## Significant/Systemic Findings and Deficiencies

### Historical Summary

The Francis Ermatinger House was built in 1843 and is one of the oldest houses in Clackamas County, Oregon City. The house was renovated from 2011 to 2017 and it was opened to the public in 2018.

### Architectural

The building is composed of wood board and all the interior finishes were installed recently, so there were no issues observed. The roof is a combination of TPO/PVC on the center area and the sides of the building are asphalt shingles. The roof seems to be in good condition and no leaks has been reported.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

Air conditioning is provided by a split system comprised of a furnace and a heat pump unit. Electricity is fed from outside to the panels inside the property, Hot water is supplied by a gas 50 gallon water heater. The water heater is large considering that the water fixtures are limited to one bathroom and a small kitchenette. In the future it is recommended to install a tankless water heater as they more energy efficient and will be more suitable for the property. Overall, all the MEPF components appear to be in a fair condition.

### Site

Site amenities consists of an asphalt parking lot, site lighting, bench, green landscape, and concrete pavement. The site amenities in general are in good condition and convey the impression of being well maintained.

### Recommended Additional Studies

No additional studies recommended at this time.

## Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

| FCI Ranges and Description |                                                                                                 |
|----------------------------|-------------------------------------------------------------------------------------------------|
| 0 – 5%                     | In new or well-maintained condition, with little or no visual evidence of wear or deficiencies. |
| 5 – 10%                    | Subjected to wear but is still in a serviceable and functioning condition.                      |
| 10 – 30%                   | Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.         |
| 30% and above              | Has reached the end of its useful or serviceable life. Renewal is now necessary.                |

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

| FCI Analysis   Ermatinger House |          |            |        |
|---------------------------------|----------|------------|--------|
| Replacement Value               | Total SF | Cost/SF    |        |
| \$ 1,362,900                    | 3,300    | \$ 413     |        |
| Current FCI                     |          | \$ 0       | 0.0 %  |
| 3-Year                          |          | \$ 0       | 0.0 %  |
| 5-Year                          |          | \$ 42,800  | 3.1 %  |
| 10-Year                         |          | \$ 271,500 | 19.9 % |

The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures. The capital expenditures allocated for each year (blue bars) are associated with the dollar amounts along the right Y axis.

### Needs by Year with Unaddressed FCI Over Time

#### FCI Analysis: Ermatinger House

Replacement Value: \$ 1,362,900; Inflation rate: 3.0%

#### Immediate Needs

No Immediate Needs were observed at this time.

#### Key Findings

No Key Findings were observed at this time.

#### Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the “why” part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the “best” fit, typically the one with the greatest significance.

#### Plan Type Descriptions

|                              |                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | ■ An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | ■ Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |

### Plan Type Descriptions

|                     |                                                                                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Accessibility       | ■ Does not meet ADA, UFAS, and/or other handicap accessibility requirements.                                                                     |
| Environmental       | ■ Improvements to air or water quality, including removal of hazardous materials from the building or site.                                      |
| Retrofit/Adaptation | ■ Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.       |
| Lifecycle/Renewal   | ■ Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. |

### Plan Type Distribution (by Cost)

### 3. Property Space Use and Observed Areas

#### Unit Allocation

All 3,300 square feet of the property are occupied by the city of Oregon City. The spaces are a historical museum with supporting restroom, mechanical and other utility spaces.

#### Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roof.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1843. The facility was substantially renovated in 2016-2017 and widespread accessibility improvements appear to have been implemented at that time.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The city of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Ermatinger House, 619 6<sup>th</sup> Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |
| 43                       | Are there any problems with exterior lighting?                                     |     |    |     |     |          |
| 44                       | Are there any other significant issues/hazards with the property?                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                |     |    |     |     |          |
|--------------------------|----------------------------------------------------------------|-----|----|-----|-----|----------|
| Question                 |                                                                | Yes | No | Unk | N/A | Comments |
| 45                       | Are there any unresolved construction defects at the property? |     |    |     |     |          |
| Comments                 |                                                                |     |    |     |     |          |
|                          |                                                                |     |    |     |     |          |

## Visual Checklist - 2010 ADA Standards for Accessible Design

Property Name: Ermatinger House

BV Project Number: 148392.21R000-012.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | ✗  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | ✗  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     | ✗  |    |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          | ✗   |    |    |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        | ✗   |    |    |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? | ✗   |    |    |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    | ✗   |    |    |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  | ✗   |    |    |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? | ✗   |    |    |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         | ✗   |    |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      | ✗   |    |    |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            | ✗   |    |    |          |

|   |                                                                                          |   |  |  |  |
|---|------------------------------------------------------------------------------------------|---|--|--|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? | X |  |  |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     | X |  |  |  |

