TECHNICAL MEMORANDUM

Safety Analysis for The North End Master Plan (PA 20-11)

Date: March 19, 2021 Project # 24824.0:

To: John Replinger, Replinger & Associates, LLC
Oregon City Planning Dept.
695 Warner Parrott Road
Oregon City, OR 97045

From: Brian J. Dunn, PE, Phill Worth, and Ali Razmpa, PE

cc:

This technical memorandum was prepared to provide a more robust analysis of the reported crash histories for the 11 study intersections identified as having high crash rates, per the latest five years of data provided by ODOT (January 1, 2014, through December 31, 2018). For each intersection, a closer inspection was made of reported crash totals, reported injuries, crashes that involved pedestrians or bicyclists, repeating crash patterns, and the causes of crashes. Finally, potential safety countermeasures are identified each of the 11 intersections for consideration by the governing agency (i.e., ODOT, City of Oregon City, or Clackamas County).

In addition to this technical memorandum, attached are the raw crash data reports from ODOT for all 25 study intersections followed by detailed crash diagrams where serious injuries occurred at the 11 high crash locations.

INTERSECTION #1: OR 99E/RIVER RD-ARLINGTON ST

A detailed evaluation of the crashes at the OR 99E/River Rd.-Arlington St. intersection was performed due to the observed crash rates exceeding the critical crash rate for the intersection. Of 56 reported crashes, 38 crashes resulted in injuries and 18 crashes resulted in property damage only. Pedestrians or bicyclists were involved in four crashes, all of which resulted in the pedestrian or bicyclist being injured. A majority of crashes were a “turn”-type collision (29 of 56), with an additional 19 crashes having a collision type of “rear end”.

Of the two crashes involving pedestrians, drivers were turning right and are recorded as failing to yield right of way to the pedestrian. Both of the crashes resulted in the pedestrian being injured. One crash involved a driver making a westbound right turn while the pedestrian was travelling northbound and the other crash involved a driver making a southbound right turn. Similarly, a crash occurred between a

bicyclist going north to south and a vehicle making a southbound right, in which the driver is recorded as proceeding after stopping, indicating the driver may have turned right on red before hitting the bicyclist. ***Further analysis of potential countermeasures by ODOT should consider "No Right Turn on Red" signage or "Yield to Pedestrian" signage, both of which could be dynamic and activated by the pedestrian signal phase.***

A total of 14 of the 29 turn crashes occurred between vehicles making a northbound left turn from OR 99E onto River Rd and vehicles travelling southbound on OR 99E. In all of these cases, the driver making the northbound left is recorded as not having right-of-way. ***Further analysis of potential countermeasures by ODOT should consider limiting the use of the permitted left turn phasing (Flashing Yellow Arrow) at this intersection to mitigate this crash type.***

A total of 6 of the 29 turn crashes occurred between vehicles making a southbound left turn from OR 99E onto River Rd and vehicles travelling northbound on OR 99E. In all of these cases, the driver making the southbound left is recorded as not having right-of-way. ***Further analysis of potential countermeasures by ODOT should consider limiting the use of the permitted left turn phasing (Flashing Yellow Arrow) at this intersection to mitigate this crash type.***

Rear end crashes occurred on all approaches to the intersection, with 4 crashes occurring on the north leg, 6 on the south leg, 2 on the west leg, and 7 on the east leg. ***Further analysis of potential countermeasures by ODOT could consider installing retroreflective backplates on all signal heads.***

INTERSECTION #2: OR 99E/DUNES DR

A detailed evaluation of the crashes at the OR 99E/Dunes Dr intersection was performed due to observed crash rates exceeding the critical crash rate for the intersection. Of 48 reported crashes, 33 crashes resulted in injuries and 15 crashes resulted in property damage only. Pedestrians or bicyclists were involved in four crashes, all of which resulted in the pedestrian or bicyclist being injured. A majority of crashes were "rear end" collisions (20 of 48), with an additional 13 crashes involving a "turn" type collision.

All crashes involving a pedestrian or bicyclist occurred between a vehicle making an eastbound left (3 of 4) or a westbound left (1 of 4), while the pedestrian or bicyclist was crossing OR 99E. In each case the driver was recorded as failing to yield right-of-way to the pedestrian or bicyclist. ***Further analysis of potential countermeasures by ODOT should consider protected left turn phasing on the minor approaches, omitting a left turn permitted phase while the pedestrian phase is called, or operating the signal in split phase to protect the pedestrian phase.***

A majority of the "rear end" crashes occurred on the north (10 of 20) and south legs (7 of 10) of OR 99E, which is a typical pattern due to the stop-and-go effect created by the traffic signal cycles at this highway intersection.

A total of four of 13 "turn" type crashes occurred between vehicles turning southbound left from OR 99E to the Oregon City Shopping Center entrance and vehicles travelling through on OR 99E. Three of these cases involved the turning vehicle not yielding to oncoming traffic. Also, an additional three of the "turn" type crashes occurred between vehicles turning westbound left onto OR 99E and vehicles travelling through on OR 99E. Each of these cases involved the vehicle travelling through failing to follow the traffic signal. ***Further analysis of potential countermeasures by ODOT should consider opportunities to draw attention to the traffic signal including, reorganizing distracting signage, providing advanced warning signage, and/or installing retroreflective signal backplates.***

INTERSECTION #3: OR 99E/I-205 SB RAMP

A detailed evaluation of the crashes at the OR 99E/I-205 SB Ramp intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Of 46 reported crashes, 29 included crashes resulting in injuries and 17 crashes resulting in property damage only. A bicyclist was involved in one crash, which resulted in the bicyclist being injured. Crashes are primarily split between "turn" type collisions (22 of 46) and "rear end" collisions (21 of 46).

A total of seven of the 22 "turn" crashes occurred between vehicles making a westbound left turn from I-205 SB Off Ramp to OR 99E and vehicles travelling southbound on OR 99E. Four of the 22 "turn" crashes occurred between vehicles making a westbound left turn from I-205 SB Off Ramp to OR 99E and vehicles travelling northbound on OR 99E. In all of these cases, the driver making the through movement on OR 99E is recorded as disregarding the traffic signal. ***Further analysis of potential countermeasures by ODOT should consider opportunities to draw attention to the traffic signal including, reorganizing distracting signage, providing advancing warning signage, or installing retroreflective signal backplates.***

A total of nine of the 22 "turn" crashes occurred between vehicles making a southbound left turn from OR 99E to the I-205 SB On Ramp and vehicles travelling northbound on OR 99E. About half of these crashes resulted from the left turn failing to yield right-of-way and the other half are related to the through movement disregarding the signal. ***Further analysis of potential countermeasures by ODOT should consider extending the red clearance time for the protected left turns of this movement.***

Rear end crashes are concentrated on the north and east legs of the intersection, with 14 crashes occurring on the north leg (one of which occurred in the left turn lane) and 7 on the east leg. ***Further analysis of potential countermeasures by ODOT could consider installing retroreflective backplates on signal heads, especially for the southbound approach, and additional advanced warning signage on the I-205 SB off-ramp.***

INTERSECTION #4: OR 99E/I-205 NB RAMP

A detailed evaluation of the crashes at the OR 99E/I-205 NB Ramp intersection was performed given the observed crash rates exceed the critical crash rate for the intersection. Of the 35 reported crashes, 20 crashes resulted in injuries and 15 crashes resulted in property damage only. A majority of crashes were

"rear end" collisions (22 of 35) and an additional 12 crashes were "turn" type collisions. A pedestrian was involved in one crash, which resulted in the pedestrian being injured.

A total of 14 of the 22 "rear end" crashes occurred on the east leg, which is the I-205 NB Off Ramp. ***Further analysis of potential countermeasures by ODOT could consider modifying this off ramp to include additional queue storage for the separate left- and right-turn lanes, which could be integrated into the design plans now being prepared for the I-205 freeway widening project.***

A total of seven of the 12 "turn" crashes occurred between vehicles making a southbound left turn from OR 99E to I-205 NB On Ramp and vehicles travelling northbound on OR 99E. In four of these cases, the left turning vehicle failed to follow the traffic signal or did not have right-of-way. In one case, the northbound through vehicle failed to follow the traffic signal, and the cause is unknown. ***Further analysis of potential countermeasures by ODOT could consider extending the red clearance time for the protected left turns of this movement and opportunities to draw attention to the traffic signal including installing retroreflective signal backplates.***

A total of four of the 12 "turn" crashes occurred between vehicles making a westbound left turn from I-205 NB Off Ramp to OR 99E and vehicles travelling northbound on OR 99E. In each case, northbound vehicles did not obey the traffic signal. ***Further analysis of potential countermeasures by ODOT could consider opportunities to draw attention to the traffic signal including installing retroreflective signal backplates.***

INTERSECTION #14: WASHINGTON ST/12TH ST

A detailed evaluation of the crashes at the Washington St./12th St. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Reported crashes include one crash resulting in a death, 26 crashes resulting in injuries, and 25 crashes resulting in property damage only. Pedestrians or bicyclists were involved in two crashes, one of which resulted in the death of the pedestrian.

A majority of the crashes (39 of 52) report a collision type of "angle". Typically, angle crashes at this intersection occurred between vehicles crossing Washington St. on 12th St. and vehicles travelling through 12th St. on Washington St.

A traffic signal was installed by the City at this location in 2019, which may have reduced the potential for the "angle" type crash pattern at this intersection. Therefore, no further potential safety countermeasures are proposed.

INTERSECTION #18: REDLAND RD/HOLLY LN

A detailed evaluation of the crashes at the Redland Rd./Holly Ln. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the

intersection. Reported crashes include five crashes resulting in injuries, and two crashes resulting in property damage only. The seven reported total crashes are roughly split between "rear end" and "turn" collision types.

All four of the "rear end" crashes occurred on the east leg (Redland Road) of the intersection, resulting from a driver making an error of failing to avoid a stopped vehicle ahead. The east leg of the intersection is an uncontrolled leg of a 3-legged two-way stop intersection. Redland Road has a posted speed of 45 MPH and has some horizontal curvature leading up to the east leg of the intersection, which may affect sight distance for approaching vehicles. ***Further analysis of potential countermeasures by the City or Clackamas County could consider installing advanced warning signage or installing a left turn pocket for vehicles waiting to turn onto Holly Lane.***

All three of the "turn" type collisions occurred between vehicles making a northbound left turn from Holly Lane onto Redland Road and vehicles travelling eastbound on Redland Road. Vehicles making the northbound left turn are identified as not having right-of-way. ***Further analysis of potential countermeasures by the City or Clackamas County could consider installing advanced warning signage for the eastbound movement or examining the opportunity to increase sight distance for the northbound left movement. Also, the City's TSP project (D48) to extend Holly Ln. north to Holcomb Blvd. may warrant the installation of a traffic signal at this location in the future.***

INTERSECTION #19: OR 213/I-205 SB OFF RAMP

A detailed evaluation of the crashes at the OR 213/I-205 SB Off Ramp intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Of the 22 reported crashes, eight included injuries and 14 resulted in property damage only. Crashes were primarily split between "turn" type collisions (8 of 22), "sideswipe" collisions (6 of 22) and "rear end" collisions (5 of 22).

About 12 crashes involving "sideswipe" and "turn" type crashes appear to occur around the merge point between the I-205 SB Loop Off Ramp and the OR 213 southbound movement. The crash report summary leaves some ambiguity in determining exactly where the crashes occurred. Crashes involving sideswipes may also be occurring between vehicles travelling adjacent to one another on the looping off ramp. Further analysis of potential countermeasures by ODOT would benefit from more detailed information about these crash types at this location.

INTERSECTION #21: OR 213/REDLAND RD

A detailed evaluation of the crashes at the OR 213/Redland Rd. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Of the 53 reported crashes, 33 resulted in injuries and 20 crashes resulting in property damage only. A majority of crashes were "rear end" related (42 of 53), with an additional 10 crashes involving "turn" type collisions.

Eighteen of the 42 "rear end" crashes occurred on the south leg (OR 213), with 17 crashes on the north leg (OR 213). ***Further analysis of potential countermeasures by ODOT could consider advance warning signs and/or advisory speed signs during congested periods.***

Four of the 10 "turn" type collisions occurred between vehicles making a northbound left turn from OR 213 to Redland Road and vehicles travelling southbound on OR 213, who disregarded the traffic signal. All four crashes resulted in an injury to at least one person. ***Further analysis of potential countermeasures by ODOT could consider installing retroreflective backplates on signal heads for all approaches.***

INTERSECTION #22: OR 213/BEAVERCREEK RD

A detailed evaluation of the crashes at the OR 213/Beavercreek Rd. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Reported crashes include one crash resulting in a death, 65 crashes resulting in injuries, and 69 crashes resulting in property damage only. Pedestrians or bicyclists were involved in three crashes, one of which resulted in a pedestrian being killed and the other two resulting in bicyclists being injured. A majority of crashes have a collision type of "rear end" (119 of 135).

All three pedestrian and bicyclist involved crashes involved the pedestrian or bicyclist crossing OR 213. In two cases, the bicyclist or pedestrian did not follow the traffic signal and in the other case the driver did not yield right-of-way to the bicyclist.

The "rear end" crashes are distributed across all intersection legs, however the largest portion of crashes occurs on the east leg of the intersection, along Beavercreek Road, where approximately one third (45 of 119) of rear end crashes occur. As described in the Planned Transportation Improvements section of this report, the City has amended the TSP to include a project that will construct a westbound right-turn merging lane onto OR 213 with additional pedestrian crossing safety improvements. These enhancements, which are being funded by proportionate share cost contributions by developments that send traffic through this intersection, may help remedy the pattern of "rear end" and pedestrian-related crashes.

INTERSECTION #24: BEAVERCREEK RD/MOLALLA AVE

A detailed evaluation of the crashes at the Beavercreek Rd./Molalla Ave. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Reported crashes include 34 crashes resulting in injuries, and 22 crashes resulting in property damage only. A pedestrian was involved in one crash, which resulted in the pedestrian being injured. Crashes are primarily split between collision types of "turn" (30 of 56) and "rear end" (17 of 56).

The pedestrian crash occurred when a driver turning right, northbound failed to yield to a pedestrian. ***Further analysis by the City of potential countermeasures could consider installing yield to pedestrian signage.***

About half of all "turn" type crashes occurred between vehicles making a permitted left turn and vehicles travelling through the intersection in the opposite direction. Ten of these crashes occurred between vehicles making a southbound left and vehicles travelling northbound through, while six crashes occurred between vehicles making a northbound left and vehicles travelling southbound through. Most of these 16 crashes identify the left turning vehicle as not having the right-of-way. ***Further analysis of potential countermeasures by the City should consider either limiting the use of the permitted left turn phasing (Flashing Yellow Arrow) at this intersection or extending the red clearance time at the end of the left-turn phase.***

Rear end crashes occur on all legs of the intersection, without an apparent pattern of occurring on a particular leg.

INTERSECTION #25: BEAVERCREEK RD/MAPLELANE RD

A detailed evaluation of the crashes at the Beavercreek Rd./Maplelane Rd. intersection was performed given the observed crash rates exceed both the 90th percentile crash rates and the critical crash rate for the intersection. Reported crashes include 31 crashes resulting in injuries, and 19 crashes resulting in property damage only. Crashes are primarily split between collision types of "turn" (34 of 50) and "rear end" (12 of 50).

More than half of all "turn" type crashes (21 of 34) occur between vehicles making an eastbound left turn from Beavercreek Road onto Maplelane Road and vehicles travelling westbound through on Beavercreek Road. An additional six crashes occur between vehicles making a westbound left turn and vehicles travelling eastbound through on Beavercreek Road. Nearly all of these crashes are recorded as occurring due to the turning vehicle not having the right-of-way. ***Further analysis of potential countermeasures by the City should consider either establishing protected/permitted left turn phasing (Flashing Yellow Arrow) for the eastbound left-turn or extending the red clearance time at the end of the left-turn phase.***

Rear end crashes occur on all legs of the intersection, without an apparent pattern of occurring on a particular leg.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

Disclaimers: *Effective 2016,* ***collection of "Property Damage Only" (PDO) crash data elements was reduced for vehicles and participants.*** *Age, Gender, License, Error and other elements are no longer available for PDO crash reporting. Please keep this in mind when comparing 2016 PDO crash data to prior years.*

A higher number of crashes may be reported as of 2011 compared to prior years. This does not necessarily reflect an increase in annual crashes. The higher numbers may result from a change to an internal departmental process that allows the Crash Analysis and Reporting Unit to add previously unavailable, non-fatal crash reports to the annual data file. Please be aware of this change when comparing pre-2011 crash statistics. For all disclaimers, see https://www.oregon.gov/ODOT/Data/documents/Crash_Data_Disclaimers.pdf.

ACTION CODE TRANSLATION LIST

ACTION CODE	SHORT DESCRIPTION	LONG DESCRIPTION
000	NONE	NO ACTION OR NON-WARRANTED
001	SKIDDED	SKIDDED
002	ON/OFF V	GETTING ON OR OFF STOPPED OR PARKED VEHICLE
003	LOAD OVR	OVERHANGING LOAD STRUCK ANOTHER VEHICLE, ETC.
006	SLOW DN	SLOWED DOWN
007	AVOIDING	AVOIDING MANEUVER
008	PAR PARK	PARALLEL PARKING
009	ANG PARK	ANGLE PARKING
010	INTERFERE	PASSENGER INTERFERING WITH DRIVER
011	STOPPED	STOPPED IN TRAFFIC NOT WAITING TO MAKE A LEFT TURN
012	STP/L TRN	STOPPED BECAUSE OF LEFT TURN SIGNAL OR WAITING, ETC.
013	STP TURN	STOPPED WHILE EXECUTING A TURN
014	EMR V PKD	EMERGENCY VEHICLE LEGALLY PARKED IN THE ROADWAY
015	GO A/STOP	PROCEED AFTER STOPPING FOR A STOP SIGN/FLASHING RED.
016	TRN A/RED	TURNED ON RED AFTER STOPPING
017	LOSTCTRL	LOST CONTROL OF VEHICLE
018	EXIT DWY	ENTERING STREET OR HIGHWAY FROM ALLEY OR DRIVEWAY
019	ENTR DWY	ENTERING ALLEY OR DRIVEWAY FROM STREET OR HIGHWAY
020	STR ENTR	BEFORE ENTERING ROADWAY, STRUCK PEDESTRIAN, ETC. ON SIDEWALK OR SHOULDER
021	NO DRVR	CAR RAN AWAY - NO DRIVER
022	PREV COL	STRUCK, OR WAS STRUCK BY, VEHICLE OR PEDESTRIAN IN PRIOR COLLISION BEFORE ACC. STABILIZED
023	STALLED	VEHICLE STALLED OR DISABLED
024	DRVR DEAD	DEAD BY UNASSOCIATED CAUSE
025	FATIGUE	FATIGUED, SLEEPY, ASLEEP
026	SUN	DRIVER BLINDED BY SUN
027	HDLGHTS	DRIVER BLINDED BY HEADLIGHTS
028	ILLNESS	PHYSICALLY ILL
029	THRU MED	VEHICLE CROSSED, PLUNGED OVER, OR THROUGH MEDIAN BARRIER
030	PURSUIT	PURSUING OR ATTEMPTING TO STOP A VEHICLE
031	PASSING	PASSING SITUATION
032	PRKOFFRD	VEHICLE PARKED BEYOND CURB OR SHOULDER
033	CROS MED	VEHICLE CROSSED EARTH OR GRASS MEDIAN
034	X N/SGNL	CROSSING AT INTERSECTION - NO TRAFFIC SIGNAL PRESENT
035	X W/ SGNL	CROSSING AT INTERSECTION - TRAFFIC SIGNAL PRESENT
036	DIAGONAL	CROSSING AT INTERSECTION - DIAGONALLY
037	BTWN INT	CROSSING BETWEEN INTERSECTIONS
038	DISTRACT	DRIVER'S ATTENTION DISTRACTED
039	W/TRAF-S	WALKING, RUNNING, RIDING, ETC., ON SHOULDER WITH TRAFFIC
040	A/TRAF-S	WALKING, RUNNING, RIDING, ETC., ON SHOULDER FACING TRAFFIC
041	W/TRAF-P	WALKING, RUNNING, RIDING, ETC., ON PAVEMENT WITH TRAFFIC
042	A/TRAF-P	WALKING, RUNNING, RIDING, ETC., ON PAVEMENT FACING TRAFFIC
043	PLAYINRD	PLAYING IN STREET OR ROAD
044	PUSH MV	PUSHING OR WORKING ON VEHICLE IN ROAD OR ON SHOULDER
045	WORK ON	WORKING IN ROADWAY OR ALONG SHOULDER
046	W/ TRAFIC	NON-MOTORIST WALKING, RUNNING, RIDING, ETC. WITH TRAFFIC
047	A/ TRAFIC	NON-MOTORIST WALKING, RUNNING, RIDING, ETC. FACING TRAFFIC
050	LAY ON RD	STANDING OR LYING IN ROADWAY
051	ENT OFFRD	ENTERING / STARTING IN TRAFFIC LANE FROM OFF ROAD
052	MERGING	MERGING

ACTION CODE TRANSLATION LIST

ACTION CODE	SHORT DESCRIPTION	LONG DESCRIPTION
055	SPRAY	BLINDED BY WATER SPRAY
088	OTHER	OTHER ACTION
099	UNK	UNKNOWN ACTION

CAUSE CODE TRANSLATION LIST

CAUSE CODE	SHORT DESCRIPTION	LONG DESCRIPTION
00	NO CODE	NO CAUSE ASSOCIATED AT THIS LEVEL
01	TOO-FAST	TOO FAST FOR CONDITIONS (NOT EXCEED POSTED SPEED
02	NO-YIELD	DID NOT YIELD RIGHT-OF-WAY
03	PAS-STOP	PASSED STOP SIGN OR RED FLASHER
04	DIS SIG	DISREGARDED TRAFFIC SIGNAL
05	LEFT-CTR	DROVE LEFT OF CENTER ON TWO-WAY ROAD; STRADDLING
06	IMP-OVER	IMPROPER OVERTAKING
07	TOO-CLOS	FOLLOWED TOO CLOSELY
08	IMP-TURN	MADE IMPROPER TURN
09	DRINKING	ALCOHOL OR DRUG INVOLVED
10	OTHR-IMP	OTHER IMPROPER DRIVING
11	MECH-DEF	MECHANICAL DEFECT
12	OTHER	OTHER (NOT IMPROPER DRIVING)
13	IMP LN C	IMPROPER CHANGE OF TRAFFIC LANES
14	DIS TCD	DISREGARDED OTHER TRAFFIC CONTROL DEVICE
15	WRNG WAY	WRONG WAY ON ONE-WAY ROAD; WRONG SIDE DIVIDED RO
16	FATIGUE	DRIVER DROWSY/FATIGUED/SLEEPY
17	ILLNESS	PHYSICAL ILLNESS
18	IN RDWY	NON-MOTORIST ILLEGALLY IN ROADWAY
19	NT VISBL	NON-MOTORIST NOT VISIBLE; NON-REFLECTIVE CLOTHIN
20	IMP PKNG	VEHICLE IMPROPERLY PARKED
21	DEF STER	DEFECTIVE STEERING MECHANISM
22	DEF BRKE	INADEQUATE OR NO BRAKES
24	LOADSHFT	VEHICLE LOST LOAD OR LOAD SHIFTED
25	TIREFAIL	TIRE FAILURE
26	PHANTOM	PHANTOM / NON-CONTACT VEHICLE
27	INATTENT	INATTENTION
28	NM INATT	NON-MOTORIST INATTENTION
29	F AVOID	FAILED TO AVOID VEHICLE AHEAD
30	SPEED	DRIVING IN EXCESS OF POSTED SPEED
31	RACING	SPEED RACING (PER PAR)
32	CARELESS	CARELESS DRIVING (PER PAR)
33	RECKLESS	RECKLESS DRIVING (PER PAR)
34	AGGRESV	AGGRESSIVE DRIVING (PER PAR)
35	RD RAGE	ROAD RAGE (PER PAR)
40	VIEW OBS	VIEW OBSCURED
50	USED MDN	IMPROPER USE OF MEDIAN OR SHOULDER
51	FAIL LN	FAILED TO MAINTAIN LANE
52	OFF RD	RAN OFF ROAD

COLLISION TYPE CODE TRANSLATION LIST

COLL CODE	SHORT DESCRIPTION	LONG DESCRIPTION
&	OTH	MISCELLANEOUS
-	BACK	BACKING
0	PED	PEDESTRIAN
1	ANGL	ANGLE
2	HEAD	HEAD-ON
3	REAR	REAR-END
4	SS-M	SIDESWIPE - MEETING
5	SS-O	SIDESWIPE - OVERTAKING
6	TURN	TURNING MOVEMENT
7	PARK	PARKING MANEUVER
8	NCOL	NON-COLLISION
9	FIX	FIXED OBJECT OR OTHER OBJECT

