for the proposed use considering size, shape, location, topography, existence of improvements and natural features;

Finding: Complies as Condition. The North End master plan is a redevelopment of a former land fill that is approximately 62 acres in size at the north end of Oregon City. The site is large enough to accommodate the proposed uses and will be provided with all necessary public services. The location and shape of the site as well as the planned improvements also make this site suitable for the proposed development. Each of the conditional uses are located on the site in a manner that accommodates the service and mitigates any impact from the use. The larger anchor retail tenants will serve as an economic catalyst for the remainder of the retail, entertainment, and residential uses on the site. Each larger anchor will be served by a sufficient parking supply as well as a planned internal and external transportation system that can readily accommodate the trips associated with the development. The TIA identifies the trip generation from all of the proposed conditional uses and demonstrates with the new internal street system, the frontage improvements to the existing street system and recommended mitigation measures for two off-site intersections, all of the permitted uses, together with the conditional uses can be suitably and adequately accommodated on the site. Each of the drive-through pads have been located to accommodate efficient and suitable queuing and circulation so as not to interfere with other site circulation provided on site. None of the conditional uses will impact any natural features and all uses are located in a manner that will serve both on-site residents and visitors alike. The internal pedestrian, vehicular and bicycle accessways and paths have been planned and designed to connect all of these uses on site with a well-designed streetscape and intermittent open spaces and plazas. Lastly, each of these uses will be subject to the Design Guidelines adopted with this GDP further ensuring a design consistency between these uses and the permitted uses on site. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. Development shall demonstrate compliance with OCMC 16.12;

Finding: Complies as Condition. The TIA and the GDP plan establish a street plan that meets the requirements for public improvements and will adequately serve the proposed development. Rather

than repeating those findings here, this criteria response incorporates by reference the TIA findings above and below and the findings above related to Chapter 16.12.

4. The proposed use will not alter the character of the surrounding area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district;

Finding: Complies as Condition. The North End master plan will beneficially alter the character of the area by redeveloping a former landfill into a vibrant mixed-use development. All the uses proposed within the master plan are permitted outright or conditionally allowed within the underlying zone. The technical reports submitted with this application demonstrate that any impacts associated with the development are adequately mitigated and will not impact surrounding properties. In fact, the improvements to the adjacent street frontages and the new collector planned through the site will provide additional access options for adjacent properties connecting through the site to other destinations or to locations within the GDP.

The proposed drive thrus are located, or conditioned to be located on corner lots with direct pedestrian entrances and vehicle access and queues located within the proposed sitewide parking lots. This approach meets the siting requirements in OCMC 17.62 and contributes to the feel of an urban block system. The request to increase tenant space in E2 is appropriate as it is farthest away from the urban core and public streets. Building C2 an S2 are conditioned to provide additional tenant spaces within the buildings and to act more as a mixed use development with a larger tenant, rather than a standalone large anchor building proportional to the mitigation processed and had been placed closer

These improvements include multimodal access improvements such as a new pedestrian connection to the Oregon Trail museum. The character of the area has been defined largely by this former landfill. Reclaiming this landfill for beneficial and economic use will significantly benefit the character of the area in a manner that does not preclude but instead enhances the opportunities on surrounding properties. The conditional uses associated with this request will all be internal to the site, and do not preclude surrounding property owners from using their properties consistent with the Mixed-Use Downtown zoning district.

Limiting the anchor tenant percentage in Buildings C2 and S2 allows the proposed to remain consistent with the intent of the Mixed Use Downtown District to encourage a mix of uses vertically and horizontally though pedestrian scaling and entrances. *"The mixed-use downtown (MUD) district is designed to apply within the traditional downtown core along Main Street and includes the "north-end" area, generally between 5th Street and Abernethy Street, and some of the area bordering McLoughlin Boulevard. Land uses are characterized by high-volume establishments constructed at the human scale such as retail, service, office, multi-family residential, lodging or similar as defined by the community development director. A mix of high-density residential, office and retail uses are encouraged in this district, with retail and service uses on the ground floor and office and residential uses on the upper floors. The emphasis is on those uses that encourage pedestrian and transit use. This district includes a downtown design district overlay for the historic downtown area. Retail and service uses on the ground floor and office and residential uses on the upper floors are encouraged in this district. The design standards for this sub-district require a continuous storefront façade featuring streetscape amenities to enhance the active and attractive pedestrian environment.:*

5. The proposal satisfies the goals and policies of the city comprehensive plan which apply to the proposed use.

Finding: Complies as Condition. The Oregon City Comprehensive Plan map designates The North End master plan area as Mixed-Use Downtown. It's also recognized as a Regional Center under the Metro 2040 Growth Concept Plan. While the Comprehensive plan includes by reference, the Oregon City Downtown Community Plan and Oregon City Waterfront Master Plans, neither of these plans include a discussion of detailed development concepts within the landfill area. However, within Section 2 – Land Use, Goal 2.2 of the Comprehensive Plan envisions the area, "…the End of the Oregon Trail area, as a quality place for shopping, living, working, cultural and recreational activities, and social interaction." Subsequently, the North End master plan has been zoned Mixed-Use Downtown and the zoning code implements these goals through specific provisions. Because the proposed uses are identified within the zoning code and the site is zoned for Mixed-Use Downtown, this request is consistent with the Comprehensive Plan. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

The applicant provided the following findings for compliance with the goals and policies of the city comprehensive:

SECTION 1: CITIZEN INVOLVEMENT

Goal 1.1 Citizen Involvement Program

Implement a Citizen Involvement Program that will provide an active and systematic process for citizen participation in all phases of the land-use decision making process to enable citizens to consider and act upon a broad range of issues affecting the livability, community sustainability, and quality of neighborhoods and the community as a whole.

Policy 1.1.1

Utilize neighborhood associations as the vehicle for neighborhood-based input to meet the requirements of the Land Conservation and Development Commission (LCDC) Statewide Planning Goal 1, Citizen Involvement. The Citizen Involvement Committee (CIC) shall serve as the officially recognized citizen committee needed to meet LCDC Statewide Planning Goal 1.

Response: The project was presented to the Oregon City Citizen Involvement Committee on February 1, 2021. The team went over the project and overall design objectives that had been considered as the project was developed and answered questions from the attendees. The land use process also includes an opportunity for community involvement in assuring the proposal complies with the applicable approval criteria.

Goal 1.4 Community Involvement

Provide complete information for individuals, groups, and communities to participate in public policy planning and implementation of policies.

Policy 1.4.1

Notify citizens about community involvement opportunities when they occur.

Response: The City's public hearing process meets the requirements of this Goal for citizen involvement in the land use process. Notice of the proposal will be provided to all property owners within the notice area (300 feet) and adjacent city-recognized neighborhood associations, published on the City's website,

and will also be posted on the subject property, giving interested citizens an opportunity to be involved in the process. The developer has also spent the last year reaching out to local civic groups to discuss the project. A public hearing to consider the request will be held by the Planning Commission who will make a decision on the proposal following an open public record period and hearing. Through the notice and public hearing process, all interested parties are afforded the opportunity to review the application, comment on the proposal, and participate in the decision. This process meets the requirements of this Goal for citizen involvement in the land use planning process. In accordance with the findings presented above, the proposal is consistent with Goal 1.

SECTION 2: LAND USE

Goal 2.1 Efficient Use of Land

Ensure that property planned for residential, commercial, office, and industrial uses is used efficiently and that land is developed following principles of sustainable development.

Policy 2.1.1
Create incentives for new development to use land more efficiently, such as by having minimum floor area ratios and maximums for parking and setbacks.
Policy 2.1.2
Encourage the vertical and horizontal mixing of different land-use types in selected areas of the city where compatible uses can be designed to reduce the overall need for parking, create vibrant urban areas, reduce reliance on private automobiles, create more business opportunities and achieve better places to live.

Policy 2.1.3
Encourage sub-area master planning for larger developments or parcels, including re-development, where it may be feasible to develop more mixed uses, or campus-style industrial parks, with shared parking and landscaping areas. Allow developments to vary from prescriptive standards if planned and approved under this provision.
Policy 2.1.4
Use redevelopment programs such as urban renewal to help redevelop underutilized commercial and industrial land.

Response: The North End Master Plan is located within the Mixed-Use Downtown Zoning District which has established minimum floor area ratios, and maximums for parking and setbacks. The minimum floor area is exceeded by the master plan. The proposed parking is between the established minimum and maximum parking standards. The maximum setbacks are met on all frontages except for Abernethy Road. Buildings located along the Abernethy Road frontage are setback outside of the floodplain and a modification to this standard has been requested as allowed by the provisions in the Oregon City Code section 17.65.070.

The Mixed-Use District allows for the vertical and horizontal mixing of different land uses as evidenced by the programming within the proposed master plan. The General Development Plan provides a healthy mix of uses including both commercial and residential.

Approval of the proposed master plan would allow for the development of approximately 65 acres at the north end of Downtown Oregon City. The site is the former home of the Rossman Landfill and redevelopment of the site presents a number of issues that make it difficult to develop as a normal

greenfield site would. Developments within the master plan are able to benefit from shared parking and landscaped areas. Finally, the master plan allows the development to vary from prescriptive standards when approved by the Oregon City Planning Commission.

The City has an urban renewal program that the development of this property could benefit from given the challenges associated with redeveloping a former land fill that is located within the Oregon City Downtown and envisioned under the Metro Functional Plan as a regional center intended to serve the region.

Goal 2.2 Downtown Oregon City
Develop the Downtown area, which includes the Historic Downtown Area, the "north end" of the Downtown, Clackamette Cove, and the End of the Oregon Trail area, as a quality place for shopping, living, working, cultural and recreational activities, and social interaction. Provide walkways for pedestrian and bicycle traffic, preserve views of Willamette Falls and the Willamette River, and preserve the natural amenities of the area.

Policy 2.2.4
Target public infrastructure investments and create public/private partnerships to leverage maximum benefits from public investment and to help ensure that the Regional Center develops to its maximum capacity and realizes its full potential.
Policy 2.2.5
Encourage the development of a strong and healthy Historic Downtown retail, office, cultural, and residential center.
Policy 2.2.9
Improve connectivity for vehicles, bicycles, and pedestrians within the Oregon City Downtown community and waterfront master plan areas and improve links between residential areas and the community beyond.

Response: Over the past year, Summit Development Group has worked in a very concerted manner to develop relationships with key stakeholders in the community and at the City to partner on the redevelopment of the former Rossman Landfill site at the north end of Downtown. The North End Master Plan, is a vision to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the General Development Plan. The plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown, but serve as a primary gateway to the north end of the Oregon City Downtown.

The master plan features tree-lined streets, landscaped open spaces, offices and residences overlooking public plazas and open spaces, and will feature a wide variety of shopping, dining, and entertainment experiences. When completed, the plan will have contributed to the expansion of infrastructure within the area by way of actual construction as well as contributions to the overall network of the existing infrastructure including sewer, water, storm, sidewalks, streets, plazas and open spaces, bikeways, street trees. Construction of the project will include completion of several of the projects currently listed within the Oregon City Transportation system Plan (TSP). Many of them are needed but not funded. Finally, the develop will contribute to the overall improvements of the larger public systems through systems development charges.

The project will complement and strengthen the downtown by providing a compact design on the west edge of the development that provides appropriate architecture, massing, and encourages a walkable environment with a downtown streetscape while maintaining a relationship to the rest of historic downtown. The east edge of the site is provided with a mix of small retail spaces integrated into larger anchor retail pads that will allow the development to balance the need for growth and economic opportunity, without compromising the comfortable, small-town roots of downtown Oregon City. For future residents and tenants, The North End master plan provides a place where they can live, work and be a part of Oregon City.

Goal 2.4 Neighborhood Livability
Provide a sense of place and identity for residents and visitors by protecting and maintaining neighborhoods as the basic unit of community life in Oregon City while implementing the goals and policies of the other sections of the Comprehensive Plan.

Policy 2.4.2
Strive to establish facilities and land uses in every neighborhood that help give vibrancy, a sense of place, and a feeling of uniqueness; such as activity centers and points of interest.
Policy 2.4.3
Promote connectivity between neighborhoods and neighborhood commercial centers through a variety of transportation modes.

Response: When fully completed, the North End Master Plan will be a complete neighborhood at the North End of Downtown Oregon City. People who live within the master plan will have all of the goods and services that downtown Oregon City has to offer. There are plazas, active open spaces and multi-modal trails to connect the master plan with the residents and visitors in Historic Downtown Oregon City. The development of the site will attract more people into downtown from the region and contribute to the vibrancy of the downtown.

Goal 2.5 Retail and Neighborhood Commercial
Encourage the provision of appropriately scaled services to neighborhoods.

Policy 2.5.4
Encourage the development of successful commercial areas organized as centers surrounded by higher density housing and office uses, rather than as commercial strips adjacent to low-density housing.
Policy 2.5.5
Encourage commercial and industrial development that enhances livability of neighborhoods through the design of attractive LEEDTM-certified buildings and environmentally responsible landscaping that uses native vegetation wherever possible, and by ensuring that development is screened and buffered from adjoining residential neighborhoods and access is provided by a variety of transportation modes.

Response: The North End Master Plan will be a complete community with a mix of uses including retail and service-oriented businesses, residences, restaurants, open spaces, and entertainment that will be appropriately scaled services to the neighborhoods and downtown.

Goal 2.7 Oregon City Comprehensive Plan Land-Use Map
Maintain the Oregon City Comprehensive Plan Land-Use Map as the official long-range planning guide for land-use development of the city by type, density and location.

Policy 2.7.2
Use the following 11 land-use classifications on the Oregon City Comprehensive Plan Land-Use Map to determine the zoning classifications that may be applied to parcels:
• Low Density Residential (LR)
• Medium Density Residential (MR)
• High Density Residential (HR)
• Commercial (C)
• Mixed Use Corridor (MUC)
• Mixed Use Employment (MUE)
• Mixed Use Downtown (MUD)
• Industrial (I)
• Public and Quasi-Public (QP)
• Parks (P)
• Future Urban Holding (FUH)

Response: The proposed master plan is designated as Mixed-Use Downtown (MUD) on the Oregon City Comprehensive Plan Map. The proposed General Development Plan is consistent with the applicable provisions of the Oregon City Municipal Codes that are intended to implement that designation with few exceptions. In those cases, modifications are being requested as allowed.

SECTION 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

Goal 5.1 Open Space
Establish an open space system that conserves fish and wildlife habitat and provides recreational opportunities, scenic vistas, access to nature and other community benefits.

Policy 5.1.1
Conserve open space along creeks, urban drainage ways, steep hillsides, and throughout Newell Creek Canyon.
Policy 5.1.2
Manage open space areas for their value in linking citizens and visitors with the natural environment, providing solace, exercise, scenic views and outdoor education. Built features in open space sites should harmonize with natural surroundings.

Response: The North End Master Plan will include a comprehensive open space system that includes setting aside the Abernethy Creek riparian corridor that runs along the eastern edge of the site. The creek and its associated buffers have been delineated and are not proposed to be developed with the master plan.

Goal 5.2 Scenic Views and Scenic Sites
Protect the scenic qualities of Oregon City and scenic views of the surrounding landscape.

Policy 5.2.1
Identify and protect significant views of local and distant features such as Mt. Hood, the Cascade Mountains, the Clackamas River Valley, the Willamette River, Willamette Falls, the Tualatin Mountains, Newell Creek Canyon, and the skyline of the city of Portland, as viewed from within the city.
Policy 5.2.2

Maximize the visual compatibility and minimize the visual distraction of new structures or development within important viewsheds by establishing standards for landscaping, placement, height, mass, color, and window reflectivity.

Response: The proposed master plan does not impact any formally identified view corridors or view sheds. All proposed development is proposed to be consistent with the height requirements of the Mixed-Use Downtown (MUD) zoning designation.

Goal 5.4 Natural Resources
Identify and seek strategies to conserve and restore Oregon City's natural resources, including air, surface and subsurface water, geologic features, soils, vegetation, and fish and wildlife, in order to sustain quality of life for current and future citizens and visitors, and the long-term viability of the ecological systems.

Policy 5.4.1
Conserve and restore ecological structure, processes and functions within the city to closely approximate natural ecosystem structure, processes, and functions.
Policy 5.4.5
Ensure that riparian corridors along streams and rivers are conserved and restored to provide maximum ecological value to aquatic and terrestrial species. This could include an aggressive tree and vegetation planting program to stabilize slopes, reduce erosion, and mitigate against invasive species and stream impacts where appropriate.
Policy 5.4.8
Conserve natural resources that have significant functions and values related to flood protection, sediment and erosion control, water quality, groundwater recharge and discharge, education, vegetation and fish, and wildlife habitat.
Policy 5.4.9
Protect and enhance riparian corridors along streams in Oregon City to increase shade, reduce streambank erosion and intrusion of sediments, and provide habitat for a variety of plants, animals, and fish.
Policy 5.4.10
Encourage and promote the restoration of the hydrologic and ecological character and function of streams and wetlands that have been degraded by channeling or eliminated from the landscape by routing into culverts.
Policy 5.4.11
Maintain and enhance the function and quality of natural wetlands and create, where appropriate, wetlands or swales to moderate the quantity and velocity of water runoff entering streams during storm events and to reduce the amount of pollutants carried into streams.

Response: The proposed development would occur on the former Rossman Landfill and is directly adjacent to Abernethy Creek. The proposed development conserves the creek and its associated buffers. If there are subsequent decisions to impact the buffers as part of a detailed development plan, the City can impose appropriate mitigation and the developer will be expected to comply with those requirements. It may be necessary to remove invasive plants and replant with native species as the property is developed, but any and all work within the corridor will be permitted through the appropriate agency.

Policy 5.4.12

Use a watershed-scale assessment when reviewing and planning for the potential effects from development, whether private or public, on water quality and quantity entering streams.
Policy 5.4.16
Protect surfacewater quality by:
• providing a vegetated corridor to separate protected water features from development
• maintaining or reducing stream temperatures with vegetative shading
• minimizing erosion and nutrient and pollutant loading into water
• providing infiltration and natural water purification by percolation through soil and vegetation

Response: The master plan developer will construct an on-site storm drainage system that includes a combination of low impact bio-retention facilities and mechanical structures to treat stormwater prior to discharge. The stormwater will be treated and conveyed to the appropriate drainage basin. The entire storm system will be designed to be consistent with the Oregon City design and construction standards.

Policy 5.4.18
Encourage use of native and hardy plants such as trees, shrubs and groundcovers to maintain ecological function and reduce maintenance costs and chemical use.

Response: The master plan includes landscape design that is consistent with the Oregon City Municipal Code landscape standards and includes design guidelines that promote the use of native and hardy plants within the on-site landscape areas.

SECTION 6: QUALITY OF AIR, WATER, AND LAND RESOURCES

Goal 6.1 Air Quality
Promote the conservation, protection and improvement of the quality of the air in Oregon City.

Policy 6.1.1
Promote land-use patterns that reduce the need for distance travel by singleoccupancy vehicles and increase opportunities for walking, biking and/or transit to destinations such as places of employment, shopping and education.
Policy 6.1.2
Ensure that development practices comply with or exceed regional, state, and federal standards for air quality.
Policy 6.1.4
Encourage the maintenance and improvement of the city's tree canopy to improve air quality.

Response: The proposed master plan is provided with a transportation system that can be utilized by all modes of transportation including bicycling and walking. Post-construction emissions would come from personal vehicles traveling to the Downtown from the region and the buildings within the development. Within the Metro area, all of these vehicles are required to meet strict emissions standards. All future building construction within the master plan will be subject to the State and local energy codes.

Additionally, the master plan includes approximately 540 housing units and will allow for a variety of uses that will create opportunities for those residents and citizens within close proximity to the development to eat, shop, recreate, and obtain all of the personal services that downtown Oregon City has to offer within walking and biking distance. The site is also in close proximity to transit as well as the

Amtrak Station. Finally, over 500 new trees will be planted within the development when it is fully constructed.

Goal 6.2 Water Quality
Control erosion and sedimentation associated with construction and development activities to protect water quality.

Policy 6.2.1
Prevent erosion and restrict the discharge of sediments into surface- and groundwater by requiring erosion prevention measures and sediment control practices.
Policy 6.2.2
Where feasible, use open, naturally vegetated drainage ways to reduce stormwater and improve water quality.

Response: Future construction activities will be subject to state and local erosion control standards. As stated previously, the master plan developer will construct an on-site storm drainage system that includes a combination of low impact bio-retention facilities and mechanical structures to treat stormwater prior to discharge. The stormwater will be treated and conveyed to the appropriate drainage basin. The entire storm system will be designed to be consistent with the Oregon City design and construction standards.

Goal 6.3 Nightlighting
Protect the night skies above Oregon City and facilities that utilize the night sky, such as the Haggart Astronomical Observatory, while providing for nightlighting at appropriate levels to ensure safety for residents, businesses, and users of transportation facilities, to reduce light trespass onto neighboring properties, to conserve energy, and to reduce light pollution via use of night-friendly lighting.

Policy 6.3.1
Minimize light pollution and reduce glare from reaching the sky and trespassing onto adjacent properties.
Policy 6.3.2
Encourage new developments to provide even and energy-efficient lighting that ensures safety and discourages vandalism. Encourage existing developments to retrofit when feasible.

Response: Proposed development within the master plan area will meet the lighting standards adopted by Oregon City as well as the Oregon Energy Codes.

Goal 6.4 Noise
Prevent excessive noise that may jeopardize the health, welfare, and safety of the citizens or degrade the quality of life.

Policy 6.4.1
Provide for noise abatement features such as sound-walls, soil berms, vegetation, and setbacks, to buffer neighborhoods from vehicular noise and industrial uses.
Policy 6.4.2
Encourage land-use patterns along high-traffic corridors that minimize noise impacts from motorized traffic through building location, design, size and scale.

Response: The master plan is located at the north end of downtown Oregon City and allows the same uses that are permitted within the zoning code. There are no expected uses that will create excessive noise beyond the uses that are already permitted within the area.

SECTION 7: NATURAL HAZARDS

Goal 7.1 Natural Hazards

Protect life and reduce property loss from the destruction associated with natural hazards.

Policy 7.1.1

Limit loss of life and damage to property from natural hazards by regulating or prohibiting development in areas of known or potential hazards.

Policy 7.1.3

Reduce risk to residents and businesses by maintaining accurate information on the existence and potential of hazards.

Policy 7.1.5

Minimize the risk of loss of life and damage to property from flooding by limiting development in the 100-year floodplain and by ensuring that accepted methods of flood proofing are used.

Policy 7.1.6

Encourage the use of land and design of structures that are relatively unaffected by the periodic effects of flooding, such as parking and other uses not normally occupied by humans.

Policy 7.1.7

Prohibit uses in areas subject to flooding that would exacerbate or contribute to hazards posed by flooding by introducing hazardous materials, filling or obstructing floodways, modifying drainage channels, and other detrimental actions.

Policy 7.1.8

Provide standards in City Codes for planning, reviewing, and approving development in areas of potential landslides that will prevent or minimize potential landslides while allowing appropriate development.

Policy 7.1.9

Locate, design, and construct structures in conformance with current building codes and standards for seismic-resistant design.

Response: The proposed master plan includes areas that are located within the floodplain and geologic hazard areas. The site will be balanced so that there is no increase in flooding beyond what occurs today. The GDP intentionally proposes to site circulation and parking area within the 100-year floodplain to minimize the potential hazards associated with habitable spaces. Further, the site has been evaluated by NV5 (formerly Geo-Design) and future construction within the development areas will be subject to the standards within the Oregon City Municipal Code as well as the recommendations of the geo-technical engineer. Finally, all future development would be subject to the applicable building codes that are in effect at the time they are proposed and constructed.

SECTION 8: PARKS AND RECREATION

Goal 8.1 Developing Oregon City's Park and Recreation System

Maintain and enhance the existing park and recreation system while planning for future expansion to meet residential growth.

Policy 8.1.1

Provide an active neighborhood park-type facility and community park-type facility within a reasonable distance from residences, as defined by the Oregon City Park and Recreation Master Plan, to residents of Oregon City.
Policy 8.1.5
Identify and construct a network of off-street trails throughout the city for walking and jogging.
Policy 8.1.6
Policy 8.1.9
Emphasize retaining natural conditions and the natural environment in proposed passive recreation areas.

Response: The proposed master plan includes a system of parks and plazas strategically located throughout the master plan and connected through a circuitous pedestrian and bike system. Parks and plazas are both passive and active. The proposed development includes two pedestrian shared use connections that are identified in the Oregon City TSP.

SECTION 9: ECONOMIC DEVELOPMENT

Goal 9.1 Improve Oregon City's Economic Health
Provide a vital, diversified, innovative economy including an adequate supply of goods and services and employment opportunities to work toward an economically reasonable, ecologically sound and socially equitable economy.

Policy 9.1.1
Attract high-quality commercial and industrial development that provides stable, high-paying jobs in safe and healthy work environments, that contributes to a broad and sufficient tax base, and that does not compromise the quality of the environment.

Response: When fully developed, the North End Master Plan will provide a mix of high-quality commercial and service uses within a development intended to complement the mix of uses in downtown. It will provide residents of the development and citizens within the area to access whatever services and products they need to live, work, and recreate within Oregon City.

Goal 9.5 Retail Service
Allow a variety of retail outlets and shopping areas to meet the needs of the community and nearby rural areas.

Response: In addition to being located at the north end of downtown Oregon City, the North End Master Plan is part of a designated regional center under the Metro 2040 Functional Plan. The site is large and provides for a mix of service, entertainment, and retail uses that can assist the City in realizing the intent of this goal. With good access and transportation facilities, the downtown area will serve nearby rural areas as well as the community itself.

Goal 9.6 Tourism
Promote Oregon City as a destination for tourism.

Policy 9.6.1
Protect historic, recreational, and natural resources as the basis for tourism, such as the Historic Downtown Area.

Policy 9.6.2
Ensure land uses and transportation connections that support tourism as an important aspect of the City's economic development strategy. This could include connections to the End of the Oregon Trail Interpretive Center and the train depot.
Policy 9.6.3
Provide land uses in the Downtown Historic Area, 7th Street corridor, and the End of the Oregon Trail Interpretive Center that support tourism and visitor services.
Policy 9.6.6
Encourage private development of hotel, bed and breakfast, restaurant facilities and other visitor services.

Response: The North End Master Plan is located at the north end of downtown Oregon City and will likely attract a lot of visitors to the area. It connects directly to the End of the Oregon Trail Interpretive Center and provides street improvements along Washington Street and Abernethy that will connect the development with the rest of downtown. The proposed development includes service, retail, restaurants, entertainment, and housing that will draw a lot of additional attention to the downtown area.

Goal 9.8 Transportation System
Recognize the importance of the land use-transportation link and encourage businesses to locate in areas already served by the type of transportation system they need.

Policy 9.8.1
Through coordination with TriMet and local employers, encourage and promote the use of mass transit to travel between residential areas and employment areas.
Policy 9.8.6
Encourage the provision of multi-modal transportation to support major existing employers.
Policy 9.8.7
Assess methods to integrate the pedestrian, bicycle and elevator transportation modes into the mass transit system.

Response: The proposed master plan is within downtown and is in close proximity to a variety of transportation services for all modes of transportation. The development provides for multi-modal transportation within the development including cycling, pedestrians, and automobiles. It is at the confluence of several major transportation facilities and over the course of its development will provide transportation improvements that supplement and improve the existing system consistent with the TSP.

SECTION 10: HOUSING

Goal 10.1 Diverse Housing Opportunities
Provide for the planning, development and preservation of a variety of housing types and lot sizes.

Policy 10.1.7
Use a combination of incentives and development standards to promote and encourage well-designed single-family subdivisions and multi-family developments that result in neighborhood livability and stability.

Response: The proposed master plan will provide approximately 540 new residential housing units within a multi-family housing type that will increase the supply of housing near downtown. There will not likely be individual lots associated with these homes, but they will have access to shared open spaces, plazas, and both passive and active recreational opportunities.

SECTION 11: PUBLIC FACILITIES

Goal 11.1 Provision of Public Facilities
Serve the health, safety, education, welfare, and recreational needs of all Oregon City residents through the planning and provision of adequate public facilities.

Policy 11.1.3
Confine urban public facilities and services to the city limits except where allowed for safety and health reasons in accordance with state land-use planning goals and regulations. Facilities that serve the public will be centrally located and accessible, preferably by multiple modes of transportation.
Policy 11.1.4
Support development on underdeveloped or vacant buildable land within the city where public facilities and services are available or can be provided and where land-use compatibility can be found relative to the environment, zoning, and Comprehensive Plan goals.
Policy 11.1.5
Design the extension or improvement of any major public facility and service to an area to complement other public facilities and services at uniform levels.
Policy 11.1.6
Enhance efficient use of existing public facilities and services by encouraging development at maximum levels permitted in the Comprehensive Plan, implementing minimum residential densities, and adopting an Accessory Dwelling Unit Ordinance to infill vacant land.

Response: The proposed master plan is an underdeveloped property in close proximity to downtown Oregon City. The site is located within the UGB and the City limits. Public services are located adjacent to the master plan site and will be extended into the site with the first phase. In addition, development of the site will contribute to the overall public infrastructure system through direct improvements or indirectly through systems development charges associated with development in the master plan area.

Goal 11.2 Wastewater
Seek the most efficient and economic means available for constructing, operating, and maintaining the City's wastewater collection system while protecting the environment and meeting state and federal standards for sanitary sewer systems.

Policy 11.2.2
Plan, operate and maintain the wastewater collection system for all current and anticipated city residents within the existing Urban Growth Boundary. Plan strategically for future expansion areas.
Policy 11.2.5
Implement the City's wastewater policies through the City of Oregon City Sanitary Sewer Master Plan.

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing sanitary sewer located adjacent to the site. The development will contribute to the improvement and maintenance of the overall wastewater system through payment of systems development charges.

Goal 11.3 Water Distribution
Seek the most efficient and economic means available for constructing, operating, and maintaining the City's water distribution system while protecting the environment and meeting state and federal standards for potable water systems.

Policy 11.3.1
Plan, operate and maintain the water distribution system for all current and anticipated city residents within its existing Urban Growth Boundary and plan strategically for future expansion areas.
Policy 11.3.2

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing water distribution lines located adjacent to the site. The development will contribute to the improvement and maintenance of the overall water system through payment of systems development charges.

Goal 11.4 Stormwater Management
Seek the most efficient and economical means available for constructing, operating, and maintaining the City's stormwater management system while protecting the environment and meeting regional, state, and federal standards for protection and restoration of water resources and fish and wildlife habitat.

Policy 11.4.1
Plan, operate, and maintain the stormwater management system for all current and anticipated city residents within Oregon City's existing Urban Growth Boundary and plan strategically for future expansion areas.
Policy 11.4.2
Adopt "green streets" standards to reduce the amount of impervious surface and increase the use of bioswales for stormwater retention where practicable.
Policy 11.4.3
Ensure parking lot designs that mitigate stormwater impacts. Take measures to reduce waterflow and increase water absorption through the use of bioswales, vegetated landscaped islands with curb cuts to allow water inflow, and tree planting.
Policy 11.4.4
Maintain existing drainageways in a natural state for maximum water quality, water resource preservation, and aesthetic benefits.
Policy 11.4.5
Design stormwater facilities to discharge surfacewater at pre-development rates and enhance stormwater quality in accordance with criteria in City of Oregon City Public Works Stormwater and Grading Design Standards.

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing storm facilities located adjacent to the site. Stormwater will be treated through a combination of mechanical treatment systems and low impact development facilities. The development will contribute to the improvement and maintenance of the overall wastewater system through payment of systems development charges.

Goal 11.6 Transportation Infrastructure

Optimize the City's investment in transportation infrastructure.

Policy 11.6.1
Make investments to accommodate multi-modal traffic as much as possible to include bike lanes, bus turnouts and shelters, sidewalks, etc., especially on major and minor arterial roads, and in regional and employment centers.

Response: The North End Master Plan area is adjacent to an existing system of public streets and will provide improvements to increase multi-modal access to the site and downtown. Further, the development will contribute directly to the system by construction improvements identified within the Oregon City TSP as well as indirectly through the payment of systems development charges.

Goal 11.7 Private Utility Operations
Coordinate with utilities that provide electric, gas, telephone and television cable systems, and high-speed internet connection to Oregon City residents to ensure adequate service levels.
Policy 11.7.1
Require local service lines in new subdivisions be placed underground.
Policy 11.7.2
Coordinate with private utility providers to install infrastructure during street construction and maintenance to reduce the need to repeatedly cut into newly paved streets.
Policy 11.7.3
Adopt lighting practices in streets and other public facilities, and encourage them in private development, that reduce glare, light pollution, light trespass, and energy use, while maintaining even lighting ensuring good visibility and safety for the public.

Response: All new private utilities will be placed underground and will be placed consistent with the franchise utilities standards. Lighting will be designed in accordance with City standards that are intended to implement these policies.

SECTION 12: TRANSPORTATION

Goal 12.1 Land Use-Transportation Connection
Ensure that the mutually supportive nature of land use and transportation is recognized in planning for the future of Oregon City.

Policy 12.1.1
Maintain and enhance citywide transportation functionality by emphasizing multi-modal travel options for all types of land uses.
Policy 12.1.3
Support mixed uses with higher residential densities in transportation corridors and include a consideration of financial and regulatory incentives to upgrade existing buildings and transportation systems.
Policy 12.1.4
Provide walkable neighborhoods. They are desirable places to live, work, learn and play, and therefore a key component of smart growth.

Response: The North End Master Plan fronts three public streets, Washington Street, Abernethy Road, and Redland Road. Frontage improvements, including bicycle and pedestrian improvements have been

coordinated with the Oregon City Engineering Division and are consistent with the requirements of the Oregon City TSP. The proposed GDP proposes to construct seven projects identified within the TSP that are intended to improve multi-modal travel options within the City. Required right-of-way and easements will be dedicated or provided with all of the proposed transportation improvements. The master plan is a walkable neighborhood that is connected to the community through direct connections to the existing transportation systems.

Goal 12.3 Multi-Modal Travel Options
Develop and maintain a transportation system that provides and encourages a variety of multi-modal travel options to meet the mobility needs of all Oregon City residents.
Policy 12.3.1
Provide an interconnected and accessible street system that minimizes vehiclemiles-traveled and inappropriate neighborhood cut-through traffic.4
Policy 12.3.2
Provide an interconnected and accessible pedestrian system that links residential areas with major pedestrian generators such as employment centers, public facilities, and recreational areas.
Policy 12.3.3
Provide a well-defined and accessible bicycle network that links residential areas, major bicycle generators, employment centers, recreational areas, and the arterial and collector roadway network.
Policy 12.3.4
Ensure the adequacy of pedestrian and bicycle connections to local, county, and regional trails.

Response: As stated previously, the proposed GDP proposes to construct seven projects identified within the TSP that are intended to improve multi-modal travel options within the City. Internal and adjacent to the site, there will be a mix of trails, sidewalks, streets, and bike lanes that provide good internal and efficient circulation routes that also connect to the existing public street system.

Goal 12.8 Implementation/Funding
Identify and implement needed transportation system improvements using available funding.

Policy 12.8.3
Provide incentives for private sector contributions to multi-modal transportation links and facilities, for example, establishing new standards in the zoning code.

Response: The cost of providing the transportation improvements associated with such a large site will require assistance and partnerships. The developer is pursuing access to a combination of public and private funding to ensure that all of the needed transportation system improvements are feasible. In addition to direct improvements paid for by the development, the developers within the master plan area will be contributing indirectly to the improvements of the overall transportation system through systems development charges.

SECTION 13: ENERGY CONSERVATION

Goal 13.1 Energy Sources
Conserve energy in all forms through efficient land-use patterns, public transportation, building siting and construction standards, and city programs, facilities, and activities.

Policy 13.1.2

Encourage siting and construction of new development to take advantage of solar energy, minimize energy usage, and maximize opportunities for public transit.

Response: Future development within the North End Master Plan will be required to meet applicable building codes for energy conservation. The site is located in close proximity to public transit and has been designed to be efficient and walkable.

Goal 13.2 Energy Conservation
Plan public and private development to conserve energy.

Policy 13.2.1
Promote mixed-use development, increased densities near activity centers, and home-based occupations (where appropriate).
Policy 13.2.5
Construct bikeways and sidewalks, and require connectivity of these facilities to reduce the use of petroleum-fueled transportation.

Response: The proposed master plan is a mixed use and walkable development that allows future residents within the development to live, work, and recreate within the area and downtown. The construction of bike lanes and sidewalks are a large part of the internal connectivity.

B. Permits for conditional uses shall stipulate restrictions or conditions which may include, but are not limited to, a definite time limit to meet such conditions, provisions for a front, side or rear yard greater than the minimum dimensional standards of the zoning ordinance, suitable landscaping, off-street parking, and any other reasonable restriction, condition or safeguard that would uphold the spirit and intent of the zoning ordinance, and mitigate adverse effect upon the neighborhood properties by reason of the use, extension, construction or alteration allowed as set forth in the findings of the Planning Commission.
Finding: Complies as Condition. All the proposed conditional use locations are identified within the overall master plan map. Under Subsections (B) and (C) above, all the conditional uses meet the dimensional standards of the zone with the exception of the anchor tenants and those dimensional adjustments are addressed here in this conditional use review. The entire site, including the conditional uses, will meet and exceed the landscaping and other applicable setback requirements. With the exception of traffic impacts that are proposed to be mitigated through the Plan approval, any impacts from the proposed conditional uses will be limited to the interior of the development itself and those impacts have been addressed through location within the site, the circulation plan, adequate parking and stacking and a comprehensive set of design guidelines. Subsections (D) and (E) are not triggered by this proposal. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Any conditional use shall meet the dimensional standards of the zone in which it is to be located pursuant to subsection B. of this section unless otherwise indicated, as well as the minimum conditions listed below.
Finding: Complies as Proposed. None of the proposed conditional uses are proposed within fifty feet of a residential zone, and additional right of way will be dedicated and improved through the master plan approval. The remaining uses of this section are not proposed within The North End master plan.

D. In the case of a use existing prior to the effective date of the ordinance codified in this title and classified in this title as a conditional use, any change of use expansion of lot area or expansion of structure shall conform with the requirements for conditional use.
Finding: Not Applicable. No existing uses are incorporated in this application.

E. The Planning Commission may specifically permit, upon approval of a conditional use, further expansion to a specified maximum designated by the Planning Commission without the need to return for additional review.
Finding: Complies as Condition. Metrics have been added to the Conditional Use Conditions of Approval in the Master Plan that delineate when a proposal will required to return for Planning commission review either as a Type III DDP or a Master Plan Amendment.

17.56.020 - Permit—Application.
A. A property owner or authorized agent shall initiate a request for a conditional use by filing an application with the city recorder. The applicant shall submit a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development. The application shall be accompanied by the filing fee listed in OCMC 17.50.080 to defray the costs of publication, investigation and processing.
B. Before the Planning Commission or City Commission may act on a conditional use application, it shall hold a public hearing thereon, following procedure as established in OCMC 17.50.
Finding: Complies. The applicant has paid for and provided notice to this application.

17.56.025 - Minor modifications to legal conditional uses.
Minor modifications to an approved conditional use permit may be permitted. If permitted, the modification shall be reviewed as a minor site plan and design review. A minor modification to an approved conditional use permit is considered one of the following:
A. Modification to a structure for the purpose of enhancing the aesthetics of the building and there is no increase in the interior usable space;
B. Except for shelters, a maximum addition of up to one thousand square feet to a commercial, office, institutional, public, multi-family, or industrial building provided that the addition is not more than thirty-five percent of the original building square footage; or
C. Revisions to parking alignment and/or related vehicle circulation patterns.
***Findings: Not applicable.** This section will be analyzed at the time of each DDP application for an approved conditional use to determine, along with any applicable Conditions of Approval, if the proposal will be reviewed as minor modification, or must be reviewed by the Planning Commission.*

17.56.040 - Criteria and standards for conditional uses.
In addition to the standards listed herein in OCMC 17.56.010, which are to be considered in the approval of all conditional uses and the standards of the zone in which the conditional use is located, the following additional standards shall be applicable:
A. Building Openings. The city may limit or prohibit building openings within fifty feet of residential property in a residential zone if the openings will cause glare, excessive noise or excessive traffic which would adversely affect adjacent residential property as set forth in the findings of the Planning Commission.
Finding: Not applicable. No buildings are proposed to abut a residential zone**.**

B. Additional Street Right-of-Way. The dedication of additional right-of-way may be required where the city plan indicates need for increased width and where the street is inadequate for its use; or where the nature of the proposed development warrants increased street width.
Finding: Complies with Condition. Needed street dedication will occur duting individual DDP review.

C. Public Utility or Communication Facility. Such facilities as a utility substation, water storage tank, radio or television transmitter, tower, tank, power transformer, pumping station and similar structures shall be located, designed and installed with suitable regard for aesthetic values. The base of these facilities shall not be located closer to the property line than a distance equal to the height of the structure. Hydroelectric generation facilities shall not exceed ninety megawatts of generation capacity.
Finding: Not Applicable. No communication facilities are part of this application.

17.56.060 - Revocation of conditional use permits.
The Planning Commission or the City Commission may initiate administrative action under Chapter 17.50 to revoke any conditional use permit previously issued by the city or, with regard to lands annexed by the city, those such permits issued by the county. The Planning Commission or the City Commission, may revoke such permit upon determining:
A. One or more conditions attached to the grant of the conditional use permit have not been fulfilled; and
B. The unfulfilled condition is substantially related to the issuance of the conditional use permit.
Finding: Complies. The applicant is aware that the Planning Commission can revoke a Conditional Use if one or more conditions attached to the grant of the conditional use permit have not been fulfilled and/or the unfulfilled condition is substantially related to the issuance of the conditional use permit.

17.56.070 - Periodic review of conditional use permits.
A. The City Commission may provide for the periodic review of some or all of the conditional use permits previously issued by the city, or, with regard to lands annexed by the city, those such permits issued by the county. In providing for such review, the City Commission may designate classes of such previously issued permits for which periodic review shall be undertaken.
B. Such review shall be accomplished as an administrative action under Chapter 17.50 and shall be limited to the question of whether additional conditions should be imposed on a conditional use in the light of changing circumstances and more efficient implementation of the city's comprehensive plan.
C. Notwithstanding the provisions of Chapter 17.58, any additional conditions shall be met as a requirement for continued operation of the conditional use.
Finding: Complies. The applicant is aware that the City Commission could choose to periodic review of some or all of the conditional use permits previously issued by the city in the future. No plans to pursue approach this have been identified by the City Commission at this time.

CHAPTER 17.62 – SITE PLAN AND DESIGN REVIEW

17.62.015 - Modifications that will better meet design review requirements.
The review body shall consider modification of certain site related development standards of this Chapter specified below. These modifications may be approved as part of a Type II design review process.
A. Applicability.
1. This process shall apply to modifications to:
a. Landscaping in OCMC 17.62.050.A;
b. Vehicular Connections to Adjoining Properties in OCMC 17.62.050.B.2;
c. On-site pedestrian circulation in OCMC 17.62.050.C;
d. Utility Undergrounding Requirements in OCMC 16.12.095.G;
e. Building location in OCMC 17.62.055.D;
f. Building Details in OCMC 17.62.050.B.9.055.I;
g. Windows in OCMC 17.62.050.B.10.055.JParking Lot Landscaping in OCMC 17.52.060.

B. The review body may approve requested modifications if it finds that the applicant has shown that the following approval criteria are met:
1. The modification will result in a development that better meets the applicable design guidelines; and
2. The modification meets the intent of the standard. On balance, the proposal will be consistent with the purpose of the standard for which a modification is requested.

Finding: Complies as Conditioned. The applicant has requested two adjustments as part of the Master Plan process that are regulated in this chapter (Section 17.62.055.D Siting of Structures- frontage width and Section 17.62.050.C.4- "Elevated external stairways. Findings for this request can be found in OCMC 17.65.070 Master Plans. If approved, these adjustments will be allowed for the applicable properties during the DDP process without the need for individual modification requests.

17.62.030 - When required.
Site plan and design review shall be required for all development of real property in all zones except the low and medium density residential districts, unless otherwise provided for by this title or as a condition of approval of a permit. Site plan and design review shall also apply to all conditional uses, cluster housing developments, multi-family uses, manufactured home parks, and non-residential uses in all zones. Site Plan and Design Review does not apply to activities occurring within the right-of-way except for communication facilities pursuant to OCMC 17.80.
Site plan and design review is required for a change in use between the uses in Table 17.62.030:
Table 17.62.030

Existing Use	*Proposed Use*
Residential	*Nonresidential use, including but not limited to: commercial, office, industrial, retail, or institutional*
Single-family or duplex	*3 or more dwellings*

Site plan and design review shall not alter the type and category of uses permitted in the underlying zoning districts.
The general standards of section 17.62.050 do not apply to 3-4 plex, duplex, single-family attached dwellings, single-family detached residential unit, internal conversions, live/work dwelling and accessory dwelling unit Type I applications.
Finding: Not Applicable. The applicant has submitted for a Master Plan (CDP) for a sitewide development approach for the former Rossman's landfill. No development is proposed with this application. The applicant has identified specific design modifications through the Master Plan amendment process (See OCMC 17.65 findings in this report), which will govern future DDP/Site Plan and Design Review applications. All future DDP application will be reviewed for compliance with OCMC 17.62 Site Plan and Design Review of the development along with applicable Master Plan Conditions of Approval.

CHAPTER 17.65 MASTER PLANS AND PLANNED UNIT DEVELOPMENT

17.65.030 - Applicability of the Master Plan or Planned Unit Development Regulations.
A. Required for Large Institutional Uses. If the boundaries of an institutional development exceed ten acres in size, the proposed development shall be master planned using the regulations of this chapter. No land use review other than a Type I or II Minor Site Plan and Design Review shall be issued for any institutional development in excess of ten acres in total acreage unless it is accompanied by or preceded by a master plan approval under this chapter. This requirement does not apply to modifications to existing institutional developments unless the modification results in a cumulative square footage increase of over ten thousand total building square feet in an existing institutional development over ten acres.
B. When Required as Part of Previous Land Use Review. The master plan or planned unit development regulations may be used to fulfill a condition of approval from a previous land use decision-requiring master planning for a development.

C. When identified in the Oregon City Comprehensive Plan. The master plan regulations are required for all properties identified for master planning in the Land Use section of the Oregon City Comprehensive Plan.
D. Voluntarily. An applicant may voluntarily submit a master plan or planned unit development as part of a land use review, including for residential projects.
Finding: Applicable. The North End Master Plan meets the purpose and intent of this Chapter by developing the 62-acre former Rossman Landfill site with a large-scale mixed-use development into a complete community with commercial, retail, entertainment, and residential uses. This application is for approval of a General Development Plan(GDP). The North End Master Plan is the foundation for a thriving, mixed-use development at the north end of downtown Oregon City. It provides a framework for future development of the site by defining on site uses that are anticipated to be developed over the life of the plan, needed extensions of community infrastructure including sewer, water, and transportation, and open space to serve the development, and off-site infrastructure improvements needed to mitigate impacts associated with complete build out of the master plan.

This is a request for approval of The North End master plan GDP. The GDP identifies the proposed uses within the development as discussed below, the project boundary and proposes both public and private infrastructure such as transportation and utility service. The GDP includes a detailed analysis of the site and anticipated impacts from the development. Where applicable, the applicant's design team has proposed mitigation to off-set the impacts of the development. Although a phasing plan has not yet been developed, public and private improvements are expected to be constructed with Detailed Development Plans over the life of the master plan. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

In this instance, Summit Development Group is the applicant and prospective purchaser of the property. Summit Development Group is voluntarily requesting that the site be developed under the master plan provisions of the Oregon City Municipal Code as provided in subsection D above.

17.65.040 - Procedure.
A. Preapplication Review. Prior to filing for either general development plan or detailed development plan approval, the applicant shall file a pre-application conference pursuant to OCMC 17.50.030.
Finding Complies as Proposed: The applicant has been made aware of these procedures in two separate preapplications held with City staff over the course of the last 11 months. The first pre-app was held in March of 2020 and the second pre-app was held in December of 2020 in response to program changes for future development on the site. A meeting with the Oregon City Citizen Involvement Committee was held virtually on February 1, 2021. No concurrent DDP approval is requested with this application.

B. General Development Plan. An application for a general development plan describing the long-term buildout of the site shall be reviewed through a Type III procedure. An applicant shall have an approved general development plan before any detailed development plan may be approved, unless both are approved or amended concurrently. Amendments to an approved general development plan shall be reviewed under a Type III procedure pursuant to OCMC 17.65.080.
Finding: Complies This is a request for approval of The North End master plan GDP. The GDP identifies the proposed uses within the development as discussed below, the project boundary and proposes both public and private infrastructure such as transportation and utility service. The GDP includes a detailed analysis of the site and anticipated impacts from the development. Where applicable, the applicant's design team has proposed mitigation to off-set the impacts of the development. Although a phasing

plan has not yet been developed, public and private improvements are expected to be constructed with Detailed Development Plans over the life of the master plan. Community Development and Public Works Staff have provided conditions on infrastructure phasing in the report to provide additional guidance during individual DDP reviews.

C. Detailed Development Plan. An application for a detailed development plan, is processed through a Type II procedure, as long as it is in conformance with the approved general development plan. Amendments to an approved detailed development plan shall be processed pursuant to OCMC 17.65.080. Once a development has an approved detailed development plan, OCMC 17.62 Site Plan and Design Review is not required.

Finding: No applicable. The applicant has not propose a DDP application with this review,. All future DDP will be reviewed for complaince with the this Master plan and any adopted conditions of approval or revisions.

D. Concurrent Review. An applicant may concurrently apply for a general development plan and a detailed development plan. Such a concurrent application is reviewed through the highest procedure that applies to any element of the combined application.

Finding: Not applicable. The applicant is not proposing concurrent review.

E. Relationship to Other Reviews. It is the express policy of the City that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.

Finding: Complies. All applications for the subject site have been reviewed prior to the Master Plan submittal, or will be submitted after its approval.

F. Duration of General Development Plan. A general development plan shall involve a planning period of up to twenty years. An approved general development plan shall remain in effect until development allowed by the plan has been completed through the detailed development plan process, the plan is amended or superseded, or the plan expires under its stated expiration date either as stated in the approved master plan or planned unit development application or decision of approval.

Finding: Compiles. The applicant is intending to utilize the adopted Mater Plan for the allowed 20 years. The applicant can request to close the master plan upon full build-out and show that all outstanding conditions are met.

17.65.050 - General Development Plan.

A. Existing Conditions Submittal Requirements.

1. Narrative statement. An applicant shall submit a narrative statement that describes the following:

a. Current uses of and development on the site;

b. For institutions, history or background information about the mission and operational characteristics of the institution that may be helpful in the evaluation of the general development plan, and information about current programs or services;

c. A vicinity map showing the location of the General Development Plan boundary relative to the larger community, along with affected major transportation routes, transit, and parking facilities. At least one copy of the vicinity map shall be eight and one-half inches × eleven inches in size, and black and white reproducible;

d. Land uses that surround the development site. This may also reference submitted maps, diagrams or photographs;

e. Previous land use approvals within the General Development Plan boundary and related conditions of approval, if applicable;

f. Existing utilization of the site;

g. Site description, including the following items. May also reference submitted maps, diagrams or photographs.

1. Physical characteristics;

2. Ownership patterns;

3. Building inventory;

4. Vehicle/bicycle parking;

5. Landscaping/usable open space;

6. FAR/lot coverage;

7. Natural resources that appear on the city's adopted Goal 5 inventory;

8. Cultural/historic resources that appear on the city's adopted Goal 5 inventory;

9. Location of existing trees six inches in diameter or greater when measured four feet above the ground. The location of single trees shall be shown. Trees within groves may be clustered together rather than shown individually; and

10. Geologic hazards pursuant to OCMC 17.44.

h. Existing transportation analysis, including the following items. May also reference submitted maps, diagrams or photographs.

1. Existing transportation facilities, including highways, local streets and street classifications, and pedestrian and bicycle access points and ways;

2. Transit routes, facilities and availability;

3. Alternative modes utilization, including shuttle buses and carpool programs; and

4. Baseline parking demand and supply study (may be appended to application or waived if not applicable).

i. Infrastructure facilities and capacity, including the following items:

1. Water;

2. Sanitary sewer;

3. Stormwater management; and

4. Easements.

2. Maps and Plans.

a. Existing conditions site plan. Drawn at a minimum scale of one-inch equals one hundred feet (one inch=one hundred feet) that shows the following items. At least one copy shall be eight and on-half inches × eleven inches in size, and black and white reproducible.

1. Date, north point, and scale of drawing.

2. Identification of the drawing as an existing conditions site plan.

3. Proposed development boundary.

4. All parking, circulation, loading and service areas, including locations of all carpool, vanpool and bicycle parking spaces as required in Chapter 52 of this title.

5. Contour lines at two-foot contour intervals for grades zero to ten percent, and five-foot intervals for grades over ten percent.

6. A site plan or plans, to scale, for the General Development Plan site and surrounding properties containing the required information identified in OCMC 17.62.040.b. Vicinity map. Depicting the location of the site sufficient to define its location, including identification of nearest cross streets. At least one copy of the vicinity map shall be eight and one-half inches × eleven inches in size, and black and white reproducible.

c. Aerial photo. Depicting the subject site and property within two hundred fifty feet of the proposed development boundaries. At least one copy of the aerial photo shall be eight and one-half inches × eleven in size, and black and white reproducible.

Finding: Complies. The information requested within this section has been provided in Chapter 3: Existing Conditions and the accompanying drawings included in Appendix B of he applicant's submittal.

B. Proposed Development Submittal Requirements.

1. Narrative statement. An applicant shall submit a narrative statement that describes the following:

a. The proposed duration of the general development plan.

b. The proposed development boundary. May also reference submitted maps or diagrams.

c. A description, approximate location, and timing of each proposed phase of development, and a statement specifying the phase or phases for which approval is sought under the current application. May also reference submitted maps or diagrams.

d. An explanation of how the proposed development is consistent with the purposes of Section 17.65, the applicable zone district or districts, and any applicable overlay district.

e. A statement describing the impacts of the proposed development on inventoried Goal 5 natural, historic or cultural resources within the development boundary or within two hundred fifty feet of the proposed development boundary.

f. An analysis of the impacts of the proposed development on the surrounding community and neighborhood, including:

1. Transportation impacts as prescribed in subsection g. below;

2. Internal parking and circulation impacts and connectivity to sites adjacent to the development boundary and public right-of-ways within two hundred fifty feet of the development boundary;

3. Public facilities impacts (sanitary sewer, water and stormwater management) both within the development boundary and on city-wide systems; including a phasing plan for all on-site and off-site public improvements, including but not limited to transportation, schools, parks, open space, trails, sewer, water and stormwater, with an analysis of the capacity and improvements required as a result of fully implementing the plan. This analysis shall reference any adopted parks and recreation, public facilities plans and concept plans and identify specific funding mechanisms to address the adequacy of public facilities.

4. Neighborhood livability impacts;

5. Natural, cultural and historical resource impacts within the development boundary and within two hundred fifty feet of the development boundary.

g. A summary statement describing the anticipated transportation impacts of the proposed development. This summary shall include a general description of the impact of the entire development on the local street and road network, and shall specify the maximum projected average daily trips, projected AM and PM peak hour traffic and the maximum parking demand associated with build-out each phase of the master plan or planned unit development.

h. In addition to the summary statement of anticipated transportation impacts, an applicant shall provide a traffic impact study as specified by city requirements. The transportation impact study shall either:

1. Address the impacts of the development of the site consistent with all phases of the general development plan; or

2. Address the impacts of specific phases if the City Engineer determines that the traffic impacts of the full development can be adequately evaluated without specifically addressing subsequent phases.

i. If an applicant chooses to pursue option h.1., the applicant may choose among three options for implementing required transportation capacity and safety improvements:

1. The General Development Plan may include a phasing plan for the proposed interior circulation system and for all on-site and off-site transportation capacity and safety improvements required on the existing street system as a result of fully implementing the plan. If this option is selected, the transportation phasing plan shall be binding on the applicant.

2. The applicant may choose to immediately implement all required transportation safety and capacity improvements associated with the fully executed general development plan. If this option is selected, no further transportation improvements will be required from the applicant. However, if a general development plan is later amended in a manner so as to cause the projected average daily trips, the projected AM or PM peak hour trips, or the peak parking demand of the development to increase over original projections, an additional transportation impact report shall be required to be submitted during the detailed development plan review process for all future phases of the development project and additional improvements may be required.

3. The applicant may defer implementation of any and all capacity and safety improvements required for any phase until that phase of the development reaches the detailed development plan stage. If this option is selected, the applicant shall submit a table linking required transportation improvements to vehicle trip thresholds for each development phase.

j. For residential and mixed-use projects:

a. Proposed minimum lot area, width, frontage and yard requirements.

b. Proposed project density in number of units per acre.

2. Maps and diagrams. The applicant shall submit, in the form of scaled maps or diagrams, as appropriate, the following information:

a. A preliminary site circulation plan showing the approximate location of proposed vehicular, bicycle, and pedestrian access points and circulation patterns, parking and loading areas or, in the alternative, proposed criteria for the location of such facilities to be determined during detailed development plan review.

b. The approximate location of all proposed streets, alleys, other public ways, sidewalks, bicycle and pedestrian access ways and other bicycle and pedestrian ways, transit streets and facilities, neighborhood activity centers and easements on and within two hundred fifty feet of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.

c. The approximate location of all public facilities to serve the proposed development, including water, sanitary sewer, stormwater management facilities.

d. The approximate location, footprint and building square footage of buildings within of each phase of proposed development, and/or proposed lot patterns for each phase of future development.

e. The approximate locations of proposed parks, playgrounds or other outdoor play areas; outdoor common areas and usable open spaces; and natural, historic and cultural resource areas or features proposed for preservation. This information shall include identification of areas proposed to be dedicated or otherwise preserved for public use and those open areas to be maintained and controlled by the owners of the property and their successors in interest for private use.

Finding: Complies with Condition. The plans and reports provided with The North End general master plan depict existing and foundational improvements to the master plan area including grading, utilities, circulation, parking areas, access locations, open spaces, a proposed range of uses, building pad locations, and vertical massing. The boundary of the master plan is illustrated in the site plans included in Appendix B. The duration of the master plan and the subsequent phasing of improvements is wholly dependent upon market demand. However, it is anticipated that a first phase will include mass grading and horizontal infrastructure followed shortly thereafter by vertical development. Depending on market

conditions, the applicant intends to reach full build out by 2025, well within the 20-year vested master plan timeline. As more specifically discussed below, the GDP has been designed to be consistent with the existing provisions of the Oregon City Municipal Code sections except where a few adjustments are discussed below.

The general master plan has been laid out in a manner that intentionally avoids impacts to the natural resources on site, and where there are impacts that are unavoidable, the expectation is that they will be mitigated for in accordance with local requirements. The NROD criteria are addressed in more detail below.

Development on the site would occur over a former landfill that is capped, and although it is unlikely that there are any archaeological resources within the project area as a result of the prior landfill activities, the State Historic Preservation Office has indicated that the project area lies within an area generally perceived to have a high probability for possessing archaeological sites and/or buried human remains. If any archaeological objects or sites are discovered during construction, development activities will cease, and the appropriate authorities will be notified.

Currently, the site is a single property, and the requirements of the Mixed-Use Downtown Zoning District standards for minimum lot area, width, frontage, and yard requirements can be satisfied by future development. It is important that future land divisions and individual detailed DDP's respect the approved concepts within the GDP. Details of how the GDP satisfies the dimensional requirements of the Mixed-Use Downtown zoning district and other applicable provisions of the OCMC are provided within this narrative. It should be noted that the GDP assumes development of 524 residential units within the North District area but that there is no minimum density requirement of the underlying zone. Instead development within the GDP is regulated by FAR. The proposed FAR, as discussed below is 0.49:1 in excess of the 0.3:1 minimum required in the zone.

The North End master plan is planned to be a well designed, compact and walkable community. Future development within the boundaries of the master plan area, under detailed development plan approval, is expected to meet City standards which include development standards that have already been adopted by the community to mitigate impacts of the proposed development on the surrounding community and neighborhood. The variety of proposed uses within the plan area allows for people to live, work, play and shop in one place, which also becomes a destination for people from the region. Where possible, the proposed master plan takes advantage of existing infrastructure extensions of existing utilities and streets. The public utility plan is contained in Appendix B. Improvements to the local transportation system are intended to be consistent with the impacts of the development but timed in accordance with a future development agreement. Ideally, improvements will be based on the individual impacts of each DDP and constructed with a combination of public and private funds. Summit Development Group, the master developer continues to diligently discuss opportunities with local agencies to assist in funding the improvements in a timely and comprehensive manner to help catalyze development within the site. A complete Transportation Impact Analysis for full buildout of the GDP is discussed in more detail below demonstrating that the development can be accommodated within the GDP based on the improvements proposed by the applicant. The plan has been prepared by Kittelson and Associates. The study determines the transportation related impacts associated with The North End master plan and was prepared in accordance with the City of Oregon City (City) Guidelines for Transportation Impact Analyses (TIA Guidelines – Reference 1). The study intersections and scope of this report were based on the TIA Guidelines and direction provided by City and Oregon Department of Transportation (ODOT) staff.

The TIA is based on the forecast trip generation of the development combined with engineering judgment and an understanding of existing and future land use and traffic conditions in the vicinity of the site. The study analyzed all site access points and intersections adjacent to the site, driveways serving properties on the opposite side of the streets fronting the development, proposed streets through the site, any intersection of streets classified as an arterial or collector where site traffic is expected to exceed 20 peak hour trips, and intersections where signal progression analysis was needed.

Overall, the traffic study analyzed 25 existing and 5 proposed new intersections within the report. The study analyzed all intersection operations over three peak hour periods. The traffic analyses reflect the peak hours of weekday morning (7:00 AM - 9:00 AM), weekday afternoon (4:00 PM - 6:00 PM), and Saturday midday (11:15 AM - 1:15 PM) conditions. The analysis evaluated the following scenarios:

- Existing land use and transportation system conditions, including intersection volume-to-capacity (v/c) ratio, control delay, and level-of service (LOS) during the weekday AM and PM peak hours, as well as the Saturday midday peak hour.
- Year 2025 background conditions (without the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.
- Year 2025 total traffic conditions (with the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.

Additionally, the traffic study analyzed existing conditions, future conditions, adjacent land uses and transportation facilities including bicycle and pedestrian facilities, and nearby transit facilities. Finally, the analysis evaluates traffic safety and crash history for the study intersections. Based on the analyses of these characteristics, the TIA compares the impacts of the proposed development on the transportation system considering background traffic conditions, other developments that are in process and expected to contribute to the system, and traffic expected to be generated from build out of the proposed master plan.

John Replinger, the City's contract transportation engineer, reviewed the applicant's TIA and provided the following findings and conditions of approval in his letter dated June 17, 2021 (Exhibit 4) The relevant materials consisted of the Traffic Impact Analysis Report (TIA), dated March 23, 2021. The TIA was prepared under the direction of Brian J. Dunn, PE of Kittelson & Associates.

The TIA supports the master plan for the site west of the Home Depot, south of Washington Street and north of Abernethy Road. The development will include a mix of uses including retail and residential. A key feature is a collector-level street connecting Washington Street and Abernethy Road. Four other site access points are proposed. The TIA identifies the impacts of full development of the site predicated on build-out in 2025 and appears to demonstrate the full development can be constructed if identified mitigation measures are completed. Each phase in the development will be reviewed for compliance with transportation performance measures during detailed development plan review.

Additional transportation analyses and updated traffic data may be required during detailed development plan review as specified in the conditions of approval. Later phases of the development may be delayed if mitigation measures cannot be implemented to meet existing transportation

performance standards. The TIA provides a basis upon which the master plan can be evaluated and can serve as the basis for additional analysis.

I find that the TIA provides an adequate basis upon which to assess the impacts of the proposed master plan. It will serve as a basis for subsequent analyses undertaken in support of detailed development plans for individual phases of the development.

The TIA does not, however, provide for mitigation that allows the applicant to show that the system is adequate to accommodate the development, although appropriate mitigation appears feasible. The applicant will need to undertake additional analysis in connection with the detailed development plan for each phase that demonstrates adequacy of the transportation system to accommodate each phase. This will require a commitment to mitigation measures allowing applicable performance measures, including v/c and queue storage, will be met.

It is important to note that the TIA is based on the assumption that full development will occur by 2025. If development is extended beyond that date, new analyses will be required with new background traffic associated with the new completion year.

1. The applicant shall comply with the following Transportation Conditions:
    a. The applicant will be required to provide supplemental transportation analyses for each phase of the development that demonstrate the ability of the transportation system to accommodate that phase of the development. In connection with the first detailed development plan submitted by the applicant, the applicant shall obtain new AM peak, PM peak, and mid-day Saturday traffic counts and conduct new operational analyses for the following intersections:
        i. OR99E/Dunes Drive
        ii. Washington Street/Home Depot – Site Access A
        iii. OR213/Redland Road
        iv. Redland Road/Holcomb Boulevard/Abernethy Road
    b. Absent meaningful evidence to the contrary, the new counts and new analyses submitted in support of the detailed development will be presumed to supersede the traffic volume estimates and analyses submitted in the March 2021 TIA.
    c. The following are a non-comprehensive set of issues that should be addressed in additional analyses:
        i. Intersection v/c and queuing must meet applicable standards with each phase. Partial development (some phases of the development) may be permissible without mitigation depending on background traffic and the status of adopted alternative mobility targets.
        ii. Where the applicant is relying on the regional center's two-tiered v/c standard (i.e. 1.10 during the peak hour and 0.99 during the second hour), the applicant will need to provide evidence that both are met. (This is particularly applicable to OR213/Redland Road and OR99E/Dunes Drive, both of which are predicted to exceed 1.10 during a peak hour.)
        iii. A phase or combination of phases that causes traffic volumes at any access point to exceed volumes in this TIA, additional analyses will be required.
        iv. The applicant will need to demonstrate the adequacy of queue storage or undertake appropriate mitigation to resolve queue storage issues at the

intersection of Abernethy Road/Holcomb Boulevard/Redland Road in connection with each phase.

v. The applicant will need to demonstrate that the intersection of OR213/Redland Road meets applicable v/c standards and provides adequate queue storage in connection with each phase.

vi. The applicant will need to demonstrate that the intersection of OR99E/Dunes Drive meets applicable v/c standards in connection with each phase. Applicant is encouraged to explore the potential for signal timing changes with ODOT or develop other mitigation measures with ODOT.

d. With each detailed development plan, the applicant will be required to address sight distance requirements in connection with the establishment of any new access to Washington Street or Abernethy Road, including those described in this TIA.

e. With each detailed development plan, the applicant will be required to address on-site circulation issues. These include, but are not limited to, adequacy of queue storage for drive-through service windows, maneuvering of trucks at loading areas, and maneuvering in parking lots.

f. With each detailed development plan, the applicant will work with TriMet to provide appropriate sidewalks and bus stop features on or adjacent to the site.

g. With each detailed development plan, the applicant will be required to update the predicted traffic using the intersection of OR213/Beavercreek Road. The applicant should use the updated value of $380 per peak hour trip rather than the obsolete value of $219 as used in this TIA. The developer shall participate in funding of this project according to the established formula.

h. If traffic signal warrants are met and cause the installation of a traffic signal at any of the site access points on Washington Street or Abernethy Road, the applicant will bear the full cost of signal design and installation.

i. The applicant shall participate in the funding of improvements for the intersection of OR213/Redland Road (TSP Project D79) in proportion to the development's traffic volume as a percentage of the predicted 2035 traffic volume at the intersection calculated in the TSP. The 2017 TSDC Project List shows a project cost of $10,105,000. Participation shall apply to each phase of the development.

j. The applicant's final share of project costs may be modified as necessary when the detailed development plan is approved to reflect any a modification of the development's trip generation or a change in project costs resulting from revisions to project costs associated with updates to the City's Transportation System Plan or Capital Improvement Program.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

C. Approval Criteria for a General Development Plan. The Planning Commission may approve an application for general development plan only upon finding that the following approval criteria are met.

1. The proposed General Development Plan is consistent with the purposes of OCMC 17.65.

Finding*: Complies with Conditions.* As stated at the beginning of the Chapter, the purpose and intent of a master plan is to, "foster the growth of major institutions, phased residential, commercial or mixed-

use development, and other large-scale development, while identifying and mitigating the impacts of such growth on surrounding properties and public infrastructure… The master plan or planned unit development process is intended to facilitate an efficient and flexible review process for major developments, support innovative and creative land development, and to provide long-term assurance to plan for and execute developments in a phased manner. To facilitate this, the master plan process is structured to allow an applicant to address larger development issues, such as adequacy of infrastructure and transportation capacity, and reserve capacity of the infrastructure and transportation system before expenditure of final design costs. The master plan or planned unit development process is further intended to promote efficiency in land development, maintenance, street systems and utility networks while providing site layouts that integrate usable and attractive open spaces, site circulation, and the general wellbeing of site users. For the purposes of this chapter planned unit developments are considered the same as master plans."

This GDP is a major mixed-use development located at the north end of the Oregon City downtown in a very visible location at the confluence of two major transportation facilities. The master plan will facilitate a purposeful and efficient redevelopment of a former landfill. The master plan has been developed consistent with this purpose statement over the course of the past 11 months by a team of design professionals on behalf of the applicant to be as consistent with the requirements of the Comprehensive Plan and Municipal Code as practical. Compliance with OCMC chapters 12.04 16.12, 17.62 is discussed throughout this narrative. As proposed and modified through this process, future development within the master plan area can comply with OCMC and meet the approval requirements for a GDP. The proposed GDP proposes a plan to foster the growth of a mixed use. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

2. Development shall demonstrate compliance with OCMC 12.04 16.12, 17.62, if applicable, and 16.08, if applicable.

Finding: See findings from sections 12.04 16.12, 17.62 and 16.08 of this report.

3. Public services for transportation, water supply, police, fire, sanitary waste disposal, storm-water disposal, and any other needed public services and facilities including schools and parks for proposed residential uses, are capable of serving the proposed development, or will be made capable by the time each phase of the development is completed.

Finding: Complies as conditioned. Public services and utilities are available to the site as demonstrated in the attached plans and reports per Appendix B of the application. The plans and reports all demonstrate that it is feasible to provide services to the development proposed in the GDP consistent with the provisions of this code, including water, sewer, stormwater and transportation services. Future detailed development plans are expected to meet the applicable standards of the 2021 Oregon City Municipal Code and the design guidelines that are included with this document are intended to supplement those regulations. The site is already served by the Oregon City Police and Fire Services. Open spaces and plazas are provided within the development for both the public and residents. The School District will have an opportunity to provide comments on the development to speak to any capacity issues associated with the development. The applicant has not proposed a phasing plan and expects to constructed public infrastructure with Detailed Development Plans over the life of the master plan.

No public parks have been identified or planned for the subject site. Open spaces and plazas, maintained by the applicant, are provided within the development for both the public and residents. The Oregon City School District (Wes Rogers, Exhibit 3a) indicated, they did not have a conflict with the proposal . Clackamas Fire District #1 participated in the pre-application conference to provide general direction and will be involved with each development. Public services for transportation, fire, sanitary waste disposal and storm-water disposal that are needed at the time of each DDP, shall be made capable by the time each phase of the development is completed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

4. The proposed General Development Plan protects any inventoried Goal 5 natural, historic or cultural resources within the proposed development boundary consistent with the provisions of applicable overlay districts.

Finding: Complies with Conditions. The applicant has the locations of the Natural Resource Overlay District onsite. The proposed layout does not proposed to impact the vegetative corridor of Abernethy Creek. Future detailed development plans are expected to meet the applicable standards of the 2021 Oregon City Municipal Code as it pertains to the protection and development of these resources. The most significant natural resource on site, Abernethy Creek, is intended to be preserved with approval of the GDP. Impacts to other resources on the west side of the development, east of Washington Street may be impacted for street improvements and other onsite development. Any impacts to those resources from future development on site will be mitigated for pursuant to the applicable chapters of this code. A final natural resources report will be submitted with each DDP to ensure that future development meets the requirements of the Natural Resources Overlay District on the property. The GDP demonstrates through its master site plan that the GDP does not preclude or prohibit future compliance with the NROD.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

5. The proposed General Development Plan, including development standards and impact mitigation thresholds and improvements, adequately mitigates identified impacts from each phase of development. For needed housing, as defined in ORS 197.303(1), the development standards and mitigation thresholds shall contain clear and objective standards.

Finding: Complies with Conditions. The GDP anticipates impacts to the public systems and the surrounding community and proposes to mitigate impacts to the transportation system through future traffic improvements that have been identified within the City's Transportation System Plan (TSP), to the utility system by making the necessary extensions to serve the site and the payment of Systems Development Charges SDC's, to the public parks system through the payment of SDC's and to surrounding properties through compliance with the applicable standards of the OCMC.
with the applicable provisions of the 2021 Oregon City Municipal Code. The Civil drawings in Appendix B illustrate the site and utility plans, which includes information from the TIA, in conformance with this requirement. Staff has prepared recommended conditions of approval to address the need to mitigate impacts associated with the Master Plan and each detailed development plan. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

6. The proposed general development plan is consistent with the Oregon City Comprehensive Plan.

Finding: Complies with Conditions The comprehensive plan embodied by this request include, contain urban development, promote redevelopment, protect natural resources, foster economic vitality, provide efficient and cost-effective services, and ensure a sense of history and place. These are core tenets are reflected within the proposed GDP. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

The site is zoned Mixed Use Downtown (MUD) and the proposed development will develop consistent with the provisions of that district and the requirements of the OCMC except where allowed to be modified by this chapter. The community's **Municipal Code** is intended to implement the goals and policies of the Comprehensive Plan as it relates to the development of land. Development of this site through the master plan process will result in a compact and efficient mixed-use development within the existing urban growth boundary, served by existing or new public infrastructure. The TSP, utility master plans, and community concept plans also help to fulfill the goals and policies of the Comprehensive Plan. This master plan and the GDP has been developed considering each one of these documents and future DDP's are required to meet the same standards of those documents as they are being designed and constructed. The GDP is consistent with the applicable regulations for development as explained in this narrative. The applicant has prepared extensive responses to applicable Oregon City Comprehensive Plan Goals and Policies in Chapter 17.56 Conditions Uses, which are also applicable and shall be cross refenced to this section. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

7. The proposed general development plan is consistent with the underlying zoning district(s) and any applicable overlay zone or concept plans.

Finding: Complies with Conditions. This proposed GDP is consistent with the underlying zoning district as well as the purpose and standards of all applicable overlay zone requirements, as shown below under the narrative response to Oregon City Municipal Code Chapter 17.34. Approval of the GDP does not permit any development on site. Future development on the site can only occur with the approval of DDP's that are consistent with the applicable provisions of the OCMC, with the GDP, and the supplemental design guidelines adopted with this plan. There are no concept plans that apply to this area. The GDP and accompanying documents have been predicated upon compliance with the 2021 Oregon City Municipal Code and include plans demonstrating the feasibility that future development under this plan can comply with the applicable requirements of these districts except where standards are allowed to be modified. There are a number of modifications to those standards requested with the approval of this plan which are reviewed in the applicable sections of the staff report. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

8. For projects with a residential use component, the proposed general development plan includes common open space for the recreational needs of the development's residents.

a. Required open space shall be located either on-site or off-site within one-quarter mile of the development.

b. Minimum required open space shall be 100 square feet per residential unit in the development.

c. The open space area may be in private ownership or proposed for public dedication, at the City's discretion whether to accept.

d. The open space shall be developed with a unified design to provide for a mix of passive and active uses. Passive uses include, but are not limited to sitting benches, picnicking, reading, bird watching and natural areas. Active uses include, but are not limited to playgrounds, sports fields and courts, running and walking areas.

e. Land area to be used for the open space area that is required in this section shall not include required setback areas, required landscaping, streets, rights-of-way, driveways, or parking spaces.

f. Unless dedicated to the public, the applicant shall also provide an irrevocable legal mechanism for the maintenance of the open space and any related landscaping and facilities. The applicant shall submit, for city review and approval, all proposed deed restrictions or other legal instruments used to reserve open space and maintenance of open space and any related landscaping and facilities.

Finding: Complies with Condition. The North End master plan includes a residential component and illustrates common open spaces provided for residents of the development This GDP illustrates that these standards can be satisfied with future development of the site consistent with this plan. The master plan will accommodate 524 residential units. Based on this number of units, the development is required to provide 52,400 square feet of open space. Within the immediate vicinity of the multi-family buildings, the plan calls for 45,600 square feet of private open space, and within a quarter-mile there are other on-site parks, open spaces, and public plazas. As detailed development plans are prepared for the residential portions of the site, compliance with the applicable standards and supplemental design guidelines is expected by the prospective developers of those areas through individual DDP review. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

9. For projects with a residential use component, the proposed general development plan includes a mix of residential uses such that no single residential use exceeds 75 percent of the total proposed units. The mix of residential uses shall provide variety of dwelling types and sizes that are integrated throughout the site, rather than isolated from one another, with smooth transitions between residential types including appropriate setbacks, landscaping or screening as necessary, while maintaining street and pedestrian connectivity between all residential uses. Tenancy (i.e. ownership versus rental) shall not be a consideration in determination of the mix of residential use. For the purposes of this section, residential uses include single family detached, single family attached, duplex, 3-4 plex, and multifamily.

Finding: Complies with Condition. The proposed GDP does include a residential component and satisfies this standard through the provision of a variety of unit sizes, and entry types (i.e. ground floor walk-up, elevator for units located above elevators) within a multi-family/multistory format. As detailed development plans are prepared for the residential portions of the site, compliance with the applicable standards and supplemental design guidelines is expected by the prospective developers of those areas though individual DDP review.

17.65.060 - Detailed development plan.

A. Submittal Requirements.

1. A transportation impact study documenting the on- and off-site transportation impacts, as specified in OCMC 17.65.050.B.1.h1. If such an analysis was submitted as part of the general development plan process, the scope of the report may be limited to any changes which have occurred during the interim and any information listed below which was not a part of the initial study.

The on-site portion of the analysis shall include the location, dimensions and names of all proposed streets, alleys, other public ways, sidewalks, bike routes and bikeways, pedestrian/bicycle access ways and other pedestrian and bicycle ways, transit streets and facilities, neighborhood activity centers, and easements

on and within two hundred fifty feet of the boundaries of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.

2. The location within the development and in the adjoining streets of existing and proposed sewers, water mains, culverts, drain pipes, underground electric, cable television and telephone distribution lines, gas lines, and the location of existing aerial electric, telephone and television cable lines, if any, to be relocated within the development.

3. For portions of the project that would otherwise be subject to Site Plan and Design Review, a site plan or plans, to scale, containing the required information identified in OCMC 17.62.040:

4. For residential portions of the project not otherwise subject to Site Plan and Design Review, a site plan or plans, to scale, showing the proposed land uses and densities, building locations, lot patterns, circulation patterns, and open space locations and uses.

5. Any other information the community development director deems necessary to show that the proposed development will comply with all of the applicable Chapter 17 requirements.

B. Approval Criteria. The Community Development Director shall approve an application for detailed development plan approval only upon findings that:

1. All development standards and impact mitigation meet the requirements of the approved general development plan, including conditions of approval.

2. Any other applicable zoning regulations that are not addressed in the general development plan are met, unless an adjustment to those regulations has been applied for and is approved. The approval standards applicable to adjustments required as part of a master plan or planned unit development are contained in OCMC 17.65.070.

3. The detailed development plan conforms with the base zone standards, applicable residential design standards, and applicable standards contained in Chapter 17.62, 17.52, 16.12, and 16.08 unless adjusted as provided in OCMC 17.65.070.

Finding: ***Not applicable.*** *This application is for the approval of a Concept Development Master Plan for the site. Once approved, the applicant intend to submit for development approval though the DDP process in phases. Relevant conditions of approval from the Concept Mater Plan will be implemented though the applicable DDP application review and approval process.*

17.65.070 - Adjustments to development standards.

A. Purpose. In order to implement the purpose of the city's master plan or planned unit development process, which is to foster the growth of major institutions, major residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating their impacts on surrounding properties and public infrastructure, an applicant may request one or more adjustments to the applicable development regulations as part of the master planning or planned unit development process, and are not required to go through the Variance process pursuant to OCMC Chapter 17.60.

B. Procedure. Requests for adjustments shall be processed concurrently with a general development plan. An adjustment request at the detailed development plan review shall cause the detailed development plan to be reviewed as a Type III application.

Finding: Complies with Condition. This application for GDP approval requests four adjustments to standards listed in subsection C below that are permitted to be adjusted through the city's master plan process. Any future adjustments not identified within the GDP will be reviewed as a Type III application

C. Regulations That May be Adjusted. Adjustments may be allowed for the following items:

1. Dimensional standards of the underlying zone of up to 20 percent, except the perimeter of the development shall meet the underlying zone's setbacks when adjacent to residentially zoned property.
2. Site plan and design standards.
3. Residential design standards.
4. Increase in allowed maximum residential density of up to 10 percent.
5. Standards for land division approval.
6. Additional uses allowed with residential projects, or residential component of projects:
a. Notwithstanding the use provisions of the underlying zones, neighborhood commercial uses as defined in Chapter 17.24.020, including restaurants and eating and drinking establishments without a drive-through, retail trade, and services, are permitted on up to 10 percent of the net developable area. The neighborhood commercial uses shall be planned and constructed so as to support and be compatible with the entire development and shall not alter the character of the surrounding area so as to substantially preclude, impair or limit the use of surrounding properties for the primary uses listed in the underlying district.
b. Public or private parks and playgrounds, community buildings, and/or outdoor recreational facilities, such as swimming pools and tennis courts;
c. Indoor recreational facilities, such as racquetball or tennis courts, fitness centers or swimming pools;
d. Common public and private open space including trails.
e. Primary or accessory uses that are not identified as a permitted or conditional use in the underlying zone but which are defined in the code.
Finding: Complies with Conditions. The applicant has identified the following four adjustments. Compliance with the approval criteria are discussed below.

- **16.12.030 - Blocks—Width**. Adjustments to the Land Division standards for approval are permitted through the master plan process under 17.65.070.C.5.
- **17.54.100(2 and 3)** - **Fences, hedges, walls, and retaining walls.** Requesting retaining walls be allowed to exceed heigh limits in areas identified in the master plan. Adjustments to the site plan and design standards are permitted through the master plan process under 17.65.070.C.2. This would be an adjustment to a design standard that applies to all zones within the City
- **17.62.055(D) - Institutional, office, multi-family, retail, and commercial building standards**. Building frontage percentages and location on public or private streets. Adjustments to the site plan and design standards are permitted through the master plan process under 7.65.070.C.2.
- **17.62.050(C)(4) – General Standards**. Elevated External Stairways or Walkways. Elevated stairways to be allowed within the North District. Adjustments to the site plan and design standards are permitted through the master plan process under 17.65.070.C.2.

D. Regulations That May Not be Adjusted. Adjustments are prohibited for the following items:
1. To allow a primary or accessory use that is not identified as a permitted, or conditional use in the underlying zone, with the exception of the additional uses permitted under OCMC 17.65.070.C.6 above; ;
2. To any regulation that contains the word "prohibited";
3. As an exception to a threshold review, such as a Type III review process; and
4. Minimum density for residential sites may not be reduced.
Finding: Complies. None of the regulations listed above are adjusted with approval of the GDP.

E. Approval Criteria. A request for an adjustment to one or more applicable development regulations under this section shall be approved if the review body finds that the applicant has shown the following criteria to be met.

1. Granting the adjustment will equally or better meet the purpose of the regulation to be modified;
Finding: Complies with Conditions

Adjustment #1
Chapter 16.12.030 - Blocks—Width states, "The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features. All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted transportation system plan. The maximum block spacing between streets is five hundred thirty feet and the minimum block spacing between streets is one hundred fifty feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the city engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every three hundred thirty feet. The spacing standards within this section do not apply to alleys." Although a land division is not proposed with this application, we are fairly certain that any land division of this site would not satisfy the requirement given the proposed uses within the master plan and that the master plan area will be served by a series of internal private streets as opposed to local streets.