## Abbreviated Accessibility Checklist

## Building Entrances

Main/accessible entrance

Additional entrance or signage/hardware

| Question |                                                                                                     | Yes | No | NA | Comments |
|----------|-----------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Do a sufficient number of accessible entrances appear to be provided ?                              | ✗   |    |    |          |
| 2        | If the main entrance is not accessible, is an alternate accessible entrance provided?               | ✗   |    |    |          |
| 3        | Is signage provided indicating the location of alternate accessible entrances ?                     | ✗   |    |    |          |
| 4        | Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ? | ✗   |    |    |          |
| 5        | Do doors at accessible entrances appear to have compliant hardware ?                                | ✗   |    |    |          |
| 6        | Do doors at accessible entrances appear to have a compliant clear opening width ?                   | ✗   |    |    |          |

|   |                                                                                                       |   |  |  |  |
|---|-------------------------------------------------------------------------------------------------------|---|--|--|--|
| 7 | Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ? | X |  |  |  |
| 8 | Do thresholds at accessible entrances appear to have a compliant height ?                             | X |  |  |  |

## Abbreviated Accessibility Checklist

## Interior Accessible Route

Accessible interior path (ramp/lift)

Door hardware, stair rails, or self-service area

| Question |                                                                                        | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does an accessible route appear to connect all public areas inside the building ?      | ✗   |    |    |          |
| 2        | Do accessible routes appear free of obstructions and/or protruding objects ?           | ✗   |    |    |          |
| 3        | Do ramps on accessible routes appear to have compliant slopes ?                        |     |    | ✗  |          |
| 4        | Do ramp runs on an accessible route appear to have a compliant rise and width ?        |     |    | ✗  |          |
| 5        | Do ramps on accessible routes appear to have compliant end and intermediate landings ? |     |    | ✗  |          |
| 6        | Do ramps on accessible routes appear to have compliant handrails ?                     |     |    | ✗  |          |

|    |                                                                                                                       |   |  |   |  |
|----|-----------------------------------------------------------------------------------------------------------------------|---|--|---|--|
| 7  | Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage ? |   |  | X |  |
| 8  | Do public transaction areas have an accessible, lowered service counter section ?                                     | X |  |   |  |
| 9  | Do public telephones appear mounted with an accessible height and location ?                                          |   |  | X |  |
| 10 | Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ?             | X |  |   |  |
| 11 | Do doors at interior accessible routes appear to have compliant hardware ?                                            | X |  |   |  |
| 12 | Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ?  | X |  |   |  |
| 13 | Do doors on interior accessible routes appear to have a compliant clear opening width ?                               | X |  |   |  |

## Park Findings and Deficiencies

### Historical Summary

The Park was constructed around 1996 and renovated in 2021. The renovation in 2021 was the property signage. The Park is open to the community.

### Site and Amenities

There is a basketball court that is in poor condition, there are major cracks throughout the site, and it needs to be seal and striped and milled over. There is a tennis fence, drinking fountains, chain link fencing, and trash receptacles throughout in fair condition. There is no irrigation system for the site, and it is recommended to be installed.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Key Findings

### Athletic Surfaces and Courts in Poor condition.

Basketball/General, Asphalt Pavement  
Hartke Park Site

Uniformat Code: G2051

Recommendation: **Seal and Stripe in 2022**

Priority Score: **82.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$9,400

\$\$\$\$

Sealing and striping is mostly worn and faded - AssetCALC ID: 2925494

### Athletic Surfaces and Courts in Poor condition.

Basketball/General, Asphalt Pavement  
Hartke Park Site

Uniformat Code: G2051

Recommendation: **Mill and Overlay in 2022**

Priority Score: **82.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$72,800

\$\$\$\$

Asphalt pavement throughout site is cracked, spalled, and has potholes - AssetCALC ID: 2925487

No photo

Modernization recommendation

Item does not currently exist at site

### Irrigation System

Pop-Up Spray Heads, Commercial  
Hartke Park Site

Uniformat Code: G2081

Recommendation: **Replace/Install in 2021**

Priority Score: **54.9**

Plan Type:  
Modernization/Adaptation

Cost Estimate: \$24,400

\$\$\$\$

No irrigation system exists on site - AssetCALC ID: 2925486

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

#### Safety

An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.