CRASH TYPE CODE TRANSLATION LIST

CRASH TYPE	SHORT DESCRIPTION	LONG DESCRIPTION
&	OVERTURN	OVERTURNED
0	NON-COLL	OTHER NON-COLLISION
1	OTH RDWY	MOTOR VEHICLE ON OTHER ROADWAY
2	PRKD MV	PARKED MOTOR VEHICLE
3	PED	PEDESTRIAN
4	TRAIN	RAILWAY TRAIN
6	BIKE	PEDALCYCLIST
7	ANIMAL	ANIMAL
8	FIX OBJ	FIXED OBJECT
9	OTH OBJ	OTHER OBJECT
A	ANGL-STP	ENTERING AT ANGLE - ONE VEHICLE STOPPED
B	ANGL-OTH	ENTERING AT ANGLE - ALL OTHERS
C	S-STRGHT	FROM SAME DIRECTION - BOTH GOING STRAIGHT
D	S-1TURN	FROM SAME DIRECTION - ONE TURN, ONE STRAIGHT
E	S-1STOP	FROM SAME DIRECTION - ONE STOPPED
F	S-OTHER	FROM SAME DIRECTION-ALL OTHERS, INCLUDING PARKING
G	O-STRGHT	FROM OPPOSITE DIRECTION - BOTH GOING STRAIGHT
H	O-1 L-TURN	FROM OPPOSITE DIRECTION-ONE LEFT TURN,ONE STRAIGHT
I	O-1STOP	FROM OPPOSITE DIRECTION - ONE STOPPED
J	O-OTHER	FROM OPPOSITE DIRECTION-ALL OTHERS INCL. PARKING

DRIVER LICENSE CODE TRANSLATION LIST

LIC CODE	SHORT DESC	LONG DESCRIPTION
0	NONE	NOT LICENSED (HAD NEVER BEEN LICENSED)
1	OR-Y	VALID OREGON LICENSE
2	OTH-Y	VALID LICENSE, OTHER STATE OR COUNTRY
3	SUSP	SUSPENDED/REVOKED
4	EXP	EXPIRED
8	N-VAL	OTHER NON-VALID LICENSE
9	UNK	UNKNOWN IF DRIVER WAS LICENSED AT TIME OF CRASH

DRIVER RESIDENCE CODE TRANSLATION LIST

RES CODE	SHORT DESC	LONG DESCRIPTION
1	OR<25	OREGON RESIDENT WITHIN 25 MILE OF HOME
2	OR>25	OREGON RESIDENT 25 OR MORE MILES FROM HOME
3	OR-?	OREGON RESIDENT - UNKNOWN DISTANCE FROM HOME
4	N-RES	NON-RESIDENT
9	UNK	UNKNOWN IF OREGON RESIDENT

ERROR CODE TRANSLATION LIST

ERROR CODE	SHORT DESCRIPTION	FULL DESCRIPTION
000	NONE	NO ERROR
001	WIDE TRN	WIDE TURN
002	CUT CORN	CUT CORNER ON TURN
003	FAIL TRN	FAILED TO OBEY MANDATORY TRAFFIC TURN SIGNAL, SIGN OR LANE MARKINGS
004	L IN TRF	LEFT TURN IN FRONT OF ONCOMING TRAFFIC
005	L PROHIB	LEFT TURN WHERE PROHIBITED
006	FRM WRNG	TURNED FROM WRONG LANE
007	TO WRONG	TURNED INTO WRONG LANE
008	ILLEG U	U-TURNED ILLEGALLY
009	IMP STOP	IMPROPERLY STOPPED IN TRAFFIC LANE
010	IMP SIG	IMPROPER SIGNAL OR FAILURE TO SIGNAL
011	IMP BACK	BACKING IMPROPERLY (NOT PARKING)
012	IMP PARK	IMPROPERLY PARKED
013	UNPARK	IMPROPER START LEAVING PARKED POSITION
014	IMP STRT	IMPROPER START FROM STOPPED POSITION
015	IMP LGHT	IMPROPER OR NO LIGHTS (VEHICLE IN TRAFFIC)
016	INATTENT	INATTENTION (FAILURE TO DIM LIGHTS PRIOR TO 4/1/97)
017	UNSF VEH	DRIVING UNSAFE VEHICLE (NO OTHER ERROR APPARENT)
018	OTH PARK	ENTERING/EXITING PARKED POSITION W/ INSUFFICIENT CLEARANCE; OTHER IMPROPER PARKING MANEUVER
019	DIS DRIV	DISREGARDED OTHER DRIVER'S SIGNAL
020	DIS SGNL	DISREGARDED TRAFFIC SIGNAL
021	RAN STOP	DISREGARDED STOP SIGN OR FLASHING RED
022	DIS SIGN	DISREGARDED WARNING SIGN, FLARES OR FLASHING AMBER
023	DIS OFCR	DISREGARDED POLICE OFFICER OR FLAGMAN
024	DIS EMER	DISREGARDED SIREN OR WARNING OF EMERGENCY VEHICLE
025	DIS RR	DISREGARDED RR SIGNAL, RR SIGN, OR RR FLAGMAN
026	REAR-END	FAILED TO AVOID STOPPED OR PARKED VEHICLE AHEAD OTHER THAN SCHOOL BUS
027	BIKE ROW	DID NOT HAVE RIGHT-OF-WAY OVER PEDALCYCLIST
028	NO ROW	DID NOT HAVE RIGHT-OF-WAY
029	PED ROW	FAILED TO YIELD RIGHT-OF-WAY TO PEDESTRIAN
030	PAS CURV	PASSING ON A CURVE
031	PAS WRNG	PASSING ON THE WRONG SIDE
032	PAS TANG	PASSING ON STRAIGHT ROAD UNDER UNSAFE CONDITIONS
033	PAS X-WK	PASSED VEHICLE STOPPED AT CROSSWALK FOR PEDESTRIAN
034	PAS INTR	PASSING AT INTERSECTION
035	PAS HILL	PASSING ON CREST OF HILL
036	N/PAS ZN	PASSING IN "NO PASSING" ZONE
037	PAS TRAF	PASSING IN FRONT OF ONCOMING TRAFFIC
038	CUT-IN	CUTTING IN (TWO LANES - TWO WAY ONLY)
039	WRNGSIDE	DRIVING ON WRONG SIDE OF THE ROAD (2-WAY UNDIVIDED ROADWAYS)

ERROR CODE TRANSLATION LIST

ERROR CODE	SHORT DESCRIPTION	FULL DESCRIPTION
040	THRU MED	DRIVING THROUGH SAFETY ZONE OR OVER ISLAND
041	F/ST BUS	FAILED TO STOP FOR SCHOOL BUS
042	F/SLO MV	FAILED TO DECREASE SPEED FOR SLOWER MOVING VEHICLE
043	TOO CLOSE	FOLLOWING TOO CLOSELY (MUST BE ON OFFICER'S REPORT)
044	STRDL LN	STRADDLING OR DRIVING ON WRONG LANES
045	IMP CHG	IMPROPER CHANGE OF TRAFFIC LANES
046	WRNG WAY	WRONG WAY ON ONE-WAY ROADWAY; WRONG SIDE DIVIDED ROAD
047	BASCRULE	DRIVING TOO FAST FOR CONDITIONS (NOT EXCEEDING POSTED SPEED)
048	OPN DOOR	OPENED DOOR INTO ADJACENT TRAFFIC LANE
049	IMPEDING	IMPEDING TRAFFIC
050	SPEED	DRIVING IN EXCESS OF POSTED SPEED
051	RECKLESS	RECKLESS DRIVING (PER PAR)
052	CARELESS	CARELESS DRIVING (PER PAR)
053	RACING	SPEED RACING (PER PAR)
054	X N/SGNL	CROSSING AT INTERSECTION, NO TRAFFIC SIGNAL PRESENT
055	X W/SGNL	CROSSING AT INTERSECTION, TRAFFIC SIGNAL PRESENT
056	DIAGONAL	CROSSING AT INTERSECTION - DIAGONALLY
057	BTWN INT	CROSSING BETWEEN INTERSECTIONS
059	W/TRAF-S	WALKING, RUNNING, RIDING, ETC., ON SHOULDER WITH TRAFFIC
060	A/TRAF-S	WALKING, RUNNING, RIDING, ETC., ON SHOULDER FACING TRAFFIC
061	W/TRAF-P	WALKING, RUNNING, RIDING, ETC., ON PAVEMENT WITH TRAFFIC
062	A/TRAF-P	WALKING, RUNNING, RIDING, ETC., ON PAVEMENT FACING TRAFFIC
063	PLAYINRD	PLAYING IN STREET OR ROAD
064	PUSH MV	PUSHING OR WORKING ON VEHICLE IN ROAD OR ON SHOULDER
065	WORK IN RD	WORKING IN ROADWAY OR ALONG SHOULDER
070	LAY ON RD	STANDING OR LYING IN ROADWAY
071	NM IMP USE	IMPROPER USE OF TRAFFIC LANE BY NON-MOTORIST
073	ELUDING	ELUDING / ATTEMPT TO ELUDE
079	F NEG CURV	FAILED TO NEGOTIATE A CURVE
080	FAIL LN	FAILED TO MAINTAIN LANE
081	OFF RD	RAN OFF ROAD
082	NO CLEAR	DRIVER MISJUDGED CLEARANCE
083	OVRSTEER	OVER-CORRECTING
084	NOT USED	CODE NOT IN USE
085	OVRLOAD	OVERLOADING OR IMPROPER LOADING OF VEHICLE WITH CARGO OR PASSENGERS
097	UNA DIS TC	UNABLE TO DETERMINE WHICH DRIVER DISREGARDED TRAFFIC CONTROL DEVICE

EVENT CODE TRANSLATION LIST

EVENT CODE	SHORT DESCRIPTION	LONG DESCRIPTION
001	FEL/JUMP	OCCUPANT FELL, JUMPED OR WAS EJECTED FROM MOVING VEHICLE
002	INTERFER	PASSENGER INTERFERED WITH DRIVER
003	BUG INTF	ANIMAL OR INSECT IN VEHICLE INTERFERED WITH DRIVER
004	INDRCT PED	PEDESTRIAN INDIRECTLY INVOLVED (NOT STRUCK)
005	SUB-PED	"SUB-PED": PEDESTRIAN INJURED SUBSEQUENT TO COLLISION, ETC.
006	INDRCT BIK	PEDALCYCLIST INDIRECTLY INVOLVED (NOT STRUCK)
007	HITCHIKR	HITCHHIKER (SOLICITING A RIDE)
008	PSNGR TOW	PASSENGER OR NON-MOTORIST BEING TOWED OR PUSHED ON CONVEYANCE
009	ON/OFF V	GETTING ON/OFF STOPPED/PARKED VEHICLE (OCCUPANTS ONLY; MUST HAVE PHYSICAL CONTACT W/ VEHIC
010	SUB OTRN	OVERTURNED AFTER FIRST HARMFUL EVENT
011	MV PUSHD	VEHICLE BEING PUSHED
012	MV TOWED	VEHICLE TOWED OR HAD BEEN TOWING ANOTHER VEHICLE
013	FORCED	VEHICLE FORCED BY IMPACT INTO ANOTHER VEHICLE, PEDALCYCLIST OR PEDESTRIAN
014	SET MOTN	VEHICLE SET IN MOTION BY NON-DRIVER (CHILD RELEASED BRAKES, ETC.)
015	RR ROW	AT OR ON RAILROAD RIGHT-OF-WAY (NOT LIGHT RAIL)
016	LT RL ROW	AT OR ON LIGHT-RAIL RIGHT-OF-WAY
017	RR HIT V	TRAIN STRUCK VEHICLE
018	V HIT RR	VEHICLE STRUCK TRAIN
019	HIT RR CAR	VEHICLE STRUCK RAILROAD CAR ON ROADWAY
020	JACKNIFE	JACKKNIFE; TRAILER OR TOWED VEHICLE STRUCK TOWING VEHICLE
021	TRL OTRN	TRAILER OR TOWED VEHICLE OVERTURNED
022	CN BROKE	TRAILER CONNECTION BROKE
023	DETACH TRL	DETACHED TRAILING OBJECT STRUCK OTHER VEHICLE, NON-MOTORIST, OR OBJECT
024	V DOOR OPN	VEHICLE DOOR OPENED INTO ADJACENT TRAFFIC LANE
025	WHEELOFF	WHEEL CAME OFF
026	HOOD UP	HOOD FLEW UP
028	LOAD SHIFT	LOST LOAD, LOAD MOVED OR SHIFTED
029	TIREFAIL	TIRE FAILURE
030	PET	PET: CAT, DOG AND SIMILAR
031	LVSTOCK	STOCK: COW, CALF, BULL, STEER, SHEEP, ETC.
032	HORSE	HORSE, MULE, OR DONKEY
033	HRSE&RID	HORSE AND RIDER
034	GAME	WILD ANIMAL, GAME (INCLUDES BIRDS; NOT DEER OR ELK)
035	DEER ELK	DEER OR ELK, WAPITI
036	ANML VEH	ANIMAL-DRAWN VEHICLE
037	CULVERT	CULVERT, OPEN LOW OR HIGH MANHOLE
038	ATENUATN	IMPACT ATTENUATOR
039	PK METER	PARKING METER
040	CURB	CURB (ALSO NARROW SIDEWALKS ON BRIDGES)
041	JIGGLE	JIGGLE BAR OR TRAFFIC SNAKE FOR CHANNELIZATION
042	GDRL END	LEADING EDGE OF GUARDRAIL
043	GARDRAIL	GUARD RAIL (NOT METAL MEDIAN BARRIER)
044	BARRIER	MEDIAN BARRIER (RAISED OR METAL)
045	WALL	RETAINING WALL OR TUNNEL WALL
046	BR RAIL	BRIDGE RAILING OR PARAPET (ON BRIDGE OR APPROACH)
047	BR ABUTMNT	BRIDGE ABUTMENT (INCLUDED "APPROACH END" THRU 2013)
048	BR COLMN	BRIDGE PILLAR OR COLUMN
049	BR GIRDR	BRIDGE GIRDER (HORIZONTAL BRIDGE STRUCTURE OVERHEAD)
050	ISLAND	TRAFFIC RAISED ISLAND
051	GORE	GORE
052	POLE UNK	POLE - TYPE UNKNOWN
053	POLE UTL	POLE - POWER OR TELEPHONE
054	ST LIGHT	POLE - STREET LIGHT ONLY
055	TRF SGNL	POLE - TRAFFIC SIGNAL AND PED SIGNAL ONLY
056	SGN BRDG	POLE - SIGN BRIDGE
057	STOPSIGN	STOP OR YIELD SIGN

EVENT CODE TRANSLATION LIST

EVENT CODE	SHORT DESCRIPTION	LONG DESCRIPTION
058	OTH SIGN	OTHER SIGN, INCLUDING STREET SIGNS
059	HYDRANT	HYDRANT
060	MARKER	DELINEATOR OR MARKER (REFLECTOR POSTS)
061	MAILBOX	MAILBOX
062	TREE	TREE, STUMP OR SHRUBS
063	VEG OHED	TREE BRANCH OR OTHER VEGETATION OVERHEAD, ETC.
064	WIRE/CBL	WIRE OR CABLE ACROSS OR OVER THE ROAD
065	TEMP SGN	TEMPORARY SIGN OR BARRICADE IN ROAD, ETC.
066	PERM SGN	PERMANENT SIGN OR BARRICADE IN/OFF ROAD
067	SLIDE	SLIDES, FALLEN OR FALLING ROCKS
068	FRGN OBJ	FOREIGN OBSTRUCTION/DEBRIS IN ROAD (NOT GRAVEL)
069	EQP WORK	EQUIPMENT WORKING IN/OFF ROAD
070	OTH EQP	OTHER EQUIPMENT IN OR OFF ROAD (INCLUDES PARKED TRAILER, BOAT)
071	MAIN EQP	WRECKER, STREET SWEEPER, SNOW PLOW OR SANDING EQUIPMENT
072	OTHER WALL	ROCK, BRICK OR OTHER SOLID WALL
073	IRRGL PVMT	OTHER BUMP (NOT SPEED BUMP), POTHOLE OR PAVEMENT IRREGULARITY (PER PAR)
074	OVERHD OBJ	OTHER OVERHEAD OBJECT (HIGHWAY SIGN, SIGNAL HEAD, ETC.); NOT BRIDGE
075	CAVE IN	BRIDGE OR ROAD CAVE IN
076	HI WATER	HIGH WATER
077	SNO BANK	SNOW BANK
078	LO-HI EDGE	LOW OR HIGH SHOULDER AT PAVEMENT EDGE
079	DITCH	CUT SLOPE OR DITCH EMBANKMENT
080	OBJ FRM MV	STRUCK BY ROCK OR OTHER OBJECT SET IN MOTION BY OTHER VEHICLE (INCL. LOST LOADS)
081	FLY-OBJ	STRUCK BY ROCK OR OTHER MOVING OR FLYING OBJECT (NOT SET IN MOTION BY VEHICLE)
082	VEH HID	VEHICLE OBSCURED VIEW
083	VEG HID	VEGETATION OBSCURED VIEW
084	BLDG HID	VIEW OBSCURED BY FENCE, SIGN, PHONE BOOTH, ETC.
085	WIND GUST	WIND GUST
086	IMMERSED	VEHICLE IMMERSED IN BODY OF WATER
087	FIRE/EXP	FIRE OR EXPLOSION
088	FENC/BLD	FENCE OR BUILDING, ETC.
089	OTHR CRASH	CRASH RELATED TO ANOTHER SEPARATE CRASH
090	TO 1 SIDE	TWO-WAY TRAFFIC ON DIVIDED ROADWAY ALL ROUTED TO ONE SIDE
091	BUILDING	BUILDING OR OTHER STRUCTURE
092	PHANTOM	OTHER (PHANTOM) NON-CONTACT VEHICLE
093	CELL PHONE	CELL PHONE (ON PAR OR DRIVER IN USE)
094	VIOL GDL	TEENAGE DRIVER IN VIOLATION OF GRADUATED LICENSE PGM
095	GUY WIRE	GUY WIRE
096	BERM	BERM (EARTHEN OR GRAVEL MOUND)
097	GRAVEL	GRAVEL IN ROADWAY
098	ABR EDGE	ABRUPT EDGE
099	CELL WTNSD	CELL PHONE USE WITNESSED BY OTHER PARTICIPANT
100	UNK FIXD	FIXED OBJECT, UNKNOWN TYPE.
101	OTHER OBJ	NON-FIXED OBJECT, OTHER OR UNKNOWN TYPE
102	TEXTING	TEXTING
103	WZ WORKER	WORK ZONE WORKER
104	ON VEHICLE	PASSENGER RIDING ON VEHICLE EXTERIOR
105	PEDAL PSGR	PASSENGER RIDING ON PEDALCYCLE
106	MAN WHLCHR	PEDESTRIAN IN NON-MOTORIZED WHEELCHAIR
107	MTR WHLCHR	PEDESTRIAN IN MOTORIZED WHEELCHAIR
108	OFFICER	LAW ENFORCEMENT / POLICE OFFICER
109	SUB-BIKE	"SUB-BIKE": PEDALCYCLIST INJURED SUBSEQUENT TO COLLISION, ETC.
110	N-MTR	NON-MOTORIST STRUCK VEHICLE
111	S CAR VS V	STREET CAR/TROLLEY (ON RAILS OR OVERHEAD WIRE SYSTEM) STRUCK VEHICLE
112	V VS S CAR	VEHICLE STRUCK STREET CAR/TROLLEY (ON RAILS OR OVERHEAD WIRE SYSTEM)
113	S CAR ROW	AT OR ON STREET CAR OR TROLLEY RIGHT-OF-WAY

EVENT CODE TRANSLATION LIST

EVENT CODE	SHORT DESCRIPTION	LONG DESCRIPTION
114	RR EQUIP	VEHICLE STRUCK RAILROAD EQUIPMENT (NOT TRAIN) ON TRACKS
115	DSTRCT GPS	DISTRACTED BY NAVIGATION SYSTEM OR GPS DEVICE
116	DSTRCT OTH	DISTRACTED BY OTHER ELECTRONIC DEVICE
117	RR GATE	RAIL CROSSING DROP-ARM GATE
118	EXPNSN JNT	EXPANSION JOINT
119	JERSEY BAR	JERSEY BARRIER
120	WIRE BAR	WIRE OR CABLE MEDIAN BARRIER
121	FENCE	FENCE
123	OBJ IN VEH	LOOSE OBJECT IN VEHICLE STRUCK OCCUPANT
124	SLIPPERY	SLIDING OR SWERVING DUE TO WET, ICY, SLIPPERY OR LOOSE SURFACE (NOT GRAVEL)
125	SHLDR	SHOULDER GAVE WAY
126	BOULDER	ROCK(S), BOULDER (NOT GRAVEL; NOT ROCK SLIDE)
127	LAND SLIDE	ROCK SLIDE OR LAND SLIDE
128	CURVE INV	CURVE PRESENT AT CRASH LOCATION
129	HILL INV	VERTICAL GRADE / HILL PRESENT AT CRASH LOCATION
130	CURVE HID	VIEW OBSCURED BY CURVE
131	HILL HID	VIEW OBSCURED BY VERTICAL GRADE / HILL
132	WINDOW HID	VIEW OBSCURED BY VEHICLE WINDOW CONDITIONS
133	SPRAY HID	VIEW OBSCURED BY WATER SPRAY
134	TORRENTIAL	TORRENTIAL RAIN (EXCEPTIONALLY HEAVY RAIN)
135	RAIL OCC	INJURED OCCUPANT OF RAILWAY TRAIN, LIGHT RAIL, STREET CAR OR CABLE CAR

FUNCTIONAL CLASSIFICATION TRANSLATION LIST

FUNC CLASS	DESCRIPTION
01	RURAL PRINCIPAL ARTERIAL - INTERSTATE
02	RURAL PRINCIPAL ARTERIAL - OTHER
06	RURAL MINOR ARTERIAL
07	RURAL MAJOR COLLECTOR

98	UNKNOWN URBAN SYSTEM
99	UNKNOWN URBAN NON-SYSTEM

HIGHWAY COMPONENT TRANSLATION LIST

CODE	DESCRIPTION
0	MAINLINE STATE HIGHWAY
1	COUPLET
3	FRONTAGE ROAD
6	CONNECTION
8	HIGHWAY - OTHER

INJURY SEVERITY CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
1	KILL	FATAL INJURY (K)
2	INJA	SUSPECTED SERIOUS INJURY (A)
3	INJB	SUSPECTED MINOR INJURY (B)
4	INJC	POSSIBLE INJURY (C)
5	PRI	DIED PRIOR TO CRASH
7	NO<5	NO INJURY - 0 TO 4 YEARS OF AGE
9	NONE	NO APPARENT INJURY (O)

LIGHT CONDITION CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	UNK	UNKNOWN
1	DAY	DAYLIGHT
2	DLIT	DARKNESS - WITH STREET LIGHTS
3	DARK	DARKNESS - NO STREET LIGHTS
4	DAWN	DAWN (TWILIGHT)
5	DUSK	DUSK (TWILIGHT)

MEDIAN TYPE CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	NONE	NO MEDIAN
1	RSDMD	SOLID MEDIAN BARRIER
2	DIVMD	EARTH, GRASS OR PAVED MEDIAN

MILEAGE TYPE CODE TRANSLATION LIST

CODE	LONG DESCRIPTION
0	REGULAR MILEAGE
T	TEMPORARY
Y	SPUR
Z	OVERLAPPING

MOVEMENT TYPE CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	UNK	UNKNOWN
1	STRGHT	STRAIGHT AHEAD
2	TURN-R	TURNING RIGHT
3	TURN-L	TURNING LEFT
4	U-TURN	MAKING A U-TURN
5	BACK	BACKING
6	STOP	STOPPED IN TRAFFIC
7	PRKD-P	PARKED - PROPERLY
8	PRKD-I	PARKED - IMPROPERLY
9	PARKNG	PARKING MANEUVER

NON-MOTORIST LOCATION CODE TRANSLATION LIST

CODE	LONG DESCRIPTION
00	AT INTERSECTION - NOT IN ROADWAY
01	AT INTERSECTION - INSIDE CROSSWALK
02	AT INTERSECTION - IN ROADWAY, OUTSIDE CROSSWALK
03	AT INTERSECTION - IN ROADWAY, XWALK AVAIL UNKNWN
04	NOT AT INTERSECTION - IN ROADWAY
05	NOT AT INTERSECTION - ON SHOULDER
06	NOT AT INTERSECTION - ON MEDIAN
07	NOT AT INTERSECTION - WITHIN TRAFFIC RIGHT-OF-WAY
08	NOT AT INTERSECTION - IN BIKE PATH OR PARKING LANE
09	NOT-AT INTERSECTION - ON SIDEWALK
10	OUTSIDE TRAFFICWAY BOUNDARIES
13	AT INTERSECTION - IN BIKE LANE
14	NOT AT INTERSECTION - IN BIKE LANE
15	NOT AT INTERSECTION - INSIDE MID-BLOCK CROSSWALK
16	NOT AT INTERSECTION - IN PARKING LANE
18	OTHER, NOT IN ROADWAY
99	UNKNOWN LOCATION