The purpose of block length and width standards are to make a neighborhood more walkable and connected. They are intended to create neighborhoods with grid traffic patterns to make it easier to get from place to place for multiple modes of transportation and provide opportunities for additional routes throughout the City or neighborhood. Larger blocks, on the other hand discouraged because they can't adequately disperse or calm traffic. Block length standards promote connectivity to the rest of the community. The code recognizes that block length standards are not ideal in all instances as the code allows the city engineer to determine the block length in some zones within the City.

In this instance, the east side of the development includes larger format retail uses and three commercial pads greater than 100,000 square feet in size intended to serve anchor retail facilities and associated parking and circulation aisles that when or if the land is divided will likely exceed the maximum block length, width, and spacing requirements of this section.

Existing development and the presence of Abernethy Creek make it difficult for the development to connect to the north and east. However, the proposed master plan, with this adjustment equally meets the purpose of the standard in 16.12.030 by providing a continuous and well connected multi-modal transportation system that includes private streets, sidewalks, and shared use paths to connect uses within the development as well as to the surrounding transportation system. The developer is requesting that the City defer to the layout of the general master plan and adjust these maximum standards in favor of the proposed circulation system and block width proposal.

See the combined mitigation Analysis and proposed condition at the end of this section.

Adjustment #2
Section 17.54.100.2 states that, "A fence, hedge, wall, located next to, or behind the forward (most building, or within more than forty feet of the right of-way, whichever is less may be up to: a. Six feet in total height for residential properties with less than five units as measured from the finished grade at any point on the fence; or b. Eight feet in total height for all other uses as measured from the finished

grade at any point on the fence."

Section 17.54.100.3 states that, "A retaining wall or combination of a fence, hedge, wall located next to and behind the forward most building, or within more than forty feet of the right-of-way, whichever is less, may be up to (as measured from the finished grade) 8.5 feet in height from the finished grade." This particular chapter is not provided with a purpose statement, but the chapter in general sets out the requirements for accessory structures, projections, exceptions, marijuana businesses and mobile food units, which would lead one to believe that the purpose of these standards are to regulate operations and aesthetics of particular circumstances that relate to specific uses. A wall of any height can be constructed provided it's engineered properly, but, most communities put regulations limiting the height of walls in place to discourage and break up large blank surfaces on the landscape.

Given the significant difference in height between the master plan area, the adjacent properties at the south and west property lines, and Washington Street, it may be necessary to design and construct retaining walls that are higher than 8.5 feet from the finished grade. In some instances, buildings foundations will be utilized in place of walls (which is not regulated by this section of the code), but that's not the case along the proposed streets and sidewalk system. For example, the difference in height between the subject property and the End of the Oregon Trail Interpretive Center is approximately 29 feet. The applicant is requesting that the City adjust this height requirement given the known grade differences. The purpose of this standard can be equally or better met through thoughtful design of those retaining walls by utilizing different colors and materials or landscaping that climb the walls. The applicant is willing to accept conditions related to the design of the walls.

See the combined mitigation analysis and proposed condition at the end of this section.

Adjustment #3
Section 17.62.055.D Siting of Structures. States, "On sites with one hundred feet or more of frontage at least sixty percent of the site frontage width shall be occupied by buildings placed within five feet of the property line... Multifamily developments shall be placed no farther than twenty feet from the front property line…" The code allows larger front yard setbacks to be approved through site plan and design review if the setback area incorporates elements such as tables, benches, art, fountains, additional landscaping, enhanced landscaping, and other elements approved by the Community Development Director that can
meet the intent of the section.

The purpose statement for this section is to, "…provide a range of design choices that promote creative, functional, and cohesive development that is compatible with surrounding areas. Buildings approved in compliance with these standards are intended to serve multiple tenants over the life of the building, and are not intended for a one-time occupant. The standards encourage people to spend time in the area, which also provides safety through informal surveillance. Finally, this section is intended to promote the design of an urban environment that is built to human scale by creating buildings and streets that are attractive to pedestrians, create a sense of enclosure, provide activity and interest at the intersection of public and private spaces while also accommodating vehicular movement."

The proposed development has over one hundred feet of frontage along both Abernethy Road and Washington Street. As stated earlier, the difference in grade between the development site and the surrounding streets are significant given that this was a former land fill. The grade along Washington

Street is taken up by the building foundations of the proposed parking garages beneath the multi-family housing. The setbacks proposed along Washington Street vary from 1.9 to 23 feet behind the right of way, and over 230 feet along the site's frontage along Abernethy Road. The applicant is requesting this adjustment due to the unique shape of the site and the presence of the floodplain along Abernethy Road. To the extent possible, the applicant would prefer to keep all occupied buildings outside of the floodplain. In order to accomplish this, the buildings along Abernethy Road would be replaced with surface parking. The developer is requesting that the City allow this standard to be adjusted and provide deference to the proposed layout of the GDP as currently proposed.

This adjustment will allow the development to equally meet the purpose of the regulation by providing pedestrian amenities and enhanced landscaping along Abernethy Road and Washington Street. Further, the applicant is proposing a private commercial street, ("D" Street) between the buildings and Abernethy Road and places the buildings within five feet of that proposed street. These buildings will serve multiple tenants over their lifetime by providing separate retail spaces that are daylighted below the larger retail spaces above that will front ("C Street). With retail uses fronting both private internal streets, there will be opportunities for added activity and surveillance on both sides of the retail buildings.

See the combined mitigation Analysis and proposed condition at the end of this section.

Adjustment #4
Section 17.62.050.C.4 states, "Elevated external stairways or walkways shall not extend beyond the building facade except for external stairways or walkways located in, or facing interior courtyard areas that are not visible from the street or a public access easement…" According to the code, "The purposes of site plan and design review are to: Encourage site planning in advance of construction; protect lives and property from potential adverse impacts of development; consider natural or manmade hazards which may impose limitations on development; conserve the city's natural beauty and visual character and minimize adverse impacts of development on the natural environment as much as is reasonably practicable; assure that development is supported with necessary public facilities and services; ensure that structures and other improvements are properly related to their sites and to surrounding sites and structure; and implement the city's comprehensive plan and land use regulations with respect to development standards and policies." There is not a separate purpose statement for the section proposed to be adjusted.

The applicant is requesting an adjustment to this standard to allow pedestrians to walk between the plaza area and Washington Street. Because of the grade difference in this location, it would be difficult to provide a direct pedestrian route without providing a stairwell that projects beyond the building façade. The proposed stairwell is not located in or facing an internal courtyard. The idea behind this stairwell is to provide an attractive pedestrian alternative to connect the site to development in a more direct manner. This adjustment equally meets the purpose statement of the Site Plan and Design Review Chapter by considering a man-made hazard (grade difference) between the public street and the development. It will also add visual interest and character to the site's frontage with Washington Street by providing an artistic feature that also serves a practical purpose and creative solution to pedestrian connectivity. Details of the stairwell would be provided with the appropriate DDP

Combined Modification/Amendment Mitigation Analysis and Proposed Condition of Approval

The applicant has proposed four Master Plan Amendments and a package of mitigation submitted as part application. Staff finds the proposed modifications are reasonable and also finds that the mitigation proposed is proportional to the request by continuing to break up the site with pedestrian scale access and amenities.

To ensure clarity of implementation through the Type I or II DDP process, staff has identified the following items shown in the submitted Master Plan and design guidelines that shall be implemented through the applicable DDP applications. Mitigation items not included in the list below, not addressed in other conditions of approval, or not required by the adopted Municipal Code are not required.

The following items, shown in the submitted Master Plan and design guidelines, shall be implemented through the applicable DDP applications. Mitigation items not included in the list below, not addressed in other conditions of approval, or not required by OCMC criteria, either at the time this Master Plan was submitted or in place at the time of DDP review are not required.

- Construction of open space as demonstrated in the figure identified on page 98 of the submitted Master Plan. Open spaces that vary more than 10% in square footage than proposed shall be reviewed at a Type III level. All open spaces shall use a combination of hard and soft scaping.
- A minimum of 40% of the Central Square plaza area shall consist of a special paving material, which can include brick, precast concrete, pavers, or stone. A maximum of 50% of the plaza area can be concrete paving. A minimum of 5,000 square feet of open space shall be provided that is unimpeded by planting or site elements to create a central gathering space. The central square shall not eligible for any multi-family open space calculation.
- A minimum of 2 public art or interpretive elements shall be installed in each District (North, South, East, West) and be at least three cubic feet or thirty square feet in size.
- There shall be a differentiation of private street lighting and parking lot lighting design. Street lighting shall utilize decorated banners or flower baskets on at least 50% of the light standards.
- Pedestrian wayfinding signage shall be installed in all four districts directing pedestrians to offsite amenities such as End of the Oregon Trail Museum, Amtrak Station, Main Street, and Willamette River.
- No more than 50% of the proposed multi-family square footage can be constructed and Certificates of Occupancy given without full construction of the proposed Central Square Plaza (P)
- The pedestrian connection to the End of The Oregon Trail Museum shall be constructed by the date of final occupancy of C2 within the South District obtain. The record demonstrates that there are multiple feasible alignments for that connection and the final design shall be reviewed through the Type II DDP process as long as it is consistent with the intent of providing an ADA access between the development and the EOT in the same general location as depicted in the adopted Master Plan. The pedestrian connection may utilize portions of city property at the End of the Oregon Trail Museum if allowed by a future public/private agreement and/or with an abutting private property.

  The following amendments to the Municipal Code are approved and subject to the conditions found in the Notice of Decision.
  - OCMC Chapter 16.12.030 - Blocks—Width

i. Subject to proposed street and pedestrian connections layout found on the site circulation diagram of page 64 of the application.

- OCMC Chapter 17.54.100.2- Retaining Walls
  i. Retaining walls are allowed to exceed heigh limits in areas identified in an exhibit the applicant will submit prior to the June 28, 2021 Planning Commission Hearing with proportional mitigation included.
- OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)
  i. Building frontage percentages and location on public or private streets shall meet at a minimum the footprint layout found on the District Plan Map found on page 61 of the application.
- OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways
  i. Elevated stairways are allowed within the North District.

2. If more than one adjustment is being requested, the cumulative effect of the adjustments results in a project that is still consistent with the overall purpose of the zone;

Finding: Complies with Conditions. More than one adjustment is being requested with this application. The cumulative effect of the adjustments continues to satisfy the overall purpose of the MUD zone by providing a high-quality, vibrant mixed-use development with a variety of retail and service uses on the ground floors and residential on the upper floors. It creates an urban and intense development on the west side of the development and will attract more people into downtown Oregon City with a mix of larger retail uses that tend to serve the larger reason. The site will be well connected to the community and transit through a comprehensive and circuitous circulation plan. Each of the adjustments are necessary to respond to unique and specific site conditions not typically found on other sites. The impact of the adjustments is to create that high-quality walkable environment while navigating significant changes in grade. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. City-designated Goal 5 resources are protected to the extent otherwise required by Title 17;

Finding: Complies with Condition. The proposed adjustments do not impact City-designated Goal 5 resources on the site, which will be reviewed for specific compliance to Title 17 at the time of each DDP. The sit is not located with conservation or historic districts, nor are there any individually designated resources subject to OCCM 17.40 onsite. The 30 foot Barlow Road visual corridor abuts the site on Abernethy Road; however, no changes to the visual corridor are proposed for this application. The Confederated Tribes of the Umatilla Indian Reservation (CTUIR) submitted comments relating to the need for a cultural survey for the site. A cultural survey is not a requirement found in the Municipal Code. However, the applicant is required to meet at applicable state and federal laws relating to above and below ground cultural resources. If the applicant is proposing construction that will include the disturbance of native soils, or has a high likelihood of containing archeological evidence, as confirmed by the State Historic Preservation Office, the applicant will be required submit and adhere to an inadvertent discovery plan that, depending on the proposed action, and as recommended by SHPO, could include archeological monitoring during times of site disturbance. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

4. Any impacts resulting from the adjustment are mitigated such that the development does not create significant adverse impacts on adjacent properties;
Finding: Complies with Conditions. The proposed adjustments do not impact any of the adjacent properties. The site is immediately adjacent to three properties and bound by public streets and Abernethy Creek. Conditions of approval that implement proportional mitigation to any identified impact have been addressed throughout the staff report. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

5. If an environmental zone, the proposal has as few significant detrimental environmental impacts on the resource and resource values as is practicable; and.
Finding: Complies. None of the proposed adjustments would significantly impact the environmental resources on the master plan site and will be individually reviewed for compliance with COMC 17.49 Natural Resource Overlay District at the time of each DDP application.

6. The proposed adjustment is consistent with the Oregon City Comprehensive Plan and a concept plan if applicable .
Finding: Complies with Conditions. The GDP is consistent with the applicable regulations for development. The applicant has prepared extensive responses to applicable Oregon City Comprehensive Plan Goals and Policies in Chapter 17.56 Conditions Uses, which are also applicable and shall be cross-referenced to this section. The subject property is not located within a concept plan, and the adjustments are generally consistent, and specifically, do not conflict with any of the applicable Oregon City Comprehensive Plan goals and policies. The proposed adjustments equally meet the purpose statements of the regulations that are being adjusted and satisfy the standards of the MUD zoning district. Approval of these adjustments is consistent with the land use designations for the site and does not preclude the development from meeting the applicable goals and policies of the Oregon City Comprehensive Plan. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.65.80 - Amendments to approved plans.
A. When Required. An amendment to an approved General Development Plan or detailed development plan is required for any use or development that is not in conformance with the applicable plan, as provided below. The approval criteria contained in OCMC 17.65.050 will apply to general development plan amendments, the approval criteria contained in OCMC 17.65.060 will apply to detailed development plan amendments. The thresholds and procedures for amendments are stated below.
B. Type III Procedure. Unless the approved general development plan or detailed development plan specifically provides differently, amendments to either plan that require a Type III procedure are:
. 1. A proposed expansion of the approved boundary;
2. A proposed reduction in the approved boundary that affects a condition of approval, or takes the site out of conformance, or further out of conformance, with a development standard;
3. Proposals that increase the amount, frequency, or scale of a use over ten percent of what was approved (examples include the number of students, patients or members; the number of helicopter flights; the number or size of special events; transportation impacts);
4. New uses not covered in the plan that will increase vehicle trips to the site greater than 10 percent of the original amount approved;
5. Increases or decreases in overall floor area of development on the site or number of residential units of over ten percent;

6. A increases/decrease greater than ten percent in the amount of approved or required parking; and
7. Proposed uses or development which were reviewed, but were denied because they were found not to be in conformance with an approved plan.
C. Type II Procedure. Unless an approved plan specifically provides otherwise, amendments to a general development plan or detailed development plan not specifically stated in Subsection B or D are processed through a Type II procedure.
D. Type I Procedure. Unless an approved plan specifically provides otherwise, the following amendments to a general development plan or detailed development plan shall be processed through a Type I procedure:
1. Accessory uses and structures that meet applicable development regulations;
2. Reconfiguration of approved parking or landscape designs that do not alter the points of ingress or egress, and do not change the number of parking spaces required, so long as the reconfiguration meets applicable development regulations; and
3. Structures for approved uses that do not exceed one thousand five hundred square feet in size and that meet applicable development regulations.
Finding: Complies with Condition. All DDPs will be reviewed by the above criteria and administered though the applicable land use review process.

OREGON CITY
Community Development – Planning
695 Warner Parrott Road | Oregon City OR 97045
Ph (503) 722-3789 | Fax (503) 722-3880

17.65.090 - Regulations that apply.
An applicant is entitled to rely on land use regulations in effect on the date its general development plan application was initially submitted, pursuant to ORS 227.178(3), as that statute may be amended from time to time. After a general development plan is approved, and so long as that General Development Plan is in effect, an applicant is entitled to rely on the land use regulations in effect on the date its general development plan application was initially submitted, as provided above, when seeking approval of detailed development plans that implement an approved general development plan. At its option, an applicant may request that a detailed development plan be subject to the land use regulations in effect on the date its detailed development plan is initially submitted.
Finding: Complies with Condition. The Applicant, Summit Development Group, is formally requesting that future development within site, including all DDPs, be vested under the applicable provisions of the 2021 Oregon City Municipal Code land use regulations with the approval of the Master Plan (GDP). This will afford future developers and tenants within the master plan area with long-term regulatory certainty and predictability. Unless further amended and extended by the Planning Commission, this Master Plan shall control development on the site for 20 years from the date of initial adoption. Subsequent land divisions may occur onsite, but all parcels shall remain subject to the Master Plan and its implementing Conditions of Approval unless amended through the Master Plan amendment process. The Applicant has requested and is approved to utilize the 2021 Oregon City Municipal Municipal Code as adopted at the time of the Master Plan submittal for the life of the Master Plan. The applicant may also choose to use the current code year at a future DDP application, though only one code year can be used for each DDP submittal. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CONCLUSION AND DECISION:

Based on the analysis and findings as described above, Staff concludes that the proposed Master Plan located at 1105 Abernethy Road, Oregon City, OR 97045 , Clackamas County Tax Map 22E2900902 can meet the requirements as described in the Oregon City Municipal Code by complying with the Conditions of Approval provided in this report. Therefore, the Community Development Director recommends approval of Planning Files GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030) based upon the findings and exhibits contained in this staff report.

Subject

Response to Planning Commission Comments and Conditions of Approval

Remarks

The first hearing for GLA 21-00016 (AKA: The North End) was held on Monday, June 28th. The Development and Design teams appreciated the thoughtful and collaborative comments we received from both the Planning Commission and Staff. In an effort to address the concerns and comments, we are developing additional exhibits, which will be submitted separately, have provided further explanation of the plans for The North End, and on items related directly to the Conditions of Approval of the General Development Plan (GDP), have suggested edits as appropriate. The applicant team is continuing to work through the technical issues related to transportation requirements, the geohazard zones, and retaining walls with Development Services that will be addressed at the next hearing.

RETAINING WALLS

The large height difference between The North End and adjacent properties has the potential to create retaining walls that exceed the typical retaining wall height. The applicant is sensitive to the visual impact that such structures have on the public as well as the adjacent property owners. To address these concerns, we will submit an exhibit that indicates the extent of the larger-than-standard retaining walls and include a list of mitigation measures that can be provided in future DDPs to address each specific location.

DESIGN FLEXIBILITY

As Staff discussed in the hearing, we have been working to provide design flexibility while ensuring that the City can be sure of what will be developed as part of the North End. We believe that we can provide both flexibility and stability through the use of ranges. To accomplish this, we are proposing the following edits to the Conditions of Approval.

Conditions of Approval

7. Except as **listed below** ~~approved by the Planning Commission~~, the applicant is required to show compliance with OCMC 17.65.80 - Amendments to approved plans and all applicable conditions of approval at the time of each DDP application to ensure the proposal is reviewed under the correct review process. ~~(P)~~

- **a. The GDP for the North End Master Plan is a concept plan and is not intended to fix the location of structures on site, provided they meet all other applicable codes and conditions of approval.**
- **b. All uses not expressly prohibited within the Mixed-Use Downtown District, shall continue to be allowed, provided those uses meet all other applicable code requirements.**
- **c. At full buildout, on-site parking shall be within the code minimum and maximum requirements. Variations in parking count prior to full buildout are governed by Condition No. 16.**
- **d. At full buildout, the site shall have between 500 and 600 residential units.**
- **e. Building areas can be combined and/or configured in any manner provided they meet all other applicable codes and conditions of approval. At full buildout, total building area shall be within 25% of the maximum square footage provided within the GDP and shall continue to meet the minimum FAR requirements and not exceed the maximum approved trip generation. (P)**

13. a. Construction of open space as demonstrated in the figure identified on page 98 of the submitted Master Plan. Open spaces that vary more than ~~10%~~ **25%** in square footage than proposed **within the GDP** shall be reviewed at a Type III level. All open spaces shall use a combination of hard and soft scaping.

82. The general and parking lot landscaping for this Master Plan is calculated based on the entire site area subject to the GDP. Each individual phase may or may not meet the minimum site-wide requirement but the site shall satisfy the minimum requirement at full build out.. A phase will be permitted to develop below the required minimum as long as each phase demonstrates that the site will meet the minimum landscaping percentage requirements at full buildout. (P)

RETAIL BALANCE

We heard from staff concerning the balance of large-format and small-scale retail in the large buildings located in the South and Central Districts. There are no other areas near downtown that can accommodate retailers of that scale, and in conversations with the community, these larger format uses will limit the direct competition to the existing and future downtown businesses. While trying to respond to the community and develop large-format buildings on the south edge of the landfill, we developed a buried-story approach. This allows us to address the flood plain limits, the 13ft+ height difference, and the desire for two activated street frontages in a single building. The North End as submitted provides a retail balance of 85% large-format and 15% small-scale retail, therefore we are proposing the following edit to the Conditions of Approval.

Condition of Approval

10.The proposed buildings needing a Conditional Use for tenant size (E2, S2, C2) are approved for implementation through the DDP process with the following conditions:

a. Building E2 is allowed to be used for a single tenant.

b. Buildings S2 and C2 are subject to the following limitation:

i. No single **retail** tenant may occupy more than ~~70%~~**85%** of leasable square footage.

ii. This single tenant percentage limitation does not apply to uses that are otherwise permitted outright in the underlying zone. (P)

PEDESTRIAN EXPERIENCE AND SAFETY

We heard from both the Commission and the public, that the safety and experience of pedestrians need to be paramount in any design for this site. The North End project team agrees, with the project already designed to incorporate raised pedestrian crossings and to provide visual and spatial interest along our primary East-West pedestrian way. In an effort to ensure these concerns are addressed, we propose the following additions to the Conditions of Approval.

Condition of Approval

Pedestrian way -

13.h. The Primary east-west Pedestrian way shall have the following elements:

- **i. Trees located at 30ft on-center.**
- **ii. Adjacent to any parking lot area, a 4ft (at maturity) evergreen hedge shall be provided. The design shall allow for periodic breaks in the hedge to provide pedestrian access to the walkway.**
- **iii. Pedestrian Benches shall be located every 90ft adjacent to trees and planting areas.**
- **iv. All-weather cover shall be provided through pavilion and trellis elements. A minimum of (2) elements, with a minimum size of 500 sqft, shall be located along the pedestrian way.**

Raised Crosswalks -

13.i. A minimum of 4 raised pedestrian crossings or tabletop intersections shall be included on-site at final build-out.

ON-SITE PARKING

At the hearing, we discussed our concern with the over-parking limit. Our site-wide approach to parking calculations allows flexibility in what order the site will develop, but it also requires the development of site components at full capacity. The nature of this site, as a retired landfill, calls for an integrated approach to the design and construction of all below-grade elements (e.g., utilities, stormwater, and methane gas mitigation) concurrent with the finished grade elements (particularly parking and landscaping). In our worst-case scenario, full development of the East District first would temporarily create a situation where the site would be 40% over-parked. To address this, we are proposing the following edit to the Conditions of Approval.

Condition of Approval

16. The applicant has proposed a sitewide parking approach looking at the sum total of development proposed and parking provided. The parking ratios proposed in the Master Plan (GDP) fall within the minimum and maximum parking standards found in OCMC 17.52.020. At the time of each DDP submittal, the applicant is responsible to demonstrate how they are implementing parking requirements based on the proposed DDP uses. At no time shall the site be more than ~~25%~~**40%** above parking maximums or 15% below parking minimums per 17.52.020 - Number of automobile spaces required. With the following modifications:
    a. Structured parking may be completed and used before the associated use is constructed and is not subject to the limitations above. (P)

TRANSIT

Public transit on-site and how we would accommodate it was another topic of interest. Along the main avenue running North-South through our site, we have planned for transit stops adjacent to the intersection with "4th Street". We believe that this location will be the most transit-efficient and effective based on various traffic and site circulation metrics. The applicant intends to provide structured cover for the future transit stops. Based on this, we propose the following edit to the Conditions of Approval.

Condition of Approval

37. If it is determined through individual DDP review that **public** transit improvements are needed, the applicant of that DDP shall provide **rider** accommodations for transit **and/or shuttle rider** facilities **(such as benches and structured cover consistent with pedestrian amenities elsewhere on site)** along Washington Street and Abernethy Road and ~~the new north-south road connecting Washington Street and Abernethy Road (Market Street) such as new bus stops, bus pullouts or other transit facilities within the development.~~ **at the intersection of the new north-south road connecting Washington Street and Abernethy Road (Market Street) and 4th Road.** (P,DS)

NATURAL RESOURCE OVERLAY DISTRICT (NROD)

During the hearing, Staff mentioned that we have an NROD surrounding the site and are working with the city on a parallel process to address the NROD boundary. As a point of clarification, we are requesting the following edit to the Conditions of Approval.

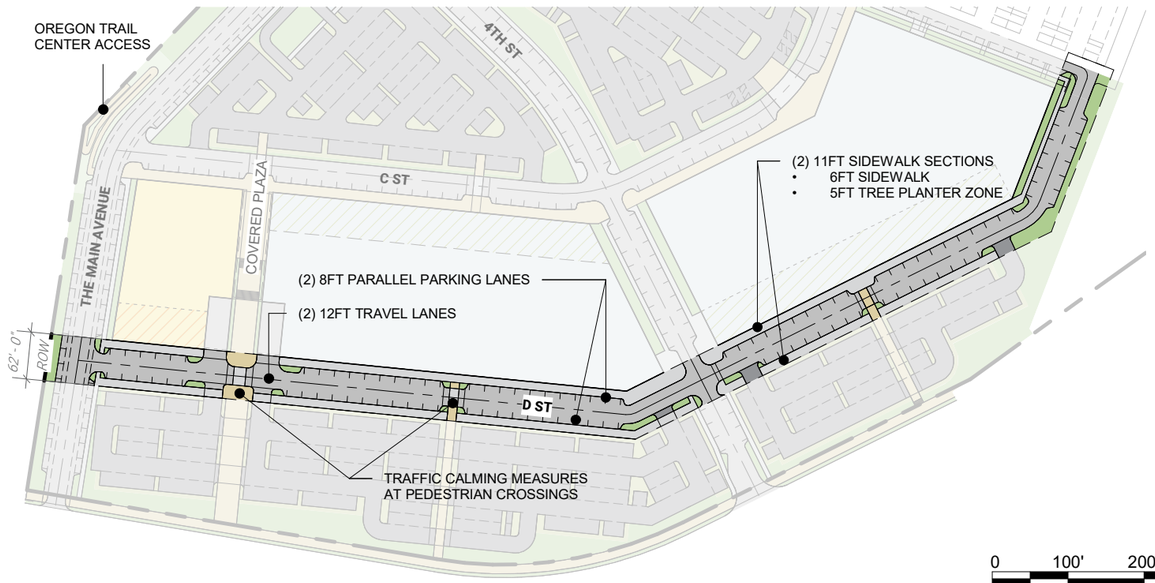
Condition of Approval

77. Areas located in the Natural Resource Overlay District not subject to the Type I exemption process **or a Type II NROD boundary verification** will require review through a future Type II or Type III Natural Resource Review process when development is proposed that impacts those areas **consistent with the provisions of**~~. Any development areas impacted by the Natural Resources Overlay District will be reviewed for compliance with~~ OCMC 17.49 at or prior to the associated DDP review. (P)

Respectfully submitted by:
Russell 'Ski' Wisniewski, AIA, NCARB
Project Architect

MODIFIED D STREET SECTION

A1



Based on Condition of Approval 78 (included below for reference) from the Staff report dated June 21, 2021, the applicant proposes to change the D Street Section to follow the design indicated in 2. Proposed 'D Street' Design. Staff has indicated that the street section needed to meet the design intent of the Internal Road section, in this case without fire access.

CONDITION OF APPROVAL

78. The applicant has proposed a private street (D street) that appears to be more of a drive aisle for the adjacent parking lot and does not meet the intent of the code. OCMC 17.62.050 (B) Vehicle Access and Connectivity requires "Parking areas shall be located behind the building façade that is closest to the street, below buildings, or on one or dlboth sides of buildings". The applicant has not requested a Master Plan amendment for D Street as part of this Master Plan; therefore, D Street shall be redesigned to meet the design intent of the proposed private Internal Road (with or without fire access) found on page 93 of the applicant's submittal. A sidewalk and street trees shall be included on both sides of D Street. Angled parking or a one-way street could be allowed if deemed safe by the Assistant City Engineer at the time of DDP review. (P)

Changes to Conditions of Approvals for: GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

The following amended conditions of approval have been incorporated in the Revised (June 24, 2021) Staff Report. Changes made to the Conditions of Approval for GLUA 21-000016 are intended to further clarify the condition or correct a formatting error and do not change the requirements of the conditions. The corrections have been highlighted in red below for reference.

Language added is shown in red.
Language removed is in red and ~~crossed out~~.

Conditions of Approval

Planning File GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

(P) = Verify that condition of approval has been met with the Planning Division.
(DS) = Verify that condition of approval has been met with the Development Services Division.
(B) = Verify that condition of approval has been met with the Building Division.
(F) = Verify that condition of approval has been met with Clackamas Fire Department.

13. The following items, shown in the submitted Master Plan and design guidelines, shall be implemented through the applicable DDP applications. Mitigation items not included in the list below, not addressed in other conditions of approval, or not required by OCMC criteria, either at the time this Master Plan was submitted or in place at the time of DDP review are not required.

a. Construction of open space as demonstrated in the figure identified on page 98 of the submitted Master Plan. Open spaces that vary more than 10% in square footage than proposed shall be reviewed at a Type III level. All open spaces shall use a combination of hard and soft scaping.
b. A minimum of 40% of the Central Square plaza area shall consist of a special paving material, which can include brick, precast concrete, pavers, or stone. A maximum of 50% of the plaza area can be concrete paving. A minimum of 5,000 square feet of open space shall be provided that is unimpeded by planting or site elements to create a central gathering space. The central square shall not eligible for any multi-family open space calculation.
c. A minimum of 2 public art or interpretive elements shall be installed in each District (North, South, East, West) and be at least three cubic feet or thirty square feet in size.

d. There shall be a differentiation of private street lighting and parking lot lighting design. Street lighting shall utilize decorated banners or flower baskets on at least 50% of the light standards.
e. Pedestrian wayfinding signage shall be installed in all four districts directing pedestrians to offsite amenities such as End of the Oregon Trail Museum, Amtrak Station, Main Street, and Willamette River.
f. No more than 50% of the proposed multi-family square footage can be constructed and Certificates of Occupancy given without full construction of the proposed Central Square Plaza. ~~(P)~~

~~a.~~ g. The pedestrian connection to the End of The Oregon Trail Museum shall be constructed by the date of final occupancy of C2 within the South District obtain. The record demonstrates that there are multiple feasible alignments for that connection and the final design shall be reviewed through the Type II DDP process as long as it is consistent with the intent of providing an ADA access between the development and the EOT in the same general location as depicted in the adopted Master Plan. The pedestrian connection may utilize portions of city property at the End of the Oregon Trail Museum if allowed by a future public/private agreement and/or with an abutting private property. (P)

31. Roadway improvements, including street widening, frontage improvements and right-of-way dedication along Abernethy Road shall be per requirements of the jurisdiction that has authority over Abernethy Road at the time of construction plan approval. The future developer of DDPs shall provide a 12-foot-wide shared-use path along the site's frontage on the north side of Abernethy Road to fulfill TSP project S2 and the path may serve to fulfill the sidewalk required on the north side of Abernethy Road if approved by the jurisdiction that has authority over Abernethy Road at the time of construction plan approval. (DS)

32. All roads required to be constructed by the developer, public and private, shall have 12-foot-wide vehicular lanes unless otherwise approved by the City Engineer ~~(E.G., wider lanes where 26-foot clear width is needed on roads that have fire hydrants)~~. (DS)

35. For all new site driveways and intersections that require traffic signals, the developer of future DDPs shall provide a Traffic Signal Plan conforming to the requirements of the road authority.

36. The developer of future DDPs shall provide street lighting plans with photometric information for all internal roads, Washington Street, Abernethy Road, and Redland Road. Street lighting shall ~~which~~ conform~~s~~ with all City standards, specifications, codes, and policies and ~~is~~ be approved by Portland General Electric (PGE) prior to receiving a permit and beginning construction. (DS)

54. Public improvements associated with each DDP are required to be completed and accepted by the City Engineer. Public improvements shall be constructed according to approved final engineering plans prior to occupancy. (DS)

63. Within Geologic Hazard areas identified by Oregon City, future detailed development plans shall include terraced slopes or retaining walls for slopes or walls greater than seven vertical feet. The terraced slope or wall shall have a maximum vertical height of five feet and a minimum vegetated width of 3 feet between. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. (DS)

74. Public services for transportation, fire, sanitary waste disposal and storm-water disposal that are needed at the time of each DDP, shall be made capable by the time each phase of the development is completed. (DS)

1 - PROJECT INTRODUCTION

Introduction

The North End Master Plan is a proposed master plan to redevelop the former Rossman Landfill with a mixed-use development. The plan has been carefully designed to promote a sense of place at the north end of the Oregon City Downtown. This land use application is a request to approve the General Development Plan (GDP). The GDP will be subsequently implemented through future discretionary reviews that will be guided by this development plan.

Therefore, this application does not include a request for approval of a Detailed Development Plan (DDP) currently. Once approved, the GDP will vest future development within the master plan area under the current code provisions to assure long term regulatory certainty and a high level of predictability for future tenants and developers within the master plan area.

The GDP provides a detailed framework for development within the master plan area over the next 20 years; although build out of the site is anticipated to occur over the next 5 years or so. The plan has been developed under the applicable chapters of the 2021 version of the Oregon City Municipal Code as discussed in **Chapter 2: Narrative Response**.

Because the GDP vests development for the 20-year life of the GDP, future DDP requests will also be reviewed under the 2021 code and the supplemental design guidelines and conditions of approval of the GDP.

This balanced approach ensures that the quality of the architecture, including massing, forms, and materials, will contribute to a distinctive design that creates the overall identity for the project. Landscaping, site amenities, lighting, and wayfinding will be unified throughout the site to support the project's sense of place.

Existing Conditions and Background

The subject site is located at 1105 Abernathy Drive in Oregon City, Tax Lot Number 2-2E-29-00902. The property is currently zoned Mixed-Use Downtown and is located outside of the historic downtown overlay but is located within the Urban Renewal District. The site is located over the top of the Rossman Landfill, and includes land that is identified in the City's Natural Resource Overlay District (NROD) due to the presence of Abernethy Creek and wetlands that have been identified on the site. The site also includes areas within the Geologic Hazard Overlay Zone for the presence of slopes over 10%; and lands that are impacted by the 100-year floodplain. These and other relevant conditions are discussed in **Chapter 3: Existing Conditions** of this document.

Proposed Development

Summit Development Group seeks approval of The North End Master Plan, a mixed-use GDP to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the master plan. The plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown, but serve as a primary gateway to the north end of the Oregon City Downtown. The master plan features tree-lined streets, landscaped open spaces, offices and residences overlooking public plazas and open spaces, and will feature a wide variety of shopping, dining, and entertainment experiences. The North End Master Plan and Design Guidelines are intended to integrate design elements of downtown Oregon City into the development are discussed in detail in **Chapter 4: Proposed Development** and **Chapter 5: Master Plan Design Guidelines**.

This page intentionally left blank.

THE NORTH END

2 - NARRATIVE RESPONSE

2 - NARRATIVE RESPONSE

Chapter 17.65: Master Plans and Planned Unit Development

17.65.010: Purpose and Intent
It is the intent of this chapter to foster the growth of major institutions, phased residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating the impacts of such growth on surrounding properties and public infrastructure. The city recognizes the valuable housing options, services and/or employment opportunities that these developments bring to Oregon City residents. The master plan or planned unit development process is intended to facilitate an efficient and flexible review process for major developments, support innovative and creative land development, and to provide long-term assurance to plan for and execute developments in a phased manner. To facilitate this, the master plan process is structured to allow an applicant to address larger development issues, such as adequacy of infrastructure and transportation capacity, and reserve capacity of the infrastructure and transportation system before expenditure of final design costs. The master plan or planned unit development process is further intended to promote efficiency in land development, maintenance, street systems and utility networks while providing site layouts that integrate usable and attractive open spaces, site circulation, and the general wellbeing of site users. For the purposes of this chapter planned unit developments are considered the same as master plans.

Response:
The North End Master Plan meets the purpose and intent of this Chapter by developing the 62-acre former Rossman Landfill site with a large-scale mixed-use development into a complete community with commercial, retail, entertainment, and residential uses. This application is for approval of a GDP (GDP). The North End Master Plan is the foundation for a thriving, mixed-use development at the north end of downtown Oregon City. It provides a framework for future development of the site by defining on site uses that are anticipated to be developed over the life of the plan, needed extensions of community infrastructure including sewer, water, and transportation, and open space to serve the development, and off-site infrastructure improvements needed to mitigate impacts associated with complete build out of the master plan.

17.65.020: What is Included in a Master Plan or Planned Unit Development
A. A master plan or planned unit development is a two-step process that includes a General Development Plan and a detailed development plan. A General Development Plan incorporates the entire area where development is planned for up to the next twenty years from the date of final approval, including the identification of one or more development phases. The General Development Plan may encompass land that is not currently under the applicant's control, but which eventually may be controlled by the applicant during the duration of the master plan. The plan shall have no effect for lands not currently controlled by the applicant. "Controlled" shall be defined as leased or owned by the applicant. A detailed development plan is the phase or phases of the General Development Plan that are proposed for development within two years.
B. A master plan or planned unit development identifies the current and proposed uses of the development, proposed project boundaries, and proposed public and private infrastructure needed to serve the development. If approved, the General Development Plan may be used to allow existing legal non-conforming uses. If conditions of approval from a previous land use decision have not been completed, they shall be modified through the General Development Plan or completed with new development.
C. A master plan or planned unit development identifies future development impacts, thresholds for mitigation and mitigation improvements and implementation schedules. A threshold for mitigation is the point that determines when or where a mitigation improvement will be required. Examples of "thresholds" include vehicle trips, square feet of impervious surface area, water usage measured in gallons per minute, construction of a building within a General Development Plan and construction of a building within a certain distance of a residential lot.

Response:
This is a request for approval of The North End master plan GDP. The GDP identifies the proposed uses within the development as discussed below, the project boundary and proposes both public and private infrastructure such as transportation and utility service. The GDP includes a detailed analysis of the site and anticipated impacts from the development. Where applicable, the applicant's design team has proposed mitigation to off-set the impacts of the development. Although a phasing plan has not yet been developed, public and private improvements are expected to be constructed with Detailed Development Plans over the life of the master plan.

17.65.030: Applicability
A. Required for Large Institutional Uses. If the boundaries of an institutional development exceed ten acres in size, the proposed development shall be master planned using the regulations of this chapter. No land use review other than a Type I or II Minor Site Plan and Design Review shall be issued for any institutional development in excess of ten acres in total acreage unless it is accompanied by or preceded by a master plan approval under this chapter. This requirement does not apply to modifications to existing institutional developments unless the modification results in a cumulative square footage increase of over ten thousand total building square feet in an existing institutional development over ten acres.
B. When Required as Part of Previous Land Use Review. The master plan or planned unit development regulations may be used to fulfill a condition of approval from a previous land use decision-requiring master planning for a development.
C. When identified in the Oregon City Comprehensive Plan. The master plan regulations are required for all properties identified for master planning in the land use section of the Oregon City Comprehensive Plan.
D. Voluntarily. An applicant may voluntarily submit a master plan or planned unit development as part of a land use review, including for residential projects.

Response:
In this instance, Summit Development Group is the applicant and prospective purchaser of the property. Summit Development Group is voluntarily requesting that the site be developed under the master plan provisions of the Oregon City Development Code as provided in subsection D above.

17.65.040 – Procedure
A. Preapplication Review. Prior to filing for either General Development Plan or detailed development plan approval, the applicant shall file a pre-application conference pursuant to OCMC 17.50.030.
B. General Development Plan. An application for a General Development Plan describing the long-term buildout of the site shall be reviewed through a Type III procedure. An applicant shall have an approved General Development Plan before any detailed development plan may be approved, unless both are approved or amended concurrently. Amendments to an approved General Development Plan shall be reviewed under a Type III procedure pursuant to OCMC 17.65.080.
C. Detailed Development Plan. An application for a detailed development plan, is processed through a Type II procedure, as long as it is in conformance with the approved General Development Plan. Amendments to an approved detailed development plan shall be processed pursuant to OCMC 17.65.080. Once a development has an approved detailed development plan, OCMC 17.62, Site Plan and Design Review is not required.
D. Concurrent Review. An applicant may concurrently apply for a General Development Plan and a detailed development plan. Such a concurrent application is reviewed through the highest procedure that applies to any element of the combined application.
E. Relationship to Other Reviews. It is the express policy of the city that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.
F. Duration of General Development Plan. A General Development Plan shall involve a planning period of up to twenty years. An approved General Development Plan shall remain in effect until development allowed by the plan has been completed through the detailed development plan process, the plan is amended or superseded, or the plan expires under its stated expiration date either as stated in the approved master plan or planned unit development application or decision of approval.

Response:
The applicant has been made aware of these procedures in two separate pre-applications held with City staff over the course of the last 11 months. The first pre-app was held in March of 2020 and the second pre-app was held in December of 2020 in response to program changes for future development on the site. The December pre-application conference notes are attached to this application as **Appendix F**. A meeting with the Oregon City Citizen Involvement Committee was held virtually on February 1, 2021. No concurrent DDP approval is requested with this application.

17.65.050 - General Development Plan.
A. Existing Conditions Submittal Requirements.
1. Narrative Statement. An applicant shall submit a narrative statement that describes the following:
a. Current uses of and development on the site;
b. For institutions, history or background information about the mission and operational characteristics of the institution that may be helpful in the evaluation of the General Development Plan, and information about current programs or services;

2 - NARRATIVE RESPONSE

7 | Chapter 17.65: Master Plans and Planned Unit Development (Cont.)

c. A vicinity map showing the location of the General Development Plan boundary relative to the larger community, along with affected major transportation routes, transit, and parking facilities. At least one copy of the vicinity map shall be eight and one-half inches by eleven inches in size, and black and white reproducible;
d. Land uses that surround the development site. This may also reference submitted maps, diagrams or photographs;
e. Previous land use approvals within the General Development Plan boundary and related conditions of approval, if applicable;
f. Existing utilization of the site;
g. Site description, including the following items. May also reference submitted maps, diagrams or photographs:
i. Physical characteristics;
ii. Ownership patterns;
iii. Building inventory;
iv. Vehicle/bicycle parking;
v. Landscaping/usable open space;
vi. FAR/lot coverage;
vii. Natural resources that appear on the city's adopted Goal 5 inventory;
viii. Cultural/historic resources that appear on the city's adopted Goal 5 inventory;
ix. Location of existing trees six inches in diameter or greater when measured four feet above the ground. The location of single trees shall be shown. Trees within groves may be clustered together rather than shown individually; and
x. Geologic hazards pursuant to OCMC 17.44.
h. Existing transportation analysis, including the following items. May also reference submitted maps, diagrams or photographs.
i. Existing transportation facilities, including highways, local streets and street classifications, and pedestrian and bicycle access points and ways;
ii. Transit routes, facilities and availability;
iii. Alternative modes utilization, including shuttle buses and carpool programs; and
iv. Baseline parking demand and supply study (may be appended to application or waived if not applicable).
i. i. Infrastructure facilities and capacity, including the following items:
i. Water;
ii. Sanitary sewer;
iii. Stormwater management; and
iv. Easements.
2. Maps and Plans.
a. Existing conditions site plan. Drawn at a minimum scale of one-inch equals one hundred feet (one inch equals one hundred feet) that shows the following items. At least one copy shall be eight and one-half inches x eleven inches in size, and black and white reproducible.
i. Date, north point, and scale of drawing.
ii. Identification of the drawing as an existing conditions site plan.
iii. Proposed development boundary.
iv. All parking, circulation, loading and service areas, including locations of all carpool, vanpool and bicycle parking spaces as required in Chapter 52 of this title.
v. Contour lines at two-foot contour intervals for grades zero to ten percent, and five-foot intervals for grades over ten percent.
b. A site plan or plans, to scale, for the General Development Plan site and surrounding properties containing the required information identified in OCMC 17.62.040.b, Vicinity map. Depicting the location of the site sufficient to define its location, including identification of nearest cross streets. At least one copy of the vicinity map shall be eight and one-half inches by eleven inches in size, and black and white reproducible.
c. Aerial photo. Depicting the subject site and property within two hundred fifty feet of the proposed development boundaries. At least one copy of the aerial photo shall be eight and one-half inches by eleven in size, and black and white reproducible.

Response:
The information requested within this section has been provided within this document in **Chapter 3: Existing Conditions** and the accompanying drawings included in **Appendix B**.

B. Proposed Development Submittal Requirements.
1. Narrative statement. An applicant shall submit a narrative statement that describes the following:
a. The proposed duration of the General Development Plan.
b. The proposed development boundary. May also reference submitted maps or diagrams.
c. A description, approximate location, and timing of each proposed phase of development, and a statement specifying the phase or phases for which approval is sought under the current application. May also reference submitted maps or diagrams.
d. An explanation of how the proposed development is consistent with the purposes of Section 17.65, the applicable zone district or districts, and any applicable overlay district.
e. A statement describing the impacts of the proposed development on inventoried Goal 5 natural, historic or cultural resources within the development boundary or within two hundred fifty feet of the proposed development boundary.
f. An analysis of the impacts of the proposed development on the surrounding community and neighborhood, including:
i. Transportation impacts as prescribed in subsection g below;
ii. Internal parking and circulation impacts and connectivity to sites adjacent to the development boundary and public right-of-ways within two hundred fifty feet of the development boundary;
iii. Public facilities impacts (sanitary sewer, water and stormwater management) both within the development boundary and on city-wide systems; including a phasing plan for all on-site and off-site public improvements, including but not limited to transportation, schools, parks, open space, trails, sewer, water and stormwater, with an analysis of the capacity and improvements required as a result of fully implementing the plan. This analysis shall reference any adopted parks and recreation, public facilities plans and concept plans and identify specific funding mechanisms to address the adequacy of public facilities.
iv. Neighborhood livability impacts;
v. Natural, cultural and historical resource impacts within the development boundary and within two hundred fifty feet of the development boundary.

Response:
The plans and reports provided with The North End general master plan depict existing and foundational improvements to the master plan area including grading, utilities, circulation, parking areas, access locations, open spaces, a proposed range of uses, building pad locations, and vertical massing. The boundary of the master plan is illustrated in the site plans included in **Appendix B**. The duration of the master plan and the subsequent phasing of improvements is wholly dependent upon market demand. However, it is anticipated that a first phase will include mass grading and horizontal infrastructure followed shortly thereafter by vertical development. Depending on market conditions, the applicant intends to reach full build out by 2025, well within the 20-year vested master plan timeline. As more specifically discussed below, the GDP has been designed to be consistent with the existing provisions of the Oregon City Municipal Code sections except where a few adjustments are discussed below.

The general master plan has been laid out in a manner that intentionally avoids impacts to the natural resources on site, and where there are impacts that are unavoidable, the expectation is that they will be mitigated for in accordance with local requirements. The NROD criteria are addressed in more detail below.

Development on the site would occur over a former landfill that is capped, and although it is unlikely that there are any archaeological resources within the project area as a result of the prior landfill activities, the State Historic Preservation Office has indicated that the project area lies within an area generally perceived to have a high probability for possessing archaeological sites and/or buried human remains. If any archaeological objects or sites are discovered during construction, development activities will cease, and the appropriate authorities will be notified.

The North End master plan will be a high-quality, compact and walkable community. Future development within the boundaries of the master plan area, under detailed development plan approval, is expected to meet City standards which include development standards that have already been adopted by the community to mitigate impacts of the proposed development on the surrounding community and neighborhood. The variety of proposed uses within the plan area allows for people to live, work, play and shop in one place, which also becomes a destination for people from the region. Where possible, the proposed master plan takes advantage of existing infrastructure extensions of existing utilities and streets. The public utility plan is contained in **Appendix B**.

Improvements to the local transportation system are intended to be consistent with the impacts of the development but timed in accordance with a future development agreement. Ideally, improvements will be based on the individual impacts of each DDP and constructed with a combination of public

Response to 17.65.050.B Cont.:
and private funds. Summit Development Group, the master developer continues to diligently discuss opportunities with local agencies to assist in funding the improvements in a timely and comprehensive manner to help catalyze development within the site. A complete Transportation Impact Analysis for full buildout of the GDP is discussed in more detail below demonstrating that the development can be accommodated within the GDP based on the improvements proposed by the applicant.

g. A summary statement describing the anticipated transportation impacts of the proposed development. This summary shall include a general description of the impact of the entire development on the local street and road network, and shall specify the maximum projected average daily trips, projected AM and PM peak hour traffic and the maximum parking demand associated with build-out each phase of the master plan or planned unit development.
h. In addition to the summary statement of anticipated transportation impacts, an applicant shall provide a traffic impact study as specified by city requirements. The transportation impact study shall either:
i. Address the impacts of the development of the site consistent with all phases of the general development plan; or
ii. Address the impacts of specific phases if the city engineer determines that the traffic impacts of the full development can be adequately evaluated without specifically addressing subsequent phases.
i. If an applicant chooses to pursue option h.1., the applicant may choose among three options for implementing required transportation capacity and safety improvements:
i. The general development plan may include a phasing plan for the proposed interior circulation system and for all on-site and off-site transportation capacity and safety improvements required on the existing street system as a result of fully implementing the plan. If this option is selected, the transportation phasing plan shall be binding on the applicant.
ii. The applicant may choose to immediately implement all required transportation safety and capacity improvements associated with the fully executed general development plan. If this option is selected, no further transportation improvements will be required from the applicant. However, if a general development plan is later amended in a manner so as to cause the projected average daily trips, the projected a.m. or p.m. peak hour trips, or the peak parking demand of the development to increase over original projections, an additional transportation impact report shall be required to be submitted during the detailed development plan review process for all future phases of the development project and additional improvements may be required.
iii. The applicant may defer implementation of any and all capacity and safety improvements required for any phase until that phase of the development reaches the detailed development plan stage. If this option is selected, the applicant shall submit a table linking required transportation improvements to vehicle trip thresholds for each development phase.

Response:
A detailed traffic study based on the uses proposed within the general master plan has been prepared by Kittelson and Associates and is included as **Appendix C** to this application ("TIA"). The study determines the transportation related impacts associated with The North End master plan and was prepared in accordance with the City of Oregon City (City) Guidelines for Transportation Impact Analyses (TIA Guidelines – Reference 1). The study intersections and scope of this report were based on the TIA Guidelines and direction provided by City and Oregon Department of Transportation (ODOT) staff.

The TIA is based on the forecast trip generation of the development combined with engineering judgment and an understanding of existing and future land use and traffic conditions in the vicinity of the site. The study analyzed all site access points and intersections adjacent to the site, driveways serving properties on the opposite side of the streets fronting the development, proposed streets through the site, any intersection of streets classified as an arterial or collector where site traffic is expected to exceed 20 peak hour trips, and intersections where signal progression analysis was needed.

Overall, the traffic study analyzed 25 existing and 5 proposed new intersections within the report. The study analyzed all intersection operations over three peak hour periods. The traffic analyses reflect the peak hours of weekday morning (7:00 AM - 9:00 AM), weekday afternoon (4:00 PM - 6:00 PM), and Saturday midday (11:15 AM - 1:15 PM) conditions.

The analysis evaluated the following scenarios:
- Existing land use and transportation system conditions, including intersection volume-to-capacity (v/c) ratio, control delay, and level-of-service (LOS) during the weekday AM and PM peak hours, as well as the Saturday midday peak hour.
- Year 2025 background conditions (without the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.
- Year 2025 total traffic conditions (with the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.

Additionally, the traffic study analyzed existing conditions, future conditions, adjacent land uses and transportation facilities including bicycle and pedestrian facilities, and nearby transit facilities. Finally, the analysis evaluates traffic safety and crash history for the study intersections.

Based on the analyses of these characteristics, the TIA compares the impacts of the proposed development on the transportation system considering background traffic conditions, other developments that are in process and expected to contribute to the system, and traffic expected to be generated from build out of the proposed master plan.

Finally, considering the findings of the analysis and all locally planned improvements to the system, the study assesses the overall impacts from the development on the system and proposes mitigation measures to ensure that the system operates at within acceptable state and local levels of service. The findings and recommendations will be integrated into the conditions associated with approval of the master plan.

The TIA mitigation recommendations are detailed under the narrative response to Oregon City Municipal Code Chapter 16.12.033 below.

j. For residential and mixed-use projects:
i. Proposed minimum lot area, width, frontage and yard requirements.
ii. Proposed project density in number of units per acre.

Response:
Currently, the site is a single property, and the requirements of the Mixed-Use Downtown Zoning District standards for minimum lot area, width, frontage, and yard requirements can be satisfied by future development. It is important that future land divisions and individual detailed DDP's respect the approved concepts within the GDP. Details of how the GDP satisfies the dimensional requirements of the Mixed-Use Downtown zoning district and other applicable provisions of the OCMC are provided within this narrative. It should be noted that the GDP assumes development of 524 residential units within the North District area but that there is no minimum density requirement of the underlying zone. Instead development within the GDP is regulated by FAR. The proposed FAR, as discussed below is 0.49:1 in excess of the 0.3:1 minimum required in the zone.

2. Maps and Diagrams. The applicant shall submit, in the form of scaled maps or diagrams, as appropriate, the following information:
a. A preliminary site circulation plan showing the approximate location of proposed vehicular, bicycle, and pedestrian access points and circulation patterns, parking and loading areas or, in the alternative, proposed criteria for the location of such facilities to be determined during detailed development plan review.
b. The approximate location of all proposed streets, alleys, other public ways, sidewalks, bicycle and pedestrian access ways and other bicycle and pedestrian ways, transit streets and facilities, neighborhood activity centers and easements on and within two hundred fifty feet of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.
c. The approximate location of all public facilities to serve the proposed development, including water, sanitary sewer, stormwater management facilities.
d. The approximate location, footprint and building square footage of buildings within of each phase of proposed development, and/or proposed lot patterns for each phase of future development.
e. The approximate locations of proposed parks, playgrounds or other outdoor play areas; outdoor common areas and usable open spaces; and natural, historic and cultural resource areas or features proposed for preservation. This information shall include identification of areas proposed to be dedicated or otherwise preserved for public use and those open areas to be maintained and controlled by the owners of the property and their successors in interest for private use.

Response:
In **Chapter 4: Proposed Development** and the accompanying drawings included in **Appendix B**, the GDP includes plans and diagrams that provide the information requested in this section. Conceptual descriptions of circulation, site improvements, public infrastructure, building locations and sizes, and proposed open spaces are provided throughout the master plan document and discussed in detail in the narrative below. More detailed programming for on-site open spaces and specific building design will be provided with DDP's and are expected to meet current Oregon City standards except as modified below in combination with the design guidelines that accompany this document.

C. Approval Criteria for a General Development Plan. The planning commission may approve an application for General Development Plan only upon finding that the following approval criteria are met:

1. *The proposed General Development Plan is consistent with the purposes of OCMC 17.65.*
2. *Development shall demonstrate compliance with OCMC 12.04 16.12, 17.62, if applicable, and 16.08, if applicable.*

Response:
As stated at the beginning of the Chapter, the purpose and intent of a master plan is to, "foster the growth of major institutions, phased residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating the impacts of such growth on surrounding properties and public infrastructure… The master plan or planned unit development process is intended to facilitate an efficient and flexible review process for major developments, support innovative and creative land development, and to provide long-term assurance to plan for and execute developments in a phased manner. To facilitate this, the master plan process is structured to allow an applicant to address larger development issues, such as adequacy of infrastructure and transportation capacity, and reserve capacity of the infrastructure and transportation system before expenditure of final design costs. The master plan or planned unit development process is further intended to promote efficiency in land development, maintenance, street systems and utility networks while providing site layouts that integrate usable and attractive open spaces, site circulation, and the general wellbeing of site users. For the purposes of this chapter planned unit developments are considered the same as master plans."

This GDP is a major mixed-use development located at the north end of the Oregon City downtown in a very visible location at the confluence of two major transportation facilities. The master plan will facilitate a purposeful and efficient redevelopment of a former landfill. The master plan has been developed consistent with this purpose statement over the course of the past 11 months by a team of design professionals on behalf of the applicant to be as consistent with the requirements of the Comprehensive Plan and Development Code as practical. Compliance with OCMC chapters 12.04 16.12, 17.62 is discussed throughout this narrative. As proposed and modified through this process, future development within the master plan area can comply with OCMC and meet the approval requirements for a GDP. The proposed GDP proposes a plan to foster the growth of a mixed use community while providing long term certainty that vests the development in the 2021 Oregon City Code. Consistent with the purpose statement, the GDP also identifies all impacts related to the development and proposes a plan for mitigation of those impacts on public infrastructure.

3. *Public services for transportation, water supply, police, fire, sanitary waste disposal, storm-water disposal, and any other needed public services and facilities including schools and parks for proposed residential uses, are capable of serving the proposed development, or will be made capable by the time each phase of the development is completed.*

Response:
Public services and utilities are available to the site as demonstrated in the attached plans and reports. See **Appendix B**. The plans and reports all demonstrate that it is feasible to provide services to the development proposed in the GDP consistent with the provisions of this code, including water, sewer, stormwater and transportation services. Future detailed development plans are expected to meet the applicable standards of the 2021 Oregon City Municipal Code and the design guidelines that are included with this document are intended to supplement those regulations. The site is already served by the Oregon City Police and Fire Services. Open spaces and plazas are provided within the development for both the public and residents. Systems Development Charges are paid at the time of development to assist the community in maintaining some of these services and facilities as well. The School District will have an opportunity to provide comments on the development to speak to any capacity issues associated with the development.

4. *The proposed GDP protects any inventoried Goal 5 natural, historic or cultural resources within the proposed development boundary consistent with the provisions of applicable overlay districts.*

Response:
The GDP indicates the locations of the known natural and historic resources within the proposed development boundary and identifies the probable impacts to those resources when the plan is fully realized. Future detailed development plans are expected to meet the applicable standards of the 2021 Oregon City Municipal Code as it pertains to the protection and development of these resources. The most significant natural resource on site, Abernethy Creek, is intended to be preserved with approval of the GDP. Impacts to other resources on the west side of the development, east of Washington Street may be impacted for street improvements and other on-site development. Any impacts to those resources from future development on site will be mitigated for pursuant to the applicable chapters of this code. A final natural resources report will be submitted with each DDP to ensure that future development meets the requirements of the Natural Resources Overlay District on the property. The GDP demonstrates through its master site plan that the GDP does not preclude or prohibit future compliance with the NROD.

5. *The proposed General Development Plan, including development standards and impact mitigation thresholds and improvements, adequately mitigates identified impacts from each phase of development. For needed housing, as defined in ORS 197.303(1), the development standards and mitigation thresholds shall contain clear and objective standards.*

Response:
The GDP anticipates impacts to the public systems and the surrounding community and proposes to mitigate impacts to the transportation system through future traffic improvements that have been identified within the City's Transportation System Plan (TSP), to the utility system by making the necessary extensions to serve the site and the payment of Systems Development Charges SDC's, to the public parks system through the payment of SDC's and to surrounding properties through compliance with the applicable standards of the OCMC. The applicant is prepared to mitigate impacts associated with each detailed development plan approval consistent with the applicable provisions of the 2021 Oregon City Municipal Code. The Civil drawings in **Appendix B** illustrate the site and utility plans, which includes information from the TIA, in conformance with this requirement.

6. *The proposed General Development Plan is consistent with the Oregon City Comprehensive Plan.*

Response:
The Comprehensive Plan is adopted and acknowledged. The principles within the comprehensive plan embodied by this request include, contain urban development, promote redevelopment, protect natural resources, foster economic vitality, provide efficient and cost-effective services, and ensure a sense of history and place. These are core tenets are reflected within the proposed GDP.

The site is zoned Mixed Use Downtown (MUD) and the proposed development will develop consistent with the provisions of that district and the requirements of the OCMC except where allowed to be modified by this chapter. The community's development code is intended to implement the goals and policies of the Comprehensive Plan as it relates to the development of land. Development of this site through the master plan process will result in a compact and efficient mixed-use development within the existing urban growth boundary, served by existing or new public infrastructure. The TSP, utility master plans, and community concept plans also help to fulfill the goals and policies of the Comprehensive Plan. This master plan and the GDP has been developed considering each one of these documents and future DDP's are required to meet the same standards of those documents as they are being designed and constructed. The GDP is consistent with the applicable regulations for development as explained in this narrative.

7. The proposed General Development Plan is consistent with the underlying zoning district(s) and any applicable overlay zone or concept plans.

Response:
This proposed GDP is consistent with the underlying zoning district as well as the purpose and standards of all applicable overlay zone requirements, as shown below under the narrative response to Oregon City Municipal Code Chapter 17.34. Approval of the GDP does not permit any development on site. Future development on the site can only occur with the approval of DDP's that are consistent with the applicable provisions of the OCMC, with the GDP, and the supplemental design guidelines adopted with this plan. There are no concept plans that apply to this area. The GDP and accompanying documents have been predicated upon compliance with the 2021 Oregon City Municipal Code and include plans demonstrating the feasibility that future development under this plan can comply with the applicable requirements of these districts except where standards are allowed to be modified. There are few modifications to those standards requested with the approval of this plan. They are discussed in detail below.

8. For projects with a residential use component, the proposed General Development Plan includes common open space for the recreational needs of the development's residents.
a. Required open space shall be located either on-site or off-site within one-quarter mile of the development.
b. Minimum required open space shall be one hundred square feet per residential unit in the development.
c. The open space area may be in private ownership or proposed for public dedication, at the city's discretion whether to accept.
d. The open space shall be developed with a unified design to provide for a mix of passive and active uses. Passive uses include, but are not limited to sitting benches, picnicking, reading, bird watching and natural areas. Active uses include, but are not limited to playgrounds, sports fields and courts, running and walking areas.
e. Land area to be used for the open space area that is required in this section shall not include required setback areas, required landscaping, streets, rights-of-way, driveways, or parking spaces.
f. Unless dedicated to the public, the applicant shall also provide an irrevocable legal mechanism for the maintenance of the open space and any related landscaping and facilities. The applicant shall submit, for city review and approval, all proposed deed restrictions or other legal instruments used to reserve open space and maintenance of open space and any related landscaping and facilities.

Response:
The North End master plan does in fact include a residential component and illustrates common open spaces provided for residents of the development. As detailed development plans are prepared for the residential portions of the site, compliance with the applicable standards and supplemental design guidelines is expected by the prospective developers of those areas. This GDP illustrates that these standards can be satisfied with future development of the site consistent with this plan. The master plan will accommodate 524 residential units. Based on this number of units, the development is required to provide 52,400 square feet of open space. Within the immediate vicinity of the multi-family buildings, the plan calls for 45,600 square feet of private open space and within a quarter mile there are other on-site parks, open spaces, and public plazas. Open spaces are intended to be both passive and active. See **Chapter 4: Proposed Development** and **Chapter 5: Master Plan Design Guidelines**.

9. For projects with a residential use component, the proposed General Development Plan includes a mix of residential uses such that no single residential use exceeds seventy-five percent of the total proposed units. The mix of residential uses shall provide variety of dwelling types and sizes that are integrated throughout the site, rather than isolated from one another, with smooth transitions between residential types including appropriate setbacks, landscaping or screening as necessary, while maintaining street and pedestrian connectivity between all residential uses. Tenancy (i.e. ownership versus rental) shall not be a consideration in determination of the mix of residential use. For the purposes of this section, residential uses include single-family detached, single-family attached, duplex, 3—4 plex, and multi-family.

Response:
The proposed GDP does include a residential component and satisfies this standard through the provision of a variety of unit sizes, and entry types (i.e. ground floor walk-up, elevator for units located above elevators) within a multi-family/multistory format.

17.65.070 - Adjustments to development standards.
A. Purpose. In order to implement the purpose of the city's master plan or planned unit development process, which is to foster the growth of major institutions, major residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating their impacts on surrounding properties and public infrastructure, an applicant may request one or more adjustments to the applicable development regulations as part of the master planning or planned unit development process, and are not required to go through the variance process pursuant to OCMC Chapter 17.60.

Response:
This application for GDP approval requests four adjustments to standards listed in subsection C below that are permitted to be adjusted through the city's master plan process.

B. Procedure. Requests for adjustments shall be processed concurrently with a General Development Plan. An adjustment request at the detailed development plan review shall cause the detailed development plan to be reviewed as a Type III application.

Response:
The applicant is aware that future adjustments not identified within the GDP will be reviewed as a Type III application.

C. Regulations That May be Adjusted. Adjustments may be allowed for the following items:
1. Dimensional standards of the underlying zone of up to twenty percent, except the perimeter of the development shall meet the underlying zone's setbacks when adjacent to residentially zoned property.
2. Site plan and design standards.
3. Residential design standards.
4. Increase in allowed maximum residential density of up to ten percent.
5. Standards for land division approval.
6. Additional uses allowed with residential projects, or residential component of projects:
a. Notwithstanding the use provisions of the underlying zones, neighborhood commercial uses as defined in Chapter 17.24.020, including restaurants and eating and drinking establishments without a drive-through, retail trade, and services, are permitted on up to ten percent of the net developable area. The neighborhood commercial uses shall be planned and constructed so as to support and be compatible with the entire development and shall not alter the character of the surrounding area so as to substantially preclude, impair or limit the use of surrounding properties for the primary uses listed in the underlying district.
b. Public or private parks and playgrounds, community buildings and/or outdoor recreational facilities, such as swimming pools and tennis courts.
c. Indoor recreational facilities, such as racquetball or tennis courts, fitness centers or swimming pools.
d. Common public and private open space including trails.
e. Primary or accessory uses that are not identified as a permitted or conditional use in the underlying zone but which are defined in the code.

Response:
In preparation of the GDP and thinking forward towards implementation, the design team has identified the following four adjustments. Compliance with the approval criteria are discussed below.

1. 16.12.030 - Blocks—Width. Adjustments to the Land Division standards for approval are permitted through the master plan process under 17.65.070.C.5.
2. 17.54.100(2 and 3) - Fences, hedges, walls, and retaining walls. Adjustments to the site plan and design standards are permitted through the master plan process under 17.65.070.C.2. This would be an adjustment to a design standard that applies within to all zones within the City.
3. 17.62.055(D) - Institutional, office, multi-family, retail, and commercial building standards. Adjustments to the site plan and design standards are permitted through the master plan process under 17.65.070.C.2.
4. 17.62.050(C)(4) – General Standards. Adjustments to the site plan and design standards are permitted through the master plan process under 17.65.070.C.2.

D. Regulations That May Not be Adjusted. Adjustments are prohibited for the following items:
1. To allow a primary or accessory use that is not identified as a permitted, or conditional use in the underlying zone, with the exception of the additional uses permitted under OCMC 17.65.070.C.6 above;
2. To any regulation that contains the word "prohibited";
3. As an exception to a threshold review, such as a Type III review

process; and
4. Minimum density for residential sites may not be reduced.

Response:
None of the regulations listed above are adjusted with approval of the GDP.

E. Approval Criteria. A request for an adjustment to one or more applicable development regulations under this section shall be approved if the review body finds that the applicant has shown the following criteria to be met:
1. Granting the adjustment will equally or better meet the purpose of the regulation to be modified;

Response:
Adjustment #1
Chapter 16.12.030 - Blocks—Width states, "The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features.

All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted transportation system plan. The maximum block spacing between streets is five hundred thirty feet and the minimum block spacing between streets is one hundred fifty feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the city engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every three hundred thirty feet. The spacing standards within this section do not apply to alleys."

Although a land division is not proposed with this application, we are fairly certain that any land division of this site would not satisfy the requirement given the proposed uses within the master plan and that the master plan area will be served by a series of internal private streets as opposed to local streets.

The purpose of block length and width standards are to make a neighborhood more walkable and connected. They are intended to create neighborhoods with grid traffic patterns to make it easier to get from place to place for multiple modes of transportation and provide opportunities for additional routes throughout the City or neighborhood. Larger blocks, on the other hand discouraged because they can't adequately disperse or calm traffic. Block length standards promote connectivity to the rest of the community. The code recognizes that block length standards are not ideal in all instances as the code allows the city engineer to determine the block length in some zones within the City.

In this instance, the east side of the development includes larger format retail uses and three commercial pads greater than 100,000 square feet in size intended to serve anchor retail facilities and associated parking and circulation aisles that when or if the land is divided will likely exceed the maximum block length, width, and spacing requirements of this section. Existing development and the presence of Abernethy Creek make it difficult for the development to connect to the north and east.

However, the proposed master plan, with this adjustment equally meets the purpose of the standard in 16.12.030 by providing a continuous and well-connected multi-modal transportation system that includes private streets, sidewalks, and shared use paths to connect uses within the development as well as to the surrounding transportation system. The developer is requesting that the City defer to the layout of the general master plan and adjust these maximum standards in favor of the proposed circulation system and block width proposal.

Adjustment #2
Section 17.54.100.2 states that, "A fence, hedge, wall, located next to, or behind the forward most building, or within more than forty feet of the right-of-way, whichever is less may be up to:

a. Six feet in total height for residential properties with less than five units as measured from the finished grade at any point on the fence; or
b. Eight feet in total height for all other uses as measured from the finished grade at any point on the fence."

Section 17.54.100.3 states that, "A retaining wall or combination of a fence, hedge, wall located next to and behind the forward most building, or within more than forty feet of the right-of-way, whichever is less, may be up to (as measured from the finished grade) 8.5 feet in height from the finished grade."

This particular chapter is not provided with a purpose statement, but the chapter in general sets out the requirements for accessory structures, projections, exceptions, marijuana businesses and mobile food units, which would lead one to believe that the purpose of these standards are to regulate operations and aesthetics of particular circumstances that relate to specific uses. A wall of any height can be constructed provided it's engineered properly, but, most communities put regulations limiting the height of walls in place to discourage and break up large blank surfaces on the landscape.

Given the significant difference in height between the master plan area, the adjacent properties at the south and west property lines, and Washington Street, it may be necessary to design and construct retaining walls that are higher than 8.5 feet from finished grade.

In some instances, buildings foundations will be utilized in place of walls but that's not the case along the proposed streets and sidewalk system. For example, the difference in height between the subject property and the End of the Oregon Trail Interpretive Center is approximately 29 feet. The applicant is requesting that the City adjust this height requirement given the known grade differences. The purpose of this standard can be equally or better met through thoughtful design of those retaining walls by utilizing different colors and materials or landscaping that climb the walls. The applicant is willing to accept conditions related to the design of the walls.

Adjustment #3
Section 17.62.055.D Siting of Structures. States, "On sites with one hundred feet or more of frontage at least sixty percent of the site frontage width shall be occupied by buildings placed within five feet of the property line... Multi-family developments shall be placed no farther than twenty feet from the front property line…"

The code allows larger front yard setbacks to be approved through site plan and design review if the setback area incorporates elements such as tables, benches, art, fountains, additional landscaping, enhanced landscaping, and other elements approved by the Community Development Director that can meet the intent of the section.

The purpose statement for this section is to, "…provide a range of design choices that promote creative, functional, and cohesive development that is compatible with surrounding areas. Buildings approved in compliance with these standards are intended to serve multiple tenants over the life of the building, and are not intended for a one-time occupant. The standards encourage people to spend time in the area, which also provides safety through informal surveillance. Finally, this section is intended to promote the design of an urban environment that is built to human scale by creating buildings and streets that are attractive to pedestrians, create a sense of enclosure, provide activity and interest at the intersection of public and private spaces while also accommodating vehicular movement."

The proposed development has over one hundred feet of frontage along both Abernethy Road and Washington Street. As stated earlier, the difference in grade between the development site and the surrounding streets are significant given that this was a former land fill. The grade along Washington Street is taken up by the building foundations of the proposed parking garages beneath the multi-family housing. The setbacks proposed along Washington Street vary from 1.9 to 23 feet behind the right of way, and over 230 feet along the site's frontage along Abernethy Road. The applicant is requesting this adjustment due to the unique shape of the site and the presence of the floodplain along Abernethy Road. To the extent possible, the applicant would prefer to keep all occupied buildings outside of the floodplain. In order to accomplish this, the buildings along Abernethy Road would be replaced with surface parking. The developer is requesting that the City allow this standard to be adjusted and provide deference to the proposed layout of the GDP as currently proposed.

This adjustment will allow the development to equally meet the purpose of the regulation by providing pedestrian amenities and enhanced landscaping along Abernethy Road and Washington Street. Further, the applicant is proposing a private commercial street, ("D" Street) between the buildings and Abernethy Road and places the buildings within five feet of that proposed street. These buildings will serve multiple tenants over their lifetime by providing separate retail spaces that are daylighted below the larger retail spaces above that will front ("C Street). With retail uses fronting both private internal streets, there will be opportunities for added activity and surveillance on both sides of the retail buildings.

2 - NARRATIVE RESPONSE

Response to 17.65.070.E.1 Cont. :
Adjustment #4
Section 17.62.050.C.4 states, "Elevated external stairways or walkways shall not extend beyond the building facade except for external stairways or walkways located in, or facing interior courtyard areas that are not visible from the street or a public access easement…"

According to the code, "The purposes of site plan and design review are to: Encourage site planning in advance of construction; protect lives and property from potential adverse impacts of development; consider natural or man-made hazards which may impose limitations on development; conserve the city's natural beauty and visual character and minimize adverse impacts of development on the natural environment as much as is reasonably practicable; assure that development is supported with necessary public facilities and services; ensure that structures and other improvements are properly related to their sites and to surrounding sites and structure; and implement the city's comprehensive plan and land use regulations with respect to development standards and policies." There is not a separate purpose statement for the section proposed to be adjusted.

The applicant is requesting an adjustment to this standard to allow pedestrians to walk between the plaza area and Washington Street. Because of the grade difference in this location, it would be difficult to provide a direct pedestrian route without providing a stairwell that projects beyond the building façade. The proposed stairwell is not located in or facing an internal courtyard. The idea behind this stairwell is to provide an attractive pedestrian alternative to connect the site to development in a more direct manner. This adjustment equally meets the purpose statement of the Site Plan and Design Review Chapter by considering a man-made hazard (grade difference) between the public street and the development. It will also add visual interest and character to the site's frontage with Washington Street by providing an artistic feature that also serves a practical purpose and creative solution to pedestrian connectivity. Details of the stairwell would be provided with the appropriate DDP.

2. If more than one adjustment is being requested, the cumulative effect of the adjustments results in a project that is still consistent with the overall purpose of the zone;

Response:
More than one adjustment is being requested with this application. The cumulative effect of the adjustments continues to satisfy the overall purpose of the MUD zone by providing a high quality vibrant mixed-use development with a variety of retail and service uses on the ground floors and residential on the upper floors. It creates an urban and intense development on the west side of the development and will attract more people into downtown Oregon City with a mix of larger retail uses that tend to serve the larger reason. The site will be well connected to the community and transit through a comprehensive and circuitous circulation plan. Each of the adjustments are necessary to respond to unique and specific site conditions not typically found on other sites. The impact of the adjustments is to create that high quality walkable environment while navigating significant changes in grade.

3. City-designated Goal 5 resources are protected to the extent otherwise required by Title 17;

Response:
The proposed adjustments do not impact City-designated Goal 5 resources on the site.

4. Any impacts resulting from the adjustment are mitigated such that the development does not create significant adverse impacts on adjacent properties;

Response:
The proposed adjustments do not impact any of the adjacent properties. The site is immediately adjacent to three properties and bound by public streets and Abernethy Creek. Any impacts from the retaining wall height at the southwest edges of the master plan site, can be mitigated through selection of materials and landscaping to break up the mass of the wall, if necessary.

5. If an environmental zone, the proposal has as few significant detrimental environmental impacts on the resource and resource values as is practicable; and

Response:
Although there are environmental resources on the master plan site, none of the proposed adjustments would significantly impact those resources.

6. The proposed adjustment is consistent with the Oregon City Comprehensive Plan and a concept plan if applicable.

Response:
The subject property is not located within a concept plan and the adjustments do not affect any of the Oregon City Comprehensive Plan goals and policies which are implemented through the City's development code. As stated above, the proposed adjustments equally meet the purpose statements of the regulations that are being adjusted and satisfy the standards of the MUD zoning district. Approval of these adjustments is consistent with the land use designations for the site and do not preclude the development from meeting the applicable goals and policies of the Oregon City Comprehensive Plan.

17.65.090 - Regulations that apply.
An applicant is entitled to rely on land use regulations in effect on the date its GDP application was initially submitted, pursuant to ORS 227.178(3), as that statute may be amended from time to time. After a General Development Plan is approved, and so long as that General Development Plan is in effect, an applicant is entitled to rely on the land use regulations in effect on the date its General Development Plan application was initially submitted, as provided above, when seeking approval of detailed development plans that implement an approved General Development Plan. At its option, an applicant may request that a detailed development plan be subject to the land use regulations in effect on the date its detailed development plan is initially submitted.

Response:
Summit Development Group is formally requesting that future development within the site, including all DDPs, be vested under the applicable provisions of the 2021 Oregon City Municipal Code land use regulations with approval of the GDP. This will afford future developers and tenants within the master plan area with long term regulatory certainty and predictability.

Chapter 12.04: Streets, Sidewalks, and Public Spaces

Response:
Chapter 12.04.170 requires that all development be in conformance with the city's public facility master plans, public works policies, standard drawings, and engineering specifications. All streets must be reviewed and approved by the city engineer prior to construction and when we are connecting, if at all, to another jurisdiction's' right of way, that jurisdiction must also review the right of way as a condition of site plan or plat review, if required by code or intergovernmental agreement.

The GDP has been designed to meet the current Oregon City requirements for all adjacent public streets, sidewalks, and public spaces as found in the city's public facility plans, public works policies and engineering specifications in compliance with these criteria. The proposed street plan is illustrated within the GDP provided with this narrative in **Chapter 4: Proposed Development.**

With this approval, frontage improvements will occur along Abernethy Road and Washington Street, both of which have been designed consistent with the City/County standards as shown on the Civil Plans attached to this narrative as **Appendix B.**

Internal streets will be private and provided with public access easements to ensure that the general public has access throughout the master plan in the same manner as future residents and tenants. Internal sidewalks will be designed to meet or exceed city standards. For example, Civil Sheets C110 and C111 attached with **Appendix B** to this narrative shows the sidewalk cross sections ranging between 5 and 12 feet depending upon the street. Although the private streets proposed within the GDP vary from the typical Oregon City Street cross section, they are designed to mimic and function as public streets. Proposed features include wider sidewalks, street furniture, bulb outs at intersections, planter strips, and raised crosswalks.

There are differences in the grades between existing street frontages and the proposed development. The reclaimed landfill sits much higher than the existing streets and surrounding properties. The street network was created to navigate these grade changes and make the desired connections to adjacent streets and provide vehicular connectivity through the plan area.

The following projects are identified within the current Oregon City TSP and are proposed to be either constructed with the first phase of the GDP (**Bolded**) or in response to impacts associated with future DDP approvals. The timing of the improvements will be memorialized within a subsequent development agreement with the City or as conditions of approval to this GDP review.

2 - NARRATIVE RESPONSE

Response to Chapter 12.04 Cont. :

S44 Project
Description: Construction of a shared use path from Abernethy Road to east of the Abernethy Road-Washington Street extension. Find in TSP document (Page 90).

S5 Project
Description: Construction of a shared-use path from Abernethy Road to Clackamas River Drive. Find in TSP document (Page 87)

S2 Project
Description: Construction of a shared use path from Main Street to Redland Road. Find in TSP document (Page 87)

D63 Project
Description: Street connection from Washington Street to Abernethy Road. Find in TSP document (Page 54)

B8 Project
Description: Abernethy Road. Bike Lanes from Washington Street to Redland Rd. Find in TSP document (Page 83)

W5 Project
Description: Washington Street sidewalk infill from Washington Street to Abernethy Road. Find in TSP document (Page 55)

D79 Project (with future phases)
Description: capacity improvements at the intersection of OR 213/Redland Road. Find in TSP document (Page 78)

A Traffic Impact Analysis ("TIA") was also completed for this GDP review and is addressed in detail below. The TIA identifies all of the on-site and off-site transportation improvements that will be completed upon full buildout of this proposal.

12.04.005 - Jurisdiction and management of the public rights-of-way.
A. The City has jurisdiction and exercises regulatory management over all public rights-of-way within the City under authority of the City Charter and state law by issuing separate public works right-of-way permits or permits as part of issued public infrastructure construction plans. No work in the public right-of-way shall be done without the proper permit. Some public rights-of-way within the city are regulated by the State of Oregon Department of Transportation (ODOT) or Clackamas County and as such, any work in these streets shall conform to their respective permitting requirements.
C. The City has jurisdiction and exercises regulatory management over each public right-of-way whether the City has a fee, easement, or other legal interest in the right-of-way. The City has jurisdiction and regulatory management of each right-of-way whether the legal interest in the right-of-way was obtained by grant, dedication, prescription, reservation, condemnation, annexation, foreclosure or other means.
D. No person may occupy or encroach on a public right-of-way without the permission of the City. The City grants permission to use rights-of-way by franchises, licenses and permits.
E. The exercise of jurisdiction and regulatory management of a public right-of-way by the City is not official acceptance of the right-of-way, and does not obligate the City to maintain or repair any part of the right-of-way.

Response:
The applicant acknowledges the City permitting requirements for work in the rights-of –way. The project team will comply with OCMC standards and permitting requirements for any work or use of the right-of-way.

12.04.025 - Driveways.
Driveways shall be reviewed in accordance with OCMC 16.12.035. Driveway requirements may be modified through the procedures in OCMC 16.12.013.

Response:
The GDP provides six access locations into the site as described below. There are two proposed accesses along Abernethy Road and four new proposed driveways along Washington Street.

Proposed "Market Street" would provide access into the master plan at intersections with both Abernethy Road to the south and Washington Street to the North. Additionally, proposed 4th Street would connect to Abernethy to the east and Washington Street to the west. Proposed Market Street would satisfy the street connection called for in the Oregon City Transportation System Plan. The driveways differentiate the private street entrances from the surrounding public streets.

The applicant seeks a modification below for the limitation of one driveway per frontage under OCMC 16.12.035. A modification is requested through the process outlined in OCMC Section 16.12.013. All other aspects of the project driveways will be designed in accordance with OCMC 16.12.035.

12.04.030 - Maintenance and repair.
The owner of land abutting the street where a sidewalk has been constructed shall be responsible for maintaining said sidewalk and abutting curb, if any, in good repair.

Response:
The applicant acknowledges the requirement for maintenance and repair of sidewalks along the street frontages.

12.04.032 - Required sidewalk repair.

Response:
The applicant acknowledges the requirement for maintenance and repair of sidewalk along the street frontage.

12.04.050 - Retaining walls—Required.

Response:
The applicant acknowledges the requirement for retaining walls on private property, when necessary, to prevent soil or earth from sliding or failing into the street. Except for the retaining walls that provide the proposed pedestrian access to the End of the Oregon Trail Interpretive Center from the master plan site, all retaining walls will be constructed on the inside of a property line.

12.04.100 - Excavations—Restoration of pavement.

Response:
The applicant acknowledges the requirement to restore pavement in excavated areas of the street during construction.

12.04.120 - Obstructions—Permit required.

Response:
The applicant will obtain the appropriate permits required for permanent and temporary obstructions prior to construction activities.

12.04.150 - Street and alley vacations—Cost.

Response:
Street and alley vacations are not associated with this development. This requirement is not applicable to the GDP.

12.04.170 - Street design—Purpose and general provisions.
All development shall be in conformance with the city's public facility master plans, public works policies, standard drawings and engineering specifications. All streets shall be reviewed and approved by the city engineer prior to construction. All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Response:
The drawings associated with public street access, vehicle circulation and street frontage improvements were prepared by a professional, licensed civil engineer in compliance with City standards, except where approved as an engineering modification. See civil sheets C110 and C111 in **Appendix B** to this narrative. As stated previously the application includes a modification request to OCMC 16.12.035, which limits driveways to one per frontage. The project requests approval of two driveways along Abernethy Road and four driveways along Washington Street. That modification is discussed in detail later in this narrative. All design requirements for driveway width, spacing and sight line vision are in compliance with City standards.