#### Performance/Integrity

Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.

## Plan Type Descriptions

|                            |                                                                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>       | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                              |
| <b>Environmental</b>       | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                           |
| <b>Retrofit/Adaptation</b> | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.       |
| <b>Lifecycle/Renewal</b>   | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. |

## Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$159,700**

## 2. General Park Summary

| General Site Information          |                                                                                                          |           |           |
|-----------------------------------|----------------------------------------------------------------------------------------------------------|-----------|-----------|
| Asset                             | Description                                                                                              | Quantity  | Condition |
| <b>Sports Apparatus</b>           | Backstops                                                                                                | 2 EA      | Fair      |
| <b>Drinking Fountain</b>          | Exterior Site                                                                                            | 1 EA      | Fair      |
| <b>Fences</b>                     | Chain Link 4'                                                                                            | 100 LF    | Fair      |
| <b>Athletic Surface</b>           | Basketball Court                                                                                         | 16,000 SF | Poor      |
| <b>Irrigation System</b>          | Pop-Up Spray Heads, Install                                                                              | 18,800 SF | N/A       |
| <b>Fences</b>                     | Chain Link 8'                                                                                            | 530 LF    | Fair      |
| <b>Trash Receptacles</b>          | Light Duty                                                                                               | 1 EA      | Fair      |
| <b>Sports Apparatus</b>           | Tennis Post and Anchors                                                                                  | 2 EA      | Fair      |
| <b>Landscaping and Topography</b> | No significant landscaping features.<br>Irrigation not present<br>Low to moderate site slopes throughout |           |           |

**General Site Information**

|                                     |                                                                                                                                                         |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>On-Site Vehicular Paving</b>     | N/A                                                                                                                                                     |
| <b>Pedestrian paving and Trails</b> | Concrete sidewalks                                                                                                                                      |
| <b>On-Site Amenities</b>            | Chain link fencing, trash receptacles                                                                                                                   |
| <b>Ancillary Buildings</b>          | N/A                                                                                                                                                     |
| <b>Fields and Lots</b>              | Basketball court, backstops                                                                                                                             |
| <b>Storm Water Management</b>       | Surface drainage to developed and undeveloped surroundings                                                                                              |
| <b>Accessibility</b>                | Presently it does not appear an accessibility study is needed for the general site areas.                                                               |
| <b>Key Issues and Findings</b>      | The basketball court needs to be replaced as there is cracking and needs to be sealed and striped. An irrigation system is recommended to be installed. |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park was originally constructed in 1996 and substantially renovated in 2021.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Hartke Park, 556 Hartke Loop, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5        | List any major capital improvement within the last three years.                                                                              |          |
| 6        | List any major capital expenditures planned for the next year.                                                                               |          |
| 7        | What is the age of the roof(s)?                                                                                                              |          |
| 8        | What building systems (HVAC, roof, interior/exterior finishes, paving, etc.) are the responsibilities of the tenant to maintain and replace? |          |

| Question |                                                                                                | Yes | No | Unk | N/A | Comments |
|----------|------------------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
| 9        | Are there any unresolved building, fire, or zoning code issues?                                |     |    |     |     |          |
| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |
| 43                       | Are there any problems with exterior lighting?                                     |     |    |     |     |          |
| 44                       | Are there any other significant issues/hazards with the property?                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                |     |    |     |     |          |
|--------------------------|----------------------------------------------------------------|-----|----|-----|-----|----------|
| Question                 |                                                                | Yes | No | Unk | N/A | Comments |
| 45                       | Are there any unresolved construction defects at the property? |     |    |     |     |          |
| Comments                 |                                                                |     |    |     |     |          |

\*be cognizant that if the "None" box is checked that does not guarantee full compliance; this study is limited in nature

## Hartke Park Accessibility: Photographic Overview

1 – PARK ENTRANCE/CURB CUT

2 – PARK RAMP

The table below is intended to be used as a general reference guide to help differentiate the orders of magnitude for some of the more commonly observed accessibility issues. The table is not intended to be all-inclusive, and boxes checked in the tables above do not necessarily mean those specific problems or shortcomings cited as examples below exist at the subject buildings and sites. Reference the data and photos above and/or the *Key Findings* section in the body of the report for visuals and/or more specifics about the particular subject site conditions.