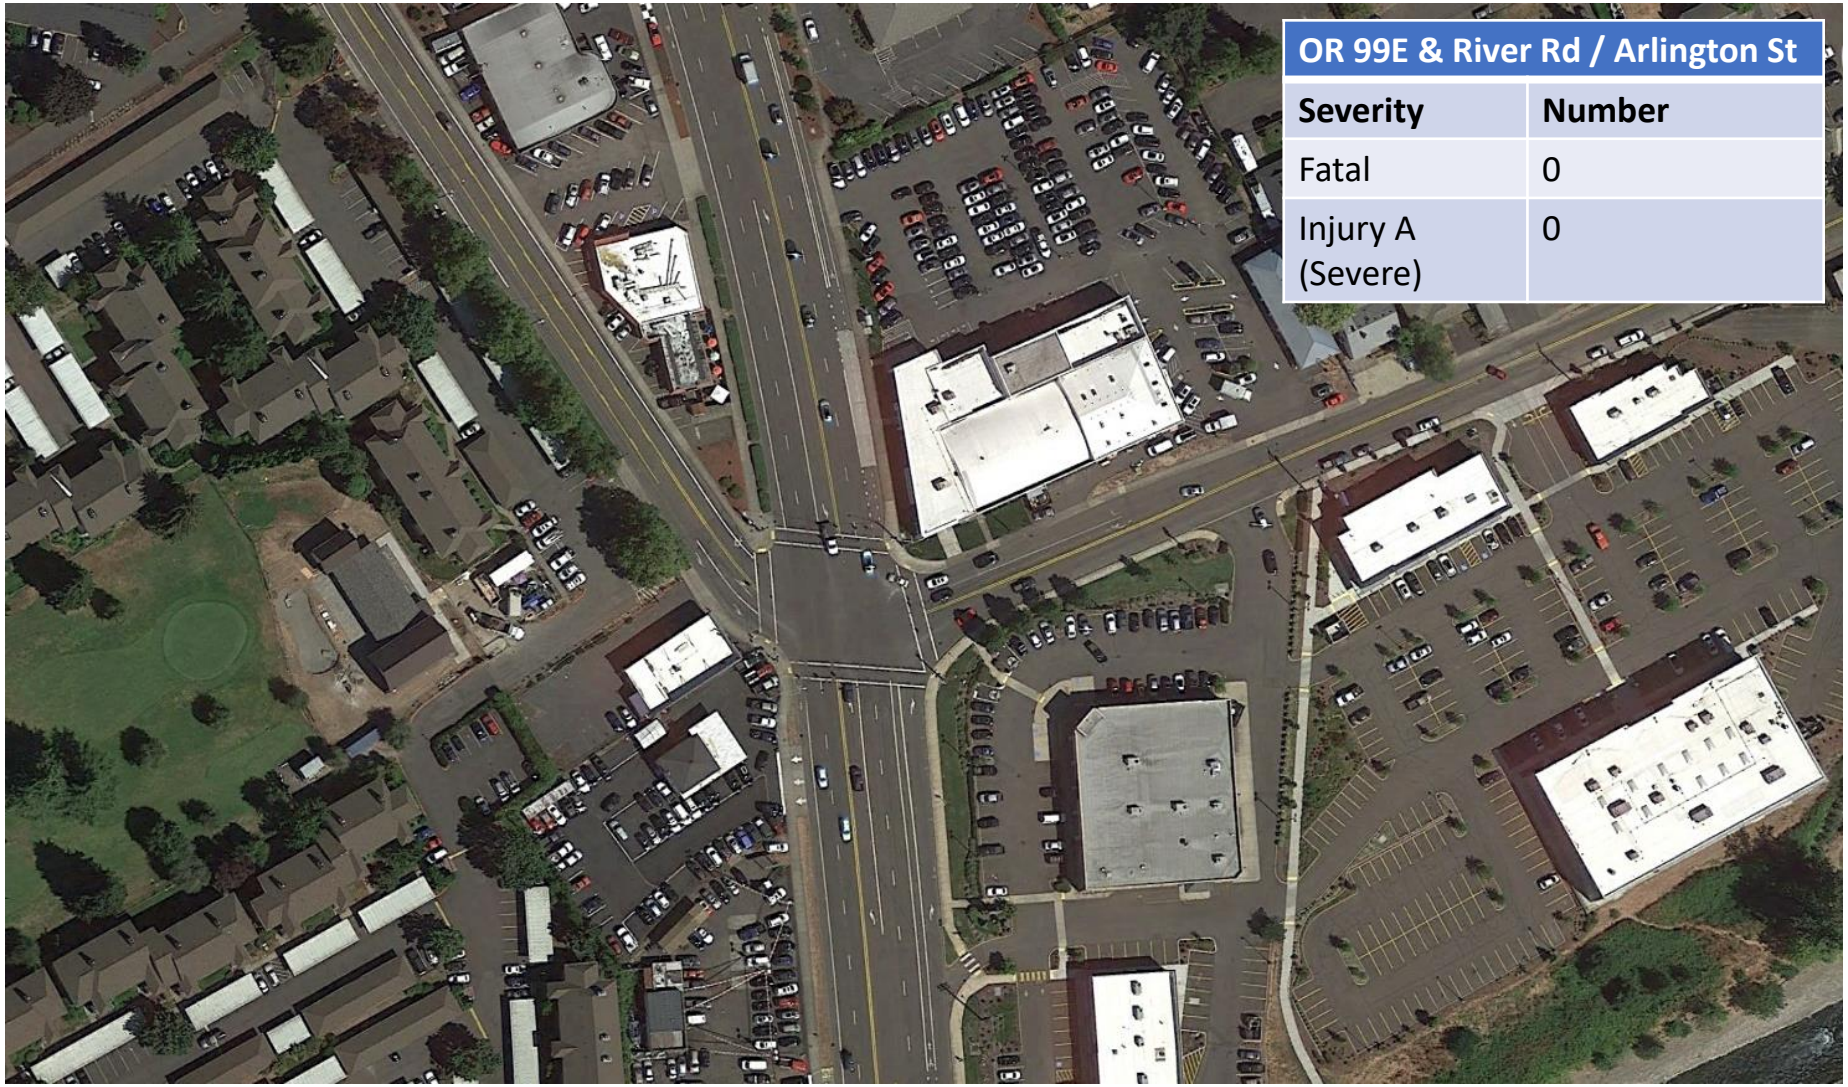
ROAD CHARACTER CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	UNK	UNKNOWN
1	INTER	INTERSECTION
2	ALLEY	DRIVEWAY OR ALLEY
3	STRGHT	STRAIGHT ROADWAY
4	TRANS	TRANSITION
5	CURVE	CURVE (HORIZONTAL CURVE)
6	OPENAC	OPEN ACCESS OR TURNOUT
7	GRADE	GRADE (VERTICAL CURVE)
8	BRIDGE	BRIDGE STRUCTURE
9	TUNNEL	TUNNEL

PARTICIPANT TYPE CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	OCC	UNKNOWN OCCUPANT TYPE
1	DRVR	DRIVER
2	PSNG	PASSENGER
3	PED	PEDESTRIAN
4	CONV	PEDESTRIAN USING A PEDESTRIAN CONVEYA
5	PTOW	PEDESTRIAN TOWING OR TRAILERING AN OB
6	BIKE	PEDALCYCLIST
7	BTOW	PEDALCYCLIST TOWING OR TRAILERING AN
8	PRKD	OCCUPANT OF A PARKED MOTOR VEHICLE
9	OTHR	OTHER TYPE OF NON-MOTORIST

TRAFFIC CONTROL DEVICE CODE TRANSLATION LIST



CODE	SHORT DESC	LONG DESCRIPTION
000	NONE	NO CONTROL
001	TRF SIGNAL	TRAFFIC SIGNALS
002	FLASHBCN-R	FLASHING BEACON - RED (STOP)
003	FLASHBCN-A	FLASHING BEACON - AMBER (SLOW)
004	STOP SIGN	STOP SIGN
005	SLOW SIGN	SLOW SIGN
006	REG-SIGN	REGULATORY SIGN
007	YIELD	YIELD SIGN
008	WARNING	WARNING SIGN
009	CURVE	CURVE SIGN
010	SCHL X-ING	SCHOOL CROSSING SIGN OR SPECIAL SIGNAL
011	OFCR/FLAG	POLICE OFFICER, FLAGMAN - SCHOOL PATROL
012	BRDG-GATE	BRIDGE GATE - BARRIER
013	TEMP-BARR	TEMPORARY BARRIER
014	NO-PASS-ZN	NO PASSING ZONE
015	ONE-WAY	ONE-WAY STREET
016	CHANNEL	CHANNELIZATION
017	MEDIAN BAR	MEDIAN BARRIER
018	PILOT CAR	PILOT CAR
019	SP PED SIG	SPECIAL PEDESTRIAN SIGNAL
020	X-BUCK	CROSSBUCK
021	THR-GN-SIG	THROUGH GREEN ARROW OR SIGNAL
022	L-GRN-SIG	LEFT TURN GREEN ARROW, LANE MARKINGS, OR SIGNAL
023	R-GRN-SIG	RIGHT TURN GREEN ARROW, LANE MARKINGS, OR SIGNAL
024	WIGWAG	WIGWAG OR FLASHING LIGHTS W/O DROP-ARM GATE
025	X-BUCK WRN	CROSSBUCK AND ADVANCE WARNING
026	WW W/ GATE	FLASHING LIGHTS WITH DROP-ARM GATES
027	OVRHD SGNL	SUPPLEMENTAL OVERHEAD SIGNAL (RR XING ONLY)
028	SP RR STOP	SPECIAL RR STOP SIGN
029	ILUM GRD X	ILLUMINATED GRADE CROSSING
037	RAMP METER	METERED RAMPS
038	RUMBLE STR	RUMBLE STRIP
090	L-TURN REF	LEFT TURN REFUGE (WHEN REFUGE IS INVOLVED)
091	R-TURN ALL	RIGHT TURN AT ALL TIMES SIGN, ETC.
092	EMR SGN/FL	EMERGENCY SIGNS OR FLARES
093	ACCEL LANE	ACCELERATION OR DECELERATION LANES
094	R-TURN PRO	RIGHT TURN PROHIBITED ON RED AFTER STOPPING
095	BUS STPSGN	BUS STOP SIGN AND RED LIGHTS
099	UNKNOWN	UNKNOWN OR NOT DEFINITE

VEHICLE TYPE CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
00	PDO	NOT COLLECTED FOR PDO CRASHES
01	PSNGR CAR	PASSENGER CAR, PICKUP, LIGHT DELIVERY, ETC.
02	BOBTAIL	TRUCK TRACTOR WITH NO TRAILERS (BOBTAIL)
03	FARM TRCTR	FARM TRACTOR OR SELF-PROPELLED FARM EQUIPMENT
04	SEMI TOW	TRUCK TRACTOR WITH TRAILER/MOBILE HOME IN TOW
05	TRUCK	TRUCK WITH NON-DETACHABLE BED, PANEL, ETC.
06	MOPED	MOPED, MINIBIKE, SEATED MOTOR SCOOTER, MOTOR BIKE
07	SCHL BUS	SCHOOL BUS (INCLUDES VAN)
08	OTH BUS	OTHER BUS
09	MTRCYCLE	MOTORCYCLE, DIRT BIKE
10	OTHER	OTHER: FORKLIFT, BACKHOE, ETC.
11	MOTRHOME	MOTORHOME
12	TROLLEY	MOTORIZED STREET CAR/TROLLEY (NO RAILS/WIRES)
13	ATV	ATV
14	MTRSCTR	MOTORIZED SCOOTER (STANDING)
15	SNOWMOBILE	SNOWMOBILE
99	UNKNOWN	UNKNOWN VEHICLE TYPE

WEATHER CONDITION CODE TRANSLATION LIST

CODE	SHORT DESC	LONG DESCRIPTION
0	UNK	UNKNOWN

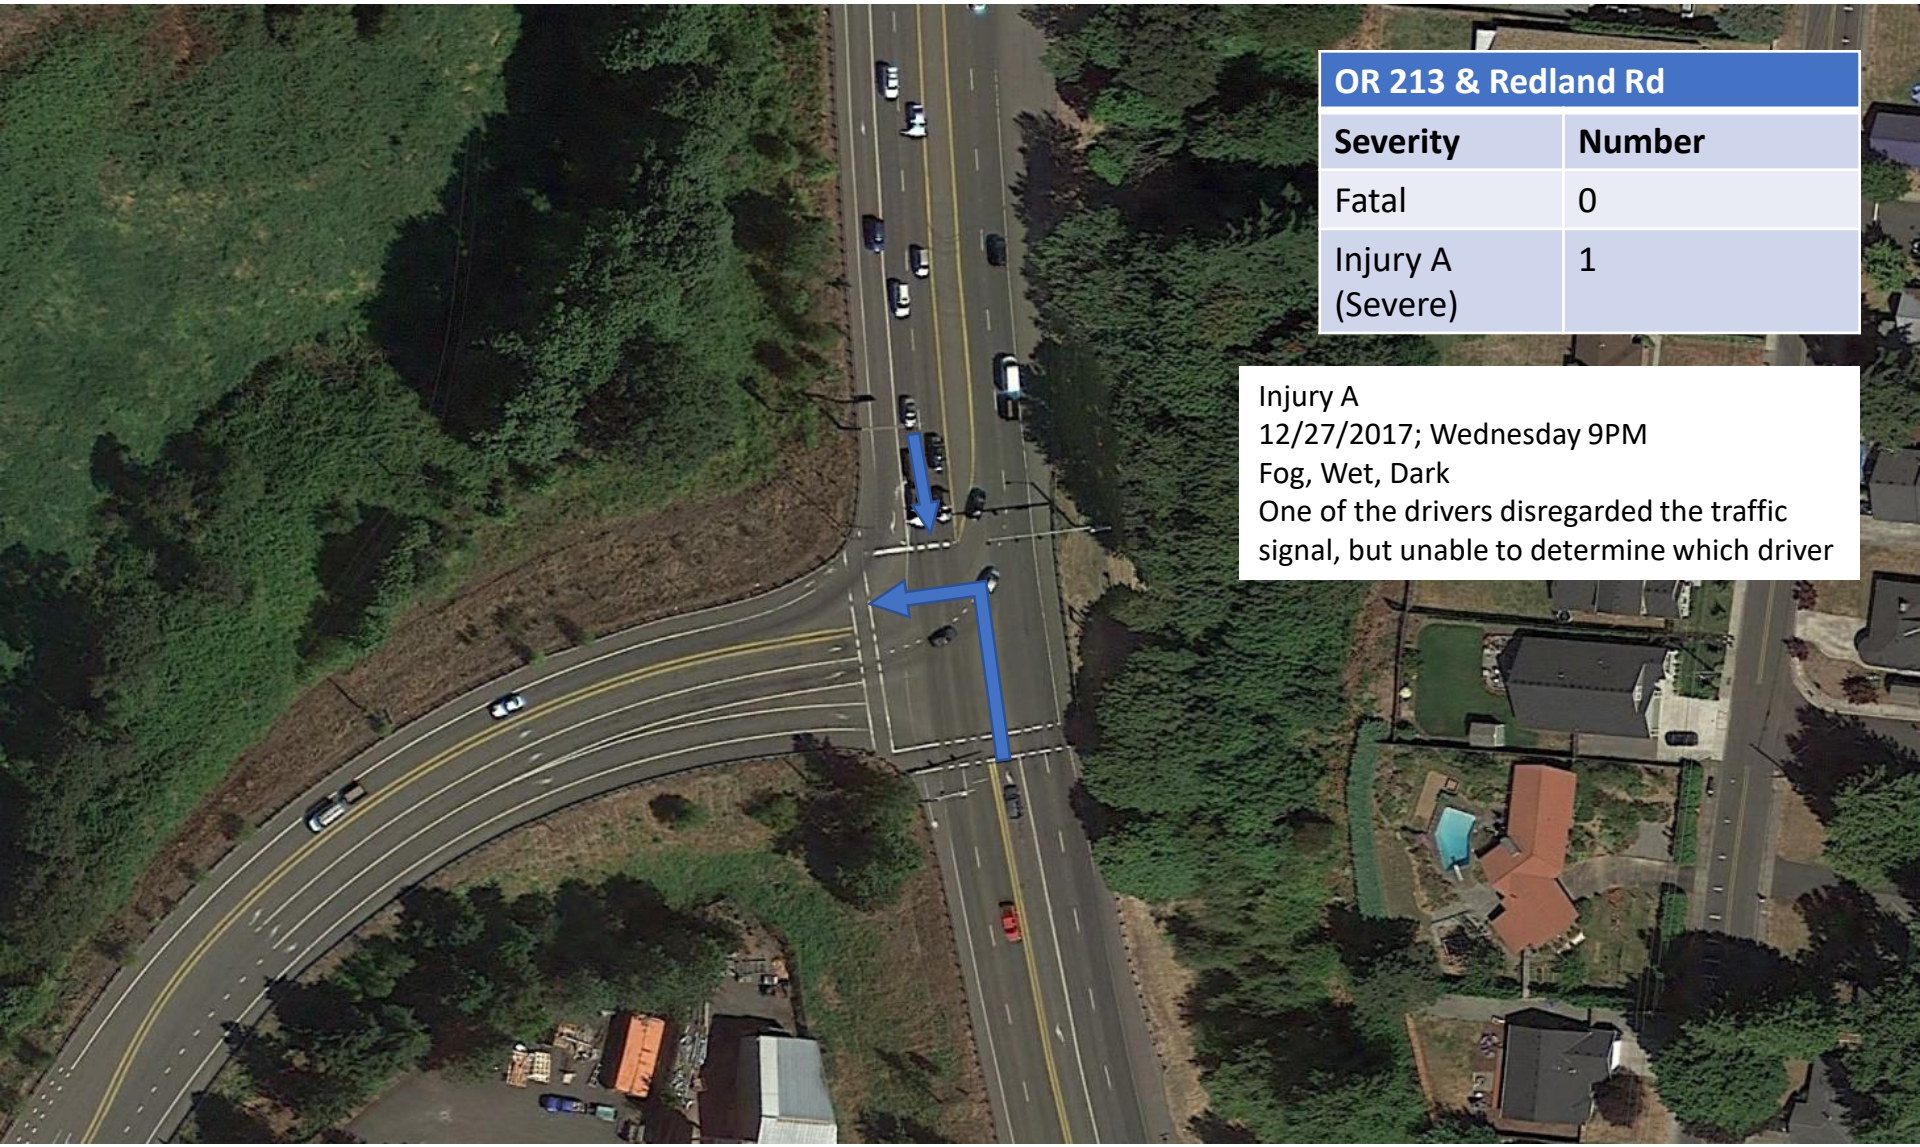
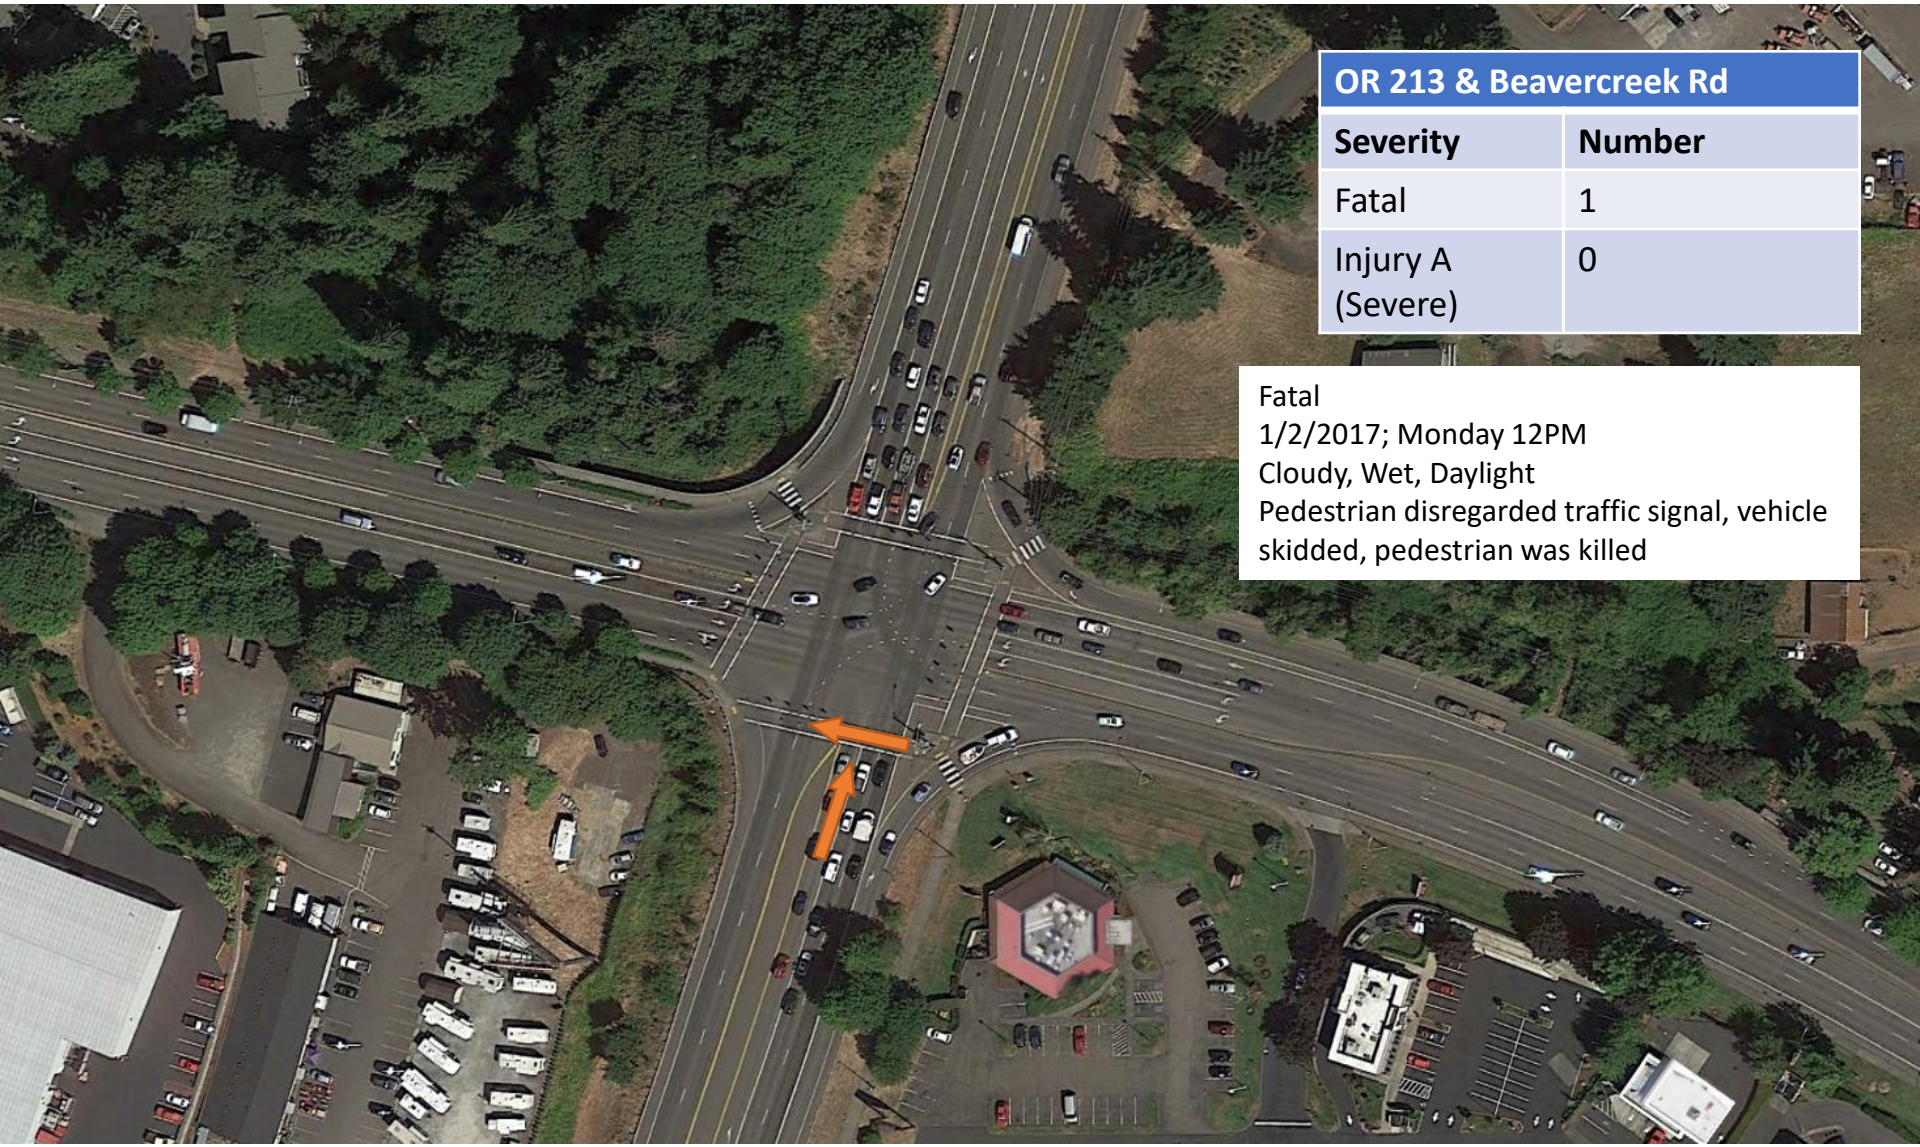
2	CLD	CLOUDY
3	RAIN	RAIN
4	SLT	SLEET
5	FOG	FOG
6	SNOW	SNOW
7	DUST	DUST
8	SMOK	SMOKE
9	ASH	ASH

OR 99E & River Rd / Arlington St	
Severity	**Number**
Fatal	0
Injury A (Severe)	0