12.04.270 - Standard construction specifications.
The workmanship and materials for any work performed under permits issued per this chapter shall be in accordance with the current edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City in accordance with this ordinance, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Street Standard Drawings provide other design details, in which case the

requirements of this chapter and the Public Works Street Standard Drawings shall control. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards.

Response:
The applicant acknowledges this requirement. Workmanship and materials performed under permits will comply with these specifications and standards.

Chapter 12.08: Public and Street Trees

All development shall provide street trees adjacent to all street frontages. Species and locations of trees shall be selected based upon vision clearance requirements, but shall in all cases be selected from the Oregon City Street Tree List, an approved street tree list for a jurisdiction in the metropolitan region, or be approved by a certified arborist unless otherwise approved pursuant to this section. If a setback sidewalk has already been constructed or the Public Works Department determines that the forthcoming street design shall include a setback sidewalk, then all street trees shall be installed with a planting strip or within tree wells. If existing street design includes a curb-tight sidewalk, then all street trees shall be placed according to OCMC 12.08.035.C.

Response:
The GDP includes a street plan with street trees proposed along all public and private streets within and adjacent to the development in compliance with 12.08.015. As called for in the Landscape Design Guidelines in **Chapter 5: Master Plan Design Guidelines**, street trees within Detailed Development Plans (DDP) for individual phases of development will be planted and spaced according to these provisions. Tree spacing will be evenly distributed to meet the clearance requirements of 15 feet from streetlights, 5 feet from fire hydrants, 20 feet from intersections and 5 feet from all public utilities in compliance with 12.08.015.B.

The proposed GDP Design Guidelines, included here as **Chapter 5: Master Plan Design Guidelines**, further ensures compliance with the Oregon City Municipal Code (OCMC) standards through mandatory language that requires development within the project to meet or exceed the requirements of Chapter 12.08. For example, design guideline 5 requires street trees to be planted and spaced in accordance with Chapter 12.08 and requires selected street trees to have a minimum 40 foot height and a 40-foot canopy spread at the time of planting. The Design Guidelines also require the same clearance distances be maintained when street trees are planted within the development. All the provisions of this Chapter are met or exceeded with approval of the GDP because the street plan has been designed to accommodate all of the spacing requirements upon a specific DDP application.

Chapter 13.12: Stormwater Management

13.12.050 - Applicability and exemptions.
This chapter establishes performance standards for stormwater conveyance, quantity and quality. Additional performance standards for erosion prevention and sediment control are established in OCMC 17.47.
A. Stormwater Conveyance. The stormwater conveyance requirements of this chapter shall apply to all stormwater systems constructed with any development activity, except as follows:
1. The conveyance facilities are located entirely on one privately owned parcel;
2. The conveyance facilities are privately maintained; and
3. The conveyance facilities receive no stormwater runoff from outside the parcel's property limits.
Those facilities exempted from the stormwater conveyance requirements by the above subsection will remain subject to the requirements of the Oregon Uniform Plumbing Code. Those exempted facilities shall be reviewed by the Building Official.

Response:
Stormwater generated from the developed site area in the master plan will be collected, detained, and treated consistent with the Oregon City Stormwater and Grading Design Standards. A preliminary stormwater management report was prepared by Daniel Loss, P.E., a professional and licensed engineer for the master plan development and is included as **Appendix A**. Under the master plan approval, the site's new and reconstructed impervious surfaces will be managed per the Oregon City Stormwater and Grading Design Standards dated March 2020. Because of the landfills clay cap, all new and redeveloped impervious surfaces within the master plan site will be treated by a combination of proprietary treatment systems and Low Impact Development (LID) facilities such as vegetated swales, filtration raingardens and planters.

The mechanical filters are sized for the onsite stormwater runoff. Specific details of the proposed stormwater management system and the methods utilized to design the system are laid out in detail in the Stormwater Management report, and as proposed, the stormwater system satisfies these provisions of the OCMC.

B. Water Quality and Flow Control. The water quality and flow control requirements of this chapter shall apply to the following proposed uses or developments, unless exempted under subsection C:
1. Activities located wholly or partially within water quality resource areas pursuant to OCMC 17.49 that will result in the creation of more than five hundred square feet of impervious surface within the NROD or will disturb more than one thousand square feet of existing impervious surface within the NROD as part of a commercial or industrial redevelopment project. These square footage measurements will be considered cumulative for any given five-year period; or
2. Activities that create or replace more than five thousand square feet of impervious surface, cumulated over any given five-year period.

Response:
The project is partially located within a water quality resource area and creates more than 5,000 square feet of new impervious surface. Water quality and flow control except as discussed below can be provided for portions of the site that are located within these areas with future DDP review and approval.

C. Exemptions. The following exemptions to subsection B of this section apply:
1. An exemption to the flow control requirements of this chapter will be granted when the development site discharges to the Willamette River, Clackamas River or Abernethy Creek; and either lies within the one hundred-year floodplain or is up to ten feet above the design flood elevation as defined in OCMC 17.42, provided that the following conditions are met:
a. The project site is drained by a conveyance system that is comprised entirely of manmade elements (e.g. pipes, ditches, culverts outfalls, outfall protection, etc.) and extends to the ordinary high water line of the exempt receiving water; and
b. The conveyance system between the project site and the exempt receiving water has sufficient hydraulic capacity and erosion stabilization measures to convey discharges from the proposed conditions of the project site and the existing conditions from non-project areas from which runoff is collected.
2. Projects in the following categories are generally exempt from the water quality and flow control requirements:
a. Stream enhancement or restoration projects approved by the City.
b. Farming practices as defined by ORS 30.960 and farm use as defined in ORS 214.000; except that buildings associated with farm practices and farm use are subject to the requirements of this chapter.
c. Actions by a public utility or any other governmental agency to remove or alleviate an emergency condition.
d. Road and parking area preservation/maintenance projects such as pothole and square cut patching, surface sealing, replacing or overlaying of existing asphalt or concrete pavement, provided the preservation/maintenance activity does not expand the existing area of impervious coverage above the thresholds in subsection B of this section.
e. Pedestrian and bicycle improvements (sidewalks, trails, pathways, and bicycle paths/lands) where no other impervious surfaces are created or replaced, built to direct stormwater runoff to adjacent vegetated areas.
f. Underground utility projects that replace the ground surface with in-kind material or materials with similar runoff characteristics.
g. Maintenance or repair of existing utilities.

Response:
The master plan area will discharge to all three bodies listed in this section and is located partially within the 100 – year floodplain which means that it qualifies for an exemption to the flow control requirements. The stormwater report, included as **Appendix A** to this narrative, concludes that 29.8 acres of impervious surface from the site will outfall into the Abernethy Creek tributary after being treated. The creek tributary extends approximately 520 feet south before entering joining Abernethy Creek and ultimately flowing to the Willamette River.

The existing stream channel geometry was estimated based upon available topographic survey and average stream cross sections. Using Civil Tool Pro, HHPR concluded that the Abernethy Creek tributary segment has more than sufficient capacity to convey the 10-yr storm event. Flows will remain in the existing creek channel at and downstream of the point of discharge.

2 - NARRATIVE RESPONSE

Response to 13.12.050.C Cont. :
Areas of the project contributing to the Kelly Field drainage basin will include 30.8 acre of disturbed land. The project will ultimately discharge into a 36" concrete culvert pipe. The existing 36" pipe extends west under Washington Street before out falling west to the Clackamas River delta approximately 1500 feet downstream. Current topographic survey is underway to confirm existing pipe slopes, sizes, and configuration. Downstream analysis will be conducted during individual DDP development and documented in the final stormwater report to ensure that this criterion is satisfied prior to redevelopment. However, based on the expert studies referenced above and attached as **Appendix A**, the redevelopment of the site can conform to all the water quality and flow control standards..

The stormwater report concludes that no adverse impacts to the downstream system are anticipated due to runoff from this project.

D. Uses Requiring Additional Management Practices. In addition to any other applicable requirements of this chapter, the following uses are subject to additional management practices, as defined in the Public Works Stormwater and Grading Design Standards:
1. Bulk petroleum storage facilities;
2. Above ground storage of liquid materials;
3. Solid waste storage areas, containers, and trash compactors for commercial, industrial, or multi-family uses;
4. Exterior storage of bulk construction materials;
5. Material transfer areas and loading docks;
6. Equipment and/or vehicle washing facilities;
7. Development on land with suspected or known contamination;
8. Covered vehicle parking for commercial or industrial uses;
9. Industrial or commercial uses locating in high traffic areas, defined as average daily count trip of two thousand five hundred or more trips per day; and
10. Land uses subject to DEQ 1200-Z Industrial Stormwater Permit Requirements.

Response:
The GDP lays out the general plan to develop the prior Rossman Landfill, which corresponds to items 3, 7, 8, and 9. While the stormwater report details how the project can meet the stormwater management requirements, additional management practices will be evaluated and recommended with each subsequent DDP. Future development within the master plan area for uses subject to additional management practices will provide supplemental stormwater reports to address compliance with these sections.

13.12.080 - Submittal requirements.
A. Applications subject to stormwater conveyance, water quality, and/or flow control requirements of this chapter shall prepare engineered drainage plans, drainage reports, and design flow calculation reports in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards.
B. Each project site, which may be composed of one or more contiguous parcels of land, shall have a separate valid city approved plan and report before proceeding with construction.

Response:
The application package includes a preliminary stormwater report and stormwater plan sheet, prepared by a professional, licensed civil engineer that addresses each of the factors in Subsection A above. Before proceeding with construction, a separate final report will be provided for each project. See **Appendix A.**

13.12.090 - Approval criteria for engineered drainage plans and drainage report.
An engineered drainage plan and/or drainage report shall be approved only upon making the following findings:
A. The plan and report demonstrate how the proposed development and stormwater facilities will accomplish the purpose statements of this chapter.
B. The plan and report meet the requirements of the Public Works Stormwater and Grading Design Standards adopted by resolution under OCMC 13.12.020.
C. The storm drainage design within the proposed development includes provisions to adequately control runoff from all public and private streets and roof, footing, and area drains and ensures future extension of the current drainage system.
D. Streambank erosion protection is provided where stormwater, directly or indirectly, discharges to open channels or streams.
E. Specific operation and maintenance measures are proposed that ensure that the proposed stormwater quantity control facilities will be properly operated and maintained.

Response:
The application package includes a preliminary stormwater report and stormwater plans, prepared by a professional, licensed civil engineer, in compliance with City standards. The information provided within the report demonstrates that the stormwater management design proposed with the GDP will satisfy the Public Works Stormwater and Grading Design Standards, adequately controls run-off from impervious surfaces, and prescribes improvements that will protect streambanks associated with Abernethy Creek from erosion. Specific operation and maintenance measures have been suggested and will be provided upon approval and construction of the system during review of individual DDP's.

New and constructed impervious surfaces will be managed per the Oregon City Stormwater and Grading Design Standards dated March 2020. However, the site is not able to utilize infiltration type facilities during design since the project site was once a landfill and has contaminated soils. Because infiltration would run the risk of mobilizing contaminates in the soils or groundwater, the project will be utilizing underground detention and mechanical treatment methods for stormwater disposal. Stormwater will be treated by proprietary treatment systems, vegetated swales, filtration raingardens and planters across the site. The public frontage improvements will be treated with filtration planters.

Based on the measures proposed within the report, the stormwater management plan will achieve pollutant removal to the maximum extent practicable via biofiltration designed to target pollutants expected with a commercial development. The proposed private facilities satisfy the City of Oregon City water quality and quantity requirements, and as designed, this project will not create any adverse impacts to the downstream storm system.

13.12.100 - Alternative materials, alternative design and methods of construction.
The provisions of this chapter are not intended to prevent the use of any material, alternate design or method of construction not specifically prescribed by this chapter or the Public Works Stormwater and Grading Design Standards, provided any alternate has been approved and its use authorized by the City Engineer. The City Engineer may approve any such alternate, provided that the City Engineer finds that the proposed design is satisfactory and complies with the intent of this chapter and that the material, method, or work offered is, for the purpose intended, at least the equivalent of that prescribed by this chapter in effectiveness, suitability, strength, durability and safety. The City Engineer shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use. The details of any action granting approval of an alternate shall be recorded and entered in the City files.

Response:
The applicant understands the proposal of alternative materials or methods are subject to review and authorization by the City engineer. The project proposes to employ low impact development facilities for water quality treatment and flow control across the site as previously discussed.
The civil engineer has designed the proposed stormwater system to be consistent with the Oregon City Stormwater Grading and Design Standards. Finally, the report also included an investigation of the downstream conveyance system and did not find any obstructions. Each subsequent DDP will be required to ensure that the stormwater from the development is managed consistent with the Public Works Stormwater and Grading Design Standards, reaffirm the findings of the preliminary storm report, and obtain any necessary approvals from the City Engineer prior to utilizing an alternative method or design.

13.12.110 - Transfer of engineering responsibility.
Project drainage plans shall always have a project engineer. If the project engineer is changed during the course of the work, the City shall be notified in writing and the work shall be stopped until the replacement engineer has agreed to accept the responsibilities of the project engineer. The new project engineer shall provide written notice of accepting project responsibility to the City within seventy-two hours of accepting the position as project engineer.

Response:
The drainage plan for the application was prepared by a licensed civil engineer. The applicant understands the requirements that apply should a transfer of engineering responsibility occur during construction of the project.

13.12.120 - Standard construction specifications.
The workmanship and materials shall be in accordance with the current edition of the "Standard Specifications for Public Works Construction," as prepared by

the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Stormwater and Grading Design Standards provide other design details, in which case the requirements of this chapter and the Public Works Stormwater and Grading Design Standards shall be complied with.

Response:
The project is designed to comply with City standards and specifications. During construction, workmanship and materials will be required to comply with the approved drawings demonstrating the standards and specifications.

13.12.140 - Maintenance of public stormwater facilities.
A. A stormwater facility that receives stormwater runoff from a public right-of-way shall be a public facility. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those public stormwater facilities. Access for maintenance of the stormwater facilities shall be provided to the City through the granting of a stormwater easement or other means acceptable to the City.

Response:
Public stormwater facilities are proposed with this development along Washington Street and Abernethy Road. The onsite stormwater facilities are not designed to receive water from the public right-of-way. Easements, when necessary, will be provided to the City for access maintenance to any public facility.

B. Responsibility for maintenance of stormwater facilities including all landscaping, irrigation systems, structures and appurtenances shall remain with the property owner/developer for two years (known as the warranty period). The owner/developer shall provide the City a separate two-year landscaping maintenance surety bond for one hundred ten percent of the landscaping cost. Transfer of maintenance of stormwater conveyance systems shall occur when the City accepts the stormwater conveyance system.

Response:
The applicant understands this requirement and will comply with this standard during the DDP and construction phases of the project.

C. The City will perform an inspection of the development's entire publicly maintained stormwater system approximately forty-five days before the two-year warranty period expires. The stormwater system shall be found to be in a clean, functional condition by the City engineer before acceptance of maintenance responsibility by the City.

Response:
Noted. The applicant is aware of this requirement and will comply.

13.12.145 - Maintenance of private stormwater facilities.
A. An applicant shall submit an operation and maintenance plan for each proposed stormwater facilities, unless exempted in the Public Works Stormwater and Grading Design Standards. The information in the operation and maintenance plan shall satisfy the requirements of the Public Works Stormwater and Grading Design Standards.
B. Private owners are required to inspect and maintain stormwater facilities on their property in accordance with an approved operation and maintenance plan. A maintenance log is required to document facility inspections and specific maintenance activities. The log shall be available to City inspection staff upon request.
C. Failure to operate or maintain a stormwater facility according to the operation and maintenance plan may result in an enforcement action under Section 13.12.150.

Response:
The property owner is aware of their responsibility to maintain stormwater facilities on the private property. A preliminary stormwater report is provided as **Appendix A** with this application package. The civil engineer has acknowledged this requirement within the report and it will be incumbent upon future DDP developers to provide supplemental stormwater reports consistent with the GDP stormwater plan and provide an operations and maintenance plan for their projects that are compliant with the Public Works Stormwater and Grading Design Standards.

13.12.170 - Permits from other jurisdictions.
A. The Oregon State Department of Environmental Quality (DEQ) currently issues NPDES 1200-C permits for projects that cover areas of one acre or greater. No permit shall be issued for projects of this size (or any other size as modified by DEQ) without a copy of said DEQ permit being on file with Oregon City. DEQ is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DEQ representatives.

Response:
The applicant acknowledges this requirement and each DDP is expected to comply with these standards.

B. Projects may require Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits. If such permits are required, no permission to construct will be granted until such a time as a copy of such permit is on file with the City or notice is received from those agencies that a permit is not required. DSL/USACE is responsible for enforcing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DSL/USACE representatives.

Response:
The applicant acknowledges this requirement and is in the process of reviewing the NROD designation along the northwest edge of the property through a separate Type I process with the City. No physical development is proposed with the GDP. If it is subsequently found that these permits are needed during design of individual DDP's, the applicant and subsequent developers within the master plan will comply.

C. Projects may require Oregon State Department of Fish and Wildlife (ODFW) permits. When ODFW permits are required, no work will be authorized until the receipt of a copy of the ODFW permit. ODFW is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate ODFW representatives.

Response:
To the applicant's knowledge, this requirement is not applicable to the GDP or any subsequent DDP. If it is subsequently found that review by the Oregon State Department of Fish and Wildlife is warranted during design of individual DDP's, the applicant and subsequent developers within the master plan will comply.

Chapter 15.48: Grading, Filling and Excavating

15.48.030 Applicability—Grading permit required.
A. A city-issued grading permit shall be required before the commencement of any of the following filling or grading activities:
1. Grading activities in excess of ten cubic yards of earth;
2. Grading activities which may result in the diversion of existing drainage courses, both natural and man-made, from their natural point of entry or exit from the grading site;
3. Grading and paving activities resulting in the creation of impervious surfaces greater than two thousand square feet or more in area;
4. Any excavation beyond the limits of a basement or footing excavation, having an unsupported soil height greater than five feet after the completion of such a structure; or
5. Grading activities involving the clearing or disturbance of one-half acres (twenty-one thousand seven hundred eighty square feet) or more of land.

Response:
Grading for the site will be required. On-site grading within The North End master plan is complicated by the presence of the clay soil cap that's used in the landfill reclamation. The project team includes Ryan Lawrence, a geotechnical engineer with NV-5; Eric Aronson, an environmental consultant and hydrogeologist with Aronson Environmental which is responsible for overseeing the Rossman Landfill remediation plan; and Daniel Loss, a professional licensed Civil Engineer. Each one of these professionals have been employed to consult on all grading and development activity that is planned to occur within the overall master plan and make informed decisions about the methods and designs that are to be employed during those activities to ensure that the integrity of the clay cap is not compromised.

Preliminary grading plans are provided within the civil plan set to comply with the applicable provisions of the Oregon City Municipal Code related to grading. See sheets C300-C307 in **Appendix B**. Preliminary and final grading plans will be provided with individual DDP's. The first DDP will be applied for once the GDP is approved and is expected to include mass grading of the site,

2 - NARRATIVE RESPONSE

Response to 15.48.030 Cont. :
for the purposes of installing internal streets, utilities, and frontage improvements along Washington Street and Abernethy road. The preliminary grading plans have been prepared in accordance with this chapter and the applicant acknowledges that no grading can occur on site until the City reviews and approves a specific mass grading permit.

15.48.040 - Grading permit exemptions.
The following filling and grading activities shall not require the issuance of a grading permit:
A. Excavation for utilities, or for wells or tunnels allowed under separate permit by other governmental agencies;
B. An excavation below finished grade for basements and footings of a building, retaining wall or other structure authorized by a valid building permit. The placement of any fill material removed from such an excavation requires a grading permit if:
1. It exceeds fifty cubic yards,
2. More than ten cubic yards are removed from the site, or
3. The fill is placed on the site to a depth greater than one foot;
C. Farming practices as defined in ORS 30.930 and farm uses as defined in ORS 215.203, except that buildings associated with farm practices and farm uses are subject to the requirements of this chapter;
D. Excavation for cemetery graves;
E. Sandbagging, diking, ditching, filling or similar work when done to protect life or property during an emergency;
F. Repaving of existing paved surfaces that does not alter existing drainage patterns;
G. Maintenance work on public roads performed under the direction of the city, Clackamas County or Oregon State Department of Transportation personnel.

Response:
The applicant acknowledges the grading permit exemptions listed above. However, a grading permit is required per the requirements established in OMC 15.48.030. The exceptions listed above are not applicable to the project.

15.48.090 Submittal requirements.
An engineered grading plan or an abbreviated grading plan shall be prepared in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards whenever a city approved grading permit is required. In addition, a geotechnical engineering report and/or residential lot grading plan may be required pursuant to the criteria listed below.
A. Abbreviated Grading Plan. The city shall allow the applicant to submit an abbreviated grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards if the following criteria are met:
1. No portion of the proposed site is within the flood management area overlay district pursuant to Chapter 17.42, the unstable soils and hillside constraints overlay district pursuant to Chapter 17.44, or a water quality resource area pursuant to Chapter 17.49; and
2. The proposed filling or grading activity does not involve more than fifty cubic yards of earth.
B. Engineered Grading Plan. The city shall require an engineered grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer if the proposed activities do not qualify for abbreviated grading plan.
C. Geotechnical Engineering Report. The city shall require a geotechnical engineering report in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer who specializes in geotechnical work when any of the following site conditions may exist in the development area:
1. When any publicly maintained facility (structure, street, pond, utility, park, etc.) will be supported by any engineered fill;
2. When an embankment for a stormwater pond is created by the placement of fill;
3. When, by excavation, the soils remaining in place are greater than three feet high and less than twenty feet wide.
D .Residential Lot Grading Plan. The city shall require a residential lot grading plan in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer for all land divisions creating new residential building lots or where a public improvement project is required to provide access to an existing residential lot.

Response:
Given the size of the site, the proposal will exceed the thresholds for an Abbreviated Grading Plan as established in OMC 15.48.090.A. As such, the applicant has prepared an Engineered Grading Plan that is included in the attached plan set as sheets C300 through C307 in **Appendix B**. Further, a geotechnical report meeting the standards above has been prepared for the site and is included as **Appendix D**. Approval of the current GDP will not result in the creation of any new residential lots or provide access to an existing residential lot; For this reason, the application does not include a Residential Lot Grading Plan.

Chapter 16.08: Land Divisions Process and Standards

Response:
Since no land divisions are proposed with approval of the GDP this chapter is not applicable. However, the applicant does acknowledge that a land division may be required to divide the portion of the site subject to maximum height requirements adjacent to the End of the Oregon Trail Interpretive Center from the rest of the site, and expects that future tenants may want to further divide the land to ensure that their assets and lease areas are located on separate lots. Further, it is recognized that the block length standards of 530 feet required within Chapter 16.12 will be difficult to comply with given the proposed programming within North End master plan. A modification to block length standards is requested with the GDP and is discussed in Chapter 17.65.070 below. All other provisions of the land division standards will be addressed and satisfied upon future land divisions within the master plan area. The site size and configuration of uses in the GDP does not preclude or prohibit compliance with any future application of the land division standards.

Chapter 16.12: Minimum Public Improvements and Design Standards

16.12.010 - Purpose and general provisions.
All development shall be in conformance with the policies and design standards established by this chapter and with applicable standards in the City's public facility master plans and City design standards and specifications. In reviewing applications for development, the City Engineer shall take into consideration any approved development and the remaining development potential of adjacent properties. All street, water, sanitary sewer, storm drainage and utility plans associated with any development shall be reviewed and approved by the City Engineer prior to construction. All streets, driveways or storm drainage connections to another jurisdiction's facility or right-of-way shall be reviewed by the appropriate jurisdiction as a condition of the preliminary plat and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Response:
All street, water, sanitary sewer, storm drainage and utility plans associated with any development will be specifically reviewed and approved by the City Engineer prior to construction and subsequent to approval of a DDP. The proposed GDP includes a street network that conforms with the City's street standards for both the internal street network as well as the adjacent and surrounding street system. **Appendix B** includes the proposed street design and the related cross sections demonstrating that the proposed street system meets the City's design standards except where modification is requested under this GDP proposal. The proposed water, sanitary sewer, storm drainage and utility plans are also included in the **Appendix B** of the GDP proposal. These exhibits demonstrate that any of the proposed development in the GDP can satisfy the respective design standards for that utility at the time a DDP application is submitted for review and approval.

16.12.011 - Applicability.
A. Compliance with this chapter is required for all development including land divisions, site plan and design review, master plan, detailed development plan and conditional use applications and all public improvements. Minor Site Plan and Design Review applications shall not be subject to this chapter unless improvements are proposed within the right-of-way, or as otherwise provided in this chapter.
B. Compliance with this chapter is also required for new construction or additions which exceed fifty percent of the existing square footage of all 3-4 plexes, single and two-family dwellings living space. Garages, carports, sheds, and porches may not be included in the calculation if these spaces are not living spaces. Accessory dwelling units are not subject to compliance with this chapter. All applicable 3-4 plexes, single and two -family dwellings shall provide any necessary dedications, easements or agreements as identified in the transportation system plan and this chapter, subject to constitutional limitations. In addition, the street frontage shall be improved to include the following priorities for improvements:
1. Improve street pavement, construct curbs, gutters, sidewalks and planter strips; and
2. Plant street trees.
The cost of compliance with the standards identified in 16.12.011.B.1 and

16.12.011.B.2 is calculated based on the square footage valuation from the State of Oregon Building Codes Division and limited to ten percent of the total construction costs. The value of the alterations and improvements is based on the total construction costs for a complete project rather than costs of various project component parts subject to individual building permits. The entire proposed construction project cost includes engineering and consulting fees and construction costs. It does not include permit fees, recording fees, or any work associated with drafting or recording dedications or easements.

Response:
The proposal is for a GDP. Therefore, consistent with 16.12.011.A above, Chapter 16.12 applies to the proposed development. The following narrative and appendices demonstrate that the GDP is compliant with the Minimum Public Improvements and Design Standards.

16.12.012 - Jurisdiction and management of the public rights-of-way.
The City has jurisdiction and exercises regulatory management over all public rights-of-way as defined and outlined within 12.04 of the Oregon City Municipal Code.

Response:
The applicant acknowledges that Oregon City has jurisdiction and exercises regulatory management over all public rights-of-way as defined and outlined in Chapter 12.04 of the Oregon City Municipal Code. The development site fronts three public streets: Washington Street, Abernethy Road, and Redland Road. All required/proposed improvements for these frontages have been coordinated with Oregon City and the applicant and the proposed upgrades to these adjacent rights of way have been included in the TIA.

16.12.013 - Modifications.
The applicant may request and the review body may consider modification of the standards in this chapter resulting from constitutional limitations restricting the City's ability to require the dedication of property or for any other reason, based upon the criteria listed below and other criteria identified in the standard to be modified. All modifications, except for adjustments approved by the City Engineer for tree preservation purposes pursuant to 16.12.013.A, shall be processed through a Type II Land Use application and may require additional evidence from a transportation engineer or others to verify compliance. Compliance with the following criteria is required:

Response:
The GDP requires one modification to the engineering standards of Subsection 16.12 as explained below:

1. OCMC 16.12.035.C. The standards of this section limit properties to one driveway per street frontage. The project requests approval of four driveway access points along Washington Street and two driveway access points along Abernethy Road.

A. The modification meets the intent of the standard;

Response:
The site is approximately 62 acres in size and includes approximately 1,091,698 square feet of new commercial, retail, entertainment, and residential uses. Driveway access, under the provisions of 16.12.035.C is limited to reduce conflicts with the traveling public along streets and to ensure adequate space for street improvements including curbs, gutters, sidewalks, planter strips and street trees.

The project proposes four driveways along the Washington Street frontage and two additional driveways along the Abernethy Road frontage. There is approximately 1,344 lineal feet of street frontage along Washington Street and approximately 1,320 lineal feet of frontage along Abernethy Road. According to the TIA provided with this application as **Appendix C**, Washington Street and Abernethy Road are both classified as a Minor Arterial. Section 12.04.195 of the Oregon City Municipal Code requires that the minimum driveway spacing along a Minor Arterial is 175 feet. As proposed within the GDP, the three new site accesses proposed along Washington Street will be positioned at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection. Accordingly, the access spacing proposed within the GDP will comply with the access spacing requirements of the Oregon City Municipal Code. The additional driveways do not hinder the installation of priority street improvements, such as street trees, lighting and sidewalks. This request is consistent with the intent of the driveway standards.

B. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Response:
The proposed driveways are located along Washington Street and Abernethy Road. The site has a significant amount of frontage along these rights-of-way. The additional driveways exceed the access spacing requirements of the OCMC for streets classified as "minor arterials" in the Oregon City Transportation System Plan (TSP) as described above. Accordingly, the additional driveways will not affect the safety of pedestrians along the right-of-way. The driveways are shown on the Civil Site Plan sheets C200 to C207 of the Civil Plans provided in **Appendix B**. Site driveways have been located on the site and designed to meet all City requirements for sight distance, driveway spacing, and appropriate traffic control.

C. The modification is consistent with an adopted transportation or utility plan; and

Response:
Table 16.12.035.A identifies 175 feet as the minimum driveway spacing standard for a minor arterial. As discussed previously, three new site accesses are proposed along Washington Street at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection.

The driveway approaches are identified in Table 16.12.035.D and require the approaches be a minimum width of 20 feet for two way traffic and a maximum width of 40 feet for commercial and mixed uses. The proposed driveways are compliant with the minimum and maximum driveway widths established in the plan as illustrated in the civil plans (Sheets C200 through C207).

D. The modification is complementary with a surrounding street design; or, in the alternative;

Response:
The additional driveways proposed for the development are complementary to the surrounding street design because the driveways are spaced more than 175 feet apart and located to facilitate safe connections to the surrounding streets and make circulation in and around the master plan area more efficient. Because of the large size of the site and the need to create multiple connections within the site as well as connections to the existing street grid external to the site, the driveways have been placed to maximize pedestrian, vehicle and bicycle connections as well as presenting a design that permits a coherent design for all of the related frontage and sidewalk improvements.

E. If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Response:
The modifications are not being requested for constitutional reasons; therefore, this criterion is not applicable to the proposed GDP.

16.12.015 - Street design—Generally.
Development shall be required to provide existing or future connections to adjacent sites through the use of vehicular and pedestrian access easements where applicable. Development shall provide any necessary dedications, easements or agreements as identified in the Transportation System Plan, Trails Master Plan, and/or Parks and Recreation Master Plan and this chapter, subject to constitutional limitations. The location, width and grade of street shall be considered in relation to: existing and planned streets, topographical conditions, public convenience and safety for all modes of travel, existing and identified future transit routes and pedestrian/bicycle accessways, overlay districts, and the proposed use of land to be served by the streets. The street system shall assure an adequate traffic circulation system with intersection angles, grades, tangents and curves appropriate for the traffic to be carried considering the terrain. To the extent possible, proposed streets shall connect to all existing or approved stub streets that abut the development site. The arrangement of streets shall either:

2 - NARRATIVE RESPONSE

A. Provide for the continuation or appropriate projection of existing principal streets in the surrounding area and on adjacent parcels or conform to a plan for the area approved or adopted by the City to meet a particular situation where topographical or other conditions make continuance or conformance to existing streets impractical;
B. Where necessary to give access to or permit a satisfactory future development of adjoining land, streets shall be extended to the boundary of the development and the resulting dead-end street (stub) may be approved with a temporary turnaround as approved by the City Engineer. Notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. Access control in accordance with OCMC 16.12.017 shall be required to preserve the objectives of street extensions.
C. Adequate right-of-way and improvements to streets, pedestrian ways, bike routes and bikeways, and transit facilities shall be provided and be consistent with the City's Transportation System Plan. Consideration shall be given to the need for street widening and other improvements in the area of the proposed development impacted by traffic generated by the proposed development. This shall include, but not be limited to, improvements to the right-of-way, such as installation of lighting, signalization, turn lanes, median and parking strips, traffic islands, paving, curbs and gutters, sidewalks, bikeways, street drainage facilities and other facilities needed because of anticipated vehicular and pedestrian traffic generation.

Response:
The development site fronts three public streets, Washington Street, Abernethy Road, and Redland Road. The arrangement of these streets and their respective intersections is not proposed to change, nor is their location or grade. Frontage improvements have been coordinated with the Oregon City Engineering Division and are consistent with the requirements within the OCMC as discussed below. In addition, the proposed GDP approval proposes to construct seven projects identified within the TSP as discussed on pages 11 and 12 of this narrative. Those improvements will be constructed with the appropriate phase of development. Required right-of-way and easements will be dedicated or provided with each of those proposed improvements.

Based on the TIA completed for the project, the following improvements will be constructed adjacent to and through the site:

Frontage improvements proposed along Washington Street will consist of the required half-street improvements, per the City's Minor Arterial street design standards. This will include additional pavement width, where needed, to support the transition of the roadway from five lanes to three lanes southbound, including the extension of a continuous left-turn lane. Frontage improvements will also support respective bike lanes, planter strip and sidewalk treatments as required by the City's design standards, and on-street parking where required by the City Engineer.

Frontage improvements proposed along Abernethy Road will consist of the required half-street improvements consistent with the City's Minor Arterial street design standards. This will include additional pavement width, where needed, to support the existing three-lane cross-section with a continuous left-turn lane. Frontage improvements will also support respective bike lanes, planter strip and sidewalk treatments as required by the City's design standards, and on-street parking where required by the City Engineer.

A new collector-level street will extend through the site, starting from the current street terminus just south of the signalized Washington Street/Home Depot access intersection and include bike lanes and a shared-use facility, per the City's TSP.

A second shared-use facility will be constructed on the site, per the City's TSP. The two shared-use facilities will be fully interconnected with a system of pedestrian facilities that extend to every building, pedestrian plaza, and other pedestrian destination on the site.

The master plan envisions a total of six external site access points. These accesses, including proposed traffic control measures are as follows:

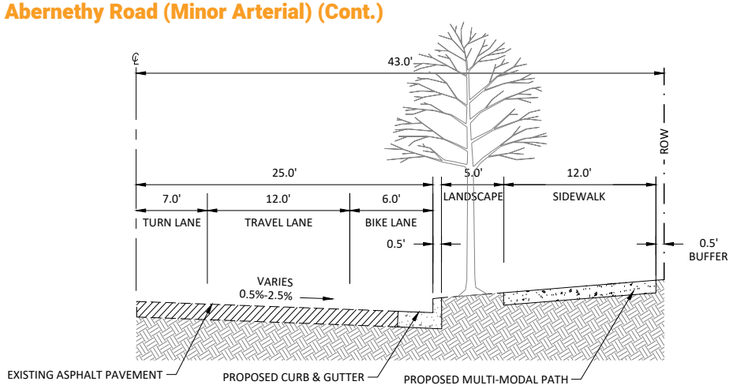
- Washington St./Home Depot-Site Access "A": Existing access with no proposed changes.
- Washington St./Site Access "B": This is a new private driveway leading into a parking structure. Improvements include stop-control on the minor approach, with a single egress lane for shared left- and right-turn movements. This access will rely on the presence of a continuous left-turn lane on Washington Street to allow for left-turn ingress.
- Washington St./Site Access "C": This access is identical to Site Access "B".
- Washington St./Site Access "D": This is a new private street connection leading into the site. Improvements include stop-control on the minor approach, with separate left- and right-turn egress lanes. This access will rely on the presence of a continuous left-turn lane on Washington Street to allow for left-turn ingress.
- Abernethy Rd./Site Access "E": This is a new private street connection leading into the site. Improvements include stop-control on the minor approach, with a single egress lane for shared left- and right-turn movements. This access will rely on the presence of a continuous left-turn lane on Abernethy Road to allow for left-turn ingress.
- Abernethy Rd./Site Access "F": This is part of the new collector-level street leading into the site. Improvements include signalization, with separate left- and right-turn egress lanes. This access will rely on a left-turn lane on Abernethy Road to allow for left-turn ingress. Improvements also include the construction of a westbound right-turn lane from Abernethy into the site.

With these improvements, the GDP conforms to these approval criteria.

16.12.016 - Street design.
All development regulated by this chapter shall provide street improvements in compliance with the standards in Table 16.12.016 depending on the street classification set forth in the Transportation System Plan and the Comprehensive Plan designation of the adjacent property, unless an alternative plan has been adopted. The table implements the adopted Transportation System Plan and illustrates the maximum design standards. These standards may be reduced with an alternative street design which may be approved based on the modification criteria in OCMC 16.12.013. The steps for reducing the street design are found in the Transportation System Plan.

Response:
Alternative street plans that were different from table 16.12.016 were provided by City Staff at the pre-application conference and the proposed street sections have been discussed over the course of the last year. The development site fronts three public roadways: Washington Street, Abernethy Road, and Redland Road. Access into and out of the site are proposed along Washington Street and Abernethy Road. Frontage improvements along Redland Road are not proposed with the General Development Plan. Washington Street and Abernethy Road are both classified as Minor Arterials in the Oregon City TSP. All internal streets are proposed to be private. Below, is an analysis of the proposed street sections.

Abernethy Road (Minor Arterial)
Abernethy Road is a Clackamas County Facility. Along Abernethy Road, there is a 400-foot section of sidewalk that extends west along the site frontage from the signalized intersection and crosswalks at Redland Road, with the remaining property frontage having no sidewalk. Further west beyond the site frontage, sidewalk is lacking for most of the distance to the next traffic signal at Washington Street. According to Oregon City Staff, the maximum street section that the City may require is as follows:



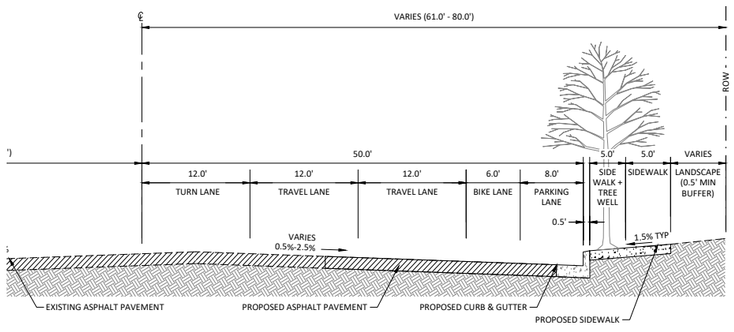
Maximum Street Section city code may require on the development's side of centerline

Road Classification	Zoning	R.O.W. width	Road Width	Public Access	Sidewalk	Landscape Strip & Curb	Bike Lane	Street parking	Travel Lanes	Median
Minor Arterial	MUD	58'	47'	0.5'	10'	0.5' (5'x5' tree wells within sidewalk)	6'	8'	(2.5) 12'	6'

The project proposes to construct ½ street improvements that exceed what the City may require along Abernethy Road within 43 feet of right of way from the centerline. Right of way improvements include a 7-foot turn lane, a 12-foot travel lane, a 6-foot bike lane, curb, a 5-foot landscape strip a 12-foot sidewalk and .5 feet of buffer behind the edge of sidewalk. All the proposed improvements will be located within a 43-foot-wide half street right of way and meet or exceed the City's requirements for ½ Street improvements along Abernethy Road.

2 - NARRATIVE RESPONSE

Abernethy Road (Minor Arterial) (Cont.)



Washington Street (Minor Arterial)

Washington Street is a City owned and managed facility but is also classified as a Minor Arterial. The portion of the development site fronting Washington Street does not include any curb, gutter, planter strips, or street trees. It is paved and improved with a separated, meandering, and narrow sidewalk for pedestrians. According to City staff, the maximum street section that the City may require is as follows:

Maximum Street Section city code may require on the development's side of centerline

Road Classification	Zoning	R.O.W. width	Road Width	Public Access	Sidewalk	Landscape Strip & Curb	Bike Lane	Street parking	Travel Lanes	Median
Minor Arterial	MUD	58'	47'	0.5'	10'	0.5' (5'x5' tree wells within sidewalk)	6'	8'	(2.5) 12'	6'

As proposed and illustrated below, Washington Street is proposed to be constructed ½ street improvements including a 12-foot turn lane, two 12-foot travel lanes, a 6-foot wide bike lane, an 8-foot wide parking lane, curb, a 5-foot planter strip, a 5 foot sidewalk, and a varying width landscape buffer within a right of way that varies between 61 and 80 feet. Additional right of way dedications and easements will be provided where necessary. The proposed ½ street section was confirmed by City staff prior to being designed.

Redland Road (Minor Arterial)

Redland Road is also classified as a Minor Arterial but is an ODOT owned facility and does not currently include any frontage improvements for cyclists or pedestrians. The applicant is not proposing direct access onto Redland Road. The TIA suggests improvements at the intersection of OR213/Redland Road and at Abernethy Road/Redland Road based on the analysis performed. The future improvements will likely be required through conditions of approval on individual DDP's that trigger the improvements.

Market Street

All internal streets, including "Market Street" are proposed to be constructed as private facilities within public access easements overlaid. "Market Street" is expected to function like a Collector Street. As proposed, the "Market Street" improvements will vary through the development as illustrated below. Right of way width will vary between 64 and 80 feet. Section 1 detail begins at the north end of the site where the street will tie in with the existing street improvements adjacent to The Home Depot. Section 2 runs through the middle of the site and Section 3 runs between proposed "4th Street" along the sites shared property line with the End of the Oregon Trail Interpretive Center to Abernethy road. In all three sections, travel and turn lanes are proposed to be 12 feet wide, bike lanes, where provided will be constructed on both sides of the street and be a minimum of 6 feet wide. Where provided parking lanes will be 8 feet wide, sidewalks and landscaping will vary.

Within Section 1, the landscaping and street trees will be located within an area that is 13.5 feet behind the edge of sidewalk. In Sections 2 and 3, the proposed sidewalks vary between 11 and 13 feet with 5-foot tree wells. Section 2, the portion of the street that runs through the heart of the development, is provided with parking and bike lanes on both sides of the street.

Other interior streets vary based on function and location within the development. They are still private but intend to be like local streets within a minimum right of way width of 64 feet. The specific private street sections are provided in Sheets C110 and C111 of the Civil Plan set located in **Appendix B** to this application.

A. Sidewalks. The applicant shall provide for sidewalks on both sides of all public streets, on any private street if so required by the decision-maker, and in any special pedestrian way within the development. Both sidewalks and curbs are to be constructed to City standards and at widths set forth above, and according to plans and specifications provided by the City Engineer. Exceptions to this requirement may be allowed in order to accommodate topography, trees or some similar site constraint. In the case of major or minor arterials, the decision-maker may approve a development without sidewalks where sidewalks are found to be dangerous or otherwise impractical to construct or are not reasonably related to the applicant's development. The decision-maker may require the applicant to provide sidewalks concurrent with the issuance of the initial building permit within the area that is the subject of the development application. Applicants for partitions may be allowed to meet this requirement by providing the City with a financial guarantee per OCMC 16.12.110.

Response:

The applicant proposes the installation new sidewalks on both sides of all new private streets that are interior to the development and along the frontages of Washington Street and Abernethy Road where ½ street improvements have been proposed. There are no sidewalk improvements along either side of Redland Road, presumably because it does not include any access or development immediately adjacent to the facility. The proposed sidewalk improvements will be constructed to City standards and are illustrated in the civil plans attached to this application as **Appendix B**.

B. Pedestrian and Bicycle Accessways Routes. If deemed appropriate to extend pedestrian and bicycle routes, existing or planned, the decision-maker may require the installation of separate pedestrian and bicycle facilities.

Response:

Bike and Pedestrian routes are identified throughout the development and along the site's frontage with Washington Street and Abernethy Road as illustrated in sheets C110 and C111 of the civil plans attached to this application as **Appendix B**. All other bike lanes and pedestrian access routes are identified **Chapter 4: Proposed Development**.

C. Street Name Signs and Traffic Control Devices. The applicant shall install street signs and traffic control devices as directed by the City Engineer. Street name signs and traffic control devices shall be in conformance with all applicable city regulations and standards.

Response:

Street names for the GDP are only for reference. Street names that honor the history of Oregon City will be selected at a later date. There are no proposed changes to the existing street name signs or traffic control devices. The applicant acknowledges that new signage and traffic control devices will be warranted based on the impacts of additional traffic generated from development of the site and consistent with the TIA. All future street name signs and traffic control devices warranted by the TIA will be consistent with applicable city regulations and standards and subject to approval by the City engineer at the time of DDP review and approval.

D. Street Lights. The applicant shall install street lights which shall be served from an underground source of supply. Street lights shall be in conformance with all City regulations.

Response:

This is an application for approval of the GDP. No actual physical improvements will be constructed with approval of this request. The applicant is aware of the requirements to install street lights consistent with City regulations. Future applications for DDP approval will be accompanied by formal street lighting plans consistent with these provisions.

2 - NARRATIVE RESPONSE

E. Any new street proposed with a pavement width of less than thirty-two feet shall be processed through OCMC 16.12.013 and meet minimum life safety requirements, which may include fire suppression devices as determined by the Fire Marshall to assure an adequate level of fire and life safety. The modified street shall have no less than a twenty-foot wide unobstructed travel lane.

Response:
None of the streets within the proposed GDP include a pavement width of less than thirty-two feet. Therefore, this criterion is not applicable to the proposal.

F. All development shall include vegetated planter strips that are five feet in width or larger and located between the sidewalk and curb unless otherwise approved pursuant to this chapter. All development shall utilize the vegetated planter strip for the placement of street trees or place street trees in other acceptable locations, as prescribed by OCMC 12.08. Development proposed along a collector, minor arterial, or major arterial roads may place street trees within tree wells within a wider sidewalk in lieu of a planter strip. In addition to street trees per OCMC 12.08, vegetated planter strips shall include ground cover and/or shrubs spaced four feet apart and appropriate for the location. No invasive or nuisance plant species shall be permitted.

Response:
Alternative Street plans were provided by staff for the public street improvements and all internal streets are proposed to be private. Vegetated planter strips are provided between the sidewalk and curb or behind the sidewalk when matching an existing public street section. Interior to the site, street trees are provided along all newly proposed streets adjacent to or within the development. Washington Street and Abernethy Road are classified as minor arterials within the Oregon City TSP.

For Abernethy Road, a five-foot-wide vegetated planter strip is located between the curb and sidewalk. Along Washington Street, the vegetated planter strip varies in width and is located behind the sidewalk. In this case, street trees are provided within 5-foot tree wells. Section 1 of "Market Street" includes vegetated planter strips and street trees behind the sidewalk. Along all other interior streets, five-foot-wide tree wells are provided to allow for more active and wider sidewalks. Street trees are not proposed along the site's frontage with Redland Road as this is an ODOT facility, and it does not appear that there would be room to widen the right-of-way without impacting the Abernethy Creek NROD. Further, the proposed master plan does not propose any direct access or improvements to Redland Road or Hwy 213.

G. Vehicle and pedestrian access easements may serve in lieu of streets when approved by the decision maker and only where dedication of a street is deemed impracticable.

Response:
The GDP includes a street plan and does not require vehicle and pedestrian access easements in lieu of street dedication. New private streets along with primary and secondary pedestrian access routes are provided through the site to meet provisions of the TSP. The applicant will dedicate required right-of-way when the GDP is approved and after completing the proposed ½ street improvements to the adjacent rights of way.

H. Vehicular and pedestrian easements shall allow for public access and shall comply with all applicable pedestrian access requirements.

Response:
All proposed private streets and pedestrian ways included within this development will be provided with pedestrian access easements to the public. These connections will provide access into and out of the site from one of proposed driveways and include sidewalks that connect at those same locations. There are other pedestrian locations proposed along both Abernethy Road and Washington street that are separated from the streets. See the civil site plan (Sheets C200 thru C207) in **Appendix B**.

16.12.017 - Street design—Access control.
A. A street which is dedicated to end at the boundary of the development or in the case of half-streets dedicated along a boundary shall have an access control granted to the City as a City controlled plat restriction for the purposes of controlling ingress and egress to the property adjacent to the end of the dedicated street. The access control restriction shall exist until such time as a public street is created, by dedication and accepted, extending the street to the adjacent property.

Response:
The street plan and improvements associated with the street network will require dedications along Washington Street and Abernethy Road. Each of these dedications will be provided to the City under this standard and concurrently with each DDP that triggers that frontage improvement and related dedication.

B. The City may grant a permit for the adjoining owner to access through the access control.

Response:
The applicant is aware of this requirement. The development site is surrounded by right-of-way on three sides. The proposed GDP provides for pedestrian connections throughout the site, to the End of the Oregon Trail Interpretive Center, and to adjacent public rights-of-way; If it is subsequently determined that an adjacent owner requires access for a legitimate purpose, the applicant will comply with this standard.

C. The plat shall contain the following access control language or similar on the face of the map at the end of each street for which access control is required: "Access Control (See plat restrictions)."

Response:
This proposal is for the approval of the GDP. No land division is proposed with this application. Therefore, this standard does not apply.

D. Said plats shall also contain the following plat restriction note(s): "Access to (name of street or tract) from adjoining tracts (name of deed document number[s]) shall be controlled by the City of Oregon City by the recording of this plat, as shown. These access controls shall be automatically terminated upon the acceptance of a public road dedication or the recording of a plat extending the street to adjacent property that would access through those Access Controls."

Response:
This proposal is for the approval of the GDP. No land division is proposed with this application. Therefore, this standard does not apply.

16.12.018 - Street design—Alignment.
The centerline of streets shall be:
A. Aligned with existing streets by continuation of the centerlines; or
B. Offset from the centerline by no more than five feet, provided appropriate mitigation, in the judgment of the City Engineer, is provided to ensure that the offset intersection will not pose a safety hazard.
C. Driveways that are at least twenty-four feet wide shall align with existing or planned streets on adjacent sites.

Response:
The civil plans attached as **Appendix B**, have been designed to this standard. The location where this standard is triggered is at the continuation of "Market Street" from the Home Depot access road. The proposed private street into the site will match that centerline.

16.12.019 - Traffic sight obstructions.
All new streets shall comply with the Traffic Sight Obstructions in Chapter 10.32.

Response:
The sight line standards established in OMC 10.32.030 state that:
"A clear vision area shall contain no vegetation or fences or other artificial obstruction exceeding three feet in height measured from the top of the curb or, where no curb exists, from the established street center line grade, except that trees exceeding this height may be located in this area provided all branches and foliage are removed to a height of eight feet above the grade."

Currently, there is not a formal landscape plan provided with this application. The applicant and design team are aware of these requirements and are not proposing any obstructions (such as fences) within the sight lines of the accesses for those entering or exiting the public right-of-way. Future DDP's are expected to satisfy these standards with their submittal. The applicant is aware of their obligation to maintain sightline visibility.

16.12.020 - Street design—Intersection angles.
Except where topography requires a lesser angle, streets shall be laid out to intersect at angles as near as possible to right angles. In no case shall the acute angles be less than eighty degrees unless there is a special intersection design. An arterial or collector street intersecting with another street shall have at least one hundred feet of tangent adjacent to the intersection unless

2 - NARRATIVE RESPONSE

topography requires a lesser distance. Other streets, except alleys, shall have at least fifty feet of tangent adjacent to the intersection unless topography requires a lesser distance. All street intersections shall be provided with a minimum curb return radius of twenty-five feet for local streets. Larger radii shall be required for higher street classifications as determined by the City Engineer. Additional right-of-way shall be required to accommodate curb returns and sidewalks at intersections. Ordinarily, intersections should not have more than two streets at any one point.

Response:
All proposed intersections have been designed to intersect at a right angle to other streets as illustrated in the civil plan sheets C200 through C207 within **Appendix B** to this application. Intersection angles to the public right-of-way were designed to be at 90 degrees except for the connection to Washington Street which is at an existing angle of 82 degrees. There is more than 100 feet of tangent at all intersections to the public right-of-way. A minimum of 25-foot curb return is proposed to be provided at all intersections to the public right-of-way.

16.12.021 - Street design—Grades and curves.
Grades and center line radii shall conform to standards approved by the City Engineer.

Response:
The proposed street design has been designed to meet the grades and curves to the Oregon City Street Design Standards provided by the City Engineer.

16.12.022 - Street design—Development abutting arterial or collector street.
Where development abuts or contains an existing or proposed arterial or collector street, the decision maker may require: access control; screen planting or wall contained in an easement or otherwise protected by a restrictive covenant in a form acceptable to the decision maker along the rear or side property line; or such other treatment it deems necessary to adequately protect residential properties or afford separation of through and local traffic. Reverse frontage lots with suitable depth may also be considered an option for residential property that has arterial frontage. Where access for development abuts and connects for vehicular access to another jurisdiction's facility then authorization by that jurisdiction may be required.

Response:
The development site abuts three Minor Arterials, Washington Street, Abernethy Road, and Redland Road. However, vehicular access is proposed to only Washington Street and Abernethy Road. This project is not a development that is in need of protection from through or local traffic. Vehicular access connections along the site's frontage with Abernethy Road is in Clackamas County's jurisdiction and the applicant is aware that there is a need to obtain approvals from them for new access. Redland Road is under ODOT's jurisdiction, but no new access is proposed along Redland Road. To the extent that this provision applies to future DDP's the applicant will comply.

16.12.023 - Street design—Pedestrian and bicycle safety.
Where deemed necessary to ensure public safety, reduce traffic hazards and promote the welfare of pedestrians, bicyclists and residents of the subject area, the decision maker may require that local streets be so designed as to discourage their use by nonlocal automobile traffic.
The City Engineer may require that crosswalks include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities. These curb extensions can increase the visibility of pedestrians and provide a shorter crosswalk distance as well as encourage motorists to drive slower. The City Engineer may approve an alternative design that achieves the same standard for constrained sites.

Response:
The applicant acknowledges that the City Engineer may impose additional requirements for pedestrian and bicycle safety during the application review process. All new streets and frontage improvements have been designed to be compliant with the Oregon City street design requirements as informed by City staff and located to be consistent with the Oregon City TSP. Pedestrian and bicycle safety improvements have been considered in the proposed design of new streets intended to serve the master plan area. . The applicant will later submit a DDP for development of each phase of the project. While **Appendix B** demonstrates that all new streets and street frontages have been designed to meet City standards, the applicant understands that the City Engineer could consider corner extensions in the DDP process.

16.12.024 - Street design—Half street.
Half streets, while generally not acceptable, may be approved where essential to the development, when in conformance with all other applicable requirements, and where it will not create a safety hazard. When approving half streets, the decision maker shall first determine that it will be practical to require the dedication of the other half of the street when the adjoining property is divided or developed. Where the decision maker approves a half street, the applicant shall construct a half street with at least twenty feet of pavement width and provide signage prohibiting street parking so as to make the half street safe until such time as the other half is constructed. Whenever a half street is adjacent to property capable of being divided or developed, the other half of the street shall be provided and improved when that adjacent property divides or develops. Access control may be required to preserve the objectives of half streets.
When the remainder of an existing half-street improvement is completed it shall include the following items: dedication of required right-of-way, construction of the remaining portion of the street including pavement, curb and gutter, landscape strip, sidewalk, street trees, lighting and other improvements as required for that particular street. It shall also include at a minimum the pavement replacement to the centerline of the street. Any damage to the existing street shall be repaired in accordance with the City's "Pavement Cut Standards" or as approved by the City Engineer.

Response:
The applicant is proposing ½ street improvements along both Washington Street and Abernethy Road. The proposed ½ street improvements for both rights of way are provide a pavement width greater than 20-feet and provide dedication of required right-of-way, construction of curb and gutter, landscape strips, sidewalks, street trees, lighting and other improvements as informed and discussed with City staff. Pavement is provided from the centerline of the respective right-of-way. Finally, no construction activities are proposed with approval of the GDP. See the street sections for Washington Street and Abernethy Road on sheet C110 of the civil plan set attached to this narrative with **Appendix B**.

16.12.025 - Street design—Cul-de-sacs and dead-end streets.
The City discourages the use of cul-de-sacs and permanent dead-end streets except where construction of a through street is found by the decision maker to be impracticable due to topography or some significant physical constraint such as geologic hazards, wetland, natural or historic resource areas, pre-existing dedicated open space, pre-existing development patterns, arterial access restrictions or similar situation as determined by the decision maker. This section is not intended to preclude the use of curvilinear eyebrow widening of a street where needed.
A. When permitted, access from new cul-de-sacs and permanent dead-end streets shall be limited to a maximum of twenty-five dwelling units.

Response:
The proposed GDP does not provide for any cul-de-sacs or permanent dead-end streets. This standard is not applicable.

B. Cul-de-sacs and permanent dead-end streets shall include pedestrian/bicycle accessways to meet minimum block width standards as prescribed in OCMC 16.12.030.

Response:
The applicant is not proposing any alterations to the existing cul-de-sac south of the subject site with this application. This standard does not apply.

C. Cul-de-sacs shall have sufficient radius to provide adequate turn-around for emergency vehicles in accordance with fire district and city adopted street standards.

Response:
The applicant is not proposing any cul-de-sacs with this application. This standard does not apply.

D. Permanent dead-end streets shall provide public street right-of-way/easements sufficient to provide a sufficient amount of turn-around space complete with appropriate no-parking signs or markings to accommodate waste disposal, sweepers, emergency and other long vehicles in the form of a hammerhead or other design to be approved by the decision maker.

Response:
There are no proposed cul-de-sacs or dead-end street proposed within the GDP. This standard is not applicable.

E. In the case of dead-end stub streets that will connect to streets on adjacent sites in the future, notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. A dead-end

2 - NARRATIVE RESPONSE

street shall include signage or barricade meeting Manual on Uniform Traffic Control Devices (MUTCD).

Response:
The proposed GDP does not propose any dead-end stub streets to connect to adjacent properties. This standard is not applicable.

16.12.026 - Street design—Alleys.
Alleys with public access easements on private property shall be provided in the Park Place and South End concept plan areas for the following districts R-5, R-3.5, R-2, MUC-1, MUC-2 and NC zones unless other permanent provisions for private access to off-street parking and loading facilities are approved by the decision maker. All alleys intended to provide access for emergency vehicles shall be a minimum width of twenty feet. The corners of alley intersections shall have a radius of not less than ten feet and shall conform to standards approved by the City Engineer. Access easements and maintenance agreements shall be recorded on affected properties.

Response:
The subject site is not located within the Park Place or South End concept plan areas, nor is it or will it be zoned R-5, R-3.5, R-2, MUC-1, MUC-2, or NC. This standard does not apply.

16.12.027 - Street design—Off-site street improvements.
During consideration of the preliminary plan for a development, the decision maker shall determine whether existing streets impacted by, adjacent to, or abutting the development meet the applicable design or dimensional requirements. Where such streets fail to meet these requirements, the decision-maker shall require the applicant to make proportional improvements sufficient to achieve conformance with minimum applicable design standards required to serve the proposed development.

Response:
The project proposes frontage improvements to Washington Street and Abernethy Road consistent with City and County requirements for those facilities and sufficient to achieve conformance with standards required to serve the proposed development. As discussed in more detail above under Section 17.65, the applicant has included a complete TIA with this GDP proposal. The TIA evaluated the total impacts to the transportation system from the proposed full buildout of the GDP area and identifies the facility improvements that are recommended to serve the proposed development. The applicant adopts the recommendations and the improvements proposed in the TIA. Proposed street improvements were discussed previously in OCMC Subsection 16.12.016, Street Design.

16.12.028 - Street design—Transit.
Streets shall be designed and laid out in a manner that promotes pedestrian and bicycle circulation. The applicant shall coordinate with transit agencies where the application impacts transit streets as identified in OCMC 17.04.1310. Pedestrian/bicycle access ways shall be provided as necessary to minimize the travel distance to transit streets and stops and neighborhood activity centers. The decision maker may require provisions, including easements, for transit facilities along transit streets where a need for bus stops, bus pullouts or other transit facilities within or adjacent to the development has been identified.

Response:
The applicant is proposing to install pedestrian and bicycle facilities throughout the development consistent with the Oregon City street design standards and in locations called for in the Oregon City TSP as discussed earlier. The applicant is aware that future tenants and businesses within the master plan area can benefit from transit facilities located within the development. According to the TIA provided as **Appendix C**, "local transit service is already provided by TriMet in the immediate site vicinity by the following two bus lines:

- TriMet Line 79 (Clackamas/Oregon City): Provides service between Clackamas Town Center and Oregon City Transit Center, with bus stops conveniently located along Washington Street right at the traffic signal with the Home Depot/site access street. Weekday and weekend service is generally provided at 40-minute headways.
- TriMet Line 154 (Willamette/Clackamas Heights): Provides service that connects the Clackamas Heights area up along Holcomb Boulevard with the Oregon City Transit Center, with additional service to the West Linn area via Willamette Falls Drive. Bus stops are conveniently located along Abernethy Road at the traffic signal with Redland Road and at the west end of the property frontage. Only weekday service is provided at 1-hour headways.

Additionally, The North End master plan site is just over three-quarters of a mile (approximately 17 minute walk) from the Oregon City Transit Center located in the downtown core of Oregon City at Main Street and 11th Street. This means that visitors, residents, and employees associated with the master plan area can walk (or use Route 79) to the Oregon City Transit Center and access a variety of other bus lines that serve the area. There has not been any requests from TriMet for any easements or other transit improvements, but if it is determined through individual DDP review that they are needed, the applicant of that DDP is expected to comply with the relevant standards.

16.12.029 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standards in effect at the time the permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.

Response:
The applicant acknowledges that it is their responsibility to restore any pavement that is damaged during the excavation process.

16.12.030 - Blocks—Width.
The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features.

All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted Transportation System Plan. The maximum block spacing between streets is 530 feet and the minimum block spacing between streets is 150 feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the City Engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every 330 feet. The spacing standards within this section do not apply to alleys.

Response:
The proposed GDP does not include any land division that would normally be used to create new blocks; however, the GDP does identify specific uses that require large areas of land and provides for an underlying street system that creates connectivity between uses both on and off site. The street plan responds to several factors including the desire for a new collector level street through the GDP area, efficient and safe connections to the external street system, topographical differences between the site and the existing surrounding street network and the desire to create a mixed use, multimodal live work environment within the project area. These unique factors atop a reclaimed landfill and within a floodplain and NROD overlay make it difficult for future land divisions to comply with these block spacing standards. However, as the street plan in **Appendix B** demonstrates and as discussed above, takes into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features as required by this criterion. For all these reasons, the applicant has requested a modification to the block length standards under the provisions in 17.65.070 later in this narrative.

16.12.031 - Street design—Street names.
Except for extensions of existing streets, no street name shall be used which will duplicate or be confused with the name of an existing street. Street names shall conform to the established standards in the City and shall be subject to the approval of the City.

Response:
New street names will be requested later in conjunction with future street construction and site development through the DDPs and will conform to this standard.

16.12.032 – Public off-street pedestrian and bicycle accessways.
Pedestrian/bicycle accessways are intended to provide direct, safe and convenient connections between residential areas, retail and office areas, institutional facilities, industrial parks, transit streets, neighborhood activity

centers, rights-of-way, and pedestrian/bicycle accessways which minimize out-of-direction travel, and transit-orientated developments where public street connections for automobiles, bicycles and pedestrians are unavailable. Pedestrian/bicycle accessways are appropriate in areas where public street options are unavailable, impractical or inappropriate. Pedestrian and bicycle accessways are required through private property or as right-of-way connecting development to the right-of-way at intervals not exceeding 330 feet of frontage; or where the lack of street continuity creates inconvenient or out of direction travel patterns for local pedestrian or bicycle trips.

Response:
Public streets are readily available along Washington Street and Abernethy Road. Private streets are proposed to provide internal circulation of the master plan area. All proposed street improvements along the site's frontage as well those private streets proposed internally are provided with appropriate bicycle and pedestrian improvements. In addition, the master plan includes additional shared use amenities called for in the Oregon City TSP to provide safe and convenient access within the site, to surrounding streets, and to the End of the Oregon Trail Interpretive Center. The onsite bicycle and pedestrian circulation system provides for safe and convenient connections between uses within the GDP, to open spaces, the plaza, and to the surrounding streets. **Chapter 4: Proposed Development** and **Appendix B** includes the pedestrian and bicycle accessways in compliance with this standard.

A. Entry points shall align with pedestrian crossing points along adjacent streets and with adjacent street intersections.

Response:
Acknowledged by the applicant. There are currently no adjacent pedestrian crossing points along the site's frontage. This standard is not applicable to this proposal.

B. Accessways shall be free of horizontal obstructions and have a nine foot six inch high vertical clearance to accommodate bicyclists. To safely accommodate both pedestrians and bicycles, accessway right-of-way widths shall be as follows:
1. Accessways shall have a fifteen- foot wide right-of-way with a seven-foot wide paved surface with a minimum four-foot planter strip on either side.
2. If an accessway also provides secondary fire access, the right-of-way width shall be at least twenty- four feet wide with a - sixteen foot paved surface between four-foot planter strips on either side.

Response:
None of the proposed pedestrian and bicycle accessways are obstructed within the development and are proposed with more than the minimum vertical clearance. The width of the proposed accessway that bisects the property from east to west is 22 feet, more than the 15-foot width required by this standard. Future and site specific DDP's will be required to design this adequate 22-foot width with at least the 7-foot wide paved surface and 4-foot planter strip in compliance with this criterion. Because the 22-foot proposed width easily accommodates these design features the GDP is consistent with this standard.

C. Accessways shall be direct with at least one end point of the accessway always visible from any point along the accessway. On-street parking shall be prohibited within fifteen feet of the intersection of the accessway with public streets to preserve safe sight distance and promote safety.

Response:
In compliance with this standard, all planned accessways are direct and can meet this visibility standard as shown on the civil site plans (C200 thru C207) in **Appendix B**. The specific design of the onsite pedestrian and bicycle amenities will be further reviewed and approved by the City in subsequent DDPs. None of the proposed accessways intersect with the public streets unless they are approved as part of the sidewalk system and connecting to either Washington Street or Abernethy Road. In these instances, on street parking will not be permitted and is not planned within 15 feet of the intersection of any accessway and public street to preserve safe sight distance.

D. To enhance pedestrian and bicycle safety, accessways shall be lighted with pedestrian-scale lighting. Accessway lighting shall be to a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. Street lighting shall be provided at both entrances.

Response:
No specific site lighting is proposed with the GDP. The applicant is aware of this standard and the proposed street plan and accessway plan in the GDP can easily accommodate these lighting standards at the time of DDP approval.

E. Accessways shall comply with Americans with Disabilities Act (ADA).

Response:
The proposed accessways are already provided with sufficient width to meet ADA with on-site sidewalks ranging between 5 and 22 feet. All future DDP applications are will provide this level of design for pedestrian walkways which comply with ADA code requirements. The GDP itself proposes an access plan composed of both private and public streets and internal pathways. As designed and located on the site, each accessway or street affords a grade and width that can satisfy ADA requirements at the time of DDP approval.

F. The planter strips on either side of the accessway shall be landscaped along adjacent property by installation of the following:
1. Either an evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average; and
2. Ground cover covering one hundred percent of the exposed ground. No bark mulch shall be allowed except under the canopy of shrubs and within two feet of the base of trees; and
3. A two-inch minimum caliper tree for every thirty-five -feet along the accessway. Trees may be planted on either side of the accessway, provided they are spaced no more than thirty-five feet apart; and
4. In satisfying the requirements of this section, evergreen plant materials that grow over forty-two inches in height shall be avoided. All plant materials shall be selected from the Oregon City Native Plant List.

Response:
The proposed on-site access ways were designed to be compliant with these standards to ensure there was adequate space in the cross sections, as shown in the preliminary high level landscape plans, to accommodate all of these planting requirements. For example, the cross section for "Market Street" provides a width of five feet that can easily accommodate these planting requirements. The applicant for each new DDP will further refine the design to ensure that the detailed requirements of these standards are reflected in the detailed landscape plans. Trees are proposed to be provided along the accessways except where they cross private streets, drive aisles, or interfere with parking.

G. Accessways shall be designed to prohibit unauthorized motorized traffic. Curbs and removable, lockable bollards are suggested mechanisms to achieve this.

Response:
The supplemental landscape design guidelines include provisions within the master plan to ensure that the accessways are differentiated from motorized traffic with different materials and require minimum hardscape, softscape, and furniture requirements. See **Chapter 5: Master Plan Design Guidelines** for specific details related to the landscape and material requirements for each district. If necessary, bollards will be located to ensure that there are no unauthorize motor vehicles on the accessways.

H. Accessway surfaces shall be paved with all-weather materials as approved by the City. Pervious materials are encouraged. Accessway surfaces shall be designed to drain stormwater runoff to the side or sides of the accessway. Minimum cross slope shall be two percent.

Response:
Compliance with this standard is illustrated in sheets (C300 thru C308) for grading, materials, and stormwater provided with **Appendix B** in addition to the GDP preliminary site plans and Design Guidelines attached to this narrative in **Chapter 4: Proposed Development** and **Chapter 5: Master Plan Design Guidelines** respectively. In sum, all accessway surfaces will be paved with all-weather surfaces and have been designed to drain stormwater runoff to the side of the accessway. The cross slopes are all a minimum of two percent. .

I. In parks, greenways or other natural resource areas, accessways may be approved with a five-foot wide gravel path with wooden, brick or concrete edgings.

Response:
No accessways are currently proposed in the subject areas as part of this GDP. If such an accessway is later proposed in a DDP, the specific DDP application will have to demonstrate compliance with this criterion.

2 - NARRATIVE RESPONSE

J. The decision maker may approve an alternative accessway design due to existing site constraints through the modification process set forth in OCMC 16.12.013.

Response:
The GDP does not propose any alternative accessway designs. If such designs are later requested through a DDP application, the applicant will be required to meet this standard as well as the design guidelines that are approved with this GDP.

K. Ownership, liability and maintenance of accessways. To ensure that all pedestrian/bicycle accessways will be adequately maintained over time, the City Engineer shall require one of the following:
1. Dedicate the accessways to the public as public right-of-way prior to the final approval of the development; or
2. The developer incorporates the accessway into a recorded easement or tract that specifically requires the property owner and future property owners to provide for the ownership, liability and maintenance of the accessway.

Response:
The applicant has indicated that they would provide public access easements throughout the master plan area for any private street, accessway, or sidewalk. This standard will be required to be met with individual DDP plan approval.

16.12.033 - Mobility standards.
Development shall demonstrate compliance with intersection mobility standards. When evaluating the performance of the transportation system, the City of Oregon City requires all intersections, except for the facilities identified in subsection E below, to be maintained at or below the following mobility standards during the two-hour peak operating conditions. The first hour has the highest weekday traffic volumes and the second hour is the next highest hour before or after the first hour. Except as provided otherwise below, this may require the installation of mobility improvements as set forth in the Transportation System Plan (TSP) or as otherwise identified by the City Engineer.
A. For intersections within the regional center, the following mobility standards apply:
1. During the first hour, a maximum v/c ratio of 1.10 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
3. Intersections located on the Regional Center boundary shall be considered within the Regional Center.
B. For intersections outside of the Regional Center but designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:
1. During the first hour, a maximum v/c ratio of 0.99 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
C. For intersections outside the boundaries of the Regional Center and not designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:
1. For signalized intersections:
a. During the first hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.
b. During the second hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.
2. For unsignalized intersections outside of the boundaries of the Regional Center:
a. For unsignalized intersections, during the peak hour, all movements serving more than twenty vehicles shall be maintained at LOS "E" or better. LOS "F" will be tolerated at movements serving no more than twenty vehicles during the peak hour.
D. For the intersection of OR 213 & Beavercreek Road, the following mobility standards apply:
1. During the first, second & third hours, a maximum v/c ratio of 1.00 shall be maintained. Calculation of the maximum v/c ratio will be based on an average annual weekday peak hour.
E. Until the City adopts new performance measures that identify alternative mobility targets, the City shall exempt proposed development that is permitted, either conditionally, outright, or through detailed development master plan approval, from compliance with the above-referenced mobility standards for the following state-owned facilities:
I-205/OR 99E Interchange
State intersections located within or on the Regional Center Boundaries
1. In the case of conceptual development approval for a master plan that impacts the above references intersections:
a. The form of mitigation will be determined at the time of the detailed development plan review for subsequent phases utilizing the Code in place at the time the detailed development plan is submitted; and
b. Only those trips approved by a detailed development plan review are vested.
2. Development which does not comply with the mobility standards for the intersections identified in OCMC 16.12.033 shall provide for the improvements identified in the Transportation System Plan (TSP) in an effort to improve intersection mobility as necessary to offset the impact caused by development. Where required by other provisions of the Code, the applicant shall provide a traffic impact study that includes an assessment of the development's impact on the intersections identified in this exemption and shall construct the intersection improvements listed in the TSP or required by the Code.

Response:
The TIA prepared by Phill Worth and Brian Dunn, P.E. of Kittelson and Associates is attached to this submittal as **Appendix C** . Kittelson analyzed the mobility standards on the studied intersections consistent with these criteria. You can find his analysis beginning on page 9 of the TIA. The TIA addresses the impacts of the project related to traffic generation and transportation conditions at 25 existing and the 5 new intersections proposed within the GDP. The trip generation calculations show 984 AM peak hour trips and 2727 PM peak hour trips, for a total of 3,711 trips each weekday. Table 1: Applicable Mobility Standards for All Study Intersections found on page 11 of the TIA (**Appendix C**) and provided below for reference, illustrates the mobility standards for each of the study intersections expected to be impacted by proposed development of The North End master plan.
The TIA found that when the master plan is fully developed, all but two of the 25 existing study intersections operate at levels that meet the mobility standards of the governing agency. The TIA recommends the following mitigation measures to offset those impacts:

1. OR 213/Dunes Road – Further document how signal timing/phasing optimization can improve intersection operations.
2. OR 213/Redland Road – To address operational and vehicle queue deficiencies, evaluate the construction of a third southbound travel lane on OR 213 through the intersection with taper transition back to two lanes prior to the Holcomb Boulevard overcrossing. This improvement would also include reconstruction of the exclusive southbound right-turn lane from the highway onto Redland Road at current storage length, with appropriate taper transition back to three lanes prior to the sign bridge across OR 213.
3. Abernethy Road/Redland Road – To address queue deficiencies, research installation of a right-turn overlap signal phasing on the southbound approach of Redland Road. As necessary, evaluate the construction of a second eastbound left-turn lane on Abernethy Road and retiming of the traffic signal to minimize vehicle queues.
4. Abernethy Road/Site Access “F” - Evaluate signal warrants and increased multimodal benefits under a scenario that includes a traffic signal at this primary access to Abernethy Road.

In addition to the other frontage improvements and new internal street network proposed by the GDP to carry the traffic associated with this development, the applicant is committed to ensuring that the impacts from the development are mitigated consistent with the applicable requirements of the OCMC. Thus, the applicant will continue to work with the City Engineer on these recommended off-site mitigation measures to mitigate mobility impacts at the two identified intersections. It is assumed that the appropriate timing for constructing the recommended mitigation measures will be informed by the trip generation data identified within the TIA.

Response to 16.12.033 Cont. :
With the TIA, proposed frontage improvements and on site new street network and the recommended mobility impact recommendations, this standard is satisfied.

	Study Intersection	Jurisdiction	Area Location/ Facility Designation	Operating Requirement
1	OR 99E / River Rd.-Arlington St.	ODOT	Corridor	0.99 v/c 1st hour, then 0.99 v/c 2nd hour

OR 99E/I-205 ramp terminal intersections are exempt from meeting state mobility targets, as per Oregon City Municipal Code Section 16.12.033.
* OR 213/I-205 SB ramp terminal intersection is exempt from meeting state mobility targets, as per the 2013 Oregon City TSP (see page 38).
** Per a 2018 amendment to the Oregon Highway Plan (OHP).

16.12.035 - Driveways.
A. All new development and redevelopment shall meet the minimum driveway spacing standards identified in Table 16.12.035.A.

Table 16.12.035.A Minimum Driveway Spacing Standards

Street Functional Classification	*Minimum Driveway Spacing Standards*	*Distance*
Major Arterial Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*175 ft*
Minor Arterial Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*175 ft*
Collector Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*100 ft*
Local Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*25 ft*

The distance from a street corner to a driveway is measured along the right-of-way from the edge of the intersection (on the same side of the road) right-of-way to the nearest portion of the driveway and the distance between driveways is measured at the nearest portions of the driveway at the right-of-way.

Response:
As discussed previously, the GDP proposes four driveways along the Washington Street frontage and two additional driveways on the Abernethy Road frontage. There is approximately 1,344 lineal feet of street frontage along Washington Street and approximately 1,320 lineal feet of frontage along Abernethy Road. According to the TIA, Washington Street and Abernethy Road are both classified as a Minor Arterial. Section 12.04.195 of the Oregon City Municipal Code requires that the minimum driveway spacing along a Minor Arterial is 175 feet. As proposed within the GDP, the three new site accesses proposed along Washington Street will be positioned at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection. Accordingly, the access spacing proposed within the GDP will comply with the minimum driveway spacing standards above.

B. Nonresidential or multi-family residential driveways that generate high traffic volumes shall be treated as intersections and shall adhere to requirements of OCMC 16.12.020.

Response:
As stated earlier in this narrative, the proposed driveways will comply with the requirements of OCMC 16.12.020 which requires them to intersect with adjacent streets at right angles. This standard is met.

C. One driveway may be allowed per frontage, unless otherwise restricted. In no case shall more than two driveways be allowed for any single-family attached or detached residential property, duplex, 3-4 plex, or property developed with an ADU or internal conversion with multiple frontages, unless otherwise approved by the City Engineer.

Response:
The proposal would provide four new driveways along Washington Street and two new driveways from along Abernethy Road. The proposed driveways are justified by the size of the project site and the amount of traffic expected to be generated at build-out. The applicant is seeking approval of the additional driveways through modification that was discussed in detail under the provisions of OCMC Subsection 16.12.013 earlier in this narrative.

D. When a property fronts multiple roads, access shall be provided from the road with the lowest classification in the Transportation System Plan whenever possible to minimize points of access to arterials and collectors. At the discretion of the City Engineer, properties fronting a collector or arterial road may be allowed a second driveway, for the creation of a circulation pattern that eliminates reverse maneuvers for vehicles exiting a property if applied for and granted through procedures in OCMC 16.12.013. All lots proposed with a driveway and lot orientation on a collector or minor arterial shall combine driveways into one joint access per two or more lots unless the City Engineer determines that:
1. No driveway access may be allowed since the driveway(s) would cause a significant traffic safety hazard; or
2. Allowing a single driveway access per lot will not cause a significant traffic safety hazard.

Response:
The site fronts three streets: Washington Street, Abernethy Road, and Redland Road. All three streets are classified as Minor Arterials. The GDP proposes vehicle access from both Washington Street and Abernethy Road. A modification has been requested above under 16.12.013 in order to allow the site to be served with more than one driveway. Both streets share the same classification in the Transportation System Plan. The additional driveways will not create a significant traffic safety hazard. In this case the site is atypically large, leaving sufficient distance between driveways to avoid any safety concerns. Each driveway is designed to meet the design specifications of the City Engineer and each driveway has confirmed sight distance to ensure safe operations.

2 - NARRATIVE RESPONSE

E. All driveway approaches shall be limited to the dimensions identified in Table 16.12.035.D.

Table 16.12.035.D Driveway Approach Size Standards		
Property Use	*Minimum Driveway Approach Width*	*Maximum Driveway Approach Width*
Single-Family Attached	*10 feet*	*12 feet*
Single-Family Attached in R-5 & R-3.5	*10 feet*	*12 feet*
Single-Family Detached in R-10, R-8, & R-6	*12 feet*	*24 feet*
Duplexes	*12 feet*	*24 feet*
3 - 4 plexes	*12 feet*	*24 feet*
Multi-Family	*18 feet*	*30 feet*
Commercial, Industrial, Office, Institutional, Mixed Use, and/or Nonresidential	*One-way 12 feet Two-way 20 feet*	*40 feet*

Driveway widths shall match the width of the driveway approach where the driveway meets sidewalk or property line but may be widened onsite (for example between the property line and the entrance to a garage). Groups of more than four parking spaces shall be so located and served by driveways so that their use will not require backing movements or other maneuvering within a street right-of-way other than an alley.

Response:
As demonstrated on the attached site plans (sheets C200 through C207) within the civil sheets provided as **Appendix B**, the proposed driveways serving the site along Washington Street include a 36-foot driveway at the end of the existing street that provides access to The Home Depot, two 24-foot driveways from Washington Street into the parking garages, and one 40-foot driveway from Washington Street to proposed “4th Street”. The proposed driveways serving the site along Abernethy Road include one 40-foot driveway at the intersection of Abernethy Road and “Market Street” and one 40-foot driveway at the intersection of Abernethy Road and “4th Street”. The proposed widths of all new driveways fall between the minimum and maximum driveway approaches for commercial, industrial, office, institutional, mixed use, and nonresidential sites, as established in Table 16.12.035.D. Two-way traffic circulation is proposed in the parking lot design. This standard is satisfied by the GDP.

F. The City Engineer reserves the right to require a reduction in the number and size of driveway approaches as far as practicable for any of the following purposes:
1. To provide adequate space for on-street parking;
2. To facilitate street tree planting requirements;
3. To assure pedestrian and vehicular safety by limiting vehicular access points; and
4. To assure that adequate sight distance requirements are met.
a. Where the decision maker determines any of these situations exist or may occur due to the approval of a proposed development for non-residential uses or attached or multi-family housing, a shared driveway shall be required and limited to twenty-four feet in width adjacent to the sidewalk or property line.

Response:
The applicant acknowledges the City Engineer’s authority to alter the number of driveways for the reasons listed in subsections (1) – (4) above. As discussed previously, the TIA establishes that adequate visibility and stopping distance are available to safely accommodate traffic flow from the proposed driveways. Sufficient curb length remains to accommodate on-street parking around the driveway access points where permitted. In addition, the project provides street trees along all public and private streets within and adjacent to the development.

G. For all driveways, the following standards apply.
1. Each new or redeveloped curb cut shall have an approved concrete approach or asphalted street connection where there is no concrete curb and a minimum hard surface for at least ten feet back into the property as measured from the current edge of sidewalk or street pavement to provide for controlling gravel tracking onto the public street. The hard surface may be concrete, asphalt, or other surface approved by the City Engineer.
2. Any driveway approach built within public right-of-way shall be built and permitted per City requirements as approved by the City Engineer.
3. No driveway with a slope of greater than fifteen percent shall be permitted without approval of the City Engineer.

Response:
The proposed driveways can satisfy these standards as demonstrated on the attached site plans (sheet C200 through C207). The project engineer proposes asphalted approaches for each driveway, adjacent to the existing adjoining roadway. The driveways are not provided on slopes greater than fifteen percent. Furthermore, because the driveway approaches are constructed within the public right-of-way, the applicant acknowledges that they must be constructed to the City’s standards and approved by the City Engineer. The driveways were designed in compliance with City standards by a licensed civil engineer.

H. Exceptions. The City Engineer reserves the right to waive these standards or not allow driveway access, if the driveway(s) would cause a significant traffic safety hazard. Narrower driveway widths may be considered where field conditions preclude use of recommended widths. When larger vehicles and trucks will be the predominant users of a particular driveway, turning templates may be utilized to develop a driveway width that can safely and expeditiously accommodate the prevalent type of ingress and egress traffic.

Response:
The applicant acknowledges that the City Engineer reserves the right to waive development standards if they suspect that the proposed design will result in dangerous scenarios. As stated above, none of these scenarios are presented by the proposed design and the applicant is not requesting narrower driveway widths. Further, larger vehicles are not the predominant users of this mixed-use site and therefore all planned turning templates are sufficient to accommodate the nature of the traffic generated by this proposed GDP.

16.12.065 - Building site—Grading.
Grading of building sites shall conform to the State of Oregon Structural Specialty Code, Title 18, any approved grading plan and any approved residential lot grading plan in accordance with the requirements of OCMC 13.12,15.48, 16.12 and the Public Works Stormwater and Grading Design Standards, and the erosion control requirements of OCMC 17.47.