## Reference Guide

## Park Findings and Deficiencies

### Historical Summary

The park was constructed around 2005. The play structure was added in 2016. The park is located within a small community and is open to the public.

### Site and Amenities

The park is lightly furnished with a drinking fountain and a bike rack that is in fair condition. There is a small play structure that has wood chips. There is no irrigation system at the site, it is recommended to be installed.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$51,300

| Storm Water Management  | Surface drainage to developed and undeveloped surroundings                                |
| Accessibility           | Presently it does not appear an accessibility study is needed for the general site areas. |
| Key Issues and Findings | An irrigation system is recommended to be installed.                                      |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park was originally constructed in 2005 (estimated) and substantially renovated around 2016.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall and Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Hazelwood Park, 920 Laurelwood Drive, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Park Findings and Deficiencies

### Historical Summary

Hillendale Park is located in the Hillendale neighborhood of Oregon City directly to the east of Clackamas County Jail. The original construction date of the park is unknown, but it appears to have been established for quite some time. The park consists of two parking lots, playground areas, a picnic area, walking trails, soccer fields, softball/baseball diamonds, combination tennis/basketball courts, a sand volleyball court, and seasonal restrooms.

### Architectural

The only buildings in the park are a simple restroom structure, a maintenance shed, and a picnic shelter. The restroom building is a CMU structure with a metal roof and steel doors. The maintenance shed has a similar construction but is considerably smaller. The picnic shelter is an open-air, wood-framed structure with a metal roof. There are also 7 simple wood-framed shade structures partially enclosing some of the park benches located throughout the park. All the structures appear to be well-maintained, and no deficiencies were identified.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There is very little in the way of MEPF equipment in the park. The restroom building contains the plumbing fixtures and infrastructure consistent with seasonal use where no hot water is present. The building also has both interior and exterior lighting. No fire alarm or suppression elements or HVAC equipment was observed.

### Site & Amenities

Hillendale Park has a significant number of site assets and amenities spread throughout the entirety of the park. Typical park elements such as benches and trash receptacles are present in all areas of the park while other elements such as playground equipment and picnic tables/camping grills are concentrated in particular areas like playgrounds and picnic shelters. While most of the site assets were observed to be in satisfactory condition, a limited number of park benches, picnic tables, and signage was deemed to be deficient and recommended for replacement. Similarly, the asphalt pavement covering the pedestrian bridge adjacent to the playground is badly degraded. Property management also reported that certain areas of the park have drainage issues during periods of heavy rains and require drainage improvements.

### Recommended Additional Studies

Some areas of the park were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

**ADA Paths of Travel**

Walkways, Asphalt Pathway (Uniformat Code: Y1020)  
Hillendale Park Playground south  
Recommendation: **Install** in 2021.  
No accessible pathway provided to the two playgrounds in the south side of the park.  
AssetCalc ID: 2963280

Priority Score **63.9**

Plan Type: Accessibility

Cost Estimate: \$ 700

\$\$\$

**ADA Miscellaneous**

Level III Study, Includes Measurements (Uniformat Code: Y1090)  
Hillendale Park General Park  
Recommendation: **Evaluate/Report** in 2021.  
A number of potential accessibility issues were identified during the assessment.  
AssetCalc ID: 2967413

Priority Score **63.9**

Plan Type: Accessibility

Cost Estimate: \$ 9,800

\$\$\$

**ADA Paths of Travel**

Walkways, Asphalt Pathway (Uniformat Code: Y1020)  
Hillendale Park Parking lot South  
Recommendation: **Install** in 2021.  
Ramp from parking space to asphalt sidewalk is not compliant.  
AssetCalc ID: 2963284