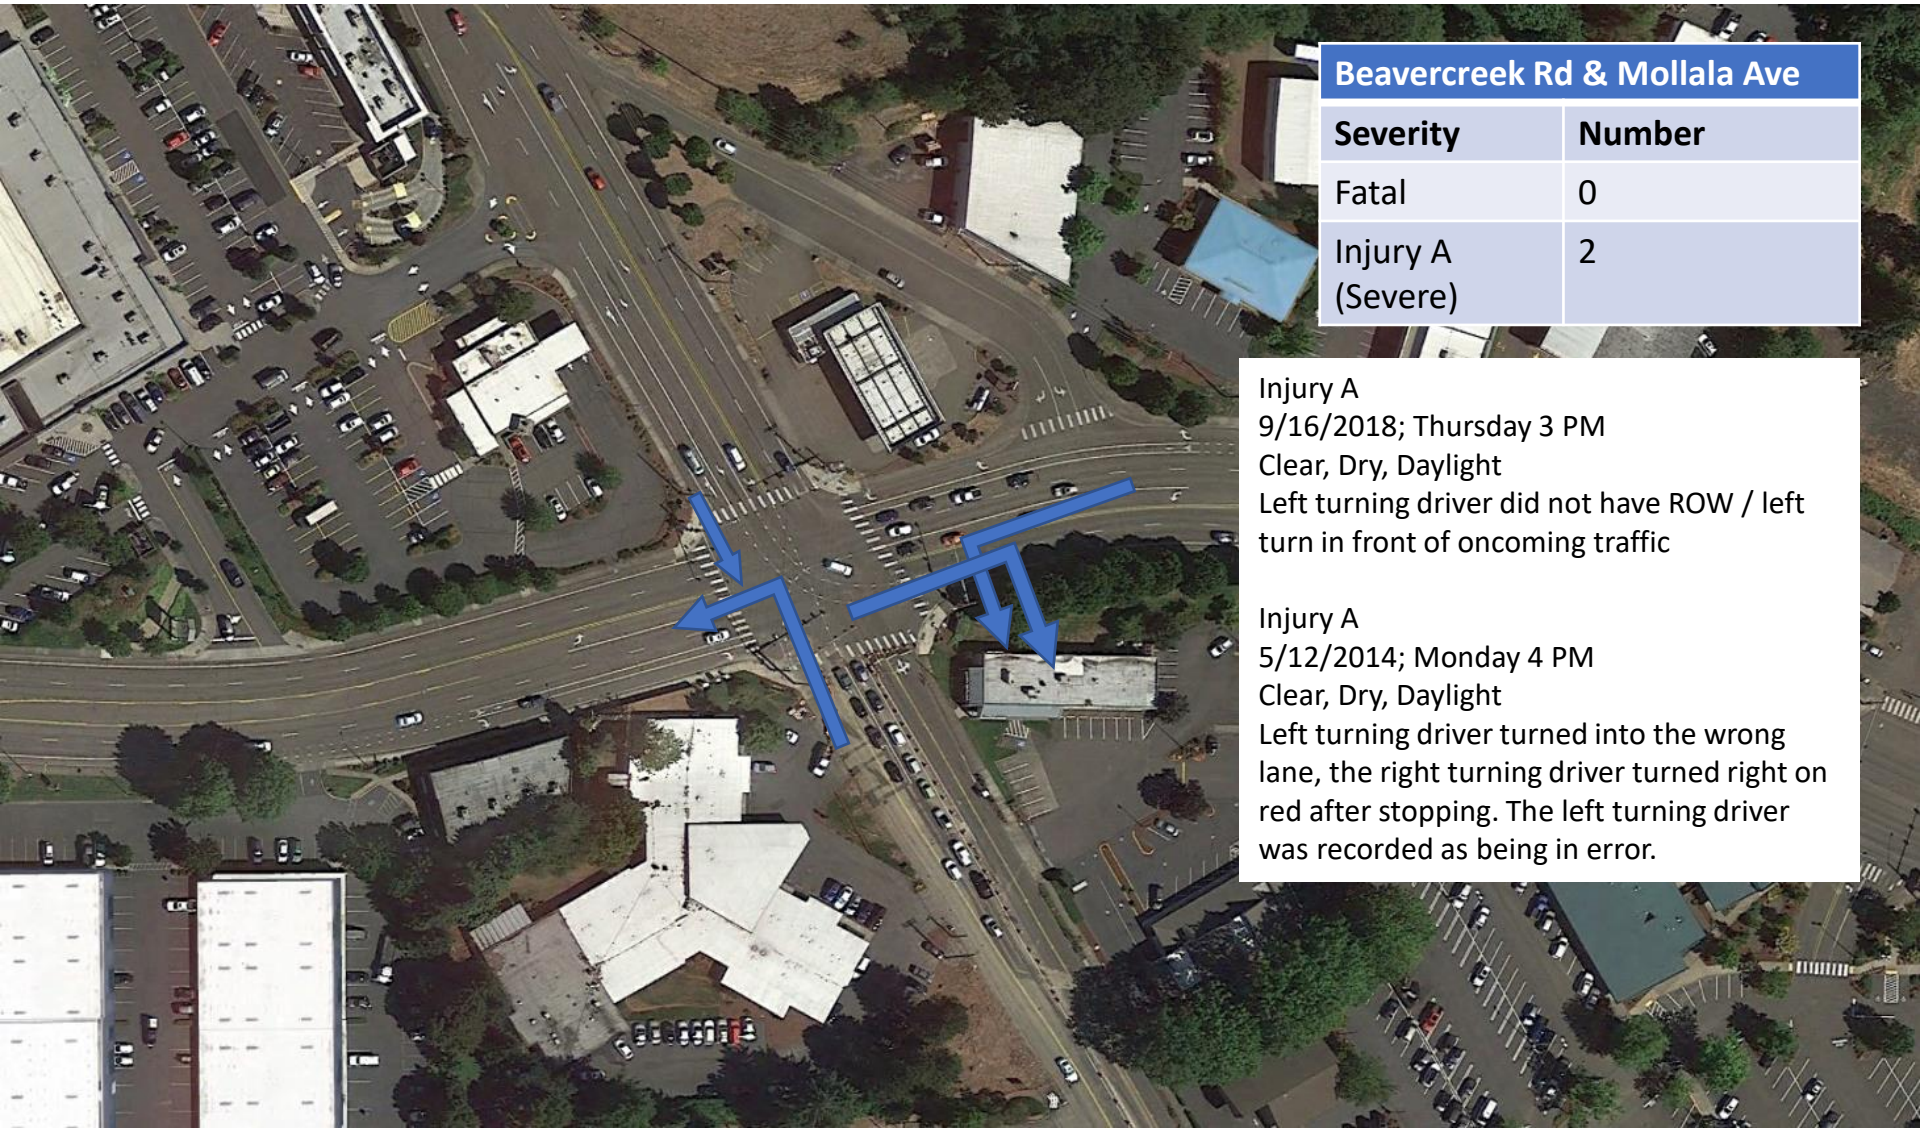
OR 99E & I-205 SB Ramps	
Severity	**Number**
Fatal	0
Injury A (Severe)	1

Injury A
5/19/2018; Saturday, 10PM
Clear, Dry
Left turning vehicle did not have ROW / left turn in front of oncoming traffic



Washington St & 12th St	
Severity	**Number**
Fatal	1
Injury A (Severe)	0

Fatal
1/3/2014; Friday 6 PM
Cloudy, Dry, Daylight
Driver failed to yield ROW to pedestrian, pedestrian was killed



OR 213 & Redland Rd	
Severity	**Number**
Fatal	0
Injury A (Severe)	1

Injury A
12/27/2017; Wednesday 9PM
Fog, Wet, Dark
One of the drivers disregarded the traffic signal, but unable to determine which driver

OR 213 & Beavercreek Rd	
Severity	**Number**
Fatal	1
Injury A (Severe)	0

Fatal
1/2/2017; Monday 12PM
Cloudy, Wet, Daylight
Pedestrian disregarded traffic signal, vehicle skidded, pedestrian was killed

Beavercreek Rd & Mollala Ave	
Severity	**Number**
Fatal	0
Injury A (Severe)	2

Injury A
9/16/2018; Thursday 3 PM
Clear, Dry, Daylight
Left turning driver did not have ROW / left turn in front of oncoming traffic

Injury A
5/12/2014; Monday 4 PM
Clear, Dry, Daylight
Left turning driver turned into the wrong lane, the right turning driver turned right on red after stopping. The left turning driver was recorded as being in error.

Beavercreek Rd & Maple Ln	
Severity	**Number**
Fatal	0
Injury A (Severe)	2

Injury A
2/7/2016; Saturday 2 PM
Rain, Wet, Daylight
Left turning driver did not have ROW / left turn in front of oncoming traffic

Injury A
9/9/2017; Saturday 8 PM
Rain, Wet, Daylight
Southbound driver disregarded the traffic signal

This document is intended to supplement the land use narrative of the North End Master Plan GDP submittal. It includes the applicant's response to the applicable goals and policies of the Oregon City Comprehensive Plan. The Oregon City Comprehensive Plan is implemented through the Oregon City Municipal Code and associated policy documents such as the Oregon City Transportation System Plan and various facilities plans that are adopted and incorporated by reference into the City's Development Code.

SECTION 1: CITIZEN INVOLVEMENT

Goal 1.1 Citizen Involvement Program

Implement a Citizen Involvement Program that will provide an active and systematic process for citizen participation in all phases of the land-use decision making process to enable citizens to consider and act upon a broad range of issues affecting the livability, community sustainability, and quality of neighborhoods and the community as a whole.

Policy 1.1.1

Utilize neighborhood associations as the vehicle for neighborhood-based input to meet the requirements of the Land Conservation and Development Commission (LCDC) Statewide Planning Goal 1, Citizen Involvement. The Citizen Involvement Committee (CIC) shall serve as the officially recognized citizen committee needed to meet LCDC Statewide Planning Goal 1.

Response: The project was presented to the Oregon City Citizen Involvement Committee on February 1, 2021. The team went over the project and overall design objectives that had been considered as the project was developed and answered questions from the attendees.

Goal 1.4 Community Involvement

Provide complete information for individuals, groups, and communities to participate in public policy planning and implementation of policies.

Policy 1.4.1

Notify citizens about community involvement opportunities when they occur.

Response: The City's public hearing process meets the requirements of this Goal for citizen involvement in the land use process. Notice of the proposal will be provided to all property owners within the notice area (300 feet) and adjacent city-recognized neighborhood associations, published on the City's website, and will also be posted on the subject property, giving interested citizens an opportunity to be involved in the process. The developer has also spent the last year reaching out to local civic groups to discuss the project. A public hearing to consider the request will be held by the Planning Commission who will make a decision on the proposal following an open public record period and hearing. Through the notice and public hearing process, all interested parties are afforded the opportunity to review the application, comment on the proposal, and participate in the decision. This process meets the requirements of this Goal for citizen involvement in the land use planning process. In accordance with the findings presented above, the proposal is consistent with Goal 1.

SECTION 2: LAND USE

Goal 2.1 Efficient Use of Land

Ensure that property planned for residential, commercial, office, and industrial uses is used efficiently and that land is developed following principles of sustainable development.

Policy 2.1.1
Create incentives for new development to use land more efficiently, such as by having minimum floor area ratios and maximums for parking and setbacks.
Policy 2.1.2
Encourage the vertical and horizontal mixing of different land-use types in selected areas of the city where compatible uses can be designed to reduce the overall need for parking, create vibrant urban areas, reduce reliance on private automobiles, create more business opportunities and achieve better places to live.

Policy 2.1.3
Encourage sub-area master planning for larger developments or parcels, including re-development, where it may be feasible to develop more mixed uses, or campus-style industrial parks, with shared parking and landscaping areas. Allow developments to vary from prescriptive standards if planned and approved under this provision.
Policy 2.1.4
Use redevelopment programs such as urban renewal to help redevelop underutilized commercial and industrial land.

Response: The North End Master Plan is located within the Mixed-Use Downtown Zoning District which has established minimum floor area ratios, and maximums for parking and setbacks. The minimum floor area is exceeded by the master plan. The proposed parking is between the established minimum and maximum parking standards. The maximum setbacks are met on all frontages except for Abernethy Road. Buildings located along the Abernethy Road frontage are setback outside of the floodplain and a modification to this standard has been requested as allowed by the provisions in the Oregon City Code section 17.65.070.

The Mixed-Use District allows for the vertical and horizontal mixing of different land uses as evidenced by the programming within the proposed master plan. The General Development Plan provides a healthy mix of uses including both commercial and residential.

Approval of the proposed master plan would allow for the development of approximately 65 acres at the north end of Downtown Oregon City. The site is the former home of the Rossman Landfill and redevelopment of the site presents a number of issues that make it difficult to develop as a normal greenfield site would. Developments within the master plan are able to benefit from shared parking and landscaped areas. Finally, the master plan allows the development to vary from prescriptive standards when approved by the Oregon City Planning Commission.

The City has an urban renewal program that the development of this property could benefit from given the challenges associated with redeveloping a former land fill that is located within the Oregon City Downtown and envisioned under the Metro Functional Plan as a regional center intended to serve the region.

Goal 2.2 Downtown Oregon City
Develop the Downtown area, which includes the Historic Downtown Area, the "north end" of the Downtown, Clackamette Cove, and the End of the Oregon Trail area, as a quality place for shopping,

living, working, cultural and recreational activities, and social interaction. Provide walkways for pedestrian and bicycle traffic, preserve views of Willamette Falls and the Willamette River, and preserve the natural amenities of the area.

Policy 2.2.4
Target public infrastructure investments and create public/private partnerships to leverage maximum benefits from public investment and to help ensure that the Regional Center develops to its maximum capacity and realizes its full potential.
Policy 2.2.5
Encourage the development of a strong and healthy Historic Downtown retail, office, cultural, and residential center.
Policy 2.2.9
Improve connectivity for vehicles, bicycles, and pedestrians within the Oregon City Downtown community and waterfront master plan areas and improve links between residential areas and the community beyond.

Response: Over the past year, Summit Development Group has worked in a very concerted manner to develop relationships with key stakeholders in the community and at the City to partner on the redevelopment of the former Rossman Landfill site at the north end of Downtown. The North End Master Plan, is a vision to redevelop the site with a mix of commercial, service, entertainment, residential, and retail uses as depicted in the General Development Plan. The plan envisions a transformation of the former landfill to a lively, integrated mixed-use development that will not only complement the downtown, but serve as a primary gateway to the north end of the Oregon City Downtown.

The master plan features tree-lined streets, landscaped open spaces, offices and residences overlooking public plazas and open spaces, and will feature a wide variety of shopping, dining, and entertainment experiences. When completed, the plan will have contributed to the expansion of infrastructure within the area by way of actual construction as well as contributions to the overall network of the existing infrastructure including sewer, water, storm, sidewalks, streets, plazas and open spaces, bikeways, street trees. Construction of the project will include completion of several of the projects currently listed within the Oregon City Transportation system Plan (TSP). Many of them are needed but not funded. Finally, the develop will contribute to the overall improvements of the larger public systems through systems development charges.

The project will complement and strengthen the downtown by providing a compact design on the west edge of the development that provides appropriate architecture, massing, and encourages a walkable environment with a downtown streetscape while maintaining a relationship to the rest of historic downtown. The east edge of the site is provided with a mix of small retail spaces integrated into larger anchor retail pads that will allow the development to balance the need for growth and economic opportunity, without compromising the comfortable, small-town roots of downtown Oregon City. For future residents and tenants, The North End master plan provides a place where they can live, work and be a part of Oregon City.

Goal 2.4 Neighborhood Livability
Provide a sense of place and identity for residents and visitors by protecting and maintaining neighborhoods as the basic unit of community life in Oregon City while implementing the goals and policies of the other sections of the Comprehensive Plan.

Policy 2.4.2
Strive to establish facilities and land uses in every neighborhood that help give vibrancy, a sense of place, and a feeling of uniqueness; such as activity centers and points of interest.
Policy 2.4.3
Promote connectivity between neighborhoods and neighborhood commercial centers through a variety of transportation modes.

Response: When fully completed, the North End Master Plan will be a complete neighborhood at the North End of Downtown Oregon City. People who live within the master plan will have all of the goods and services that downtown Oregon City has to offer. There are plazas, active open spaces and multi-modal trails to connect the master plan with the residents and visitors in Historic Downtown Oregon City. The development of the site will attract more people into downtown from the region and contribute to the vibrancy of the downtown.

Goal 2.5 Retail and Neighborhood Commercial
Encourage the provision of appropriately scaled services to neighborhoods.

Policy 2.5.4
Encourage the development of successful commercial areas organized as centers surrounded by higher density housing and office uses, rather than as commercial strips adjacent to low-density housing.
Policy 2.5.5
Encourage commercial and industrial development that enhances livability of neighborhoods through the design of attractive LEEDTM-certified buildings and environmentally responsible landscaping that uses native vegetation wherever possible, and by ensuring that development is screened and buffered from adjoining residential neighborhoods and access is provided by a variety of transportation modes.

Response: The North End Master Plan will be a complete community with a mix of uses including retail and service-oriented businesses, residences, restaurants, open spaces, and entertainment that will be appropriately scaled services to the neighborhoods and downtown.

Goal 2.7 Oregon City Comprehensive Plan Land-Use Map
Maintain the Oregon City Comprehensive Plan Land-Use Map as the official long-range planning guide for land-use development of the city by type, density and location.

Policy 2.7.2
Use the following 11 land-use classifications on the Oregon City Comprehensive Plan Land-Use Map to determine the zoning classifications that may be applied to parcels:
- *Low Density Residential (LR)*
- *Medium Density Residential (MR)*
- *High Density Residential (HR)*
- *Commercial (C)*
- *Mixed Use Corridor (MUC)*
- *Mixed Use Employment (MUE)*
- *Mixed Use Downtown (MUD)*
- *Industrial (I)*
- *Public and Quasi-Public (QP)*
- *Parks (P)*

• *Future Urban Holding (FUH)*

Response: The proposed master plan is designated as Mixed-Use Downtown (MUD) on the Oregon City Comprehensive Plan Map. The proposed General Development Plan is consistent with the applicable provisions of the Oregon City Development Codes that are intended to implement that designation with few exceptions. In those cases, modifications are being requested as allowed.

SECTION 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

Goal 5.1 Open Space
Establish an open space system that conserves fish and wildlife habitat and provides recreational opportunities, scenic vistas, access to nature and other community benefits.

Policy 5.1.1
Conserve open space along creeks, urban drainage ways, steep hillsides, and throughout Newell Creek Canyon.
Policy 5.1.2
Manage open space areas for their value in linking citizens and visitors with the natural environment, providing solace, exercise, scenic views and outdoor education. Built features in open space sites should harmonize with natural surroundings.

Response: The North End Master Plan will include a comprehensive open space system that includes setting aside the Abernethy Creek riparian corridor that runs along the eastern edge of the site. The creek and its associated buffers have been delineated and are not proposed to be developed with the master plan.

Goal 5.2 Scenic Views and Scenic Sites
Protect the scenic qualities of Oregon City and scenic views of the surrounding landscape.

Policy 5.2.1
Identify and protect significant views of local and distant features such as Mt. Hood, the Cascade Mountains, the Clackamas River Valley, the Willamette River, Willamette Falls, the Tualatin Mountains, Newell Creek Canyon, and the skyline of the city of Portland, as viewed from within the city.
Policy 5.2.2
Maximize the visual compatibility and minimize the visual distraction of new structures or development within important viewsheds by establishing standards for landscaping, placement, height, mass, color, and window reflectivity.

Response: The proposed master plan does not impact any formally identified view corridors or view sheds. All proposed development is proposed to be consistent with the height requirements of the Mixed-Use Downtown (MUD) zoning designation.

Goal 5.4 Natural Resources
Identify and seek strategies to conserve and restore Oregon City's natural resources, including air, surface and subsurface water, geologic features, soils, vegetation, and fish and wildlife, in order to sustain quality of life for current and future citizens and visitors, and the long-term viability of the ecological systems.

Policy 5.4.1
Conserve and restore ecological structure, processes and functions within the city to closely approximate natural ecosystem structure, processes, and functions.
Policy 5.4.5
Ensure that riparian corridors along streams and rivers are conserved and restored to provide maximum ecological value to aquatic and terrestrial species. This could include an aggressive tree and vegetation planting program to stabilize slopes, reduce erosion, and mitigate against invasive species and stream impacts where appropriate.
Policy 5.4.8
Conserve natural resources that have significant functions and values related to flood protection, sediment and erosion control, water quality, groundwater recharge and discharge, education, vegetation and fish, and wildlife habitat.
Policy 5.4.9
Protect and enhance riparian corridors along streams in Oregon City to increase shade, reduce streambank erosion and intrusion of sediments, and provide habitat for a variety of plants, animals, and fish.
Policy 5.4.10
Encourage and promote the restoration of the hydrologic and ecological character and function of streams and wetlands that have been degraded by channeling or eliminated from the landscape by routing into culverts.
Policy 5.4.11
Maintain and enhance the function and quality of natural wetlands and create, where appropriate, wetlands or swales to moderate the quantity and velocity of water runoff entering streams during storm events and to reduce the amount of pollutants carried into streams.

Response: The proposed development would occur on the former Rossman Landfill and is directly adjacent to Abernethy Creek. The proposed development conserves the creek and its associated buffers. If there are subsequent decisions to impact the buffers as part of a detailed development plan, the City can impose appropriate mitigation and the developer will be expected to comply with those requirements. It may be necessary to remove invasive plants and replant with native species as the property is developed, but any and all work within the corridor will be permitted through the appropriate agency.

Policy 5.4.12
Use a watershed-scale assessment when reviewing and planning for the potential effects from development, whether private or public, on water quality and quantity entering streams.
Policy 5.4.16
Protect surfacewater quality by:
- *providing a vegetated corridor to separate protected water features from development*
- *maintaining or reducing stream temperatures with vegetative shading*
- *minimizing erosion and nutrient and pollutant loading into water*
- *providing infiltration and natural water purification by percolation through soil and vegetation*

Response: The master plan developer will construct an on-site storm drainage system that includes a combination of low impact bio-retention facilities and mechanical structures to treat stormwater prior to discharge. The stormwater will be treated and conveyed to the appropriate drainage basin. The entire storm system will be designed to be consistent with the Oregon City design and construction standards.

Policy 5.4.18
Encourage use of native and hardy plants such as trees, shrubs and groundcovers to maintain ecological function and reduce maintenance costs and chemical use.

Response: The master plan includes landscape design that is consistent with the Oregon City Municipal Code landscape standards and includes design guidelines that promote the use of native and hardy plants within the on-site landscape areas.

SECTION 6: QUALITY OF AIR, WATER, AND LAND RESOURCES

Goal 6.1 Air Quality
Promote the conservation, protection and improvement of the quality of the air in Oregon City.

Policy 6.1.1
Promote land-use patterns that reduce the need for distance travel by singleoccupancy vehicles and increase opportunities for walking, biking and/or transit to destinations such as places of employment, shopping and education.
Policy 6.1.2
Ensure that development practices comply with or exceed regional, state, and federal standards for air quality.
Policy 6.1.4
Encourage the maintenance and improvement of the city's tree canopy to improve air quality.

Response: The proposed master plan is provided with a transportation system that can be utilized by all modes of transportation including bicycling and walking. Post-construction emissions would come from personal vehicles traveling to the Downtown from the region and the buildings within the development. Within the Metro area, all of these vehicles are required to meet strict emissions standards. All future building construction within the master plan will be subject to the State and local energy codes.

Additionally, the master plan includes approximately 540 housing units and will allow for a variety of uses that will create opportunities for those residents and citizens within close proximity to the development to eat, shop, recreate, and obtain all of the personal services that downtown Oregon City has to offer within walking and biking distance. The site is also in close proximity to transit as well as the Amtrak Station. Finally, over 500 new trees will be planted within the development when it is fully constructed.

Goal 6.2 Water Quality
Control erosion and sedimentation associated with construction and development activities to protect water quality.

Policy 6.2.1
Prevent erosion and restrict the discharge of sediments into surface- and groundwater by requiring erosion prevention measures and sediment control practices.
Policy 6.2.2
Where feasible, use open, naturally vegetated drainage ways to reduce stormwater and improve water quality.

Response: Future construction activities will be subject to state and local erosion control standards. As stated previously, the master plan developer will construct an on-site storm drainage system that includes a combination of low impact bio-retention facilities and mechanical structures to treat stormwater prior to discharge. The stormwater will be treated and conveyed to the appropriate drainage basin. The entire storm system will be designed to be consistent with the Oregon City design and construction standards.

Goal 6.3 Nightlighting
Protect the night skies above Oregon City and facilities that utilize the night sky, such as the Haggart Astronomical Observatory, while providing for nightlighting at appropriate levels to ensure safety for residents, businesses, and users of transportation facilities, to reduce light trespass onto neighboring properties, to conserve energy, and to reduce light pollution via use of night-friendly lighting.

Policy 6.3.1
Minimize light pollution and reduce glare from reaching the sky and trespassing onto adjacent properties.
Policy 6.3.2
Encourage new developments to provide even and energy-efficient lighting that ensures safety and discourages vandalism. Encourage existing developments to retrofit when feasible.

Response: Proposed development within the master plan area will meet the lighting standards adopted by Oregon City as well as the Oregon Energy Codes.

Goal 6.4 Noise
Prevent excessive noise that may jeopardize the health, welfare, and safety of the citizens or degrade the quality of life.

Policy 6.4.1
Provide for noise abatement features such as sound-walls, soil berms, vegetation, and setbacks, to buffer neighborhoods from vehicular noise and industrial uses.
Policy 6.4.2
Encourage land-use patterns along high-traffic corridors that minimize noise impacts from motorized traffic through building location, design, size and scale.

Response: The master plan is located at the north end of downtown Oregon City and allows the same uses that are permitted within the zoning code. There are no expected uses that will create excessive noise beyond the uses that are already permitted within the area.

SECTION 7: NATURAL HAZARDS

Goal 7.1 Natural Hazards
Protect life and reduce property loss from the destruction associated with natural hazards.
Policy 7.1.1
Limit loss of life and damage to property from natural hazards by regulating or prohibiting development in areas of known or potential hazards.
Policy 7.1.3
Reduce risk to residents and businesses by maintaining accurate information on the existence and potential of hazards.