Response:
The applicant acknowledges that the building grading shall conform to the State of Oregon Structural Specialty Code, Title 18, and the requirements established in OCMC 13.12, 15.48, 16.12, 17,47, and the Public Works Stormwater and Grading Design Standards. Where applicable, the building grading is designed to comply with these standards. Preliminary grading plans are provided in sheets C300 thru C307 of the civil plan set attached as **Appendix B** to this narrative.

16.12.085 - Easements.
The following shall govern the location, improvement and layout of easements:
A. Utilities. Utility easements shall be required where necessary as determined by the City Engineer. Insofar as practicable, easements shall be continuous and aligned from block-to-block within the development and with adjoining subdivisions or partitions. Specific utility easements for water, sanitary or storm drainage shall be provided based on approved final engineering plans.

Response:
Utility easements will be provided with approval of individual DDP approvals and will be based on locations provided within the final engineering plans.

B. Unusual Facilities. Easements for unusual facilities such as high voltage electric transmission lines, drainage channels and stormwater detention facilities shall be adequately sized for their intended purpose, including any necessary maintenance roads. These easements shall be shown to scale on the preliminary and final plats or maps. If the easement is for drainage channels, stormwater detention facilities or related purposes, the easement shall comply with the requirements of the Public Works Stormwater and Grading Design Standards.

Response:
Easements for unusual facilities will be provided with DDP approval and will be adequately sized for their intended purposes including any required maintenance roads.

C. Watercourses. Where a development is traversed or bounded by a watercourse, drainageway, channel or stream, a stormwater easement or drainage right-of-way shall be provided which conforms substantially to the line of such watercourse, drainageway, channel or stream and is of a sufficient width to allow construction, maintenance and control for the purpose as required by the responsible agency. For those subdivisions or partitions which are bounded by a stream of established recreational value, setbacks or easements may be required to prevent impacts to the water resource or to accommodate pedestrian or bicycle paths.

2 - NARRATIVE RESPONSE

Response:
Abernethy Creek runs along the east edge of the site and another natural resource area with a shape similar to a lobster claw is located in the northwest edge of the site. Easements for the proposed maintenance and control will be provided to the responsible agency with DDP approval. This standard is not applicable to the GDP. No element proposed under this GDP would preclude or inhibit conformance with this standard at the time of DDP review and approval.

D. Access. When easements are used to provide vehicular access to lots within a development, the construction standards, but not necessarily width standards, for the easement shall meet City specifications. The minimum width of the easement shall be 20 feet. The easements shall be improved and recorded by the applicant and inspected by the City Engineer. Access easements may also provide for utility placement.

Response:
Easements are not used to provide vehicular access to lots adjacent to the subject site. This standard does not apply.

E. Resource Protection. Easements or other protective measures may also be required as the Community Development Director deems necessary to ensure compliance with applicable review criteria protecting any unusual significant natural feature or features of historic significance.

Response:
The applicant is aware that the Community Development Director may require easements to protect any significant natural features located within the subject site. The most likely candidate for this protection is the Abernethy Creek riparian area. The applicant will comply with this standard at the appropriate time as determined by the applicant and the City.

16.12.090 - Minimum improvements—Procedures.
In addition to other requirements, improvements installed by the applicant either as a requirement of these or other regulations, or at the applicant's option, shall conform to the requirements of this title and be designed to City specifications and standards as set out in the City's facility master plan and Public Works Stormwater and Grading Design Standards. The improvements shall be installed in accordance with the following procedure:
A. Improvement work shall not commence until construction plans have been reviewed and approved by the City Engineer and to the extent that improvements are located in County or State right-of-way, they shall be approved by the responsible authority. To the extent necessary for evaluation of the proposal, the plans may be required before approval of the preliminary plat of a subdivision or partition. Expenses incurred thereby shall be borne by the applicant and paid for prior to final plan review.

Response:
The applicant acknowledges that improvement work cannot commence until construction plans have been reviewed and approved by the City Engineer or other responsible authority.

B. Improvements shall be constructed under the inspection and approval of the City Engineer. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. Where required by the City Engineer or other City decision-maker, the applicant's project engineer also shall inspect construction.

Response:
The applicant acknowledges that the improvements must be inspected and approved by the City Engineer and that the expenses incurred thereby shall be their responsibility.

C. Erosion control or resource protection facilities or measures are required to be installed in accordance with the requirements of OCMC 17.47, 17.49 and the Public Works Erosion and Sediment Control Standards.

Response:
This request for approval of the GDP does not approve any actual construction activities for the site; therefore, detailed erosion control plans consistent with the applicable requirements of the OCMC will be provided with applications for DDP approval.

D. Underground utilities, waterlines, sanitary sewers and storm drains installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the ten-foot wide franchise utility easement within private property.

Response:
The applicant acknowledges this requirement and will place all utilities underground consistent with these provisions during construction of approved DDP's on the site.

E. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer upon completion of the improvements.

Response:
The applicant acknowledges that physical and digital copies of as-built construction documents must be filed with the City Engineer upon completion of improvements on site. However, the GDP does not involve any construction activities on site. The as-builts will be provided for utilities that are constructed with approved DDP's.

F. The City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods.

Response:
The applicant acknowledges that the City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods.

16.12.095 - Minimum improvements—Public facilities and services.
The following minimum improvements shall be required of all applicants for a development, unless the decision-maker determines that any such improvement is not proportional to the impact imposed on the City's public systems and facilities:
A. Transportation System. Applicants and all subsequent lot owners shall be responsible for improving the City's planned level of service on all public streets, including alleys within the development and those portions of public streets adjacent to but only partially within development. Applicants are responsible for designing and providing adequate vehicular, bicycle and pedestrian access to their developments and for accommodating future access to neighboring undeveloped properties that are suitably zoned for future development. Storm drainage facilities shall be installed and connected to off-site natural or man-made drainageways. Upon completion of the street improvement survey, the applicant shall reestablish and protect monuments of the type required by ORS 92.060 in monument boxes with covers at every public street intersection and all points or curvature and points of tangency of their center line, and at such other points as directed by the City Engineer.

Response:
The applicant acknowledges the required contributions to the public transportation system adjacent to the project and has proposed to construct frontage improvements along the sites frontage as well as several projects listed within the TSP as described previously. Preliminary utility plans have been provided with the GDP to demonstrate that the proposed master plan can comply with City Standards for each of these facilities. See civil sheets C110, C111, and C400 thru C407 for specific details.

B. Stormwater Drainage System. Applicants shall design and install drainage facilities within a development and shall connect the development's drainage system to the appropriate downstream storm drainage system as a minimum requirement for providing services to the applicant's development. The applicant shall obtain county or state approval when appropriate. Applicants are responsible for extending the appropriate storm drainage system to the development site and for providing for the connection of upgradient properties to that system. The applicant shall design the drainage facilities in accordance with City drainage master plan requirements, OCMC 13.12 and the Public Works Stormwater and Grading Design Standards.

Response:
This standard is met. The stormwater plan for the GDP is unique to this location due to presence of the former landfill. The proposed stormwater management plan will achieve pollutant removal to the maximum extent practicable via biofiltration designed to target pollutants expected with a commercial development. The proposed private facilities satisfy the City of Oregon City water quality and quantity requirements. As designed, this project will not create any adverse impacts to the downstream storm system. Specific details on the proposed stormwater management system can be found in the Storm Report provided as **Appendix A.**

C. Sanitary Sewer System. The applicant shall design and install a sanitary sewer system to serve all lots or parcels within a development in accordance with the City's sanitary sewer design standards, and shall connect those lots or parcels to the City's sanitary sewer system, except where connection is required to the county sanitary sewer system as approved by the county.

2 - NARRATIVE RESPONSE

Applicants are responsible for extending the City's sanitary sewer system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development. The applicant shall obtain all required permits and approvals from all affected jurisdictions prior to final approval and prior to commencement of construction. Design shall be approved by the City Engineer before construction begins.

Response:
This standard is met. The GDP includes a preliminary utility plan to serve the site by connections to existing services within Washington Street and Abernethy Road. Sanitary sewer service is connected along both frontages as well as within the street that currently serves The Home Depot. As proposed, the sewer extensions have been designed to meet all jurisdictional requirements. Sanitary facilities are proposed to be extended through the site to feed all proposed structures within the master plan. Specific details of the sewer system can be found in the utility plan sheets (C400 thru C407) attached as **Appendix B.**

D. Water System. The applicant shall design and install a water system to serve all lots or parcels within a development in accordance with the City public works water system design standards, and shall connect those lots or parcels to the City's water system. Applicants are responsible for extending the City's water system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development.

Response:
This standard is met. As demonstrated on the preliminary utility plan provided in civil sheets (C400 thru C407) and attached as **Appendix B**, the project will extend an existing public water line located within the street serving The Home Depot and loop it through the site to serve all of the proposed buildings within the master plan. As proposed, the water extension has been designed to meet all jurisdictional requirements.

E. Street Trees. Refer to OCMC 12.08, Street Trees.

Response:
Refer to the responses to OCMC 12.08.

F. Bench Marks. At least one bench mark shall be located within the subdivision boundaries using datum plane specified by the City Engineer.

Response:
This application does not include a request for subdivision approval. This standard does not apply.

G. Other Utilities. The applicant shall make all necessary arrangements with utility companies or other affected parties for the installation of underground lines and facilities. Existing and new electrical lines and other wires, including but not limited to communication, street lighting and cable television, shall be placed underground.

Response:
The applicant acknowledges this requirement. The project will locate new franchise utilities underground and extend them through the site. Actual utility locations will be coordinated with the utility companies and constructed with approval of individual DDP's.

H. Oversizing of Facilities. All facilities and improvements shall be designed to City standards as set out in the City's facility master plan, public works design standards, or other City ordinances or regulations. Compliance with facility design standards shall be addressed during final engineering. A development may be required to modify or replace existing offsite systems if necessary to provide adequate public facilities. The City may require oversizing of facilities to meet standards in the City's facility master plan or to allow for orderly and efficient development. Where oversizing is required, the applicant may request reimbursement from the City for oversizing based on the City's reimbursement policy and funds available, or provide for recovery of costs from intervening properties as they develop.

Response:
As demonstrated throughout this document and the appendices, public improvements associated with the GDP have been designed to City standards. The need to oversize any public facilities for this project has not been identified by staff.

I. Erosion Control Plan—Mitigation. The applicant shall be responsible for complying with all applicable provisions of OCMC 17.47 with regard to erosion control.

Response:
Preliminary grading plans are provided in civil sheets (C300 thru C307) to demonstrate that the project can be graded in compliance with the applicable city standards. These grading plans will be refined and submitted along with each DDP filed within the master plan. Detailed erosion control plans will be provided with construction drawings at the time of permit review. This standard is not directly applicable to the GDP as no grading permit is request with this GDP approval.

16.12.100 - Same—Road standards and requirements.
A. The creation of a public street and the resultant separate land parcels shall be in conformance with requirements for subdivisions or partitions and the applicable street design standards of this Chapter. However, the decision-maker may approve the creation of a public street to be established by deed without full compliance with the regulations applicable to subdivisions or partitions where any of the following conditions exist:
1. The establishment of the public street is initiated by the City Commission and is declared essential for the purpose of general traffic circulation and the partitioning of land is an incidental effect rather than the primary objective of the street;
2. The tract in which the street is to be dedicated is within an isolated ownership either not over one acre or of such size and characteristics as to make it impossible to develop building sites for more than three dwelling units.

Response:
This standard does not apply. A private internal street system with public access easements is proposed to serve the development. There are also existing abutting public streets that will be improved as part of the GDP and subsequent DDPs. These streets are already dedicated to the public.

B. For any public street created pursuant to subsection A of this section, a copy of a preliminary plan and the proposed deed shall be submitted to the Community Development Director and City Engineer at least ten days prior to any public hearing scheduled for the matter. The plan, deed and any additional information the applicant may submit shall be reviewed by the decision-maker and, if not in conflict with the standards of Title 16 and Title 17, may be approved with appropriate conditions.

Response:
The applicant is not proposing to create any new public streets with this application. This standard does not apply.

16.12.105 - Same—Timing requirements.
A. Prior to applying for final plat approval, the applicant shall either complete construction of all public improvements required as part of the preliminary plat approval or guarantee the construction of those improvements. Whichever option the applicant elects shall be in accordance with OCMC 17.50.140.

Response:
There are no land divisions proposed with the GDP. This standard is not applicable. Public improvements will be constructed with individual approval of DDP's for the site.

B. Construction. The applicant shall construct the public improvements according to approved final engineering plans and all applicable requirements of this Code, and under the supervision of the City Engineer. Under this option, the improvement shall be complete and accepted by the City Engineer prior to final plat approval.

Response:
The applicant acknowledges that the public improvements must be constructed according to the approved final engineering plans and all applicable requirements of the Oregon City Municipal Code. Those plans will be filed with individual requests for DDP approval for the site.

16.12.110 -Public improvements—Financial guarantees.
A. To ensure construction of required public improvements, the applicant shall provide the City with a performance guarantee in accordance with OCMC 17.50.140.

Response:
The applicant acknowledges their responsibility to provide a performance guarantee for public improvements in compliance with OCMC 17.50.140 and will provide those in association with the construction of individual DDP's.

2 - NARRATIVE RESPONSE

B. After satisfactory completion of required public improvements and facilities, all public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period as prescribed in OCMC 17.50.141.

Response:
The applicant acknowledges that the required public improvements and facilities shall be maintained and under warranty until the City accepts the improvements as prescribed in OCMC 17.50.141 once they have been constructed.

16.12.120 - Waiver of Remonstrance.
The review authority may require a property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district where it deems such a waiver necessary to provide needed improvements reasonably related to the impacts created by the proposed development. To ensure compliance with this chapter, the review authority may require an applicant to sign or accept a legal and enforceable covenant, contract, dedication, easement, performance guarantee, or other document, which shall be approved in form by the City Attorney.

Response:
The applicant acknowledges the City's authority to require the property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district.

Chapter 17.34: Mixed Use Downtown

17.34.010 - Designated
The mixed-use downtown (MUD) district is designed to apply within the traditional downtown core along Main Street and includes the "north-end" area, generally between 5th Street and Abernethy Street, and some of the area bordering McLoughlin Boulevard. Land uses are characterized by high-volume establishments constructed at the human scale such as retail, service, office, multi-family residential, lodging or similar as defined by the community development director. A mix of high-density residential, office and retail uses are encouraged in this district, with retail and service uses on the ground floor and office and residential uses on the upper floors. The emphasis is on those uses that encourage pedestrian and transit use. This district includes a downtown design district overlay for the historic downtown area. Retail and service uses on the ground floor and office and residential uses on the upper floors are encouraged in this district. The design standards for this sub-district require a continuous storefront façade featuring streetscape amenities to enhance the active and attractive pedestrian environment.

Response:
The North End master plan is located within the Mixed-Use Downtown (MUD) district but outside of the downtown design district. This is a request for GDP approval for the master plan. The GDP has been prepared over the course of the last 12 months to ensure that it can meet the applicable standards of this Chapter. Subsequent applications for DDP should be based on the preliminary layout of buildings and uses within the approved GDP. All future development will continue to be subject to the provisions of this chapter except where modifications have been proposed through the GDP.

The GDP proposes land uses are characterized by high-volume establishments constructed at the human scale such as retail uses both large and small scale, office uses, multi-family residential, and permitted entertainment uses. The code encourages a mix of high-density residential, office and retail uses with retail and service uses on the ground floor and residential uses on the upper floors. The emphasis is on those uses that encourage pedestrian and transit use. The proposed GDP directly reflects all of these urban use objectives by proposing a combination of mixed use residential oriented around and near a pedestrian scale Market Street as well as a series of anchor retail and entertainment uses that serve residents and visitors alike in compliance with this designation within a street plan and open space network that accommodated multi-modal travel.

17.34.020 Permitted Uses

Response:
The proposed GDP proposes retail, office, residential and entertainment uses all of which are listed as permitted uses in the zone.

USE	DESCRIPTION
Banquet, conference facility, and meeting rooms	
Lodging facilities	Including bed and breakfasts, boarding houses, hotels, motels, and other related facilities
Child care centers and nursery schools	
Indoor entertainment centers and arcades	
Health and fitness clubs	
Medical and dental clinics	Including outpatient and infirmary services
Museums, libraries, and cultural facilities	
Offices	Including finance, insurance, real estate, government, and other related services
Outdoor markets	Including produce stands, craft markets, farmers markets that operate on the weekend and after 6pm on the weekdays
Postal services	
Repair shops	Including those for radio and television, office equipment, bicycles, electronic equipment, shoes, and small appliances and equipment
Multi family residential	
Restuarants	Eating and drinking establishments without a drive-through
Services	Including personal, professional, educational, and financial services, and laundry and dry-cleaning
Retail trade	Including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores
Seasonal sales	
Residential care facilities	Including assisted living facilities, nursing homes, and group homes for over 15 patients licensed by the state
Studios and galleries	Including dance, art, photography, music, and other arts
Utilities	Basic and linear facilities, such as water, sewer, power, telephone, cable, electrical and natural gas lines, not including major facilities such as sewage and water treatment plants, pump stations, water tanks, telephone exchanges and cell towers
Vetrinary clinics or pet hospitals	Including pet day care facilities
Home occupations	
Research and development activities	
Temporary real estate offices in model dwellings	
Transporation facilities	
Live/work dwellings	
After-hours public parking	
Religious institutions	
Mobile food units out	Subject to the provisions of the Oregon City Municipal Code

2 - NARRATIVE RESPONSE

17.34.030 - Conditional uses
The following uses are permitted in this district when authorized and in accordance with the process and standards contained in OCMC 17.56:
A. Drive-through facilities;
B. Emergency services;
C. Hospitals;
D. Outdoor markets that do not meet the criteria of OCMC 17.34.020.I;
E. Parks, playgrounds, play fields and community or neighborhood centers;
F. Parking structures and lots not in conjunction with a primary use on private property, excluding after-hours public parking;
G. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies and specialty stores in a freestanding building with a single store exceeding a foot print of sixty thousand square feet;
H. Public facilities such as sewage and water treatment plants, water towers and recycling and resource recovery centers;
I. Public utilities and services such as pump stations and sub-stations;
J. Distributing, wholesaling and warehousing;
K. Gas stations;
L. Public and or private educational or training facilities;
M. Stadiums and arenas;
N. Passenger terminals (water, auto, bus, train), excluding bus stops;
O. Recycling center and/or solid waste facility;
P. Shelters, except within the downtown design district.

Response:
The GDP includes a request to approve eight conditional uses for the site including five drive through uses and three anchor retail facilities that will exceed sixty thousand square feet within a freestanding building. All of these uses are listed as permitted conditional uses and are addressed below under the applicable conditional use criteria.

USE	DESCRIPTION
Drive-through facilities	
Emergency services	
Hospitals	
Outdoor markets	Only those not meeting the required criteria of a permitted outdoor market
Parks, playgrounds, play fields and community or neighborhood centers	
Parking structures and lots not in conjunction with a primary use on private property	Excluding after-hours public parking
Retail trade	Including grocery, hardware, gift shops, bakeries, delicatessens, florists, pharmacies, and specialty stores in a freestanding building with a single store exceeding a footprint of 60,000 square feet
Public facilities	
Public utilities and services	Including pump stations and sub-stations
Distributing, wholesaling and warehousing	
Gas stations	
Public and private educational or training facilities	
Passenger terminals, excluding bus stops	
Shelters	

17.34.040 - Prohibited uses

Response:
The GDP approval requested with this application does not include any of the uses prohibited in the MUD district. Individual applications for DDP will be subject to a separate review of their proposed uses and will be subject to the same prohibitions.

USE	DESCRIPTION
Kennels	
Outdoor storage and sale	Not including outdoor markets allowed as a permitted use
Self-service storage	
Single-family attached and detached residential units and duplexes	
Motor vehicle and recreational vehicle repair and services	
Motor vehicle and recreational vehicle sales and incidental services	
Heavy equipment service, repair, sales, storage or rental	Including but not limited to construction equipment and machinery and farming equipment
Marijuana facilities	Including production, processing, wholesaling, research, testing, and laboratories
Mobile food units within the downtown design district	Unless a special event has been issued

17.34.060 - Mixed-use downtown dimensional standards—For properties located outside of the downtown design district
A. Minimum lot area: None.
B. Minimum floor area ratio: 0.30.
C. Minimum building height: Twenty-five feet or two stories except for accessory structures or buildings under one thousand square feet.
D. Maximum building height: Seventy-five feet, except for the following location where the maximum building height shall be forty-five feet:
1. Properties between Main Street and McLoughlin Boulevard and 11th and 16th streets;
2. Property within five hundred feet of the End of the Oregon Trail Center property; or

2 - NARRATIVE RESPONSE

3. Property abutting single-family detached or attached units.
E. Minimum required setbacks, if not abutting a residential zone: None.
F. Minimum required interior side yard and rear yard setback if abutting a residential zone: Fifteen feet, plus one additional foot in yard setback for every two feet in height over thirty-five feet.
G. Maximum Allowed Setbacks.
1. Front yard: Twenty feet.
2. Interior side yard: No maximum.
3. Corner side yard abutting street: Twenty feet.
4. Rear yard: No maximum.
5. Rear yard abutting street: Twenty feet.
H. Maximum site coverage including the building and parking lot: Ninety percent.
I. Minimum landscape requirement (including parking lot): Ten percent.
J. Residential minimum net density of 17.4 units per acre, except that no minimum net density shall apply to residential uses proposed above nonresidential uses in a vertical mixed-use configuration or to live/work dwellings.

Response:
The applicable dimensional standards for The North End master plan are met in the proposed GDP as illustrated in the table below except where modifications have been requested under the provisions of 17.65.070. Future DDP's will be subject to consistency with the GDP to ensure that the overall master plan satisfies these requirements as proposed.

Standard	Requirement	Proposed	Notes
Min. Lot Area	None	62+ Acres	Standard met by the GDP
Min. Floor Area Ratio	0.3	0.49	Standard met by the GDP
Min. Building Height	25 feet	Varies	Standard met by the GDP
Max. Building Height	75 / 45 feet	Varies	The 45-foot height requirement applies to those portions of the site located within 500 feet of the End of the Oregon Trail Interpretive Center. A subsequent land division may be needed to separate this area from the rest of the site as the City interprets this standard to apply to the entire property as a single lot.
Min. Setbacks	None	Varies	Standard met by the GDP
Max. Setbacks	20 feet	Varies	Many of the buildings are located within this setback to an internal private street. Future land divisions within the GDP will need to locate property lines in accordance with these standards on site. The GDP locates buildings as close to the existing Washington street frontage as possible, however, buildings located along the Abernethy Road frontage are setback outside of the floodplain and a modification to this standard has been requested as allowed by the provisions in 17.65.070.
Max. Coverage	90%	~26%	Standard met by the GDP
Min. Residential Density	None		Does not apply to residential developments above retail in a mixed-use development.
Min. Landscaping	10%	~11.5%	Standard met by the GDP

17.34.080 - Explanation of certain standards.
A. Floor Area Ratio (FAR).
1. Purpose. Floor area ratios are a tool for regulating the intensity of development. Minimum FARs help to achieve more intensive forms of building development in areas appropriate for larger-scale buildings and higher residential densities.
2. Standards.
a. The minimum floor area ratios contained in OCMC 17.34.060 and 17.34.070 apply to all nonresidential and mixed-use building developments.
b. Required minimum FARs shall be calculated on a project-by-project basis and may include multiple contiguous blocks. In mixed-use developments, residential floor space will be included in the calculations of floor area ratio to determine conformance with minimum FARs.
c. An individual phase of a project shall be permitted to develop below the required minimum floor area ratio provided the applicant demonstrates, through covenants applied to the remainder of the site or project or through other binding legal mechanism, that the required density for the project will be achieved at project build out.

Response:
In compliance with this standard, the FAR for the GDP is calculated based on the entire site area subject to the GDP except for the Abernethy Creek NROD. With this site area reduction, the site area comprises 2,464,613 square feet. The development proposed under this GDP comprises 1,091,698 square feet for a total proposed FAR of 0.49:1, meeting the required minimum FAR of 0.3:1. Each individual phase may or may not meet the minimum requirement but as permitted by this section, a phase will be permitted to develop below the required minimum as long as each phase demonstrates through a binding mechanism that the site will meet the minimum FAR requirement at full buildout. This is a request for the approval of the GDP which satisfies the requirements for FAR across the overall site. The FAR requirements apply to this development under the standards above. Future applications for DDP should be consistent with the GDP approval to ensure the project remains compliant with this standard.

B. Building Height.
1. Purpose.
a. The Masonic Hall is currently the tallest building in downtown Oregon City, with a height of fifty-eight feet measured from Main Street. The maximum building height limit of fifty-eight feet will ensure that no new building will be taller than the Masonic Hall.
b. A minimum two-story (twenty-five feet) building height is established for the downtown design district overlay sub-district to ensure that the traditional building scale for the downtown area is maintained.

Response:
The site is not located within the downtown design district. As proposed in the GDP, all development is within the allowed height limits and will demonstrate continuing compliance with the height maximums at each DDP approval.

Chapter 17.41: Tree Protection, Preservation, Removal and Replanting Standards

17.41.010 - Protection of trees—Intent
The intent of this chapter is to ensure that new development is designed in a manner that preserves trees to the maximum extent practicable. As a requirement of any Type II land use application, the siting of structures, roadways and utility easements, shall provide for the protection of tree resources to the maximum extent practicable. This chapter applies to all land division and site plan and design review applications.

17.41.020 - Tree protection—Applicability
A. Applications for development subject to OCMC 16.08 (Land Divisions) or OCMC 17.62 (Site Plan and Design Review) shall demonstrate compliance with these standards as part of the review proceedings for those developments. Compliance with this chapter is required from the date a land use application is filed until a land division is recorded or other development approval is final.
B. For public capital improvement projects, the city engineer shall demonstrate compliance with these standards pursuant to a Type I process.
C. Tree canopy removal greater than twenty-five percent on areas with greater than twenty-five percent slope, unless exempted under OCMC 17.41.040, shall be subject to these standards.
D. A heritage tree or grove which has been designated pursuant to the procedures of OCMC 12.32 shall be subject to the standards of this section.
E. A tree that has been planted pursuant to this section shall remain or shall be replaced with a new tree if removed.

Response:
This is an application for approval of The North End master plan GDP. No tree removal is proposed with this request and this standard is not expressly applicable to the GDP review. It is noted however that this site is a reclaimed landfill and there are very few trees on the site outside of the resource areas. For any required tree removal within a proposed development footprint, on-site mitigation is preferred and proposed to be integrated into the overall site landscaping consistent with the proposed design guidelines provided as **Chapter 5: Master Plan Design Guidelines** of this application. Requests for individual DDP's will be subject to the requirements of this chapter and be required to demonstrate conformance with these standards under a site-specific development plan.

Chapter 17.42: Flood Management Overlay Zone

17.42.010 - Purpose—Findings.
A. There is established in the city a flood management overlay district. The flood management overlay district is an overlay zone classification defining areas subject to periodic flooding or inundation which can result in property harm or loss, disruption of public services, hazards for public health, or added expense for public services. All conditions and restrictions of land use established by this chapter of the city's zoning ordinance shall be in addition to such restrictions and conditions as may be imposed and established in underlying zoning districts.

2 - NARRATIVE RESPONSE

B. It is the purpose of this chapter to promote the public health, safety and general welfare, and to minimize public and private losses due to flood conditions in specific areas by provisions designed:
1. To protect human life and health;
To minimize expenditure of public money and costly flood control projects;
To minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
2. To minimize prolonged business interruptions;
3. To minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges located in areas of special flood hazard;
4. To help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future flood blight areas;
5. To ensure that potential buyers are notified that property is in an area of special flood hazard;
6. To ensure that those who occupy the areas of special flood hazard assume responsibility for their actions; and
7. To protect flood management areas, which provide the following functions:
a. Protect life and property from dangers associated with flooding;
b. Flood storage, reduction of flood velocities, reduction of flood peak;
c. Flows and reduction of wind and wave impacts;
d. Maintain water quality by reducing and sorting sediment loads;
e. Processing chemical and organic wastes and reducing nutrients, recharge, store and discharge groundwater; and
f. Provide plant and animal habitat, and support riparian ecosystems.

17.42.020 - Applicability.
A. This chapter shall apply to development in the flood management overlay district, which may also be referred to as the "floodplain overlay district" in this code. The flood management overlay district includes all areas of special flood hazards and all flood management areas within the city. The overlay district restricts the uses that are allowed in the base zone by right, with limitations, or as provisional uses.
B. The flood management areas which have been mapped include the following locations:
1. Land contained within the one hundred-year floodplain, flood area and floodway as shown on the Federal Emergency Management Agency flood insurance maps dated June 17, 2008, including areas of special flood hazard pursuant to Section 17.42.040 and the area of inundation for the February 1996 flood; and
2. Lands that have physical or documented evidence of flooding within recorded history based on aerial photographs of the 1996 flooding and/or the water quality and flood management areas maps.
C. The standards that apply to the flood management areas apply in addition to state or federal restrictions governing floodplains or flood management areas.

Response:
The North End master plan is located within the Flood Management Overlay Zone as illustrated in the figure 2.3, therefore, these standards are applicable to future development requested with DDP approval. For the purposes of this request, building locations within the GDP have been proposed based on the 1996 flood inundation lines also illustrated below so that any flooding that can be expected on site in a similar event will primarily only affect the proposed parking areas within the master plan area. For example, the areas that were flooded in 1996 along Abernethy Road are proposed to be developed with surface parking lots, and the areas within that were inundated along Washington Street will be developed with mixed use housing that is located on top of three proposed parking structures.

17.42.160 - Flood management area standards.
A. Uses Permitted Outright:
1. Excavation and fill required to plant any new trees or vegetation.
2. Restoration or enhancement of floodplains, riparian areas, wetland, upland and streams that meet federal and state standards provided that any restoration project which encroaches on the floodway complies with the requirements of Section 17.42.190 (Floodways).
B. Provisional Uses.
1. All uses allowed in the base zone or existing flood hazard overlay zone are allowed in the flood management overlay district subject to compliance with the development standards of this section.
C. Prohibited Uses.
1. Any use prohibited in the base zone;
2. Uncontained areas of hazardous materials as defined by the Department of Environmental Quality.

Response:
The uses proposed within the GDP are all uses that are either outright allowed in the zone or conditionally allowed within the MUD zone district in compliance with this criterion. The GDP does not propose any of the prohibited uses within the master plan area. The preliminary grading illustrated in civil sheets C300 thru C-307, attached within **Appendix B** illustrate that based on the grading plan and the proposed development in the GDP, there will be no net increase of fill within the floodplain on site. The Cut/Fill balance exhibits are provided within the preliminary stormwater report attached as **Appendix A** to this application. The GDP therefore does not permit any development that would otherwise be prohibited by the floodplain overlay zone.

The remaining sections of this Chapter include standards that are specific to construction, materials, and methods. The GDP does not provide a level of detail to demonstrate compliance with these standards. The applicant recognizes that all future development within the flood management overlay zone is subject to these requirements and will ensure that they are designed to meet these specific approval criteria with the submission of individual DDP's.

Figure 2.3 - FEMA 100-yr floodplain and the 1996 Flood Inundation

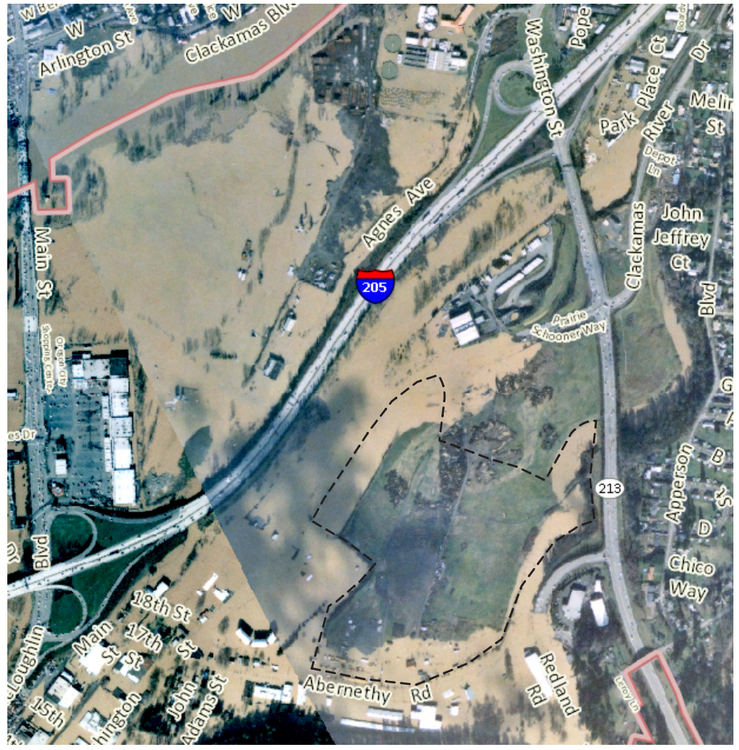

Figure 2.4 - Aerial showing extent of 1996 Flood on the North End site

Chapter 17.44: Geologic Hazards Overlay Zone

17.44.010 - Intent and purpose.
The intent and purpose of the provisions of this chapter are:
A. To ensure that activities in geologic hazard areas are designed based on detailed knowledge of site conditions in order to reduce the risk of private and public losses;
B. To establish standards and requirements for the use of lands within geologic hazard areas;
C. To provide safeguards to prevent undue hazards to property, the environment, and public health, welfare, and safety in connection with use of lands within geologic hazard areas;
D. To mitigate risk associated with geologic hazard areas, not to act as a guarantee that the hazard risk will be eliminated, nor as a guarantee that there is a higher hazard risk at any location. Unless otherwise provided, the geologic hazards regulations are in addition to generally applicable standards provided elsewhere in the Oregon City Municipal Code.

Response:
There are areas within The North End master plan area that are identified within the Geologic Hazards Overlay Zone as illustrated in the figure below. The master plan area topography was artificially created to cover the prior landfill that was located on site.

Brett Shipton P.E., a Principal Engineer with NV5 (formerly GeoDesign), has provided a geotechnical report that is attached as an **Appendix D** to this application. That report provides a detailed level of review of the soils and geologic conditions on site along with identifying recommended construction practices to ensure that risks associated with development on properties within geologic hazards on site are mitigated by proposed development.

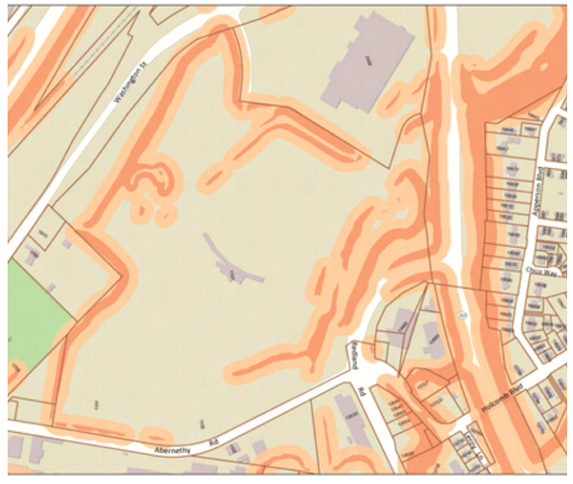

Figure 2.5 Oregon City Geologic Hazards Map - Steep Slopes

17.44.025 - When required; regulated activities; permit and approval requirements.
No person shall engage in any of the following regulated activities within the adopted Oregon City Geologic Hazards Overlay Zone as defined in section 17.04.515 of the Oregon City Municipal Code without first obtaining permits or approvals as required by this chapter:
A. Installation or construction of an accessory structure greater than 500 square feet in area;
B. Development of land, construction, reconstruction, structural alteration, relocation or enlargement of any building or structure for which permission is required pursuant to the Oregon City Municipal Code;
C. Tree removal on slopes greater than 25 percent where canopy area removal exceeds 25 percent of the lot.
D. Excavation which exceeds two feet in depth, or which involves twenty-five or more cubic yards of volume;
The requirements of this chapter are in addition to other provisions of the Oregon City Municipal Code. Where the provisions of this chapter conflict with other provisions of the Oregon City Municipal Code, the provisions that are the more restrictive of regulated development activity shall govern.

Response:
Future construction projects within the GDP will result in development, tree removal, and excavation. Therefore, these requirements are applicable to development within the master plan area. Future applications for DDP's will be required to conform with the recommendations of the NV5 report and supplement that information with their own specific analysis and design. Any DDP that includes land identified within a designated Geologic Hazard Overlay Zone is expected to comply with the applicable provisions of the Oregon City Municipal Code. The NV5 report demonstrates that based on the proposed preliminary grading plan and the development locations, the site development under each DDP can feasibly satisfy the requirements of the Geologic Hazard Overlay Zone.

17.44.050 - Development—Application requirements and review procedures and approvals.
Except as provided by subsection B. of this section, the following requirements apply to all development proposals subject to this chapter:
A. A geological assessment and geotechnical report that specifically includes, but is not limited to:
1. Comprehensive information and data regarding the nature and distribution of underlying geology, the physical and chemical properties of existing soils and groundwater; an opinion of site geologic stability, and conclusions regarding the effect of geologic conditions on the proposed development. In addition to any field reconnaissance or subsurface investigation performed for the site, the following resources, as a minimum, shall be reviewed to obtain this information and data:
a. The State of Oregon Department of Geology and Mineral Industries (DOGAMI) in Bulletin 99, Geology and Geological Hazards of North Clackamas County, Oregon (1979), or in any subsequent DOGAMI mapping for the Oregon City area;
b. Portland State University study entitled "Environmental Assessment of Newell Creek Canyon, Oregon City, Oregon" (1992);
c. Portland State University study, "Landslides in the Portland, Oregon, Metropolitan Area Resulting from the Storm of February 1996: Inventory Map, Database and Evaluation" (Burns and others, 1998);
d. DOGAMI Open File Report O-06-27, "Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from LIDAR Imagery and Aerial Photographs" (Madin and Burns, 2006);
e. "Preliminary Geologic Map of the Oregon City Quadrangle, Clackamas County, Oregon" (Madin, in press);
2. Information and recommendations regarding existing local drainage, proposed permit activity impacts on local drainage, and mitigation to address adverse impacts;
3. Comprehensive information about site topography;
4. Opinion as to the adequacy of the proposed development from an engineering standpoint;
5. Opinion as to the extent that instability on adjacent properties may adversely affect the project;
6. Description of the field investigation and findings, including logs of subsurface conditions and laboratory testing results;
7. Conclusions regarding the effect of geologic conditions on the proposed development, tree removal, or grading activity;
8. Specific requirements and recommendations for plan modification, corrective grading, and special techniques and systems to facilitate a safe and stable site;
9. Recommendations and types of considerations as appropriate for the type of proposed development:
a. General earthwork considerations, including recommendations for temporary and permanent cut and fill slopes and placement of structural fill;
b. Location of residence on lot;
c. Building setbacks from slopes;
d. Erosion control techniques applicable to the site;
e. Surface drainage control to mitigate existing and potential geologic hazards;
f. Subdrainage and/or management of groundwater seepage;
g. Foundations;
h. Embedded/retaining walls;
i. Management of surface water and irrigation water; and
j. Impact of the development on the slope stability of the lot and the adjacent properties.
10. Scaled drawings that describe topography and proposed site work, including:
a. Natural physical features, topography at two or ten-foot contour intervals locations of all test excavations or borings, watercourses both perennial and intermittent, ravines and all existing and man-made structures or features all fully dimensioned, trees six-inch caliper or greater measured four feet from ground level, rock outcroppings and drainage facilities;
b. All of the features and detail required for the site plan above, but reflecting preliminary finished grades and indicating in cubic yards whether and to what extent there will be a net increase or loss of soil.
c. A cross-section diagram, indicating depth, extent and approximate volume of all excavation and fills.
11. For properties greater than one acre, a preliminary hydrology report, prepared by a suitably qualified and experienced hydrology expert, addressing

the effect upon the watershed in which the proposed development is located; the effect upon the immediate area's stormwater drainage pattern of flow, the impact of the proposed development upon downstream areas and upon wetlands and water resources; and the effect upon the groundwater supply.
B. Review procedures and approvals require the following:
1. Examination to ensure that:
a. Required application requirements are completed;
b. Geologic assessment and geotechnical report procedures and assumptions are generally accepted; and
c. All conclusions and recommendations are supported and reasonable.
2. Conclusions and recommendations stated in an approved assessment or report shall then be directly incorporated as permit conditions or provide the basis for conditions of approval for the regulated activity.
3. All geologic assessments and geotechnical reports shall be reviewed by an engineer certified for expertise in geology or geologic engineering and geotechnical engineering, respectively, as determined by the city. The city will prepare a list of prequalified consultants for this purpose. The cost of review by independent review shall be paid by the applicant.
C. The city engineer may waive one or more requirements of subsections A and B of this section if the city engineer determines that site conditions, size or type or development of grading requirements do not warrant such detailed information. If one or more requirements are waived, the city engineer shall, in the staff report or decision, identify the waived provision(s), explain the reasons for the waiver, and state that the waiver may be challenged on appeal and may be denied by a subsequent review authority.

Response:
A preliminary Geotech report has been prepared by Brett Shipton P.E., a Principal Engineer with NV5 (formerly GeoDesign). The preliminary report is attached to this application as **Appendix D**. The preliminary Geotech report is a comprehensive report that provides a review of the soils, geologic conditions, surface and subsurface conditions, an analysis of geologic hazards. The report also provides design recommendations for foundations, pavement, retaining walls, and drainage. Finally, the report provides recommendations for construction activities including site preparation, excavation, structural fill, erosion control, and wet weather construction. on site along with identifying recommended construction practices to ensure that the hazards on site are mitigated by future development.

The report provides a general overview of the geotechnical conditions on site for the GDP. However, while future applications for detailed development plans can rely upon the findings and recommendations of the NV5 report, they must provide their own analysis and design based on building types, final grading, and locations.

17.44.060 - Development standards.
Notwithstanding any contrary dimensional or density requirements of the underlying zone, the following standards shall apply to the review of any development proposal subject to this chapter. Requirements of this chapter are in addition to other provision of the Oregon City Municipal Code. Where provision of this chapter conflict with other provision of the Oregon City Municipal Code, the provisions that are more restrictive of regulated development activity shall govern.
A. All developments shall be designed to avoid unnecessary disturbance of natural topography, vegetation and soils. To the maximum extent practicable as determined by the review authority, tree and ground cover removal and fill and grading for residential development on individual lots shall be confined to building footprints and driveways, to areas required for utility easements and for slope easements for road construction, and to areas of geotechnical remediation.

Response:
With the exception of the Abernethy Creek corridor on the eastern edge of the master plan site, there is not native topography, vegetation, or soils. That corridor is proposed to be preserved through approval of the GDP.

B. All grading, drainage improvements, or other land disturbances shall only occur from May 1 to October 31. Erosion control measures shall be installed and functional prior to any disturbances. The city engineer may allow grading, drainage improvements or other land disturbances to begin before May 1 (but no earlier than March 16) and end after October 31 (but no later than November 30), based upon weather conditions and in consultation with the project geotechnical engineer. The modification of dates shall be the minimum necessary, based upon the evidence provided by the applicant, to accomplish the necessary project goals. Temporary protective fencing shall be established around all trees and vegetation designed for protection prior to the commencement of grading or other soil disturbance.

Response:
The applicant acknowledges these requirements and expects all subsequent applications for development within the master plan area to comply with this standard prior to any on-site development activity.

C. Designs shall minimize the number and size of cuts and fills.

Response:
Preliminary grading plans have been provided in the civil plan set, sheets C300 thru C307 in **Appendix B**. Areas that are proposed to be developed on site will minimize the amount of cut and fill, but a minimal amount of cut will be necessary in order to construct streets, utilities, and buildings. Competing interests such as utility systems that rely on gravity to function (i.e. wet utilities) and compliance with the Americans with Disabilities Act largely dictate the amount of grading required on site. Because this is a reclaimed landfill site and there is a remediation cap in place, there will be careful consideration developing within these areas. The preliminary grading plan and stormwater management plan address these cut and fill and cap issues as detailed above. Based on all of these considerations, the GDP minimizes the number of on-site cuts and fills.

D. Cut and fill slopes, such as those for a street, driveway accesses, or yard area, greater than seven feet in height (as measured vertically) shall be terraced. Faces on a terraced section shall not exceed five feet. Terrace widths shall be a minimum of three feet and shall be vegetated. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. Except in connection with geotechnical remediation plans approved in accordance with the chapter, cuts shall not remove the toe of any slope that contains a known landslide or is greater than twenty-five percent slope. The top of cut or fill slopes not utilizing structural retaining walls shall be located a minimum of one-half the height of the cut slope from the nearest property line.

Response:
No cuts are required by the GDP development plans that would remove the toe of a slope and the GDP calls for the location of structural retaining walls where they may be required as shown on sheets C300 thru C307 of the civil plan sheets. Future development can feasibly comply with this standard. The GDP itself does not provide the level of construction detail to demonstrate specific compliance with this standard.

E. Any structural fill shall be designed by a suitably qualified and experienced civil or geotechnical engineer licensed in Oregon in accordance with standard engineering practice. The applicant's engineer shall certify that the fill has been constructed as designed in accordance with the provisions of this chapter.

Response:
The GDP does not dictate the need for any structural fill. If such fill is required to develop improvements consistent with the approved GDP, the DDP review will be required to demonstrate conformance with this standard.

F. Retaining walls shall be constructed in accordance with the Oregon Structural Specialty Code adopted by the State of Oregon.

Response:
Any retaining walls required by a DDP will demonstrate compliance with this standard, but it should be recognized that the GDP does not propose site design element that would preclude an applicant for a DDP from complying with this standard.

G. Roads shall be the minimum width necessary to provide safe vehicle and emergency access, minimize cut and fill and provide positive drainage control. The review authority may grant a variance from the city's required road standards upon findings that the variance would provide safe vehicle and emergency access and is necessary to comply with the purpose and policy of this chapter.

Response:
Streets proposed within the master plan area are proposed to be private and have been designed to provide safe access for all modes of transportation including vehicles, bicycles, and pedestrians. A variance is not necessary to the road standards with approval of the GDP. The preliminary grading plan and stormwater management plan addressed above demonstrate that minimum cut and fill is proposed for the street system and positive drainage control is achieved.

2 - NARRATIVE RESPONSE

H. Density shall be determined as follows:
1. For those areas with slopes less than twenty-five percent between grade breaks, the allowed density shall be that permitted by the underlying zoning district;
2. For those areas with slopes of twenty-five to thirty-five percent between grade breaks, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;
3. For those areas with slopes over thirty-five percent between grade breaks, development shall be prohibited except as otherwise provided in subsection I.4. of this section.

Response:
Subsection (H)(1) applies. The allowed density in the GDP area is a minimum of .3:1 FAR. The GDP maintains a density of .49:1 in compliance with the density permitted by the underlying zoning district.

I. For properties with slopes of twenty-five to thirty-five percent between grade breaks:
1. For those portions of the property with slopes of twenty-five to thirty-five percent, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;
2. An individual lot or parcel with slopes between twenty-five and thirty-five percent shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.
3. No cut into a slope of twenty-five to thirty-five percent for the placement of a housing unit shall exceed a maximum vertical height of fifteen feet for the individual lot or parcel.
4. For those portions of the property with slopes over thirty-five percent between grade breaks:
a. Notwithstanding any other city land use regulation, development other than roads, utilities, public facilities and geotechnical remediation shall be prohibited; provided, however, that the review authority may allow development upon such portions of land upon demonstration by an applicant that failure to permit development would deprive the property owner of all economically beneficial use of the property. This determination shall be made considering the entire parcel in question and contiguous parcels in common ownership on or after January 1, 1994, not just the portion where development is otherwise prohibited by this chapter. Where this showing can be made on residentially zoned land, development shall be allowed and limited to one single-family residence. Any development approved under this chapter shall be subject to compliance with all other applicable city requirements as well as any applicable state, federal or other requirements;
b. To the maximum extent practicable as determined by the review authority, the applicant shall avoid locating roads, utilities, and public facilities on or across slopes exceeding thirty-five percent.

Response:
According to the geotechnical reports, the steepest slopes were artificially created to either serve as a landfill berm on the perimeter of the site or to construct the golf driving range within the interior of the site. The report identifies possible evidence of slope instability, caused either naturally or at the time these slopes were constructed. These artificial slopes in the master plan area are man-made and range between 35 and 80 percent. The GDP shows preliminary grading plans that will grade those slopes for future development.

J. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report.

Response:
The applicant acknowledges this requirement. Future applications for DDP review will provide their own geotechnical analysis and the geotechnical engineer of record will be responsible for reviewing the final grading, drainage, and foundation plans as specified in this standard. No actual development activity is authorized with approval of the GDP. However, the GDP includes a preliminary grading plan demonstrating that the GDP can be built out in conformance with applicable geotechnical specifications.

K. At the city's discretion, peer review shall be required for the geotechnical evaluation/investigation report submitted for the development and/or lot plans. The peer reviewer shall be selected by the city. The applicant's geotechnical engineer shall respond to written comments provided by the city's peer reviewer prior to issuance of building permit.

Response:
The applicant is aware that the City may require peer review of the geotechnical reports associated with development.

L. The review authority shall determine whether the proposed methods of rendering a known or potential hazard site safe for construction, including proposed geotechnical remediation methods, are feasible and adequate to prevent landslides or damage to property and safety. The review authority shall consult with the city's geotechnical engineer in making this determination. Costs for such consultation shall be paid by the applicant. The review authority may allow development in a known or potential hazard area as provided in this chapter if specific findings are made that the specific provisions in the design of the proposed development will prevent landslides or damage. The review authority may impose any conditions, including limits on type or intensity of land use, which it determines are necessary to assure that landslides or property damage will not occur.

Response:
The applicant is aware that the cost for the peer review of the geotechnical reports provided by the City's consulting engineer is paid by the applicant and that additional conditions could be imposed on the development to assure that landslides and property damage do occur in compliance with this criteria.

17.44.070 - Access to property.
A. Shared private driveways may be required if the city engineer or principal planner determines that their use will result in safer location of the driveway and lesser amounts of land coverage than would result if separate private driveways are used.
B. Innovations in driveway design and road construction shall be permitted in order to keep grading and cuts or fills to a minimum and to achieve the purpose and policy of this chapter.
C. Points of access to arterials and collectors shall be minimized.
D. The city engineer or principal planner shall verify that adequate emergency services can be provided to the site.

Response:
Access to the master plan area is proposed in several locations through the GDP. The applicant has requested a modification to allow the site to have more than one access. The proposed access locations are onto two designated minor arterials but have been located so that they meet or exceed the access spacing standards. For the size of this development, the proposed access locations are intentional and proposed in a way to efficiently move traffic in and out of the development without burdening any single facility.

17.44.080 - Utilities.
All new service utilities, both on-site and off-site, shall be placed underground and under roadbeds where practicable. Every effort shall be made to minimize the impact of utility construction. Underground utilities require the geologic hazards permitting and review prescribed herein.

Response:
The applicant is aware of the requirement to provide all new service utilities underground as required.

17.44.090 - Stormwater drainage.
The applicant shall submit a permanent and complete stormwater control plan. The program shall include, but not be limited to the following items as appropriate: curbs, gutters, inlets, catch basins, detention facilities and stabilized outfalls. Detention facilities shall be designed to city standards as set out in the city's drainage master plan and design standards. The review authority may impose conditions to ensure that waters are drained from the development so as to limit degradation of water quality consistent with Oregon City's Title III section of the Oregon City Municipal Code Chapter 17.49 and the Oregon City Public Works Stormwater Management Design Manual and Standards Plan or other adopted standards subsequently adopted by the city commission. Drainage design shall be approved by the city engineer before construction, including grading or other soil disturbance, has begun.

Response:
A preliminary stormwater report is provided as **Appendix A** to this application along with a set of utility plans demonstrating that stormwater form the site can be collected, treated, and detained prior to being released into an approved system consistent with City standards. Specific details of the system have been discussed previously in this narrative and illustrated within the accompanying plan sets. Future applications for DDP approval will require these plans to be refined to respond to the actual proposed development.

Chapter 17.47: Erosion and Sediment Control

17.47.010 - Purpose.
A. The purpose of this chapter is to require erosion prevention measures and sediment control practices for all development during construction to prevent and restrict the discharge of sediments, and to require final permanent erosion prevention measures, which may include landscaping, after development is completed. Erosion prevention techniques shall be designed to protect soil particles from the force of water and wind and other mechanical means so that they will not be transported from the site. Sediment control measures shall be designed to capture soil particles after they have become dislodged by erosion and attempt to retain the soil particles on-site.
B. The objective of these measures is to control, at the source, waterborne and airborne erosion and the air and water pollution that results from such erosion mechanisms. This chapter recognizes that all non-point discharges eventually end up in surface water bodies. This chapter is intended to control water quality degradation from construction and development activities and it applies in addition to any other applicable provision of this Code, state or federal law. This chapter is not intended to serve as a guideline for stormwater management control measures for already constructed developments.
17.47.030 - Applicability.
A. This chapter, which may also be referred to as "erosion control" in this Code, applies to development that may cause visible or measurable erosion on any property within the city limits of Oregon City.
B. This chapter does not apply to work necessary to protect, repair, maintain or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies, provided that after the emergency has passed, adverse impacts are mitigated in accordance with applicable standards.

Response:
This is a proposal for approval of the GDP associated with The North End master plan. Preliminary construction plans are provided as appendices to this plan for the purposes of illustrating that the master plan can be constructed in conformance with City standards. Construction activities are not permitted through the GDP approval. Separate DDP's will be filed for new development within the master plan area once the GDP is approved. Construction associated with approval of individual DDP's for the site will be required to meet the provisions of this chapter before the City will issue development permits.

Chapter 17.49: Natural Resource Overlay Zone

17.49.010 - Purpose.
The natural resource overlay district designation provides a framework for protection of Metro Titles 3 and 13 lands, and Statewide Planning Goal 5 resources within Oregon City. The natural resource overlay district (NROD) implements the Oregon City Comprehensive Plan Natural Resource Goals and Policies, as well as Federal Clean Water Act requirements for shading of streams and reduction of water temperatures, and the recommendations of the Metro ESEE Analysis. It is intended to resolve conflicts between development and conservation of habitat, stream corridors, wetlands, and floodplains identified in the city's maps. The NROD contributes to the following functional values:
A. Protect and restore streams and riparian areas for their ecologic functions and as an open space amenity for the community.
B. Protect floodplains and wetlands, and restore them for improved hydrology, flood protection, aquifer recharge, and habitat functions.
C. Protect upland habitats, and enhance connections between upland and riparian habitat.
D. Maintain and enhance water quality and control erosion and sedimentation through the revegetation of disturbed sites and by placing limits on construction, impervious surfaces, and pollutant discharges.
E. Conserve scenic, recreational, and educational values of significant natural resources.
The NROD ecological functions listed above are planned for integration with existing neighborhoods, new residential and commercial developments. The long-term goal of the NROD is to restore and enhance stream corridors, wetlands, and forests to more natural vegetated conditions, recognizing that existing homes and other existing uses will continue in the district. This chapter does not regulate the development within the identified water resource. Separate permits from the Division of State Lands and the Army Corp of Engineers may be required for work within a stream or wetland.

Response:
The applicant has submitted a Type I NROD Permit Exemption and Boundary Verification for Area 4 indicated on the attached **Appendix E** which would, if approved, modify the boundary of the NROD along the northern site frontage adjacent to Washington Street and exempt the existing imperious Washington Street improvements from NROD permits.

The applicant has also submitted a Type I NROD Permit Exemption for Area 5 indicated on the attached **Appendix E**. This area contains the impervious soil cap.

The Type I application will likely be reviewed during the completeness review for this GDP application process. If the areas are removed under the Type I procedure, the NROD approval criteria for that area of the site will be inapplicable to this GDP application. The applicant understands, however, that it may be required to supplement the GDP application narrative with responses to the NROD approval criteria for Areas 4 and 5.

17.49.060 – Consistency and relationship to other regulations.

Response:
The proposed project will result in the elimination of Roadside Ditch 1. As such, the project will obtain necessary permits and approvals from the Oregon Department of State Lands (DSL) and/or the U.S. Corps of Engineers. The project will also require permits from the Oregon Department of Environmental Quality (ODEQ). The Applicant is aware that an NROD permit does not become valid prior to obtaining other agency approvals or those agencies indicate that such approvals are not required.

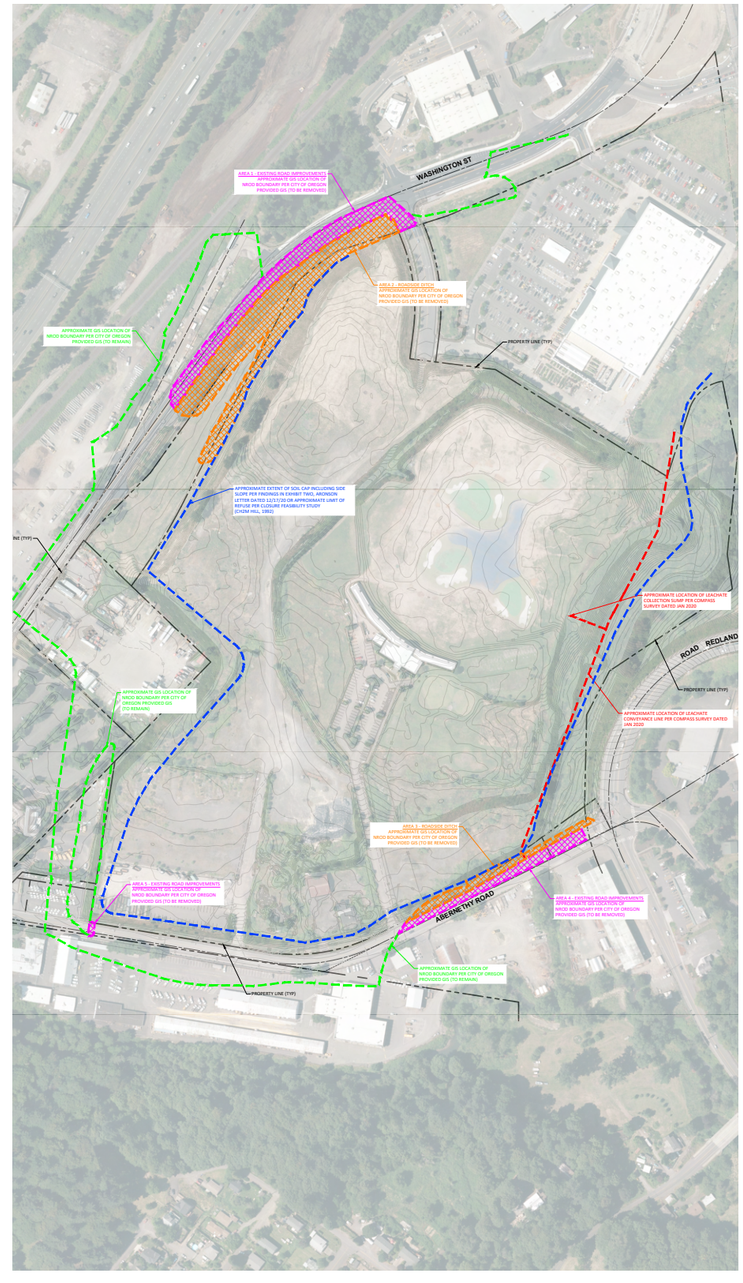

Figure 2.6 - NROD Permit Exemption and Boundary Verification Plan

2 - NARRATIVE RESPONSE

17.49.080 – Uses allowed outright (exempted)
J. Replacement, additions, alterations and rehabilitation of existing structures, roadways, utilities, etc., where the ground level impervious surface area is not increased.

Response:
The applicant will replace existing impervious surface area associated with Washington Street and Abernethy Road for the required half street improvements. This portion of the proposed development within the VC associated with Roadside Ditch 1 and Tributary 1 and Associated Wetlands is exempt from review pursuant to Section 17.49.080.J.

17.49.090 – Uses allowed under prescribed conditions.
F. New roadways, bridges/creek crossings, utilities or alterations to such facilities when not exempted by Section 17.49.080.

Response:
The required half street improvements for Washington Street and Abernethy Road will increase the ground level impervious surface area beyond the limits of existing development. These portions of the required half street improvements within the NROD (78,462 square feet) are subject to Section 17.49.150 described below.

17.49.100 – General development standards.
The following standards apply to all Uses Allowed under Prescribed Conditions within the NROD with the exception of rights of ways (subject to Section 17.49.150), trails (subject to Section 17.49.170), utility lines (subject to Section 17.49.140), land divisions (subject to Section 17.49.160), and mitigation projects (subject to Section 17.49.180 or 17.49.190):
A. Native trees may be removed only if they occur within ten feet of any proposed structures or within five feet of new driveways or if deemed not wind-safe by a certified arborist. Trees listed on the Oregon City Nuisance Plant List or Prohibited Plant List are exempt from this standard and may be removed. A protective covenant shall be required for any native trees that remain;

Response:
Standard is met. The trees proposed for removal within the NROD are all within 10 feet of proposed permanent development. A tree survey of the project area is needed and will be included with future DDP submittals.

B. The community development director may allow the landscaping requirements of the base zone, other than landscaping required for parking lots, to be met by preserving, restoring and permanently protecting habitat on development sites in the Natural Resource Overlay District.

Response:
Standard does not apply. No landscaping requirements of the base zone will be met within the NROD.

C. All vegetation planted in the NROD shall be native and listed on the Oregon City Native Plant List;

Response:
The vegetation proposed to be planted within the NROD will be native and listed on the Oregon City Native Plant List.

D. Grading is subject to installation of erosion control measures required by the City of Oregon City;

Response:
Proposed erosion control measures required by the City of Oregon City will be installed prior to site mobilization and grading activities.

E. The minimum front, street, or garage setbacks of the base zone may be reduced to any distance between the base zone minimum and zero in order to minimize the disturbance area within the NROD portion of the lot;

Response:
Standard does not apply. Minimum setback reductions prescribed in the MUD zone are not being requested.

F. Any maximum required setback in any zone, such as for multi-family, commercial or institutional development, may be increased to any distance between the maximum and the distance necessary to minimize the disturbance area within the NROD portion of the lot;

Response:
Maximum setback increases are being requested through the provisions of 17.65.070 and are not related to the location of the NROD on site.

G. Fences are allowed only within the disturbance area;

Response:
Standard is met. Fences are not proposed within the undisturbed NROD with the GDP. Subsequent applications for individual DDP's will be required to satisfy the applicable standards of this chapter at the time they are submitted.

H. Incandescent lights exceeding two hundred watts (or other light types exceeding the brightness of a two hundred watt incandescent light) shall be placed or shielded so that they do not shine directly into resource areas;
Response:
The applicant is aware of these standards. Lights are not currently proposed for any portion of the site. When individual DDP's are applied for the applicant will be required to satisfy these standards. Any lights adjacent to the NROD will be shielded so that they do not shine directly into resource areas.

I. If development will occur within the one hundred-year floodplain, the FEMA floodplain standards of Chapter 17.42 shall be met; and

Response:
Standard is met. Development will occur within the one hundred year floodplain. As such, the FEMA floodplain standards of Chapter 17.42 will be required to be satisfied with future development and as stated within that section, the proposed GDP will comply with those standards.

J. Mitigation of impacts to the regulated buffer is required, subject to Section 17.49.180 or 17.49.190.

Response:
Mitigation of impacts will be provided subject to Section 17.49.180, Mitigation Planting Option 2.

17.49.150 – Standards for vehicular or pedestrian paths and roads.
A. Stream crossings shall be limited to the minimum number and width necessary to ensure safe and convenient pedestrian, bicycle and vehicle connectivity, and shall cross the stream at an angle as close to perpendicular to the stream channel as practicable. Bridges shall be used instead of culverts wherever practicable.

Response:
This standard does not apply. Stream crossings are not proposed for the development.

B. Where the right-of-way or private road crosses a stream the crossing shall be by bridge or a bottomless culvert;

Response:
This standard does not apply. Stream crossings are not proposed within the development.

C. No fill or excavation shall occur within the ordinary high water mark of a stream without the approval of the Division of State Lands and/or the U.S. Army Corps of Engineers;

Response:
Approval from DSL and the Corps will be obtained for the elimination of Roadside Ditch 1. Copies of the permits or approvals will be provided to the City prior to concurrent with the Oregon City grading permit application.

D. If the Oregon Department of State Lands (DSL) has jurisdiction over any work that requires excavation or fill in a wetland, required permits or authorization shall be obtained from DSL prior to release of a grading permit;
Response:
Approval from DSL and the Corps will be obtained for the elimination of Roadside Ditch 1. Copies of the permits or approvals will be provided to the City prior to concurrent with the Oregon City grading permit application.

E. Any work that will take place within the banks of a stream shall be conducted between June 1 and August 31, or shall be approved by the Oregon Department of Fish and Wildlife; and

2 - NARRATIVE RESPONSE

Response:
Standard will be met. If required, work within Roadside Ditch 1 will either be conducted between June 1 and August 31 or an In-Water Work Variance will be approved by the Oregon Department of Fish and Wildlife.

F. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Response:
Mitigation for the 78,462 square feet (1.8 acres) of total impacts associated with the required half street improvements will be provided as required and detailed in the response to Section 17.49.180.

17.49.180 – Mitigation standards.

Response:
The applicant will provide mitigation for project-related impacts pursuant to the standards of this section using Mitigation Planting Option 2.

A. Mitigation shall occur at a two-to-one ratio of mitigation area to proposed NROD disturbance area […].

Response:
Standard is met. The proposed disturbance area, excluding disturbance to existing impervious surface areas is 78,462 square feet (1.8 acres), which requires 156,924 square feet of mitigation. The proposed mitigation area is 156,924 square feet (3.6 acres), located in the eastern portion of the project parcel adjacent to Tributary 1 and Associated Wetlands.

B. Mitigation shall occur on the site where the disturbance occurs, pursuant to the following:

1. The mitigation required for disturbance associated with a right-of-way or utility in the right-of-way shall be located as close to the impact area as possible within the NROD;

Response:
Mitigation is proposed for the eastern portion of the Tax Lot 902 adjacent to Tributary 1 and Associated Wetlands. This standard will be met.

2. If not possible to locate mitigation on the same site, the mitigation shall occur first on the same stream tributary, secondly in the Abernethy, Newell or Livesay Creek or a tributary thereof, or thirdly as close to the impact area as possible within the NROD; and

Response:
The proposed mitigation location is on the project parcel.

3. An easement that allows access to the mitigation site for monitoring and maintenance shall be provided as part of the mitigation plan.

Response:
The applicant will provide an easement to the mitigation site allowing for monitoring and maintenance as required.

C. Mitigation shall occur within the NROD area of a site unless it is demonstrated that this is not feasible because of a lack of available and appropriate area. In such cases, the proposed mitigation area shall be contiguous to the existing NROD area so the NROD boundary can be easily extended in the future to include the new resource site.

Response:
The proposed mitigation location is on the project parcel within the existing NROD adjacent to Tributary 1 and Associated Wetlands.

D. Invasive and nuisance vegetation shall be removed within the mitigation area.

Response:
Invasive vegetation listed on the Oregon City Nuisance Plant List including, but not limited to Himalayan blackberry, thistle, reed canarygrass, spotted cat's ear, and common teasel will be removed within the mitigation area.

E. Required Mitigation Planting. An applicant shall meet Mitigation Planting Option 1 or 2 below, whichever option results in more tree plantings, except that where the disturbance area is one acre or more, Mitigation Option 2 shall be required. All trees, shrubs, and groundcover shall be selected from the Oregon City Native Plant List.

Response:
Mitigation Planting Option 2 will be used because the impact area is larger than 1 acre. All trees, shrubs, and herbaceous (groundcover) selected for the mitigation plan are from the Oregon City Native Plant List. The plant species listed in Table 4 are subject to adjustment based on site conditions and plant availability at the time of planting. However, no more than one-third of the trees will be of the same genus, and shrubs will consist of at least three different species.

Table 4: Proposed Plant List for Mitigation Planting

Botanical Name	Common Name
TREES (minimum of 785 plantings)	
Acer macrophyllum	Big-leaf maple
Alnus rubra	Red alder
Fraxinus latifolia	Oregon Ash
Pseudotsuga menziesii	Douglas-fir
Salix scouleriana	Scouler's willow
SHRUBS (minimum of 3,923 plantings)	
Acer circinatum	Vine maple
Amelanchier alnifolia	Western serviceberry
Berberis aquifolium	Tall Oregon grape
Crataegus douglasii	Black hawthorn
Ribes sanguineum	Red flowering currant
Spiraea douglasii	Douglas' spirea
Symphoricarpos albus	Snowberry
HERBACEOUS	
Agrostis exerata	Spike bentgrass
Bromus carinatus	California brome
Deschampsia cespitosa	Tufted hairgrass

2. Mitigation Planting Option 2.

Response:
The mitigation planting quantity is based on the disturbance area within the NROD. Seven-hundred and eighty-five (785) replacement trees and three-thousand, nine-hundred and twenty-three (3,923) replacement shrubs will be planted according to the size, spacing, and diversity standards of this section. Bare ground will be planted or seeded with native grasses and ground cover species. New plantings will be mulched and planting areas will be watered for a minimum of three years following planting.

F. Monitoring and Maintenance.

Response:
The proposed mitigation will be monitored and maintained for a minimum of five years, with approved annual progress reports submitted to the City's planning division. Mulching and irrigation will be applied in the amounts necessary to ensure eighty percent survival at the end of the required five-year monitoring period. The mitigation area will be inspected annually during the active growing season. During site monitoring, survival rates of planted trees and shrubs and invasive plant species cover will be documented. This information, along with photo-documentation of the mitigation area, will be used to inform the annual progress report. Should survival rate drop below 80 percent or invasive plant coverage exceed 10 percent at any time during the maintenance period, immediate remedial action will be taken. Monitoring and maintenance is the on-going responsibility of the property owner, assign, or designee.

G. Covenant or Conservation Easement. Applicant shall record a restrictive covenant or conservation easement, in a form provided by the city, requiring the owners and assigns of properties subject to this section to comply with the applicable mitigation requirements of this section. Said covenant shall run with the land, and permit the city to complete mitigation work in the event of default by the responsible party. Costs borne by the city for such mitigation shall be borne by the owner.

Response:
The applicant will record a restrictive covenant or conservation easement in the form provided by the City that will require owners and assigns of the property to comply with the applicable mitigation requirements. The covenant or easement will run with the land and permit the City to complete mitigation work in the event of default by the responsible party. Should the city need to complete the mitigation work, such cost will be borne by the owner. The covenant or conservation easement is the responsibility of the property owner, assign, or designee.

H. Financial Guarantee. A financial guarantee for establishment of the mitigation area, in a form approved by the city, shall be submitted before development within the NROD disturbance area commences. The city will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented pursuant to this section.

Response:
A financial guarantee will be provided to the city prior to development within the NROD disturbance area. The financial guarantee is the responsibility of the property owner, assign, or designee.

17.49.250 - Verification of NROD boundary.
The NROD boundary may have to be verified occasionally to determine the true location of a resource and its functional values on a site. This may be through a site-specific environmental survey or a simple site visit in those cases where existing information demonstrates that the NROD significance rating does not apply to a site-specific area. Applications for development on a site located in the NROD area may request a determination that the subject site is not in an NROD area and therefore is not subject to the standards of OCMC 17.49.100. Verifications shall be processed as either a Type I or Type II process.

Response:
As approved in NROD-20-00022, the portion of the City-mapped NROD on the landfill refuse soil cap is not viable NROD. This area has been removed from the NROD within the parcel. The removed NROD area on the west side of the landfill refuse soil cap contained the entirety of an area mapped as upland habitat and a portion of the associated VC. Because the mapped upland habitat is not viable NROD, it is assumed that the NROD Significance Rating does not apply to the portion of the VC associated with the mapped upland habitat that is west of and outside of the limits of the landfill refuse soil cap.

Chapter 17.52: Off-Street Parking and Loading

17.52.010 - Applicability.
The construction of a new structure or parking lot, or alterations to the size or use of an existing structure, parking lot or property use shall require site plan review approval and compliance with this chapter. This chapter does not apply to single-family attached, detached residential dwellings and duplexes.

Response:
The standards of this chapter are applicable to the project review. The project proposes a combination of parking structures and surface parking lots to satisfy minimum off-street parking requirements of the OCMC and serve the needs of future businesses and residents in the master plan.

17.52.015 - Planning commission adjustment of parking standards.
A. Purpose: The purpose of permitting a Planning Commission adjustment to parking standards is to provide for flexibility in modifying parking standards in all zoning districts, without permitting an adjustment that would adversely impact the surrounding or planned neighborhood. Adjustments provide flexibility to those uses which may be extraordinary, unique, or provide greater flexibility for areas that can accommodate a denser development pattern based on existing infrastructure and ability to access the site by means of walking, biking or transit. An adjustment to a minimum parking standard may be approved based on a determination by the Planning Commission that the adjustment is consistent with the purpose of this Code, and the approval criteria can be met.
B. Procedure: A request for a Planning Commission parking adjustment shall be initiated by a property owner or authorized agent by filing a land use application. The application shall be accompanied by a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development and parking plan, the extent of the adjustment requested along with findings for each applicable approval criteria. A request for a parking adjustment shall be processed as a Type III application as set forth in Chapter 17.50.

Response:
The applicant is not requesting approval of an adjustment to parking standards. The parking proposed complies with the minimum requirements of the OCMC, as discussed in subsection 17.52.20, below.

17.52.020 - Number of automobile spaces required.
A. The number of parking spaces shall comply with the minimum and maximum standards listed in Table 17.52.020. The parking requirements are based on spaces per one thousand square feet net leasable area unless otherwise stated.

Response:
The North End master plan is a proposed 1,091,698 square feet of mixed-use development that includes 524 residential units, (3) anchor retail facilities, and a mix of smaller retail and entertainment uses on a 62-acre site. Table 17.52.020 requires a minimum of 4.1 parking spaces per 1,000 sf of retail which includes stores, restaurants and drive thru uses; .25 spaces per seat for movie theaters; and 1 space per unit for the multi-family residential units. Based on the proposed programming in the master plan, and the requirements of Table 17.52.020, the site is required to provide a minimum of 3,366 onsite parking spaces.

Table 17.52.020 also establishes the maximum allowed number of spaces at 5.0 parking spaces per 1,000 sf of retail which includes stores, restaurants and drive thru uses; .5 spaces per seat for movie theaters, and 2.5 spaces per unit for the multi-family residential units proposed on site. Based on the proposed programming in the master plan, the maximum number of allowed spaces would be 5,923 spaces. See the table below:

Parking Requirements				
Land Use	**Floor Area (SF)**	**Min. Requirement**	**Max. Requirement**	**Proposed**
Drive Thru Restaurant	3,800	15.7	19.1	
Retail	170,800	700.2	853.9	
Multi-Family Housing	524	524	???	
Theatre (seats)*	1000	250	2500	
Total - North District		1489.9	3635	**1354**
Drive Thru Restaurant (s)	7,200	29.5	35.9	
Retail	149,100	611.4	745.6	
Total - East District		634	773	**973**
Drive Thru Restaurant	3,300	13.5	16.5	
Retail	137,500	563.7	687.42	
Total - Central District		577	704	**452**
Drive Thru Restaurant	4,000	16.4	20.0	
Retail	158,300	649.1	791.6	
Total - South District		665	811	**446**

** The theatre space may need further analysis given the presence of the bowling alley, but the other uses would generally be considered ancillary to the primary use and not necessarily require they're own separate parking.*

2 - NARRATIVE RESPONSE

Response to 17.52.020.A Cont.:
Per 17.52.020.A.3, fractional results less than one-half are disregarded. Other results round up, requiring an additional space. The master plan proposes to provide 3,225 parking stalls within the parking structures and parking lots, and another 531 parallel parking stalls along the internal private street system for a total of 3,756 parking stalls on-site. Therefore, the master plan proposes parking that exceeds the minimum number of required parking spaces, but less than the maximum number allowed. Parking will be evaluated again with each application for DDP approval. This standard is satisfied.

1. Multiple Uses. In the event several uses occupy a single structure or parcel of land, the total requirements for off-street parking shall be the sum of the requirements of the several uses computed separately.

Response:
The master plan would include a mix of uses and parking has been calculated based on the square footages for each use separately. This standard is satisfied.

2. Requirements for types of buildings and uses not specifically listed herein shall be determined by the Community Development Director, based upon the requirements of comparable uses listed.

Response:
A determination by the Community Development Director is not needed for this application. The parking requirements for the uses proposed within the master plan are listed in minimum and maximum parking standards of Table 17.52.020.

3. Where calculation in accordance with the above list results in a fractional space, any fraction less than one-half shall be disregarded and any fraction of one-half or more shall require one space.

Response:
Parking requirements for the proposed GDP utilized this methodology for dealing with fractional spaces and provides enough parking to satisfy the minimum parking requirement for the site without exceeding the maximum allowed parking.

4. Fleet vehicle parking shall be accommodated within the maximum parking ratio, except that in GI, CI, and MUE zones, fleet vehicle parking may be included in a parking lot in addition to the maximum number of permitted parking spaces.

Response:
Fleet vehicle parking was not considered within the GDP. This provision is not applicable with this request but may be considered when considering applications for DDP's.

5. A change in use within an existing habitable building located in the MUD Design District or the Willamette Falls Downtown District is exempt from additional parking requirements. Additions to an existing building and new construction are required to meet the minimum parking requirements for the areas as specified in Table 17.52.020 for the increased square footage.

Response:
The site is located within the MUD zone but this application does not propose conversion of an existing building. The GDP is proposing to meet the minimum parking requirements for the uses proposed.

B. Parking requirements can be met either onsite, or offsite by meeting one or multiple of the following conditions:
1. Parking may be located on the same site as the associated use which it is supporting.

Response:
All proposed required parking spaces are located on the private property developed with The North End master plan. This standard is met.

2. Mixed Uses. If more than one type of land use occupies a single structure or parcel of land, the total requirements for off-street automobile parking shall be the sum of the requirements for all uses, unless it can be shown that the peak parking demands are actually less (e.g. the uses operate on different days or at different times of the day). In that case, the total requirements shall be reduced accordingly, up to a maximum reduction of fifty percent, as determined by the Community Development Director.

Response:
This is an application for approval of a GDP for a mixed-use development. All parking has been calculated based on the sum of the requirements for all proposed uses on site. Further, the minimum requirements are exceeded as discussed above so a reduction is not necessary.

3. Shared Parking. Required parking facilities for two or more uses, structures, or parcels of land may be satisfied by the same parking facilities used jointly, to the extent that the owners or operators show that the need for parking facilities does not materially overlay (e.g., uses primarily of a daytime versus nighttime nature), that the shared parking facility is within one thousand feet of the potential uses, and provided that the right of joint use is evidenced by a recorded deed, lease, contract, or similar written instrument authorizing the joint use.

Response:
Parking on site will be shared across the development. Individual DDP requests will include shared parking agreements and easements as required.

4. On-Street Parking. On-street parking may be counted toward the minimum standards when it is on the street face abutting the subject land use. An on-street parking space shall not obstruct a required clear vision area and it shall not violate any law or street standard. On-street parking for commercial uses shall conform to the following standards:
a. Dimensions. The following constitutes one on-street parking space:
1. Parallel parking: twenty-two feet of uninterrupted and available curb;
2. Forty-five and/or sixty-degree diagonal parking: Fifteen feet of curb;
3. Ninety-degree (perpendicular) parking: Twelve feet of curb.
4. Public Use Required for Credit. On-street parking spaces counted toward meeting the parking requirements of a specific use may not be used exclusively by that use, but shall be available for general public use at all times. Signs or other actions that limit general public use of on-street spaces are prohibited.

Response:
On street parking within the internal private streets has been included in the parking calculations above. On street parking is based on the parallel parking standard listed above. All on-street parking will be available on a first come, first serve basis to anyone patronizing the master plan development. Individual applications for DDP are expected to be subject to these standards as well.

C. Reduction of the Number of the Minimum Automobile Spaces Required. Any combination of the reductions below is permitted unless otherwise noted.
1. Downtown Parking Overlay. The minimum required number of parking stalls is reduced within the Downtown Parking Overlay by fifty percent.
2. Transit Oriented Development. For projects not located within the Downtown Parking Overlay District, the minimum required number of parking stalls is reduced up to twenty-five percent when:
a. In a commercial center (sixty thousand square feet or greater of retail or office use measured cumulatively within a five hundred foot radius) or
b. When adjacent to multi-family development with over eighty units or
c. Within 1,320 feet of an existing or planned public transit street and within 1,320 feet of the opposite use (commercial center or multi-family development with over eighty units).
3. Tree Preservation. The Community Development Director may grant an adjustment to any standard of this requirement provided that the adjustment preserves a designated heritage tree or grove so that the reduction in the amount of required pavement can help preserve existing healthy trees in an undisturbed, natural condition.
4. Transportation Demand Management. The Community Development Director shall reduce the required number of parking stalls up to twenty-five percent when a parking-traffic study prepared by a traffic engineer demonstrates alternative modes of transportation, including transit, bicycles, and walking, and/or special characteristics of the customer, client, employee or resident population will reduce expected vehicle use and parking space demand for this development, as compared to standard Institute of Transportation Engineers vehicle trip generation rates and further that the transportation demand management program promotes or achieves parking utilization lower than minimum city parking requirements.
A transportation demand management (TDM) program shall be developed to include strategies for reducing vehicle use and parking demand generated by the development and will be measured annually. If, at the annual assessment, the City determines the plan is not successful, the plan may be revised. If the City determines that no good-faith effort has been made to implement the plan, the City may take enforcement actions.
5. The minimum required number of stalls may be reduced by up to ten percent when the subject property is adjacent to an existing or planned fixed public transit route or within one thousand feet of an existing or planned transit stop.

2 - NARRATIVE RESPONSE

Response:
The GDP does not seek a reduction to the number of minimum automobile spaces required under these provisions.

17.52.030 - Standards for automobile parking.
A. Access. Ingress and egress locations on public thoroughfares shall be located in the interests of public traffic safety and meet requirements of OCMC 16.12.035. Groups of more than four parking spaces shall be so located and served by driveways so that their use will require no backing movements or other maneuvering within a street right-of-way other than an alley.

Response:
This standard is met by the GDP. The layout of vehicle parking on the proposed site provides circulation and maneuvering which enables all vehicles to enter and exit the site in a forward motion through any one of the driveway access points along Washington Street or Abernethy Road.

B. Surfacing. Required off-street parking spaces and access aisles shall have paved surfaces adequately maintained. The use of pervious asphalt/concrete and alternative designs that reduce storm water runoff and improve water quality pursuant to the City's stormwater and low impact development design standards are encouraged.

Response:
This standard is met by the GDP. Paving is proposed for all vehicle areas on the site. Pervious asphalt/concrete are not currently proposed, but are not prohibited by the master plan and could be proposed with individual DDP's. The applicant acknowledges the requirement to maintain the paved surfaces over time.

C. Drainage. Drainage shall be designed in accordance with the requirements of OCMC 13.12 and the City public works stormwater and grading design standards.

Response:
Parking and circulation area were all considered in the preliminary storm design for the master plan site. As discussed under the findings for Chapter 13.12, Stormwater Management, the project will comply with the Oregon City Stormwater Grading and Design Standards as proposed.

D. Dimensional Standards.
1. Requirements for parking developed at varying angles are according to the table included in this section. A parking space shall not be less than seven feet in height when within a building or structure, and shall have access by an all-weather surface to a street or alley. Parking stalls in compliance with the American with Disabilities Act may vary in size in order to comply with the building division requirements. Up to thirty-five percent of the minimum required parking may be compact, while the remaining required parking stalls are designed to standard dimensions. The Community Development Director may approve alternative dimensions for parking stalls in excess of the minimum requirement which comply with the intent of this chapter.

Response:
This standard is met. All stalls shown on the civil site plans have been designed to meet the minimum dimensions required for standard or compact stalls. Parking is primarily angled at 90 degrees, but there are locations along the north and east edge of the development where angled parking is proposed. The civil site plans (sheets C200 through C207) attached in **Appendix B** to this application provides the dimensions for parking stalls and circulation to demonstrate that development within the master plan area can comply with these standards. DDP's may propose compact spaces within their design provided the minimum parking requirements for the overall site are met.