Priority Score **63.9**

Plan Type: Accessibility

Cost Estimate: \$ 200

\$\$\$

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$403,300**

## 2. Restroom Building

| General Site Information            |                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>On-Site Vehicular Paving</b>     | Two asphalt parking areas with concrete curbs                                                                                                                                                                                                                                                                                                                                  |
| <b>Pedestrian paving and Trails</b> | Asphalt and concrete pathways                                                                                                                                                                                                                                                                                                                                                  |
| <b>On-Site Amenities</b>            | Chain link fencing, pedestrian bridges, picnic tables, benches, grills, bleachers, playground equipment, trash receptacles                                                                                                                                                                                                                                                     |
| <b>Ancillary Buildings</b>          | Picnic Shelter, maintenance shed, shade structures                                                                                                                                                                                                                                                                                                                             |
| <b>Fields and Lots</b>              | Unimproved play fields; Softball fields with natural turf, backstops, dugouts and fencing; Soccer fields with natural turf and movable goals; Combination tennis/basketball courts with painted asphalt surface with tennis nets and backboards/rims; Volleyball court with sand and nets; Playgrounds with wood chips play surfaces, play structures, and other play elements |
| <b>Storm Water Management</b>       | Surface drainage to developed and undeveloped surroundings and to water features in the park                                                                                                                                                                                                                                                                                   |
| <b>Accessibility</b>                | Potential moderate/major issues have been identified associated with the general site areas and a detailed accessibility study is recommended.                                                                                                                                                                                                                                 |
| <b>Key Issues and Findings</b>      | Degraded asphalt pavement on pedestrian bridge, limited number of excessively worn benches and picnic tables, damaged sign.                                                                                                                                                                                                                                                    |

## 4. Property Space Use and Observed Areas

---

### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park original construction is unknown.

The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |                          |                          |                                    |
|-----------------------------|--------------------------|--------------------------|------------------------------------|
| Facility                    | Year Built/<br>Renovated | Prior Study<br>Provided? | Major/Moderate<br>Issues Observed? |
| Restroom Building           | UNKNOWN                  | No                       | No                                 |
| General Park                | UNKNOWN                  | No                       | Yes                                |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Hillendale Park, 19260 Clairmont Way, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Visual Checklist - 2010 ADA Standards for Accessible Design

**Property Name:** Hillendale Park

**BV Project Number:** 148392.21R-00 - 027.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | ✗  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | ✗  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     | ✗  |    |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          | ✗   |    |    |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        | ✗   |    |    |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? | ✗   |    |    |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    | ✗   |    |    |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  | ✗   |    |    |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? | ✗   |    |    |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         |     | ✗  |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      |     | ✗  |    |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     | ✗  |    |          |

|   |                                                                                          |  |   |  |  |
|---|------------------------------------------------------------------------------------------|--|---|--|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  | X |  |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  | X |  |  |

## Abbreviated Accessibility Checklist

## Building Entrances

NA

NA

| Question |                                                                                                     | Yes | No | NA | Comments |
|----------|-----------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Do a sufficient number of accessible entrances appear to be provided ?                              |     |    | ×  |          |
| 2        | If the main entrance is not accessible, is an alternate accessible entrance provided?               |     |    | ×  |          |
| 3        | Is signage provided indicating the location of alternate accessible entrances ?                     |     |    | ×  |          |
| 4        | Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ? |     |    | ×  |          |
| 5        | Do doors at accessible entrances appear to have compliant hardware ?                                |     |    | ×  |          |
| 6        | Do doors at accessible entrances appear to have a compliant clear opening width ?                   |     |    | ×  |          |

|   |                                                                                                       |  |  |   |  |
|---|-------------------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ? |  |  | × |  |
| 8 | Do thresholds at accessible entrances appear to have a compliant height ?                             |  |  | × |  |

## Abbreviated Accessibility Checklist

## Interior Accessible Route

NA

NA

| Question |                                                                                        | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does an accessible route appear to connect all public areas inside the building ?      |     |    | ✗  |          |
| 2        | Do accessible routes appear free of obstructions and/or protruding objects ?           |     |    | ✗  |          |
| 3        | Do ramps on accessible routes appear to have compliant slopes ?                        |     |    | ✗  |          |
| 4        | Do ramp runs on an accessible route appear to have a compliant rise and width ?        |     |    | ✗  |          |

## Park Findings and Deficiencies

### Historical Summary

The site was constructed in 2006. There have been no major renovations to the park. The park is open to the community with a restroom building located at the center.

### Architectural

The restroom building is comprised of CMU and a metal roof. There are 4 skylights on the restroom building roof. There are no windows just openings between the CMU blocks for air to pass through. The interiors are in fair condition and consist of unfinished flooring, painted CMU walls, and wood paneling for the roof.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There is a main electrical panel for the Restroom Building located at the rear. There is a water heater for the restroom building in fair condition. There is no fire suppression system for the building.