Policy 7.1.5
Minimize the risk of loss of life and damage to property from flooding by limiting development in the 100-year floodplain and by ensuring that accepted methods of flood proofing are used.
Policy 7.1.6
Encourage the use of land and design of structures that are relatively unaffected by the periodic effects of flooding, such as parking and other uses not normally occupied by humans.
Policy 7.1.7
Prohibit uses in areas subject to flooding that would exacerbate or contribute to hazards posed by flooding by introducing hazardous materials, filling or obstructing floodways, modifying drainage channels, and other detrimental actions.
Policy 7.1.8
Provide standards in City Codes for planning, reviewing, and approving development in areas of potential landslides that will prevent or minimize potential landslides while allowing appropriate development.
Policy 7.1.9
Locate, design, and construct structures in conformance with current building codes and standards for seismic-resistant design.

Response: The proposed master plan includes areas that are located within the floodplain and geologic hazard areas. The site will be balanced so that there is no increase in flooding beyond what occurs today. The GDP intentionally proposes to site circulation and parking area within the 100-year floodplain to minimize the potential hazards associated with habitable spaces. Further, the site has been evaluated by NV5 (formerly Geo-Design) and future construction within the development areas will be subject to the standards within the Oregon City development code as well as the recommendations of the geo-technical engineer. Finally, all future development would be subject to the applicable building codes that are in effect at the time they are proposed and constructed.

SECTION 8: PARKS AND RECREATION

Goal 8.1 Developing Oregon City's Park and Recreation System
Maintain and enhance the existing park and recreation system while planning for future expansion to meet residential growth.

Policy 8.1.1
Provide an active neighborhood park-type facility and community park-type facility within a reasonable distance from residences, as defined by the Oregon City Park and Recreation Master Plan, to residents of Oregon City.
Policy 8.1.5
Identify and construct a network of off-street trails throughout the city for walking and jogging.
Policy 8.1.6
Policy 8.1.9
Emphasize retaining natural conditions and the natural environment in proposed passive recreation areas.

Response: The proposed master plan includes a system of parks and plazas strategically located throughout the master plan and connected through a circuitous pedestrian and bike system. Parks and plazas are both passive and active. The proposed development includes two pedestrian shared use connections that are identified in the Oregon City TSP.

SECTION 9: ECONOMIC DEVELOPMENT

Goal 9.1 Improve Oregon City's Economic Health
Provide a vital, diversified, innovative economy including an adequate supply of goods and services and employment opportunities to work toward an economically reasonable, ecologically sound and socially equitable economy.

Policy 9.1.1
Attract high-quality commercial and industrial development that provides stable, high-paying jobs in safe and healthy work environments, that contributes to a broad and sufficient tax base, and that does not compromise the quality of the environment.

Response: When fully developed, the North End Master Plan will provide a mix of high-quality commercial and service uses within a development intended to complement the mix of uses in downtown. It will provide residents of the development and citizens within the area to access whatever services and products they need to live, work, and recreate within Oregon City.

Goal 9.5 Retail Service
Allow a variety of retail outlets and shopping areas to meet the needs of the community and nearby rural areas.

Response: In addition to being located at the north end of downtown Oregon City, the North End Master Plan is part of a designated regional center under the Metro 2040 Functional Plan. The site is large and provides for a mix of service, entertainment, and retail uses that can assist the City in realizing the intent of this goal. With good access and transportation facilities, the downtown area will serve nearby rural areas as well as the community itself.

Goal 9.6 Tourism
Promote Oregon City as a destination for tourism.

Policy 9.6.1
Protect historic, recreational, and natural resources as the basis for tourism, such as the Historic Downtown Area.
Policy 9.6.2
Ensure land uses and transportation connections that support tourism as an important aspect of the City's economic development strategy. This could include connections to the End of the Oregon Trail Interpretive Center and the train depot.
Policy 9.6.3
Provide land uses in the Downtown Historic Area, 7th Street corridor, and the End of the Oregon Trail Interpretive Center that support tourism and visitor services.
Policy 9.6.6
Encourage private development of hotel, bed and breakfast, restaurant facilities and other visitor services.

Response: The North End Master Plan is located at the north end of downtown Oregon City and will likely attract a lot of visitors to the area. It connects directly to the End of the Oregon Trail Interpretive Center and provides street improvements along Washington Street and Abernethy that will connect the development with the rest of downtown. The proposed development includes service, retail,

restaurants, entertainment, and housing that will draw a lot of additional attention to the downtown area.

Goal 9.8 Transportation System
Recognize the importance of the land use-transportation link and encourage businesses to locate in areas already served by the type of transportation system they need.

Policy 9.8.1
Through coordination with TriMet and local employers, encourage and promote the use of mass transit to travel between residential areas and employment areas.
Policy 9.8.6
Encourage the provision of multi-modal transportation to support major existing employers.
Policy 9.8.7
Assess methods to integrate the pedestrian, bicycle and elevator transportation modes into the mass transit system.

Response: The proposed master plan is within downtown and is in close proximity to a variety of transportation services for all modes of transportation. The development provides for multi-modal transportation within the development including cycling, pedestrians, and automobiles. It is at the confluence of several major transportation facilities and over the course of its development will provide transportation improvements that supplement and improve the existing system consistent with the TSP.

SECTION 10: HOUSING

Goal 10.1 Diverse Housing Opportunities
Provide for the planning, development and preservation of a variety of housing types and lot sizes.

Policy 10.1.7
Use a combination of incentives and development standards to promote and encourage well-designed single-family subdivisions and multi-family developments that result in neighborhood livability and stability.

Response: The proposed master plan will provide approximately 540 new residential housing units within a multi-family housing type that will increase the supply of housing near downtown. There will not likely be individual lots associated with these homes, but they will have access to shared open spaces, plazas, and both passive and active recreational opportunities.

SECTION 11: PUBLIC FACILITIES

Goal 11.1 Provision of Public Facilities
Serve the health, safety, education, welfare, and recreational needs of all Oregon City residents through the planning and provision of adequate public facilities.

Policy 11.1.3
Confine urban public facilities and services to the city limits except where allowed for safety and health reasons in accordance with state land-use planning goals and regulations. Facilities that serve the public will be centrally located and accessible, preferably by multiple modes of transportation.
Policy 11.1.4

Support development on underdeveloped or vacant buildable land within the city where public facilities and services are available or can be provided and where land-use compatibility can be found relative to the environment, zoning, and Comprehensive Plan goals.
Policy 11.1.5
Design the extension or improvement of any major public facility and service to an area to complement other public facilities and services at uniform levels.
Policy 11.1.6
Enhance efficient use of existing public facilities and services by encouraging development at maximum levels permitted in the Comprehensive Plan, implementing minimum residential densities, and adopting an Accessory Dwelling Unit Ordinance to infill vacant land.

Response: The proposed master plan is an underdeveloped property in close proximity to downtown Oregon City. The site is located within the UGB and the City limits. Public services are located adjacent to the master plan site and will be extended into the site with the first phase. In addition, development of the site will contribute to the overall public infrastructure system through direct improvements or indirectly through systems development charges associated with development in the master plan area.

Goal 11.2 Wastewater
Seek the most efficient and economic means available for constructing, operating, and maintaining the City's wastewater collection system while protecting the environment and meeting state and federal standards for sanitary sewer systems.

Policy 11.2.2
Plan, operate and maintain the wastewater collection system for all current and anticipated city residents within the existing Urban Growth Boundary. Plan strategically for future expansion areas.
Policy 11.2.5
Implement the City's wastewater policies through the City of Oregon City Sanitary Sewer Master Plan.

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing sanitary sewer located adjacent to the site. The development will contribute to the improvement and maintenance of the overall wastewater system through payment of systems development charges.

Goal 11.3 Water Distribution
Seek the most efficient and economic means available for constructing, operating, and maintaining the City's water distribution system while protecting the environment and meeting state and federal standards for potable water systems.

Policy 11.3.1
Plan, operate and maintain the water distribution system for all current and anticipated city residents within its existing Urban Growth Boundary and plan strategically for future expansion areas.
Policy 11.3.2

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing water distribution lines located adjacent to the site. The development will contribute to the improvement and maintenance of the overall water system through payment of systems development charges.

Goal 11.4 Stormwater Management
Seek the most efficient and economical means available for constructing, operating, and maintaining the City's stormwater management system while protecting the environment and meeting regional, state, and federal standards for protection and restoration of water resources and fish and wildlife habitat.

Policy 11.4.1
Plan, operate, and maintain the stormwater management system for all current and anticipated city residents within Oregon City's existing Urban Growth Boundary and plan strategically for future expansion areas.
Policy 11.4.2
Adopt "green streets" standards to reduce the amount of impervious surface and increase the use of bioswales for stormwater retention where practicable.
Policy 11.4.3
Ensure parking lot designs that mitigate stormwater impacts. Take measures to reduce waterflow and increase water absorption through the use of bioswales, vegetated landscaped islands with curb cuts to allow water inflow, and tree planting.
Policy 11.4.4
Maintain existing drainageways in a natural state for maximum water quality, water resource preservation, and aesthetic benefits.
Policy 11.4.5
Design stormwater facilities to discharge surfacewater at pre-development rates and enhance stormwater quality in accordance with criteria in City of Oregon City Public Works Stormwater and Grading Design Standards.

Response: The North End Master Plan is located within the existing UGB and will be served by the extension and improvement of existing storm facilities located adjacent to the site. Stormwater will be treated through a combination of mechanical treatment systems and low impact development facilities. The development will contribute to the improvement and maintenance of the overall wastewater system through payment of systems development charges.

Goal 11.6 Transportation Infrastructure
Optimize the City's investment in transportation infrastructure.

Policy 11.6.1
Make investments to accommodate multi-modal traffic as much as possible to include bike lanes, bus turnouts and shelters, sidewalks, etc., especially on major and minor arterial roads, and in regional and employment centers.

Response: The North End Master Plan area is adjacent to an existing system of public streets and will provide improvements to increase multi-modal access to the site and downtown. Further, the development will contribute directly to the system by construction improvements identified within the Oregon City TSP as well as indirectly through the payment of systems development charges.

Goal 11.7 Private Utility Operations
Coordinate with utilities that provide electric, gas, telephone and television cable systems, and high-speed internet connection to Oregon City residents to ensure adequate service levels.
Policy 11.7.1

Require local service lines in new subdivisions be placed underground.
Policy 11.7.2
Coordinate with private utility providers to install infrastructure during street construction and maintenance to reduce the need to repeatedly cut into newly paved streets.
Policy 11.7.3
Adopt lighting practices in streets and other public facilities, and encourage them in private development, that reduce glare, light pollution, light trespass, and energy use, while maintaining even lighting ensuring good visibility and safety for the public.

Response: All new private utilities will be placed underground and will be placed consistent with the franchise utilities standards. Lighting will be designed in accordance with City standards that are intended to implement these policies.

SECTION 12: TRANSPORTATION

Goal 12.1 Land Use-Transportation Connection
Ensure that the mutually supportive nature of land use and transportation is recognized in planning for the future of Oregon City.

Policy 12.1.1
Maintain and enhance citywide transportation functionality by emphasizing multi-modal travel options for all types of land uses.
Policy 12.1.3
Support mixed uses with higher residential densities in transportation corridors and include a consideration of financial and regulatory incentives to upgrade existing buildings and transportation systems.
Policy 12.1.4
Provide walkable neighborhoods. They are desirable places to live, work, learn and play, and therefore a key component of smart growth.

Response: The North End Master Plan fronts three public streets, Washington Street, Abernethy Road, and Redland Road. Frontage improvements, including bicycle and pedestrian improvements have been coordinated with the Oregon City Engineering Division and are consistent with the requirements of the Oregon City TSP. The proposed GDP proposes to construct seven projects identified within the TSP that are intended to improve multi-modal travel options within the City. Required right-of-way and easements will be dedicated or provided with all of the proposed transportation improvements. The master plan is a walkable neighborhood that is connected to the community through direct connections to the existing transportation systems.

Goal 12.3 Multi-Modal Travel Options
Develop and maintain a transportation system that provides and encourages a variety of multi-modal travel options to meet the mobility needs of all Oregon City residents.
Policy 12.3.1
Provide an interconnected and accessible street system that minimizes vehiclemiles-traveled and inappropriate neighborhood cut-through traffic.4
Policy 12.3.2
Provide an interconnected and accessible pedestrian system that links residential areas with major pedestrian generators such as employment centers, public facilities, and recreational areas.

Policy 12.3.3
Provide a well-defined and accessible bicycle network that links residential areas, major bicycle generators, employment centers, recreational areas, and the arterial and collector roadway network.
Policy 12.3.4
Ensure the adequacy of pedestrian and bicycle connections to local, county, and regional trails.

Response: As stated previously, the proposed GDP proposes to construct seven projects identified within the TSP that are intended to improve multi-modal travel options within the City. Internal and adjacent to the site, there will be a mix of trails, sidewalks, streets, and bike lanes that provide good internal and efficient circulation routes that also connect to the existing public street system.

Goal 12.8 Implementation/Funding
Identify and implement needed transportation system improvements using available funding.

Policy 12.8.3
Provide incentives for private sector contributions to multi-modal transportation links and facilities, for example, establishing new standards in the zoning code.

Response: The cost of providing the transportation improvements associated with such a large site will require assistance and partnerships. The developer is pursuing access to a combination of public and private funding to ensure that all of the needed transportation system improvements are feasible. In addition to direct improvements paid for by the development, the developers within the master plan area will be contributing indirectly to the improvements of the overall transportation system through systems development charges.

SECTION 13: ENERGY CONSERVATION

Goal 13.1 Energy Sources
Conserve energy in all forms through efficient land-use patterns, public transportation, building siting and construction standards, and city programs, facilities, and activities.

Policy 13.1.2
Encourage siting and construction of new development to take advantage of solar energy, minimize energy usage, and maximize opportunities for public transit.

Response: Future development within the North End Master Plan will be required to meet applicable building codes for energy conservation. The site is located in close proximity to public transit and has been designed to be efficient and walkable.

Goal 13.2 Energy Conservation
Plan public and private development to conserve energy.

Policy 13.2.1
Promote mixed-use development, increased densities near activity centers, and home-based occupations (where appropriate).
Policy 13.2.5
Construct bikeways and sidewalks, and require connectivity of these facilities to reduce the use of petroleum-fueled transportation.

Response: The proposed master plan is a mixed use and walkable development that allows future residents within the development to live, work, and recreate within the area and downtown. The construction of bike lanes and sidewalks are a large part of the internal connectivity.

Re: Rossman Landfill Development Proposal
Project ID:
GLUA 21-000016 (MAS 21-02 CU 21-01 FP 21-03, GEO 21-030) The North End Master Plan

ITEMS OF CONCERN

Traffic:
Noted that traffic was checked in December 2020 on Washington/Abernathy. At that time, many people were still working from home due to the virus.

However, currently traffic is backed up on Washington Street from 14th back to Prairie Schooner Way during the hours of 1:00pm to 6:00pm Monday thru Friday. Traffic at the intersection of Redland/Holcomb/Abernathy is backed up during the early morning hours and late afternoon during the week.

Businesses and buildings removed?
Golf driving range will be dissolved.

What about the county and Sheriff's parking on north side of Abernathy, the appliance parts house, old OJ's antique store, 2 homes on the south side of the Interpretive Center.

Funds:
Is the City of Oregon City funding any of this project?

The design is wonderful but all I foresee is a lot of people and traffic.

I personally would like to see the 62 acres turned into a park/walking paths. Perhaps a small deli/ice cream shop/coffee shop.

I have been a citizen of Clackamas County – Oregon City address - for almost 46 years. Change is sometimes good, but so is seeing the old Oregon City stay the same with its history!!

Please send me an email (djtroxler1@outlook.com) reply that my letter has been accepted.

Thank you,

Jan Troxler.

Hello Ms. Robertson-Gardiner,

The Confederated Tribes of the Umatilla Indian Reservation (CTUIR) Cultural Resources Protection Program (CRPP) has reviewed the documents for GLUA-21-00016. The proposed project area is within a Cayuse 5 Area of Concern for the CTUIR. The General Development Plan Application states: "The proposed GDP protects any inventoried Goal 5 natural, historic or cultural resources within the proposed development boundary consistent with the provisions of applicable overlay districts." How up to date is Oregon City's Goal 5 Inventory? If the Goal 5 Inventory is not up to date, the CRPP recommends consulting with the State Historic Preservation Office (SHPO). Additionally, the CRPP recommends conducting a pedestrian survey with subsurface testing in areas where development will impact native sediments below the fill and trash layers of the old landfill. Please let me know if you have any questions or concerns.

Thank you,

Kristen Tiede

Christina,
The following statement provides DEQ's position regarding the proposed development on Rossman's Landfill. I would be happy to provide input regarding the condition of approval that you are drafting.
Bob
Cell: 971-254-7493

DEQ STATEMENT

The Oregon Department of Environmental Quality regulates the closed Rossman's Landfill through a DEQ solid waste closure permit. The landfill has been closed for 38 years. The landfill is capped with a compacted soil cover. Post-closure activities include groundwater and landfill gas monitoring.

DEQ supports redevelopment of closed landfills and intends to enter into a Prospective Purchaser Agreement with two parties planning to purchase portions of the site for development. The property proposed for acquisition is approximately 77 acres and includes two parcels. Summit OC LLC intends to purchase "Parcel I," (Tax Lot 902) covering approximately 62 acres. OCLD LLC intends to purchase "Parcel II" (Tax Lot 1200), which is approximately15 acres. Details regarding the proposed Prospective Purchaser Agreement can be found here:

https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=674&Screen=Load

DEQ will work with the businesses who purchase lots on top of the closed landfill to ensure that development occurs in a safe manner that protects occupants from landfill gas or other environmental concerns associated with a closed landfill.

Hi Bob-

Per my voice mail,

We are currently working on the staff report for the landfill master plan. The proposal is for a Master Plan approval that will guide later development applications for individual buildings. I was hoping to work with you to write a general condition of approval that would direct the applicant to continue to work with DEQ to obtain all applicable permits for development on the site. A comment email for the record from DEQ is also helpful, as many ask if the applicant is working with DEQ and a quick email to the record often resolves that question.

Let me know if you want to chat over the phone.

Thanks!

Christina

Subject: North End Development
Date: Thursday, June 17, 2021 8:13:06 AM

Dear Oregon City Commissioners,

I am hopeful and excited for this development proposal. I am a 23 year old CNA 2, at Providence St.Vincet, and have been a resident of Oregon City my entire life. Throughout the years I have been able to watch our City grow and change. It has blossomed from a mill town with almost every downtown store front for lease to a flourishing community with wonderful restaurants and activities. Half the time a person cannot even find parking! Not only has our downtown done well, but other parts of Oregon City have become fun to visit and there are many options for places people can go.

This has not only helped helped our little economy, but lead me to love my town more. If we were to go anywhere when I was little, we had to drive out to the neighboring cities. There you could find good food and places to explore. Now I can be close to home and put money back into my community. It would also help use a piece of land that has been idle for years and is such a waste.

I remember when I was little, in the age range of 8-12, this plan had already been proposed. The idea of having more to explore and a fun place to visit besides Home Depot was exhilarating as a child. Especially with this location being closer to the Barton to Carver river float, it made me think it would be the perfect place to have the people enjoying that location/activity to stop by and refresh. When this idea was dismissed it made me very downcast and disappointed. Maybe it had been for the best so that the idea would mesh more perfectly with the now flourishing and refined downtown Oregon City. As an adult I can only imagine the fun that could be had once it is developed.

Additionally, this would help with our housing. If the apartments proposed to be above the businesses are affordable, this would help tremendously. With how many people have move to our city, it is hard to find good and affordable housing. I am very blessed to live with my parents still, but this could give my Fiancé and I (who will be married next June) an affordable place to stay near home.

The only thing I could think be be of an issue with this (other than possible financial difficulty), would be the need for parking. I may have missed that part within the plan, but would a parking structure or some sort of additional parking be added? If so this would help with the already tricky parking situation. If this plan is denied I will once again be greatly disappointed and will hope in another roughly 12 years that I can be excited about an idea I've know of since a child. It coming to fruition would mean so much.

Thank you for reading and hearing me out. Please consider that this would be very beneficial for the community and that the residents who have been here for their whole lives/many years are anticipating this exciting project. Take care and be safe!

Sincerely,
Emma Fleming

I support the North End Summit Development Plan. There is a demand for housing and retail at the north end of Oregon City.

This project will boost the economy of Oregon City. It will generate construction and after construction.

Also this project could promote other development in the vicinity. Additional property taxes would benefit the city and schools.

Date: Monday, June 14, 2021 12:58:21 PM

Oregon City Planning Commission,
Please accept this note in support of the North End mixed use development project. The North End will bring an exciting mix of uses to an area that has for far too long been nothing more than a blighted landscape along Interstate 205. In addition, it will add vitality to neighboring properties such as the Clackamette Cove area that have been sitting fallow for far too long as well. The North End planned development that will include retail, commercial, residential, and job growth components will serve as an exciting place for people to live, work, play, and learn!
Thank you,

Skip Rotticci

- I am in favor of the North end project!

  In the last ten years Oregon City was the 11th fastest growing city in Oregon by population. The demand for housing, retail and entertainment is ever increasing.

- Our entire region will benefit from a vibrant north end neighborhood, complementing and strengthening connections to other local communities.

- Oregon City has an opportunity to be leaders in taking a degraded area, raising it to today's environmental standards and turning it into an energetic economy that will meet the needs of this evolving community.

- The new economic activity during construction and after will result in new revenue and provide significant additional dollars for city services. During construction, it is estimated that over 3,000 jobs will be created. After completion, it is estimated that 988 new jobs will be available.

- The retail and entertainment facilities will attract additional people and the property taxes collected will benefit schools and provide new revenue streams to the city.

- Tourists and people from outside the region will visit, and the area's businesses as a whole will benefit from their longer time spent here.

Subject: North End Development
Date: Monday, June 14, 2021 11:18:21 AM

To Whom it may concern,
I am strongly in favor of the North End Development plan. As an Oregon City resident for nearly 30 years, I've observed discussions of use for this land come and go. Now, it appears there may be a viable option.
Naysayers (and they are very loud) will proclaim THE TRAFFIC WILL BE HORRIBLE. I find that argument interesting, because I imagine before these naysayer's homes were built, previous residents were saying THE TRAFFIC WILL BE HORRIBLE, and it goes on and on.
I witnessed just such a scenario in the early 2000s. We were friends with a couple who purchased a new home in a development off Pease Road. When proposals were made to add another housing development across the street, these people were very unhappy. "What about all the dirt and dust? We like that open field." I couldn't believe my ears. I imagine previous homeowner's said the same thing as this couple's housing development was being built.
Evidently, all growth should have stopped once they were residents. It's as if some are saying, "We're here, so close the gates!" Is the solution then to completely stop all growth so the current residents don't have to put up with anything new? I think that's ridiculous and very short-sighted.
At some point, we have to move on and think beyond our selfish desires, to get beyond the "not in my backyard" mentality and think long-term.
I hope the project wins approval and can proceed.
Thank you,
Dave Frazier

RE: The North End Masterplan Project ID GLUA 21-000016 (MAS 21-02, CU 21-03, GEO 21-030)

Dear Planning Commission Members;

I enthusiastically support the Summit Development proposal for a mixed-use development on the former Rossman Landfill site. This significant project will meet many of Oregon City's needs and develop a significantly underdeveloped and contaminated site. I encourage you to approve this project for the following reasons:

Zoning: The applicant is proposing only outright permitted uses with NO variances. The mixed-use downtown zoning and masterplan requirement for this area add significant complexity. The Summit team has taken the time to thoroughly understand the city's requirements and meet them.

Uses: The wide range of uses proposed here maximize the potential of this large, visible and strategically located site. These include badly needed multifamily housing, small- and large-scale retail development, entertainment options, office space, a mixed used market street and significant onsite parking.

Traffic: Any large-scale development will generate significant new traffic. This team has really thought this through. They propose improvements to Washington and Abernethy Street and well-planned internal circulation that connects to the community. This site is well served from many directions with close-by Highway 213, Abernethy Road, Washington Street, two TriMet bus lines, and even Amtrak Rail. The jug handle project at I-205/HWY 213 was built to handle a large mixed-employment development like this. The housing / retail mix proposed will generate trips at different times of day and days of week, helping to even out traffic flow. The development will serve Oregon City residents from the south using surface streets as well as from the surrounding areas via HWY 213. I have every confidence in the city traffic engineers and the developer's ability to identify effective mitigation strategies to address major concerns.

Environmental Impact: This site has been very challenging and expensive to develop because of decades long landfill contamination issues. The development team is well versed in these challenges. They have a sophisticated, knowledgeable approach developed in conjunction with the Oregon Department of Environmental Quality. Having the full site developed by a capable knowledgeable

developer vs. piecemeal is the most efficient and effective way to safely address contamination on the property. The team has been creative in finding solutions and identifying some potential funding to help address the many challenges.

Economic Advantages: This development will bring approximately $300 million in assessed value, as well as significant jobs and attractions to our city. The 550+ multifamily housing units will generate ongoing customers, diners and tourists to support our downtown and other local businesses. The developer has reached out to community and business leaders to understand Oregon City's needs and wants and are working to find the right tenant mix to meet them.

For these reasons and more, I urge your support of this compelling project.

Respectfully;

Renate Mengelberg
engaged in the community as a former:
Oregon City Planning Commissioner
Oregon City Commissioner

Clackamas County Brownfields Coordinator

I encourage you to learn more about the exciting opportunity before us today: a vibrant North End neighborhood at the location of the old Rossman landfill.