2. Alternative parking/plan. Any applicant may propose an alternative parking plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. In such situations, the Community Development Director may approve an alternative parking lot plan with variations to parking dimensions of this section. The alternative shall be consistent with the intent of this chapter and shall create a safe space for automobiles and pedestrians while providing landscaping to the quantity and quality found within parking lot landscaping requirements.

Response:
The project does not seek approval of an alternative parking plan. This standard is not applicable.

E. Carpool and Vanpool Parking. New developments with seventy-five or more parking spaces, excluding projects where seventy-five percent or more of the total floor area is residential , and new hospitals, government offices, group homes, nursing and retirement homes, schools and transit park-and-ride facilities with fifty or more parking spaces, shall identify the spaces available for employee, student and commuter parking and designate at least five percent, but not fewer than two, of those spaces for exclusive carpool and vanpool parking. Carpool and vanpool parking spaces shall be located closer to the main employee, student or commuter entrance than all other employee, student or commuter parking spaces with the exception of ADA accessible parking spaces. The carpool/vanpool spaces shall be clearly marked "Reserved - Carpool/Vanpool Only."

Response:
The master plan provides more than 75 parking spaces on site and this provision is applicable. The location of carpool, vanpool, and ADA spaces will be designated with individual DDP's. ADA parking has been identified within the GDP for each building to demonstrate that the site is able to comply with dimensional standards for ADA spaces, but those locations are not intended to be formally set with this request. Carpool, vanpool, and ADA spaces can be accommodated on site.

17.52.040 - Bicycle parking standards.
B. Number of Bicycle Spaces Required. For any use not specifically mentioned in Table A, the bicycle parking requirements shall be the same as the use which, as determined by the Community Development Director, is most similar to the use not specifically mentioned. Calculation of the number of bicycle parking spaces required shall be determined in the manner established in OCMC 17.52.020 for determining automobile parking space requirements. Modifications to bicycle parking requirements may be made through the site plan and design, conditional use, or master plan review process.
Where two options for a requirement are provided, the option resulting in more bicycle parking applies. Where a calculation results in a fraction, the result is rounded up to the nearest whole number.

Response:
All of the uses proposed within the GDP are listed in table A which prescribes the minimum number of bicycle parking spaces required for the site. The GDP does not provide the level of detail required to satisfy this standard but there is adequate space on the site to accommodate required bicycle parking. Future applications for DDP approval are expected to provide detailed plans that satisfy this requirement.

C. Design Standards.
1. Bicycle parking facilities shall be in the form of a lockable enclosure onsite, secure room in a building onsite, a covered or uncovered rack onsite, or within the adjacent right-of-way.
2. Bicycle parking areas shall be clearly marked or visible from on-site buildings or the street. If a bicycle parking area is not plainly visible from the street or main building entrance, a sign shall be posted indicating the location of the bicycle parking area. Indoor bicycle parking areas shall not require stairs to access the space. If sites have more than one building, bicycle parking shall be distributed as appropriate to serve all buildings.
3. All bicycle racks shall be designed so that:
a. The bicycle frame is supported horizontally at two or more places.
b. The frame and at least one wheel of the bicycle can be locked to the rack with a standard
c. The user is not required to lift the bicycle onto the bicycle rack.
d. Each bicycle parking space is accessible without moving another bicycle.
e. It is a minimum of thirty inches tall and eighteen inches wide between the two points of contact.
f. Provides an area of six feet by two feet per bicycle.
g. All bicycle racks and lockers shall be securely anchored to the ground or to a structure.

Response:
The GDP does not provide the level of detail required to satisfy these design standards but there is adequate space on the site to accommodate required bicycle parking and meet the design standards. Future applications for DDP approval are expected to provide detailed plans that satisfy these requirements.

2 - NARRATIVE RESPONSE

43 | Chapter 17.52: Off-Street Parking and Loading (Cont.)

17.52.060 - Parking lot landscaping.
A. Applicability. Unless otherwise specified, construction of new parking lots and alterations of existing parking lots shall comply with parking lot landscaping standards. Parking lot landscaping requirements within this section do not apply to parking structures or parking garages, except landscaping as required in OCMC 17.62.

Response:
The project is subject to parking lot landscaping standards. However, the GDP provides high level landscape drawings that show that required parking lot landscaping can generally satisfy these provisions. No modifications to the parking lot landscaping is requested with the GDP approval. Subsequent requests for DDP approval will require the applicant to provide more detailed landscape plans that meet these provisions as well as the landscape design guidelines proposed with the overall master plan.

B. Development Standards.
1. The landscaping shall be located in defined landscaped areas that are uniformly distributed throughout the parking or loading area.
2. All areas in a parking lot not used for parking, maneuvering, or circulation shall be landscaped.
3. Parking lot trees shall be a mix of deciduous shade trees and coniferous trees. The trees shall be evenly distributed throughout the parking lot as both interior and perimeter landscaping.
4. Required landscaping trees shall be of a minimum two-inch minimum caliper size (though it may not be standard for some tree types to be distinguished by caliper), planted according to American Nurseryman Standards, and selected from the Oregon City Street Tree List or approved by an arborist;
5. At maturity, all of the landscaped area shall be planted in ground cover plants, which includes grasses. Mulch (as a ground cover) shall only be allowed underneath plants at full growth and within two feet of the base of a tree and is not a substitute for ground cover.
6. Landscaped areas shall include irrigation systems unless an alternate plan is submitted, and approved by the Community Development Director, that can demonstrate adequate maintenance;
7. All landscaping shall be installed according to accepted planting procedures, according to American Nurseryman Standards.
C. Perimeter Parking Lot Landscaping and Parking Lot Entryway/Right-of-Way Screening. Parking lots and associated drive aisles shall include a five-foot wide landscaped buffer where the parking lot abuts the right-of-way and/or adjoining properties. In order to provide connectivity between non-single-family sites, the Community Development Director may approve an interruption in the perimeter parking lot landscaping for a single driveway where the parking lot abuts property designated as multi-family, commercial or industrial. Shared driveways and parking aisles that straddle a lot line do not need to meet perimeter landscaping requirements.
1. The perimeter parking lot are[a] shall include:
a. Trees spaced a maximum of thirty feet apart (minimum of one tree on either side of the entryway is required). When the parking lot is adjacent to a public right-of-way, the parking lot trees shall be offset from the street trees;
b. An evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average. The hedge/shrubs shall be parallel to and not nearer than two feet from the right-of-way line. The required screening shall be designed to allow for free access to the site and sidewalk by pedestrians. Visual breaks, no more than five feet in width, shall be provided every thirty feet within evergreen hedges abutting public right-of-ways.
D. Parking Area/Building Buffer. Except for parking lots with fewer than five parking stalls, parking areas (excluding drive aisles with no adjacent parking) shall be separated from the exterior wall of a structure, exclusive of pedestrian entranceways or loading areas, by one of the following:
1. Minimum five-foot wide landscaped planter strip (excluding areas for pedestrian connection) meeting the standards for perimeter parking lot area landscaping; or:
2. Minimum seven foot sidewalks with shade trees spaced a maximum of thirty feet apart in three-foot by five-foot tree wells.
E. Interior Parking Lot Landscaping. Surface parking lots with more than five parking stalls shall include at least forty-five square feet of interior parking lot landscaping per parking stall to improve the water quality, reduce storm water runoff, and provide pavement shade. Pedestrian walkways or any impervious surface in the landscaped areas are not to be counted in the percentage. Fractions shall be rounded up when calculating the required number of plantings.
Interior parking lot landscaping shall include:
a. A minimum of one tree per four parking spaces.
b. A minimum of 1.5 shrubs per parking space.
c. No more than eight contiguous parking spaces shall be created without providing an interior landscape strip between them. Landscape strips shall be provided between rows of parking shall be a minimum of six feet in width and a minimum of ten feet in length.
F. Alternative landscaping plan.
Any applicant may propose an alternative landscaping plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. Alternative plans may include the use of low impact development techniques and minimized landscaping requirements. In such situations, the Community Development Director may approve variations to the landscaping standards of OCMC 17.52.060 in accordance with A and/or B below.
1. General Review Standard. The alternative shall meet the standards in OCMC 17.62.015- Modifications that will better meet design review requirements.
2. Credit for Pervious/Low Impact Development. The Community Development Director may count up to fifty percent of the square footage of any pervious hardscaped landscape material within a parking lot that is designed and approved pursuant to the City's adopted stormwater and low impact development design standards toward minimum landscaping requirements for the site. (This includes porous pavement detention, open celled block pavers, porous asphalt, porous concrete pavement, porous turf, porous gravel, etc.).

Response:
The GDP provides an overall general landscape plan that was designed based on these standards. The plans are high level and do not get to the level of detailed design needed to demonstrate compliance with specific details; however, future applications for DDP's within the master plan area are required to meet the provisions of the OCMC as well as the landscape design standards in **Chapter 5: Master Plan Design Guidelines** of this application.

The GDP landscape plans generally show how the landscape standards can be met with future development. Landscaping is proposed in all areas not specified for parking, maneuvering, or circulation. The landscape design guidelines reinforce the standard that all trees within the landscape are 2-inch caliper or greater. The required parking lot landscaping considered the need for 45 square feet of landscaping for each parking space and anticipates trees spaced according to the OCMC requirements listed above. Ground cover is required across the site where improvements are not constructed filling in the gaps between trees and shrubs. The plans illustrate a variety trees within a minimum 5-foot buffer around the perimeter of each parking lot and shows adequate space for hedges/shrubs. Perimeter landscaping is provided along all parking areas.

The GDP high level landscape plans and preliminary design were developed by a Kurt Lango, a certified landscape architect who also authored the landscape design guidelines. Each application for DDP approval will be required to provide greater detail and satisfy both sets of requirements. Alternative landscape plans may be requested with future DDP applications, but the GDP illustrates that it is possible to satisfy these requirements.

17.52.080 - Maintenance.
The owner, tenant and their agent, if any, shall be jointly and severally responsible for the maintenance of the site including but not limited to the off-street parking and loading spaces, bicycle parking and all landscaping which shall be maintained in good condition so as to present a healthy, neat and orderly appearance and shall be kept free from refuse and debris.
All plant growth in interior landscaped areas shall be controlled by pruning, trimming, or otherwise so that:
a. It will not interfere with the maintenance or repair of any public utility;
b. It will not restrict pedestrian or vehicular access; and
c. It will not constitute a traffic hazard due to reduced visibility.

Response:
The applicant acknowledges this requirement and understands that maintenance of the site is their responsibility.

17.52.090 - Loading areas.
B. Applicability.
OCMC 17.52.090 applies to uses that are expected to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week. The City Engineer and decision maker shall determine through site plan and design review the number, size, and location of required loading areas, if any.

2 - NARRATIVE RESPONSE

C. Standards.
1. The off-street loading space shall be large enough to accommodate the largest vehicle that is expected to serve the use without obstructing vehicles or pedestrian traffic on adjacent streets and driveways. Applicants are advised to provide complete and accurate information about the potential need for loading spaces because the City Engineer or decision maker may restrict the use of other public right-of-way to ensure efficient loading areas and reduce interference with other uses.
2. Where parking areas are prohibited between a building and the street, loading areas or drive isles are also prohibited.
3. The City Engineer and decision maker, through site plan and design review, may approve a loading area adjacent to or within a street right-of-way when all of the following loading and unloading operations conditions are met:
a. Short in duration (i.e., less than one hour);
b. Infrequent (less than three operations daily between 5:00 a.m. and 12:00 a.m. or all operations between 12:00 a.m. and 5:00 a.m. at a location that is not adjacent to a residential zone);
c. Does not obstruct traffic during peak traffic hours;
d. Does not interfere with emergency response services; and
e. Is acceptable to the applicable roadway authority.

Response:
The standards of this section are applicable as the mixed-use master plan includes anchor retail as well as a mix of other smaller retail uses on site. These uses will require loading areas; however, the exact location of loading will be dependent upon the individual developer or tenant. The GDP site plan (Civil Sheets C200 thru C207) illustrates some opportunities for loading associated with the anchor retail and some of the smaller retail uses around the site, but again, these locations are not formalized with this request and will need to be confirmed with applications for DDP approval.

Chapter 17.54 – Supplemental Zoning Regulations

Response:
This chapter regulates accessory structures and uses, projections from buildings, setback exceptions, fences, hedges, walls, and retaining walls, marijuana businesses, mobile food units, and home occupations. Individual developments within the master plan may propose some of the items regulated within this chapter through individual DDP requests. With the exception of section 17.54.100 that pertains to the regulation of Fences, hedges, walls, and retaining walls, those requests should be consistent with these provisions.

A modification under the provisions of 17.65.070 is requested to the maximum allowed height of retaining walls to address the anticipated walls necessary to make a pedestrian connection to the End of the Oregon Trail Interpretive Center. Because of the difference in grade around the site as a result of berms and fill associated with the former Rossman Landfill, retaining walls will need to exceed the 8.5 foot height requirement. This is a condition specific to this site. The modification is discussed under Chapter 17.65.

Chapter 17.56 – Conditional Uses

17.56.010 - Permit—Authorization—Standards—Conditions.
A conditional use listed in this title may be permitted, enlarged or altered upon authorization of the planning commission in accordance with the standards and procedures of this title. A conditional use permit listed in this section may be permitted, enlarged or altered upon authorization of the planning commission or city commission in accordance with the standards and procedures of this section. Any expansion to, alteration of, or accessory use to a conditional use shall require planning commission or city commission approval of a modification to the original conditional use permit unless authorized in this chapter.
A. Conditional uses, because of their public convenience and necessity and their effect upon the neighborhood shall be permitted only upon the approval of the planning commission or city commission after due notice and public hearing, according to procedure as provided in OCMC 17.50. The applicant shall provide evidence substantiating that all the requirements of this title relative to the proposed use are satisfied, and demonstrate that the proposed use also satisfies the following criteria:
1. The use is listed as a conditional use in the underlying district;
2. The characteristics of the site are suitable for the proposed use considering size, shape, location, topography, existence of improvements and natural features;
3. Development shall demonstrate compliance with OCMC 16.12;
4. The proposed use will not alter the character of the surrounding area in a manner which substantially limits, impairs or precludes the use of surrounding properties for the primary uses listed in the underlying district;
5. The proposal satisfies the goals and policies of the city comprehensive plan which apply to the proposed use.

Response:
1. The North End master plan includes pads for five drive through facilities. It has not been determined what these drive through uses are; however, they would likely include drive through eating and drinking facilities such as coffee stands or restaurants, or personal services like banks. The master plan also proposes three anchor retail facilities. Drive-throughs and Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies and specialty stores in a freestanding building with a single store exceeding a foot print of sixty thousand square feet are permitted as Conditional Uses within the Mixed Use Downtown Zoning District according to Section 17.34.030 (A and G).
2. The North End master plan is a redevelopment of a former land fill that is approximately 62 acres in size at the north end of Oregon City. The site is large enough to accommodate the proposed uses and will be provided with all necessary public services. The location and shape of the site as well as the planned improvements also make this site suitable for the proposed development. Each of the conditional uses are located on the site in a manner that accommodates the service and mitigates any impact from the use. The larger anchor retail tenants will serve as an economic catalyst for the remainder of the retail, entertainment, and residential uses on the site. Each larger anchor will be served by a sufficient parking supply as well as a planned internal and external transportation system that can readily accommodate the trips associated with the development. The TIA identifies the trip generation from all of the proposed conditional uses and demonstrates with the new internal street system, the frontage improvements to the existing street system and recommended mitigation measures for two off-site intersections, all of the permitted uses, together with the conditional uses can be suitably and adequately accommodated on the site. Each of the drive-through pads have been located to accommodate efficient and suitable queuing and circulation so as not to interfere with other site circulation provided on site. None of the conditional uses will impact any natural features and all uses are located in a manner that will serve both on-site residents and visitors alike. The internal pedestrian, vehicular and bicycle accessways and paths have been planned and designed to connect all of these uses on site with a well-designed streetscape and intermittent open spaces and plazas. Lastly, each of these uses will be subject to the Design Guidelines adopted with this GDP further ensuring a design consistency between these uses and the permitted uses on site.
3. The TIA and the GDP plan establish a street plan that meets the requirements for public improvements and will adequately serve the proposed development. Rather than repeating those findings here, this criteria response incorporates by reference the TIA findings above and below and the findings above related to Chapter 16.12.
4. The North End master plan will beneficially alter the character of the area by redeveloping a former landfill into a vibrant mixed-use development. All the uses proposed within the master plan are permitted outright or conditionally allowed within the underlying zone. The technical reports submitted with this application demonstrate that any impacts associated with the development are adequately mitigated and will not impact surrounding properties. In fact, the improvements to the adjacent street frontages and the new collector planned through the site will provide additional access options for adjacent properties connecting through the site to other destinations or to locations within the GDP. These improvements include multimodal access improvements such as a new pedestrian connection to the Oregon Trail museum. The character of the area has been defined largely by this former landfill. Reclaiming this landfill for beneficial and economic use will significantly benefit the character of the area in a manner that does not preclude but instead enhances the opportunities on surrounding properties. The conditional uses associated with this request will all be internal to the site, and do not preclude surrounding property owners from using their properties consistent with the Mixed-Use Downtown zoning district.

2 - NARRATIVE RESPONSE

Response to 17.56.010.A Cont.:

5. The Oregon City Comprehensive Plan map designates The North End master plan area as Mixed-Use Downtown. It's also recognized as a Regional Center under the Metro 2040 Growth Concept Plan. While the Comprehensive plan includes by reference, the Oregon City Downtown Community Plan and Oregon City Waterfront Master Plans, neither of these plans include a discussion of detailed development concepts within the landfill area. However, within Section 2 – Land Use, Goal 2.2 of the Comprehensive Plan envisions the area, "…the End of the Oregon Trail area, as a quality place for shopping, living, working, cultural and recreational activities, and social interaction." Subsequently, the North End master plan has been zoned Mixed-Use Downtown and the zoning code implements these goals through specific provisions. Because the proposed uses are identified within the zoning code and the site is zoned for Mixed-Use Downtown, this request is consistent with the Comprehensive Plan.

B. Permits for conditional uses shall stipulate restrictions or conditions which may include, but are not limited to, a definite time limit to meet such conditions, provisions for a front, side or rear yard greater than the minimum dimensional standards of the zoning ordinance, suitable landscaping, off-street parking, and any other reasonable restriction, condition or safeguard that would uphold the spirit and intent of the zoning ordinance, and mitigate adverse effect upon the neighborhood properties by reason of the use, extension, construction or alteration allowed as set forth in the findings of the planning commission.

C. Any conditional use shall meet the dimensional standards of the zone in which it is to be located pursuant to subsection B of this section unless otherwise indicated, as well as the minimum conditions listed below.

D. In the case of a use existing prior to the effective date of the ordinance codified in this title and classified in this title as a conditional use, any change of use expansion of lot area or expansion of structure shall conform with the requirements for conditional use.

E. The planning commission may specifically permit, upon approval of a conditional use, further expansion to a specified maximum designated by the planning commission without the need to return for additional review.

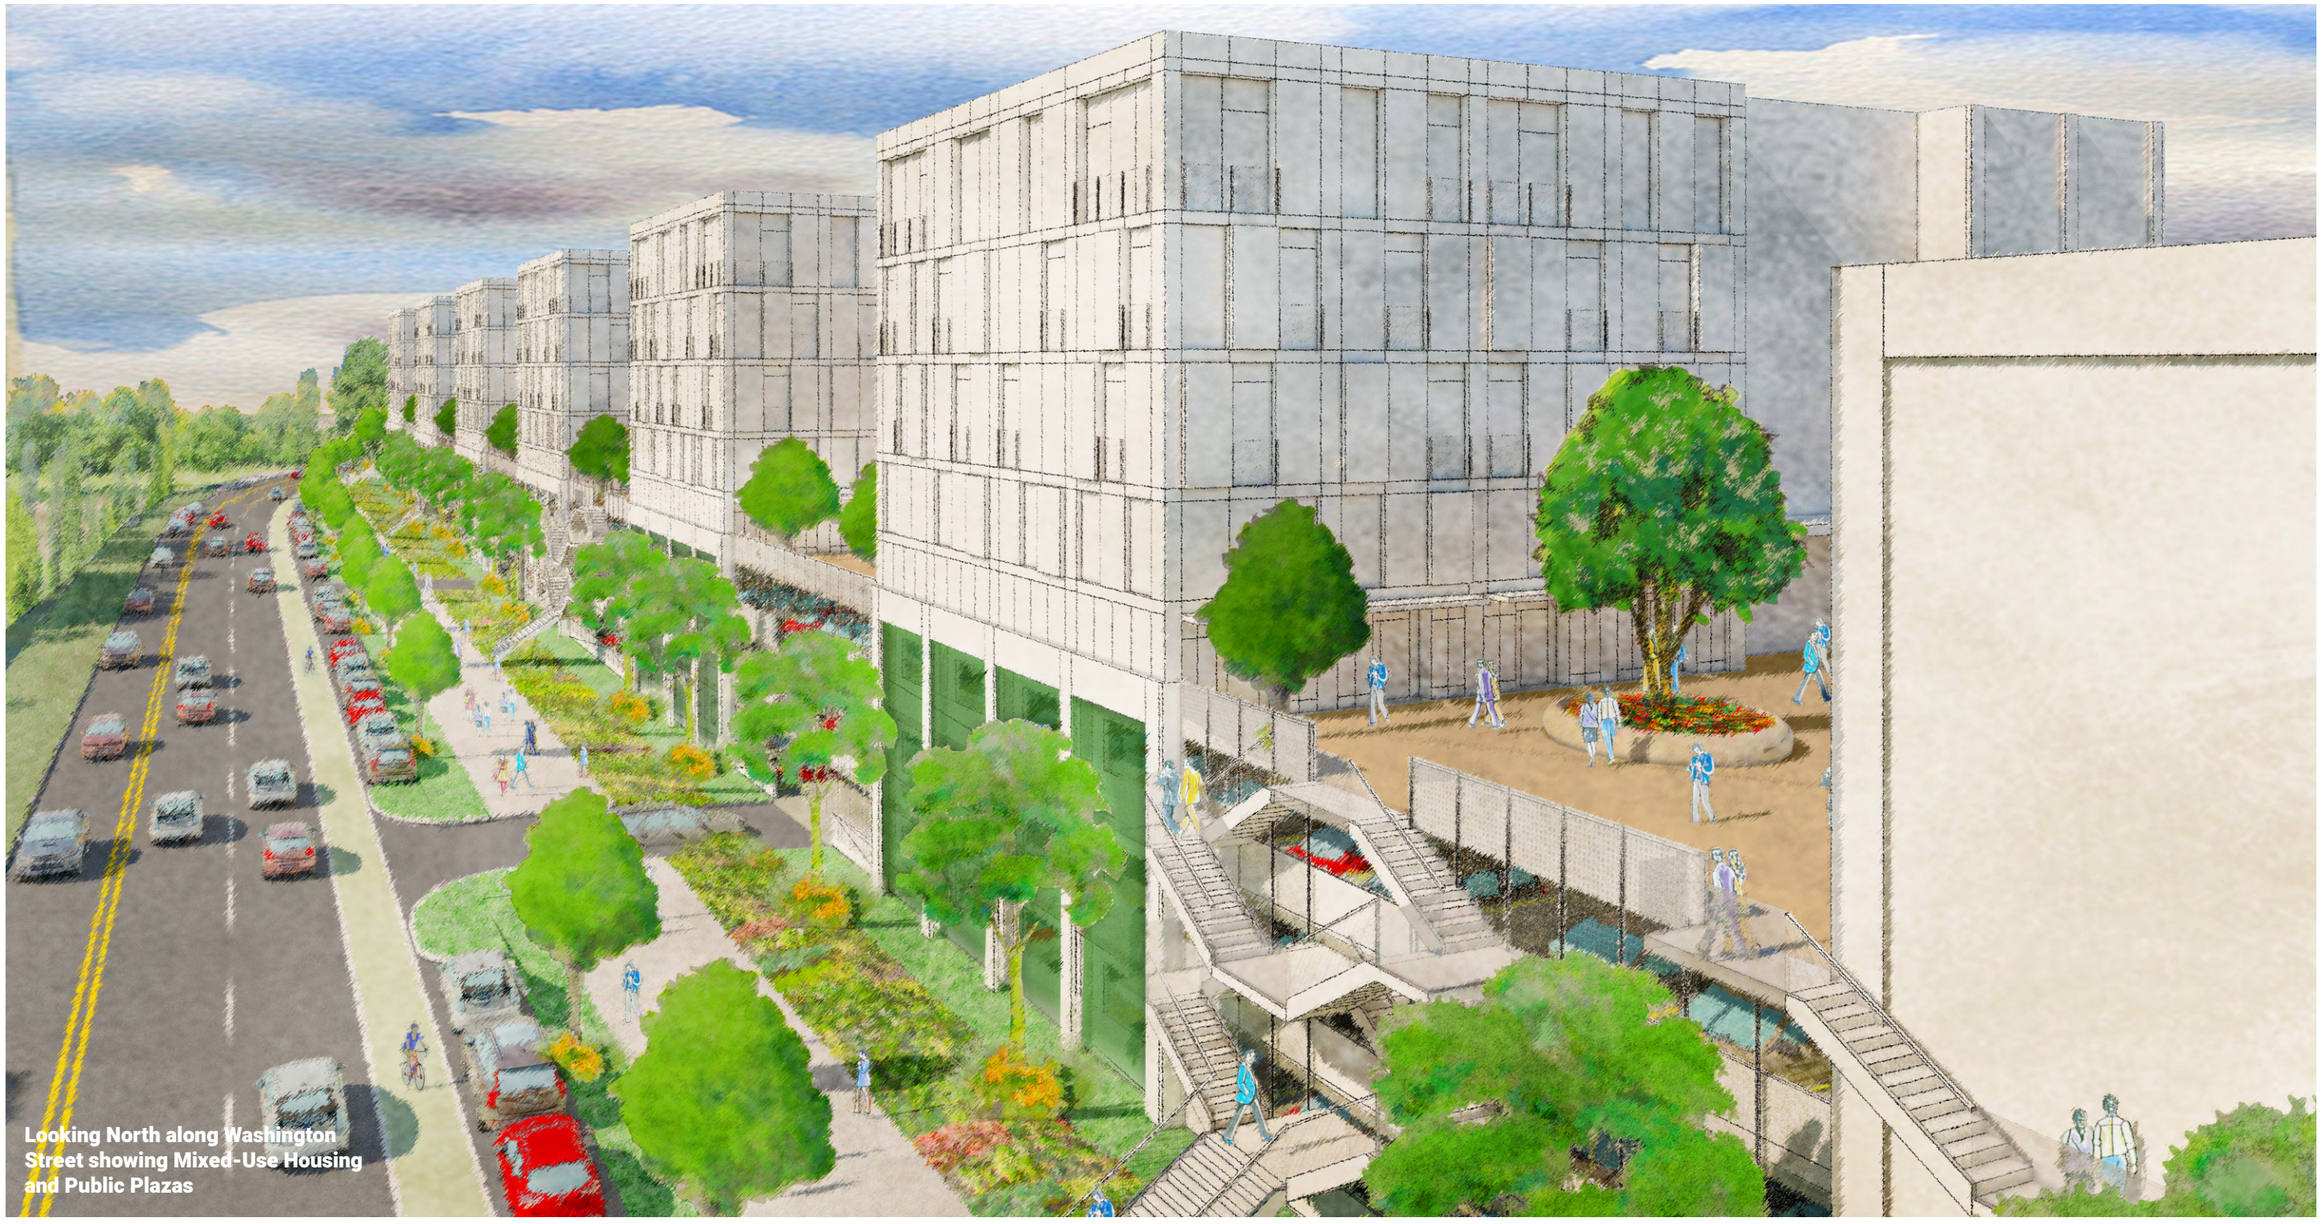
Response:

All the proposed conditional use locations are identified within the overall master plan map. Under Subsections (B) and (C) above, all the conditional uses meet the dimensional standards of the zone with the exception of the anchor tenants and those dimensional adjustments are addressed here in this conditional use review. The entire site, including the conditional uses, will meet and exceed the landscaping and other applicable setback requirements. With the exception of traffic impacts that are proposed to be mitigated through the Plan approval, any impacts from the proposed conditional uses will be limited to the interior of the development itself and those impacts have been addressed through location within the site, the circulation plan, adequate parking and stacking and a comprehensive set of design guidelines. Subsections (D) and (E) are not triggered by this proposal.

17.56.040 - Criteria and standards for conditional uses.
In addition to the standards listed herein in OCMC 17.56.010, which are to be considered in the approval of all conditional uses and the standards of the zone in which the conditional use is located, the following additional standards shall be applicable:

A. Building Openings. The city may limit or prohibit building openings within fifty feet of residential property in a residential zone if the openings will cause glare, excessive noise or excessive traffic which would adversely affect adjacent residential property as set forth in the findings of the planning commission.

B. Additional Street Right-of-Way. The dedication of additional right-of-way may be required where the city plan indicates need for increased width and where the street is inadequate for its use; or where the nature of the proposed development warrants increased street width.



Response:

None of the proposed conditional uses are proposed within fifty feet of a residential zone, and additional right of way will be dedicated and improved through the master plan approval. The remaining uses of this section are not proposed within The North End master plan.

THE NORTH END

3 - EXISTING CONDITIONS

Looking North along Washington Street showing Mixed-Use Housing and Public Plazas

3 - EXISTING CONDITIONS

Existing Conditions and Background
The subject site is located at 1105 Abernathy Drive in Oregon City, Tax Lot Number 2-2E-29-00902. The property is currently zoned Mixed-Use Downtown and is located outside of the historic downtown overlay but is located within the Urban Renewal District. Abernethy Creek runs along the northeast portion of the site and the Creek and its environs will be preserved within the master plan.

The site is located over the top of the Rossman Landfill, and includes land that is identified in the City's Natural Resource Overlay District (NROD) due to the presence of Abernethy Creek and wetlands that have been identified on the site. The site also includes areas within the Geologic Hazard Overlay Zone for the presence of slopes over 10%; and lands that are impacted by the 100-year floodplain.

The Rossman Landfill was established in 1969 and accepted approximately 60% of the municipal waste generated in the Portland Metropolitan area until it closed in late 1980. A closure permit was approved in 1990 which included remediation that intended to seal the waste and any associated leachate with a clay soil layer cap. The closure plan includes on-going monitoring for groundwater contamination and landfill related gasses. Home Depot and other commercial uses have been constructed over the top of the reclaimed landfill since 2000. The site is currently developed with outdoor equipment storage and the Trails End Driving Range which includes event space as well as eating and drinking facilities. Both of these uses are accessed from Abernethy Road. Below is a vicinity map of the area with the subject site outlined in yellow.

Regional Importance
The proposed master plan is within one of eight areas designated as a regional center in the Metro 2040 Growth Concept Plan. According to the Concept Plan, "Regional centers are hubs of commerce and local government services serving hundreds of thousands of people. They are characterized by two- to four- story, compact employment and housing development served by high-quality transit."

The challenges with developing this particular site are complex and should be afforded specific attention. Summit Development envisions a complete community intended to add diversity and appropriately scaled intensity that will build upon and contribute to the overall character of Downtown Oregon City. The master plan is dependent upon partnerships with the City and an appropriate mix of anchor and smaller scale retail with the other proposed uses in order to offset the high costs of developing this former landfill with public infrastructure and street improvements that will deliver a new sense of identity and place for residents and visitors.

THE NORTH END

4 - PROPOSED DEVELOPMENT

Looking South along ‘A Street’ showing the typical pedestrian experience

4 - PROPOSED DEVELOPMENT

Project Description
Summit Development Group seeks approval of The North End Master Plan, a mixed-use GDP to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the master plan. The plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown, but serve as a primary gateway to the north end of the Oregon City Downtown. The master plan features tree-lined streets, landscaped open spaces, offices and residences overlooking public plazas and open spaces, and will feature a wide variety of shopping, dining, and entertainment experiences.

The compact design on the west edge of the development provides appropriate architecture and massing, and the walkable environment of a downtown streetscape while maintaining a human scale. The east edge of the site is provided with a mix of small retail spaces integrated into larger anchor retail pads that will allow the development to balance the need for growth and economic opportunity, without compromising the comfortable, small-town roots of downtown Oregon City. For future residents and tenants, The North End master plan provides a place where they can live, work and be a part of Oregon City.

The North End architecture and design guidelines are intended to integrate design elements of downtown Oregon City into the development.

The proposed development includes the creation of a comprehensive circulation system comprised of streets, sidewalks, shared paths, and on-street bike lanes that connect the proposed uses on-site to each other, to internal plazas and open spaces, and to the greater community through connections along Washington Street, Abernethy Road, and the End of the Oregon Trail Interpretive Center.

The proposed master plan is located at a key entrance to the north end of Downtown Oregon City near the intersections of Interstate 205 and Highway 213. Streets have been named within this submittal for the purposes of organization only. The names are intended to be placeholders for review and description and are planned to be formally named later. The master plan is divided into four distinct “Districts” as described below:

North District Area
The North District Area is approximately 17.1 Acres of the overall master plan. It is located west of the proposed “Market street” and east of Washington Street. This area is proposed to be developed with a mix of four and five story residential mixed use buildings, retail commercial uses, an entertainment center, the main pavilion, the parking garages along Washington Street, and one of the five drive thru uses identified within the master plan. Overall, this area would include approximately 524 residential units and 632,789 square feet of building area. This district is compact, served by the main internal plaza, a series of locally placed open spaces, and makes up the most active multi-modal portion of the masterplan area. The North District Area includes four east-west street connections, depicted as 1st, 2nd, 3rd, and 4th Streets and three north-south street connections including A Street, B Street, and Market Street in the master plan. The area is located adjacent to Washington Street which connects directly to the End of the Oregon Trail Interpretive Center, the Amtrak Station, and the rest of Downtown Oregon City. This portion of the site shares similar characteristics with the Oregon City downtown.

East District Area
The East District Area is approximately 16.3 Acres of the overall master plan and would be developed with a mix of small format commercial retail uses, two drive thru uses and one of the Anchor Retail uses on site. The area is located adjacent to the nearby Home Depot development and would consist of approximately 155,804 square feet of building area. Surface parking is provided for uses within the East District Area. The main pedestrian path that connects to the North District Area is to the anchor retail areas in the East District as well as two east-west street connections depicted on the master plan as 2nd and 3rd Streets. The East District Area also includes the primary natural resource on the site which remains set aside and protected through the master plan.

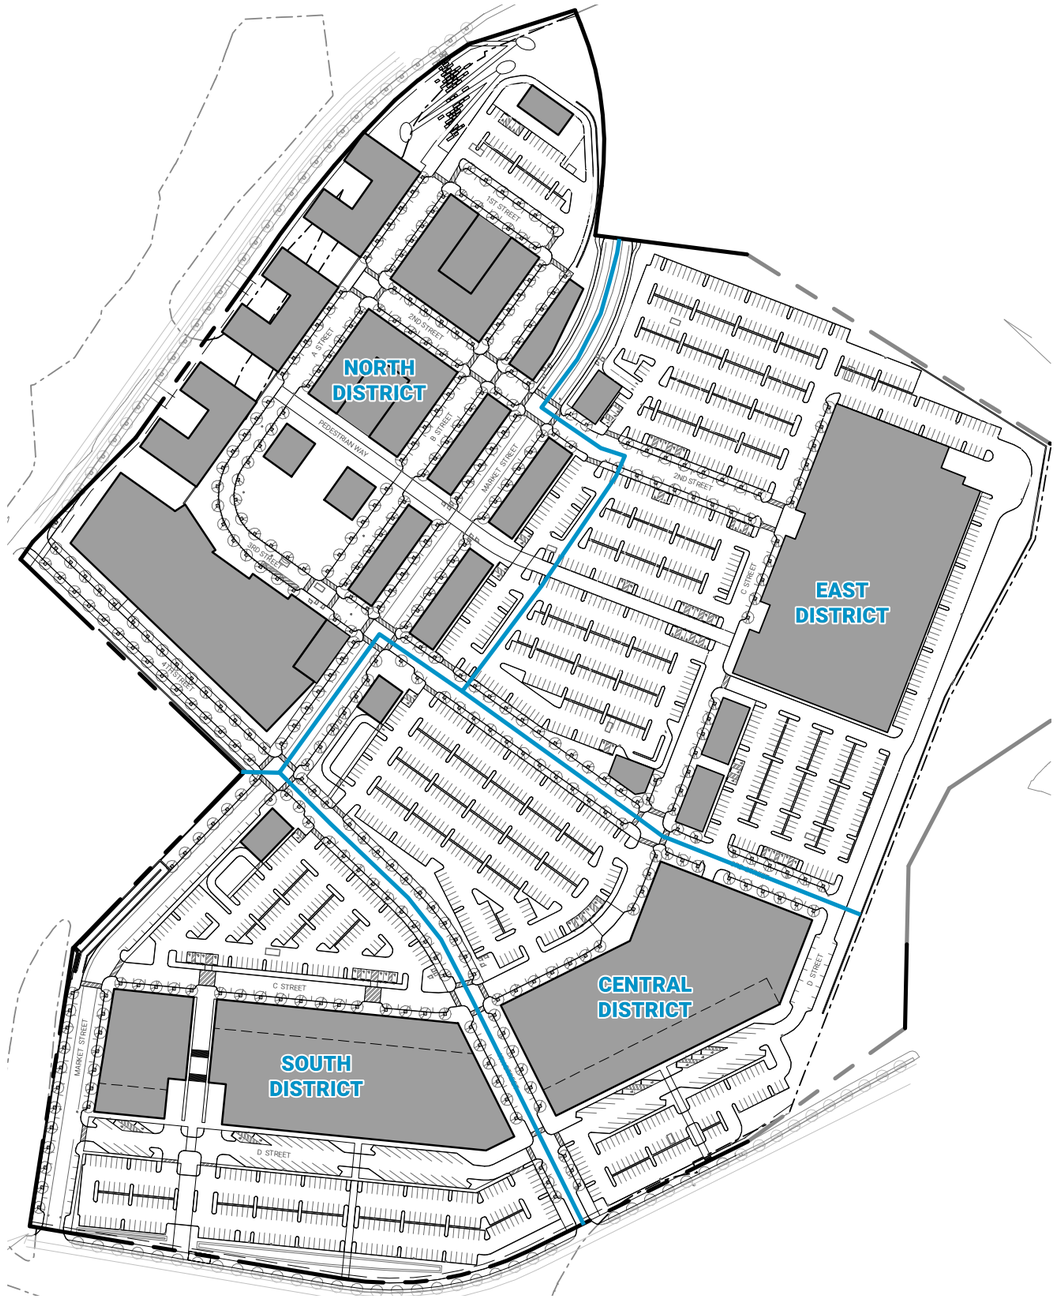

Figure 1.1. District Plan Map

4 - PROPOSED DEVELOPMENT

Central District

The Central District area makes up approximately 10.6 acres of the overall master plan and will be developed with a mix of small format commercial retail uses, an anchor retail pad and one drive thru use. This area is located between 3rd and 4th Streets east of Market Street. This area would consist of approximately 140,779 square feet of building area. In addition to the streets mentioned previously, this district is served by two north-south streets depicted as C Street and D Street on the master plan. Due to the difference in grades across the site, there are opportunities for lower level retail uses along D Street at the rear of the anchor retail pad located within this district. Abernethy Road runs along the southern portion of the Central District Area and includes one of the accesses along 4th Street into the master plan site.

South District Area

The South District area makes up 12.6 acres of the overall master plan and includes the last drive thru use within the master plan, a small format grocer, an anchor retail pad and commercial retail uses along both Market Street and D Street. The building area within the South District is approximately 162,326 square feet. The South District Area includes the second access from Abernethy Road along Market Street and includes C Street and D Street as additional east-west connections. The proposed drive thru in this District is at the intersection of 4th Street and Market Street within the master plan. The pedestrian connection to the End of the Oregon Trail interpretive Center is located within the South District Area.

Access

There are four proposed access points to the subject site. Proposed Market Street would provide access into the master plan at intersections with both Abernethy to the south and Washington Street to the North. Additionally, proposed 4th Street would connect to Abernethy to the east and Washington Street to the west. Proposed Market Street would satisfy the street connection called for in the Oregon City Transportation System Plan.

All internal streets are proposed to be private with overlaid with public access easements and although different from the typical Oregon City Street cross section, the internal streets will be designed to mimic and function as public streets. Proposed features include wider sidewalks, street furniture, bulb outs at intersections, planter strips, and raised crosswalks. The proposed street sections are shown on **sheets XXXXXXXX** of the master plan and have been designed to provide for safe and efficient connections for all modes of travel within the master plan.

The shared paths called for in the TSP through the project site are proposed to be provided as part of Market Street and through the east-west pedestrian corridor that bisects the site south of the anchor retail site located in the East District Area. These paths would connect into the frontage improvements planned along Abernethy Road, Washington Street, the End of the Oregon Trail interpretive Center, and the internal street systems providing a circuitous bike and pedestrian system that connects all of the internal uses.

Phasing

The project will be developed over several years with the first phase consisting of mass grading, padding, utilities, internal streets, shared use paths, and frontage improvements. Subsequent phases would likely begin with the construction of anchor retail sites enabling for other on-site improvements and secondary retail. The remaining phases will likely include a mix of commercial retail, entertainment, and mixed-use residential uses as the market demand for those uses is realized.

THE NORTH END

MASTER PLAN DESIGN GUIDELINES

Looking South along Market Street showing the primary Pedestrian Crossing

INTRODUCTION

Using the Guidelines
These guidelines are based upon the Oregon City Municipal Code and all applicable State and Federal Building Codes as of March 2021. This is the framework for which projects submitting Detailed Development Plans under this GDP shall be reviewed.

Where no direct guidance is provided in these guidelines, the base zoning code shall apply. In the event of a future conflict between the provisions of the Oregon City Municipal Code and the GDP, the Design Guidelines and framework approved and established under this GDP shall be applied.

A Major Modification to the master plan is any proposal that would alter the plan's proposed development by more than 25% such as a decrease in open space or required parking.

Minor modifications are proposals that do not substantially alter the plan's proposed development such as: facade treatments (i.e. material or color), character/design detail of public spaces, or minor variations to street furniture or landscaping. (i.e. tree or shrub type). A modification of any type should be consistent with the intent of the applicable design guidelines within the master plan. Any request for a modification to the master plan must be approved by the developer (Summit Development Group) prior to being submitted to Oregon City.

STREET DESIGN GUIDELINES

All street designs shall comply with the City of Oregon City standards (Chapter 12.04 - dated 07.03.2019), as well as the following standards:

Half-Street Improvements along **ABERNETHY ROAD** shall include the following:

-
- (1) 7'-0" turn lane
- (1) 12'-0" travel lane
- (1) 6'-0" bike lane
- (1) 5'-0" landscape
- (1) 5’-0” landscape strip
- (1) 12’-0” Multi-Modal Path

Half-Street Improvements along **WASHINGTON STREET** shall include the following:

- (1) 12’-0” turn lane
- (2) 12’-0” travel lane
- (1) 6'-0" bike lane
- (1) 8'-0" parking lane
- (1) 10'-0" sidewalk zone with 5’-0” wide tree wells

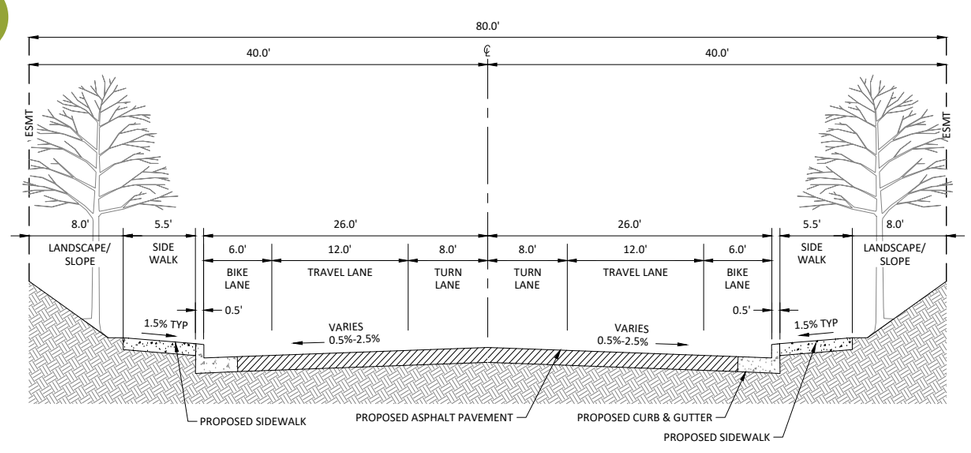
MARKET STREET shall connect to the existing road extension from Washington St and be covered by a 80’-0” public access easement. The design varies slightly across the site in response to the existing road alignment and topography. Design features shall include:

- (2) 12'-0" travel lane
- (2) 6'-0" bike lane
- (1) 12-0" turn lane from Washington St to 2nd Street
- (2) 8'-0" parking lane where occurs, see Site Plan
- (2) Various sidewalks zones with 5’-0” tree wells where occurs, see Site Plan
- North of 2nd Street the remainder of the ROW shall be landscaped

All internal **FIRE ACCESS STREETS** shall be covered be a 64’-0” public access easement and have 13’-0” wide travel lanes. Additional design features shall include:

- (2) 8'-0" parking lane
- (2) 11'-0" sidewalk zone with 5’-0” wide tree wells

All **NON-FIRE ACCESS INTERNAL STREETS** shall be covered be a 64’-0” public access easement and have 12’-0” wide travel lanes. Additional design features shall include:



- (2) 8'-0" parking lane
- (2) 12'-0" sidewalk zone with 5’-0” wide tree wells

Refer to site plan and enlarged sections on pages 60-61 for details.

LANDSCAPE GUIDELINES

The proposed site plan offers a variety of uses overlaid on to an expansive site, which has been carefully broken down into a series of individual districts by way of a network of streets and pedestrian ways. The landscape provides an opportunity to further differentiate these districts and contribute to the distinct character of each area and further enhance the pedestrian experience. A landscape palette should be developed for each type of outdoor space – parking lots, streetscapes, parks and plazas, and pedestrian ways - to create a planting hierarchy across the site. Plants should be selected for seasonal interest, drought-tolerance, and low maintenance while reinforcing the design of the outdoor spaces and architecture of the site.

1. The intent of all landscape areas will be to meet the General Design standards set forth in Oregon City's Site Plan and Design Review standards (Section 17.62).
2. Section 17.34.060.I and 17.62.050.A.4: The mixed-use downtown dimensional standards for this site require that each property have a minimum landscape of 10% (including parking lot landscaping). All landscape plans shall include a mix of vertical (trees and shrubs) and horizontal elements (grass, groundcover, etc.) that within three years will cover one hundred percent of the landscape area.

1 | General Planting

In selecting plant material, consideration should be given to support the visual character and ecological functions of the site within the context of Oregon City and the greater Willamette Valley. Native plants are recommended as they are suited for the climate of the region, require less watering and maintenance, and provide habitat for wildlife. Heritage plants, such as the Oregon White Oak, are not only native but are important contributors to the area's sense of place and should be considered where appropriate. Variety in plant selection is encouraged to promote a diverse and resilient plant community. Individual site conditions should be evaluated carefully prior to plant selection to choose the appropriate specie, while prioritizing the health, safety, and welfare of site users. Any code-required landscape areas shall meet City standards.

2 | Stormwater

As stated by the City of Oregon City, stormwater management is a key element in maintaining and enhancing livability within the city. Stormwater shall be viewed as a valuable natural resource that is managed through a variety of green infrastructure in order to improve the water quality for the City and the greater Oregon City watershed. Green infrastructure for stormwater management shall emphasize low-impact development practices, manage higher pollutant generating activities at the source, erosion and sediment control, and long-term operation and management of this infrastructure once implemented. On-site infiltration, retention, treatment, and utilization of rainwater on-site shall be prioritized where feasible.

3 | Maintenance

To help promote healthy and enduring exterior spaces all materials shall be chosen with long-term maintenance in mind. Hardscape materials and site furnishings shall be durable and easy to maintain and the selection of drought tolerant, low-maintenance plant materials should be prioritized. Permanent automatic irrigation systems that are water-efficient shall be used in landscape areas to encourage healthy and enduring plant materials

MASTER PLAN DESIGN GUIDELINES

4 | Parking Lots

The landscape areas within and surrounding parking lots are intended to improve and soften the appearance of the parking; reduce the visual impact of parking areas from sidewalks, streets; shade and cool parking areas; reduce the amount and rate of stormwater runoff from vehicle areas; and improve air quality. The parking lot landscape should be informed by the adjacent streetscapes and pedestrian ways to further strengthen the identity of the development's different districts and assist with wayfinding.

The parking lot landscaping shall meet the requirements of the City of Oregon City Municipal Code (Section 17.52.060 - Parking lot landscaping) as a base standard. In addition, the following landscape requirements must be met:

1. The tree planting types shall be unique to each District within the development. For the parking areas, each district parking area shall have a minimum of 3 tree types with a total 20% of the trees being evergreen.
2. All trees must be chosen from the adopted Oregon City Tree List.
3. All trees shall reach a mature height of 30-feet with a minimum 30-foot canopy spread.
4. For shrubs and groundcover within the parking area and perimeter planting, a total of 40% must be evergreen.
5. All shrubs and groundcover must be at least one-gallon container size.

LEGEND

- NORTH DISTRICT
- SOUTH DISTRICT
- EAST DISTRICT
- CENTRAL DISTRICT

MASTER PLAN DESIGN GUIDELINES

5 | Street Trees

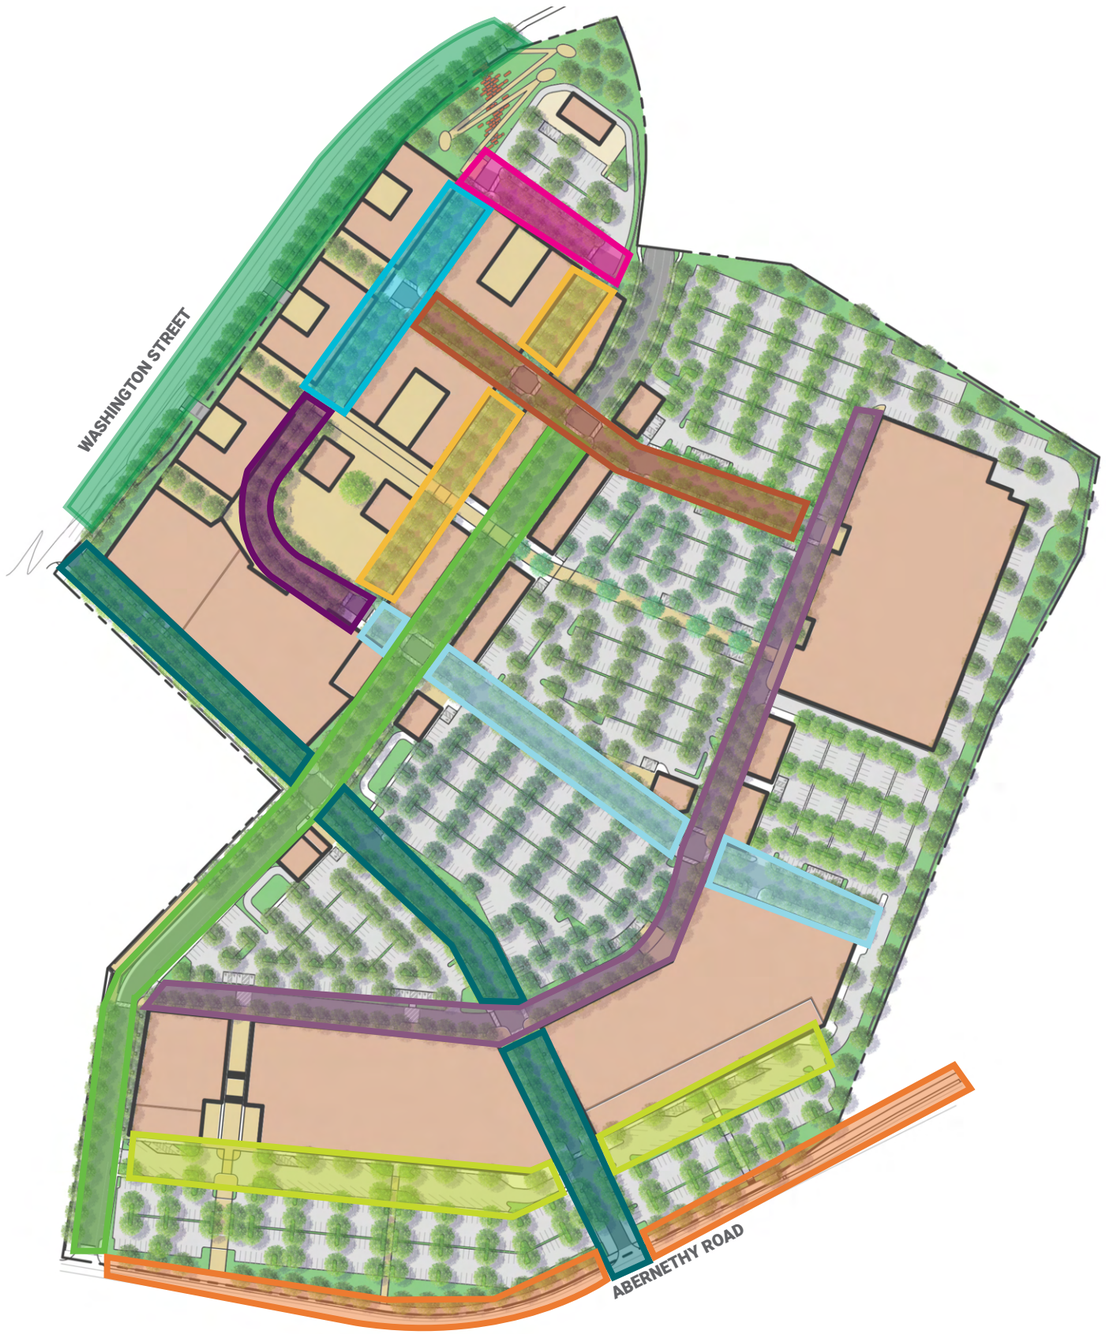
Street trees clean our air, give us shade, limit storm water runoff, reduce energy costs, increase property values, enhance business districts, and make our community more inviting to visitors. They also help unify the development's buildings with the adjacent streetscape and help lend a pedestrian scale to the site. In addition to the selecting trees appropriate for the site's climate and planting conditions, trees should be selected to help differentiate streets and adjacent development while accentuating entrances, intersections, and other key development features. Consideration should be given to maintaining a diverse population of trees that will help ensure a healthy urban forest.

All street trees for public and private frontages shall meet the requirements in the Oregon City Municipal Code Chapter 12.08 Public and Street Trees. In addition, the following requirements must be met:

1. Each street shall have a consistent tree type that is unique to that street.
2. Street trees along Main Street shall have a minimum 40-foot height and 40-foot canopy spread.
3. At the designer's discretion, large canopy trees (trees that reach a minimum 40-foot height) may be used to demarcate street corners.
4. Trees shall be spaced according to Oregon City street tree standards.
5. If trees cannot be added within the ROW due to conflicts with utilities, or otherwise, trees shall be placed on-site within ten feet of the right-of-way as street trees. A covenant shall be recorded identifying the tree(s) as subject to the protections and replacement requirements in this chapter.
6. In addition to the standards above, trees shall be backfilled with the original soil that was excavated from the site, unless more soil is needed or the soil is compacted or very poorly drained. Soil used to fill the planting hole shall be reasonably clear of rocks, roots, debris, weeds, ash, cement, concrete, tar, and all other foreign matter. Soil shall not be frozen when backfilling.

6 | Streetscape Furnishing Zones

Site Furnishings:



A minimum of 2 standard benches per approximately 200 linear feet shall be provided within the furnishing zone. Benches shall be centered between street trees to the maximum extent practicable. The standard bench for the accessways shall be the '59" Backed Neocombo' by Landscape Forms.

1-7 bike racks per block in furnishing zone or as per direction of the City Engineer. Bike racks shall be grouped to the maximum extent practicable. The standard bike rack within the streetscapes shall be the 'Bola' by Landscape Forms.

3 planters shall be placed within every 100 linear feet of furnishing zone. Planters may be grouped. Raised planters shall not inhibit the flow of pedestrian traffic or conflict with adjacent vehicular parking area or development. The standard planter for the furnishings zone shall be the DS-23 planter by Kornegay Design.

MASTER PLAN DESIGN GUIDELINES

Looking Southwest into the Central Square showing the connection to the Pedestrian Way and pedestrian experience throughout

OPEN SPACE GUIDELINES

1 | Parks and Plazas

Parks and open spaces are integral to the development and the pedestrian experience within. These are the public places that encourage gathering and provide flexibility for a variety of uses and activities. These spaces should be designed in the context of providing a valuable resource for both the development and larger Oregon City region. The unique geography of Oregon City, its distinction as “the end of the Oregon Trail,” and its setting as a nexus for numerous Native American groups contributes to a strong sense of place that should be reflected in the design of each park and plaza. They should be well integrated with the adjacent buildings and easily accessible from all parts the development. They should link to other open spaces, parks, and pedestrian ways to create a cohesive network that enhances the pedestrian experience. Plantings, site furnishings, and paving in these areas should be consistent across the development to further enhance the continuity of the outdoor spaces.

LEGEND

- VERTICAL PARK
- PARKLETS
- PEDESTRIAN WAY
- NORTH ACCESS WAYS
- SOUTH ACCESS WAYS
- MULTI-FAMILY COURTYARDS

MASTER PLAN DESIGN GUIDELINES

99 | Open Space Guidelines

2 | Central Square

The Central Square is located at the core of the mixed-use area and unifies the adjacent commercial and residential development by providing a flexible urban space. It should be an iconic space for the development that brings people together from the new development and the surrounding neighborhood alike. The central square shall be designed to both encourage every-day use, informal gathering, and accommodate large-scale events: it should function as the development's living room. Minimal plantings should be used to enhance the open nature of the site while a mix of paving materials and seating elements shall be used to create visual interest. A lawn provides a flexible and soft area conducive to informal gathering and recreation as well as events. Sufficient space should be provided to allow a stage and viewing area. In addition to meeting minimum light level requirements, exterior lighting should be incorporated to foster evening activities and sufficient power should be provided for a variety of events.

Hardscape:
A minimum of 40% of the plaza area shall consist of a special paving material, which can include brick, precast concrete, pavers, or stone. A maximum of 50% of the plaza area can be concrete paving. A minimum of 5,000 square feet of open space shall be provided that is unimpeded by planting or site elements to create a central gathering space. The material of the roadway shall be consistent with the hardscape material throughout the plaza and be flush with the finish grade of the plaza. Bollards, light poles, or other materials that meet current guidelines for pedestrian crossings and accessibility standards shall be integrated to differentiate the roadway from the plaza.

Softscape:
10% of plaza area shall be used to create a contiguous lawn space. Trees within the plaza shall be planted in 4-feet by 6-feet tree wells with tree grates. An electrical duplex shall be provided at each tree grate to allow for holiday lighting. A specimen tree at 6" caliper shall be provided between the two retail pavilions. The tree shall be deciduous and reach a height of 40-60 feet at maturity. The tree shall be planted in a landscape area with minimum dimensions of 10-feet by 10-feet. The designer can add additional trees and landscape areas at their discretion.

Site Furnishings:
A minimum of 10 standard benches shall be located throughout the plaza. Custom benches can be used in addition to this minimum requirement. The standard bench for the Central Square shall be the '69" Backed Neoliviano' by Landscape Forms. A minimum of 20 standard bike racks shall be provided. The standard bike rack for the Central Square shall be the 'Bola' by Landscape Forms. The standard tree grate shall be 'Corona' by Iron Age Designs. A minimum of 2 trash and 2 recycling receptacle shall be provided in the Central Square. The standard receptacle for the Central Square shall be the 'Collect Litter-Side Open' by Landscape Forms.

Art:
The designer is encouraged to integrate art within the plaza, whether through hardscape design, custom benches, lighting, or stand-alone pieces

LEGEND

CENTRAL SQUARE

MASTER PLAN DESIGN GUIDELINES

100 | Open Space Guidelines

3 | Vertical Park

The primary park space of the development functions as a pedestrian gateway into the site, a visual landmark from off-site, and a key recreational zone for the area. The park will need to navigate a significant change in elevation from Washington Street into the site while taking advantage of the views afforded by this location. To do so, an accessible pathway system with a series of nodes with seating elements should be implemented. The planting design of this area shall be visually engaging to establish the park as a key landmark and accentuate the entrance into the site.

Hardscape:
The design shall provide an ADA accessible walkway with a slope that shall not exceed 4.5-percent. The walkway shall navigate the slope by switchback from the entrance on Washington Street to an overlook located at the top of the park. An entry plaza shall be located at the bottom and the top of the walkway and shall each be a minimum of 900 square feet. The designer shall locate periodic gathering areas along the walk with opportunities for seating. Natural materials, such as wood timbers or stone boulders, shall be used to create a cascading scramble and seating area that is integrated with the pathway system. The scramble shall be a minimum of 3600 square feet.

Softscape:
The designer shall use a variety of plant material and trees to create a vibrant and dynamic landscape reflective of the natural surroundings.

Site Furnishings:
A minimum of 6 standard benches shall be located throughout the vertical park. Custom benches can be used in addition to this minimum standard. The standard bench for the Central Square shall be the '59" Backed Neocombo' by Landscape Forms. A minimum of 1 trash and 1 recycling receptacle shall be provided in the Vertical Park.The standard receptacle for the Central Square shall be the 'Collect Litter-Side Open' by Landscape Forms.

4 | Parklets

There are several parklets located throughout the site that are pedestrian focused and provide moments of respite for passersby. Located in conjunction with adjacent commercial spaces these parklets provide opportunities for an outdoor extension of the building and informally programmed activities. They should be designed as gathering places that are adaptable for a number of activities and shall be visually linked to the other parklets through use of cohesive hard and softscape materials and site furnishings. Specialty paving, such as stone or concrete pavers, should be considered to distinguish these areas.

LEGEND

VERTICAL PARK

PARKLETS

MASTER PLAN DESIGN GUIDELINES

101 | Open Space Guidelines

5 | Pedestrian Way

The key to the pedestrian experience within the site are the pedestrian ways that link together the different districts of the development. This network should function as a linear park in which pedestrians can safely navigate through the site while having the opportunity to stop and enjoy the different facets of each district. The pedestrian way should be large enough to accommodate shared bicycle and pedestrian traffic and include a consistent palette of hardscape materials, site furnishings, and plantings to create a cohesive network. Large shade trees shall be utilized to create an informal canopy and ornamental plantings shall be used strategically to emphasize entries and nodes along the pedestrian ways.

Hardscape:
Paving material shall be entirely a specialty material, including brick, precast concrete, pavers, or stone.

Softscape:
Trees shall be planted in 4-feet by -feet tree wells with tree grates at 30-feet on center. An electrical duplex shall be provided at each tree grate to allow for holiday lighting. All trees shall reach a mature height of 30-feet with a minimum 30-foot canopy spread. Trees shall be consistent throughout the pedestrian way.

Site Furnishings:
The standard tree grate shall be ‘Corona’ by Iron Age Designs.

6 | North Access Ways

The three access ways along Washington Street shall function as welcoming plaza spaces that are seamlessly integrated with the surrounding development and provide safe and accessible entry into the site. These entries should be emphasized through a balanced use of specialty paving, plantings, and seating. Plantings along Washington Street shall be used strategically to blend the scale of the retaining structures with the adjacent landscape and pedestrian walkway.

Hardscape:
A minimum of 40% of each access way area shall consist of a special material, which can include brick, precast concrete, pavers, or stone. A maximum of 40% of plaza area can be concrete paving.

Softscape:
A minimum of 20% of each access way shall be landscape area, which shall consist of a mix of trees, shrubs, and groundcover. Lawn is not permitted.

Site Furnishings:
A minimum of 10 standard benches or an equivalent length of custom benches shall be incorporated in each access way. The standard bench for the access ways shall be the ‘59” Backed Neocombo’ by Landscape Forms.

LEGEND

PEDESTRIAN WAY

NORTH ACCESS WAYS

MASTER PLAN DESIGN GUIDELINES

102 | Open Space Guidelines

7 | South Access Ways

The three access ways along Washington Street shall function as welcoming plaza spaces that are seamlessly integrated with the surrounding development and provide safe and accessible entry into the site. These entries should be emphasized through a balanced use of specialty paving, plantings, and seating. Plantings along Washington Street shall be used strategically to blend the scale of the retaining structures with the adjacent landscape and pedestrian walkway.

Hardscape:
A minimum of 40% of each access way area shall consist of a special material, which can include brick, precast concrete, pavers, or stone. A maximum of 40% of plaza area can be concrete paving.

Softscape:
A minimum of 20% of each access way shall be landscape area, which shall consist of a mix of trees, shrubs, and groundcover. Lawn is not permitted.

Site Furnishings:
A minimum of 10 standard benches or an equivalent length of custom benches shall be incorporated in each access way. The standard bench for the access ways shall be the '59" Backed Neocombo' by Landscape Forms.

8 | Oregon Trail Interpretive Center Access

Located to the east of the site is the historic End of the Oregon Trail Interpretive Center, a significant site for the development of Oregon City and the larger Pacific Northwest. Providing an enhanced connection to the Interpretive Center from the development site is critical to integrating the site with the history of Oregon City and enhancing the sense of place. Due to a substantial difference in grade along the property line between the two sites the plans propose a series of retaining walls and ramps to navigate the steep slopes and provide an accessible pedestrian connection. The ramp shall be a minimum of 10'-wide and meet ADA requirements for providing an accessible walkway. Where feasible, planting shall be used to help soften the visual impact of the retaining walls.

LEGEND

SOUTH ACCESS WAYS

OREGON TRAIL INTERPRETIVE CENTER ACCESS

SITE LIGHTING GUIDELINES

1 | General Lighting Guidelines

The overall goal of the outdoor lighting for the OCMU project is to provide safety and personal security in an aesthetically pleasing manner that helps create interest in the overall development during the hours of darkness. The luminares selected are intended to be visually appealing during daylighting hours, or be generally hidden from sight. The luminaires will be chosen to control glare and excessive brightness. With few exceptions, cut off style luminaires is a requirement of the following lighting design standards. The exceptions to this are limited to pedestrian scale pole mounted luminaires, landscape lighting, and some decorative building mounted lighting. Light trespass to properties abutting the OCMU project will be less than 0.5 footcandles outside of the OCMU development. LED lamps are currently the most energy efficient technology in the market place, and will continue to be for the foreseeable future. Luminaires with LED lamping will be required for all outdoor lighting associated with this project. The lighting will comply with the latest version of the Oregon State Energy Code (OSEC). The OSEC is a very stringent standard, and will provide the project with low operating costs for outdoor lighting in and of itself. The lighting design will direct the illumination where it is useful, such as for security and accent some of the architectural features of the buildings. Misdirected light equals wasted energy. One of the added benefits of a mindful illumination strategy that places the light only where desired, is that in addition to minimizing light pollution, it saves energy.

2 | General Exterior Lighting Guidelines

1. All exterior lighting will be an LED source, and have a color temperature of 4000K, with the exception of luminaires intended to architecturally highlight specific finishes may be changed to enhance the specific finish. For example, illumination of brick or natural wood surfaces may be changed to 3000K to enhance the warmth of the materials.
2. Photometric calculations will be required to show compliance with the lighting design standards as well as city requirements.
3. A minimum of 3 footcandles is required at building entrances per city code.
4. Building canopy lighting will be either fully recessed, or shielded by the canopy structure.
5. Free standing open structures may have employ the use of other lighting strategies provided they do not produce excessive glare.

3 | Street Lighting Guidelines

1. Private street lighting will meet the minimum lighting levels and uniformity prescribed in IESNA RP-8-14. This is the same standard for public street lighting in Oregon City.
2. Light fixtures and poles shall meet city standards

4 | Parking Area Guidelines

1. General parking lot illumination will be full cut off style luminaires mounted on 30 foot poles that are installed on 3 foot tall concrete pole bases where physical protection is required. (code max is 35’ mounting height for lots 5 acres and larger). Pole finish shall be black.
2. Parking lot lighting levels will be illuminated to a minimum of 1 foot candle.

5 | Pedestrian Connection Lighting Guidelines

1. Decorative luminaires will be mounted on decorative poles will be used to help define the pedestrian connection paths. Non-cut off luminaires may be used to help clearly identify people and other objects and create a localized glow when compared to the areas illuminated with cut off style luminaires such as the retail parking areas. Care will be used to limit the light output of pedestrian lighting to avoid excessive glare.
2. Pedestrian connection lighting will meet the minimum lighting levels and uniformity prescribed in IESNA RP-8-14 for public pedestrian areas.
3. Illuminated bollards will be used where the path intersects private streets.

6 | Multifamily Outdoor Space Lighting Guidelines

Multifamily areas are generally all bordered by private streets, and pedestrian connectors. Lighting will be designed to be consistent, and carry the theme of the adjacent street and pedestrian lighting into the Multifamily building areas.

7 | Plaza Lighting Guidelines

Various lighting strategies may be employed in the Plaza areas.

1. Generally one or two taller poles with multiple decorative luminaires on the poles will be installed in a plaza area to provide general illumination.
2. Pedestrian scale poles may be used to illuminate smaller spaces within the plazas, and to help connect them to other areas of the project.
3. Illuminated bollards may be used to help delineate drivable surfaces from pedestrian surfaces.
4. Festival catenary may be used in all plaza areas.
5. Accent lighting will be employed to highlight architectural design elements, hardscape areas and adjacent structures.
6. Light levels will create a safe and inviting outdoor plaza spaces while minimizing needless glare.

BUILDING GUIDELINES

1 | Mechanical and Service Equipment Guidelines

Development throughout the site shall include the following measures to minimize the visual and acoustic impact of mechanical, service, and utility equipment on the site and adjacent buildings. The standard does not apply to solar energy panels, photo-voltaic equipment, wind power generating equipment, pipes, vents, and chimneys.

Roof Top Equipment in:

Zone A (See Fig 1.2a) -

- Shall be set back from the face of the buildings by a minimum of 10'-0"
- Shall not extend past a line drawn at a 19 degree angle from the top of parapet or exterior roof edge
  OR
  be fully screened by a sight-obscuring enclosure that is designed to blend into the adjacent roof surface.

Zone B (See Fig 1.2b) -

- Shall be set back from the face of the buildings by a minimum of 10'-0"
- Shall be screened by a sight-obscuring enclosure that:
  a. Uses the building materials from the primary facade of the building
  b. Extends a minimum of 8'-0" above the roof plane

Wall mounted equipment and Utility Meters in:

Zone A -

- Shall not be located on the Primary building facade
- Shall be screened from view by one of the following:
  a. sight-obscuring enclosures constructed of one of the materials used on the primary facade of the structure
  b. sight-obscuring fences
  c. trees or shrubs that block at least eighty percent of the equipment from view
  d. painting the units to match the building.

Zone B -

- Shall not be located on the Primary building facade
- Shall be fully enclosed, located within the building footprint and accessible directly to the exterior from the adjacent ROW
  OR
  be located in an exterior screened alcove.

Exceptions -

Vents and Wall-mounted mechanical equipment that extends six inches or less from the outer building wall shall be exempt from this standards if designed to blend in with the color and architectural design of the subject building.

Ground-mounted above-grade mechanical equipment in:

Zone A -

Shall be screened by ornamental fences, screening enclosures, trees, or shrubs that block at least eighty percent of the view from the public right-of-way.

Zone B -

Is prohibited

2 | Refuse and Recycling Enclosure Guidelines

On-site waste management and collection facilities shall be located in fully enclosed and visually screened enclosures that are designed to be efficient, safe and convenient. In addition to meeting all the standards laid out in 17.62.085, refuse and recycling enclosures in:

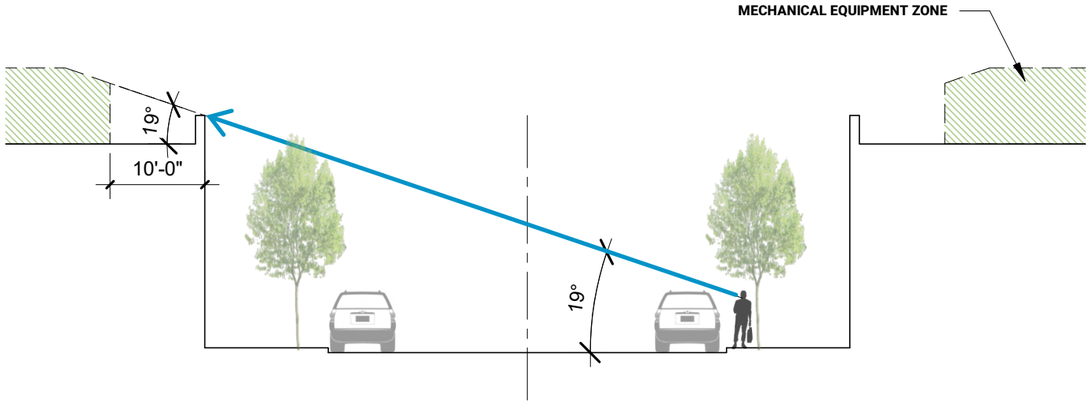
Zone A-

Shall be located within the building envelope, immediately adjacent to the public right-of-way, No collection access shall be provided on C Street.

OR

Shall be free-standing enclosures that are not be located on a primary roadway. Free standing enclosures shall be designed to match the associated building's materials and architectural language.

Zone B -



Shall be located within the building envelope, immediately adjacent to the public right-of-way. No collection access shall be provided on Market Street.

Figure 1.2b - ROOFTOP EQUIPMENT ZONE B

5 - MASTER PLAN DESIGN GUIDELINES

3 | Building Material Guidelines

The intent of this development is to be a memorable and purposeful destination within the heart of Oregon City which seeks to represent the site in its place, historically and physically. The site materials were chosen to produce a modern Pacific Northwest style, highlighting the refined industrial nature of a region built on river trade and the timber industry. To that end, the building materials are limited to develop a character that is cohesive across all the future development on site.

The development hopes to tap into the joy of living in Oregon by emphasizing natural light and connection to the outdoors. High-quality exterior materials will create a sense of timelessness, permanence, and emphasize the pedestrian experience throughout the site. These materials should be thoughtfully detailed to contribute to a well-articulated building facade.

General Material Guidelines

All structures on site shall provide one or more of the following as their primary facade materials, >50% of total facade square footage minus the glazing area:

- Heavy Timber
- Brick
- Wood
- Stone

Additional acceptable materials include pre-finished architectural metal panels, premium prefinished cement composite siding, board form concrete, stucco finishes and split or ground-faced concrete block. Plain concrete may be used no more than three feet above the finished grade level.

The following materials are not allowed on site, vinyl or plywood siding, glass block, highly tinted* or reflective glass, corrugated fiberglass, and highly reflective sheet metal.

Based on Oregon State Energy Code requirements light tinting or fritting may be used to meet code compliance and glazing requirements.

CONSISTENT VERTICAL AND HORIZONTAL PLANES

INTEGRATE BUILDING MATERIALS IN TO GLAZING

USE OF MATERIALS TO ARTICULATE FACADE

INTEGRATE GROUND FLOOR WITH UPPER STORIES

5 - MASTER PLAN DESIGN GUIDELINES

4 | Building Massing Guidelines

All structures in the development shall front directly on at least one roadway frontage. Buildings facades shall be within five feet of the sidewalk. Up to 15% of the building facade can be up to ten feet from the sidewalk to allow for architectural interest and emphasis on primary entries. Buildings that use the 15% shall provide enhanced paving and approved public seating in these areas.

Exception:
Buildings that are inside or front Plazas are not limited in the roadway setback limit. Plazas shall conform to Open space guidelines on page: **XXX**

Primary Entries

Buildings shall have their Primary Entries located on the Primary Facade as indicated in Fig 1.2. Primary entries shall be designed to:

- Provide Protection from the weather. All entries shall be protected by a hard or soft cover that extend at least 3 feet past the face of the facade.
- Provide Visual interest through architectural projections or recess, height changes at the parapet or roof level, and material variation from the primary building material.

Architectural Projections

Where canopies or awnings are placed on a building facade, they must comply with the following:

- The bottom of canopy or awning shall be a minimum of 12'-0" above finished pedestrian sidewalk surface.
- The depth of the canopy or awning shall be a minimum of 4'-0" measured from face of the building.

More generous depths of cover than described above are encouraged at building corners and ground floor entries.

Pedestrian Focused Facades

At the Ground Level along the Pedestrian Way, larger ground level openings and overhead doors are encouraged to provide a better pedestrian experience and connection for those walking and occupying the buildings.

Introduction

Project Description

The proposed project is located in between Washington Street and Abernethy Road in Oregon City, Oregon. The site is approximately 1000' NE of the intersection at Trails End Hwy and S Beavercreek Rd.

The project proposes the construction of commercial buildings, surface parking areas, landscape, recreational areas, pedestrian walkways, utility connections and new stormwater facilities. This project also includes public improvements to Abernethy Road and Washington Street.

The project will disturb approximately 60.5 acres total. There are half street public improvements required for the development and public stormwater facilities will be required for new or modified impervious areas. The private development will propose a mixture of surface low impact development (LID) stormwater facilities (i.e Rain Garden Filtration, Vegetated Swale and Planter Filtration) and underground detention pipe with proprietary water quality treatment facilities.

Existing Site Conditions

The existing site (Tax Lot 32E04C 01400) is 56.2 acres in size. The existing site was once an operating landfill, until the landfill was closed and covered with clay soil layer cap. The site largely consists of grassy vegetation and trees with buried trash below.

A portion of the existing site slopes west to an existing drainage ditch located along Washington Street. This drainage ditch conveyance collects flows from the "Kelly Field" drainage basin and drains via a 36-inch culvert to the Clackamas River to the west. This drainage system discharges into the Clackamas River delta via a 48-inch pipe, just before the Clackamas River meets the Willamette River. The proposed site improvements will impact the existing stormwater infrastructure. This report will include design for public Washington Street frontage improvements.

A portion of the existing site slopes southeast to an existing stream located along the east side of the proposed development. This stream flows southwest, crossing Abernethy Road through a 48-inch culvert before draining into Abernethy Creek.

The existing conveyance system within Abernethy Road is part of the "Abernethy" drainage basin. A portion of the existing project site draining into the existing conveyance system in Abernethy Road, before discharging via a 12-inch pipe into Abernethy Creek. This report will include design for public Abernethy Road frontage improvements.

There is currently no known stormwater flow control or treatment facilities on the site or within the public frontage improvements.

Methodology

The site's new and reconstructed impervious surfaces will be managed per the Oregon City Stormwater and Grading Design Standards dated March 2020. The development may not utilize infiltration type facilities during design since the project site was once a landfill. The site has contaminated soils. Infiltration would run the risk of mobilizing contaminates in the soils or groundwater. Stormwater management facilities would be located on fill. The water quality/quantity requirements are as follows:

- Detention Based Stormwater Quality Control – Volume of the 1.0 in, 24-hour storm
- Rate Based Stormwater Quality Control – Peak Flow Rate of the 1.0 in, 24-hour storm
- Quantity Control/Flow Control – Peak Flow Duration matching between 42% of the 2-year up to the 10-year storm event.
- Conveyance Design – 10-year, 24-hour storm

The water quantity requirements are also per the Oregon City Stormwater and Grading Design Standards dated March 2020. The WES BMP calculator was used for sizing or verifying the stormwater facilities using the City specific guidelines. The BMP tool confirms peak flow duration matching for flows ranging from 42% of the 2-year peak flow to the 10-year peak flow.

This project will be utilizing underground detention and mechanical treatment methods for stormwater disposal. In order to comply with City requirements, the underground detention systems were first modeled in Hydraflow Hydrographs. The stage/storage/discharge data was extracted and entered into the BMP detention pond tool to verify that the facility size suffices with agency WQ requirements.

Soils Characteristics

The Natural Resources Conservation Service (NRCS) with the United States Department of Agriculture (USDA) has classified the soils within Clackamas County in the Web Soil Survey. Soils are categorized into Hydrologic Soil Group based on estimated runoff from precipitation. These groupings assume the soils are saturated and receive precipitation from long-duration storms. This rainfall to runoff relationship is complex and includes drainage and permeability characteristics of the soil.

The soils for the site are listed as urban land since the existing landfill site resulted in minimal intact native soil. Infiltration will not be used as a means of disposal for design. All proposed stormwater management facilities will be lined and located in strategic areas to avoid disturbing the buried garbage. Refer to Appendix A for available depth between proposed finished ground to surveyed trash elevations. Soil type D will be used for this design.

Existing (E) and Proposed (P) Soil Assumptions:

Curve Numbers =	(P) 98 for Impervious Areas
	(E) 79 for Woods in Fair Condition (Soil Type D)
	(P) 77 for Woods in Good Condition (Soil Type D)
Sheet Flow Mannings “n” =	0.011 for pavement
	0.013 for pipe
	0.150 for short prairie grass and lawn
Shallow Concentrated Flow “Cp” =	16.135 for unpaved surfaces
	20.32 for paved surfaces

Proposed Improvements

Proposed onsite surface area will consist of parking lots, hardscape, landscape and buildings. The public improvement surface area will consist of asphalt paving, hardscape and landscape. The City requires stormwater management for the improved site area and any contributing area runoff. Refer to Appendix A for basin delineation. For clarity and analysis, the design is broken down into public and private area contributions. The 56.2-acre site will be categorized as private and the 4.3 acre frontage improvements will be labeled as public.

Pollutants of concern related to commercial development include sediment, nutrients, pesticides, herbicides, fungicides, metals (zinc, copper, lead, etc.), oil, grease, and other petroleum.

Stormwater Quality Treatment

The new and redeveloped impervious surfaces on the private development will be treated by proprietary treatment systems, a vegetated swale, filtration raingardens and planters. The public frontage improvements will be treated with filtration planters. The City of Oregon City requires treatment using the peak flow rate for the 1.0 inch, 24-hour storm. Refer to Appendix B for rainfall intensities.

All stormwater facilities were sized or verified using the WES BMP Sizing Tool. The WES BMP Tool assumes existing conditions is forest. Table 1 below provides a summary of the private water quality LID facilities.

Basin A will treat all surfaces through a vegetated filtration swale. Basin A was sized using the BMP tool for treatment only. Due to the proposed treatment swale, the time of concentration within the proposed basin A increases to 14.6 minutes. Time of concentration calculations are provided in Appendix B of this report. No detention is proposed for Basin A. Refer to flow control section of this report for flow control design. The proposed treatment swale will meet City design elements and has the following characteristics:

- Length of treatment swale: 150 feet
- Longitudinal slope: 0.5%,
- Bottom Width: 2 foot flat
- Side slope ratio: 3V:1H
- Ponding depth: 12 inches
- Growing Media: 18 inches
- Drain rock and separation layer: 15 inches
- Freeboard: 6 inches
- Lined Swale with 30 MIL PVC or equivalent
- 6-inch perforated underdrain pipe
- Orifice Controlled

Basin B and Basin R will both treat all surfaces within the basin through vegetated filtration rain gardens. Basin B and Basin R were sized using the BMP tool to meet both treatment and flow control requirements. The proposed rain gardens have the following characteristics:

- Side slope ratio: 3V:1H
- Ponding depth: 12 inches
- Growing Media: 18 inches
- Drain rock and separation layer: 21 inches
- Freeboard: 4 inches
- Lined Raingarden with 30 MIL PVC or equivalent
- 6-inch perforated underdrain pipe
- Orifice controlled

Basin U and Basin V will both treat all surfaces within the basin through vegetated filtration planters. Due to proposed road grades resulting from the existing filled site, the proposed planters will require check dams. Basin U and Basin V were sized using the BMP tool. To meet BMP modeling requirements, all cells within the proposed planters will be flat with a minimum of 12 inches of ponding within each cell.