### Site and Amenities

The parking lot for the park is in fair condition, the seal and stripe for the parking lot is also in fair condition. There is a shaded gazebo next to the parking lot. There are picnic tables, trash receptacles, a bike rack, fencing, and a drinking fountain throughout the property. There is a wood pier, concrete stairs and a metal ramp that is in fair condition. The lighting throughout the property is adequate.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

### Immediate Needs

**Plan Types**

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

**Plan Type Descriptions**

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |

Plan Type Descriptions

|                     |                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Environmental       | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                           |
| Retrofit/Adaptation | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.       |
| Lifecycle/Renewal   | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. |

Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$183,200

## 4. Property Space Use and Observed Areas

### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e., city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park was originally constructed in 2006. The park has not since been substantially renovated.

The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |                          |                          |                                    |
|-----------------------------|--------------------------|--------------------------|------------------------------------|
| Facility                    | Year Built/<br>Renovated | Prior Study<br>Provided? | Major/Moderate<br>Issues Observed? |
| Restroom Building           | 2006                     | No                       | No                                 |
| General Park                | 2006                     | No                       | No                                 |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                              |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                       |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Jon Storm Park, 1801 Clackamette Drive, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Park Findings and Deficiencies

### Historical Summary

Library Park is located at 606 John Adams Street and has a spray area that is temporally closed due to Covid-19. The spray park was redesigned and open in 2011, the rest of the park amenities were installed throughout different periods.

### Site & Amenities

Site amenities consists of an asphalt parking lot, concrete sidewalk, playground area, spray area, site lighting, stone retaining wall, benches, trash receptacles and a shed. The site amenities appear to be in good condition and conveys the impression of being well maintained.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

### Systems Expenditure Forecast

### Immediate Needs

Not applicable, no immediate needs were identified.

### Key Findings

Not applicable, key findings were identified.

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

| Plan Type Descriptions |                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Safety                 | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| Performance/Integrity  | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| Accessibility          | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| Environmental          | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| Retrofit/Adaptation    | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| Lifecycle/Renewal      | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

| General Site Information            |                                                                                               |          |      |
|-------------------------------------|-----------------------------------------------------------------------------------------------|----------|------|
| <b>Drinking Fountain</b>            | Metal Pedestal                                                                                | 1 EA     | Fair |
| <b>Book Box</b>                     | Metal                                                                                         | 5 EA     | Fair |
| <b>Plumbing System</b>              | Spray Area                                                                                    | 2,800 SF | Fair |
| <b>Landscaping and Topography</b>   | Moderate landscaping features<br>Irrigation present<br>Low to moderate site slopes throughout |          |      |
| <b>On-Site Vehicular Paving</b>     | Asphalt parking areas and drive lanes with concrete parking curbs                             |          |      |
| <b>Pedestrian paving and Trails</b> | Concrete sidewalks                                                                            |          |      |
| <b>On-Site Amenities</b>            | Spray area, playground, benches, retaining walls and site lighting                            |          |      |
| <b>Ancillary Buildings</b>          | Shed                                                                                          |          |      |
| <b>Fields and Lots</b>              | None                                                                                          |          |      |
| <b>Storm Water Management</b>       | Surface drainage to developed and undeveloped surroundings                                    |          |      |
| <b>Accessibility</b>                | Presently it does not appear an accessibility study is needed for the general site areas.     |          |      |
| <b>Key Issues and Findings</b>      | No key issuers were found.                                                                    |          |      |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Library Park, 606 John Adams Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5        | List any major capital improvement within the last three years.                                                                              |          |
| 6        | List any major capital expenditures planned for the next year.                                                                               |          |
| 7        | What is the age of the roof(s)?                                                                                                              |          |
| 8        | What building systems (HVAC, roof, interior/exterior finishes, paving, etc.) are the responsibilities of the tenant to maintain and replace? |          |

| Question |                                                                                                | Yes | No | Unk | N/A | Comments |
|----------|------------------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
| 9        | Are there any unresolved building, fire, or zoning code issues?                                |     |    |     |     |          |
| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |
| 43                       | Are there any problems with exterior lighting?                                     |     |    |     |     |          |
| 44                       | Are there any other significant issues/hazards with the property?                  |     |    |     |     |          |

## Visual Checklist - 2010 ADA Standards for Accessible Design

Property Name: Library Park

BV Project Number: 148392.21R000-019.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | X  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | X  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     |    | X  |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          | ✗   |    |    |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        | ✗   |    |    |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? | ✗   |    |    |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    | ✗   |    |    |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  | ✗   |    |    |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? | ✗   |    |    |          |

# Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         | ✗   |    |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      | ✗   |    |    |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     |    | ✗  |          |

|   |                                                                                          |  |  |   |  |
|---|------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  |  | X |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  |  | X |  |

## Park Findings and Deficiencies

### Historical Summary

The McLoughlin Promenade is a 7.8-acre linear park on the bluff above downtown, which provides spectacular views of the Willamette River, Willamette Falls, and downtown Oregon City. It also provides a connection to the Oregon City Municipal Elevator.