All cities evolve. The north end, bounded by Washington Street and Abernethy Road, started out as a wooded flat with wetlands near a Native American village. When the first tired, starving emigrants passed over the Oregon Trail, it was a place to rest themselves and their stock, get fresh meals and feed for the animals before moving on to their Donation Land Claim.

It soon evolved to small family farms and orchards and a large dairy. By the 1920s the city was trying to find space for sports fields, and although the north end was still outside the city limits, the dairy was purchased and renamed Kelly Field, in memory of Walter “Bud” Kelly, who died of influenza while serving his country in World War I.

A circular track, bleachers, and sports fields were developed, hosting visiting circuses, rodeos, the early Territorial Day parades, horse races, and other entertainment for the citizens of Oregon City.

But time takes it toll. By the 1960s the area had a need for solid waste disposal and a portion of the property was made available after a nearby space became inadequate. In the 1990s a piece of the property was developed as the End of the Oregon Trail Interpretive Center to celebrate the property’s history but the majority of the old garbage dump was left vacant.

We now have a proposal to develop a vibrant mixed-use community at our north end. This development brings back many of the historic features of this property: jobs, recreation, nature, dining, and retail.

I strongly recommend development of this plan as a positive addition to our city, an improvement of one of our northern entry points, and a project sensitive to the history of this property.

The North End Master Plan

Dear Planning Commission Members:

Please approve this project.

You are the first step in the transformation of the Rossman Landfill from environmental wasteland and economic blight into an economic powerhouse for the Oregon City North End. The project envisioned by Summit Development offers a solution to the environmental problems that have plagued the water aquifer under and rivers near the landfill for years and will create economic opportunities that will benefit the region for many years to come. Summit Development has expressed a true desire to connect the North End with Downtown. The housing component alone with 550+ units, will create in excess of 1,000 new customers for Downtown Oregon City businesses just a few minutes away and for the End of the Oregon Trail Interpretive Center right next door. The likely assessed value upon completion will be over $300 million, creating property tax revenue in excess of $5 million annually, an incredible benefit for Oregon City's schools, police, fire and other districts.

As the benefits of this project are great, the risks of losing the project are perhaps even greater. Consider that the land has sat vacant, leaching landfill contaminants into the water systems, generating no economic benefit and paying only $30,000 in property taxes since Fred Bruning left Oregon City and took Cabela's to Tualatin after being denied The Rivers center in 2012. The question, "Can Oregon City get the big projects done?" became an issue in seeking state funding for the Willamette Falls Riverwalk. Please send this message to the State, to Metro and to the investment community: "Yes, Oregon City can get the big projects done!"

Thank you.

Subject: North End Development
Date: Friday, June 18, 2021 12:20:23 PM

Dear Oregon City Commission

I live in Washington County and over the last 30 years have seen small towns go from cherry stands to
thriving communities. For example Sherwood Oregon where an entry level homes are now close to $550,000.
There has been development in these places but not necessarily as well planned as the North End plan has been.

I have worked in Oregon City for over 20 years. A lot of good changes have happened and I keep waiting to
see the potential bloom here.

Our location has so much to offer-multiple rivers, huge water falls, industry
and amazing history. So much more than other places.

In my opinion, development of the north end will bring prosperity, higher real estate valuations and tax revenues
to Oregon City and the County.

I hope this opportunity is not passed up.

Best regards,

Date: Wednesday, June 23, 2021 12:58:31 PM

Christina,
Following is our revised statement.
Bob

DEQ STATEMENT

DEQ intends to enter into a Prospective Purchaser Agreement with OCLD Summit LLC to support development of the closed Rossman's Landfill. The property proposed for acquisition is approximately 77 acres and includes two parcels. An entity or entities affiliated with OCLD Summit LLC intends to purchase "Parcel I, (Tax Lot 902) which is approximately 62 acres. OCLD Summit LLC intends to purchase "Parcel II" (Tax Lot 1200) which is approximately15 acres.

Development of the property will require a landfill gas management system and other improvements. All development related activities will be overseen by DEQ's Environmental Cleanup program and paid for by the purchaser and /or the affiliated entities. As part of the PPA, the purchaser/s agree to carry out a detailed Scope of Work and comply with an Easement and Equitable Servitudes that will be recorded on each Parcel to ensure that development is protective of public health and the environment.

In addition, Rossman's Landfill, which has been closed for 38 years, is regulated under a solid waste closure permit which will continue in effect. All permit related requirements (primarily related to groundwater monitoring, methane monitoring and methane extraction) will be overseen by DEQ's Materials Management/Solid Waste program and will be pre-paid by purchaser deposits totaling the approximate net present value of $1,293,500 at the time of acquisition, which funds will be placed into a Trust to cover anticipated permit costs 2026 through 2056. (Funds from previous sale of another parcel of the landfill were pre-paid by a different purchaser with a deposit of $803,000 into a Trust Fund to cover anticipated permit costs from 2016 through 2026.)

By entering the Prospective Purchaser Agreement, purchaser and affiliated entities agree to fulfill all obligations of the PPA, including the Scope of Work, Easement and Equitable Servitudes and related documents. In addition, activities under the PPA must be performed in accordance with all applicable federal, state, and local laws. Details regarding the proposed Prospective Purchaser Agreement can be found here:

Christina,
The following statement provides DEQ's position regarding the proposed development on Rossman's Landfill. I would be happy to provide input regarding the condition of approval that you are drafting.
Bob
Cell: 971-254-7493

DEQ STATEMENT

The Oregon Department of Environmental Quality regulates the closed Rossman's Landfill through a DEQ solid waste closure permit. The landfill has been closed for 38 years. The landfill is capped with a compacted soil cover. Post-closure activities include groundwater and landfill gas monitoring.

DEQ supports redevelopment of closed landfills and intends to enter into a Prospective Purchaser Agreement with two parties planning to purchase portions of the site for development. The property

proposed for acquisition is approximately 77 acres and includes two parcels. Summit OC LLC intends to purchase “Parcel I,” (Tax Lot 902) covering approximately 62 acres. OCLD LLC intends to purchase “Parcel II” (Tax Lot 1200), which is approximately15 acres. Details regarding the proposed Prospective Purchaser Agreement can be found here:

https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=674&Screen=Load

DEQ will work with the businesses who purchase lots on top of the closed landfill to ensure that development occurs in a safe manner that protects occupants from landfill gas or other environmental concerns associated with a closed landfill.

Hi Bob-

Per my voice mail,

We are currently working on the staff report for the landfill master plan. The proposal is for a Master Plan approval that will guide later development applications for individual buildings. I was hoping to work with you to write a general condition of approval that would direct the applicant to continue to work with DEQ to obtain all applicable permits for development on the site. A comment email for the record from DEQ is also helpful, as many ask if the applicant is working with DEQ and a quick email to the record often resolves that question.

Let me know if you want to chat over the phone.

Thanks!

Christina

From: Richard Piacentini
To: Christina Robertson-Gardiner
Subject: The North End Master Plan - June 28, 2021 Planning Commission Agenda
Date: Tuesday, June 22, 2021 11:45:20 AM

Hi Christina

Thank you for calling me today.

As we discussed, we own the commercial property located at the intersection of Redland, Holcomb and Abernathy roads in Oregon City. The building addresses are 13541 to 13559 Redland Road South, with Plaid Pantry and Pioneer Take and Bake Pizza operating there.

Our concerns with The North End Master Plan are related mostly to the traffic impacts to the intersection of Redland, Holcomb and Abernathy roads and the intersection of Redland Road and Hwy 213, and how increased traffic and future improvements to the intersections would impact ingress and egress from our property.

Please add me to the contact list for this project as an interested party so that I will receive information as the plans for these intersections progresses.

Thanks,
Richard

One more thing. Oregon City will grow and it's up to us to manage that growth. Thoughtful development increases both quality of life and opportunity. With the proposed development by Willamette Falls and this on the North End, this becomes more about managing growth. So considering traffic and housing goes hand in hand with supporting growth. With the food carts, traffic had dramatically increased on Washington Street. Thank you for your consideration.

ODOT Response

Project Name: North End Master Plan	**Applicant:** Seth Henderson, Summit Development Group
Jurisdiction: City of Oregon City	**Jurisdiction Case #:** GLUA 21-000016 (MAS 21-02 CU 21-01 (MAS 21-02 CU 21-01 FP 21-03, GEO 21-030)
Site Address: 1107 Abernethy Road, Oregon City, OR	**Legal Description:** 02S 02E 29 **Tax Lot(s):** 00902
State Highway: I 205, OR 213	**Mileposts:** 10.18; 0.48

The site of this proposed land use action is adjacent to OR 213 and is in the vicinity of I-205 and OR 99E. ODOT has permitting authority for these facilities and an interest in ensuring that this proposed land use is compatible with their safe and efficient operation. **Please direct the applicant to the District Contact indicated below to determine permit requirements and obtain application information.**

COMMENTS/FINDINGS

ODOT has reviewed the submitted application materials for the North End Master Plan development. The proposal includes a plan to redevelop the former Rossman Landfill over the next 20 years with a mix of commercial, service, entertainment, residential, and retail uses. The 62-acre property is currently zoned Mixed-Use Downtown and is bound by Abernethy Road to the south, Redland Road and OR 213 to the east, a Home Depot store to the northeast, and Washington Street to the northwest.

ODOT reviewed the Traffic Impact Analysis (TIA) prepared by Kittelson & Associates and dated March 23, 2021. Our response to the TIA is summarized in the following comments:

Safety
As indicated in the TIA, safety is a major concern within the vicinity of the proposed development and the study area. According to Table 4 of the TIA, 11 intersections within the study area exhibit a high rate of crashes that exceed critical crash rate by intersection type and/or observed crash rate exceeding the 90th percentile rate. Of the 11 listed intersections with high crash rates, 7 intersections are on ODOT facilities (OR 99E, OR 213, and I-205) that are listed in ODOT's 90th percentile statewide SPIS list. Furthermore, the report indicates that "57% of total reported crashes over the last 5 years resulted in an injury" including fatalities and/or serious injuries. ODOT recommends a detailed evaluation of each intersection to identify safety remedies in order to minimize crashes and for the applicant to contribute a proportional share towards identified improvements.

Year 2025 Background Traffic Volumes
Annual growth rates are typically taken from the local Transportation System Plan (TSP). The TSP growth rate was anticipated to be much higher than is shown in Table 7 of the TIA (0.27% for OR 99E, 0.31% for OR 213, 0.26% for I-205, and 1.15% for local streets). The TSP growth rate was closer to 2.0%.

Site Trip Generation
The methodology to determine trip generation appears to significantly underestimate the number of trips the proposed development will generate. Table 8 of the report proposes to use the Shopping Center land use (ITE 820) for all the potential new commercial and retail uses (grocery store, cinema, fast food and sit-down restaurants, and small retail outfits). In addition, the trip generation is further discounted with internal, pass-by, and diverted trips which reduces the overall trip generation for the Master Plan (50% of the diverted trips were applied to ODOT facilities in the study area). The overall trip generation is proposed to be reduced to less than a third of its overall net rates. The low trip generation estimate will likely reduce the developer's proportional share contribution to TSP projects in the study area.

Queuing Impact Assessment
The TIA does not include queuing analysis for "exempt" study intersections such as OR99/I-205 or OR213/I-205, etc. These intersections are exempt from evaluation capacity, but not from safety. Safety is of particular concern at interchanges where increased queueing is anticipated to create safety issues.

Intersection #21: OR213/Redland Road
The TIA indicates that the OR 213/Redland Road intersection will exhibit queueing and capacity deficiencies. The report refers to TSP project #D79, which includes the addition of a third southbound through-lane on OR213 (Redland Jughandle Phase 2) that will most likely address the deficiencies. The report does not evaluate how the intersection will operate with this TSP project and the trip contribution from the proposed Master Plan. Furthermore, the report does not evaluate the developer's proportional contribution to the TSP project at this intersection or any other TSP projects at study area intersections.

REPLINGER & ASSOCIATES LLC
TRANSPORTATION ENGINEERING

June 17, 2021

Ms. Christina Robertson-Gardiner
City of Oregon City
PO Box 3040
Oregon City, OR 97045

SUBJECT: REVIEW OF TRAFFIC IMPACT STUDY – THE NORTH END MASTER PLAN – GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

Dear Ms. Robertson-Gardiner:

In response to your request, I have reviewed the materials submitted in support of the proposed master plan for The North End Development. The relevant materials consisted of the Traffic Impact Analysis Report (TIA), dated March 23, 2021. The TIA was prepared under the direction of Brian J. Dunn, PE of Kittelson & Associates.

The TIA supports the master plan for the site west of the Home Depot, south of Washington Street and north of Abernethy Road. The development will include a mix of uses including retail and residential. A key feature is a collector-level street connecting Washington Street and Abernethy Road. Four other site access points are proposed.

The TIA identifies the impacts of full development of the site predicated on build-out in 2025 and appears to demonstrate the full development can be constructed if identified mitigation measures are completed. Each phase in the development will be reviewed for compliance with transportation performance measures during detailed development plan review.

Additional transportation analyses and updated traffic data may be required during detailed development plan review as specified in the conditions of approval. Later phases of the development may be delayed if mitigation measure cannot be implemented to meet existing transportation performance standards.

The TIA provides a basis upon which the master plan can be evaluated and can serve as the basis for additional analysis.

Comments

1. ***Study Area.*** The study addresses the appropriate intersections. The engineer evaluated traffic patterns and traffic volumes and evaluated thirty locations. The key intersections were:

    1. OR 99E / River Rd.-Arlington St.
    2. OR 99E / Dunes Dr.
    3. OR 99E / I-205 SB Ramp
    4. OR 99 E / I-205 NB Ramp
    5. OR 99E / 14th St.
    6. OR 99E / 12th St.
    7. OR 99E / 10th St.
    8. Washington St. / Clackamas River Dr.
    9. Washington St. / Prairie Schooner Wy.
    10. Washington St. / Home Depot-Site Access A
    11. Washington St. / Abernethy Rd.
    12. Washington St. / 15th St.
    13. Washington St. / 14th St.
    14. Washington St. / 12th St.
    15. Washington St. / 7th St.
    16. Redland Rd./ Abernethy Rd.-Holcomb Blvd.
    17. Redland Rd. / Anchor Wy.
    18. Redland Rd. / Holly Ln.
    19. OR 213 / I-205 SB Loop Off-Ramp
    20. OR 213 / Clackamas River Dr.
    21. OR 213 / Redland Rd.
    22. OR 213 / Beavercreek Rd.
    23. OR 213 / Molalla Ave.
    24. Beavercreek Rd. / Molalla Ave.
    25. Beavercreek Rd. / Maplelane Rd.
    26. Washington St. / Site Access D (proposed)
    27. Abernethy Rd. / Site Access E (proposed)
    28. Abernethy Rd. / Site Access F (proposed)
    29. Washington St. / Site Access B (proposed)
    30. Washington St. / Site Access C (proposed)

    These intersections were identified for the study in consultation with city staff and the Oregon Department of Transportation (ODOT). The study area is appropriate.

2. ***Traffic Counts.*** Traffic counts were conducted in December 2020. Due to the COVID-19 pandemic, the engineer used adjustment factors to adjust the counts to estimate the likely traffic volumes that would have been expected during normal times. Different adjustment factors were applied during the AM peak, PM peak and mid-day Saturday time periods. The adjustments were well explained and appear reasonable. For subsequent analyses, the applicant may choose to obtain additional counts.

3. ***Trip Generation.*** The TIA presents information on trip generation for the proposed development. Early in the process, the applicant's engineer shared his proposed approach to trip generation, pass-by trips and related issues with me and with ODOT staff. The approach described in the TIA is consistent with those discussions. The TIA uses four land use categories from the Institute of Transportation Engineers' *Trip Generation Manual – 10th Edition*: land use category 221 – multi-family housing (524 dwelling units); 934 - fast food restaurant with drive-through (3830 sf); 820 - shopping center (500,000 sf); and 813 – free-standing, discount superstore (138,000 sf). For these land uses, the engineer used appropriate rates from ITE's *Trip Generation Manual.* As discussed in the TIA, the engineer separately accounted for a fast-food restaurant and for the large, free-standing superstore even though these are typically components of a shopping center. The engineer points out that using separate calculations results in a higher trip generation than would treating it all as a shopping center.

   The engineer appropriately accounted for internal trips and for pass-by and diverted link trips. Due to the unique characteristics of the site, including the close proximity to regional facilities, the engineer made special efforts to account for pass-by trips (those drawn from streets that abut the site) and diverted-link trips (drawn from non-adjacent streets). The engineer provided a good explanation of how the development would draw traffic from both the adjacent streets (e.g. Washington and Abernethy) and from the nearby, but non-adjacent, regional facilities (e.g. OR 213 and I-205). The presence of a residential component in the development contributes to internal trips that do not leave the site and do not affect the street network. The trip generation and the treatment of internal trips and pass-by trips appear appropriate.

   The trip generation calculations should be reviewed and, if necessary, revised if the detailed development plan for individual phases differs significantly from the assumptions in this TIA.

4. ***Trip Distribution.*** The engineer's trip distribution shows traffic using a variety of routes and distribution to major regional facilities as follows:

   - 24% of trips to/from I-205 (North);
   - 12% of trips to/from OR 99E (North via McLoughlin Blvd.);
   - 22% of trips to/from I-205 (South);
   - 7% of trips to/from OR 99E (South to Canby);
   - 6% of trips to/from central Oregon City (West via Washington St.);
   - 3% of trips to/from Clackamas River Dr. (Northeast);
   - 2% of trips to/from Anchor Wy. (South via Redland Rd.);
   - 3% of trips to/from Beavercreek Rd. (West of OR 213);
   - 4% of trips to/from Beavercreek Rd. (East of OR 213);
   - 8% of trips to/from OR 213 (South of Beavercreek Rd.);
   - 5% of trips to/from Redland Rd. (towards Holly Ln.); and,
   - 4% of trips to/from Holcomb Blvd.

   The trip distribution seems reasonable.

5. ***Traffic Growth.*** The engineer calculated 2025 traffic volumes using several factors. The TIA specifically accounts for traffic from four approved developments: The Cove Master Plan (Phase 2); Red Soils Master Plan (Final Phase 2); North Beavercreek Industrial Project and the Oregon City Operations Center. To account for regional growth the TIA used historical ODOT traffic count data for the state highways. For city streets, the TIA used an annual increase based on Oregon City data. It is worth noting that the proposed development is a permitted use under the current zoning and is consistent with assumptions about commercial development of the zone that were used in the Transportation System Plan. Some of the anticipated traffic growth on adjacent and nearby facilities (e.g. OR213 and Washington Street) can be attributed to the TSP's assumptions about commercial development on this site. Traffic growth increases were calculated and applied appropriately to develop background 2025 traffic volumes for all three time periods: AM peak, PM peak, and mid-day Saturday peak.

6. ***Analysis.*** Traffic volumes were calculated for the intersections described in #1, above. At each location, the level of service (LOS), delay calculations, and the volume-to-capacity ratio (v/c) were provided to assess operations relative to the ODOT and city's operational standards. The analysis was undertaken for the AM peak hour, PM peak hour, and mid-day Saturday peak hour. The analysis provided

information on existing conditions, 2025 background conditions, and year 2025 traffic conditions with the proposed development.

Existing Conditions.

According to the TIA, three intersections currently experience over-saturated conditions (i.e. a v/c exceeding 1.00). All three within the regional center, which allows a v/c of 1.10 during the highest hour. This means that the intersections currently meet the applicable performance standards under existing conditions. Each of these three are discussed in turn.

The first is the intersection of OR99E and Dunes Drive, which is calculated to operate at v/c of 1.04 during the mid-day Saturday peak period with current traffic volumes. The engineer shows that signal timing changes could significantly reduce the v/c allowing the intersection to operate at a v/c less than 1.0. Although this mitigation would improve intersection functionality, at 1.04 v/c in its current condition, it satisfies the operational standard applicable in the regional center.

The second intersection where operational issues were identified is the I-205 southbound off ramp at OR213 where it meets Washington Drive. Although the overall intersection operates acceptably (and meets standards), two individual movements are of concern and experience v/c in excess of 1.00. The low-volume, left-turn movement from this ramp is one of two stop-controlled movements at this intersection that suffers long delays. This is a known problem that has previously been identified. The other stop-controlled movement (southbound Washington Drive) has insufficient queue storage for the 95th percentile queue and may cause blockages that interfere with other movements. The engineer suggests improved signage as a possible mitigation measure to reduce blockages. The proposed development does not add any traffic to the problematic movements at the intersection and the development's impact on the operational issues is de minimus.

The third intersection calculated to have an intersection v/c in excess of 1.00 under current conditions is OR213 at Redland. The v/c is calculated to be 1.01 during the AM peak hour and 1.00 during the PM peak hour. Due to its status as an intersection within the regional center, this meets applicable performance standards.

2025 Background Conditions.

Due to regional traffic growth and in-process developments, the performance of most intersections is predicted to deteriorate under background 2025 conditions when compared against current conditions.

The intersection of OR99E and Dunes Drive is predicted to fail to meet performance standards with background traffic growth. The predicted v/c during the mid-day Saturday peak period is 1.17. This exceeds the 1.10 peak hour standard applicable to intersections within the regional center. As noted above, the engineer has developed an alternative signal timing plan that could allow the intersection to operate better if allowed and implemented by ODOT.

Under background 2025 traffic, the performance of the intersection of OR213/Redland Road deteriorates and is calculated to be 1.05 during the AM peak hour and 1.03 during the PM peak hour. Both meet the 1.10 standard applicable within the regional center.

Projected 2025 Background Conditions Plus Development Traffic.

Adding traffic from the proposed development to the 2025 background traffic causes additional deterioration in the performance. The TIA shows intersections that will not meet applicable performance standards or that are predicted to experience other operational problems.

With the development, the intersection of OR99E and Dunes Drive is predicted to operate with a v/c of 1.22 during the Saturday, mid-day peak period. The signal timing plan discussed above would allow this to meet operational standards, including traffic from the proposed development, if allowed and implemented by ODOT.

With the development, the performance of the intersection of OR213/Redland Road deteriorates further. It is calculated to have a v/c of 1.07 during the AM peak hour and 1.12 during the PM peak hour. For the PM peak hour, the intersection will not meet the 1.10 standard applicable within the regional center.

It is also worth noting that the applicable performance standard within the regional center is a v/c of 1.10 during the highest hour of the peak and 0.99 during the second highest hour of the peak. This TIA does not examine the second highest hour; the

subsequent analyses for the detailed development plan will need to address the second highest hour if the v/c exceeds 1.00 during the highest hour by more than a few hundredths. There is no need, however, to address the second highest hour for this application.

The TIA also identifies other operational issues associated with queue storage at two intersections: OR213/Redland Road and Redland Road/Abernethy Road/Holcomb Road. At the OR213/Redland Road intersection, the 95th percentile queues for the eastbound approach are predicted to exceed available storage lengths. At the intersection of Redland Road/Abernethy Road/Holcomb Road, the queue storage is predicted to be exceeded for the left-turn lane on the northbound approach of Redland Road and within the westbound right-turn lane on Holcomb Boulevard.

The operational issues (both v/c and queue storage) will need to be addressed in the transportation analyses prepared in support of the detailed development plans. Mitigation measures that allow the development to show compliance with applicable performance standards (i.e. v/c in both the peak hour and second highest hour) and that solve queue storage issues will be made conditions of approval for the applicable phases of the development.

The TIA provides some discussion of mitigation measures that have potential to improve operations of the identified intersections. Implementation of the Jughandle Phase 2 (TSP Project D79) would significantly improve operations of OR213/Redland Road and allow this intersection to meet operational standards and accommodate regional growth consistent with the TSP, including development of this site. The TIA also discusses some options for improving operations of Holcomb/Redland/Abernethy. These options include additional lanes, extending queue storage, and signal timing changes. If the analyses performed in support of detailed development plans indicates such mitigation measures are required to meet operational standards, such mitigation measures will be made conditions of approval for the applicable phases of development.

7. ***Crash Information.*** The TIA provides detailed crash information for the five-year period from 2014 through 2018. Eleven of the 25 intersections experienced an observed crash rate that exceeds the critical crash rate by intersection type. Of these 11, seven were on the ODOT system and four were at local street intersections.

The TIA provides a comprehensive discussion of the intersections including crash types and causes. The TIA paid special attention to severe crashes. Six intersections were the sites of fatal or serious injury crashes. The two fatal crashes involved pedestrians. In one case the pedestrian disregarded the traffic signal; in the other the motorist failed to yield to the pedestrian. Three serious injury crashes at three separate intersections involved left-turning motorists failing to yield and turning in front of on-coming traffic. Two more serious injury cases were attributed to motorists disregarding traffic signals. Another involved a motorist turning left into the wrong lane.

The TIA points out that ODOT and Clackamas County are actively pursuing systemic actions to achieve vision zero goals. According to the TIA, "the County has a Drive to Zero Transportation Safety Action Plan and ODOT has a Safety Priority Index System. These analytical approaches guide decisions for prioritizing investments that seek to provide safety benefits to the use of transportation facilities."

There is no reason to suggest that the development will cause crashes to increase disproportionately or cause changes to crash rates. The engineer does not recommend mitigation measures for safety issues specific to the development.

8. ***Turn Lanes at Site Entrance(s).*** The TIA provides basic information about the assumed configuration at the site access points. The presence of continuous center turn lanes on Washington Street and Abernethy satisfy the need for left-turn lanes serving the site. The TIA describes the configuration of each site access point; some provide for a single exiting lane while some provide for separate left-turn and right-turn lanes. The site access configuration appears appropriate, but these assumptions should be reviewed and confirmed with the transportation analyses performed in support of the detailed development plans for each phase of the development.