As both basin planters U and V require check dams, impervious liner will be installed vertically at each check dam to promote surface storage in each cell to the maximum extent. All check dams will be 12 inches tall. The 6” perforated pipe on the planters will only be located within the lowest cell of the planter. As designed, soil media filtration will occur in each cell. Despite the impervious liner, filtered water will slowly find its way to the perorated underdrain in the bottom cell within the sloped facility. Refer to Appendix C for orifice sizes and planter details. The proposed rain gardens have the following characteristics:

- Side slopes: 3V:1H
- Ponding depth: 12 inches
- Growing Media: 18 inches
- Drain rock and separation layer: 15 inches
- Freeboard: 4 inches

- Lined Raingarden with 30 MIL PVC or equivalent
- 6-inch perforated underdrain pipe
- Orifice controlled

Table 1 – Private LID Treatment Requirements

Basin	Impervious Area Used in Design (AC) (1)	Treatment Area Required (sf)	Treatment Facility Used	Provided Treatment Area (sf)	Orifice Size (in)
A	1.27	1,082	Vegetated Filtration Swale	1,250	1.5
B	2.84	6,046	Vegetated Filtration Raingarden	7,370	4.0
R	0.79	1,946	Vegetated Filtration Raingarden	1,966	2.4
U	0.22	405	Vegetated Filtration Planter	405	1.4
V	0.24	441	Vegetated Filtration Planter	450	1.4

1. Impervious area used is total impervious area (new and modified) within the proposed basin.

Mechanical Treatment

Basins, where vegetated facilities are not a feasible option due to site constraints, will utilize proprietary stormwater treatment facilities for pollution reduction. Some site constraints include elevation constraints, steep slopes greater than 25%, high seasonal groundwater and existing contaminated soils. The proposed peak flows for each drainage basin and proposed stormwater treatment facilities were calculated using the Hydraflow Hydrograph Program's Santa Barbara Method (SBUH).

All proposed proprietary systems will treat all surfaces with BayFilter cartridges. These filters have been approved for General Use Level Designation (GULD) by the Washington Department of Ecology (WDOE). Oregon City relies on City of Portland Environmental Service's established list of approved manufactured stormwater treatment technology. Bayfilter vaults with enhanced media cartridges for all cartridge series are within this approved list.

The proposed cartridges are effective at targeting all pollutants of concern discussed above in the proposed improvements and impervious surfaces section. The BayFilter enhanced media cartridges provide treatment rates of 22.5 gpm per BayFilter 522 cartridge series and 45.0 gpm per BayFilter 545 cartridge series. BayFilter cartridges have been proven to achieve 80 percent TSS removal. Refer to Appendix C for WES Sizing Report and WQ proprietary treatment flow calculations. Runoff from proprietary facilities will overflow to approved underground detention facilities to meet the detention requirements.

Table 2 – Private Mechanical Treatment Requirements

Basin	Impervious Area Used in Design (AC) (1)	WQ Flow Required (2)	Treatment Facility Used	Required Cartridges	WQ Flow Provided
C	2.00	0.409	Bayfilter 522 w/ Cartridges	9	0.45
D	1.90	0.389	Bayfilter 522 w/ Cartridges	8	0.40
E	3.89	0.796	Bayfilter 522 w/ Cartridges	16	0.80
F	0.71	0.145	Bayfilter 522 w/ Cartridges	3	0.15
G	5.88	1.204	Bayfilter 545 w/ Cartridges	13	1.30
H	2.28	0.467	Bayfilter 522 w/ Cartridges	10	0.50
I	1.84	0.377	Bayfilter 522 w/ Cartridges	8	0.40
J	6.91	1.415	Bayfilter 545 w/ Cartridges	15	1.50

K	0.77	0.158	Bayfilter 522 w/ Cartridges	4	0.20
L	1.60	0.328	Bayfilter 522 w/ Cartridges	7	0.35
M	1.67	0.342	Bayfilter 522 w/ Cartridges	7	0.35
N	1.39	0.285	Bayfilter 522 w/ Cartridges	6	0.30
O	7.88	1.613	Bayfilter 545 w/ Cartridges	17	1.70
P	3.56	0.729	Bayfilter 545 w/ Cartridges	8	0.80

1. Impervious area used is total impervious area (new and modified) within the proposed basin.
2. WQ peak flow for all surfaces (impervious and pervious) within proposed basin
3. Converted from 22.5 GPM per cartridge for the 522 series and 45.0 GPM per cartridge for the 545 series (Refer to calculations in Appendix C for calculations)

As designed, all proposed impervious area will be treated before being discharged into the public system.

Water Quantity

The 56.2-acre project site drains to two different downstream bodies or water, the Willamette River and Clackamas River delta. In the pre-developed condition, approximately 31.0 acre drains southwest to Abernethy Creek before ultimately discharging into the Willamette River. The remaining 25.2 acre of the project site is conveyed north before discharging into the Clackamas River delta. The discharge location into the Clackamas River is directly before the river mouth, where the Clackamas River flows into the Willamette River.

The proposed conditions will impact existing drainage patterns. In the post-development condition, approximately 3.0 acres of additional area will contribute to the Kelly Field drainage basin that discharges into the Clackamas River. Additionally, the proposed site will have a large increase in impervious area.

Due to topographic constraints, runoff from portions of the development site are unable to be detained. The cumulative release from all proposed project basins, including these unmitigated areas, will meet City of Oregon City flow control standards. The post-developed rates will not exceed the pre-developed runoff rates for the project. Unmitigated basins include Basins A, C, Q, S, T and W.

As previously discussed, Basin B, R, U, and V all have proposed LID stormwater facilities that were sized with the BMP sizing tool for both treatment and detention. These facilities were modeled in Hydraflow using the SBUH method for conveyance capacity check only.

Basins D, E, F, G, H, I, J, K, L, M, N, O and P will include the construction of underground detention pipe systems to mitigate the increase of peak flow runoff from the post-development condition. These underground detention facilities were oversized to accommodate for unmitigated areas for the project. The underground detention were first modeled in Hydraflow Hydrographs. Stage/storage/discharge data was extracted and entered into the BMP tool to verify that the facility size suffices agency WQ requirements.

All proposed underground detention systems will be HDPE N-12 pipe with a design life of at least 100 years. Due to existing ground water elevations and contaminated soils onsite, all detention facilities will be designed as watertight. Infiltration was not used as a means of disposal as all facilities were modeled as lined. Each detention facility will require a flow control manhole with orifice and weir control. All underground detention systems can accommodate the 100-yr storm peak flows. The peak flow runoff for the existing and proposed conditions are summarized in Tables 3 on the following page. All flows reported in Table 3 are detained flows. In addition, calculations for the detention design can be found in Appendix C of this report. Refer to Appendix A for overall basin contribution and delineation.

Table 3 – Private Detention Summary

Private Onsite Project Limits	2-Yr Storm Event	10 -Yr Storm Event
Abernethy Basin Pre-developed Flow (cfs)	6.49	10.66
Kelly Field Basin Pre-Developed Flow (cfs)	5.40	8.83
Total Pre-developed Flow (cfs)	**11.89**	**19.49**
Abernethy Post-Developed Flow (cfs)	3.49	6.12
Kelly Field Post-Developed Flow (cfs)	2.54	5.79
Total Post-developed Flow (cfs)	**5.94**	**11.91**
Decrease of Peak Flow (cfs)	5.95	7.58
Percent Decrease of Peak Flow	50%	39%

Despite the increase in total area draining to the Kelly Field drainage basin, the post-developed peak 2-yr flow is still less than half the 2-yr pre-developed peak flow rate. Additionally, the total private project site meets all Oregon City flow control requirements for the project.

Public Water Quality and Detention

The proposed public frontage improvement will impact the existing drainage ditch along Washington Street, triggering water quality and detention requirements. Similarly, the sidewalk addition along Abernethy Road will require water quality and flow control devices.

The public runoff generated from the contributing area along Washington Street and Abernethy Road will be routed to LID stormwater planters before connecting to the existing conveyance system. These planters will filter the runoff through the 18” amended soil media mix and require orifice control devices. All proposed public planters were sized using BMP Tool and meet all Oregon City treatment and detention requirements. Refer to Appendix C for stormwater planter details and sizing.

Table 4 – Public Water Quality/Quantity Treatment Requirements

Basin	Impervious Area Used in Design (AC) (1)	Treatment Area Required (sf)	Treatment Facility Used	Provided Treatment Area (sf)	Orifice Size (in)
1	0.59	845	Vegetated Filtration Planter	850	1.9
2	0.39	684	Vegetated Filtration Planter	688	1.8
3	0.85	1,427	Vegetated Filtration Planter	1,427	2.5
4	0.24	551	Vegetated Filtration Planter	572	1.2
5	0.23	335	Vegetated Filtration Planter	324	1.2
6	0.36	516	Vegetated Filtration Planter	520	1.5
7	0.60	936	Vegetated Filtration Planter	940	2.0

1. Impervious area used is total impervious area (new and modified) within the proposed basin.

Conveyance

Stormwater pipes will be designed to convey the 10-year Rational Method storm event flows. Storm pipes will be analyzed at critical locations depending on size, slope and upstream basin size. Refer to Appendix D for conveyance calculations and Appendix A for upstream conveyance basin delineation.

Downstream Analysis

As designed, peak flows will decrease during all storm events; therefore, there is no negative impact to any existing downstream storm sewer systems.

All stormwater upstream drainage basins assume no detention. The assumed impervious area was determined based on the land use designation for the drainage basins. All upstream drainage basins were modeled using the SBUH method.

A thorough analysis of the existing conveyance system shall be conducted downstream of each proposed discharge location. The downstream collection systems include both closed conduits and open channels immediately downstream of the proposed discharge points. The design flow rate for pipes and open channel segments were analyzed at significant locations. Refer to Appendix A exhibits for discharge location identification and Appendix D for hydrographs and supporting documentation.

The project limits, both public and private, contributing to the Abernethy Creek drainage basin will include 29.8 acre of disturbed land. The project will ultimately outfall into Abernethy Creek tributary. The creek tributary extends approximately 520 feet south before entering joining Abernethy Creek and ultimately flowing to the Willamette River.

The existing stream channel geometry was estimated based upon available topographic survey and average stream cross sections. Using Civil Tool Pro, HHPR has concluded that the Abernethy Creek tributary segment has more than sufficient capacity to convey the 10-yr storm event. Flows will remain in the existing creek channel at and downstream of the point of discharge. Refer to Appendix D for as-builts and Abernethy Creek tributary capacity flow calculations.

The project limits contributing to the Kelly Field drainage basin will include 30.8 acre of disturbed land. The project will ultimately discharge into a 36” concrete culvert pipe. The existing 36” pipe extends west under Washington Street before outfalling west to the Clackamas River delta approximately 1500 feet downstream. Current topographic survey is underway to confirm existing pipe slopes, sizes and configuration. Downstream analysis will be conducted during the final design phase and documented in the final stormwater report.

No adverse impacts to the downstream system are anticipated due to runoff from this project. Refer to Appendix D for pipe and creek capacity calculations.

Operations and Maintenance

Mechanical treatment vaults, detention facilities are privately owned and to be maintained by the property owner. Due to the grading and site constraints, portion of private property are treated and managed on other properties of the site. All property owners will enter into a maintenance and access easement agreement with the City for inspection purposes.

Proposed public planters managing either Washington Street or Abernethy Road stormwater runoff are publicly owned. These planters will be maintained by Oregon City. See Appendix E for facility operations and maintenance guidance.

Conclusion

The proposed stormwater management plan will achieve pollutant removal to the maximum extent practicable via biofiltration designed to target pollutants expected with a commercial development. The proposed private facilities satisfy the City of Oregon City water quality and quantity requirements. As designed, this project shall not create any adverse impacts to the downstream storm system.

- Wet Spot
- Other
- Special Line Features

Water Features
- Streams and Canals

Transportation
- Rails
- Interstate Highways
- US Routes
- Major Roads
- Local Roads

Background
- Aerial Photography

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Clackamas County Area, Oregon
Survey Area Data: Version 16, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 13, 2019—Jul 25, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
67	Newberg fine sandy loam	0.5	0.8%
76B	Salem silt loam, 0 to 7 percent slopes	0.8	1.3%
82	Urban land	56.8	91.6%
84	Wapato silty clay loam	1.0	1.6%
92F	Xerochrepts and Haploxerolls, very steep	3.0	4.8%
Totals for Area of Interest		**62.1**	**100.0%**

Clackamas County Area, Oregon

82—Urban land

Map Unit Setting

National map unit symbol: 227g
Elevation: 50 to 400 feet
Mean annual precipitation: 40 to 60 inches
Mean annual air temperature: 50 to 54 degrees F
Frost-free period: 165 to 210 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydric soil rating: No

Data Source Information

Soil Survey Area: Clackamas County Area, Oregon
Survey Area Data: Version 16, Jun 11, 2020

Table 2-2a Runoff curve numbers for urban areas [1/]

Cover description: Cover type and hydrologic condition	Average percent impervious area [2/]	Curve numbers for hydrologic soil group: A	B	C	D
Fully developed urban areas (vegetation established)					
Open space (lawns, parks, golf courses, cemeteries, etc.) [3/]:					
Poor condition (grass cover < 50%)		68	79	86	89
Fair condition (grass cover 50% to 75%)		49	69	79	84
Good condition (grass cover > 75%)		39	61	74	80
Impervious areas:					
Paved parking lots, roofs, driveways, etc. (excluding right-of-way)		98	98	98	98
Streets and roads:					
Paved; curbs and storm sewers (excluding right-of-way)		98	98	98	98
Paved; open ditches (including right-of-way)		83	89	92	93
Gravel (including right-of-way)		76	85	89	91
Dirt (including right-of-way)		72	82	87	89
Western desert urban areas:					
Natural desert landscaping (pervious areas only) [4/]		63	77	85	88
Artificial desert landscaping (impervious weed barrier, desert shrub with 1- to 2-inch sand or gravel mulch and basin borders)		96	96	96	96
Urban districts:					
Commercial and business	85	89	92	94	95
Industrial	72	81	88	91	93
Residential districts by average lot size:					
1/8 acre or less (town houses)	65	77	85	90	92
1/4 acre	38	61	75	83	87
1/3 acre	30	57	72	81	86
1/2 acre	25	54	70	80	85
1 acre	20	51	68	79	84
2 acres	12	46	65	77	82
Developing urban areas					
Newly graded areas (pervious areas only, no vegetation) [5/]		77	86	91	94
Idle lands (CN's are determined using cover types similar to those in table 2-2c).					

Proposed Conditions

[1] Average runoff condition, and $I_a = 0.2S$.

[2] The average percent impervious area shown was used to develop the composite CN's. Other assumptions are as follows: impervious areas are directly connected to the drainage system, impervious areas have a CN of 98, and pervious areas are considered equivalent to open space in good hydrologic condition. CN's for other combinations of conditions may be computed using figure 2-3 or 2-4.

[3] CN's shown are equivalent to those of pasture. Composite CN's may be computed for other combinations of open space cover type.

[4] Composite CN's for natural desert landscaping should be computed using figures 2-3 or 2-4 based on the impervious area percentage (CN = 98) and the pervious area CN. The pervious area CN's are assumed equivalent to desert shrub in poor hydrologic condition.

[5] Composite CN's to use for the design of temporary measures during grading and construction should be computed using figure 2-3 or 2-4 based on the degree of development (impervious area percentage) and the CN's for the newly graded pervious areas.

Table 2-2c Runoff curve numbers for other agricultural lands [1/]

Cover description		Curve numbers for hydrologic soil group			
Cover type	Hydrologic condition	A	B	C	D
Pasture, grassland, or range—continuous forage for grazing. [2/]	Poor	68	79	86	89
	Fair	49	69	79	84
	Good	39	61	74	80
Meadow—continuous grass, protected from grazing and generally mowed for hay.	—	30	58	71	78
Brush—brush-weed-grass mixture with brush the major element. [3/]	Poor	48	67	77	83
	Fair	35	56	70	77
	Good	30 [4/]	48	65	73
Woods—grass combination (orchard or tree farm). [5/]	Poor	57	73	82	86
	Fair	43	65	76	82
	Good	32	58	72	79
Woods. [6/]	Poor	45	66	77	83
	Fair	36	60	73 Existing Conditions	79
	Good	30 [4/]	55	70	77 Proposed Conditions
Farmsteads—buildings, lanes, driveways, and surrounding lots.	—	59	74	82	86

1 Average runoff condition, and $I_a = 0.2S$.

2 *Poor:* <50%) ground cover or heavily grazed with no mulch.
Fair: 50 to 75% ground cover and not heavily grazed.
Good: > 75% ground cover and lightly or only occasionally grazed.

3 *Poor*: <50% ground cover.
Fair: 50 to 75% ground cover.
Good: >75% ground cover.

4 Actual curve number is less than 30; use CN = 30 for runoff computations.

5 CN's shown were computed for areas with 50% woods and 50% grass (pasture) cover. Other combinations of conditions may be computed from the CN's for woods and pasture.

6 *Poor:* Forest litter, small trees, and brush are destroyed by heavy grazing or regular burning.
Fair: Woods are grazed but not burned, and some forest litter covers the soil.
Good: Woods are protected from grazing, and litter and brush adequately cover the soil.

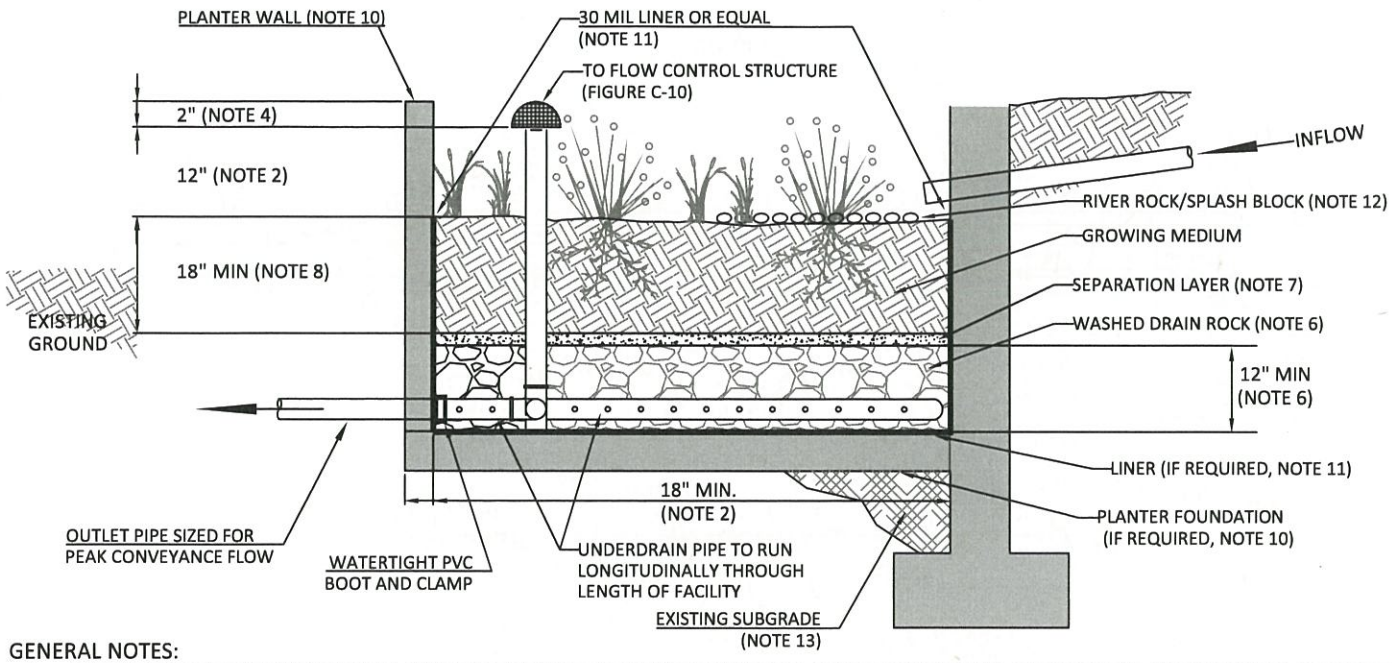
Vegetated Swale - Basin A	WaterQuality	Vegetated Swale - Filtration	Lined	1,081.7	1,250.0	1.5

Pond Sizing Details

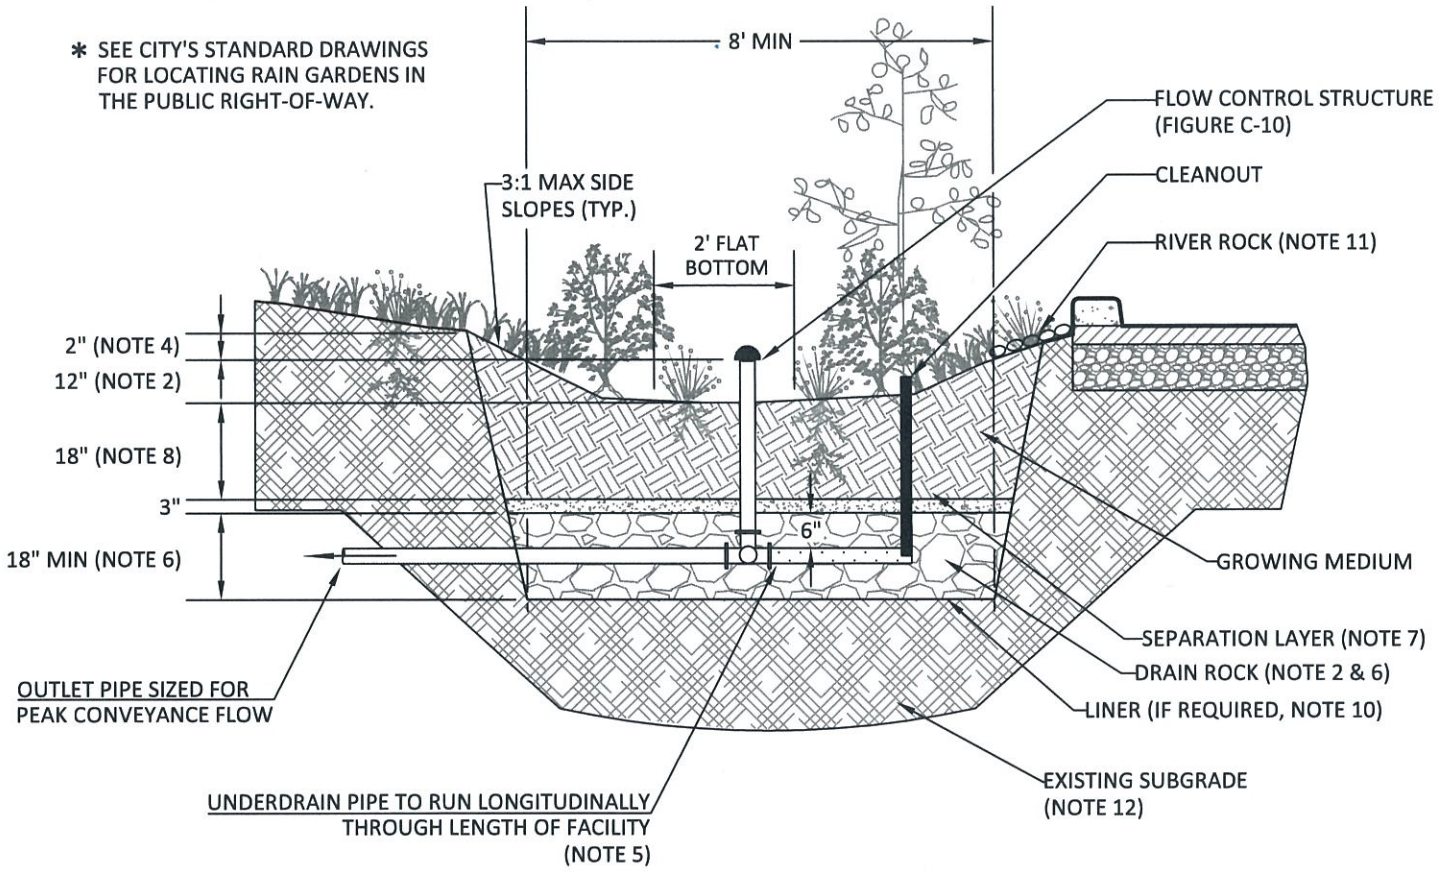


1. FCWQT = Flow control and water quality treatment, WQT = Water quality treatment only

2. Depth is measured from the bottom of the facility and includes the three feet of media (drain rock, separation layer and growing media).

3. Maximum volume of the facility. Includes the volume occupied by the media at the bottom of the facility.

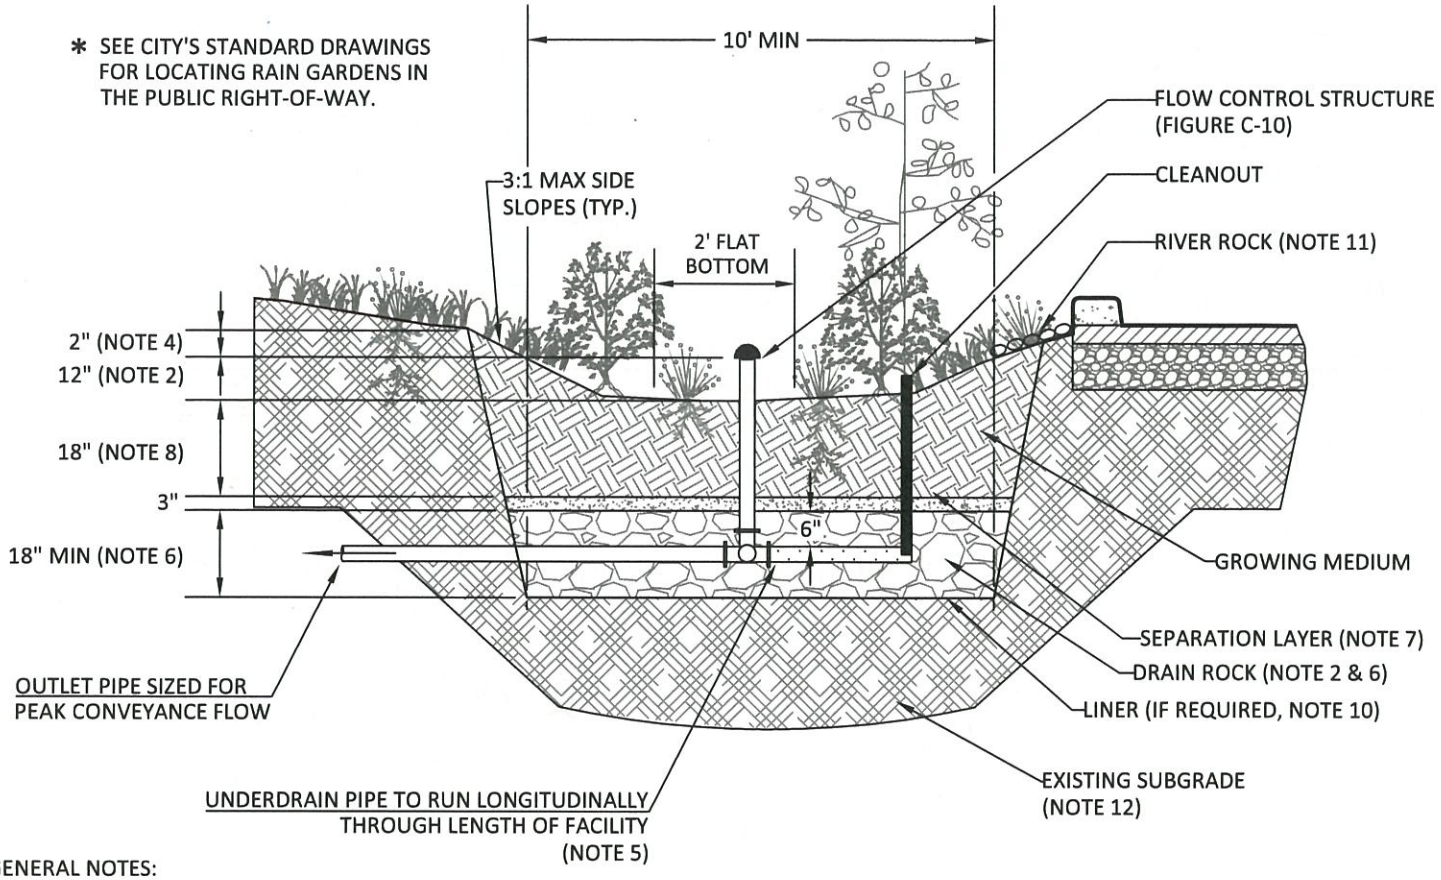
4. Maximum water storage volume of the facility. Includes water storage in the three feet of soil media assuming a 40 percent porosity.



* SEE CITY'S STANDARD DRAWINGS FOR LOCATING PLANTERS IN THE PUBLIC RIGHT-OF-WAY.

GENERAL NOTES:

1. **PROVIDE PROTECTION** FROM ALL VEHICLE TRAFFIC, EQUIPMENT STAGING, AND FOOT TRAFFIC IN PROPOSED INFILTRATION AREAS PRIOR TO, DURING AND AFTER CONSTRUCTION.
2. **DIMENSIONS:**
   -WIDTH: 18" MINIMUM
   -DEPTH OF PLANTER (FROM TOP OF GROWING MEDIUM TO OVERFLOW ELEVATION): 12"
   -SLOPE OF PLANTER: 0.5% OR LESS
3. **SETBACKS**
   -PLANTERS MUST BE MINIMUM OF 5 FEET FROM PROPERTY LINE.
4. **OVERFLOW:**
   -INLET ELEVATION MUST ALLOW FOR 2" OF FREEBOARD, MINIMUM. PROTECT FROM DEBRIS AND SEDIMENT WITH STRAINER OR GRATE.
   -IDENTIFY EMERGENCY OVERFLOW ROUTE ON THE STORMWATER MANAGEMENT PLAN.
5. **PIPING:**
   -PERFORATED UNDERDRAIN PIPING: SHALL BE ABS SCH. 40, DUCTILE IRON, OR PVC SCH.40, 6" MINIMUM DIAMETER. PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
   -OVERFLOW PIPING: SHALL BE ABS SCH.40, DUCTILE IRON, OR PVC SCH.40 AND SHALL NOT BE PERFORATED. MIMIMUM DIAMETER IS 6". PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
6. **DRAIN ROCK:**
   -SIZE FOR FLOW-THROUGH PLANTER: 1 1/2" - 3/4" WASHED
   -DEPTH: 12" MINIMUM
7. **SEPARATION** BETWEEN DRAIN ROCK AND GROWING MEDIUM: SHALL BE A 3" LAYER OF 3/4" - 1/4" OPEN GRADED AGGREGATE.
8. **GROWING MEDIUM:**
   -DEPTH: 18" MINIMUM
   -SEE APPENDIX A FOR SPECIFICATION OR USE SAND/LOAM/COMPOST 3-WAY MIX.
   -FACILITY SURFACE AREA MAY BE REDUCED BY 20% WHEN GROWING MEDIA DEPTH IS INCREASED TO 30" OR MORE.
9. **VEGETATION:** FOLLOW LANDSCAPE PLANS OR REFER TO PLANTING REQUIREMENTS IN APPENDIX A.
10. **PLANTER FOUNDATION AND WALLS:**
    -MATERIALS SHALL BE 4" REINFORCED CONCRETE, STONE, BRICK, OR OTHER DURABLE MATERIAL.
    -CONCRETE, BRICK, OR STONE WALLS SHALL BE INCLUDED ON FOUNDATION PLANS.
    -INSTALL INVERTED CURB AS NEEDED BETWEEN PLANTER AND ROAD SUBGRADE.
    -WALL HEIGHTS GREATER THAN 24" ABOVE GRADE REQUIRE HANDRAIL.
11. **WATERPROOF LINER (IF REQUIRED):**
    -LINER SHALL BE 30 MIL PVC OR EQUIVALENT, FOR FLOW THROUGH FACILITIES.
    -A WATERPROOF LINER IS NOT REQUIRED IF THE FOUNDATION OR WALL MATERIAL IS WATERPROOF REINFORCED CONCRETE OR APPROVED EQUAL.
12. **INSTALL RIVER ROCK** SPLASH PAD TO TRANSITION FROM INLET TO GROWING MEDIUM. SIZE OF ROCK SHALL BE 1" - 3".
13. **SEASONAL HIGH GROUNDWATER SEPARATION:**
    -SEPARATION DISTANCE AS REQUIRED BY THE CITY.
14. **SUBMIT RETAINING WALL DESIGN** IN ACCORDANCE WITH APPLICABLE STRUCTURAL CODES FOR REVIEW AND APPROVAL.



Stormwater Planter - Filtration
Figure C-1

GENERAL NOTES:

1. **PROVIDE PROTECTION** FROM ALL VEHICLE TRAFFIC, EQUIPMENT STAGING, AND FOOT TRAFFIC IN PROPOSED INFILTRATION AREAS PRIOR TO, DURING AND AFTER CONSTRUCTION. UNLESS REQUIRED BY SITE CONDITIONS, UNLINED RAIN GARDENS ARE PREFERRED TO MAXIMIZE ONSITE INFILTRATION.
2. **DIMENSIONS:**
   -DEPTH OF BASIN (FROM TOP OF GROWING MEDIUM TO OVERFLOW ELEVATION): 12"
   -FLAT BOTTOM WIDTH: 2' MINIMUM
   -SIDE SLOPES OF BASIN: 3:1 MAXIMUM
   -SLOPE OF RAIN GARDEN: 0.5% OR LESS
   -FACILITY AREA SHALL BE MEASURED AT THE DEEPEST SECTION (DRAIN ROCK) OF FACILITY
3. **SETBACKS:**
   -FILTRATION RAIN GARDEN MUST BE 10' FROM FOUNDATIONS AND 5' FROM PROPERTY LINES UNLESS APPROVED BY BUILDING OFFICIAL.
4. **OVERFLOW:**
   -INLET ELEVATION MUST ALLOW FOR 2" OF FREEBOARD, MINIMUM. PROTECT FROM DEBRIS AND SEDIMENT WITH STRAINER OR GRATE.
   -IDENTIFY EMERGENCY OVERFLOW ROUTE ON THE STORMWATER MANAGEMENT PLAN.
5. **PIPING:**
   -PERFORATED UNDERDRAIN PIPING: SHALL BE ABS SCH. 40, DUCTILE IRON, OR PVC SCH.40. MINIMUM DIAMETER IS 6". PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
   -OVERFLOW PIPING: SHALL BE ABS SCH. 40, DUCTILE IRON, OR PVC SCH. 40 AND SHALL NOT BE PERFORATED. MINIMUM DIAMETER IS 6". PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
6. **DRAIN ROCK:**
   -SIZE: 1 1/2" to 3/4"-0 WASHED
   -DEPTH: 18" MINIMUM
7. **SEPARATION** BETWEEN DRAIN ROCK AND GROWING MEDIUM: SHALL BE A 3" LAYER OF 3/4" - 1/4" OPEN GRADED AGGREGATE OR FILTER FABRIC WITH 3" OF ADDITIONAL DRAIN ROCK MAY BE UTILIZED IN LIEU OF OPEN GRATED AGGREGATE IF APPROVED BY CITY ENGINEER.
8. **GROWING MEDIUM:**
   -DEPTH: 18" MINIMUM
   -SEE APPENDIX A FOR SPECIFICATION OR USE SAND/LOAM/COMPOST 3-WAY MIX.
   -FACILITY SURFACE AREA MAY BE REDUCED BY 20% WHEN GROWING MEDIA DEPTH IS INCREASED TO 30" OR MORE.
9. **VEGETATION:** FOLLOW LANDSCAPE PLANS OR REFER TO PLANTING REQUIREMENTS IN APPENDIX A.
10. **WATERPROOF LINER (IF REQUIRED):** SHALL BE 30 MIL PVC OR EQUIVALENT.
11. **INSTALL RIVER ROCK** OR SPLASH PAD TO TRANSITION FROM INLETS TO GROWING MEDIUM. SIZE OF ROCK SHALL BE 1" - 3".
12. **SEASONAL HIGH GROUNDWATER SEPARATION:**
    -SEPARATION DISTANCE AS REQUIRED BY CITY.

Rain Garden - Filtration
Figure C-4

GENERAL NOTES:

1. **PROVIDE PROTECTION** FROM ALL VEHICLE TRAFFIC, EQUIPMENT STAGING, AND FOOT TRAFFIC IN PROPOSED INFILTRATION AREAS PRIOR TO, DURING AND AFTER CONSTRUCTION. UNLESS REQUIRED BY SITE CONDITIONS, UNLINED SWALES ARE PREFERRED TO ALLOW MAXIMUM INFILTRATION.
2. **DIMENSIONS:**
   -DEPTH OF SWALE (FROM TOP OF GROWING MEDIUM TO OVERFLOW ELEVATION): 12"
   -LONGITUDINAL SLOPE OF SWALE: 6.0% OR LESS
   -FLAT BOTTOM WIDTH: 2' MINIMUM
   -SIDE SLOPES OF SWALE: 3:1 MAXIMUM
   -FACILITY AREA SHALL BE MEASURED AT THE DEEPEST SECTION (DRAIN ROCK) OF FACILITY
3. **SETBACKS:**
   -FILTRATION SWALES MUST BE 10' FROM FOUNDATIONS AND 5' FROM PROPERTY LINES UNLESS APPROVED BY BUILDING OFFICIAL.
4. **OVERFLOW:**
   -INLET ELEVATION MUST ALLOW FOR 2" OF FREEBOARD, MINIMUM. PROTECT FROM DEBRIS AND SEDIMENT WITH STRAINER OR GRATE.
   -IDENTIFY EMERGENCY OVERFLOW ROUTE ON THE STORMWATER MANAGEMENT PLAN.
5. **PIPING:**
   -PERFORATED UNDERDRAIN PIPING: SHALL BE ABS SCH. 40, DUCTILE IRON, OR PVC SCH.40. MINIMUM DIAMETER IS 6". PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
   -OVERFLOW PIPING: SHALL BE ABS SCH. 40, DUCTILE IRON, OR PVC SCH. 40 AND SHALL NOT BE PERFORATED. MINIMUM DIAMETER IS 6". PIPING MUST HAVE 1% GRADE AND FOLLOW THE UNIFORM PLUMBING CODE. PVC NOT ALLOWED ABOVE GROUND.
6. **DRAIN ROCK:**
   -SIZE: 1 1/2" - 3/4" WASHED
   -DEPTH: 12"
7. **SEPARATION** BETWEEN DRAIN ROCK AND GROWING MEDIUM: SHALL BE A 3" LAYER OF 3/4" - 1/4" OPEN GRADED AGGREGATE.
8. **GROWING MEDIUM:**
   -18" MINIMUM
   -SEE APPENDIX A FOR SPECIFICATION OR USE SAND/LOAM/COMPOST 3-WAY MIX.
   -FACILITY SURFACE AREA MAY BE REDUCED BY 20% WHEN GROWING MEDIA DEPTH IS INCREASED TO 30" OR MORE.
9. **VEGETATION:** FOLLOW LANDSCAPE PLANS OR REFER TO PLANTING REQUIREMENTS IN APPENDIX A.
10. **WATERPROOF LINER (IF REQUIRED):** SHALL BE 30 MIL PVC OR EQUIVALENT.
11. **INSTALL RIVER ROCK** OR SPLASH PAD TO TRANSITION FROM INLETS TO GROWING MEDIUM. SIZE OF ROCK SHALL BE 1" TO 3".
12. **SEASONAL HIGH GROUNDWATER SEPARATION:**
    -SEPARATION DISTANCE AS REQUIRED BY CITY.
13. **CHECK DAMS:** SHALL BE PLACED ACCORDING TO FACILITY DESIGN.

LID Facility Sizing Details

Pond Sizing Details

Pond ID	Design Criteria(1)	Facility Soil Type	Max Depth (ft)(2)	Top Area (sq-ft)	Side Slope (1:H)	Facility Vol. (cu-ft)(3)	Water Storage Vol. (cu-ft)(4)	Adequate Size?
UG Det G	FCWQT	Lined	4.00	7,390.0	0	29,560.0	16,258.0	Yes

1. FCWQT = Flow control and water quality treatment, WQT = Water quality treatment only

2. Depth is measured from the bottom of the facility and includes the three feet of media (drain rock, separation layer and growing media).

3. Maximum volume of the facility. Includes the volume occupied by the media at the bottom of the facility.

4. Maximum water storage volume of the facility. Includes water storage in the three feet of soil media assuming a 40 percent porosity.

Pond Sizing Details

Pond ID	Design Criteria(1)	Facility Soil Type	Max Depth (ft)(2)	Top Area (sq-ft)	Side Slope (1:H)	Facility Vol. (cu-ft)(3)	Water Storage Vol. (cu-ft)(4)	Adequate Size?
UG Det L	FCWQT	Lined	4.00	1,450.0	0	5,800.0	3,190.0	Yes

1. FCWQT = Flow control and water quality treatment, WQT = Water quality treatment only

2. Depth is measured from the bottom of the facility and includes the three feet of media (drain rock, separation layer and growing media).

3. Maximum volume of the facility. Includes the volume occupied by the media at the bottom of the facility.

4. Maximum water storage volume of the facility. Includes water storage in the three feet of soil media assuming a 40 percent porosity.

Pond Data

Contours -User-defined contour areas. Conic method used for volumes. Bottom elevation=37.55 ft, Depth=3.24 ft, Void = 21.50%

Stage / Storage Table

Stage (ft)	Elevation (ft)	Contour area (sqft)	Incr. Storage (cuft)	Total storage (cuft)
0.00	37.55	7,370	0	0
0.32	37.87	7,370	513	513
0.65	38.20	7,370	513	1,027
0.97	38.52	7,370	513	1,540
1.30	38.85	7,370	513	2,053
1.62	39.17	7,370	513	2,567
1.94	39.49	7,370	513	3,080
2.27	39.82	7,370	513	3,594
2.59	40.14	7,370	513	4,107
2.92	40.47	7,370	513	4,620
3.24	40.79	7,370	513	5,134
3.25	40.80	4,780	60	5,194
3.55	41.10	5,559	1,549	6,743
3.85	41.40	6,346	1,784	8,527
4.15	41.70	7,138	2,021	10,549
4.25	41.80	7,370	725	11,274
4.58	42.13	8,248	2,575	13,849

Assume 21.5% void space in soil & rock section of raingarden:

18" Growing Media ~ 5% Void
3" Rock Storage ~ 10% Void
18" Rock Storage ~ 40% Void

[(1.5' * 0.05) + (1.5' * 0.40)+(0.25 * 0.10]/ 3.25' *100 = 21.5% Voids

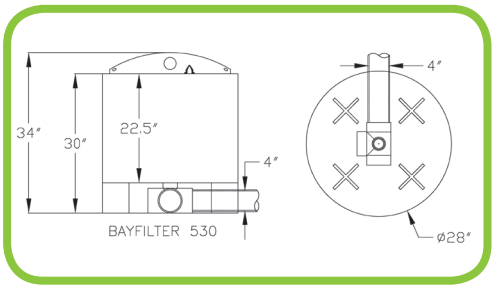
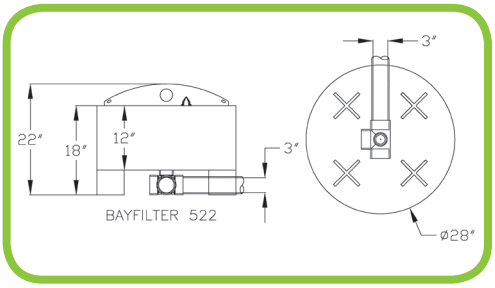
BayFilter 545



Size = 28” (711 mm) diameter
Weight = 250 lbs. (113 kg)
Media Area = 90 ft² (8.4 m²)
Flow Rate = 45 gpm (170 l/min)
Flow Rate per Square Foot = 0.50 gpm/ft² (20 l/min/m²)
Minimum Operational Head = 32” (813 mm)
Recommended Design Head = 34” (864 mm)
Sediment Capture Capacity = 350 lbs (159 kg)
Manifold Diameter = 6” (152 mm)

BayFilter 545

BayFilter 530*



Size = 28” (711 mm) diameter
Weight = 250 lbs. (113 kg)
Media Area = 90 ft² (8.4 m²)
Flow Rate = 30 gpm (114 l/min)
Flow Rate per Square Foot = 0.33 gpm/ft² (13 l/min/m²)
Minimum Operational Head = 30” (762 mm)
Recommended Design Head = 32” (813 mm)
Sediment Capture Capacity = 350 lbs (159 kg)
Manifold Diameter = 4” (102 mm)

BayFilter 530

BayFilter 522**

Size = 28” (711 mm) diameter
Weight = 125 lbs. (57 kg)
Media Area = 45 ft² (4.2 m²)
Flow Rate = 22.5 gpm (85 l/min)
Flow Rate per Square Foot = 0.50 gpm/ft² (20 l/min/m²)
Minimum Operational Head = 18” (457 mm)
Recommended Design Head = 20” (508 mm)
Sediment Capture Capacity = 175 lbs (79 kg)
Manifold Diameter = 3” (76 mm)

BayFilter 522

NOTES: The 500 series is for Total Suspended Solids (TSS) and Phosphorous and utilizes EMC media.

*BayFilter 530 replaces BFC cartridge.

** BayFilter 522 replaces 545L cartridge.

WASHINGTON STATE DEPARTMENT OF ECOLOGY

July 2019

GENERAL USE LEVEL DESIGNATON FOR BASIC (TSS) AND PHOSPHORUS TREATMENT

For

BaySaver Technologies, LLC
BayFilter™ System
using Enhanced Media Cartridges (EMC)

Ecology's Decision:

1. **Based on BaySaver Technologies' application submissions, Ecology hereby issues a General Use Level Designation (GULD) for Basic and Phosphorus Treatment for the BayFilter™ System using Enhanced Media Cartridges (EMC).**

   - **Sized at a hydraulic loading rate of no greater than 0.50 gallons per minute (gpm) per square foot (sq ft.) of filter area.**
     - **45 gpm (0.10 cfs) per cartridge (example dimensions 28-inch diameter, 30-inches tall (90 sq ft filter area))**
     - **75 gpm (0.167 cfs) per cartridge (example dimensions 39-inch diameter, 30-inches tall (150 sq ft filter area))**
       - **Canisters that provide 0.50 gpm per sq ft filter area, regardless of dimensions meet this requirement**
   - **Using BaySaver's EMC Media Blend of Zeolite, Perlite, and Activated Alumina. Specifications of media shall match the specifications provided by the manufacturer and approved by Ecology.**

2. **Ecology approves use of BayFilter™ Enhanced Media Cartridges for treatment at the above flow rates per cartridge. Designers shall calculate the water quality design flow rates using the following procedures:**

   - **Western Washington: For treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using the latest version of the Western Washington Hydrology Model or other Ecology-approved continuous runoff model.**

- **Eastern Washington: For treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using one of the three methods described in Chapter 2.2.5 of the Stormwater Management Manual for Eastern Washington (SWMMEW) or local manual.**

- **Entire State: For treatment installed downstream of detention, the water quality design flow rate is the full 2-year release rate of the detention facility.**

3. **The GULD has no expiration date, but it may be amended or revoked by Ecology, and is subject to the conditions specified below.**

<u>Ecology's Conditions of Use:</u>

BayFilter™ units shall comply with these conditions:

1. **Design, assemble, install, operate, and maintain BayFilter™ units in accordance with BaySaver Technologies' applicable manuals and documents and the Ecology Decision.**

2. **Maintenance: The required inspection/maintenance interval for stormwater treatment devices is often dependent upon the efficiency of the device and the degree of pollutant loading from a particular drainage basin. Therefore, Ecology does not endorse or recommend a "one size fits all" maintenance cycle for a particular model/size of manufactured filter treatment device.**

- **BaySaver recommends that the following be considered during the design application of the BayFilter Cartridge systems:**
  - **Water Quality Flow Rate**
  - **Anticipated Pollutant Load**
  - **Maintenance Frequency**

- **A BayFilter System tested adjacent to construction activity required maintenance after 4-months of operation. Monitoring personnel observed construction washout in the device during the testing period; the construction activity may have resulted in a shorter maintenance interval.**

- **Ecology has found that pre-treatment device prior to the BayFilter system can provide a reduction in pollutant loads on these systems, thereby extending the maintenance interval.**

- **Test results provided to Ecology from other BayFilter Systems, including the above mentioned system that was evaluated again after construction activities had been completed, have indicated the BayFilter System typically has longer maintenance intervals, sometimes exceeding 12-months.**

- **The BayFilter system contains filter fabric that is highly oleophilic (oil absorptive). When sufficient quantities of oils are present in the runoff, the oil and subsequent sediment particles may become attached to the fabric. As a result, it may compromise the maintenance interval of the BayFilter system. Oil control BMP's should be installed upstream of BayFilter installations if warranted, and/or the BayFilter system should be inspected after any known oil spill or release.**

- **Owners/operators must inspect BayFilter systems for a minimum of twelve months from the start of post-construction operation to determine site-specific inspection/maintenance schedules and requirements. Owners/operators must conduct inspections monthly during the wet season, and every other month during the dry season. (According to the SWMMWW, the wet season in western Washington is October 1 to April 30. According to SWMMEW, the wet season in eastern Washington is October 1 to June 30.) After the first year of operation, owners/operators must conduct inspections based on the findings during the first year of inspections or the manufacturer's anticipated maintenance interval, whichever is more frequent.**

- **Conduct inspections by qualified personnel, follow manufacturer's guidelines, and must use methods capable of determining either a decrease in treated effluent flowrate and/or a decrease in pollutant removal ability.**

3. **When inspections are performed, the following findings typically serve as maintenance triggers:**
   - **Accumulated vault sediment depths exceed an average of 2 inches, or**
   - **Accumulated sediment depths on the tops of the cartridges exceed an average of 0.5 inches, or**
   - **Standing water remains in the vault between rain events.**
   - **Bypass during storms smaller than the design storm.**
   - **Note: If excessive floatables (trash and debris) are present, perform minor maintenance consisting of gross solids removal, not cartridge replacement.**

4. **Discharges from the BayFilter™ units shall not cause or contribute to water quality standards violations in receiving waters.**

Pond Sizing Details

1. FCWQT = Flow control and water quality treatment, WQT = Water quality treatment only

2. Depth is measured from the bottom of the facility and includes the three feet of media (drain rock, separation layer and growing media).

3. Maximum volume of the facility. Includes the volume occupied by the media at the bottom of the facility.

4. Maximum water storage volume of the facility. Includes water storage in the three feet of soil media assuming a 40 percent porosity.

APPENDIX E – OPERATIONS AND MAINTENANCE

Stormwater Planters
Operations & Maintenance Plan

What to Look For	What to Do
Structural Components, including inlets and outlets/overflows, shall freely convey stormwater.	
Clogged inlets or outlets	-Remove sediment and debris from catch basins, trench drains and curb inlets and pipes to maintain at least 50% conveyance capacity at all times.
Cracked Drain Pipes	-Repair/seal cracks. Replace when repair is insufficient.
Check Dams	-Maintain 4 to 10 inch deep rock check dams at design intervals.
Vegetation	
Dead or strained vegetation	-Replant per original planting plan, or substitute from Appendix A. -Irrigate as needed. Mulch banks annually. DO NOT apply fertilizers, herbicides, or pesticides.
Tall Grass and Vegetation	-Cut back grass and prune overgrowth 1-2 times per year. Remove cuttings.
Weeds	-Manually remove weeds. Remove all plant debris.
Growing/Filter Medium, including soil and gravels, shall sustain healthy plant cover and infiltrate within 72 hours.	
Gullies	-Fill, lightly compact, and plant vegetation to disperse flow.
Erosion	-Replace splash blocks or inlet gravel/rock.
Slope Slippage	-Stabilize 3:1 slopes/banks with plantings from Appendix A.
Ponding	-Rake, till, or amend to restore infiltration rate.

Annual Maintenance Schedule:

Summer. Make any structural repairs. Improve filter medium as needed. Clear drain. Irrigate as needed.
Fall. Replant exposed soil and replace dead plants. Remove sediment and plant debris.
Winter. Monitor infiltration/flow-through rates. Clear inlets and outlets/overflows to maintain conveyance.
Spring. Remove sediment and plant debris. Replant exposed soil and replace dead plants. Mulch.
All seasons. Weed as necessary. Clean scuppers or curb inlets as needed.
Maintenance Records: Record date, description, and contractor (if applicable) for all structural repairs, landscape maintenance, and facility cleanout activities. Keep work orders and invoices on file and make available upon request of the inspector.
Access: Maintain ingress/egress to design standards.
Infiltration/Flow Control: All facilities shall drain within 72 hours. Record time/date, weather, and site conditions when ponding occurs.
Pollution Prevention: All sites shall implement best management practices to prevent hazardous or solid wastes or excessive oil and sediment from contaminating stormwater. Contact emergency response agencies for immediate assistance responding to spills. Record time/date, weather, and site conditions if site activities contaminate stormwater.
Vectors (Mosquitoes & Rodents): Stormwater facilities shall not harbor mosquito larvae or rats that pose a threat to public health or that undermine the facility structure. Monitor standing water for small wiggling sticks perpendicular to the water's surface. Note holes/burrows in and around facilities. Call Clackamas County Vector Control for immediate assistance to eradicate vectors. Record time/date, weather, and site conditions when vector activity observed.

Rain Gardens
Operations & Maintenance Plan

What to Look For	What to Do
Structural Components, including inlets and outlets/overflows, shall freely convey stormwater.	
Clogged inlets or outlets	-Remove sediment and debris from catch basins, trench drains and curb inlets and pipes to maintain at least 50% conveyance capacity at all times.
Cracked Drain Pipes	-Repair/seal cracks. Replace when repair is insufficient.

Vectors (Mosquitoes & Rodents): Stormwater facilities shall not harbor mosquito larvae or rats that pose a threat to public health or that undermine the facility structure. Monitor standing water for small wiggling sticks perpendicular to the water's surface. Note holes/burrows in and around facilities. Call Clackamas County Vector Control for immediate assistance to eradicate vectors. Record time/date, weather, and site conditions when vector activity observed.

Vegetated Swales
Operations & Maintenance Plan

What to Look For	What to Do
Structural Components, including inlets and outlets/overflows, shall freely convey stormwater.	
Clogged inlets or outlets	-Remove sediment and debris from catch basins, trench drains, curb inlets and pipes to maintain at least 50% conveyance capacity at all times.
Cracked Drain Pipes	-Replace/seal cracks. Replace when repair is insufficient.
Check Dams	-Maintain 4 - 10 inch deep rock check dams at design intervals.
Vegetation	
Dead or strained vegetation	-Replant per original planting plan, or substitute from Appendix A. -Irrigate as needed. Mulch banks annually. DO NOT apply fertilizers, herbicides, or pesticides.
Tall Grass and Vegetation	-Cut back to 4-6 inches, 1-2 times per year. Remove cuttings.
Weeds	-Manually remove weeds. Remove all plant debris.
Growing/Filter Medium, including soil and gravels, shall sustain healthy plant cover and infiltrate within 72 hours.	
Gullies	-Fill, lightly compact, and plant vegetation to disperse flow.
Erosion	-Restore or create outfalls, check dams, or splash blocks where necessary.
Slope Slippage	-Stabilize slope.
Ponding	-Rake, till, or amend to restore infiltration rate.

Annual Maintenance Schedule:

Summer. Make any structural repairs. Improve filter medium as needed. Clear drain. Irrigate as needed.
Fall. Replant exposed soil and replace dead plants. Remove sediment and plant debris.
Winter. Monitor infiltration/flow-through rates. Clear inlets and outlets/overflows to maintain conveyance.
Spring. Remove sediment and plant debris. Replant exposed soil and replace dead plants. Mulch.
All seasons. Weed as necessary. Clean scuppers or curb cuts as needed.
Maintenance Records: Record date, description, and contractor (if applicable) for all structural repairs, landscape maintenance, and facility cleanout activities. Keep work orders and invoices on file and make available upon request of the inspector.
Access: Maintain ingress/egress to design standards.
Infiltration/Flow Control: All facilities shall drain within 72 hours. Record time/date, weather, and site conditions when ponding occurs.
Pollution Prevention: All sites shall implement best management practices to prevent hazardous or solid wastes or excessive oil and sediment from contaminating stormwater. Contact emergency response agencies for immediate assistance responding to spills. Record time/date, weather, and site conditions if site activities contaminate stormwater.
Vectors (Mosquitoes & Rodents): Stormwater facilities shall not harbor mosquito larvae or rats that pose a threat to public health or that undermine the facility structure. Monitor standing water for small wiggling sticks perpendicular to the water's surface. Note holes/burrows in and around facilities. Call Clackamas County Vector Control for immediate assistance to eradicate vectors. Record time/date, weather, and site conditions when vector activity observed.

Underground Infiltration System
Operations & Maintenance Plan

What to Look For	What to Do
Structural Components, include pipes, manholes, rock/sand reservoirs, storm chambers and silt traps.	
Clogged inlets or outlets	-Clean gutters, rain drains, and silt traps twice a year. -Clear piping to facility when blockage occurs.
Cracked Drain Pipes	-Repair/seal cracks. Replace when repair is insufficient.
Catch Basin	-Remove accumulated sediment annually.
Vegetation includes surface cover and nearby plantings.	
Large Shrubs and Trees	-Prevent large root systems from damaging subsurface structural components.
Filter Layer, includes rock/gravel bed.	
Ponding Water	-Clear piping through facility when ponding occurs. -Replace rock/sand reservoirs as necessary. -Tilling of subgrade below reservoir may be necessary (for trenches) prior to backfill. -May require decommissioning and replacement (for infiltrators or trenches).

Annual Maintenance Schedule:

Summer. Make necessary structural repairs. Clean silt traps.
Fall. Clean gutters and rain drains.
Winter. Monitor infiltration rates.
Spring. Clean gutters and rain drains.
Maintenance Records: Record date, description, and contractor (if applicable) for all structural repairs, landscape maintenance, and facility cleanout activities. Keep work orders and invoices on file and make available upon request of the inspector.
Access: Maintain ingress/egress to design standards.
Infiltration/Flow Control: All facilities shall drain within 72 hours. Record time/date, weather, and site conditions when ponding occurs.
Pollution Prevention: All sites shall implement best management practices to prevent hazardous or solid wastes or excessive oil and sediment from contaminating stormwater. Contact emergency response agencies for immediate assistance responding to spills. Record time/date, weather, and site conditions if site activities contaminate stormwater.
Vectors (Mosquitoes & Rodents): Stormwater facilities shall not harbor mosquito larvae or rats that pose a threat to public health or that undermine the facility structure. Monitor standing water for small wiggling sticks perpendicular to the water's surface. Note holes/burrows in and around facilities. Call Clackamas County Vector Control for immediate assistance to eradicate vectors. Record time/date, weather, and site conditions when vector activity observed.

BAYFILTER™ INSPECTION AND MAINTENANCE MANUAL

The BayFilter system requires periodic maintenance to continue operating at the design efficiency. The maintenance process is comprised of the removal and replacement of each BayFilter cartridge, vertical drain down module; and the cleaning of the vault or manhole with a vacuum truck.

The maintenance cycle of the BayFilter system will be driven mostly by the actual solids load on the filter. The system should be periodically monitored to be certain it is operating correctly. Since stormwater solids loads can be variable, it is possible that the maintenance cycle could be more or less than the projected duration.

BayFilter systems in volume-based applications are designed to treat the WQv in 24 to 48 hours initially. Late in the operational cycle of the BayFilter, the flow rate will diminish as a result of occlusion. When the drain down exceeds the regulated standard, maintenance should be performed.

When a BayFilter system is first installed, it is recommended that it be inspected every six (6) months. When the filter system exhibits flows below design levels the system should be maintained. Filter cartridge replacement should also be considered when sediment levels are at or above the level of the manifold system. Please contact the BaySaver Technologies Engineering Department for maintenance cycle estimations or assistance at **1.800.229.7283**.

BayFilter System Cleanout

Vactor Truck Maintenance

Jet Vactoring Through Access Hatch

Maintenance Procedures

1. Contact BaySaver Technologies for replacement filter cartridge pricing and availability at 1-800-229-7283.
2. Remove the manhole covers and open all access hatches.
3. Before entering the system make sure the air is safe per OSHA Standards or use a breathing apparatus. Use low O_2, high CO, or other applicable warning devices per regulatory requirements.
4. Using a vacuum truck remove any liquid and sediments that can be removed prior to entry.
5. Remove the hold down bars. Using a small lift or the boom of the vacuum truck, remove used cartridges by lifting them out.
6. Any cartridges that cannot be readily lifted can be easily slid along the floor or moved using the trolley system (if installed) to a location they can be lifted via a boom lift.
7. When all the cartridges have been removed, it is now practical to remove the balance of the solids and water. Loosen the stainless clamps on the Fernco couplings for the manifold and remove the drain pipes as well. Carefully cap the manifold and the Ferncos and rinse the floor, washing away the balance of any remaining collected solids.
8. Clean the manifold pipes, inspect, and reinstall.
9. Install the exchange cartridges, reinstall the hold down bars and close all covers.
10. The used cartridges may be sent back to BaySaver Technologies for recycling.

For more information please see the BaySaver website at www.baysaver.com or contact 1-800-229-7283.

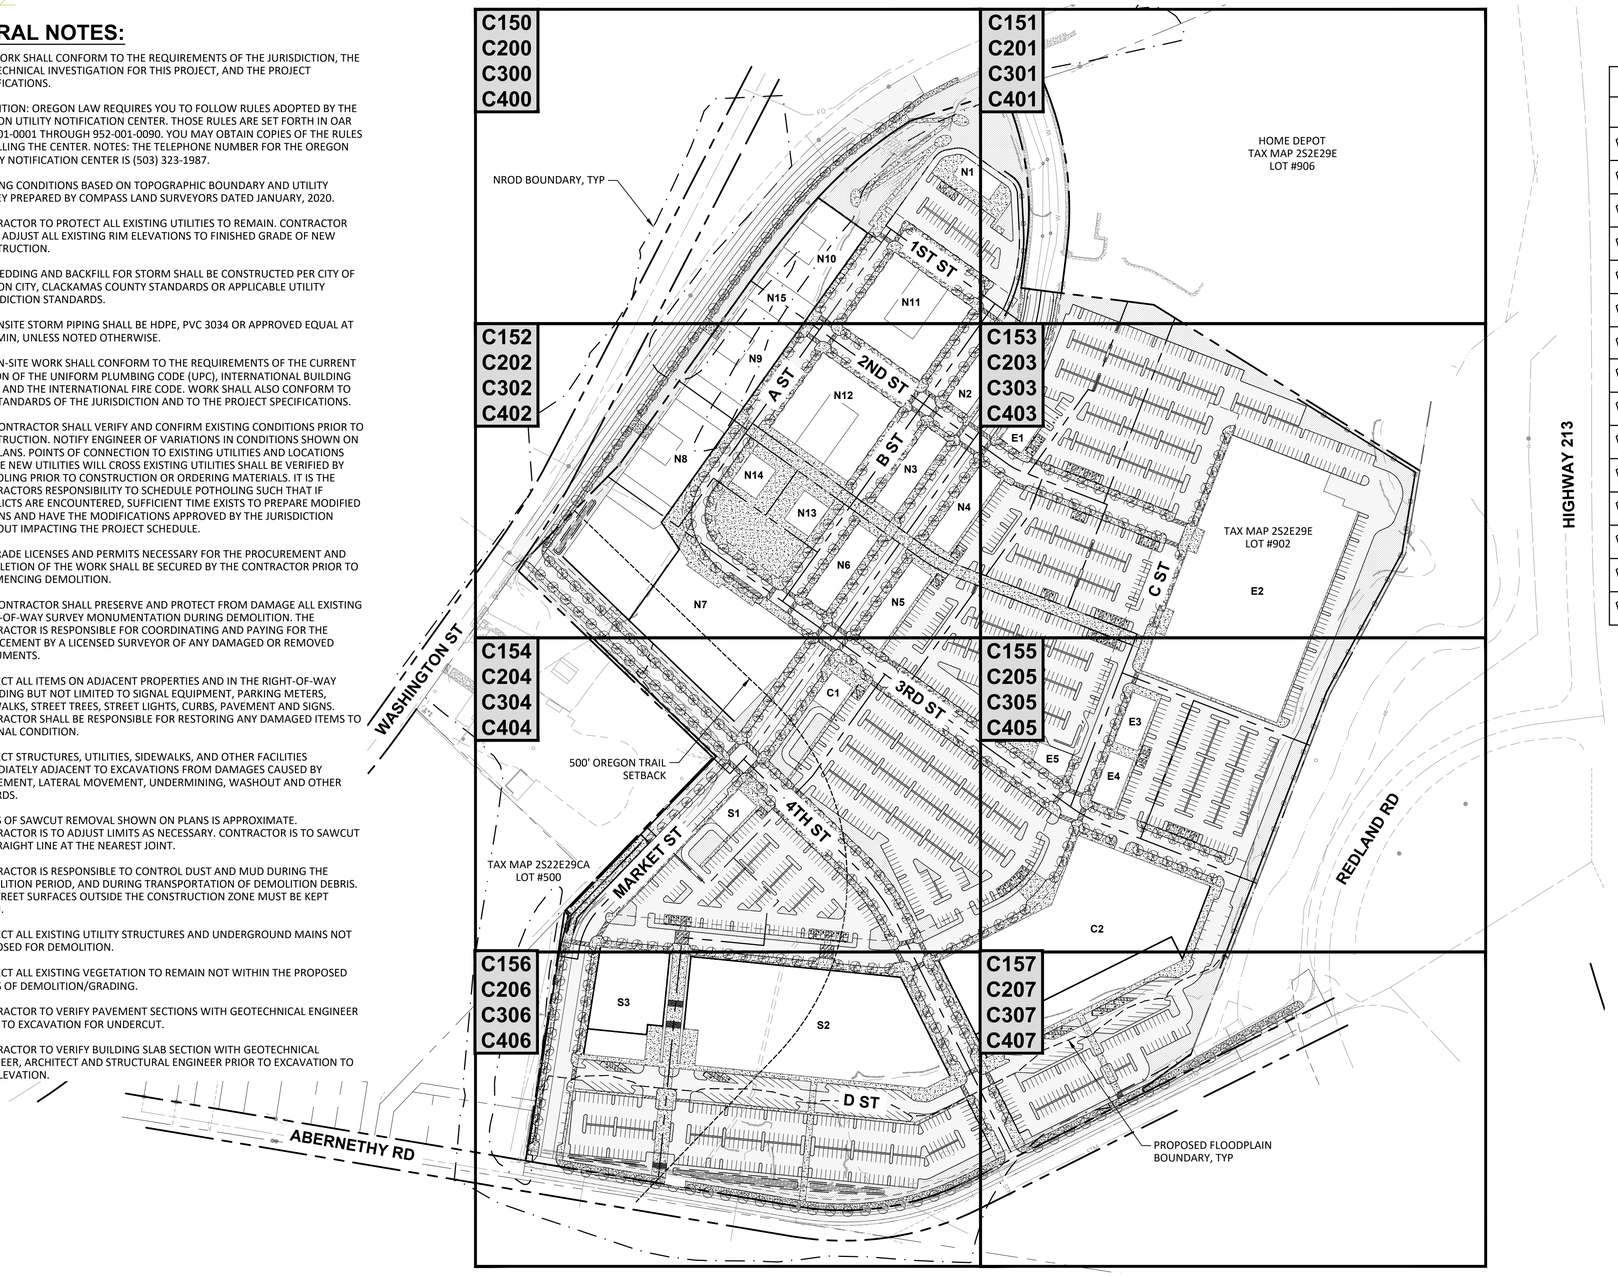
APPENDIX F – PRE-DEVELOPMENT SITE SURVEY

APPENDIX G – CONCEPT UTILITY PLAN

APPENDIX H – SITE SPECIFIC GEOTECHNICAL REPORT

SHEET LAYOUT



C102

GENERAL NOTES:

1. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE JURISDICTION, THE GEOTECHNICAL INVESTIGATION FOR THIS PROJECT, AND THE PROJECT SPECIFICATIONS.
2. ATTENTION: OREGON LAW REQUIRES YOU TO FOLLOW RULES ADOPTED BY THE OREGON UTILITY NOTIFICATION CENTER. THOSE RULES ARE SET FORTH IN OAR 952-001-0001 THROUGH 952-001-0090. YOU MAY OBTAIN COPIES OF THE RULES BY CALLING THE CENTER. NOTES: THE TELEPHONE NUMBER FOR THE OREGON UTILITY NOTIFICATION CENTER IS (503) 323-1987.
3. EXISTING CONDITIONS BASED ON TOPOGRAPHIC BOUNDARY AND UTILITY SURVEY PREPARED BY COMPASS LAND SURVEYORS DATED JANUARY, 2020.
4. CONTRACTOR TO PROTECT ALL EXISTING UTILITIES TO REMAIN. CONTRACTOR SHALL ADJUST ALL EXISTING RIM ELEVATIONS TO FINISHED GRADE OF NEW CONSTRUCTION.
5. PIPE BEDDING AND BACKFILL FOR STORM SHALL BE CONSTRUCTED PER CITY OF OREGON CITY, CLACKAMAS COUNTY STANDARDS OR APPLICABLE UTILITY JURISIDICTION STANDARDS.
6. ALL ONSITE STORM PIPING SHALL BE HDPE, PVC 3034 OR APPROVED EQUAL AT 0.5% MIN, UNLESS NOTED OTHERWISE.
7. ALL ON-SITE WORK SHALL CONFORM TO THE REQUIREMENTS OF THE CURRENT EDITION OF THE UNIFORM PLUMBING CODE (UPC), INTERNATIONAL BUILDING CODE, AND THE INTERNATIONAL FIRE CODE. WORK SHALL ALSO CONFORM TO THE STANDARDS OF THE JURISDICTION AND TO THE PROJECT SPECIFICATIONS.
8. THE CONTRACTOR SHALL VERIFY AND CONFIRM EXISTING CONDITIONS PRIOR TO CONSTRUCTION. NOTIFY ENGINEER OF VARIATIONS IN CONDITIONS SHOWN ON THE PLANS. POINTS OF CONNECTION TO EXISTING UTILITIES AND LOCATIONS WHERE NEW UTILITIES WILL CROSS EXISTING UTILITIES SHALL BE VERIFIED BY POTHOLING PRIOR TO CONSTRUCTION OR ORDERING MATERIALS. IT IS THE CONTRACTORS RESPONSIBILITY TO SCHEDULE POTHOLING SUCH THAT IF CONFLICTS ARE ENCOUNTERED, SUFFICIENT TIME EXISTS TO PREPARE MODIFIED DESIGNS AND HAVE THE MODIFICATIONS APPROVED BY THE JURISDICTION WITHOUT IMPACTING THE PROJECT SCHEDULE.
9. ALL TRADE LICENSES AND PERMITS NECESSARY FOR THE PROCUREMENT AND COMPLETION OF THE WORK SHALL BE SECURED BY THE CONTRACTOR PRIOR TO COMMENCING DEMOLITION.
10. THE CONTRACTOR SHALL PRESERVE AND PROTECT FROM DAMAGE ALL EXISTING RIGHT-OF-WAY SURVEY MONUMENTATION DURING DEMOLITION. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING AND PAYING FOR THE REPLACEMENT BY A LICENSED SURVEYOR OF ANY DAMAGED OR REMOVED MONUMENTS.
11. PROTECT ALL ITEMS ON ADJACENT PROPERTIES AND IN THE RIGHT-OF-WAY INCLUDING BUT NOT LIMITED TO SIGNAL EQUIPMENT, PARKING METERS, SIDEWALKS, STREET TREES, STREET LIGHTS, CURBS, PAVEMENT AND SIGNS. CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING ANY DAMAGED ITEMS TO ORIGINAL CONDITION.
12. PROTECT STRUCTURES, UTILITIES, SIDEWALKS, AND OTHER FACILITIES IMMEDIATELY ADJACENT TO EXCAVATIONS FROM DAMAGES CAUSED BY SETTLEMENT, LATERAL MOVEMENT, UNDERMINING, WASHOUT AND OTHER HAZARDS.
13. LIMITS OF SAWCUT REMOVAL SHOWN ON PLANS IS APPROXIMATE. CONTRACTOR IS TO ADJUST LIMITS AS NECESSARY. CONTRACTOR IS TO SAWCUT AT STRAIGHT LINE AT THE NEAREST JOINT.

17 CONTRACTOR IS RESPONSIBLE TO CONTROL DUST AND MUD DURING THE DEMOLITION PERIOD, AND DURING TRANSPORTATION OF DEMOLITION DEBRIS. ALL STREET SURFACES OUTSIDE THE CONSTRUCTION ZONE MUST BE KEPT CLEAN.

18. PROTECT ALL EXISTING UTILITY STRUCTURES AND UNDERGROUND MAINS NOT PROPOSED FOR DEMOLITION.
19. PROTECT ALL EXISTING VEGETATION TO REMAIN NOT WITHIN THE PROPOSED LIMITS OF DEMOLITION/GRADING.
20. CONTRACTOR TO VERIFY PAVEMENT SECTIONS WITH GEOTECHNICAL ENGINEER PRIOR TO EXCAVATION FOR UNDERCUT.
21. CONTRACTOR TO VERIFY BUILDING SLAB SECTION WITH GEOTECHNICAL ENGINEER, ARCHITECT AND STRUCTURAL ENGINEER PRIOR TO EXCAVATION TO PAD ELEVATION.

Preliminary Report of Geotechnical Engineering Services
Proposed Rivers Edge Development
1105 Abernethy Road
Oregon City, Oregon
GeoDesign Project: SDG-4-01

GeoDesign, Inc. is pleased to submit this preliminary report of geotechnical engineering services for the proposed Rivers Edge development located at 1105 Abernethy Road in Oregon City, Oregon. Our services for this project were conducted in general accordance with our proposal dated December 26, 2019.

We appreciate the opportunity to be of service to you. Please call if you have questions regarding this report.

Sincerely,

GeoDesign, Inc.

Brett A. Shipton, P.E., G.E.

EXECUTIVE SUMMARY

This preliminary report presents the results of our geotechnical engineering evaluation for the proposed Rivers Edge development located at 1105 Abernethy Road in Oregon City, Oregon. The development plans for this project are still preliminary, but they are anticipated to consist of assorted entertainment, retail, and dining options. The site is approximately 65 acres and was formerly a municipal waste landfill.

Based on our review of the available information and the results of our exploration, it is our opinion that the site can be developed as proposed. Our specific recommendations for site development and design are provided later in this report. The following items will have an impact on design and construction of the proposed project:

- The landfill trash and uncompacted landfill cap will not provide suitable foundation support for buildings and other structures. Buildings, utilities, and pedestrian sidewalks should be supported on deep foundations. We recommend that steel pipe piles or driven grout piles be used for this project. Corrosion protection will be required to prevent piles from degrading.
- Parking lot and road areas should be surcharged to minimize the amount of future settlement. Surcharge heights should be 10 feet above finished grade. Some additional settlement will still occur over the life of the project as the landfill trash gradually decomposes. We recommend that a budget be established for periodic maintenance of parking lots and roads.
- Methane gas will be generated as the landfill trash gradually decomposes. Methane gas mitigation will be required. We recommend that an environmental consultant be retained to design appropriate methane mitigation systems.
- The current ground surface consists of uncompacted landfill cap that will not provide suitable support for site improvements. We recommend that the upper 12 inches of subgrade be recompacted beneath buildings, sidewalks, pavement, and other improvements.
- Liquefaction, lateral spreading, fault rupture, and landslides are not considered hazards at the site.
- Our seismic analysis indicates that design levels of ground shaking can be computed assuming Site Class E in accordance with ASCE 7-16. It may be necessary to perform a site-specific seismic analysis of some of the buildings during final design.
- Stormwater infiltration will not be feasible at this site.
- The on-site soil is suitable for use as structural fill, provided it is properly moisture conditioned.

1.0 INTRODUCTION

This preliminary report presents the results of our geotechnical engineering evaluation for the proposed Rivers Edge development located at 1105 Abernethy Road in Oregon City, Oregon. This preliminary report provides a general overview of the geotechnical conditions at the site, but it is not suitable for performing final design of the proposed project. Additional data collection, analysis, and information regarding the proposed building types and locations will be required in order prepare a final geotechnical report. The development plans for the proposed project are still preliminary, but may include some combination of the following:

- 4.2-acre aquatic park that includes a large, one-story, enclosed space; shallow pools; and slides
- 4.9-acre Topgolf facility up to three stories tall at the location of the existing driving range
- 2.4-acre outdoor amphitheater
- Bowling alley or cinemas building
- Fitness center building
- Multi-story hotel building
- Single-story retail, restaurants, and other businesses that will complement the other entertainment facilities
- A big box retailer, such as Walmart or Costco
- Parking and on-site access roads

This report presents GeoDesign's preliminary geotechnical engineering recommendations for the project. At the time we prepared this report, structural loads and grading plans for the project had not yet been developed. For this report, we assume that structural loads for each building type will be similar to other projects we have worked on. We also assume that cuts and fills will generally be approximately 5 feet or less. The site location relative to surrounding physical features is shown on Figure 1.

Acronyms and abbreviations used herein are defined above, immediately following the Table of Contents.

2.0 PROJECT BACKGROUND

The site is located within the former Rossman Landfill, a large municipal landfill that was permitted to receive non-hazardous municipal waste from the Portland area between the late 1960s and early 1980s. The landfill was issued a closure permit in 1990. DEQ information indicates that shallow groundwater at the site was impacted, and remedial actions have been taken to address landfill gas generation, landfill leachate, and shallow groundwater in the site vicinity.

We understand that landfill operations included placing soil berms around the perimeter of the area to receive trash. The details of berm construction methods were not available, other than the outer slopes were as steep as approximately 1H:1V. Municipal trash was then placed within the bermed area. The landfill received waste primarily in two phases, with trash layers tens of feet thick each. After forming the first layer of trash, it was covered by a soil cap at least 2 feet

thick. The second trash layer was placed over the first soil cap, along with upward construction of the soil berms to maintain the boundaries of the landfill. This second layer of trash was then capped again by soil of varying thickness. The second layer of trash did not entirely cover the area of the first. The southeast site area, which is generally lower in elevation than the rest of the former landfill site, only received the first layer of trash. Also, during some of the landfill's operation, a thin layer of soil was spread over the active areas of the landfill each day to reduce odors emanating from the trash.

Following closure of the landfill, smaller areas of the site were leased to businesses for storage and other uses. Portions of the site are currently occupied by the Trails End Golf Center, several trash container rental companies, and other tenants. Site grading was completed for construction of the Trails End Golf Center, including the addition of more fill soil over some of the area occupied by the golf center.

Due to potential contamination from the landfill trash, we recommend that an environmental consultant be retained to evaluate environmental conditions at the site.

3.0 PURPOSE AND SCOPE

The purpose of this evaluation was to provide preliminary geotechnical engineering recommendations for the due diligence phase of the project. Specifically, we completed the following scope of services:

- Reviewed the existing subsurface information in our in-house files.
- Drilled three borings to collect subsurface soil data. The borings were drilled using mud rotary methods through the landfill trash and into the underlying native soil. The borings were drilled to depths up to 71.5 feet BGS.
- Monitored for methane and hydrogen sulfide gases during our subsurface explorations using a GEM gas detector.
- Stored the spoils from each geotechnical boring in appropriately labeled, 55-gallon drums.
- Collected one composite sample of the spoils and submitted the sample for the following analytical tests for disposal characterization:
  - RCRA 8 metals by TCLP analytical methods
  - Volatile organic compounds by EPA Method 8260
  - PCBs by EPA Method 8080
  - Hydrocarbon identification by NWTPH-HCID
- Analyzed the chemical data and arranged for permitted disposal of investigation-derived waste off site at approved facilities by licensed waste transporters.
- Conducted a geotechnical laboratory testing program that consisted of the following tests:
  - Fourteen moisture content determinations in general accordance with ASTM D2216
  - Four particle-size analyses in general accordance with ASTM D1140
  - Two Atterberg limits tests in general accordance with ASTM D2435
- Provided foundation support recommendations.
- Provided recommendations for improving the landfill material in roadway and parking areas.

- Provided preliminary design and construction recommendations, including the following:
  - Site preparation, grading, and earthwork, including dry/wet weather construction, cut and fill recommendations, and temporary excavations
  - Pavement and subgrade design
  - Utility trench construction
  - Retaining wall design criteria, including earth pressures and foundation support
- Prepared this preliminary geotechnical engineering report that presents our preliminary findings, conclusions, and recommendations.

4.0 SITE CONDITIONS

4.1 REGIONAL AND SITE GEOLOGY

The site is located on the southeast side of the Portland Basin, a fault-bounded basin situated between the Coast Ranges to the west and the Cascade Mountains to the east (Orr and Orr, 1999). Bedrock in this region consists of basalt flows emplaced approximately 15 million years ago as part of the CRBG, which is exposed in the hills of West Linn across the Willamette River from the site (Schlicker and Finlayson, 1979; Gannett and Caldwell, 1998).

Bedrock is overlain by silt, sand, and gravel of Miocene to Pleistocene age (14.5 million to 1 million years old), which form the majority of the basin-fill in the area. The basin-fill sediments generally are mapped as the Sandy River Mudstone toward the lower portion of the assemblage (mostly fine-grained sandstone and mudstone) overlain by the Troutdale Formation, a series of gravel, sand, and silt deposited by the ancestral Columbia River and smaller rivers running out of the Cascade Mountains (Schlicker and Finlayson, 1979).

The basin-fill sediments are overlain by late Pleistocene silt, sand, and gravel deposited during glacial outburst floods from Lake Missoula approximately 15,000 to 12,000 years ago (Waitt, 1985). Missoula Flood silt and sand form many of the relatively flat, elevated areas east of the Willamette River in the region surrounding the site (Schlicker and Finlayson, 1979; Madin, 1990). Down along the Willamette River floodplain and its tributaries, the Missoula flood deposits and older geologic units are unconformably overlain by more recent alluvial gravel, sand, and silt.

The total thickness of the basin-fill deposits in the site vicinity is interpreted to be approximately 150 feet to less than 30 feet (Madin, 1990; Gannett and Caldwell, 1998).

Subduction of the Juan de Fuca Plate beneath the west margin of the North American Plate presents the potential for great plate-interface earthquakes (magnitude greater than 8). Paleoseismic investigations indicate that plate interface earthquakes have an average recurrence of 500 to 600 years (Atwater and Hemphill-Haley, 1997; Goldfinger et al., 2003) and that the last subduction zone earthquake occurred in the year 1700 (Satake et al., 1996). Moderate intensity and long duration ground shaking would be expected at the site in the event of a large magnitude Cascadia plate-interface earthquake.

Northwest-striking crustal faults have been mapped in bedrock exposures surrounding the Portland Basin and inferred below sedimentary cover (Blakely et al., 2000; Personius, 2002). These faults are related to the compressional, right-lateral tectonics dominating the Portland

Basin. The Bolton fault and the Oatfield fault are two of these faults and are mapped approximately 0.5 mile southwest and 0.5 mile north of the site, respectively (Personius, 2002). The Bolton fault is mapped based on the linear escarpment formed in the CRBG along the southern bank of the Willamette River. The potential activity of the Bolton fault is not known, since offset of Quaternary deposits has not been observed, but the fault may be related to the Portland Hills-Clackamas River fault system, which has shown evidence of recent seismicity (Personius, 2002). The potential activity of the Oatfield fault is not known, since offset of Quaternary deposits has not been observed; core samples show that volcanic rocks approximately 1 million years old may be offset across the fault (Personius, 2002).

4.2 SURFACE CONDITIONS

The site is approximately 65 acres in size and located east of the Willamette River, south of the confluence with the Clackamas River. A smaller tributary (Abernethy Creek) runs south of the site toward the Willamette River. Site elevations typically vary from 50 to 75 feet, although some lower elevation areas are present around the edges of the property. The lower areas of the site lie within the Willamette River flood plain and were flooded in the February 1996 flood.