### Site & Amenities

Amenities are limited in the park to concrete sidewalk, site lighting, benches, concrete walls, metal fencing, flagpole, and trash receptacles. The major key issue found that there is no accessible space is provided and a worn-out bench in front of the McLoughlin house and that property management reported that significant landscaping, irrigation and exterior lighting improvements are necessary. Vegetation along the concrete walls/fencing appears to be as a major issue and needs to be addressed as soon as possible.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Key Findings

### Landscaping in Poor condition.

Repair  
McLoughlin Promenade Throughout Site

Uniformat Code: G2083  
Recommendation: **Repair in 2021**

Priority Score: **81.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$195,000

\$\$\$\$

Property management reported that significant landscaping and irrigation repairs required. - AssetCALC ID: 3144115

### Park Bench in Poor condition.

Wood/Composite/Fiberglass  
McLoughlin Promenade Site

Uniformat Code: G2062  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$1,100

\$\$\$\$

Bench showing signs of deterioration. - AssetCALC ID: 2955371

### ADA Parking

Designated Stall, Regraded and Leveled  
McLoughlin Promenade Site

Uniformat Code: Y1011  
Recommendation: **Install in 2021**

Priority Score: **63.9**

Plan Type: Accessibility

Cost Estimate: \$31,200

\$\$\$\$

No ADA parking space is provided. - AssetCALC ID: 2955379

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$872,100**

|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Pedestrian paving and Trails | Concrete sidewalk                                                                                                                              |
| On-Site Amenities            | Benches, concrete walls, metal fencing and site lighting                                                                                       |
| Ancillary Buildings          | None                                                                                                                                           |
| Fields and Lots              | None                                                                                                                                           |
| Accessibility                | Potential moderate/major issues have been identified associated with the general site areas and a detailed accessibility study is recommended. |
| Key Issues and Findings      | No accessible space is provided in parking lot, major vegetation found along the concrete walls and wood park bench is worn out.               |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of McLoughlin Promenade, Walkway along the bluff of the elevator, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Visual Checklist - 2010 ADA Standards for Accessible Design

**Property Name:** McLoughlin Promenade BV

**Project Number:** 148392.21R000-029.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | ✗  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | ✗  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     | ✗  |    |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          |     | ✗  |    |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        |     | ✗  |    |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? |     | ✗  |    |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    |     | ✗  |    |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  |     | ✗  |    |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? |     | ✗  |    |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         | ✗   |    |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      |     |    | ✗  |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     |    | ✗  |          |

|   |                                                                                          |  |  |   |  |
|---|------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  |  | × |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  |  | × |  |

## Park Findings and Deficiencies

### Historical Summary

The cemetery was first established in 1854. Since then, land expansions, an office house, restrooms, maintenance shop, and mausoleums were constructed and developed.

### Architectural

The office house consists of a wooden structure on a concrete slab. The exterior support beams and soffits were repaired/replaced in 2014. The façade consists of painted wood siding with wood and vinyl framed windows. Exterior doors consist of a decorative wood entry door and wood and metal service doors. The south door is weathered, aged, and the door seal/weatherstripping is loose and damaged. There are also cracked bricks on the exterior portion of the fireplace chimney. The roof consists of a gable construction with asphalt shingle roofing that was replaced in 2020. Roof drainage consists of gutters and downspouts. There is a small area of damaged ceiling in the lunch room due to a previous mold issue that has since been mitigated. The VCT flooring in the lunch room is worn and aged. The wood strip flooring in the rear/south offices is worn. Typical lifecycle-based interior and exterior finish replacements are budgeted and anticipated.

The restroom facility consists of a concrete masonry unit structure with a wood framed roof. The façade consists of painted CMU with aluminum windows. Exterior doors consist of metal entry doors. The roof consists of a flat construction with an asphalt compound. The interior floor coating/paint is worn and faded. The interior wall paint is chipped and peeling.