9. ***Pedestrian and Bicycle Facilities.*** The TIA describes pedestrian and bicycle facilities in the area. The details of the provision of bicycle and pedestrian facilities should be provided in connection with frontage improvements along any adjacent street and internal streets with the detailed development plans for each phase. Particular attention should be paid to bicycle and pedestrian facilities on or adjacent to Abernethy Road.

10. ***Transit Facilities.*** The TIA provides a summary of the transit service offered by TriMet in the area. This includes TriMet line 79, which provides service on

Washington Street, and TriMet line 154, which provides service on Abernethy Road. Both have infrequent service.

11. ***Site Circulation and Access.*** The TIA provides a good overview of the site plan and circulation including the establishment of a collector-level road through the site connecting Washington Street and Abernethy Road. The overall development pattern, including local streets and parking lots, and the proposed location of conditional uses appears reasonable. Subsequent analyses performed in support of the detailed development plans for each phase will need to expand upon the on-site circulation and site access. Among other things, the analyses will need to address issues that could affect the public street system, including, but not limited to, adequacy of queue storage for drive-through service windows, maneuvering of trucks at loading areas, and maneuvering in parking lots.

12. ***Intersection Spacing.*** Intersection spacing for new access points appears to be appropriate. The TIA indicates the spacing between the proposed access locations and adjacent intersections easily meets the minimum requirements. This should be reviewed and verified in connection with the detailed development plan for each phase.

13. ***Sight Distance.*** The engineer will need to measure sight distance and verify that it meets applicable standards as part of the analysis for each phase.

14. ***Consistency with the Transportation System Plan (TSP).*** The TIA indicates site frontage meets applicable standards or will be improved in connection with the project. This will need to be verified with the detailed development plan for each phase.

Conclusions

I find that the TIA provides an adequate basis upon which to assess the impacts of the proposed master plan. It will serve as a basis for subsequent analyses undertaken in support of detailed development plans for individual phases of the development.

The TIA does not, however, provide for mitigation that allows the applicant to show that the system is adequate to accommodate the development, although appropriate mitigation appears feasible. The applicant will need to undertake additional analysis in connection with the detailed development plan for each phase that demonstrates adequacy of the transportation system to accommodate each phase. This will require

commitment to mitigation measures allowing applicable performance measures, including v/c and queue storage, will be met.

Recommendations

It is important to note that the TIA is based on the assumption that full development will occur by 2025. If development is extended beyond that date, new analyses will be required with new background traffic associated with the new completion year.

With regard to the proposed master plan, I recommend the following conditions of approval:

A. The applicant will be required to provide supplemental transportation analyses for each phase of the development that demonstrate the ability of the transportation system to accommodate that phase of the development. In connection with the first detailed development plan submitted by the applicant, the applicant shall obtain new AM peak, PM peak, and mid-day Saturday traffic counts and conduct new operational analyses for the following intersections:

    - OR99E/Dunes Drive
    - Washington Street/Home Depot – Site Access A
    - OR213/Redland Road
    - Redland Road/Holcomb Boulevard/Abernethy Road

    Absent meaningful evidence to the contrary, the new counts and new analyses submitted in support of the detailed development will be presumed to supersede the traffic volume estimates and analyses submitted in the March 2021 TIA.

    The following are a non-comprehensive set of issues that should be addressed in additional analyses:

    Intersection v/c and queuing must meet applicable standards with each phase. Partial development (some phases of the development) may be permissible without mitigation depending on background traffic and the status of adopted alternative mobility targets.

    Where the applicant is relying on the regional center's two-tiered v/c standard (i.e. 1.10 during the peak hour and 0.99 during the second hour), the applicant

will need to provide evidence that both are met. (This is particularly applicable to OR213/Redland Road and OR99E/Dunes Drive, both of which are predicted to exceed 1.10 during a peak hour.)

A phase or combination of phases that causes traffic volumes at any access point to exceed volumes in this TIA, additional analyses will be required.

The applicant will need to demonstrate the adequacy of queue storage or undertake appropriate mitigation to resolve queue storage issues at the intersection of Abernethy Road/Holcomb Boulevard/Redland Road in connection with each phase.

The applicant will need to demonstrate that the intersection of OR213/Redland Road meets applicable v/c standards and provides adequate queue storage in connection with each phase.

The applicant will need to demonstrate that the intersection of OR99E/Dunes Drive meets applicable v/c standards in connection with each phase. Applicant is encouraged to explore the potential for signal timing changes with ODOT or develop other mitigation measures with ODOT.

B. With each detailed development plan, the applicant will be required to address sight distance requirements in connection with the establishment of any new access to Washington Street or Abernethy Road, including those described in this TIA.

C. With each detailed development plan, the applicant will be required to address on-site circulation issues. These include, but are not limited to, adequacy of queue storage for drive-through service windows, maneuvering of trucks at loading areas, and maneuvering in parking lots.

D. With each detailed development plan, the applicant will work with TriMet to provide appropriate sidewalks and bus stop features on or adjacent to the site.

E. With each detailed development plan, the applicant will be required to update the predicted traffic using the intersection of OR213/Beavercreek Road. The applicant should use the updated value of $380 per peak hour trip rather than the obsolete value of $219 as used in this TIA. The developer shall participate in funding of this project according to the established formula.

F. If traffic signal warrants are met and cause the installation of a traffic signal at any of the site access points on Washington Street or Abernethy Road, the applicant will bear the full cost of signal design and installation.

G. The applicant shall participate in the funding of improvements for the intersection of OR213/Redland Road (TSP Project D79) in proportion to the development's traffic volume as a percentage of the predicted 2035 traffic volume at the intersection calculated in the TSP. The 2017 TSDC Project List shows a project cost of $10,105,000. Participation shall apply to each phase of the development.

H. The applicant's final share of project costs may be modified as necessary when the detailed development plan is approved to reflect any a modification of the development's trip generation or a change in project costs resulting from revisions to project costs associated with updates to the City's Transportation System Plan or Capital Improvement Program.

If you have any questions or need any further information concerning this review, please contact me at replinger-associates@comcast.net.

MEMORANDUM

TO: City of Oregon City, Planning Division
FROM: Kenneth Kent, Clackamas County Engineering, Senior Planner
DATE: June 21, 2021
RE: GLUA-21-000016 Mixed Use North End Master Plan
22E29 00902

This office has the following comments pertaining to this proposal:

1. The proposed North End Master Plan site has frontage on Abernathy Road, as well as the Abernathy Road/Redland Road/Holcomb Boulevard intersection, which currently fall under the jurisdiction of Clackamas County.

2. The Traffic Impact Analysis by Kittelson & Associates, dated March 23, 2021, indicates that at buildout of the master plan, several intersections, including the Abernathy Road/Redland Road, Holcomb Boulevard intersection will exceed capacity. At the time each phase of the master plan is proposed through the City's Detailed Development Plan process, traffic analysis will be required to verify adequate capacity is available or mitigation measures will be implemented to meet capacity standards.

3. Abernathy Road is a minor arterial roadway that is currently constructed to a 3-lane section and appears to be located within a 60-foot wide public right-of-way. The minimum right-of-way for a 3-lane section is 80 feet. At the time of development, dedication of approximately 10 feet of public right-of-way will be required to provide a 40-foot one half right-of-way along the entire Abernathy Road site frontage.

4. At the time of development, frontage improvements will be required along the Abernathy Road site frontage to minor arterial roadway standards for a 3-lane section. Prior to commencement of site work, a Development Permit will be required from Clackamas County Engineering for all work performed in the Abernathy Road right-of-way. All access and frontage improvement will be required in compliance with the Clackamas County Roadway Standards.

Application for Exemption from NROD Review

Staff use:

File Number: NROD-20-22 Reviewed By: Juliana Zamilpa Date: 1.22.2021

Decision: ✓ Approved __ Denied

Soil cap is considered impervious surface, top soil serves to prevent erosion of soil cap (clay/silt layer) and is not viable NROD area/cannot accommodate vegetated corridor plant growth.

Site Address or Clackamas County Map and Tax Lot: 22E29 1200

Applicant Name/Company: Summit Development Group Phone Number: 503-720-3601

Email Address: shenderson@sdgpdx.com

The following uses are allowed within the NROD and do not require the issuance of an NROD permit. Indicate which exemption your project falls under:

___ Stream, wetland, riparian, and upland restoration or enhancement projects as authorized by the City.
___ Farming practices as defined in ORS 215.203 and farm uses, excluding buildings and structures, as defined in ORS 215.203.
___ Utility service using a single utility pole.
___ Boundary and topographic surveys leaving no cut scars greater than three inches in diameter on live parts of native plants listed in the Oregon City Native Plant List.
____ Soil tests, borings, test pits, monitor well installations, and other minor excavations necessary for geotechnical, geological or environmental investigation, provided that disturbed areas are restored to pre-existing conditions as approved by the Community Development Director.
____ Trails meeting all of the following:

1. Construction shall take place between May 1 and October 30 with hand held equipment;
2. Widths shall not exceed forty-eight inches and trail grade shall not exceed twenty percent;
3. Construction shall leave no scars greater than three inches in diameter on live parts of native plants;
4. Located no closer than twenty-five feet to a wetland or the top of banks of a perennial stream, or no closer than ten feet of an intermittent stream;
5. No impervious surfaces; and
6. No native trees greater than one-inch in diameter may be removed or cut, unless replaced with an equal number of native trees of at least two-inch diameter and planted within ten feet of the trail.

____ Land divisions provided they meet the following standards, and indicate the following on the final plat:

1. Lots shall have their building sites (or buildable areas) entirely located at least five feet from the NROD boundary shown on the City's adopted NROD map. For the purpose of this subparagraph, "building site" means an area of at least 3,500 square feet with minimum dimensions of forty feet wide by forty feet deep;
2. All public and private utilities (including water lines, sewer lines or drain fields, and stormwater disposal facilities) are located outside the NROD;
3. Impervious streets, driveways and parking areas shall be located at least ten feet from the NROD; and

4. The NROD portions of all lots are protected by:
    a. A conservation easement; or
    b. A lot or tract created and dedicated solely for unimproved open space or conservation purposes.

____ Site Plan and Design Review applications where all new construction is located outside of the NROD boundary shown on the City's adopted NROD map, and the NROD area is protected by a conservation easement approved in form by the City.

____ Routine repair and maintenance of existing structures, roadways, driveways and utilities.

DV XX Replacement, additions, alterations and rehabilitation of existing structures, roadways, utilities, etc., where the ground level impervious surface area is not increased.

____ Measures approved by the City of Oregon City to remove or abate nuisances or hazardous conditions.

____ Tree Removal. The Community Development Director may permit the removal of any tree determined to be a dead, hazardous, or diseased tree as defined in OCMC 17.04. Any tree that is removed in accordance with this Section (L) shall be replaced with a new tree of at least ½-inch caliper or at least six foot overall height. An exception to this requirement may be granted if the applicant demonstrates that a replacement tree has already been planted in anticipation of tree removal, or if the existing site conditions otherwise preclude tree replacement (due to existing dense canopy coverage or other ecological reasons).

The replacement tree(s) shall be located in the general vicinity of the removed tree(s), somewhere within NROD on the property. The replacement tree(s) shall be identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland). The property owner shall ensure that the replacement tree(s) survives at least two years beyond the date of its planting.

____ Planting of native vegetation and the removal of non-native, invasive vegetation (as identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland), or as recommended by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, arboriculture, horticulture, wildlife biology, botany, hydrology or forestry), and removal of refuse and fill, provided that:

1. All work is done using hand-held equipment;
2. No existing native vegetation is disturbed or removed; and
3. All work occurs outside of wetlands and the top-of-bank of streams.

____ Activities in which no more than one hundred square feet of ground surface is disturbed outside of the bankfull stage of water bodies and where the disturbed area is restored to the pre-construction conditions, notwithstanding that disturbed areas that are predominantly covered with invasive species shall be required to remove the invasive species from the disturbance area and plant trees and native plants pursuant to this Chapter.

____ New fences meeting all of the following:

1. No taller than three and a half feet and of split rail or similar open design.;
2. Two feet width on both sides of fence shall be planted or seeded with native grasses, shrubs, herbs, or trees to cover any bare ground;
3. Six inches of clearance from ground level;
4. Fence posts shall be placed outside the top-of-bank of streams and outside of delineated wetlands.

____ Gardens, fences and lawns within the NROD that existed prior to the time the overlay district was applied to a subject property are allowed to be maintained but cannot expand further into the overlay district.

Describe how your project meets one of the items in the list above.

Please see attached Application Narrative.

BEFORE THE PLANNING DIRECTOR FOR THE CITY OF OREGON CITY

In the Matter of a Type I Application (the "Application") by Summit Development Group, LLC ("Summit") under Oregon City Municipal Code (the "OCMC") 17.49.080(J) to allow the replacement of three areas with existing impervious structures where the ground level impervious surface is not increased so that a Natural Resource District ("NROD") Permit under OCMC 17.49.040 is not required and processed as a Type I Procedure under OCMC 17.50.030, Table 17.50.030 (providing that a Natural Resource Overlay District Exemption is processed as a Type I permit).	**APPLICANT'S FINDINGS OF FACT AND CONCLUSIONS OF LAW SUPPORTING APPROVAL OF A TYPE I NROD EXEMPTION**

1. Introduction and Summary of Justification for the NROD Permit Exemption and Verification.

This Type I Application requests that the Planning Director find that three areas ("Areas 1, 4 and 5") within the sixty-two (62) acre Property (the "Property") identified in **Exhibit 1**, located in the Mixed Use Downtown ("MUD") district, and subject to the NROD Overlay District, are exempt from the NROD permit requirement in OCMC 17.49.040 under OCMC 17.49.080(J) providing that the replacement of existing impervious structures is allowed where the impervious surface area is not increased. As shown on **Exhibit 1**, Areas 1, 4 and 5 may be exempted from the NROD Overlay District because they contain part of Washington street (Area 1) and Abernethy Road (Areas 4 and 5) which are existing impervious surface areas.

2. Type I Process.

The Type I process does not require an interpretation, or the exercise of policy, or legal judgment in evaluating the approval criteria. OCMC Table 17.50.030, note a. The Director does not provide notice of the Type I application or the Type I decision to persons other than the Applicant and no appeal is provided for a Type I decision.

As explained below, the Director can find that this Application is correctly processed through the Type I process because it is clear and objective that the three Washington Street and Abernethy Street Improvements (the "Improvements") are impervious surfaces. The three areas are precisely identified in **Exhibit 1** and the criteria for an exemption under OCMC 17.49.080(J) are satisfied because the replacement impervious structure will not exceed the area of the existing impervious structures on the Site.

3. <u>Evidence Demonstrating that the NROD Permit Exemption OCMC 17.49.080(J) for Areas 1, 4 and 5 can be Approved</u>.

A. The Improvements on the Site are impervious structures.

Exhibit 1 shows the Improvements on the three Areas that are impervious because they impede or prevent water from infiltrating into the ground, consistent with the definition of "Impervious Surface" in OCMC 17.04.586 and "Structure" in OCMC 17.04.1215. This Type I Application is solely for the purpose of replacing only the existing impervious surfaces on the three Areas, consistent with the exemption from NROD permits required by OCMC 17.49.040 in OCMC 17.49.080(J).

B. The location of the Improvements are known and verifiable without the need for interpretation or the exercise of policy or legal judgment.

The location and edge of the Improvements are known, verifiable and identified by their location on **Exhibit 1**.

4. <u>Conclusion</u>.

For the reasons contained in this application, the Planning Director can find that the NROD permit exemptions under OCMC 17.49.080(J) and can be approved under the Type I process.

TRANSPORTATION IMPROVEMENTS IN ANTICIPATION OF GROWTH

HWY 213 "JUGHANDLE" PROJECT

BEFORE (2011)

AFTER (2013)

CITY REQUIREMENTS FOR TRANSPORTATION

1. CITY REQUIRED STUDY TO DETERMINE IMPACTS OF DEVELOPMENT

2. THE STUDY EXAMINED

A. Crash History

B. Continuity of Multimodal Facilities (gaps and barriers)

C. Operations of Intersections

3. THE CONDITIONS STUDIED

A. Year 2020 (Pre-COVID) Conditions

B. Year 2025 Conditions Without Development

C. Year 2025 Conditions With Development

4. THE INTERSECTIONS STUDIED

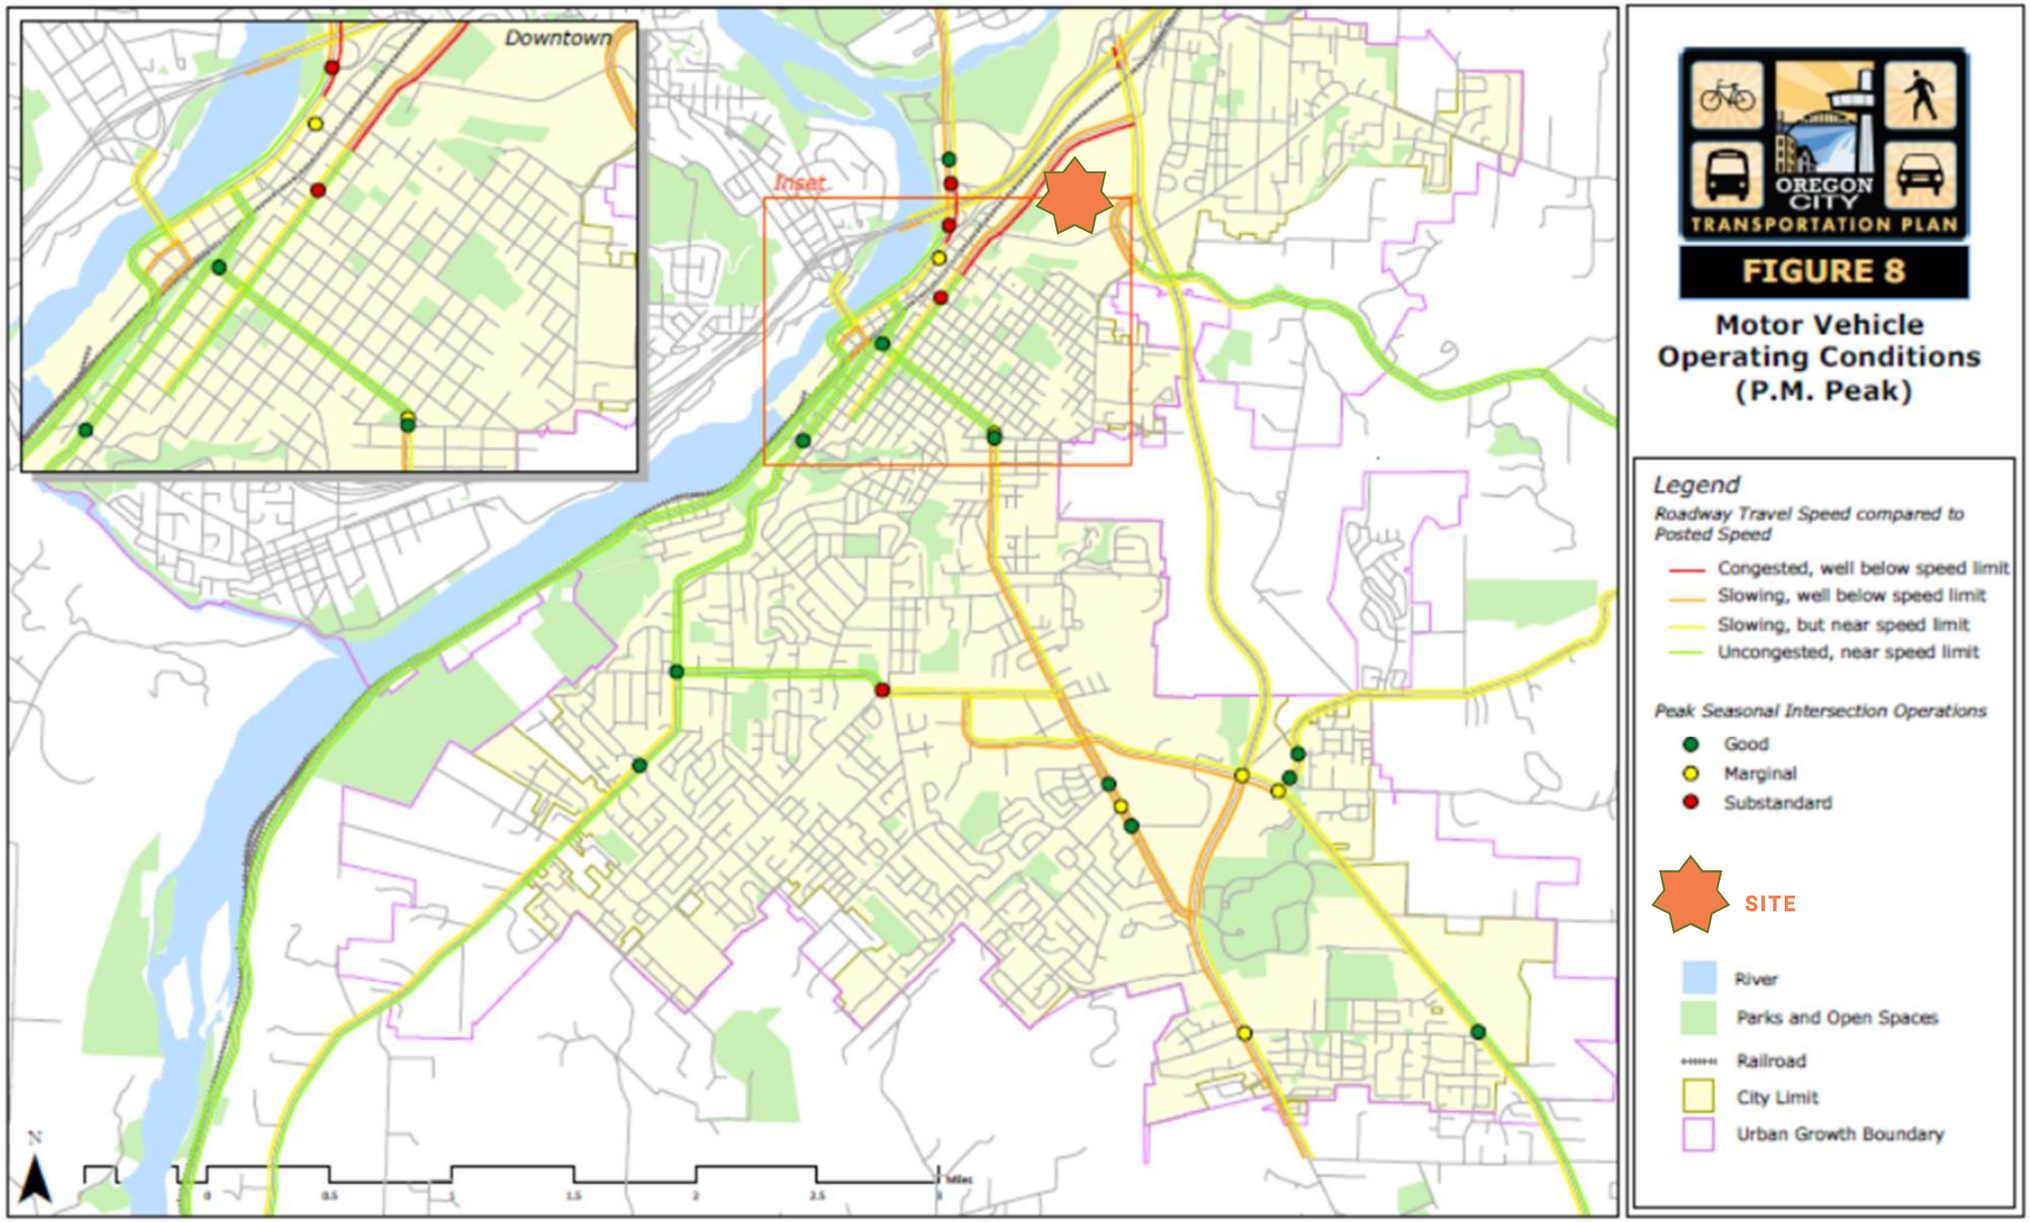
A. 25 Intersections and 5 site accesses (see map)

5. OFF-SITE IMPROVEMENT CONTRIBUTIONS

A. Each phase of development will contribute improvements, as needed

6. OTHER TRANSPORTATION IMPROVEMENTS THAT RESULT

A. Street Frontage Improvements to Washington and Abernethy



B. Construction of a City Collector Street Through the Site (TSP Project)

C. Construction of Two Shared Use Facilities Through the Site (TSP Project)

D. Construction of a Shared Use Facility Along Abernethy (TSP Project)

N

KEY FINDINGS FROM THE TRANSPORTATION ANALYSIS

1. MULTIMODAL SYSTEM

A. Connectivity and function of system is improved by site-related projects

2. CRASH HISTORY EVALUATION

A. 11 of 25 intersections with above-average crash rates

B. 6 intersections had no fatal or severe injury crashes

C. No pattern of crashes were found

3. EXISTING INTERSECTION OPERATIONS

A. Currently, all intersections meet standards or are exempt from standards

4. 2025 TOTAL TRAFFIC CONDITIONS

A. Abernethy Rd / Redland Rd / Holcomb Blvd. exceeds queue storage

B. OR 213 / Redland Rd exceeds standards and queue storage

5. IMPACT MITIGATIONS

A. Mitigations are feasible and capable of meeting standards

INTERSECTION IMPROVEMENTS

CONDITIONS OF APPROVAL

We have worked with staff over the course of the last **18 MONTHS** to develop our plans, We will accept and work toward meeting **72 OF THE 81** conditions of approval. Their are just 9 conditions that we intend to discuss more in-depth tonight with the planning commission.