The site is bound by Washington Street to the west, Washington Street to the north with a Home Depot commercial development north of the road, a steep-sided stream to the east with Redland Road further east of the stream, and Abernethy Road to the south. The site consists of broad, relatively flat areas bound by moderately steep to steep-sided slopes that are tens of feet high, descending either to lower benches within the site or to the roads and stream adjacent to the site. Most of the site lies within the former Rossman Landfill. The flattened areas are a result of the filling that has occurred at this site. There is a triangular piece of property between Washington Street and a tall berm at the west extent of the former landfill that is gently sloped toward the west.

The ground surface across the site mostly consists of low grass and weeds, gravel work areas and driveways, or bare earth. Some trees, shrubs, and blackberry patches are also present. Most of the site is currently unoccupied or is used for equipment storage. The Trails End Golf Center in the east site area has a graded driving range, groomed greens and tee-off areas, and a large clubhouse. Several office and storage buildings were previously located along the south-central boundary that have since been demolished.

4.3 SUBSURFACE CONDITIONS

Our understanding of subsurface conditions is based on the information we obtained in the three borings (B-1 through and B-3) we drilled for the project. We drilled our borings to depths of up to 71.5 feet BGS at the approximate locations shown on Figure 2. Descriptions of the field exploration and laboratory testing programs, the exploration logs, and results of our laboratory testing are presented in the Appendix.

The geologic units encountered during our subsurface explorations generally consist of fill and landfill trash overlying silt, sand, and gravel alluvium deposited by the Willamette River. The alluvium is believed to be underlain by hard silt and clay of the Sandy River Mudstone. The following sections provide a detailed description of each geologic unit encountered at the site.

4.3.1 Fill

Beginning at the ground surface, we encountered fill soil in all our explorations that extends to depths of approximately 6 to 22 feet BGS. The fill we encountered is a soil cap that was placed over the trash. The cap fill includes a variety of soil types, but mostly consists of brown to gray, sandy silt, clay, and silty sand. The silt and clay consistency ranges from medium stiff to very stiff, but is primarily medium stiff. The silty sand is typically loose to medium dense. We occasionally observed organics and debris in the fill layer. Although not encountered in our borings, we anticipate that some concrete, asphalt, and wood are also present in the fill.

Laboratory testing of select samples indicates the moisture content of the fill at the time of our explorations ranged from 18 to 41 percent. Atterberg limits testing indicates the clay exhibits medium plasticity.

4.3.2 Trash

We encountered trash below the cap fill in all three explorations. The trash extends to depths of 40 to 48 feet BGS. The trash we observed includes rags, plastic bags, general plastic, wood, glass, wire, asphalt, cloth, and metal. We lost a significant amount of drilling mud while drilling through the trash, which indicates that some voids are present. We also experienced periodic caving in the trash layer, which indicates that some of the material is likely loose. We observed occasional oil sheen and hydrocarbon odors that indicate some contamination is likely present.

4.3.3 Silt and Clay Fill

We encountered silt and clay fill beneath the landfill trash in all three borings. The silt and clay fill extends to depths of 45 to 60 feet BGS. The silt and clay fill is generally gray, moist, soft to medium stiff, has medium to high plasticity, and contains varying amounts of fine- to medium-grained sand and varying amounts of debris consisting of plastic bags, general plastic, wire, and brick. It is possible that this material was placed as a landfill liner. Laboratory testing of samples indicates the moisture content of the silt and clay ranged from 44 to 52 percent at the time of our explorations.

4.3.4 Alluvial Silt and Silty Sand

We encountered alluvial silt and silty sand in all three borings. The silt and silty sand extend to depths of 50 to 68 feet BGS. The silt is typically brown, moist to wet, very soft to medium stiff, has medium to high plasticity, and contains varying amounts of fine-grained sand. The silty sand is typically brown to gray, loose to medium dense, moist to wet, fine to medium grained, and contains varying amounts of fines. Laboratory testing of samples indicates the moisture content of the silt ranged from 46 to 48 52 percent at the time of our explorations. Laboratory testing of one sample indicates the moisture content of the silty sand was approximately 40 percent at the time of our explorations. We interpret the alluvial silt and silty sand to represent unconsolidated sediments of the Willamette River floodplain.

4.3.5 Alluvial Gravel

We encountered alluvial gravel in all three borings. All of our borings were completed in the gravel layer. The gravel is generally very dense, gray to brown, moist to wet, subrounded to subangular, and contains medium to coarse sand. We interpret the alluvial gravel to represent

either coarse-grained Missoula flood deposits or more recent channel deposits from the Willamette River. Other borings we have seen in the area indicate the gravel layer is typically 3 to 15 feet thick and is underlain by hard Sandy River Mudstone.

4.3.6 Groundwater

The presence of drilling fluids during mud rotary drilling prevented observation of groundwater in the borings. Wet soil recovered from drilling was first observed at depths of approximately 60 and 65 feet BGS (elevations of 6 to 9 feet). We also anticipate that shallow zones of perched water and leachate fluids are present. Considering the site's proximity to the Willamette River, groundwater levels may be impacted by seasonal changes in river levels. We anticipate that the shallow perched water underlying the site will vary in response to seasonal changes and other factors not observed during our field work.

4.4 INFILTRATION TESTING

We did not perform infiltration testing during our field exploration programs. In our opinion, the soil at the site is not suitable for infiltration. In our experience, the silt and clay cap fill material will have a low permeability. Any infiltration water that penetrates the cap fill will enter the trash zone and increase the demand on the existing leachate system and will increase the potential for contaminants to be transported off site.

5.0 GEOLOGIC HAZARDS

We evaluated the presence of geologic hazards in the site vicinity based on a review of published literature and our experience with nearby projects. Individual geologic hazards are summarized in the following sections.

5.1 SEISMIC HAZARDS

5.1.1 Liquefaction

Liquefaction is caused by a rapid increase in pore water pressure that reduces the effective stress between soil particles to near zero. Granular soil, which relies on interparticle friction for strength, is susceptible to liquefaction until the excess pore pressures can dissipate. In general, loose, saturated sand soil with low silt and clay content is the most susceptible to liquefaction. Silty soil with low plasticity is moderately susceptible to liquefaction under relatively higher levels of ground shaking.

Based on the groundwater depth and soil at the site, it is our opinion that the soil at the site is not susceptible to liquefaction. It appears that groundwater is generally located below the trash layer, and the soil beneath the trash layer generally has sufficient plasticity, depth, or density that it will not liquefy.

5.1.2 Lateral Spreading

Lateral spreading is a liquefaction-related seismic hazard and occurs on gently sloping or flat sites underlain by liquefiable sediment adjacent to an open face, such as a riverbank. Liquefied soil adjacent to an open face can flow toward the open face, resulting in lateral ground displacement. Since the risk of liquefaction is low, it is also our opinion that the risk of lateral spreading is low.

5.1.3 Fault Rupture

There are no active faults mapped within approximately 0.5 mile of the site (USGS, 2020). Therefore, it is our opinion that the probability of surface fault rupture beneath the site is low.

5.2 LANDSLIDES

Hazard mapping shows that there are no mapped landslides at the site (DOGAMI, 2018). Most of the site is relatively level and is not prone to landslides. There are some relatively steep slopes along the edges of the property that may need to be evaluated for stability if buildings will be located at the top of the slopes.

5.3 FLOODING

Hazard mapping shows that the site is within a mapped flood zone (DOGAMI, 2018). FEMA mapping indicates the 100-year flood elevation is 48.3 feet. We understand that Oregon City considers the flood elevation to be 50.7 feet at the site. At least some portions of the site at lower elevations will likely be in a flood hazard zone.

6.0 DESIGN RECOMMENDATIONS

6.1 FOUNDATION SUPPORT

6.1.1 General

We recommend that all proposed buildings, receiving areas, floor slabs, and other settlement-sensitive structures be supported on deep foundations. Shallow foundations should not be used because they could experience excessive settlement as the trash layer in the landfill gradually decomposes. Steel pipe piles and driven grout piles are two common pile types in the Portland metropolitan area. Therefore, we have provided recommendations for these pile types. We recommend that pile-supported slabs extend approximately 10 feet beyond the exterior of the buildings to prevent these areas from settling differentially and making building access difficult.

6.1.2 Downward Axial Capacity

Table 1 presents our estimated ultimate compressive capacity of the piles. The capacities in Table 1 assume the piles are spaced at least 3 pile diameters on-center.

Table 1. Axial Compressive Capacity

Deep Foundation Type	Ultimate Compressive Capacity[1] (tons)	Downdrag Load[2] (tons)	Refusal Criteria	Estimated Tip Elevation (feet)
12-inch-diameter, steel pipe pile (closed end)	300	15	Driven at least 10 feet into gravel or refusal as determined by PDA and CAPWAP analysis	0 to -10
18-inch-diameter, steel pipe pile (closed end)	325	25		
16-inch-diameter, driven grout pile	250	20		
18-inch-diameter, driven grout pile	325	25		

1. Does not include downdrag loads.
2. Downdrag loads should be applied as a structural load.

A safety factor of 3 should be used for pile design, although this value can be reduced to 2 if PDA testing or a pile load testing program is implemented.

Piles will develop the majority of their capacity in the very dense gravel unit encountered in the borings. This gravel unit was encountered at depths between approximately 50 and 70 feet BGS in our borings, which we believe is generally representative of conditions across most of the site. All piles should be driven at least 10 feet into the gravel or to refusal in the gravel as determined by PDA and CAPWAP analysis, whichever is less. Depth of penetration of the foundations will vary depending on the depth and consistency of the gravel unit and could differ from the estimated tip elevations presented in Table 1.

6.1.3 Uplift Resistance

Uplift capacity of the piles will be mobilized through skin friction between the foundations and the surrounding soil. Table 2 shows our computed allowable uplift capacity for each deep foundation type.

Table 2. Ultimate Uplift Capacity

Deep Foundation Type	Ultimate Uplift Capacity[1] (tons)
12-inch-diameter, steel pipe pile (closed end)	50
18-inch-diameter, steel pipe pile (closed end)	80
16-inch-diameter, driven grout pile	70
18-inch-diameter, driven grout pile	80

1. A safety factor of 2 should be used to determine the allowable uplift capacity.

The computed uplift capacities assume the piles will penetrate at least 10 feet into the gravel or to refusal and that the piles are spaced at least 3 pile diameters on-center.

6.1.4 Lateral Resistance

Resistance to lateral loads can be developed by passive pressure on the face of pile caps, grade beams, tie beams, and other buried foundation elements. Sliding friction on the base of pile-supported foundation elements should be ignored. Adjacent floor slabs, pavement, or the upper 12-inch depth of adjacent, unpaved areas should not be considered when calculating passive resistance. Pile lateral resistance will depend on the specific pile type, size, material, reinforcing, and condition of the pile head. We can complete a lateral pile analysis once the pile type has been selected.

6.1.5 Other Considerations

If driven piles are used, the terminal blow counts will depend on the pile type and driving equipment. The structural integrity of the steel pipe pile or the mandrel should be evaluated to confirm that it will withstand the stresses induced by pile driving. GeoDesign should be consulted to select the appropriate hammer energy to develop the required capacity while avoiding excessive driving stresses. Terminal blow criteria should be based on CAPWAP analysis considering the pile type, required capacity, and the selected driving equipment. Our analysis should be verified in the field using a PDA.

The piles should be installed with suitable alignment tolerances. Vertical alignment should be within 3 percent of plumb or as determined by the structural engineer. Lateral alignment should be within tolerances determined by the structural engineer, considering the pile cap design. Settlement of piles supported on the dense gravel will be negligible beyond the elastic compression of the pile or shaft.

If buried obstructions are encountered during pile or shaft installation, the foundation installation equipment should be extracted and the obstruction removed. If the buried obstruction cannot be removed, the structural engineer should be consulted to select a new foundation location. Each pile should be carefully inspected for damage caused by impacting buried obstructions during driving.

To mitigate downdrag loads on the piles, we recommend that pile driving not commence until the surcharge program is complete. We also note the landfill debris might be corrosive to concrete and steel piles. Consequently, corrosion additives or protection may be required.

We recommend full-time observation of pile and drilled shaft installation to confirm that the foundations are installed in accordance with the recommendations in this report and with the project specifications.

6.2 FLOOR SLAB SUPPORT

The uncompacted pile cap material that is underlain by trash will not provide adequate floor slab support. We recommend that a structural floor slab be used that is supported on deep foundations. The structural engineer should determine if the floor slabs can span the distance

between the building deep foundations or if additional floor slab deep foundations are necessary. We recommend that a working pad be placed beneath the floor slabs.

6.3 SEISMIC DESIGN PARAMETERS

Seismic design will be performed in accordance with ASCE 7-16, which is prescribed by the 2019 SOSSC and 2018 IBC. A Site Class E designation can be used to compute design levels of ground shaking. Per ASCE 7-16 Section 11.4.8, a site response analysis is required for this project unless the structural engineer determines that exception 3 in the code applies, which is based on the period of the building and the method of analysis used by the structural engineer. If a site response analysis is needed, we will perform this additional analysis. If a site response analysis is not needed, the seismic design parameters presented in Table 3 from ASCE 7-16 may be used for design. These parameters were obtained from USGS seismic design maps (SEAOC/OSHPD, 2020).

Table 3. ASCE 7-16 Seismic Design Parameters

Parameter	Short Period (T_s = 0.2 second)	1 Second Period (T_1 = 1.0 second)
Spectral Acceleration (MCE)	S_s = 0.833 g	S_1 = 0.372 g
Site Class	E	
Site Coefficient	F_a = 1.300	F_v = 2.512
Spectral Acceleration Parameters	S_{MS} = 1.083 g	S_{M1} = 0.934 g
Design Spectral Acceleration Parameters	S_{DS} = 0.722 g	S_{D1} = 0.623 g
Spectral PGA	0.374 g	
Design Spectral PGA	0.249 g	
MCE_G PGA Adjusted for Site Class Effects[1]	PGA_M = 0.543 g	

1. From ASCE 7-16. Minimum PGA value to use when evaluating liquefaction and soil strength loss, as required by ASCE 7-16 Section 11.8.3.

6.4 SURCHARGE RECOMMENDATIONS

6.4.1 Surcharge Embankment Construction

The landfill trash and landfill cap material have a high potential for post-construction settlement, particularly if additional fill is placed over the existing landfill cap. We recommend that all buildings, receiving areas, pedestrian walkways between the shops, and utility corridors will be pile supported. All roadways and AC parking areas will be constructed on grade, and differential settlement of these areas will be repaired periodically during the life of the project. A final grading plan has not been established at this time. However, differential settlement on the order of several inches to a couple feet is possible over the design life of the development, depending on the height of fill required to achieve final grades and the composition of the trash beneath areas of development.

Based on the performance of the other facilities constructed over the landfill, it is our opinion that post-construction settlement of roadways and parking areas can be reduced significantly by pre-consolidating the landfill debris with a surcharge embankment. Based on our review of the available information generated during the surcharge at the neighboring facility and our conversations with contractors, we recommend the surcharge embankment height be constructed to 10 feet above finished grade.

All fill placed to achieve finished subgrade elevation should be placed and compacted as structural fill in accordance with the recommendations in the "Structural Fill" section. Surcharge material placed above finished building grades does not need to be compacted. We have assumed a total unit weight of 100 pcf for the uncompacted surcharge embankment material.

Figure 3 presents the estimated primary consolidation settlement for various fill heights. We anticipate that the majority of the settlement will occur within six weeks after the final fill elevations have been achieved. However, based on the variable nature of the landfill material, areas may require an extended surcharge period. The surcharge embankment should only be removed after settlement data shows that settlement is essentially complete. After the surcharge program is complete, secondary consolidation and settlement caused by decay of organic material is anticipated to continue over the life of the development.

6.4.2 Settlement Monitoring

Settlement should be monitored during and after fill placement using settlement plates installed in the proposed surcharge areas. Figure 4 shows a typical settlement plate detail. The settlement plates should be installed prior to site filling and the elevations surveyed prior to any fill placement. The monuments should be surveyed at least twice per week during fill construction and for at least one month after final fill elevations have been achieved, followed by a surveying frequency of once weekly. The settlement plates should be monitored using survey equipment with accuracy of 1/100th of a foot and referenced to a stationary datum established at least 500 feet from the edge of the surcharge area and in an area not receiving fill. In addition to recording the elevation of the settlement plates during each survey event, a complete record of the surcharge history requires reading and recording the fill height at each settlement plate. We recommend at least one settlement plate for every 20,000 square feet (plan area) of fill. We request that GeoDesign establish the number and location of the settlement plates based on review the final grading plans

For ease in handling, the casing and rod portions of the settlement plate are usually installed in 5-foot sections. As filling progresses, couplings are used to install additional sections. Continuity in the monitoring data is maintained by reading and recording the top of the measurement rod immediately prior to and following the addition of new sections. Care must be taken during fill construction to prevent damage to the rods.

6.4.3 Post-Construction Settlement

Although surcharging will reduce the amount of post-construction settlement, some settlement is anticipated over the life of the development. The magnitude of the post-construction settlement will depend on the following factors:

- The amount of cutting or filling required to achieve site grades relative to current site elevations
- The time elapsed since the landfill material and capping material was placed
- The thickness of the cap and landfill debris
- The composition of the trash

Post-construction settlement on the order of 4 to 12 inches is anticipated over a 30-year period. We understand that post-construction settlement of roadways and parking areas will be addressed by periodic re-grading of the paved surfaces. We also recommend greater surface slope on all paved parking areas to minimize the formation puddles and decrease the need for periodic maintenance. In addition, all receiving areas surrounding buildings should be pile supported and hinged slabs should be used to provide a safe transition for pedestrians between pile-supported and unsupported hard surfaces.

6.5 METHANE MITIGATION

The organic material in the landfill will generate methane gas as it decomposes. If not properly mitigated, the methane gas can accumulate and present a hazard. Typical methane gas mitigation measures include installing impermeable barriers to prevent gas migration, active or passive gas ventilation systems, gas detection systems, and performing routine monitoring. We recommend that an environmental consultant be hired to evaluate methane conditions at the site and design appropriate methane mitigation measures for each new building.

6.6 PAVEMENT RECOMMENDATIONS

We recommend areas that received pavement be surcharged as described in the "Surcharge Recommendations" section. The pavement subgrade should be prepared as described in the "Site Preparation," "Wet Weather Construction," and "Structural Fill" sections. These recommendations result in a subgrade that consists of silty or sandy material that is either scarified and compacted to structural fill specifications in cut areas or compacted as structural fill. Subgrade could also be cement amended as described in the "Cement-Amended Soil" section. We were not provided with specific traffic volumes and have made the following assumptions for roadways and standard- and heavy-duty pavement sections:

1. Standard-Duty Paving: 200 automobiles per day with a 20-year design life
2. Heavy-Duty Paving: 400 automobiles and 20 trucks per day, 20-year design life
3. Roadways: 600 automobiles and 40 trucks per day, 20-year design life

We conducted our analyses using AASHTO methods and the following parameters:

- CBR equal to 4
- Reliability of 85 percent
- Terminal serviceability of 2.0
- Structural coefficient of 0.42 for AC
- Structural coefficient of 0.10 for crushed base rock

If these assumptions are incorrect, GeoDesign should be contacted to revise the design pavement section thicknesses. Our recommended pavement design sections are presented in Table 4, which includes consideration of subgrade that is not cement amended and subgrade that is cement amended in the upper 12 inches.

Table 4. Pavement Design Recommendation Options

Parameter	Material	No Cement Amendment of Subgrade	Cement-Amended Subgrade (12 inches)
Roadway Pavement	AC[1]	4.5 inches	4.5 inches
	Base Rock[2]	8 inches	8 inches
	Sub-Base[3]	12 inches	0 inches
	Geogrid[4]	Yes	Yes
Heavy-Duty Parking Lot Pavement	AC[1]	3.5 inches	3.5 inches
	Base Rock[2]	6 inches	6 inches
	Sub-Base[3]	6 inches	0 inches
	Geogrid[4]	Yes	Yes
Standard-Duty Parking Lot Pavement	AC[1]	2.5 inches	2.5 inches
	Base Rock[2]	6 inches	6 inches
	Sub-Base[3]	6 inches	0 inches
	Geogrid[4]	Yes	Yes

1. AC thickness
2. Crushed base rock thickness
3. Crushed sub-base rock thickness
4. Tensar DX 1100 Geogrid recommended for pavement section

All thicknesses are intended to be the minimum acceptable values. The design of the recommended pavement section is based on the assumption that construction will be completed during an extended period of dry weather and that the subgrade has been improved in accordance with the recommendations in this report. Wet weather construction will require an increased thickness of aggregate base.

The crushed aggregate base should conform to OSSC 02630 (Base Aggregate), with the addition that the material contains no more than 5 percent by dry weight passing the U.S. Standard No. 200 sieve. Crushed sub-base should conform to OSSC 02630 (Base Aggregate). The geogrid should consist of Tensar DX1100 or approved equivalent. Aggregate base should be placed in one lift and compacted to not less than 95 percent of the maximum dry density, as determined by ASTM D1557. The AC should conform to OSSC 00745 (Asphalt Concrete Pavement – Statistical Acceptance) and should be compacted to 91 percent of the maximum specific gravity of the mix, or as required by the local jurisdiction.

6.7 RETAINING WALLS

6.7.1 Assumptions

These retaining wall recommendations apply to permanent above-grade retaining walls. Our retaining wall design recommendations are based on the following assumptions: (1) the walls consist of conventional, cantilevered retaining walls, (2) the walls are less than 10 feet in height, (3) drains are provided to prevent hydrostatic pressure from developing, and (4) the retained soil is level. Re-evaluation of our recommendations will be required if the retaining wall design criteria for the project varies from these assumptions.

We note that retaining walls will likely settle over time with the surrounding ground surface. This settlement should be accounted for in the retaining wall design. Concrete retaining walls could be supported on deep foundations, if necessary. Concrete retaining walls can also be constructed with additional batter. Other types of retaining walls or reinforced slopes that can better tolerate settlement can also be used on this project instead of concrete walls.

6.7.2 Wall Design Parameters

For unrestrained retaining walls, an active equivalent fluid pressure of 35 pcf should be used for design. Where retaining walls are restrained from rotation prior to being backfilled, an at-rest equivalent fluid pressure of 55 pcf should be used for design. A superimposed seismic lateral force should be calculated based on a dynamic force of $7H^2$ pounds per linear foot of wall (where H is the height of the wall in feet). The load should be applied as a distributed load with the centroid located at a distance of 0.6H above the base of the wall.

If surcharges (e.g., retained slopes, building foundations, vehicles, terraced walls, etc.) are located within a horizontal distance from the back of a wall equal to the height of the wall, additional pressures will need to be accounted for in the wall design. Figure 5 presents additional pressures resulting from some common loading scenarios. Our office should be contacted for additional pressures resulting from alternate loading scenarios. We recommend a vertical live load of 250 psf be applied at the surface of the retained soil where the wall retains roadways.

The base of the wall footing excavations should extend a minimum of 18 inches below the lowest adjacent grade. At locations where there is a slope in front of the retaining wall, we recommend a minimum 5-foot-wide, horizontal bench be placed between the wall and the top of the slope.

6.8 PERMANENT SLOPES

Permanent cut or fill slopes should not exceed a gradient of 2H:1V, unless specifically evaluated for stability. Upslope buildings, access roads, and hardscapes should be set back a minimum of 5 feet from the crest of such slopes. Slopes should be planted with appropriate vegetation to provide protection against erosion as soon as possible after grading. Surface water runoff should be collected and directed away from slopes to prevent water from running down the face of the slope.

6.9 DRAINAGE

6.9.1 Surface

The finished ground surface around the buildings should be sloped away from foundations at a minimum 2 percent gradient for a distance of at least 5 feet. Pavement surfaces and open space areas should be sloped such that surface water runoff is collected and routed to suitable discharge points. Runoff water should not be directed to the top of slopes.

6.9.2 Subsurface

In our opinion, it is not necessary to install footing drains for at-grade structures. However, we do recommend that perimeter footing drains be installed around buried or partially buried structures. We also recommend that roof downspouts or scuppers discharge to a solid pipe that carries the collected water to an appropriate stormwater system that is designed to prevent backflow.

6.9.3 Temporary

During grading the contractor should be made responsible for temporary drainage of surface water as necessary to prevent standing water and/or erosion at the working surface. The contractor should keep all footing excavations and building pads free of water during rough and finished grading of the building site.

7.0 CONSTRUCTION RECOMMENDATIONS

7.1 SITE PREPARATION

7.1.1 Stripping and Grubbing

Stripping and grubbing will be required to remove any tree and shrub roots that remain after cuts are performed. Root material should be removed from all building, pavement, and structural fill areas. The actual stripping and grubbing depth should be based on field observations at the time of construction. Stripping and grubbing should extend at least 5 feet beyond the limits of proposed building and pavement areas. Excavated roots should be transported off site for disposal or used as fill in landscaped areas.

7.1.2 Demolition

Demolition will be necessary to remove the existing buildings and pavement. We recommend that all abandoned footings, walls, slabs, utilities, basements, and other foundation elements beneath new structures be completely removed. Any monitoring wells or underground storage tanks should be abandoned in accordance with state and local regulations prior to site development. Excavations resulting from the demolition of existing improvements should be backfilled with compacted structural fill as recommended in this report. The bottom of the excavations should expose firm subgrade. The sides of the temporary excavations should be cut into firm material and sloped no steeper than 1½H:1V.

7.1.3 Subgrade Evaluation

The near-surface silt and sand that are part of the landfill cap were placed with little to no compactive effort. We recommend that the upper 12 inches of the cap soil intended for final subgrade be improved after any recommended surcharge program has been implemented.

Subgrade improvement should be completed in areas that support pavement and slab-on-grade structures. The cap soil can be improved with one or a combination of the following methods:

- Compact the soft material in place in accordance with the recommendations provided in the "Structural Fill" section. The moisture content of the soil was higher than optimum at the time of our explorations. Moisture conditioning (e.g., tilling and drying) will be required to remove the excess moisture from the soil. Tilling can be accomplished with a variety of equipment but is generally more effective with an agricultural disc.
- Amend the soil with cement as discussed in the "Cement-Amended Soil" section. If this option is selected, GeoDesign can provide specific recommendations for cement amendment.

7.1.4 Subgrade Evaluation

A member of our geotechnical staff should observe all footing, floor slab, pavement, and sidewalk subgrade after stripping, excavation, scarifying and compaction, and placement of structural fill have been completed to confirm that there are no areas of unsuitable or unstable soil. The subgrade should be evaluated using moisture-density testing, a hand probe, or proof rolling with a fully loaded dump truck (or similar heavy, rubber tire construction equipment). Soft, loose, or unsuitable soil found at the subgrade level should be over-excavated and replaced with structural fill.

7.2 EXCAVATION

7.2.1 General

Excavations will be required for construction of new foundations, utilities, pavement, and other improvements. Conventional earthmoving equipment in proper working condition should be capable of making the necessary excavations. Temporary excavation sidewalls should stand vertical to a depth of approximately 4 feet, provided groundwater seepage does not occur. Excavations deeper than 4 feet will require shoring or should be sloped. Sloped excavations may be used to vertical depths of 10 feet BGS and should have side slopes no steeper than 1½H:1V, provided groundwater seepage does not occur. We recommend a minimum horizontal distance of 5 feet from the edge of existing improvements to the top of any temporary slope. All cut slopes should be protected from erosion by covering them during wet weather. If seepage, sloughing, or instability is observed, the slope should be flattened or shored. Shoring will be required where slopes are not possible. The contractor should be responsible for selecting the appropriate shoring system. If excavations extend into the trash layer, we anticipate that any excavated trash will need to be transported off site to an approved disposal facility.

Excavations should not be allowed to undermine adjacent improvements. If existing roads or structures are located near a proposed excavation, unsupported excavations can be maintained outside of a 1H:1V downward projection that starts 5 feet from the base of the existing elements. Excavations that must be inside of this zone should be supported by temporary or permanent shoring designed for moment resistance for the full height of the excavation, including kick-out for the full buried depth of the retaining system.

While we have described certain approaches to performing excavations, it is the contractor's responsibility to select the excavation and dewatering methods, monitor the excavations for

safety, and provide any shoring required to protect personnel and adjacent improvements. All excavations should be in accordance with applicable OSHA and state regulations.

7.2.2 Excavation Dewatering

Excavations will be above the groundwater level. However, some perched water could still seep into the site excavations, especially after periods of heavy rain. We anticipate that dewatering methods consisting of pumping water from excavation sumps will generally be adequate. If possible, we recommend that construction be scheduled for the dry season. Water generated during dewatering operations should be treated, if necessary, and pumped to a suitable disposal point.

Where groundwater seepage occurs in excavations, we recommend placing at least 1 foot of stabilization material at the base of the excavations. The stabilization material should consist of 4- or 6-inch-minus pit- or quarry-run rock, crushed rock, or crushed gravel and sand. The material should have a maximum particle size of 6 inches, should have less than 5 percent by dry weight passing the U.S. Standard No. 4 sieve, and should have at least two mechanically fractured faces. The material should be free of organic and other deleterious materials.

We note that these recommendations are for guidance only. Dewatering of excavations is the sole responsibility of the contractor, as the contractor is in the best position to select the appropriate system based on their means and methods.

7.3 STRUCTURAL FILL

Structural fill includes fill placed beneath foundations, floor slabs, hardscapes, and other structures. Structural fill should generally consist of particles no larger than 3 inches in diameter and should be free of organic and other deleterious materials. Recommendations for suitable fill material are provided in the following sections.

7.3.1 On-Site Soil

The on-site sand will generally be suitable for use as structural fill. On-site sand should be placed in lifts with a maximum uncompacted thickness of 12 inches and compacted to not less than 95 percent of the maximum dry density, as determined by ASTM D1557.

The on-site fine-grained soil will be suitable for use as structural fill only if it can be moisture conditioned. Based on our experience, this soil will be sensitive to small changes in moisture content and may be difficult, if not impossible, to compact adequately during wet weather or when the moisture content is more than a few percentage points above optimum. The soil may require extensive drying before it can be used as structural fill. The on-site fine-grained soil should be placed in lifts with a maximum uncompacted thickness of 8 inches and compacted to not less than 92 percent of the material's maximum dry density, as determined by ASTM D1557. We recommend using imported granular material for structural fill if the moisture content of the on-site soil cannot be reduced.

7.3.2 Imported Granular Material

Imported granular material should be pit- or quarry-run rock, crushed rock, or crushed gravel and sand that is fairly well graded between coarse and fine and has less than 5 percent by dry

weight passing the U.S. Standard No. 200 sieve. All granular material must be durable such that there is no degradation of the material during and after installation as structural fill. The material should be placed in lifts with a maximum uncompacted thickness of 12 inches and compacted to not less than 95 percent of the maximum dry density, as determined by ASTM D1557. During the wet season or when wet subgrade conditions exist, the initial lift should have a maximum thickness of 18 inches and should be compacted by rolling with a smooth-drum, non-vibratory roller.

7.3.3 Recycled Concrete

Recycled concrete can be used for structural fill, provided the concrete is broken to a maximum particle size of 3 inches. This material must be durable such that there is no degradation of the material during and after installation as structural fill. Recycled concrete can be used as trench backfill if it meets the size requirements for that application and the requirements for imported granular material. The material should be placed in lifts with a maximum uncompacted thickness of 12 inches and compacted to not less than 95 percent of the maximum dry density, as determined by ASTM D1557.

7.3.4 Trench Backfill Material

Oregon City trench backfill requirements should be followed for any public utilities that are installed. Our trench backfill recommendations for private utilities are provided below.

Trench backfill for the utility pipe base and pipe zone should consist of durable, well-graded, granular material that has a maximum particle size of 1 inch, has less than 5 percent by dry weight passing the U.S. Standard No. 200 sieve, and contains no organic or other deleterious materials. Backfill above the pipe zone should meet the requirements above, except that the maximum particle size may be increased to 1½ inches.

Backfill for the pipe base and within the pipe zone should be placed in maximum 12-inch-thick lifts and compacted to not less than 90 percent of the maximum dry density, as determined by ASTM D1557, or as recommended by the pipe manufacturer. Backfill above the pipe zone should be placed in maximum 12-inch-thick lifts and compacted to not less than 92 percent of the maximum dry density, as determined by ASTM D1557. Trench backfill located within 2 feet of finish subgrade elevation should be placed in maximum 12-inch-thick lifts and compacted to not less than 95 percent of the maximum dry density, as determined by ASTM D1557. Outside of structural areas, trench backfill material should be compacted to at least 90 percent of the maximum dry density, as determined by ASTM D1557.

7.3.5 Stabilization Material

Stabilization material used in staging or haul road areas or in trenches should consist of 4- or 6-inch-minus pit- or quarry-run rock, crushed rock, or crushed gravel and sand. The material should have a maximum particle size of 6 inches, should have less than 5 percent by dry weight passing the U.S. Standard No. 4 sieve, and should have at least two mechanically fractured faces. The material should be free of organic and other deleterious materials. Stabilization material should be placed in lifts between 12 and 24 inches thick and compacted to a well-keyed, firm condition.

7.3.6 Cement-Amended Soil

As an alternative to the use of imported granular material for wet weather structural fill and/or to provide subgrade stabilization for wet weather earthwork, an experienced contractor can amend the on-site soil with portland cement to obtain suitable support properties. Successful use of soil amendment depends on the use of correct mixing techniques, soil moisture content, and amendment quantities. Soil amending should be conducted in accordance with the specifications provided in OSSC 00344 (Treated Subgrade). The amount of cement used during amendment should be based on an assumed soil dry unit weight of 100 pcf.

Specific recommendations based on exposed site conditions for soil amending can be provided if necessary. However, for preliminary design purposes, we recommend a target strength for cement-amended subgrade for building and pavement subbase (below aggregate base) soil of 80 to 100 psi. The amount of cement used to achieve this target generally varies with moisture content and soil type. It is difficult to predict field performance of soil to cement amendment due to variability in soil response, and we recommend laboratory testing to confirm expectations. For building and pavement subbase, we recommend assuming a minimum cement ratio of 6 percent (by dry weight). If the soil moistures are in excess of 30 percent, a cement ratio of 7 percent may be needed. The amount of cement added to the soil may need to be adjusted based on field observations and performance.

A minimum curing of four days is required between amendment and construction traffic access. Consecutive lifts of fill may be amended immediately after the previous lift has been amended and compacted (e.g., the four-day wait period does not apply). Construction traffic should not be allowed on unprotected, cement-amended subgrade. To protect the cement-amended surfaces from abrasion or damage, the finished surface should be covered with 4 to 6 inches of imported granular material.

Amendment depths for building/pavement, haul roads, and staging areas are typically on the order of 12, 16, and 12 inches, respectively. The actual thickness of the amended material and imported granular material for haul roads and staging areas will depend on the anticipated traffic, as well as the contractor's means and methods and, accordingly, should be the contractor's responsibility.

Portland cement-amended soil is hard and has low permeability. This soil does not drain well and it is not suitable for planting. Future planted areas should not be cement amended, if practical, or accommodations should be made for drainage and planting. Moreover, cement amending soil within building areas must be done carefully to avoid trapping water under floor slabs. We should be contacted if this approach is considered. Cement amendment should not be used if runoff during construction cannot be directed away from adjacent wetlands. It is not possible to amend soil during heavy or continuous rainfall. Cement amending should not be performed if the temperature is less than 40 degrees.

7.4 EROSION CONTROL

The on-site soil is susceptible to erosion. Consequently, we recommend that slopes be covered with an appropriate erosion control product if construction occurs during periods of wet weather. We recommend that all slope surfaces be planted as soon as practical to minimize erosion.

Surface water runoff should be collected and directed away from slopes to prevent water from running down the slope face. Erosion control measures such as straw bales, sediment fences, and temporary detention and settling basins should be used in accordance with local and state ordinances.

7.5 WET WEATHER CONSTRUCTION

Trafficability of soil at the ground surface may be difficult during extended wet periods or when the moisture content of the surface soil is more than a few percentage points above optimum. If not carefully executed, earthwork activities can create extensive soft areas, resulting in significant repair costs.

When the subgrade is wet of optimum, site preparation may need to be accomplished using track-mounted equipment loading into trucks supported on granular haul roads or working blankets. Based on our experience, at least 12 inches of granular material are typically required for light staging areas and at least 18 inches of granular material for haul roads subject to repeated equipment traffic. We typically recommend that imported granular material for haul roads and working blankets consist of durable crushed rock that is well graded and has less than 8 percent by dry weight passing the U.S. Standard No. 200 sieve. Where silt or clay is exposed at the ground surface, the performance of haul roads can typically be improved by placing a geotextile on the subgrade before placing the granular material. The granular material should be placed in a single lift and the surface compacted until well keyed. Although we have presented typical recommendations for haul road and working blankets, the actual thickness and material should be determined by the contractor based on their sequencing of the project and the type and frequency of construction equipment. The base rock thickness for building areas is intended to support post-construction design loads and will not support construction traffic when the subgrade soil is wet. If construction is planned for periods when the subgrade soil is wet, an increased thickness of base rock will be required.

8.0 OBSERVATION OF CONSTRUCTION

Satisfactory foundation and earthwork performance depends to a large degree on the quality of construction. Sufficient observation of the contractor's activities is a key part of determining that the work is completed in accordance with the construction drawings and specifications. Subsurface conditions observed during construction should be compared with those encountered during the subsurface exploration. Recognition of changed conditions often requires experience; therefore, qualified personnel should visit the site with sufficient frequency to detect if subsurface conditions change significantly from those anticipated.

We recommend that GeoDesign be retained to observe earthwork activities. We anticipate this will consist of evaluating foundation, floor slab, and pavement subgrade; observing the placement of structural fill and repair of soft subgrade areas, deep foundation installation, cement amending (if applicable), retaining wall construction, and the surcharge program; and performing laboratory compaction and field moisture-density tests.

9.0 LIMITATIONS

We have prepared this preliminary report for use by Summit Development Group and their design and construction teams for the proposed project. The data and report can be used for bidding or estimating purposes, but our report, conclusions, and interpretations should not be construed as warranty of the subsurface conditions and are not applicable to other sites.

Soil explorations indicate soil conditions only at specific locations and only to the depths penetrated. They do not necessarily reflect soil strata or water level variations that may exist between exploration locations. If subsurface conditions differing from those described are noted during the course of excavation and construction, re-evaluation will be necessary.

The site development plans and design details were preliminary at the time this report was prepared. When the design has been finalized and if there are changes in the site grades or location, configuration, design loads, or type of construction, the conclusions and recommendations presented may not be applicable. If design changes are made, we request that we be retained to review our conclusions and recommendations and to provide a written verification or modification.

The scope of our services does not include services related to construction safety precautions, and our recommendations are not intended to direct the contractor's methods, techniques, sequences, or procedures, except as specifically described in this report for consideration in design.

Within the limitations of scope, schedule, and budget, our services have been executed in accordance with generally accepted practices in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

♦ ♦ ♦

We appreciate the opportunity to be of continued service to you. Please call if you have questions concerning this report or if we can provide additional services.

Sincerely,

GeoDesign, Inc.

Ryan T. Lawrence, P.E.

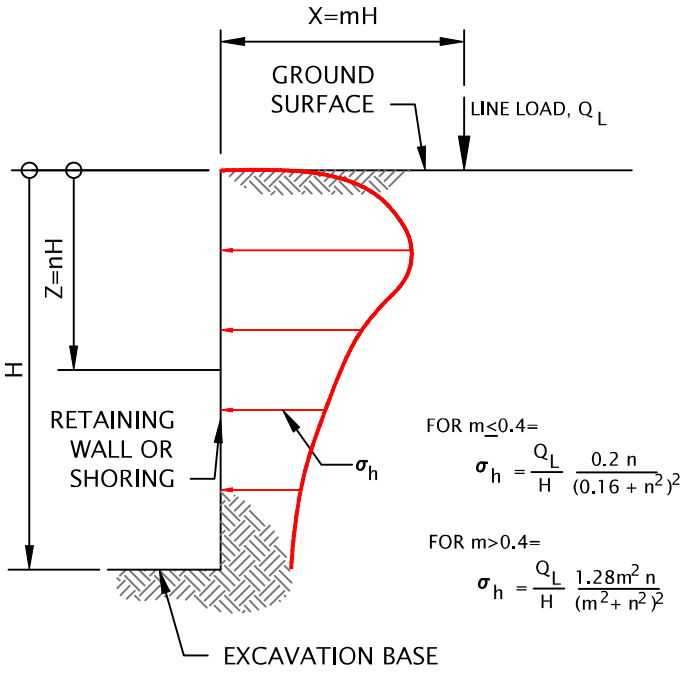
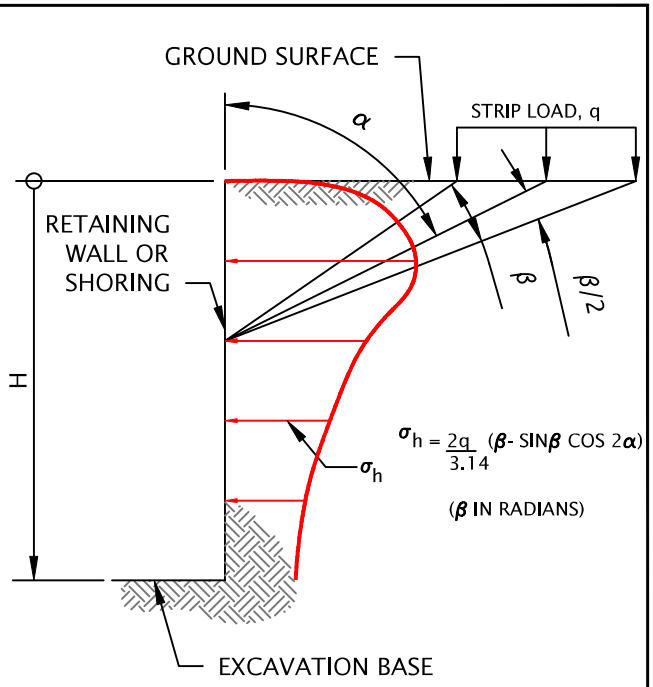
NOT TO SCALE



NOTES:



1. INSTALL MARKERS ON FIRM GROUND OR ON SAND OR GRAVEL PADS IF NEEDED FOR STABILITY. TAKE INITIAL READING ON TOP OF ROD AND AT ADJACENT GROUND LEVEL PRIOR TO PLACING ANY FILL.
2. FOR EASE IN HANDLING, ROD AND CASING ARE USUALLY INSTALLED IN 5-FOOT SECTIONS. AS FILL PROGRESSES, COUPLINGS ARE USED TO INSTALL ADDITIONAL LENGTHS. CONTINUITY IS MAINTAINED BY READING THE TOP OF THE MEASUREMENT ROD, THEN IMMEDIATELY ADDING THE NEW SECTION AND READING THE TOP OF THE ADDED ROD. BOTH READINGS ARE RECORDED.
3. RECORD THE ELEVATION OF THE TOP OF THE MEASUREMENT ROD IN EACH MARKER AT THE RECOMMENDED TIME INTERVALS. EACH TIME, NOTE THE ELEVATION OF THE ADJACENT FILL SURFACE.
4. READ THE MARKER TO THE NEAREST 0.01 FOOT, OR 0.005 FOOT IF POSSIBLE. NOTE THE FILL ELEVATION TO THE NEAREST 0.1 FOOT.
5. THE ELEVATIONS SHOULD BE REFERENCED TO A TEMPORARY BENCHMARK LOCATED ON STABLE GROUND AT LEAST 500 FEET FROM THE EMBANKMENT.

APPENDIX

APPENDIX

FIELD EXPLORATIONS

GENERAL

We conducted a subsurface exploration program that consisted of drilling three borings (B-1 through B-3) at the approximate location shown on Figure 2. The borings were drilled to depths of up to 71.5 feet BGS using mud rotary drilling methods. Drilling services were performed by Western States Soil Conservation, Inc. of Hubbard, Oregon, on February 10 through 12, 2020. The explorations were observed and logged by a member of our geotechnical staff. We collected representative samples of the various soil encountered in the exploration for visual classification and laboratory testing. The exploration logs are presented in this appendix.

The exploration location was marked in the field relative to visual site features. The exploration location should be considered accurate only to the degree implied by the methods used. The exploration elevation was estimated using Google Earth.

SOIL SAMPLING

We collected soil samples from the borings using SPTs that were performed in general conformance with ASTM D1586. The sampler was driven with a 140-pound automatic trip hammer free-falling 30 inches. The number of blows required to drive the sampler 12 inches, or as otherwise indicated, into the soil is shown adjacent to the sample symbols on the exploration logs. Disturbed samples were collected from the split barrel for subsequent classification and index testing. We also occasionally used a larger 3-inch-diameter sampler to collect additional sample recovery. Sampling methods and intervals are shown on the exploration logs.

The average efficiency of the automatic SPT hammer used by Western States Soil Conservation, Inc. was 85.8 percent. The results of the hammer calibration testing are presented at the end of this appendix.

SOIL CLASSIFICATION

The soil samples were classified in accordance with the "Exploration Key" (Table A-1) and "Soil Classification System" (Table A-2), which are presented in this appendix. The exploration logs indicate the depths at which the soils or their characteristics change, although the change could be gradual. A horizontal line between soil types indicates an observed (visual or digging action) change. If the change occurred between sample locations and was not observed or obvious, the depth was interpreted and the change is indicated using a dashed line. Classifications are shown on the exploration logs.

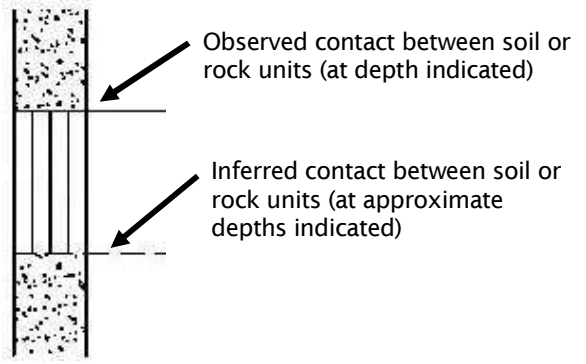
LABORATORY TESTING

We visually examined soil samples collected from the explorations to confirm field classifications. We also performed the following laboratory testing.

MOISTURE CONTENT

We determined the natural moisture content of select soil samples in general accordance with ASTM D2216. The natural moisture content is the ratio of the weight of the water to soil in a test sample and is expressed as a percentage. The test results are presented in this appendix.

ATTERBERG LIMITS TEST



We determined the Atterberg limits of select soil samples in general accordance with ASTM D4318. Atterberg limits include the liquid limit, plastic limit, and the plasticity index of soil. These index properties are used to classify soil and for correlation with other engineering properties of soil. The test results are presented in this appendix.

PARTICLE-SIZE ANALYSIS

We completed particle-size analysis on select soil samples in general accordance with ASTM D1140. The percent fines is the ratio of the dry weight of the material passing the U.S. Standard No. 200 sieve to the dry weight of the overall sample. The test results are presented in this appendix.

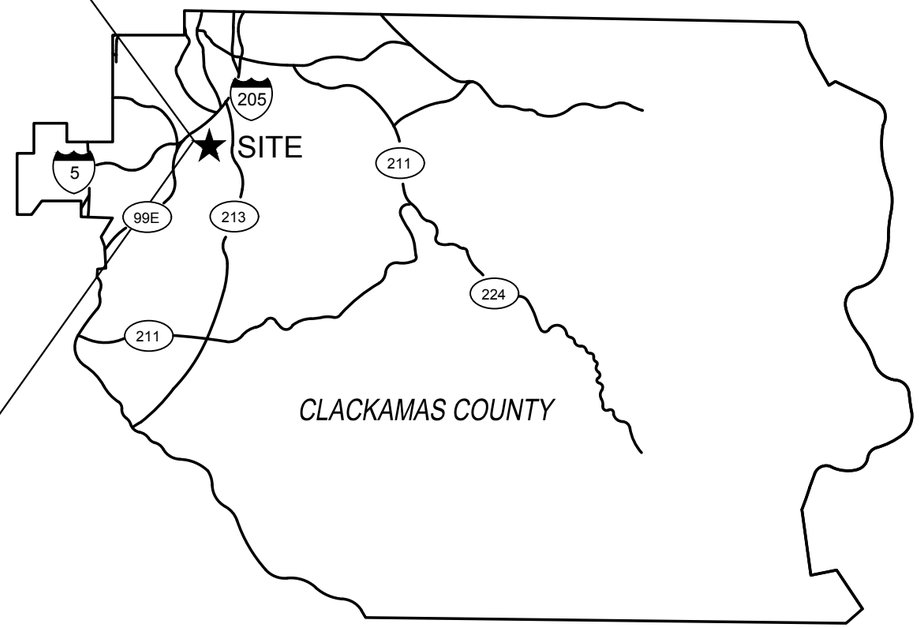
MEMORANDUM

Date: March 23, 2021 Project #: 24824.0

To: John Replinger, Replinger & Associates, LLC
Oregon City Planning Dept.
695 Warner Parrott Road
Oregon City, OR 97045

From: Brian J. Dunn, PE, Phill Worth, and Ali Razmpa, PE
Project: The North End Master Plan (PA 20-11)
Subject: **Transportation Impact Analysis Report**

INTRODUCTION



Summit Development Group is proposing an urban mixed-use development on approximately 62 acres of property located at 1105 Abernethy Road in Oregon City. Figures 1 and 2 display site vicinity maps showing the location of the proposed master plan site, which is bound by Abernethy Road to the south, Redland Road and OR 213 to the east, a Home Depot store to the northeast, and Washington Street to the northwest.

The proposed master plan concept, referred to as The North End (or master plan), is illustrated in Figure 3. As shown, the master plan incorporates a number of land uses including residential and various retail/commercial spaces. The concept plan is also divided into four distinct sub-areas (e.g., North, East, Central, and South Districts) to illustrate the different uses and functions that will occur within each district, and to delineate possible boundaries for individual phases of development. Full occupancy of the master plan uses is estimated to occur in 2025.

In terms of access, site traffic will rely primarily on the construction of a new collector-level street through the site. The street will extend from the current street terminus just west of the Home Depot store, proceed in a southwest direction before turning to the southeast to intersect with Abernethy Road in the general vicinity of an access to a golf range that exists on the site today.

Four other external connections are also envisioned as part of an interconnected network of streets. Three of these connections will occur along Washington Street, with one positioned in the northwest corner of the site and functioning as a private street connection, and two others which will function as private driveway connections into a structured parking facility that serves land uses in the North District. The fourth external access will be along Abernethy Road in southwest corner of the site.

KITTELSON & ASSOCIATES

As stated previously, a golf driving range exists on the subject property. This driving range will be removed once development occurs. Also, established land uses immediately adjacent to the master plan site, including the Home Depot store to the northeast and the Oregon Trail Interpretive Center to the southwest, are not part of this application and will remain unchanged.

STUDY METHODOLOGY

This study determines the transportation-related impacts associated with The North End master plan and was prepared in accordance with the City of Oregon City (City) *Guidelines for Transportation Impact Analyses* (TIA Guidelines – Reference 1). The study intersections and scope of this report were based on the TIA Guidelines and direction provided by City and Oregon Department of Transportation (ODOT) staff. The key assumptions and methodologies associated with this study were documented in a scoping memorandum prepared by Kittelson & Associates, Inc. (Kittelson) in January 2021. *Appendix "A" includes the scoping memorandum that was reviewed and approved by City staff.*

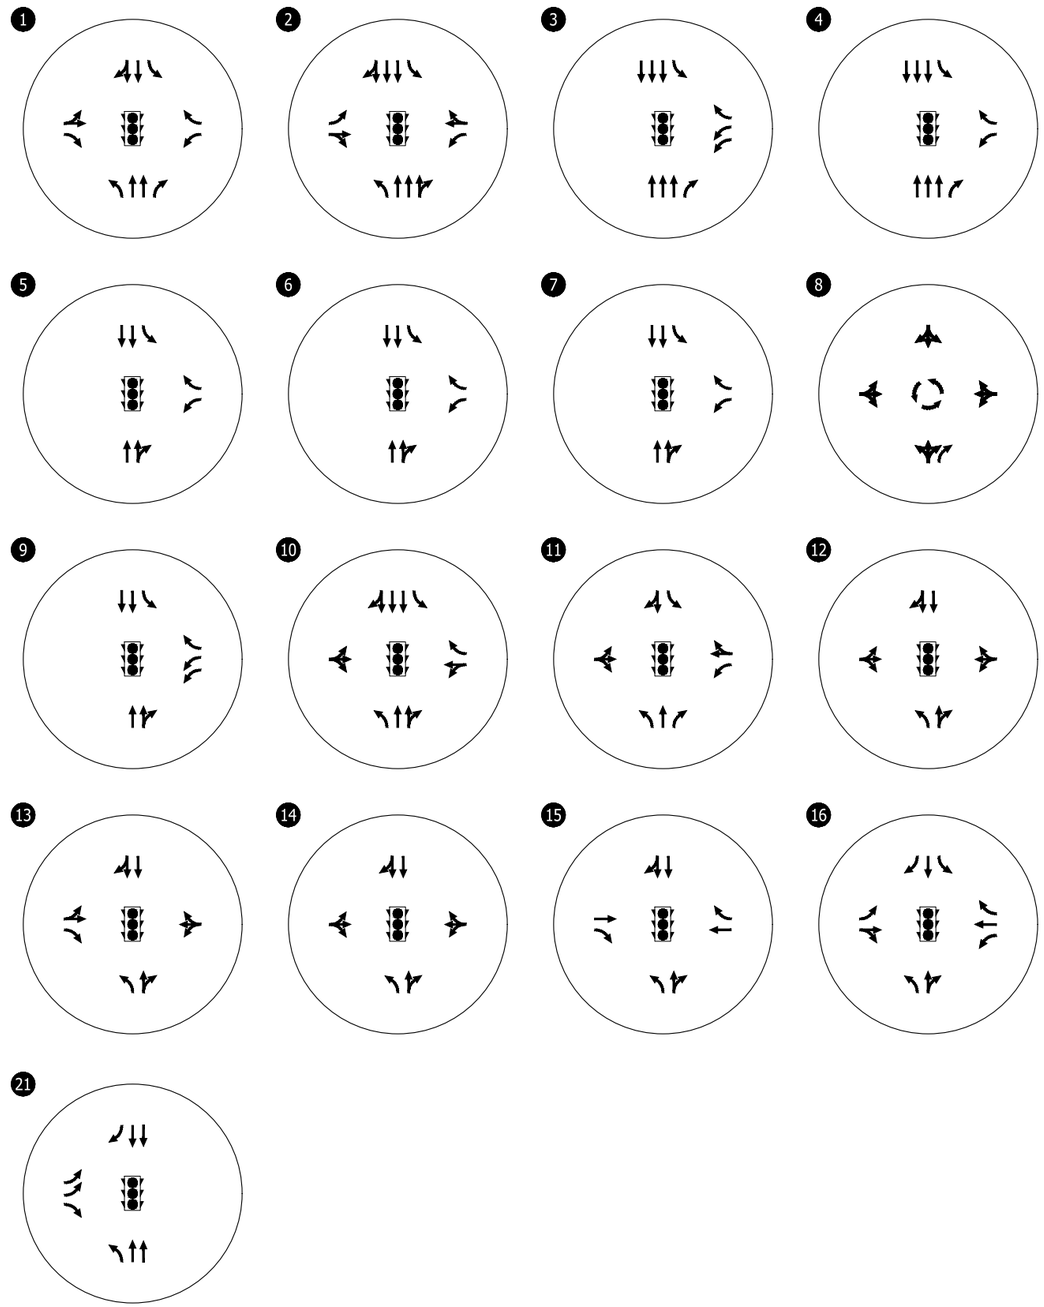
STUDY INTERSECTIONS

Per the City of Oregon City TIA Guidelines, the study area for the TIA should be based on the forecast trip generation of the development combined with engineering judgment and an understanding of existing and future land use and traffic conditions in the vicinity of the site. The City TIA guidelines identify the following considerations to form the basis for establishing the study area:

- All site access points and intersections adjacent to the site, including driveways serving parcels on the opposite side of the street;
- Roads through the site;
- Any intersection of two streets having a classification of arterial or collector, where site traffic will exceed 20 peak hour trips; and,
- Intersections where signal progression analysis is needed.

Based on the guidance above and per the outcome of the TIA scoping discussions, City staff support analysis of the following 25 existing and 5 proposed new intersections in the TIA report:

1. OR 99E / River Rd.-Arlington St.
2. OR 99E / Dunes Dr.
3. OR 99E / I-205 SB Ramp
4. OR 99 E / I-205 NB Ramp
5. OR 99E / 14th St.
6. OR 99E / 12th St.
7. OR 99E / 10th St.
8. Washington St. / Clackamas River Dr.
9. Washington St. / Prairie Schooner Wy.
10. Washington St. / Home Depot-Site Access A



11. Washington St. / Abernethy Rd.
12. Washington St. / 15th St.
13. Washington St. / 14th St.
14. Washington St. / 12th St.
15. Washington St. / 7th St.
16. Redland Rd./ Abernethy Rd.-Holcomb Blvd.
17. Redland Rd. / Anchor Wy.
18. Redland Rd. / Holly Ln.
19. OR 213 / I-205 SB Loop Off-Ramp
20. OR 213 / Clackamas River Dr.
21. OR 213 / Redland Rd.
22. OR 213 / Beavercreek Rd.
23. OR 213 / Molalla Ave.
24. Beavercreek Rd. / Molalla Ave.
25. Beavercreek Rd. / Maplelane Rd.
26. Washington St. / Site Access D (proposed)
27. Abernethy Rd. / Site Access E (proposed)
28. Abernethy Rd. / Site Access F (proposed)
29. Washington St. / Site Access B (proposed)
30. Washington St. / Site Access C (proposed)

The existing lane configurations and traffic control devices present at the 25 existing study intersections above are also shown in Figures 4 and 5. As shown, 21 of the 25 intersections are signalized. As such, existing signal timing plans were obtained from Clackamas County, City, and/or ODOT and incorporated into the operational analyses for these intersections within the TIA.

TRAFFIC ANALYSIS PERIODS

All intersection operations analyses were performed over three peak hour analysis periods. These reflect the peak hours of weekday morning (7:00 AM - 9:00 AM), weekday afternoon (4:00 PM - 6:00 PM), and Saturday midday (11:15 AM - 1:15 PM) conditions. The need to analyze all three time periods stems from our scoping discussions with City and ODOT staff. In these discussions, preliminary site trip generation estimates revealed that the master plan would generate sufficient traffic to warrant analysis of all three time periods. The systemwide peak hour has been analyzed for each time period: the period when traffic volumes at all 25 existing study intersections collectively reach their highest levels in terms of total entering vehicles. Based on road tube count data collected in December 2020, the systemwide weekday morning peak hour occurs from 7:25 AM to 8:25 AM, with the afternoon peak hour occurring from 4:00 PM to 5:00 PM, and the Saturday midday peak hour occurring from 12:15 PM to 1:15 PM.

ANALYSIS SCENARIOS

This report evaluates the following analysis scenarios:

- Existing land use and transportation system conditions, including intersection volume-to-capacity (v/c) ratio, control delay, and level-of-service (LOS) during the weekday AM and PM peak hours, as well as the Saturday midday peak hour.
- Year 2025 background conditions (without the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.
- Year 2025 total traffic conditions (with the master plan), including intersection v/c ratio, control delay, level-of-service and 95th percentile queues during all three peak hour analysis periods.

PERFORMANCE MEASURES & OPERATING STANDARDS

All analyses described in this report were performed in accordance with the procedures stated in the *Highway Capacity Manual* (HCM – Reference 2) using Vistro 2020 software. HCM 6th Edition methodologies were used to evaluate operations and vehicle queue conditions for the peak 15-minute flow rates that occur during the weekday AM and PM peak hours and the Saturday midday peak hour.

Oregon City Mobility Standards

Section 16.12.033 of the Oregon City Municipal Code (OCMC) identifies the City's mobility standards for signalized and unsignalized intersections under City jurisdiction. Per the OCMC, the following mobility standards apply to the study area intersections:

For intersections within the regional center, the following mobility standards apply:

1. *During the first hour, a maximum v/c ratio of 1.10 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for minor street approaches.*
2. *During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.*

For intersections outside the regional center but designated on the arterial and throughway network, as defined in the regional transportation plan, the following mobility standards apply:

1. *During the first hour, a maximum v/c ratio of 0.99 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized*

intersections, this standard applies to movements on the major street. There is no performance standard for minor street approaches.

2. *During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.*

For the intersection of OR 213 and Beavercreek Road, the following mobility standards apply:

1. *During the first, second and third hours, a maximum v/c ratio of 1.00 shall be maintained. Calculation of the maximum v/c ratio will be based on an average annual weekday peak hour.*

Until the city adopts new performance measures that identify alternative mobility targets, the city shall exempt proposed development that is permitted, either conditionally, outright, or through detailed development master plan approval, from compliance with the above-referenced mobility standards for the following state-owned facilities:

1. *I-205/OR 99E Interchange.*

It should also be emphasized that the Oregon City *2013 Transportation System Plan* (TSP, Reference 3) states that for the purposes of land development proposals, the I-205/OR 213 interchange intersections shall be exempt from the state mobility targets until further solutions or alternative mobility targets are explored for the intersections.

ODOT Mobility Targets

ODOT operates and maintains all study intersections along OR 99E and OR 213 in the site vicinity. Per Table 7 of Highway Mobility Policy 1F in the Oregon Highway Plan (OHP, Reference 4), ODOT enforces varying mobility targets along OR 99E and OR 213. For intersections located along facilities designated either as a "*Corridor*" or listed as a "*Principal Arterial Route*", ODOT enforces an intersection V/C ratio no greater than 0.99 during the first and second highest peak hours. For facilities located on or within a "*Regional Center*" boundary, ODOT enforces an intersection V/C ratio no greater than 1.10 during the first peak hour and 0.99 during the second highest peak hour. There are two exceptions to the ODOT mobility standards listed in Table 7 of the OHP. As stated previously, by city code, the OR 99E/I-205 ramp terminal intersections are exempt from OHP mobility targets. Also stated previously, by city code, and as specified in an adopted amendment to the OHP in 2018, the mobility target for the OR 213/Beavercreek Road intersection is now a maximum v/c ratio of 1.00 for the first, second, and third peak hour periods.

For clarity, Table 1 summarizes the applicable mobility standards for all study intersections, based on jurisdictional ownership, area location relative to Metro's 2040 Growth Concept map, and facility designation.

Table 1: Applicable Mobility Standards for All Study Intersections

Study Intersection		Jurisdiction	Area Location/ Facility Designation	Operating Requirement
1	OR 99E / River Rd.-Arlington St.	ODOT	Corridor	0.99 v/c 1st hour, then 0.99 v/c 2nd hour
2	OR 99E / Dunes Dr.	ODOT	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
3	OR 99E / I-205 SB Ramp	ODOT	Regional Center	Exempt from mobility standards by City municipal code*
4	OR 99E / I-205 NB Ramp	ODOT	Regional Center	Exempt from mobility standards by City municipal code*
5	OR 99E / 14th St.	ODOT	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
6	OR 99E / 12th St.	ODOT	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
7	OR 99E / 10th St.	ODOT	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
8	Washington St. / Clackamas River Dr.	City	Outside Regional Center, but on Arterial and Throughway Network	0.99 v/c 1st hour, then 0.99 v/c 2nd hour
9	Washington St. / Prairie Schooner Wy.	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
10	Washington St./ Home Depot-Site Access A	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
11	Washington St. / Abernethy Rd.	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
12	Washington St. / 15th St.	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
13	Washington St. / 14th St.	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
14	Washington St. / 12th St.	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour

27	Washington St. / Site Access C (proposed)	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
28	Washington St. / Site Access D (proposed)	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
29	Abernethy Rd / Site Access E (proposed)	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour
30	Abernethy Rd / Site Access F (proposed)	City	Regional Center	1.10 v/c 1st hour, then 0.99 v/c 2nd hour

* OR 99E/I-205 ramp terminal intersections are exempt from meeting state mobility targets, as per Oregon City Municipal Code Section 16.12.033.
** OR 213/I-205 SB ramp terminal intersection is exempt from meeting state mobility targets, as per the 2013 Oregon City TSP (see page 38).
*** Per a 2018 amendment to the Oregon Highway Plan (OHP).

EXISTING CONDITIONS

The existing conditions analysis identifies the site conditions and the current physical and operational characteristics of the roadways within the study area. These conditions will be compared with future conditions later in this report.

Kittelson staff visited and inventoried the proposed development site and surrounding study area in December 2020. At that time, Kittelson collected information regarding site conditions, adjacent land uses, and transportation facilities in the study area; however, due to executive order actions put in place by the Oregon State Governor to control the transmission of COVID-19, traffic volumes were not representative of normal conditions when the field visit was performed.

Site Conditions and Adjacent Land Uses

The project site is located within city limits and is zoned Mixed Use Downtown (MUD). At 62 acres in size, the property is bound by Washington Street to the northwest, a Home Depot store to the northeast, OR 213 and Redland Road to the east, Abernethy Road to the south, and an established group of small industrial businesses and the Oregon Trail Interpretive Center to the southwest. As a former landfill site, most of the site property is vacant. However, there is a small golf driving range business (Trails End Golf) that has direct access to Abernethy Road. Also, Clackamas County utilizes a portion of the property for vehicle parking and materials storage.

Land uses immediately adjacent to the site along Washington Street include the Home Depot, the Metro South Waste Transfer Station, a series of small industrial, retail power equipment, and landscaping materials businesses, the Oregon City Amtrak station, and the Oregon Trail Interpretive Center. Along Abernethy Road are a series of small industrial businesses and the Clackamas County Transportation buildings bordering both sides of the street from Washington Street to Redland Road. East of OR 213 and south of Abernethy Road lie established residential neighborhoods. To the west lies the town center of Oregon City. On the north side of I-205 lies a retail shopping center, the first phase of the Clackamette Cove master plan project (Edgewater Apartments), and the Willamette River.

Transportation Facilities

Table 2 provides a summary of transportation facilities (including pedestrian and bicycle facilities) in the site vicinity. The summary generally describes roadway features that are present at the study intersections.

Table 2: Existing Transportation Facilities

Roadway	Functional Classification[1, 2]	Number of Lanes	Posted Speed (MPH)	Sidewalks	Bicycle Lanes	On-Street Parking
OR 99E	City – Major Arterial ODOT – District/ Regional[3]	5-8	30	Yes[4]	Yes[5]	No[6]
River Rd.	City of Gladstone Arterial	2-3	30	Yes	Yes- North Partial - South	No
Arlington St.	City of Gladstone Arterial	2-3	25	Yes	No	Partial
Dunes Dr.	Collector	3	Not Posted	Yes	Yes	No
I-205	City- Freeway ODOT – Interstate	4-6	55	No	No	No
15th St.	Collector	2	Not Posted	Yes	Yes	Yes- South
14th St.	Collector	2-4	Not Posted	Yes	No	Partial

Molalla Ave.	Major Arterial	2-3	35	Yes	Yes	No
Maplelane Rd.	Minor Arterial	2-4	40	Partial - East	Yes	Partial- East

MPH = miles per hour
[1] 2013 Oregon City Transportation System Plan (TSP - Reference 3).
[2] 1999 Oregon Highway Plan (OHP – Reference 4).
[3] OR 99E is a District level highway north of I-205 and a Regional level highway south of I-205.
[4] Sidewalks are present on both sides north of Dunes Drive, east side only from Dunes to 14th Street, then both sides south of 14th Street.
[5] A combined two-way bike facility and multi-use path is present on the west side of the highway along Clackamette Drive beginning at Dunes Drive and continuing down to 14th Street.
[6] On-street parking is not allowed along OR 99E, except for limited parking between 14th Street and 11th Street.
[7] Sidewalks are on both sides, except sidewalk segments missing on west side from south of Clackamas River Drive to Prairie Schooner Way, and from south of the Metro South Transfer Station to Abernethy Road.
[8] Bicycle lanes are present between OR 213 and Abernethy Road, with striped shoulders for bicycling south of Abernethy Road to beyond Holly Lane.
[9] Sidewalks are only provided on the bridge overcrossing of Abernethy Creek next to Redland Road.
[10] Sidewalks are present on both sides from I-205 to Prairie Schooner Way, and a multi-use path is present on the east side of the highway from Beavercreek Road to Molalla Avenue.

Pedestrian and Bicycle Facilities

Table 22 highlights pedestrian and bicycle facilities available in the larger area surrounding the site. In the immediate vicinity of the site, a continuous sidewalk is present along the site frontage on Washington Street, with a connection to the crosswalks at the traffic signal at Prairie Schooner Way and additional

sidewalk extending further to the roundabout at Clackamas River Drive. A continuous sidewalk also extends southwest of the site along Washington Street. Beginning at the site property boundary, the sidewalk passes in front of the adjacent retail property and the Oregon Trail Interpretive Center before reaching the crosswalks at the traffic signal with Abernethy Road.

Along Abernethy Road, there is a 400-foot section of sidewalk that extends west along the site frontage from the signalized intersection and crosswalks at Redland Road, with the remaining property frontage having no sidewalk. Further west beyond the site frontage, sidewalk is lacking for most of the distance to the next traffic signal at Washington Street.

There are no sidewalk facilities along the limited site frontages on Redland Road and OR 213, but there are continuous bicycle lanes provided along the surrounding street facilities including Washington Street, Abernethy Road, Redland Road, and OR 213. Also, it should be emphasized that the Home Depot collector-type street that extends up to the site property from Washington Street has striped bicycle lanes and sidewalks on both sides of the street.

Transit Facilities

Local transit service is conveniently provided by TriMet in the immediate site vicinity by the following two bus lines:

- **TriMet Line 79 (Clackamas/Oregon City):** Provides service between Clackamas Town Center and Oregon City Transit Center, with bus stops conveniently located along Washington Street right at the traffic signal with the Home Depot/site access street. Weekday and weekend service is generally provided at 40-minute headways.
- **TriMet Line 154 (Willamette/Clackamas Heights):** Provides service that connects the Clackamas Heights area up along Holcomb Boulevard with the Oregon City Transit Center, with additional service to the West Linn area via Willamette Falls Drive. Bus stops are conveniently located along Abernethy Road at the traffic signal with Redland Road and at the west end of the property frontage. Only weekday service is provided at 1-hour headways.

It should be emphasized that the master plan site is just over three-quarters of a mile (approximately 17 minute walk) from the Oregon City Transit Center located in the downtown core of Oregon City at Main Street and 11th Street. This means that visitors, residents, and employees associated with the master plan area can walk (or use Route 79) to the Oregon City Transit Center and access a variety of other bus lines, including the following:

- **TriMet Line 31 (Webster Road)**: Provides service on weekdays and weekends between the Oregon City Transit Center and the Clackamas Town Center, generally at 40-minute headways.
- **TriMet Line 32 (Oatfield):** Provides service on weekdays between Clackamas Community College and the Milwaukie Transit Center, generally at 30-minute to 1-hour headways. On weekends, service is only provided between Clackamas Community College and the Oregon City Transit Center at 1-hour headways.

- **TriMet Line 33 (McLoughlin/King Road):** Provides frequent service (15 minutes or better) on weekdays and weekends between Clackamas Community College and Clackamas Town Center via downtown Milwaukie.
- **TriMet Line 34 (Linwood/River Road):** Provides weekday service only between Clackamas Community College and Clackamas Town Center via downtown Milwaukie with headways of just over 1 hour.
- **TriMet Line 35 (Macadam/Greeley)**: Provides service between the Oregon City Transit Center and the Portland City Center via Lake Oswego at approximately 15- to 30-minute headways on weekdays and at 45-minute headways on weekends.
- **TriMet Line 99 (Macadam/McLoughlin):** Provides weekday AM and PM "rush hour" service between Clackamas Community College and Portland City Center at approximately 15 to 30-minute headways.

Traffic Volumes & Peak Hour Operations

The disruption to travel patterns resulting from the COVID-19 pandemic precludes the ability to directly rely on existing traffic volumes to be representative of normal conditions. Therefore, proxy volume estimates were prepared by developing and applying COVID Adjustment Factors (CAF's) to turn movement traffic counts collected at all 25 existing study intersections in mid-December 2020. In all cases, the CAF produced a proxy volume estimate greater than what was measured. For study intersections of city or county roadways, unique CAF's were determined for the weekday AM and PM peak hours and the Saturday midday peak hour by comparing current counts with historical (pre-COVID) traffic count data available for the streets that surround the master plan site, such as Washington Street, Abernethy Road, Redland Road, and Prairie Schooner Way. For study intersections located along the OR 213 and OR 99E corridors, separate CAF's were developed by looking at fluctuations in 2018-2020 vehicle detection data available from the ODOT signal controllers within the site vicinity. Additional adjustments were then made at specific highway locations to ensure that adjusted volume estimates either matched or exceeded historical traffic demand data from 2017-2019. Table 3 presents the CAF's calculated for the weekday AM and PM peak hours, as well as for the Saturday midday peak hour. *See Appendix B for further detail on the development of these adjustment factors.*

Table 3: COVID Adjustment Factors (By Facility and Analysis Period)*

Facility	Weekday AM Peak Hour	Weekday PM Peak Hour	Saturday Midday Peak Hour
City/County Streets (All Study Intersections)	1.41	1.12	1.01
OR 99E (All Study Intersections)	1.50	1.16	1.03
OR 213 Intersections			
at I-205 SB Ramps	1.39	1.17	1.04
at Clackamas River Drive	1.39	1.17	1.04
at Redland Road	1.39	1.17	1.04
at Beavercreek Road	1.37	1.13	1.04
at Molalla Avenue	1.48	1.17	1.04

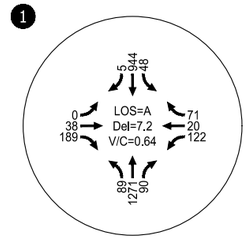
* Engineering judgment, knowledge of local land uses, and historical traffic count patterns were used when applying and adjusting these factors in specific locations.

The CAF's shown in Table 3 were applied to the mid-December 2020 traffic count data to arrive at estimated existing year 2020 traffic volumes during the weekday AM weekday PM and Saturday midday peak hours as shown in Figures 6 through 11. *Appendix "B" includes the December 2020 traffic count data.*

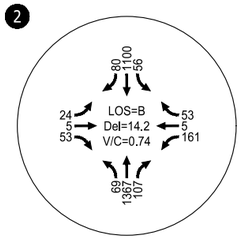
Current Intersection Operations

Figures 6 through 11 also summarize the existing traffic operations at the study intersections during the first hour of the weekday AM, weekday PM, and Saturday midday peak periods. As shown, all 25 existing study intersections currently operate at levels that meet the mobility standards of the governing agency, and because of this, the second hour was not analyzed. *Appendix "C" includes the existing traffic conditions worksheets.*

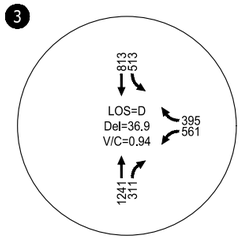
It is noted that even while agency mobility standards are satisfied, or exempt in several cases, three study intersections are showing v/c ratios over 1.00, indicating a possible oversaturated condition where demand is estimated to exceed capacity.



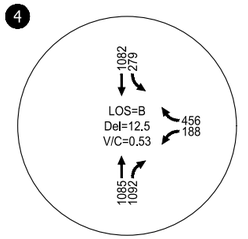
Intersection #2: OR 99E/Dunes Drive



The calculated v/c ratio is 1.04 at this intersection during the Saturday midday peak hour. Further inspection of the traffic signal timing records for this intersection indicate that the overall intersection v/c ratio could be reduced below 1.0 if the lag phasing for the critical southbound left-turn movement (from the highway into the adjacent shopping center) were switched to the lead phase concurrent with the opposing left-turn movement. *Appendix "C" includes the theoretical analysis with this signal phasing change in place.*



Intersection #19: I-205 SB Ramp/OR 213



Although this intersection is exempt from the ODOT mobility targets (in accordance with City's TSP), the stop-controlled eastbound left-turn (from loop off-ramp) and the stop-controlled southbound through movement (from city street approach on north side of interchange) are operating with v/c ratios of 1.50 during the weekday AM peak hour and 1.70 during weekday PM peak hour, respectively. While demand for these stop-controlled movements are very low (compared to all other movements), it is the mainline traffic between OR 213 and I-205 SB that is leaving little to no gaps for the minor stop-controlled traffic movements. Closer inspection of the operations reports indicates the eastbound left-turn movement has adequate storage to support 95th percentile queues. However, the southbound through movement has an estimated 95th percentile queue of 124 feet in the PM peak hour which exceeds available lane storage of 90 feet. Potential safety measures should be considered by ODOT for the southbound through movement to ensure vehicle queues do not spill back into the next adjacent intersection and conflict with the northbound left-turn movement from OR 213 to the I-205 SB on-ramp. One such measure could include posting a yellow warning sign indicating that "Oncoming Traffic Does Not Stop". Another option would be to install "Keep Intersection Clear" signage with associated striping on the ground.

Intersection #21: OR 213/Redland Road

The intersection v/c ratio is 1.01 during the weekday AM peak hour and 1.00 during the weekday PM peak hour.

Traffic Safety Analysis

Reported crash histories for the most recent five-year period (two years more than required by the City) of available data was obtained from ODOT for review. Data covered the period from January 1, 2014, through December 31, 2018. Table 4 provides a general summary of the crash data over the five-year reporting period, with crashes summarized by collision type and severity.

Table 4: Intersection Crash History (January 1, 2014 through December 31, 2018)

[1]PDO – Property damage only

[2]No crash data was reported by ODOT for this intersection.

As shown in the data in Table 4, three reported crashes resulted in a fatality involving a bicyclist or pedestrian at the Washington Street/15th Street, Washington Street/12th Street, and the OR 213/Beavercreek Road intersections. While 57% (411 of 728) of the total reported crashes over the last five years resulted in an injury, approximately 1.8% (13 of 728) of the total reported crashes resulted in a fatality or serious injury (crash Type A). About half of all crashes (362 of 728) were rear-end collisions, and about a third (234 of 728) were turning-type collisions, both indicative of crashes at intersections. *Appendix "D" contains the crash data reports provided by ODOT.*

Critical crash rates were also calculated for each of the study intersections following the analysis methodology presented in ODOT's Analysis Procedures Manual (APM - Reference 5). APM Chapter 4 provides 90th-percentile crash rates per million entering vehicles at a variety of intersection configurations in the State of Oregon based on number of approaches and traffic control types. In addition, a critical crash rate was also identified for each study intersection following APM guidance on determining crash rates by intersection type. Per the APM, intersections with observed crash rates that exceed the 90th percentile values shown in APM Exhibit 4-1 or with observed crash rates that exceed the critical crash rates should be flagged for further analysis.

Table 5 summarizes the critical crash rate assessment for each intersection and compares those values to the observed crash rate. As shown in the table, observed crash rates exceed the 90th-percentile rates for eight of the 25 existing study intersections. These same eight intersections, plus another three study intersections, show observed crash rates exceeding the calculated critical crash rates based on a statewide comparison. A more refined analysis of these 11 high crash locations are discussed in the following section. Also, it should be mentioned that, although study intersection #12 (Washington Street/15th Street) has a 90th-percentile rate that meets the critical crash rate, it does not exceed it. Therefore, no further analysis was warranted.

Additional Safety Analysis of 11 High Crash Rate Locations

Guidance provided by the Highway Safety Manual (Reference 6) includes quantitative methods for identifying systemic approaches to reducing the severity of crashes**. It should be noted that while simply increasing the volume of traffic on a roadway or at an intersection increases the exposure to the potential for a crash, it does not portend a higher rate of crashes or that more severe crashes will occur.** As such, the analysis summarized below focuses on the fatal and severe injury crashes that have been reported, to understand their underlying causes.

Evaluation of the fatal and severe injury crash records was completed for the 11 intersections identified as having high crash rates. The causes for reported crashes, repeat crash patterns, and severity of injury or fatality were identified. Particular attention was given to contributing factors identified in the crash reports. *Details of this analysis are contained in a technical memorandum provided in Appendix "D".*

Table 5: Intersection Crash Rate Assessment (January 1, 2014 through December 31, 2018)

	Location	Total Crashes	Observed Crash Rate[1]	90th Percentile Rate by Intersection Type[1,2]	Observed Crash Rate > 90th Percentile Rate	Critical Crash Rate by Intersection Type[3]	Observed Crash Rate > Critical Crash Rate by Intersection

25	Maplelane Rd. / Beavercreek Rd.	50	1.00	0.86	Yes	0.65	Yes

[1] Crash rate – Crashes per million entering vehicles (MEV)

[2] Values shown obtained from APM Exhibit 4-1, Intersection Crash Rates per MEV by Land Type and Traffic Control

[3] Values shown calculated per APM Section 4.3.4 and APM Example 4-4, HSM Critical Crash Rates for Intersections with Statewide Reference Population

Table 6 provides a brief description of each crash that involved a fatality or severe injury over the five-year period of crash history at the 11 intersections. Two crashes resulted in fatalities, both pedestrians, at two separate intersections. In one case, the driver failed to yield the right-of-way to the pedestrian. In the other, the pedestrian attempted to cross the street against the traffic signal. The fatality at Washington St./12th St. occurred in 2014. In 2018, the City installed a traffic signal at this location, providing protected crossings for pedestrians.

Table 6: Assessment of Severe Crashes at 11 High Crash Rate Locations

Location		Total Crashes	Fatal Crashes	Severe Crashes (Type A)	Severe Crash Description/Cause
1	OR 99E / River Rd.-Arlington St.	56	0	0	-
2	OR 99E / Dunes Dr.	48	0	0	-
3	OR 99E / I-205 SB Ramp	46	0	1	Injury A 5/19/2018; Saturday, 10PM Clear, Dry Southbound left turning vehicle did not have ROW / left turn in front of oncoming traffic
4	OR 99 E / I-205 NB Ramp	35	0	0	-
14	Washington St. / 12th St.	52	1	0	Fatality 1/3/2014; Friday 6 PM Cloudy, Dry, Daylight Driver failed to yield ROW to pedestrian, pedestrian was killed
18	Redland Rd. / Holly Ln.	7	0	0	-
19	I-205 SB Off-Ramp / OR 213	22	0	0	-
21	OR 213 / Redland Rd.	53	0	1	Injury A 12/27/2017; Wednesday 9PM Fog, Wet, Dark Driver disregarded traffic signal
22	OR 213 / Beavercreek Rd.	135	1	0	Fatality 1/2/2017; Monday 12PM Cloudy, Wet, Daylight Pedestrian disregarded traffic signal, vehicle skidded, pedestrian was killed
24	Molalla Ave. / Beavercreek Rd.	56	0	2	Injury A 9/16/2018; Thursday 3 PM Clear, Dry, Daylight Left turning driver did not have ROW / left turn in front of oncoming traffic Injury A 5/12/2014; Monday 4 PM Clear, Dry, Daylight Left turning driver turned into the wrong lane, the right turning driver turned right on red after stopping. The left turning driver was recorded as being in error.
25	Maplelane Rd. / Beavercreek Rd.	50	0	2	Injury A 2/7/2016; Saturday 2 PM Rain, Wet, Daylight Left turning driver did not have ROW / left turn in front of oncoming traffic Injury A 9/9/2017; Saturday 8 PM Rain, Wet, Daylight Southbound driver disregarded the traffic signal

As shown in Table 6, five of the 11 high crash locations had no severe injuries or fatalities. Six other crashes (out of 560) resulted in severe injury. Four were due to the driver turning left without having the right-of-way, at four separate intersections. The remaining two severe injury crashes, at separate intersections, were due to the driver disregarding the traffic signal. No apparent trends are evident among these crashes at these locations.

Systemwide Safety Approach

ODOT and Clackamas County are actively pursuing systemic actions to achieve vision zero goals. The County has a Drive to Zero Transportation Safety Action Plan and ODOT has a Safety Priority Index System. These analytical approaches guide decisions for prioritizing investments that seek to provide safety benefits to the use of transportation facilities.