10.b.i – Anchor Retail Split at South and Central Districts

11.a – N-1 Drive-Thru Location

The North End Master Plan for the Former Rossman Landfill: GL 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)

Master Plan (GDP): The overall long-term approach to development over 5-20 years.

- Adjustments to the following development standards:
  - OCMC Chapter 16.12.030 - Blocks—Width
  - OCMC Chapter 17.54.100.2- Retaining Walls
  - OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)
  - OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways
- Initial feasibility review of phased Infrastructure/transportation implementation- conditions added.

Conditional Use: Request to approve Approval of a Conditional Use for tenant size (E2, S2, C2) and conditional use drive-thru locations (N1, E1,C1,S1,E5)

Flood Management Overlay District: General review for feasibility of development approach.

Geologic Hazards Overlay District: General review for feasibility of development approach.

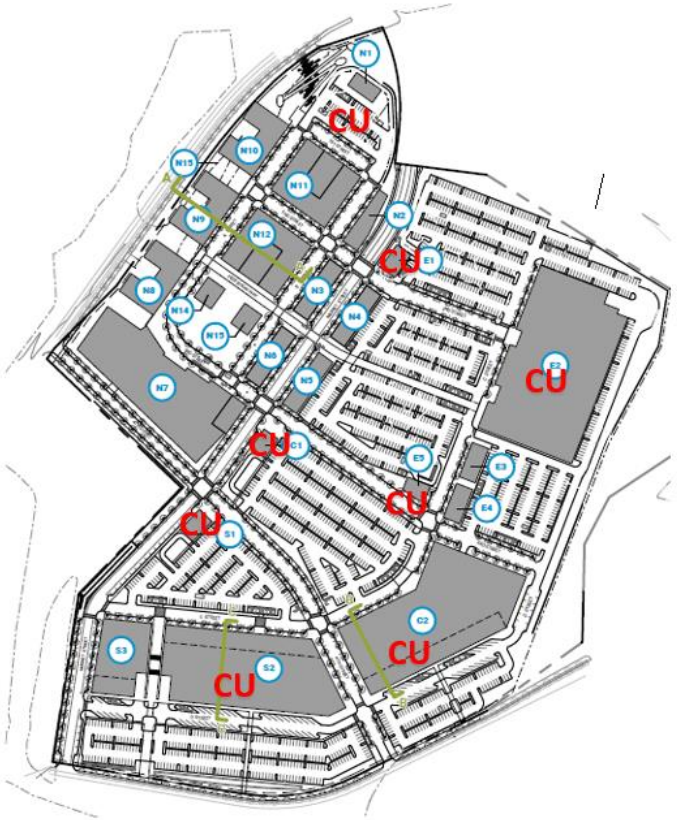
GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-03(

Purpose of Master Plan

- Allow an applicant a path of clarity & additional certainty in a multi phase development proposal.
  - Implementation reviewed though a clear and objective staff level DDP review.
  - Vests 2021 Code for life of Master Plan (20 years)
  - An option for the applicant –not required for development
- Reviews full buildout impact -provide phased conditions
- Master Plan applicants can request site/project specific adjustments
  - Show that on balance the resulting project meets the intent of city code and comprehensive plan policies
  - Proportionally mitigated for any impacts created by the requested adjustments.

Master Plan Adjustments



a. **OCMC Chapter 16.12.030 - Blocks—Width**
   i. Subject to the proposed street and pedestrian connections layout found on the site circulation diagram of page 64 of the application.

★ b. **OCMC Chapter 17.54.100.2- Retaining Walls**
   i. Retaining walls are allowed to exceed height limits in areas identified in an exhibit *the applicant will submit prior to the June 28, 2021 Planning Commission Hearing*

c. **OCMC Chapter 17.62.055.D- Siting of Structures (Frontage)**
   i. Building frontage percentages and location on public or private streets shall meet at a minimum the footprint layout found on the District Plan Map found on page 61 of the application.

d. **OCMC Chapter 17.62.050.C.4 -Elevated External Stairways or Walkways**
   i. Elevated stairways are allowed within the North District.

Conditional Use

Tenant size

(E2, S2, C2) are approved for implementation through the DDP process with the following conditions:

a. Building E2 is allowed to be used for a single tenant.
b. Buildings S2 and C2 are subject to the following limitation:
    i. No single tenant may occupy more than 70% of leasable square footage.

Drive-thru locations

Building E1,C1, S1, E5 are approved for a CU drive-thru and will be reviewed in accordance with the Municipal Code.

Building N1 is approved subject to reorientation to meet Municipal Code during DDP process.

Clear an Objective Mitigation Conditions for CU & Adjustment Request

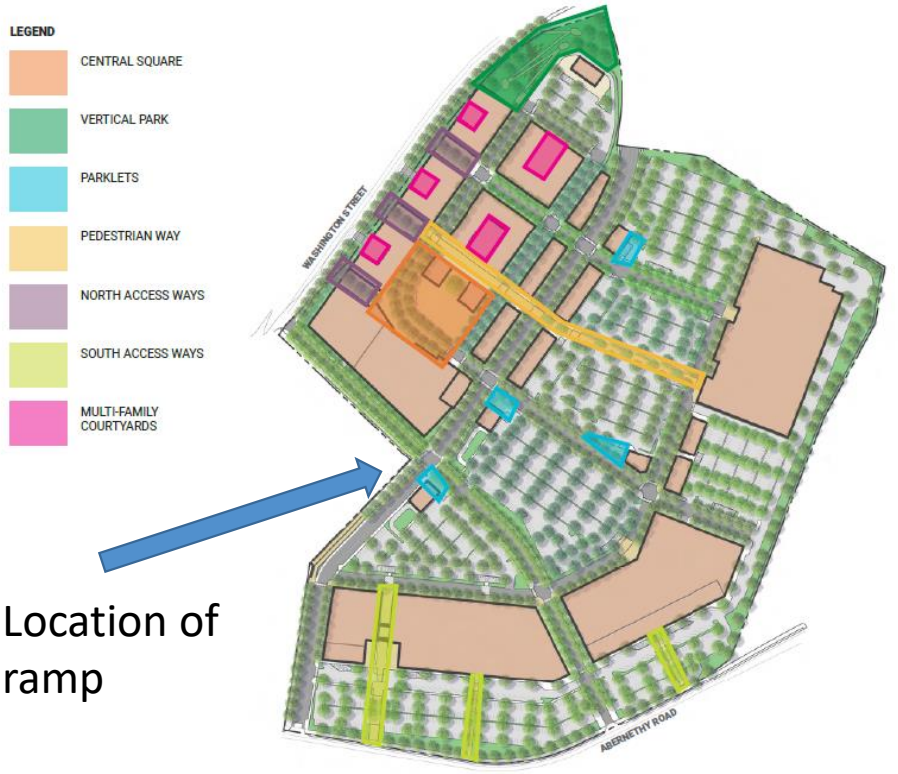
a. Construction of open space as demonstrated in the figure identified on page 98 of the submitted Master Plan. Open spaces that vary more than 10% in square footage than proposed shall be reviewed at a Type III level. All open spaces shall use a combination of hard and soft scaping.

b. A minimum of 40% of the Central Square plaza area shall consist of a special paving material, which can include brick, precast concrete, pavers, or stone. A maximum of 50% of the plaza area can be concrete paving. A minimum of 5,000 square feet of open space shall be provided that is unimpeded by planting or site elements to create a central gathering space. The central square shall not be eligible for any multi-family open space calculation.

a. A minimum of 2 public art or interpretive elements shall be installed in each District (North, South, East, West) and be at least three cubic feet or thirty square feet in size.

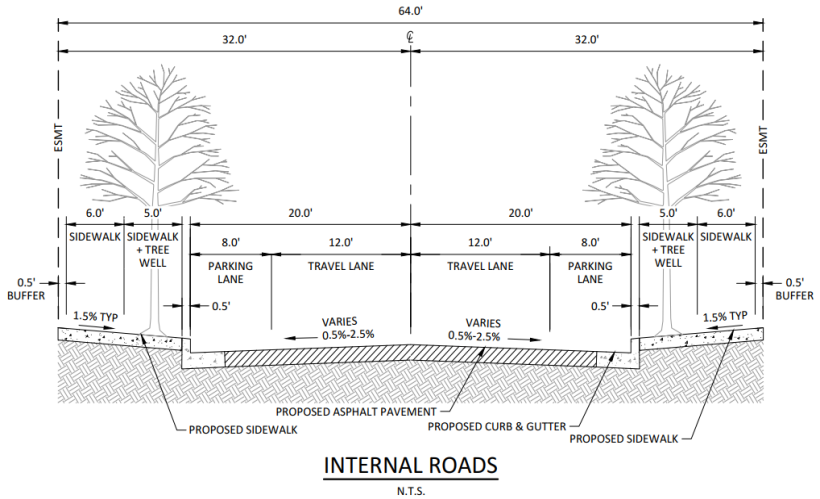
Clear an Objective Mitigation Conditions for CU & Adjustment Reque Continued

d. There shall be a differentiation of private street lighting and parking lot lightin design. Street lighting shall utilize decorated banners or flower baskets on at least 50% of the light standards.



e. Pedestrian wayfinding signage shall be installed in all four districts directing pedestrians to offsite amenities such as End of the Oregon Trail Museum, Amtrak Station, Main Street, and Willamette River.

f. No more than 50% of the proposed multi-family square footage can be constructed and Certificates of Occupancy given without full construction of the proposed Central Square Plaza.



Clear an Objective Mitigation Conditions for CU & Adjustment Requ– Continued

G. The pedestrian connection to the End of The Oregon Trail Museum shall be constructed by the date of final occupancy of Building C2 within the South District. The record demonstrates that there are multiple feasible alignments for that connection and the final design shall be reviewed through the Type II DDP process as long as it is consistent with the intent of providing an ADA access between the development and the EOT in the same general location as depicted in the adopted Master Plan. The pedestrian connection may utilize portions of city property at the End of the Oregon Trail Museum if allowed by a future public/private agreement and/or with an abutting private property.

Location of ramp

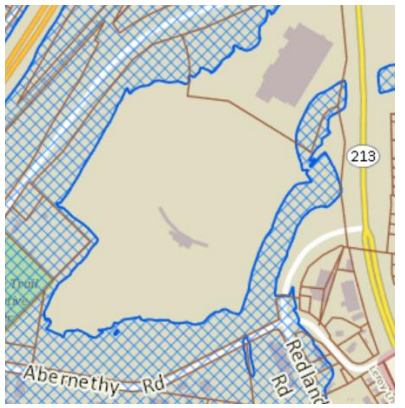
Infrastructure

INTERNAL ROADS

N.T.S.

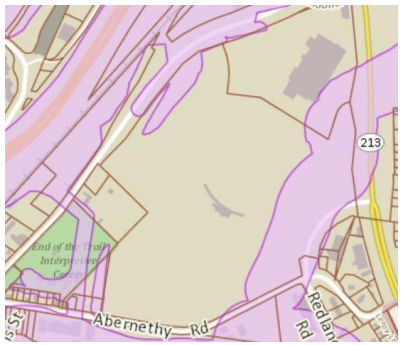
- Internal roads will be private with public access and maintenance easements.
- Acceptance with conditions of applicant's private street cross sections and locations
- Abernethy and Washington Street will be built to adopted standards and will be built at applicable DDP
- Reviewed Master Plan for general feasibility, provided additional direction on required DDP items. Public water line must loop at first phase of development.

Overlay Districts



- **Geologic Hazards Overlay District &Flood Management Overlay District**: General review for feasibility of development approach. Full review will occur at each DDP.

- **Natural Resource Overlay District:** Review of previous exemption locations (soil cap, street pavement). Full review of resource along Washington Street will occur at time of applicable DDP.



Geo-Hazard

Flood

NROD

Transportation

- The TIA identifies demonstrates the full development can be constructed by 2025 if identified improvements are completed.
- Each phase in the development will be reviewed for compliance with transportation performance measures (V/C etc..) during DDP review.
  - Applicant is requesting a continuance to work out a revised condition to vest some trips
- Internal private streets, Abernethy and Washington Streets will be improved at time of applicable DDP
- Two Intersection do not meet performance standards at full-Building Out.
  - Abernethy/Redland Intersection
  - Redland/213 (Jug Handle Phase II)
- 99E/Dunes Drive found to be acceptable with revised memo

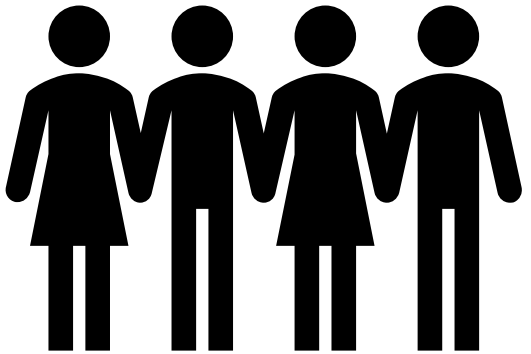
What is Not Part of the Approval?

- This review is separate from any future Urban Renewal request.
- Strictly a Land Use Review of a Master Plan Submittal. If it is approved, the city is not obligated to participate in any way.
- A specific use mix-ratio. All permitted uses in the Mixed-Use Downtown District are allowed within the area subject to the Master Plan conditions
- Applicant's Design Guidelines. Not clear and objective enough for a staff level DDP review.
  - Staff provided an urban design framework plan approach to mitigation, allows for more flexibility in finalizing tenant mix.- *Build proposed open space*
  - Only mitigation items identified in conditions of approval are required and proportional.
  - Building elevations, 3d renderings, watercolor drawings not part of adopted plan. Each phase must meet municipal code at time of DDP, except for the four requested adjustments.

Outstanding Items

- Transportation (additional data needed to vest trips in revised condition)
  - Highway 213/Redland
  - Abernethy/Redland Intersection

- Wall height limitation in Geo Hazard Overlay District
  - Not part of OCMC 17.54 height limit adjustment
  - Provide max height locations and mitigation options (planting, murals etc..)



- Master Plan Amendment (better ranges/sideboards)

Applicant requesting continence to July 12th to work with staff on outstanding items.

Staff Direction

By the close of the evening, please provide staff your

1. Questions/clarifications
2. What specific items should staff and the applicant respond to at the July 12, 2021 hearing?

Options

1. **Continuation of the GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030)to the July 12, 2021 City Commission Hearing with a 120 waiver from the applicant. (*recommended)***
2. Continuation of the GLUA 21-000016 (MAS 21-02, CU 21-01, FP 21-03, GEO 21-030) to a different date certain, with a 120 waiver from the applicant.
3. Deny Application- Provide Staff additional direction on which standards are not being met.

Intro:

This information and testimony is from Jerry Herrmann, President of Rivers of Life Center. Rossman's I Landfill and Rossman's II Landfill cumulatively have impacted the Deepwater aquifers since the late 1960's and early `70s.

I have received the closure documents from DEQ for 1973 closure of Rossman's II Landfill. Rossman's I Landfill (the first ever in the west) directly fed leachate into adjoining Clackamette Cove and then the Clackamas River. My testimony today is that the development being considered has done a very good job in addressing environmental concerns that were never addressed back in 1973.

Further, the organizations proposing work on Rossman's II have secured unprecedented agreements with DEQ that will hold them in long term accountability for any environmental challenges that do not get corrected. Oregon's worst landfills were allowed to evolve in a floodplain, floodway, and it's time to correct the impacts of the biggest – Rossman's II. Below are the substantive points that, lake thus effort unique and certainly environmentally trend-worthy.

Summary

- **The Rossman Landfill has been closed for 38 years and is regulated under a solid waste closure permit.**
- **The landfill currently has no monetary value to the City of Oregon City.**
- **Development of the property will require a landfill gas management system and other improvements - groundwater monitoring, methane monitoring and methane extraction.**
- **There is a local developer ready to turn this valueless piece of property into a mixed use development with among other benefits - much needed affordable residential units.**
- **All development related activities will be overseen by the DEQ's Environmental Cleanup program and paid for by the purchasers.**
- **Summit Development Group has negotiated with the Department of Environmental Quality to prefund a trust fund to make sure the development is protective of public health and the environment.**

- **It is an unprecedented pre-paid 30-year trust fund which will pay for a certified administrator to oversee, report and monitor the systems designed and installed by the developer. That means also that for 30 years any repairs and maintenance for any of the systems designed or installed by the developer will be paid from the trust fund. Water and soil quality and hazardous gas remediation will all be managed and the costs of managing them will be covered.**

- **This agreement allows the developer to procure private equity and debt financing. It also assures maximum cost liability and provides assurances to the State that proper environmental stewardship of the site is reinforced by continuous inspections and data reporting.**

Dear members of the Planning Commission,

I am writing in opposition to the North End Master Plan proposal, GLUA 21-000016 (MAS 21-02 CU 21-01 FP 21-03, GEO 21-030). There are several reasons for my opposition, which I would like to highlight below:

1. **The world does not need another shopping mall**

   Just a few weeks ago, yet another mall owner filed for Chapter 11 bankruptcy protection. On June 14, Washington Prime Group became the latest mall owner to file for bankruptcy protection, following CBL & Associates Properties Inc and Pennsylvania Real Estate Investment Trust the year before. (Source: https://www.cnbc.com/2021/06/14/mall-owner-washington-prime-files-for-chapter-11-bankruptcy-protection-.html)

   Malls are dying. Vacant stores are abundant all around. According to my completely non-scientific analysis counting non-occupied stores on mall directory maps, Clackamas Town Center has a 13% vacancy rate; Bridgeport Village is at 19%. The Milwaukie Marketplace looks like a ghost town. Who's to say in ten years' time, The North End retail space will not look the same? What sounds new and exciting now in current market conditions, can look more like a boarded-up-has-been in a very short period of time.

2. **Retail and the service industry do not provide living wage jobs**

   When a project of this magnitude is discussed, you will hear many people talk excitedly about the number of jobs that will be created. These are not the jobs our community needs. Working part-time at minimum wage with no benefits is not beneficial to the worker or to the community at large. The reason the retail and the service industries are struggling to find employees right now is because the work is thankless, the customers are becoming more hostile, the corporations are heartless, and there is not sufficient pay to live.

   According to the Oregon Blue Book, "Although Oregon's minimum wage is higher than most other states, private-sector workers in Oregon tend to work fewer hours per week and their average wage earnings are below the national level. … The lowest earnings were at jobs in leisure and hospitality, where pay averaged $23,798 per year."

   Oregon City residents deserve better and our community deserves better. Why not a tech campus? Why not luring in a corporate headquarters? Why not manufacturing?

3. **Conditional uses go against the core concept of "Mixed Use Downtown"**

   Page 12 of the GDP states that this development, "… creates an urban and intense development on the west side of the development and will attract more people into downtown Oregon City with a mix of larger retail uses that tend to serve the larger reason."

   By "the west side of the development", I believe they mean the North District, which is where the mixed use retail/office/multi-family dwellings will be. This is only a small piece. The GDP is

asking for eight conditional uses for the site, seven of which occur in the remaining three districts. The remaining pieces of the development are the most problematic.

Five drive-thru uses and three anchor retails establishments greater than 60,000 sf in size. Allowing this many conditional uses, and these specific types of uses, goes against the stated purpose in The Oregon City Municipal Code Chapter 17.34, "A mix of high-density residential, office and retail uses are encouraged in this district, with retail and service uses on the ground floor and office and residential uses on the upper floors. The emphasis is on those uses that encourage pedestrian and transit use."

You don't need a traffic and pedestrian pattern study to know that a drive-thru establishment is not friendly for pedestrian traffic. A fast food restaurant with a drive-thru window will bring 79 PM peak-hour trips per hour. Multiplied by five, that's basically 400 cars per hour. Four hundred cars do not mix well with pedestrians or bicyclists in any traffic scenario.

The proposal speaks of pedestrian access and respite parklets placed throughout the North End development. But the parklets are all placed next to the proposed drive-thru restaurants. There is no respite next to a McDonalds.

Allowing a conditional use drive-thru is not only bad for pedestrians, it is also bad for the city as a whole. As Daniel Herriges of StreetsBlog USA explains why very succinctly, another noteworthy negative impact of drive-thru establishments include the fact that as a land use they are low-returning in terms of tax revenue versus other uses of the same land.

Five drive-thru establishments are a lot of traffic nightmares for this space, and negates any good intentions for pedestrian access elsewhere in the project. This does not even speak to the large-scale anchor retail establishments, with one intended as a free-standing discount superstore (as indicated in the traffic impact analysis). One Wal-mart by itself without the other two anchors, would further remove the safety for pedestrians and bicyclists.

4. Traffic Concerns and Lack of Trimet service

There are currently only two bus lines with access to the proposed North End development, one of which provides service only ever 40 minutes, the other once per hour and only on week days. This is not adequate. No where in the plan is there a mention of increasing the bus service to mitigate traffic. In fact, notable today during our historic heat, the plan enthusiastically mentions that the Oregon City Transit Center is ¾ mile away. This is inconvenient at best, and is not encouraging to potential shoppers and residents. A ¾ mile walk carrying your work laptop or your school books, is a very long walk in the rain or extreme heat.

According to the GDP, "The trip generation calculations show 984 AM peak hour trips and 2727 PM peak hour trips, for a total of 3,711 trips each weekday." That's a LOT of extra traffic to place on already-clogged roads. There were three mitigation measures mentioned, but not discussion of who is to pay for these measures. A third southbound travel lane on OR 213, one of the suggested mitigations, would not come cheap.

What would be the timing of adding additional bus service and the necessary traffic mitigation measures? The timeline for this development project is very tight- completion in 2025. Without putting these measures in place in time with the development phases, our city will be clogged to a point to be detrimental to our existing businesses and citizens.

Thank you for your time. I do see some good in this proposal, but I also worry about the bad. Something this big takes very careful thought. A quick fix solution to develop a property is never the best approach. Please consider the long term impacts to our city, the businesses and business owners already here, and the citizens who love to call Oregon City home.

Sincerely,

Kristina L Franklin

RE: The North End Master Plan Supplemental Transportation Impact Analysis

SUMMARY

This memorandum serves to update analysis previously documented as the Transportation Impact Analysis Report for the North End Master Plan (PA 20-11) (TIA). The TIA identified operational deficiencies at the intersection of OR 99E and Dunes Drive in Oregon City. Further review of the analysis revealed that we originally misrepresented the signal timing and phasing plan for this intersection, which was provided to us by the Oregon Department of Transportation. Confirmation of the correct signal timing and phasing has led to the need for this revised analysis. Results of the analysis, as summarized herein, find that the intersection meets the relevant mobility standards under existing, year 2025 background, and year 2025 total traffic conditions during the typical weekday AM, weekday PM, and Saturday midday peak hours.

Signal Timing/Phasing Review

The signal timing and phasing plan provided by the Oregon Department of Transportation for this intersection is attached as Appendix A to this memorandum. Page 1 of the attachment includes a diagram of the intersection and identifies phases A1 and B2 as the southbound OR 99E through and left-turn movements, respectively. Phases A2 and B1 represent the northbound OR 99E through and left-turn movements, respectively. The previous TIA analysis incorrectly put Phase A1 and Phase B1 together and Phase A2 and Phase B2 together. This misrepresentation of the phasing created errors in the analysis results.

Revised Analysis Results

The TIA studied the weekday AM, weekday PM, and Saturday midday peak hours under existing conditions, year 2025 background conditions, and year 2025 total traffic conditions (with the proposed master plan fully developed and occupied). The revised analysis for the same study conditions and peak hours is summarized in Table 1. The analysis worksheets for each peak hour of each condition (a total of nine analyses) are attached as Appendix B to this memorandum. As indicated in the table, the intersection meets the established mobility standard of a volume to capacity (v/c) ratio of less than 1.10. Because in all circumstances the resulting peak hour v/c ratio is less than 0.99 there is no need to conduct an analysis of the second peak hour.

Table 1 OR 99E / Dunes Drive Volume to Capacity Analysis Results

Study Period	Existing Conditions	2025 Bacground Conditions	2025 Total Traffic Conditions
Weekday AM Peak Hour	0.59	0.65	0.66
Weekday PM Peak Hour	0.69	0.78	0.80
Saturday Midday Peak Hour	0.73	0.80	0.82

Conclusion

Based on the revised analysis results, this intersection operates acceptably under all study conditions. As such, no capacity deficiency is triggered, and no mitigation is needed.

Instructions -
0 = service phases defined in phases location
1-9 = use special intervals 1-9
10 = preempt sequence allows fylta
11 = preempt interval disables fylta
15 = alternate trap protection
90 = go to all red
91 = turn cvm off
92 = turn cvm on
93 = enable ped service and phases defined in phases location
94 = disable ped service
96 = enable coordination w/peds
97 = enable coordination w/o peds
98 = return with no calls
99 = return with ped calls and phases defined in phases location
100 = jump to step defined in time location and input has to be active for jump
101 = use time as resetable gap timer and service phases defined in phases location
196 = coordination sync w/peds
197 = coordination sync w/o peds
200 = lrt phase service w/o peds
201 = lrt phase service w/peds
202 = priority return-queue/delay
216 = lrt coordination sync w/peds
217 = lrt coordination sync w/o peds

Phases Serviced - phases 1 - 8

Interval Time - 0 - 255 sec or interval 1 - 10

Hold on Input:
0 = Do not hold
1 = Hold
2 = Ped Service to Rest in Walk

Outputs On - output 1 - 8

Output Modes -
0 = all steady on
1 = all flash together
2 = odd flashes WIG, even flashes WAG
3 = 1 - 4 steady on, 5 - 8 all flash together