ODOT Safety Priority Index System (SPIS) List

ODOT provides an annual list of safety priority index system (SPIS) locations that are based on reported crash data. The intent of the SPIS list is to identify roadway segments exhibiting an unusually high occurrence of crashes and is used to select locations for investigation. Based on the latest 2018 ODOT data, the following highway segments are listed in the top 15 percent of SPIS locations in the ODOT Region 1 area:

- OR 99E in the vicinity of Arlington Street (Milepost 10.94 to 11.11) – top 90th percentile
- OR 99E in the vicinity of Dunes Drive (Milepost 11.44 to 11.62) – top 95th percentile
- OR 99E in the vicinity of I-205 SB Ramps (Milepost 11.55 to 11.71) – top 90th percentile
- OR 99E in the vicinity of I-205 NB Ramps (Milepost 11.71 to 11.89) – top 90th percentile
- OR 213 in the vicinity of Washington Street (Milepost 0.05 to 0.23) – top 90th percentile
- OR 213 in the vicinity of Beavercreek Road (Milepost 2.89 to 3.07) – top 95th percentile
- I-205 in the vicinity of OR 213 Interchange (Milepost 10.40 to 10.57) – top 90th percentile

Each of the SPIS segments listed above are covered by the detailed crash analysis for those study intersections along the highways of OR 99E and OR 213. Historical crash data for the OR 213/Washington Street intersection did not exceed ODOT's critical crash rates for similar intersections.

Clackamas County Drive to Zero Transportation Safety Action Plan

The Clackamas County Drive to Zero Transportation Safety Action Plan establishes an ongoing program of education, analysis, project development, and funding of actions to achieve the goal of zero deaths on the transportation system. Recent actions include education campaigns for proper use of child seat devices and planned construction of left-turn lanes on Redland road at certain intersections.

Site Safety Contributions

Expected safety benefits of the proposed master plan include locating housing in immediate proximity to jobs, services, retail, and recreation. The resulting trips between these uses are most likely to be pedestrian trips occurring within the site. For example, over 400 trips just during the Saturday midday peak hour are estimated to occur entirely within the site. Site driveways will be positioned and designed to meet all City requirements for sight distance, driveway spacing, and appropriate traffic control. The surrounding neighborhoods will have more jobs to choose from and service, retail, and recreational

opportunities in close proximity, which will reduce their trip length and increase their options for walking, biking, and using transit to access these uses. Reducing the trip length and converting some existing trips from motor vehicle to walking, biking, and/or transit trips can reduce overall exposure on a systemwide level.

TRANSPORTATION IMPACT ANALYSIS

The transportation impact analysis identifies how the study area's transportation system will operate in 2025, the year the proposed master plan is expected to be fully built and operational. The impact of traffic generated by the proposed master plan was examined as follows:

- In-process developments and planned transportation improvements were identified for the five-year forecast period of the master plan;
- Year 2025 background traffic conditions (without master plan development), including intersection v/c ratio, level of service, and control delay during the weekday AM and PM peak hours and the Saturday midday peak hour;
- Site trip generation estimates for the anticipated land uses under all three peak hour analysis periods;
- Site trip distribution and assignment patterns based on the nature of the proposed uses, review of previous studies in the area, and knowledge of major local travel generators and destinations;
- Year 2025 total traffic conditions analysis, including intersection v/c ratio, level of service, and control delay for all three peak hour analysis periods;
- Vehicle queuing analyses for year 2025 background and total traffic conditions at key highway intersections nearby, key study intersections around the site perimeter, and at proposed site accesses; and
- Analysis of turn lane capacity needs and intersection traffic control measures.

YEAR 2025 BACKGROUND TRAFFIC CONDITIONS

The year 2025 background traffic conditions analysis identifies how the study area's transportation system will operate without the proposed master plan development. This analysis includes traffic related to approved in-process developments and general traffic growth in the region, but does not include traffic from the proposed development.

In-Process Developments

Based on scoping conversations with the City, trips associated with the following four approved in-process developments have been accounted for in the background traffic forecast for this study:

1. The Cove Master Plan (Phase 2)
2. Red Soils Master Plan (Final Phase 2)
3. North Beavercreek Industrial Project
4. Oregon City Operations Center

For each of the four in-process developments, trip assignments were collected from available resources (e.g., prior traffic impact study reports) and only those trips approved but not yet realized from the occupancy of each development were included. In most cases, the in-process trips from these developments were assigned to an isolated study area and had to be extended to cover the larger study area of this master plan report. Also, where the prior studies did not analyze trip impacts during the Saturday midday peak hour period, trip estimates were prepared using standard industry resources such as the ITE Trip Generation Manual, 10th Edition, and assigned to the street system based on the patterns observed for other peak hour periods.

Planned Transportation Improvements

The following planned transportation improvements were identified through a review of Oregon City's list of active transportation infrastructure projects as well as projects specified in ODOT's historical 2018-2021 and active 2021-2024 Statewide Transportation Improvement Program (STIP). As noted below, these projects are not anticipated to change the existing capacities of the study intersections for this master plan, at least within the five-year forecast window of this transportation study.

City Projects

- **Meyers Road West Extension Project (TSP Project # D46):** This project was completed at the end of December 2020. It consisted of extending Meyers Road east from OR 213 to High School Avenue as a Minor Arterial roadway, which consists of a three-lane cross-section with bike lanes and sidewalks on both sides of the road. *(Note: This project is not anticipated to change the capacity characteristics of any master plan study intersections by the year 2025).*
- **Meyers Road East Extension Project (TSP Project # D47)**: This project will consist of extending Meyers Road from Beavercreek Road to Meadow Lane as an Industrial Minor Arterial. The roadway extension is estimated to occur by 2022 in conjunction with the Villages at Beavercreek mixed-use housing development. *(Note: This project is not anticipated to change the capacity characteristics of any master plan study intersections by the year 2025).*
- **Beavercreek Road/OR 213 Project (Amendment to City TSP – Alternative Mobility Targets)**: In 2018, a refinement plan was adopted by Oregon City and ODOT that identifies new alternative mobility targets and physical improvements for the Beavercreek Road/OR 213 intersection, given that the intersection was projected to exceed state mobility targets by the planning horizon year 2035. In addition to pedestrian safety measures, the primary physical improvement includes construction of a westbound-to-northbound right-turn merging lane onto OR 213 from Beavercreek Road. Although funds for the project are not yet secure, Oregon City is collecting proportionate share cost contributions from developments that send

traffic through this intersection. *(Note: Because this project is not yet funded, it is not anticipated to change the capacity characteristics of this study intersection by the year 2025).*

ODOT Projects

- **I-205 Improvements: Stafford Road to OR 213 (Design Phase Only)** – Per the 2018-2021 STIP, ODOT is currently designing the I-205 Improvements Project, which will address congestion and traveler safety issues on a seven-mile stretch of I-205 between Stafford Road and OR 213. The project will ultimately add a third travel lane in each direction on the highway and will include upgrades to the OR 43 interchange, widening and seismic upgrades to the Abernethy Bridge and eight other I-205 bridges in the project area to withstand a major earthquake. Based on the project description on ODOT's project website, no capacity changes will result at the OR 213 ramp terminals and it is unclear whether the OR 99E ramp terminal study intersections with I-205 will be modified as a result of this project. Although ODOT's project website anticipates construction to begin in 2022 and continue through 2026, construction funding for the project is currently pending. *(Note: This project is not anticipated to change the capacity characteristics of any master plan study intersections by the year 2025).*

Year 2025 Background Traffic Volumes

Year 2025 background traffic volumes were developed by increasing current year 2020 traffic volumes consistent with the annual traffic growth rates shown in Table 7 over a five-year period. The growth rates shown in the table were determined from a review of historical ODOT highway volume data for the OR 99E, OR 213, and I-205 corridors, and from an analysis of historical population growth patterns for Oregon City over the past five years.

Table 7: Annual Traffic Growth Rates for Study Intersections (By Facility and Analysis Period)

Facility	Weekday AM Peak Hour	Weekday PM Peak Hour	Saturday Midday Peak Hour
OR 99E[1]	0.27%	0.27%	0.27%
OR 213[1]	0.31%	0.31%	0.31%
I-205[1]	0.26%	0.26%	0.26%
City/County Streets[2]	1.15%	1.15%	1.15%

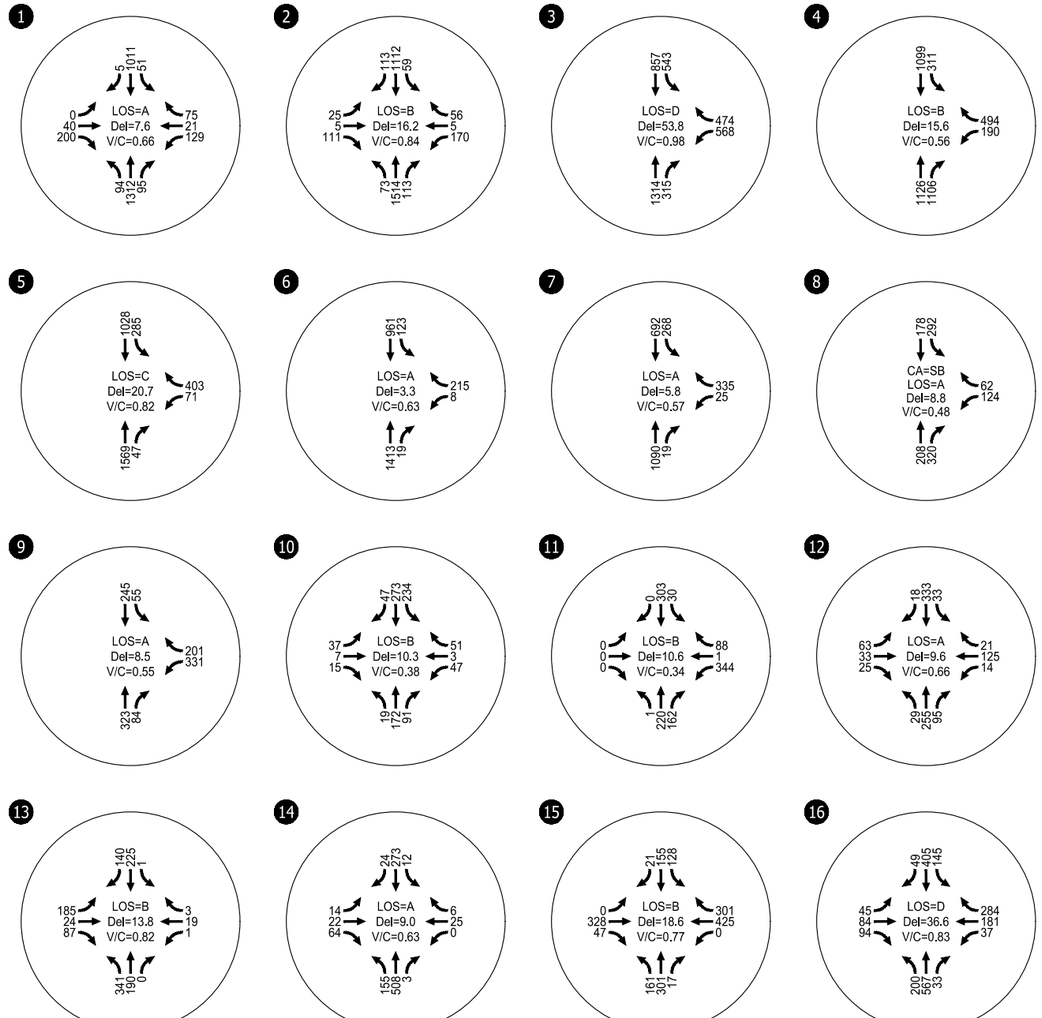
[1] Growth rates shown for the highway corridors were derived from historical ODOT average daily traffic volumes (2014-2019).

[2] For intersections that involve City or County roadways, the growth rate is equivalent to the historical 5-year population growth rate for Oregon City.

It should be emphasized that the annual growth rates shown for the highway corridors above were used to develop growth estimates of traffic traveling through the highway corridors (through movements only). For intersections having legs that involve either City or County roadways, the annual growth rate of 1.15% was applied to the associated minor movements.

Figures 12 through 17 illustrate the resulting forecast year 2025 background traffic volumes during the weekday AM and PM peak hours, and for the Saturday midday peak hour. Volumes shown reflect the growth assumptions detailed above plus the in-process development trip assignments. *Additional details on how current volumes were adjusted to derive projected 2025 background traffic volumes can be found in the operations analysis worksheets provided in Appendix "E". Specific adjustments made for each study intersection can be found in the volume tabs on the worksheets under line items entitled "Growth Factor", "In-Process Volume", and "Other Volume."*

Year 2025 Background Intersection Operations



The peak hour turning-movement volumes shown in Figures 12 through 17 were used to conduct an operations analysis of all existing study intersections to determine the year 2025 background traffic conditions. The results of the analysis indicate that all but one of the study intersections are forecast to operate at levels which meet the applicable mobility standards of the governing agency. *Appendix "E" contains the year 2025 background traffic conditions worksheets.*

It should be noted that even while Intersection #19 (I-205 SB Ramp/OR 213) is exempt from the ODOT mobility standards and Intersection #21 (OR 213/Redland Road) is forecast to operate below the v/c ratio mobility standard of 1.10, both intersections are still forecast to exceed v/c ratios of 1.00, indicating an oversaturated condition.

Intersection #2: OR 99E/Dunes Drive

This intersection is forecast to operate with a v/c ratio of 1.17 during the Saturday midday peak hour, which exceeds the ODOT mobility target of 1.10 or less. As detailed earlier in this report, the current signal timing for this intersection has been set to favor progression of through-traffic movements on the highway. However, further analysis indicates the overall intersection v/c ratio can be reduced to below 1.00 if the lag phasing for the critical southbound left-turn movement from the highway into the adjacent shopping center were switched to the lead phase, concurrent with the opposing left-turn movement. *Detailed calculations showing the operational impact of this phasing change are included at the end of Appendix "E".*

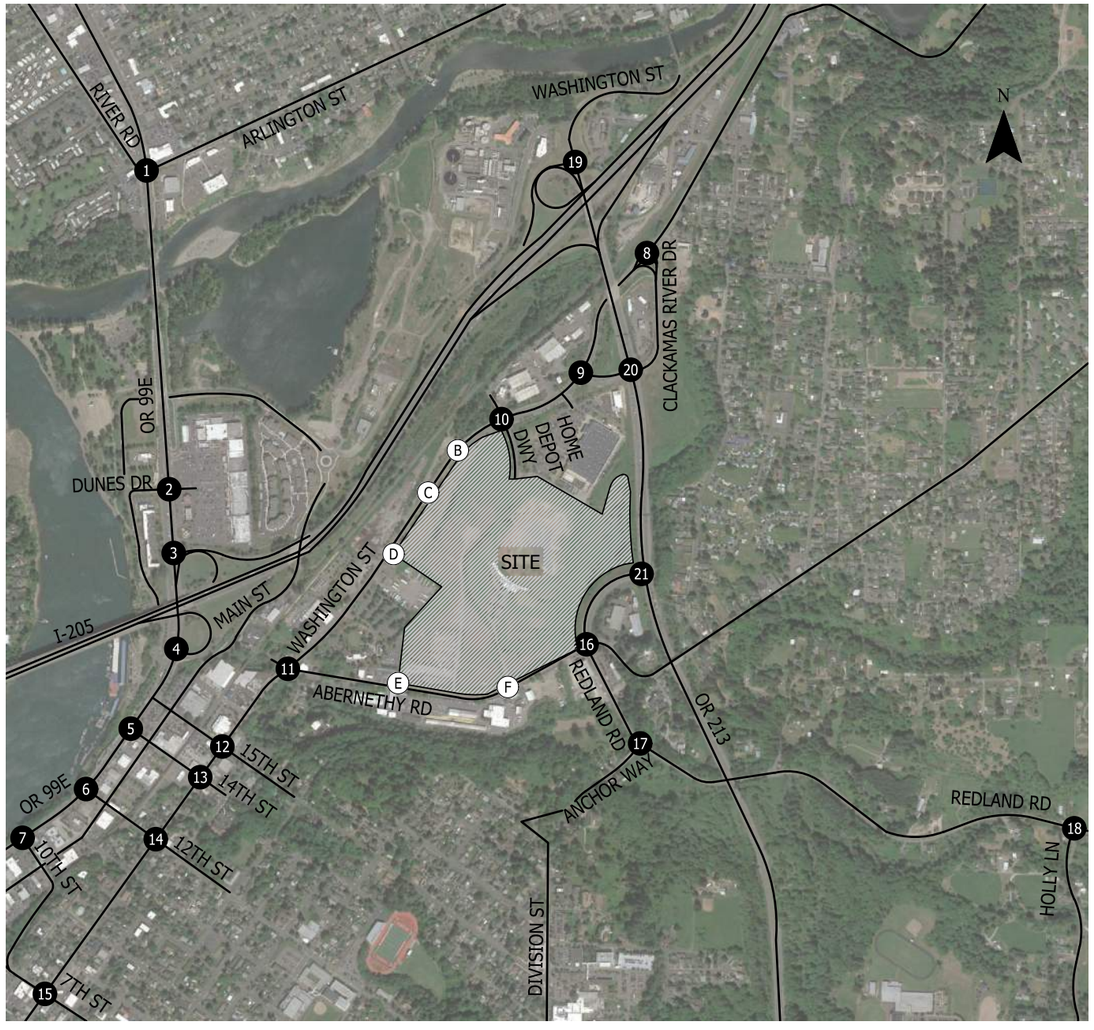
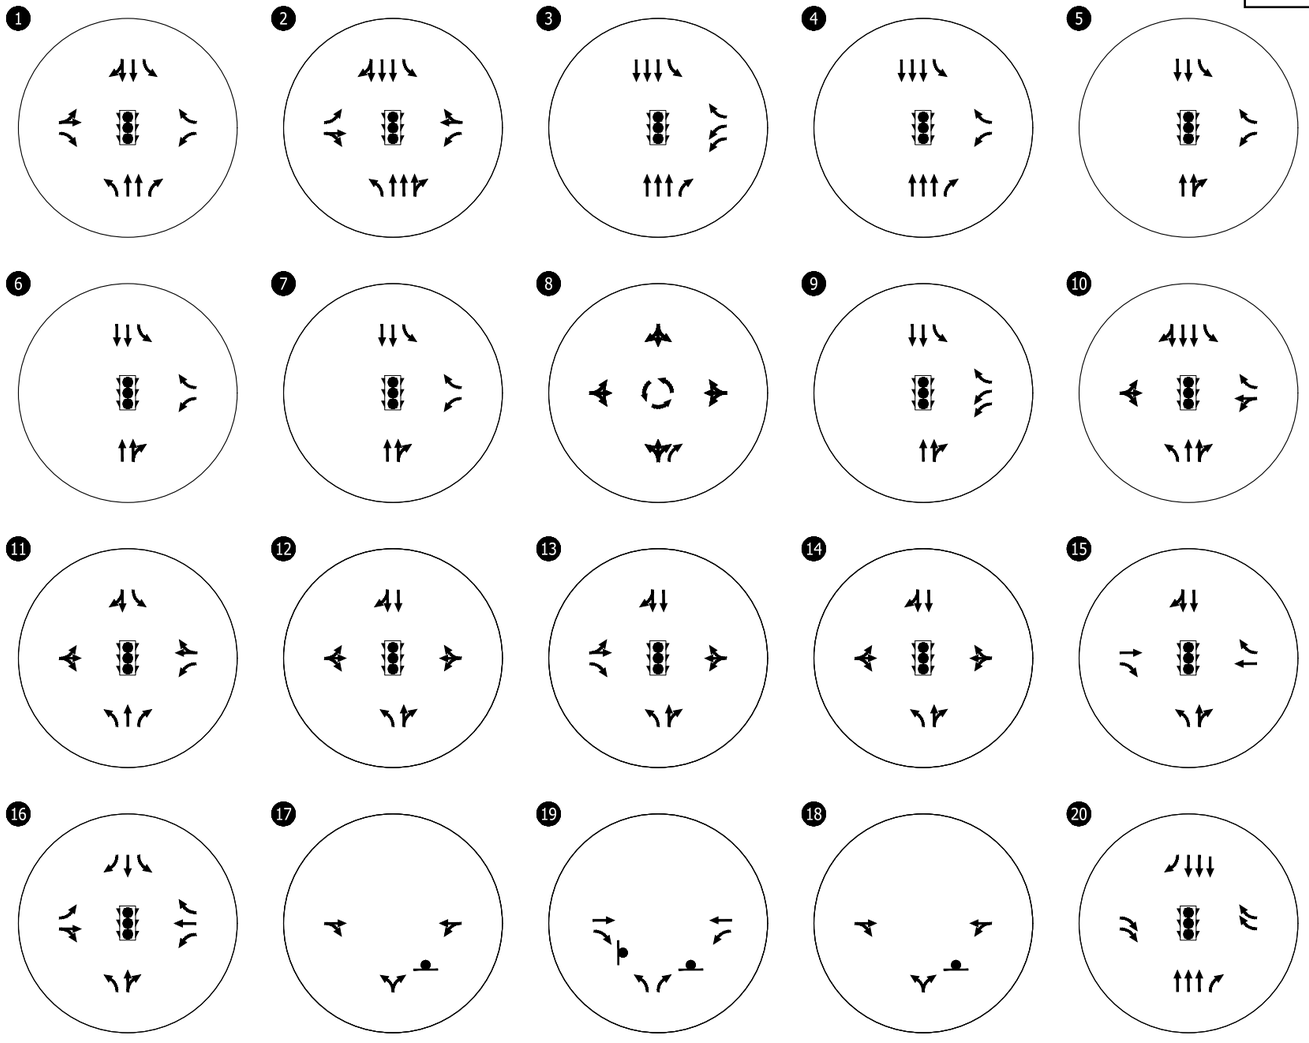
PROPOSED DEVELOPMENT PLAN

The proposed master plan project is an urban mixed-use development on approximately 62 acres of property. As shown in the master plan concept in Figure 3, the project envisions uses that are allowed outright by the property's Mixed Use Downtown (MUD) zoning, including mixed-use housing, retail, commercial, office, grocery stores, movie cinemas, and restaurants. Specific uses that are conditionally allowed by the City in the master plan include an anchor retail store with the option of a fuel station as an accessory use, as well as fast-food restaurants having drive-through windows.

The concept plan is divided into four distinct sub-areas (e.g., North, East, Central, and South Districts) to illustrate the different uses and functions that will occur within each district, and to delineate possible boundaries for individual phases of development. Full occupancy of all master plan uses is expected to occur in 2025. Also, the golf driving range that exists on the subject property today will be removed once development occurs.



Site Frontage Improvements



Frontage improvements along Washington Street and Abernethy Road will consist of the required half-street improvements consistent with Oregon City's *Minor Arterial* street design standards. This will include additional pavement width, where needed, to support a continuous left-turn lane, a single travel lane in each direction, and bicycle lanes. Frontage improvements will also include respective planter strip and sidewalk treatments as required by the City's design standards, and on-street parking where stipulated by the City Engineer.

External Site Access Descriptions

The lane configurations and traffic control devices assumed to be in place at all study intersections and proposed site accesses upon build-out of the master plan are shown in Figures 18 and 19. As shown, the master plan envisions a total of six external site access points (Shown as site Accesses "A" through "F" on all subsequent report figures).

Two of the primary accesses will be from the extension of a new collector-level street through the site. Starting from the current street terminus just south of the signalized Washington Street/Home Depot access intersection (Site Access "A"), the new collector street will proceed in a southwest direction between the North and East Districts of the master plan area. Approximately two-thirds of the way into the site, the collector street will veer to the southeast, splitting the Central and South Districts, and ending with a new intersection at Abernethy Road (Site Access "F"). Per our analysis of traffic operating conditions, the new intersection with Abernethy Road will benefit from signalization, separate left- and right-turn exit lanes, a westbound right-turn entry lane and an eastbound left-turn lane from Abernethy Road.

Three other external accesses will be established on Washington Street, each having an approximate spacing of 500 feet relative to the signalized Washington Street/Home Depot access intersection. The two northernmost accesses (Site Accesses "B" and "C") will be designed as private driveways leading into a parking structure to service the land uses in the North District. The third new access (Site Access "D") will be in the northwest corner of the site and designed as a private street linking Washington Street with the South and Central Districts of the master plan area. All three accesses will be stop-controlled on the minor approaches, and the presence of a continuous Washington Street left-turn lane will allow left-turn drivers to access the site.

The sixth external site access will be in the southwest corner of the site with direct access to Abernethy Road (Site Access "E"). Similar to the other new site accesses, stop-control will be placed on the minor approach, with separate left- and right-turn egress lanes, and use of the continuous left-turn lane on Abernethy Road for site access.

Site Trip Generation

Site trip generation estimates for the master plan were prepared for the weekday AM, weekday PM, and Saturday midday peak hours of the adjacent street network. Trip estimates for the proposed master plan are presented in Table 8, with trip totals shown for individual land uses and for the master plan as a whole. Trips are also shown broken out by trip types (i.e., total, internal, pass-by, and diverted trips). The methodology for estimating master plan trips is detailed in the following paragraphs.

It should be noted here that the land uses shown in Table 8 reflect one possible development scenario. Ultimately, the individual land uses, building types, sizes, and orientation may change upon preparation of a Detailed Development Plan. Nevertheless, for the purposes of this master plan, the total trips presented at the bottom of the table reflect a reasonable estimate of maximum trip potential for vesting purposes.

Site Trip Generation Methodology

The total trips shown for each land use in Table 8 are based on the rates or equations contained in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10th Edition (Reference 7), using the most relevant ITE land use category. Total trips shown for proposed residential uses are represented by ITE 221 (*Multifamily Housing Mid-Rise*). Total trips shown for the preponderance of retail/commercial uses are represented by ITE 820 (*Shopping Center*) and account for all general retail spaces, including the potential for a grocery store, cinema, small and large-scale retailers, coffee shops and fast-food restaurants, and sit-down restaurants. In order to achieve a higher total trip generation estimate for the proposed master plan, two retail uses were separated out. ITE 813 (*Free-Standing Discount Superstore*) was used to represent one of the large-scale retail sites within the master plan. ITE 934 (*Fast-Food Restaurant with Drive-Through Window)* was used to represent one of the master planned fast-food restaurants that could have a drive-through window. Again, this method produces a higher overall trip generation than if all retail uses were estimated using ITE 820 (*Shopping Center)*.

Table 8: Site Trip Generation Estimate

Master Plan Uses		Land Use	Size	AM Peak Hour Trips			PM Peak Hour Trips			Saturday Peak Hour Trips		
				Total	In	Out	Total	In	Out	Total	In	Out
Residential	Total	ITE 221 (Multifamily Housing Mid-Rise)	524 DU	174	45	129	217	132	85	231	113	118
	Internal			*(20)*	*(3)*	*(17)*	*(116)*	*(72)*	*(44)*	*(135)*	*(70)*	*(65)*
Fast-Food w/ Drive-Thru	Total	ITE 934 (Fast-Food Restaurant with Drive-Through Window)	3,830 GFA	153	78	75	124	64	60	208	106	102
	Internal			*(64)*	*(50)*	*(13)*	*(63)*	*(27)*	*(36)*	*(105)*	*(45)*	*(60)*
	Pass-by			*(22)*	*(11)*	*(11)*	*(14)*	*(7)*	*(7)*	*(24)*	*(12)*	*(12)*
	Diverted			*(46)*	*(23)*	*(23)*	*(28)*	*(14)*	*(14)*	*(48)*	*(24)*	*(24)*
Retail/ Commercial	Total	ITE 820 (Shopping Center)	500,000 GFA	402	249	153	1788	858	930	2207	1148	1059
	Internal			*(29)*	*(8)*	*(21)*	*(104)*	*(44)*	*(60)*	*(135)*	*(72)*	*(63)*
	Pass-by			*(32)*	*(16)*	*(16)*	*(286)*	*(143)*	*(143)*	*(268)*	*(134)*	*(134)*
	Diverted			*(80)*	*(40)*	*(40)*	*(724)*	*(362)*	*(362)*	*(994)*	*(497)*	*(497)*
Anchor or *Large-Scale Retail*	Total	ITE 813 (Free-Standing Discount Superstore)	138,000 GFA	255	143	112	598	293	305	658	329	329
	Internal			*(19)*	*(5)*	*(15)*	*(35)*	*(16)*	*(19)*	*(39)*	*(20)*	*(19)*
	Pass-by			*(16)*	*(8)*	*(8)*	*(82)*	*(41)*	*(41)*	*(64)*	*(32)*	*(32)*
	Diverted			*(56)*	*(28)*	*(28)*	*(278)*	*(139)*	*(139)*	*(206)*	*(103)*	*(103)*
Total Trips				**984**	**515**	**469**	**2727**	**1347**	**1380**	**3304**	**1696**	**1608**
Internal Trips				***(132)***	***(66)***	***(66)***	***(318)***	***(159)***	***(159)***	***(414)***	***(207)***	***(207)***
Pass-by Trips				***(70)***	***(35)***	***(35)***	***(382)***	***(191)***	***(191)***	***(356)***	***(178)***	***(178)***
Diverted Trips				***(182)***	***(91)***	***(91)***	***(1030)***	***(515)***	***(515)***	***(1248)***	***(624)***	***(624)***
Primary Trips				**600**	**323**	**277**	**997**	**482**	**515**	**1286**	**687**	**599**

It should be noted that it would be reasonable to include all retail uses shown in Table 8 under the single category of Shopping Center (ITE 820), as all proposed uses are commonly found at shopping centers of this scale and/or specifically highlighted as common land uses in the definition of ITE 820. By separating the fast-food restaurant and the free-standing discount superstore from the shopping center land uses, our approach provides a higher trip generation result and forms a more conservative analysis of the trip generation potential of the site.

Once total trips were accounted for, estimates of internal trip capture were made to reflect the internalization of trips between individual land uses within the master plan area. The process of internal capture was carried out using ITE's OTISS (Online Traffic Impact Study Software), which follows the procedures of *NCHRP Report 684 – Enhancing Internal Trip Capture Estimation for Mixed-Use Developments* (Reference 9).

Next, pass-by trips were estimated for all retail uses in the master plan. By definition, pass-by trips reflect vehicles already present on the site frontage streets of Washington Street and Abernethy Road that turn into the project using one of the site accesses, visit a use on the site, and then return back onto the adjacent street in the direction they were originally heading. Pass-by trip estimates were prepared using pass-by rate information contained in ITE's *Trip Generation Handbook*, 3rd Edition (Reference 9). For

instances where ITE pass-by rate information was unavailable for certain peak hour periods, the lower pass-by rates of adjacent peak hour periods were applied to reflect a conservative minimum reduction.

The final step in the trip generation process was to account for diverted trips also associated with uses on the site. By definition, diverted trips reflect those vehicles that are passing nearby, but deviate onto a non-contiguous street facility to reach the site (e.g., I-205, OR 213, Holcomb Boulevard, Redland Road, Clackamas River Drive). Similar to the pass-by trip capture process, diverted trips were estimated using available rate information in ITE's *Trip Generation Handbook*, 3rd Edition. For instances where ITE diverted rate information was not available for certain peak hour periods, the lower pass-by rates of adjacent peak hour periods were applied to reflect a conservative minimum reduction.

It should, finally, be noted that the results shown in Table 8 reflect an engineering judgment decision to shift a larger percentage of the pass-by trips calculated in this process into the diverted trip category. The reason for this shift is because the current traffic levels on the frontage streets of Washington Street and Abernethy Road are not high enough to support the calculated pass-by demand for this project. However, the high volumes of traffic and proximity of non-contiguous facilities such as I-205, OR 213, Redland Road, and Holcomb Boulevard present significant opportunities for trip diversion to this site. Therefore, 50% of the calculated pass-by trips were shifted over to the diverted trip category to reflect the project's attraction of trips from other major or adjacent streets nearby.

Trip Distribution and Assignment

Estimated site trip distribution patterns were developed based upon the nature of the land uses in the master plan, the location of the site relative to major travel routes in the area, and a review of previous traffic studies for similar land developments in Oregon City. These distribution patterns are shown in Figures 20 through 25 for the roadways throughout the site vicinity and reflect the following distribution for all primary (net new) site trips:

- 24% of trips to/from I-205 (North);
- 12% of trips to/from OR 99E (North via McLoughlin Blvd.);
- 22% of trips to/from I-205 (South);
- 7% of trips to/from OR 99E (South to Canby);
- 6% of trips to/from central Oregon City (West via Washington St.);
- 3% of trips to/from Clackamas River Dr. (Northeast);
- 2% of trips to/from Anchor Wy. (South via Redland Rd.);
- 3% of trips to/from Beavercreek Rd. (West of OR 213);
- 4% of trips to/from Beavercreek Rd. (East of OR 213);
- 8% of trips to/from OR 213 (South of Beavercreek Rd.);
- 5% of trips to/from Redland Rd. (towards Holly Ln.); and,
- 4% of trips to/from Holcomb Blvd.

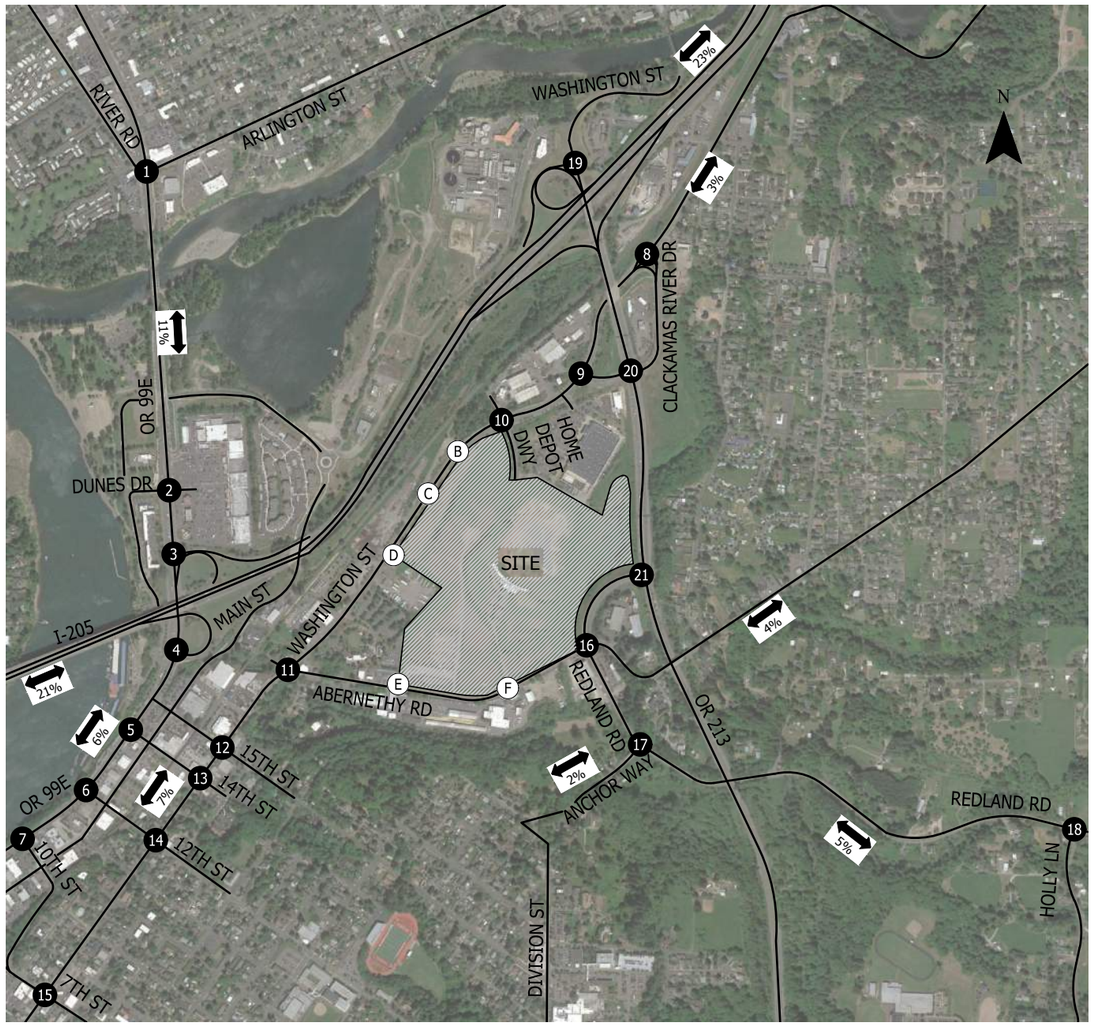
Figures 20 through 25 also display the resulting trip assignments for all site trips on the street system during the weekday AM, weekday PM, and Saturday midday peak hour periods at all existing study intersections and proposed new site accesses. The volumes shown in these figures reflect external site trips, which are the combination of primary, pass-by, and diverted trips. *Figures illustrating the individual site trip assignments for primary, pass-by, and diverted trips are provided in Appendix "F".*

YEAR 2025 TOTAL TRAFFIC CONDITIONS

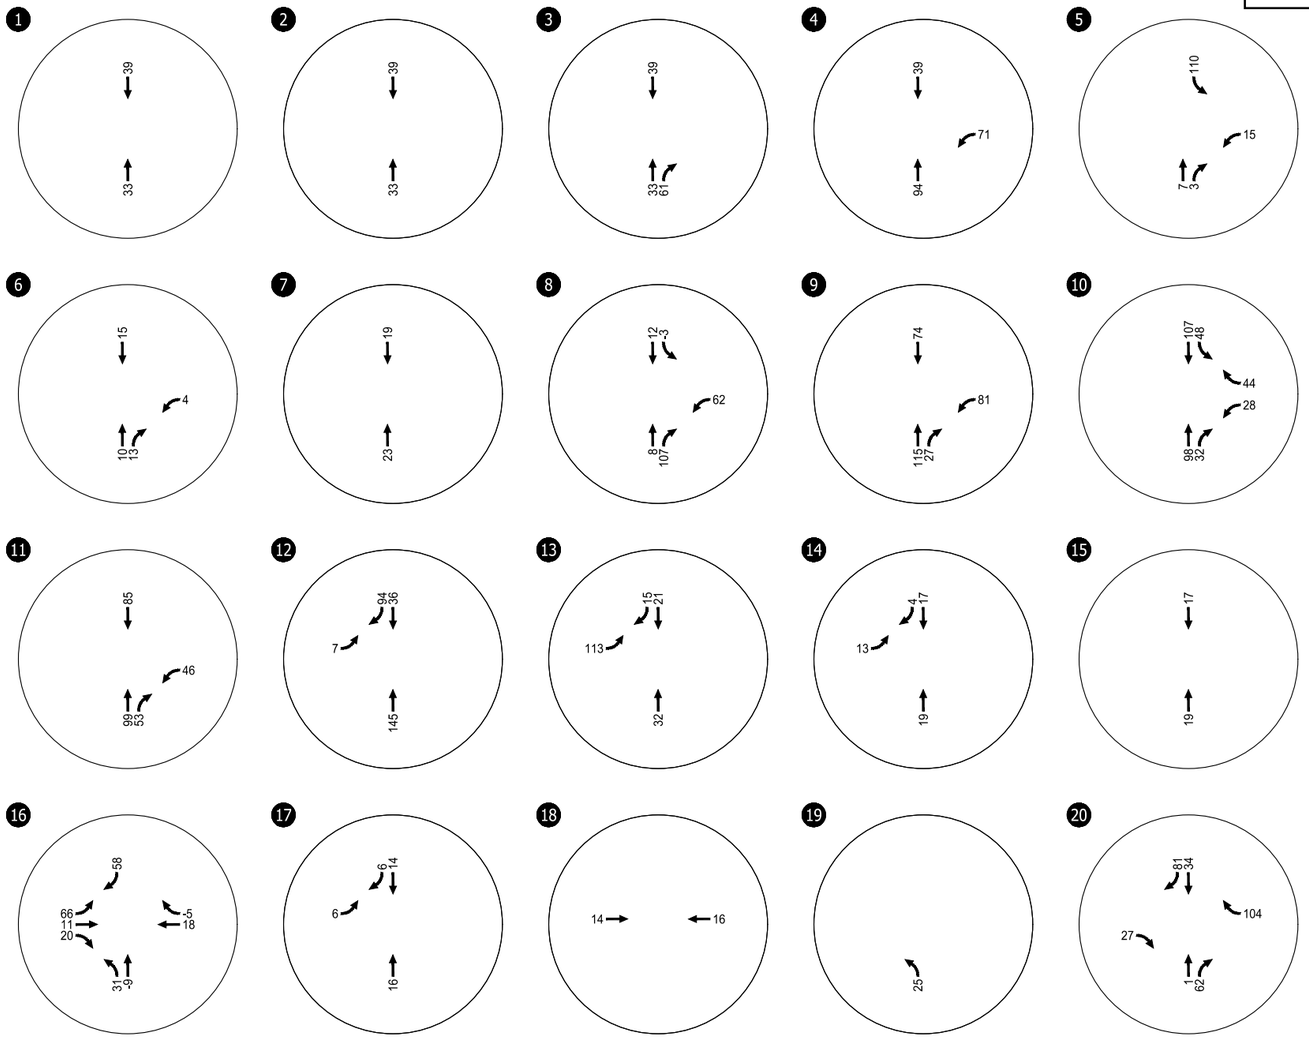
The total traffic conditions analysis forecasts how the study area's transportation system will operate with traffic generated by the proposed master plan development. The year 2025 background traffic volumes shown in Figures 12 through 17 were added to the site-generated traffic shown in Figures 20 through 25 to arrive at the respective total traffic volumes shown in Figures 26 through 31.

Intersection Operations

Year 2025 total traffic volumes shown in Figures 26 and 31 were used to conduct an operational analysis at all study intersections and site accesses. The analysis results indicate that all but two of the study intersections are forecast to operate at levels that meet the applicable mobility standards of the governing agency. *Appendix "G" contains the year 2025 total traffic conditions worksheets.*



It should be noted again that even while Intersection #19 (I-205 SB Ramp/OR 213) is exempt from the ODOT mobility standards, this intersection is still forecast to exceed v/c ratios of 1.00, indicating an oversaturated condition. Also, Intersection #20 (OR 213/Clackamas River Dr.) is forecast to operate with a v/c of 1.02 during the weekday AM peak hour, which is still below the mobility standard of 1.10 or less.



Intersection #2: OR 99E/Dunes Drive

This intersection is forecast to operate with a v/c ratio of 1.22 during the Saturday midday peak hour, which exceeds the ODOT mobility target of 1.10 or less. As detailed earlier in the existing and background conditions sections of this report, the current signal timing for this intersection has been set to favor progression of through-traffic movements on the highway. However, further analysis indicates the overall intersection v/c ratio can be reduced to below 1.00 if the lag phasing for the critical southbound left-turn movement from the highway into the adjacent shopping center were switched to the lead phase concurrent with the opposing left-turn movement. *Detailed calculations showing the operational impact of this phasing change are included at the end of Appendix "G".*

Intersection #21: OR 213/Redland Road

This intersection is forecast to operate with a v/c ratio of 1.12 during the weekday PM peak hour, which exceeds the ODOT mobility target of 1.10 or less. Project #D79 from the Oregon City TSP includes the addition of a third southbound through-lane on OR 213 at this intersection. Analysis of this improvement concept confirms that it would provide adequate capacity to meet the ODOT mobility target.

VEHICLE QUEUING IMPACT ASSESSMENT

A vehicle queue impact assessment was performed at key study intersections, including all proposed external site accesses. The analysis was conducted to ensure that queues can be adequately accommodated within available or proposed lane storage distances. For the analysis, 95th-percentile vehicle queue information for the weekday AM, weekday PM, and Saturday midday peak hours was taken from the Vistro operations analyses reports for the year 2025 background and total traffic conditions. Results were compared to determine the relative changes in estimated vehicle queue lengths without and with proposed development and for comparison against available or proposed lane storage. The results of the queue analyses for year 2025 background traffic conditions are shown in Table 8 and with year 2025 total traffic conditions presented in Table 9.

Year 2025 Background Traffic Queue Results

As shown in Table 9, under background conditions without trips from the master plan development, two intersections are forecast to have movements where queues exceed available lane storage. These locations and conditions are described in the sections below.

Intersection #16: Redland Rd. / Abernethy Rd.-Holcomb Blvd.

Weekday AM peak hour vehicle queues are forecast to exceed available striped lane storage within the left-turn lane on the northbound approach of Redland Road and within the westbound right-turn lane on Holcomb Boulevard.

Intersection #21: OR 213 / Redland Rd.

Weekday AM peak hour queues are forecast to exceed available lane storage within the inside lane of the dual left-turn lanes on the eastbound approach of Redland Road. The 95th-percentile left-turn queue could cause vehicles to spill back into the adjacent intersection at Redland Road/Abernethy Road. Excessive vehicle queues at this intersection may also be exacerbated by the oversaturated operating conditions forecasted for the weekday AM peak hour (v/c ratio greater than 1.0).

Table 9. Queue Analysis Results (Year 2025 Background Traffic Conditions)

Cont. = Continuous storage available for turn lane. ( ) Parentheses indicate where dual turn lanes exist with varying storage lengths.
*Lane storage shown reflects distance to accommodate queues up to next public intersection or major driveway approach.
**Lane storage shown reflects distance available within multiple through lanes before the roadway tapers down by one through lane.
*** Additional lane storage available within continuous left-turn lane that is beyond the exclusive turn lane.

Year 2025 Total Traffic Queue Results

As shown in Table 10, under conditions that include trips from the master plan development, three intersections are forecast to have movements where queues exceed available lane storage. These locations and conditions are described in the sections below. It should be noted that all six external site accesses are forecast to have sufficient lane storage at their locations along Washington Street and Abernethy Road.

Table 10. Queue Analysis Results (Year 2025 Total Traffic Conditions)

WB= Westbound, SB = Southbound, EB = Eastbound, NB = Northbound, L = Left, T = Through, R = Right, LTR = Shared left/through/right
Cont. = Continuous storage available for turn lane. ( ) Parentheses indicate where dual turn lanes exist with varying storage lengths.
*Lane storage shown reflects distance to accommodate queues up to next public intersection or major driveway approach.
**Lane storage shown reflects distance available within multiple through lanes before the roadway tapers down by one through lane.
******* Additional lane storage available within continuous left-turn lane that is beyond the exclusive turn lane.

Intersection #16: Redland Rd. / Abernethy Rd.-Holcomb Blvd.

Relative to background traffic conditions, the addition of site-generated trips are projected to increase excessive 95th-percentile queues further beyond available storage within the northbound left-turn lane on Redland Road and within the westbound right-turn lane on Holcomb Boulevard during all three peak hour analysis periods. Furthermore, the added site trips will result in a new state of excessive vehicle queues within the eastbound left-turn lane on Abernethy Road. Based on these findings, mitigation is needed to reduce excessive vehicle queues to within available storage distances, or at least reduce queues back to levels under background conditions.

Intersection #20: OR 213 / Clackamas River Dr.

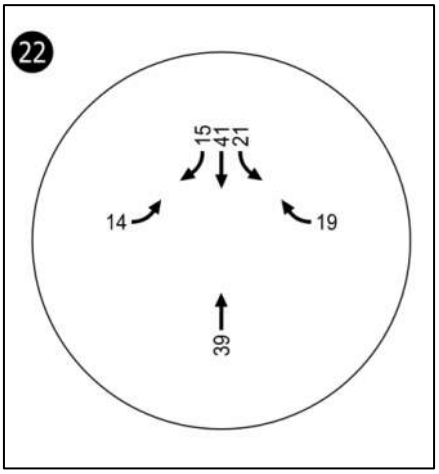
During all three of the peak hour analysis periods, vehicle queues are forecast to extend just beyond the first driveway to an adjacent Chevron Gas Station and Red Barn Car Wash facility. Further inspection of roadway conditions along Clackamas River Drive indicates that there is a secondary driveway to the gas station facility further east (more than 700 feet from the signal) where vehicle queues on Clackamas River Drive will not obstruct exiting vehicles. Also, the two westbound travel lanes on Clackamas River Drive are continuous and extend hundreds of feet further east to the roundabout at Washington Street, thus providing more stacking space for cars if needed. Based on these findings, no mitigation measures are necessary to address the queueing conditions.

Intersection #21: OR 213 / Redland Rd.

Relative to background traffic conditions, the addition of site-generated trips are projected to increase 95th-percentile queues beyond available striped lane storage during the weekday PM peak hour within the northbound left-turn lane on OR 213. Within the eastbound left-turn lanes on Redland Road, excessive vehicle queuing already forecasted in the background conditions will become worse during the weekday AM and PM peak hours. Based on these findings, mitigation is needed to reduce excessive vehicle queues to within available storage distances, or at least reduce queues back to levels under background conditions.

ON-SITE CIRCULATION/SITE-ACCESS OPERATIONS

Per the year 2025 total traffic analysis described above, the six external site accesses to Washington Street and Abernethy Road are expected to operate acceptably under the proposed traffic control measures during all three study periods. The projected 95th percentile vehicle queues for the three time periods at all six external accesses also can be accommodated. On-site parking shall be present only in locations with sufficient throat depth such that parking vehicles do not cause queueing to occur at the public street entrances. In addition, intersection sight distance is expected to satisfy applicable City requirements at the new external accesses on Washington Street and Abernethy Road and shall be documented within the project civil engineering plans. Landscaping, above ground utilities, and signing should be located and maintained along the site frontage and throughout the site in a manner that provides adequate intersection sight distance per City Code.



ACCESS SPACING

Washington Street and Abernethy Road are both classified as a *Minor Arterial*. Section 12.04.195 of the Oregon City Municipal Code requires that the minimum driveway spacing along a *Minor Arterial* is 175 feet. As described previously, the three new site accesses proposed along Washington Street will be positioned at equal spacings of approximately 500 feet relative to the signalized intersection at Washington Street/Home Depot-Site Access "A". The two new site accesses proposed along Abernethy will be approximately 1,000 feet apart, with the closest driveway at approximately 750 feet west of the signalized Abernethy Road/Redland Road intersection. Accordingly, the access spacing scheme for the master plan can comply with the access spacing requirements of the Oregon City Municipal Code.

OR 213/BEAVERCREEK ROAD PROPORTIONATE SHARE TRIP TRACKING

Development stemming from the proposed master plan is expected to be assessed its proportional share contribution for planned improvements at the OR 213/Beavercreek Road intersection. Exhibit 1 below illustrates the total number of weekday PM peak hour site-generated trips that are projected to travel through the OR 213/Beavercreek Road intersection in terms of total entering vehicles. This trip assignment is provided for the purposes of proportional share mitigation per direction from City staff.

Exhibit 1: Weekday Peak Hour Site Trips though OR 213/Beavercreek Road Intersection

The City of Oregon City will determine and collect proportionate share mitigation fees at the time of building permits as individual phases of the master plan are implemented. However, for estimating purposes only, based on **149** weekday PM peak hour site-generated trips projected to use the intersection, and the current **$219** cost per weekday PM peak hour trip[1], the total proportional share fee is estimated at **$32,631**.

[1] A $219 cost per weekday PM peak hour trip was identified by the City's traffic consultant in February 2020. The fee per trip was noted to be subject to change if a new cost estimate for the intersection project is developed in conjunction with an update of the City's capital improvement program prior to fee payment.

FINDINGS AND RECOMMENDATIONS

The following presents our findings of the transportation impact analysis for the proposed master plan, followed by recommendations for next steps to evaluate appropriate measures to mitigate off-site transportation impacts from development.

Existing Conditions

- Based on the analysis of traffic operations, all 25 existing study intersections currently operate at levels that meet the mobility standards of the governing agencies for the analysis periods.
- Crash records for the most recent five-year period available from ODOT at the 25 study area intersection include 728 reported crashes that resulted in three fatalities (0.4%) and 10 serious injuries (1.4%). Driver or pedestrian error were contributing factors in most of these instances.
- Based on the analysis of historical crash data, the following 11 study intersections currently have crash rates that exceed critical crash rates for similar facilities in the state:
    - Intersection #1: OR 99E / River Rd.-Arlington St.
    - Intersection #2: OR 99E / Dunes Dr.
    - Intersection #3: OR 99E / I-205 SB Ramp
    - Intersection #4: OR 99 E / I-205 NB Ramp
    - Intersection #14: Washington St. / 12th St. (recently signalized)
    - Intersection #18: Redland Rd. / Holly Ln.
    - Intersection #19: OR 213 / I-205 SB Loop Off-Ramp
    - Intersection #21: OR 213 / Redland Rd.
    - Intersection #22: OR 213 / Beavercreek Rd.
    - Intersection #24: Beavercreek Rd. / Molalla Ave.
    - Intersection #25: Beavercreek Rd. / Maplelane Rd.

Year 2025 Background Traffic Conditions (without development)

- Based on the analysis of traffic operations, all but one of the 25 existing study intersections are forecast to operate at levels which meet the mobility standards of the governing agency.
    - **Intersection #2: OR 99E / Dunes Dr:** This intersection is forecast to operate with a v/c ratio of 1.17 during the Saturday midday peak hour, which exceeds the ODOT mobility target of 1.10 or less. As detailed in this report, the current signal timing for this intersection has been set to favor progression of through-traffic movements on the highway. Further analysis indicates the overall intersection v/c ratio can be reduced to below 1.00 if the lag phasing for the critical southbound left-turn movement from the highway into the adjacent shopping center were switched to the lead phase concurrent with the opposing left-turn movement.

Proposed Development Plan

- The master plan envisions uses that are allowed outright by the property's Mixed Use Downtown (MUD) zoning, including mixed-use housing, retail, commercial, office, grocery stores, movie cinemas, coffee shops, and restaurants. Specific uses that are conditionally allowed by the City and also envisioned in the master plan include an anchor retail store with the option of a fuel station as an accessory use, as well as fast-food restaurants having drive-through windows.
- The concept plan is divided into four distinct sub-areas (e.g., North, East, Central, and South Districts) to illustrate the different uses and functions that will occur within each district, and to delineate possible boundaries for individual phases of development.
- Full occupancy of all master plan uses is expected to occur in 2025.
- The golf driving range that exists on the subject property today will be removed once development occurs.
- The proposed master plan is forecast to have the following trip generation characteristics:

The North End Master Plan	AM Peak Hour Trips			PM Peak Hour Trips			Saturday Peak Hour Trips		
	Total	In	Out	Total	In	Out	Total	In	Out
Total Trips	984	515	469	2727	1347	1380	3304	1696	1608
Internal Trips	*(132)*	*(66)*	*(66)*	*(318)*	*(159)*	*(159)*	*(414)*	*(207)*	*(207)*
Pass-by Trips	*(70)*	*(35)*	*(35)*	*(382)*	*(191)*	*(191)*	*(356)*	*(178)*	*(178)*
Diverted Trips	*(182)*	*(91)*	*(91)*	*(1030)*	*(515)*	*(515)*	*(1248)*	*(624)*	*(624)*
Primary Trips	600	323	277	997	482	515	1286	687	599

- Frontage improvements proposed along Washington Street will consist of the required half-street improvements, per the City's Minor Arterial street design standards. This will include additional pavement width, where needed, to support the transition of the roadway from five lanes to three lanes southbound, including the extension of a continuous left-turn lane. Frontage improvements will also support respective bike lanes, planter strip and sidewalk treatments as required by the City's design standards, and on-street parking where required by the City Engineer.
- Frontage improvements proposed along Abernethy Road will consist of the required half-street improvements consistent with the City's Minor Arterial street design standards. This will include additional pavement width, where needed, to support the existing three-lane cross-section with a continuous left-turn lane. Frontage improvements will also support respective bike lanes, planter strip and sidewalk treatments as required by the City's design standards, and on-street parking where required by the City Engineer.
- A new collector-level street will extend through the site, starting from the current street terminus just south of the signalized Washington Street/Home Depot access intersection and

ending with a new intersection at Abernethy Road. The roadway will also be designed to include bike lanes and a shared-use facility, per the City's TSP.

- A second shared-use facility will be constructed on the site, per the City's TSP. The two shared-use facilities will be fully interconnected with a system of pedestrian facilities that extend to every building, pedestrian plaza, and other pedestrian destination on the site.
- The master plan envisions a total of six external site access points. These accesses, including proposed traffic control measures are as follows:
    - **Washington St./Home Depot-Site Access "A":** Existing access with no proposed changes.
    - **Washington St./Site Access "B":** This is a new private driveway leading into a parking structure. Improvements include stop-control on the minor approach, with a single egress lane for shared left- and right-turn movements. This access will rely on the presence of a continuous left-turn lane on Washington Street to allow for left-turn ingress.
    - **Washington St./Site Access "C":** This access is identical to Site Access "B".
    - **Washington St./Site Access "D":** This is a new private street connection leading into the site. Improvements include stop-control on the minor approach, with separate left- and right-turn egress lanes. This access will rely on the presence of a continuous left-turn lane on Washington Street to allow for left-turn ingress.
    - **Abernethy Rd./Site Access "E":** This is a new private street connection leading into the site. Improvements include stop-control on the minor approach, with a single egress lane for shared left- and right-turn movements. This access will rely on the presence of a continuous left-turn lane on Abernethy Road to allow for left-turn ingress.
    - **Abernethy Rd./Site Access "F":** This is part of the new collector-level street leading into the site. Improvements include signalization, with separate left- and right-turn egress lanes. This access will rely on a left-turn lane on Abernethy Road to allow for left-turn ingress. Improvements also include the construction of a westbound right-turn lane from Abernethy into the site.
- Expected safety benefits of the proposed master plan include:
    - Locating housing in immediate proximity to jobs, services, retail, and recreation.
    - More than 400 trips during the Saturday midday peak hour are estimated to occur entirely within the site, likely as pedestrians.
    - Site driveways will be positioned and designed to meet all City requirements for sight distance, driveway spacing, and appropriate traffic control.

- Surrounding neighborhoods will have proximate access to jobs and service, retail, and recreational opportunities in close proximity, which will reduce their trip length and increase their options for walking, biking, and using transit to access these uses.
- Reducing the trip length and converting some existing trips from motor vehicle to walking, biking, and/or transit trips can reduce overall exposure on a systemwide level.

Year 2025 Total Traffic Conditions (with development)

- Based on the analysis of traffic operations, all but two of the 25 existing study intersections are forecast to operate at levels that meet the mobility standards of the governing agency.
  - **Intersection #2: OR 99E / Dunes Dr. -** This intersection is forecast to operate with a v/c ratio of 1.22 during the Saturday midday peak hour, which exceeds the ODOT mobility target of 1.10 or less. As detailed in this report, the current signal timing for this intersection has been set to favor progression of through-traffic movements on the highway. Further analysis indicates the overall intersection v/c ratio can be reduced to below 1.00 if the lag phasing for the critical southbound left-turn movement from the highway into the adjacent shopping center were switched to the lead phase concurrent with the opposing left-turn movement.
  - **Intersection #21: OR 213/Redland Road -** This intersection is forecast to operate with a v/c ratio of 1.12 during the weekday PM peak hour, which exceeds the ODOT mobility target of 1.10 or less.
- Based on the analysis of vehicle queuing operations, the following intersections around the perimeter of the master plan site are forecast to experience an increased impact on queuing deficiencies:
  - **Intersection #16: Abernethy Rd./Redland Rd. -** This intersection is forecast to have queue deficiencies within the northbound left-turn lane on Redland Road, within the eastbound left-turn lane on Abernethy Road, and within the westbound right-turn lane on Holcomb Boulevard.
  - **Intersection #21: OR 213/Redland Road -** This intersection is forecast to have queue deficiencies within the northbound left-turn lane on OR 213 and the eastbound left-turn lane on Redland.
- Based on a review of the locations of the proposed external site accesses, the proposed access schemes for Washington Street and Abernethy Road meet the City's access spacing standards for a *Minor Arterial* roadway designation.
- The City of Oregon City is collecting proportionate share mitigation fees for the OR 213/Beavercreek Road intersection at the time of building permits. For estimating purposes only, based on 149 weekday PM peak hour site-generated trips projected to use the

intersection, and the anticipated $219 cost per weekday PM peak hour trip, the total proportional share fee is estimated at $32,631.

- Landscaping, above ground utilities, and signing should be located and maintained along the site frontages and throughout the site in a manner that provides adequate intersection sight distance per City Code.

Recommendations for Mitigation or Further Analysis

- OR 213/Dunes Road – Further document how signal timing/phasing optimization can improve intersection operations.
- OR 213/Redland Road – To address operational and vehicle queue deficiencies, evaluate the construction of a third southbound travel lane on OR 213 through the intersection with taper transition back to two lanes prior to the Holcomb Boulevard overcrossing. This improvement would also include reconstruction of the exclusive southbound right-turn lane from the highway onto Redland Road at current storage length, with appropriate taper transition back to three lanes prior to the sign bridge across OR 213.
- Abernethy Road/Redland Road – To address queue deficiencies, research installation of a right-turn overlap signal phasing on the southbound approach of Redland Road. As necessary, evaluate the construction of a second eastbound left-turn lane on Abernethy Road and retiming of the traffic signal to minimize vehicle queues.
- Abernethy Road/Site Access "F" - Evaluate signal warrants and increased multimodal benefits under a scenario that includes a traffic signal at this primary access to Abernethy Road.

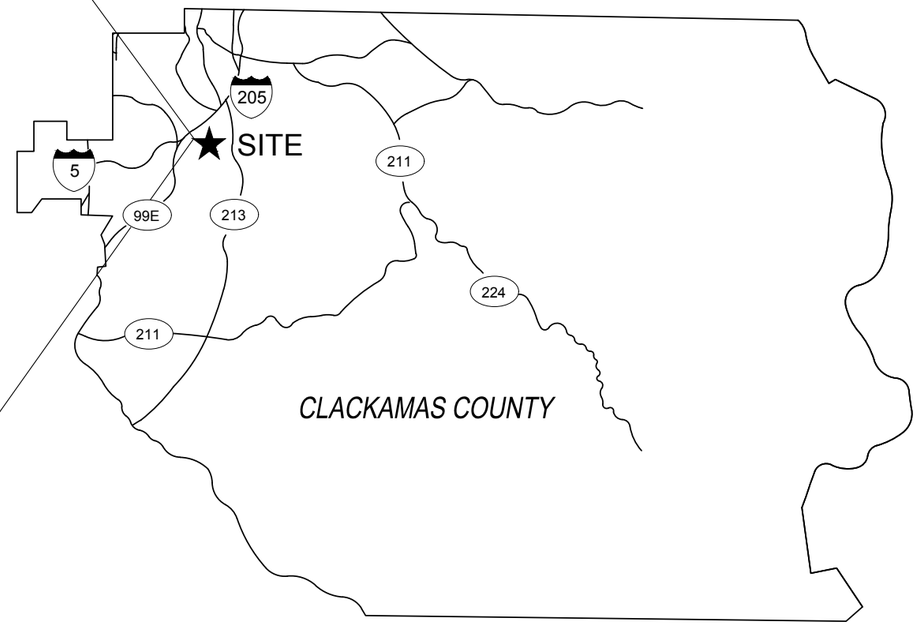
TIA SCOPING MEMORANDUM

Date: January 26, 2021 Project #: 24824

To: John Replinger, Replinger & Associates, LLC
Oregon City Planning Dept.
695 Warner Parrott Road
Oregon City, OR 97045

From: Brian J. Dunn, PE, Phill Worth, and Ali Razmpa
Project: Oregon City Master Plan Concept (PA 20-11)
Subject: **Transportation Impact Analysis Scoping Memorandum**

Per the City of Oregon City Guidelines for Transportation Impact Analysis (November 2005), this memorandum summarizes the proposed scope of the transportation impact analysis (TIA) for the proposed Oregon City Master Plan Concept. The applicant, Summit Development Group, is proposing an urban mixed-use development on approximately 62 acres of property located at 1105 Abernethy Road in Oregon City. Figures 1 and 2 display site vicinity maps showing the location of the proposed master plan site and surrounding study intersections. As shown, the site is bound by Abernethy Road to the south, Redland Road and OR 213 to the east, and Washington Street to the north. Established land uses immediately adjacent to the master plan site, including Home Depot to the northeast and the Oregon Trail Interpretive Center to the southwest, are not part of this application and will remain unchanged.



The remaining sections of this memorandum provide additional information regarding the master plan land uses, site accessibility, vehicle trip generation and distribution characteristics of the project, identified study intersections for inclusion in the TIA report as well as analysis methodology, and other assumptions that require coordination and confirmation with City and ODOT traffic engineering staff.

DEVELOPMENT DESCRIPTION

The proposed Oregon City Master Plan concept is illustrated in Figure 3. As shown, the master plan incorporates a variety of land uses including residential, retail/commercial, and potential office space. Specific uses allowed outright by the Mixed Use Downtown (MUD) zoning that applies to the property include mixed use housing, retail, commercial, office, grocery stores, movie cinemas, and restaurants. Specific uses that are conditionally allowed in the concept plan include an anchor retail store with fuel station as an accessory use, as well as a fast-food restaurant with drive through window.

The concept plan shown in Figure 3 is also divided into four distinct sub-areas (e.g. North, East, Central, and South Districts) to illustrate the different uses and functions that will occur within each district, and to delineate possible boundaries for individual phases of development.

In terms of access, most site traffic will rely on a new collector-level street constructed through the center of the site. The collector street would extend from the current street terminus that accesses Washington Street, west of Home Depot, proceed in a southwest direction, and then turn southeast to intersect with Abernethy Road roughly in the same location as the existing driveway that leads to the golfing range on-site. Two other external private street connections are also envisioned as part of the master plan street network. One street access would occur at Washington Street in the northwest corner of the site and the other at Abernethy Road in southwest corner of the site. Use of these private external connections is intended to be secondary to the collector street but are necessary to distribute site trips efficiently and between internal land uses.

As stated above, a golf driving range exists on the subject property. The driving range will be removed once development occurs.

SITE TRIP GENERATION ESTIMATES

Site trip generation estimates for the master plan were prepared for the weekday a.m., weekday p.m., and Saturday midday peak hours of the adjacent street network. The need to address three separate peak hour periods in our TIA report stems from the outcome of a scoping discussion with traffic engineering staff from Oregon City and ODOT on December 11, 2020. In that discussion, preliminary trip generation estimates were reviewed and a determination was made that the intensity and variety of land uses proposed in the master plan concept have the potential to generate sufficient traffic on the surrounding street system to warrant analysis of all three peak hour periods.

Trip estimates for the proposed master plan are shown on the following page in Table 1, with trip totals shown for the individual land uses and for the master plan as a whole. Trips are also shown broken out by trip types (e.g. total, internal, pass-by, and diverted trips).

The total trips shown for each land use in Table 1 are based on trip rates or equations contained in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10th Edition (Reference 1), using the most relevant ITE land use category. The total trips shown for residential uses reflect ITE 221 (*Multifamily Housing Mid-Rise*). Total trips for the fast-food restaurant reflect ITE 934 (*Fast-Food Restaurant with Drive-Through Window), and t*otal trips shown for the retail/commercial uses, which include all retail spaces as well as the grocery store, cinema, and restaurants, were estimated using ITE 820 (*Shopping Center*). For the remaining large retail anchor building, total trips were estimated using ITE 813 (*Free-Standing Discount Superstore*).

It should be noted that a higher trip generation results from separating out the fast-food restaurant and the free-standing discount superstore from the shopping center land use. It would be reasonable to include all proposed retail uses under the shopping center land use, as all proposed uses are commonly found at shopping centers of this scale. This approach is proposed to provide a more conservative analysis of the trip generation potential of the site.

After total trips were accounted for, estimates of internal trip capture were made, which reflect the internalization of trips between individual land uses of the master plan. The process of internal capture was carried out using ITE's OTISS (online traffic impact study software), which follows the procedures of *NCHRP Report 684 – Enhancing Internal Trip Capture Estimation for Mixed-Use Developments* (Reference 2).

Next, pass-by trips were estimated for all the retail uses in the master plan. By definition, pass-by trips reflect vehicles already present on the site frontage streets of Washington and Abernethy Streets that turn into the project using one of the site accesses, visit a use on site, and then return back onto the adjacent street in the direction they were originally heading. Pass-by trip estimates were prepared using pass-by rate information contained in ITE's *Trip Generation Handbook*, 3rd Edition (Reference 3). For instances where ITE pass-by rate information was not available for certain peak hour periods, the lower pass-by rates of adjacent peak hour periods were applied to reflect a conservative minimum reduction.

The final step in the trip generation process was to account for diverted trips also associated with uses on the site. By definition, diverted trips reflect those vehicles that are passing nearby, but deviate onto a non-contiguous street facility to reach the site (e.g. I-205, OR 213, Holcomb Road, Redland Road, Clackamas River Drive). Similar to the pass-by trip capture process, diverted trips were estimated using available rate information in ITE's *Trip Generation Handbook*, 3rd Edition. For instances where ITE diverted rate information was not available for certain peak hour periods, the lower pass-by rates of adjacent peak hour periods were applied to reflect a conservative minimum reduction.

It should be noted that the results shown in Table 1 reflect an engineering judgment decision to shift a larger percentage of the pass-by trips calculated in this process into the diverted trip category. The reason for this shift is because the current traffic levels on the frontage streets of Washington Street and Abernethy Road are not high enough to support the calculated pass-by demand for this project. The high volumes of traffic and proximity of OR 213 and I-205 present significant opportunities for trip diversion to this site. Therefore, 50% of the calculated pass-by trips were shifted over into the diverted trip category to reflect the project's attraction of trips from other major streets nearby (e.g. Holcomb Road, Redland Road, Clackamas River Drive, OR 213, and I-205.

Table 1: Site Trip Generation Estimate

Master Plan Uses		Land Use	Size	AM Peak Hour Trips			PM Peak Hour Trips			Saturday Peak Hour Trips

Site Trip Distribution and Assignment

Estimated site trip distribution patterns were developed based upon the nature of the land uses in the master plan, the location of the site relative to major travel routes in the area, and a review of previous traffic studies for similar land developments in Oregon City. These patterns are shown in Figures 4 and 5 on roadways throughout the site vicinity and reflect the following distribution patterns for all primary (net new) site trips:

- 24% of trips to/from I-205 (North);
- 12% of trips to/from OR 99E (North via McLoughlin Blvd.);
- 22% of trips to/from I-205 (South);
- 7% of trips to/from OR 99E (South to Canby);
- 6% to/from central Oregon City (West via Washington St.);
- 3% of trips to/from Clackamas River Dr. (Northeast);
- 2% of trips to/from Anchor Wy. (South via Redland Rd.);
- 3% of trips to/from Beavercreek Rd. (West of OR 213);

- 4% of trips to/from Beavercreek Rd. (East of OR 213);
- 8% of trips to/from OR 213 (South of Beavercreek Rd.);
- 5% of trips to/from Redland Rd.; and,
- 4% of trips to/from Holcomb Rd.

Table 2 summarizes preliminary estimates of the two-way traffic assignment of all primary trips to/from the major travel routes in the site vicinity, using the percentage distribution patterns above. This table was used to identify the 25 respective study intersections identified for analysis in the TIA report.

Table 2: Preliminary Distribution and Assignment of Primary Site Trips

Route	Site Trip Distribution	Weekday AM Peak Hour	Weekday PM Peak Hour	Saturday Midday Peak Hour
I-205 (North)	24.0%	145	234	301
OR 99E (North via McLoughlin)	12.0%	72	117	151
I-205 (South)	22.0%	133	214	276
OR 99E (South to Canby)	7.0%	42	68	88
Central Oregon City (via Washington)	6.0%	36	58	75
Clackamas River Drive (Northeast)	3.0%	18	29	38
Anchor Way (via Redland)	2.0%	12	19	25
Beavercreek Rd (West of OR 213)	3.0%	18	29	38
Beavercreek Rd (East of OR 213)	4.0%	24	39	50
OR 213 (South of Beavercreek)	8.0%	48	78	100
Redland Rd	5.0%	30	49	63
Holcomb Rd	4.0%	24	39	50
Total Primary Trips	**100.0%**	**604**	**974**	**1,256**

STUDY AREA INTERSECTIONS

Per the City of Oregon City TIA Guidelines the study area for the TIA should be based on the forecast trip generation of the development combined with engineering judgment and an understanding of existing and future land use and traffic conditions in the vicinity of the site. The guidelines identify the following considerations to form the basis for establishing the study area:

- All site access points and intersections adjacent to the site, including driveways serving parcels on the opposite side of the street;
- Roads through the site;
- Any intersection of two streets having a classification of arterial or collector, where site traffic will exceed 20 peak hour trips.

- Intersections where signal progression analysis is needed.

Based on the guidance above, the estimated peak hour assignment of primary site trips onto the surrounding roadways, and per the outcome of the scoping discussion, city staff have identified the following 27 study intersections for analysis in the TIA report:

1. I-205 WB Loop Off-Ramp / OR 213
2. Washington St, / Clackamas River Dr.
3. OR 213 / Clackamas River Dr.
4. Washington St. / Clackamas River Dr.
5. Washington St. / Street Access to Home Depot
6. OR 99E / River Rd.
7. OR 99E / Dunes Dr.
8. OR 99E / I-205 WB Loop off-Ramp
9. OR 99 E / I-205 EB Loop off-Ramp
10. OR 99E / 14th St.
11. OR 99E / 12th St.
12. OR 99E / 10th St.
13. Washington St. / 7th St.
14. Washington St. / 12th St.
15. Washington St. / 14th St.
16. Washington St. / 15th St.
17. Washington St. / 17th St.
18. OR 213 / Redland Rd.
19. Abernethy Rd. / Redland Rd.
20. Redland Rd. / Anchor Wy.
21. Holly Ln. / Redland Rd.
22. OR 213 / Beavercreek Rd.
23. Beavercreek Rd. / Molalla Ave.
24. Beavercreek Rd. / Maple Lane Rd.
25. OR 213 / Molalla Ave.

The existing lane configurations and traffic control devices present at the 25 existing study intersections above are also shown in Figures 4 and 5. As shown, 21 of the 25 intersections are signalized. As such, existing signal timing plans will be obtained from Clackamas County, City, or ODOT and incorporated into the operational analyses for this intersection within the TIA.

ESTABLISHING BASELINE (PRE-COVID) TRAFFIC VOLUMES

Due to the current atypical traffic patterns associated with the COVID-19 pandemic, the collection of traffic counts that reflect pre-COVID conditions is not possible. Therefore, we are proposing to develop proxy volume estimates by applying COVID Adjustment Factors (CAF's) to the turn movement traffic

counts we have collected recently at all 25 study intersections in the middle of December 2020. For intersections involving city or county roadways, we have devised a CAF by comparing recent and historical traffic counts available for four of the city intersections. For those study intersections located along the OR 213 and OR 99E corridors, we have devised separate CAF's using vehicle detection data available from ODOT for the signal controllers in these highway corridors, with detection data collected for the years 2018-2020 over the months of November and December, which are consistent with the seasonal period of the traffic counts we collected in December 2020. Table 3 presents the CAF's calculated for the weekday a.m. peak hour, weekday p.m. peak hour, and Saturday midday peak hour periods.

Table 3: COVID Adjustment Factors (By Facility and Analysis Period)[1]

Facility	Weekday AM Peak Hour	Weekday PM Peak Hour	Saturday Midday Peak Hour
City/County Streets	1.41	1.11	1.01
OR 213	1.25	1.10	1.04
OR 99E	1.50	1.16	1.03

1 – Engineering judgment and knowledge of local land use and travel patterns will be used when applying and adjusting these factors in specific locations.

TRAFFIC ANALYSIS PERIODS

As shown in Table 1, site trip generation estimates for the master plan were prepared for three separate analysis periods. These periods reflect the weekday morning (7:00 a.m. - 9:00 a.m.), weekday afternoon (4:00 p.m. - 6:00 p.m.), and Saturday midday (11:15 a.m. - 1:15 p.m.) peak hour periods. Inclusion of all three time periods in our TIA report stems from our scoping discussion with traffic engineering staff from Oregon City and ODOT on December 11, 2020. In that discussion, preliminary trip generation estimates revealed that the master plan would generate sufficient traffic to warrant analysis of all three time periods. Additionally, the scoping discussion focused on prevailing traffic conditions on the surrounding street system and the consistency of peak traffic demand patterns during the weekday commute periods as well as weekend patterns.

For the operations analysis, we are proposing to analyze the systemwide peak hours; the periods when traffic volumes at all 25 study intersections reach their highest levels in terms of totaling entering vehicles. Based on early road tube count data we have collected in December 2020, the systemwide weekday morning peak hour appears to occur from 7:25 a.m. to 8:25 a.m., with the afternoon peak hour occurring from 4:00 p.m. to 5:00 p.m., and the Saturday midday peak hour occurring from 12:15 p.m. to 1:15 p.m.

OPERATIONS ANALYSIS METHODOLOGY

The proposed methodology for analyzing intersection operations will be consistent with the procedures and standards outlined in the Oregon City TIA Guidelines. Vistro 2020, a software tool designed to

analyze intersection operations and vehicle queues in accordance with Highway Capacity Manual methodologies, will be used.

ANNUAL TRAFFIC GROWTH ASSUMPTIONS

The TIA report will address a five-year forecast of future traffic conditions. To prepare future traffic estimates, baseline year traffic volumes at all study intersections will be increased by the annual traffic growth rates shown in Table 4. These growth rates were determined from a review of the last five years of historical highway volume traffic data available from ODOT for various locations along the OR 213 and OR 99E corridors and a comparative analysis for historical and recent traffic counts collected at four city intersections.

Table 4: Annual Traffic Growth Rates for Study Intersections (By Facility and Analysis Period)

Facility	Weekday AM Peak Hour	Weekday PM Peak Hour	Saturday Midday Peak Hour
City/County Streets[1]	1.15%	1.15%	1.15%
OR 213[2]	2.0%*	2.0%*	2.0%*
OR 99E[2]	1.2%*	1.2%*	1.2%*

1 – For intersection legs that involve City or County roadways, the annual growth rate of 1.15% for these facilities will be applied to the associated minor movements. This rate is equivalent to the population growth rate for the past 5 years in Oregon City.

2 – Growth rates shown for the highway corridors are appropriate for application to the volume of traffic traveling through the area. They are derived from historical average daily traffic volumes provided by the Oregon Department of Transportation for the past five years ending 2019.

It should be emphasized that the annual growth rates presented in the table above are consistent with assumptions made in prior traffic studies conducted in the City of Oregon City, where annual traffic growth trends range between negative one percent and positive four percent.

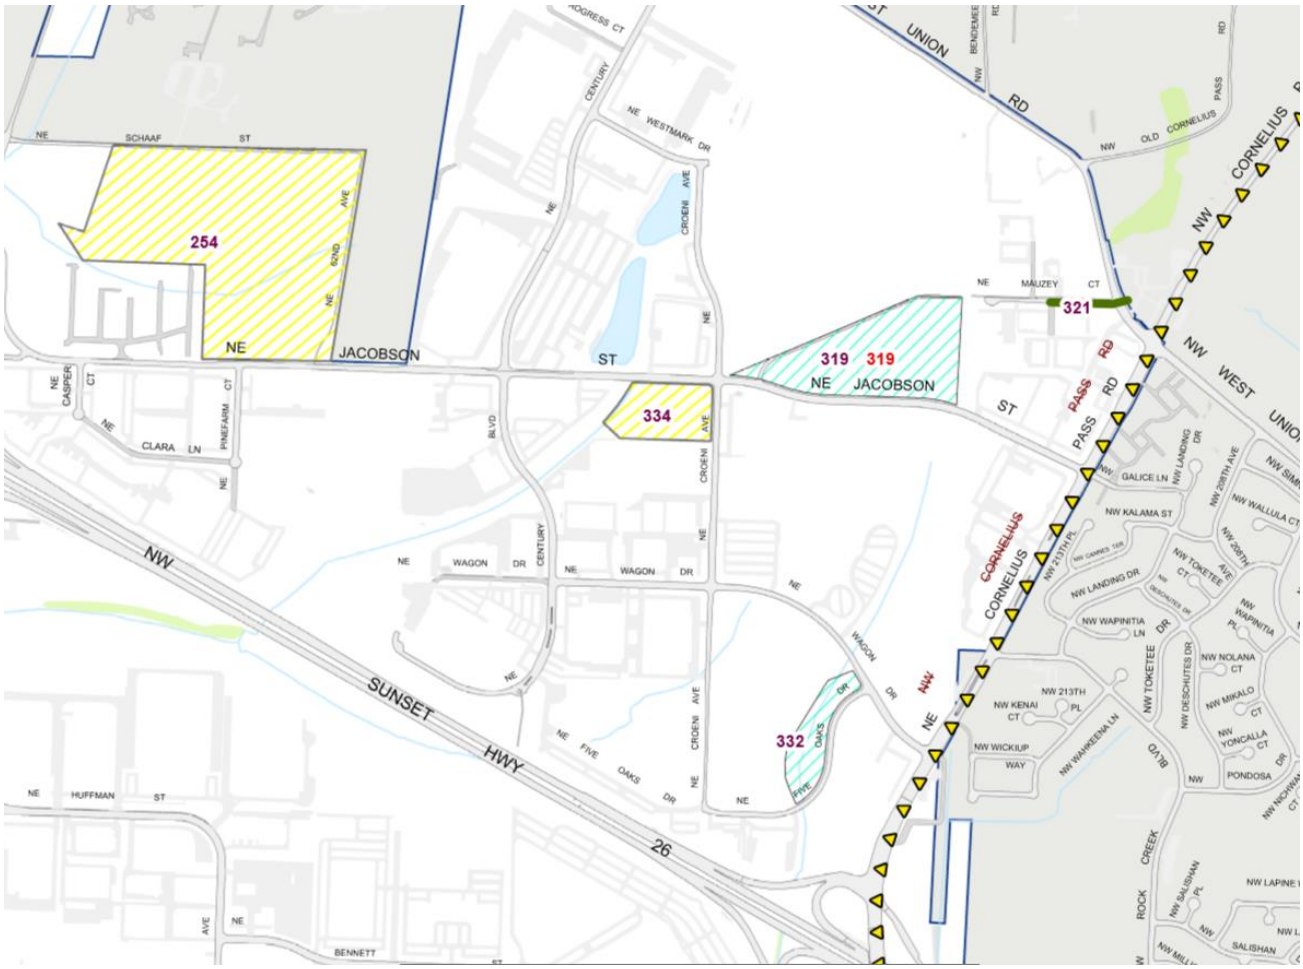
IN-PROCESS DEVELOPMENTS

Based on our scoping conversations with the City, the following in-process developments have been identified for inclusion in the background traffic forecast for the master plan TIA:

1. The Cove Project
2. Red Soils Master Plan (final Phase 2)
3. North Beavercreek Industrial Project
4. Oregon City Operations Center

Trip assignments for the in-process developments listed above will be collected from available resources (e.g. prior traffic studies) and only those trips not yet realized from development will be accounted for. If trip information for unique time periods (e.g. Saturday midday peak hour) are not available, trip estimates will be made using standard industry resources such as the ITE Trip Generation Manual, with reasonable trip assignments that reflect available information for other peak hour periods.

TRAFFIC IMPACT ANALYSIS SCOPE



The TIA report for the proposed master plan will include an evaluation of the following items:

- Development of proxy volume estimates for all study intersections, in a manner which reflect pre-COVID 19 traffic conditions.
- Existing conditions analysis, including intersection v/c ratio, control delay, and 95th percentile queues during the weekday a.m. and p.m. peak hours, as well as the Saturday midday peak hour.
- Crash data analysis of all study intersections for the most recent five-year period listing for potential trends or deficiencies.
- Build-out year (assumed 2025) background conditions analysis, including intersection v/c ratio, control delay, and 95th percentile queues during all three peak hour analysis periods.
- Site trip generation estimates for the anticipated land uses under all three peak hour analysis periods.
- Peak hour trip distribution and assignment patterns based on the nature of the proposed uses, review of previous studies in the area, and knowledge of major local travel generators and destinations.
- Build-Out Year (assumed 2025) total traffic conditions analysis, including intersection v/c ratio, control delay, and 95th percentile queues for all three peak hour analysis periods.
- Analysis of turn lane needs and traffic signal warrants at key intersections.
- Analysis of intersection sight distance following AASHTO guidelines, where applicable at site driveways.
- Analysis of site circulation patterns and turning movement needs of large trucks at site accesses, where applicable.

We request City staff confirm our study scope assumptions. If you have any questions, please contact us at 503-228-5230.