The maintenance shop consists of a steel structure with metal siding. The exterior siding has dents and damaged segments. The roof consists of a gable construction with a metal finish. Exterior doors consist of three overhead doors.

The mausoleums are concrete structures on concrete slabs with Modified bituminous membranes covering concrete roofs.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

The office house is heated and cooled by a split system furnace, replaced in 1991, and condensing unit, likely of similar age. The restrooms are heated by two wall-mounted electric heaters. No heating or cooling is provided to the maintenance shop.

The plumbing systems are adequate for the facilities and no major piping issues were found. Domestic hot water is provided to the office house by a gas-fired water heater replaced in 1995 located in the lunch room. No hot water is provided to the restrooms. No plumbing is provided to the maintenance shop. There was no evidence suggesting any problems with the general plumbing and sewage systems.

The office house is served by a main distribution panel located in the lunch room. Electrical service equipment and systems are anticipated for lifecycle replacement. Electric service to the restrooms and maintenance shop is minimal, only providing lighting to the spaces.

Mausoleum building 1 has a sink only

None of the buildings are protected by a fire alarm nor sprinkler suppression system. Due to their size and purpose, installing such systems is not necessary and the existing smoke detectors are adequate for the spaces.

### Site & Amenities

The site consists of the office house, the restroom structure, the maintenance shop/garage, seven mausoleums, site pavement, and the cemetery landscaping/burial grounds. There is also a decommissioned structure that was the previous maintenance shop. It was condemned in 2014. A budgetary cost has been included for the demolition of this structure. Site pavement includes an asphalt parking lot, asphalt streets, and concrete sidewalks. The asphalt parking lot and parts of the streets have severe alligator cracking and potholes. The parking lot sealing and striping is worn and cracked. Multiple sidewalk tripping hazards were observed due to cracked and spalled concrete in/near the Veterans Memorial and in between Mausoleums 2 & 4. The site irrigation system is outdated. The ground/soil at the south drainage point is eroded due to the heavy water flow it experiences and should be repaired. Site furnishings include benches, trash receptacles, and decorative fountains. Site lighting consists of pole lights and building mounted lights in the mausoleums. Site fencing consists of chain link and metal tube fencing. There is a damaged segment of metal tube fencing at the northeast corner of the site due to a fallen tree.

## Recommended Additional Studies

Some areas of the facility were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included.

## Key Findings

No Key Findings were observed at this time.

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |

## 7. Property Space Use and Observed Areas

### Areas Observed

Most of the cemetery areas were observed in order to gain a clear understanding of the condition of the cemetery and related amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

Areas of note that were either inaccessible or not observed for other reasons are listed here:

- Northeast section, closed off due to storm debris

## 8. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The cemetery was first developed in 1854 with additional buildings and amenities added over time. No widespread accessibility renovations have occurred.

Complaints about accessibility issues have been sporadically received by property management at the restroom facility although no prior or pending litigation was reported.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 9. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 10. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 11. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Mt. View Cemetery, 500 Hilda Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The table below is intended to be used as a general reference guide to help differentiate the orders of magnitude for some of the more commonly observed accessibility issues. The table is not intended to be all-inclusive, and boxes checked in the tables above do not necessarily mean those specific problems or shortcomings cited as examples below exist at the subject buildings and sites. Reference the data and photos above and/or the *Key Findings* section in the body of the report for visuals and/or more specifics about the particular subject site conditions.

## Reference Guide

## Park Findings and Deficiencies

### Historical Summary

Old Canemah Park is located at 150 3<sup>rd</sup> Avenue, the park is a naturally vegetated habitat with walking trails, picnic areas and a beautiful view of the Willamette river.

### Site & Amenities

Significant alligator cracks and depressions can be found in the asphalt sidewalk and parking areas, there is no accessible parking provided.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Key Findings

### Parking Lots in Poor condition.

Pavement, Asphalt  
Old Canemah Park Parking Area

Uniformat Code: G2021  
Recommendation: **Path and Overlay in 2021**

Priority Score: **84.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$89,400

\$\$\$\$

Many asphalt patches are showing signs of depression and alligator cracking. - AssetCALC ID: 2946861

### ADA Parking

Designated Stall, Regraded and Leveled  
Old Canemah Park Parking

Uniformat Code: Y1011  
Recommendation: **Install in 2021**

Priority Score: **63.9**

Plan Type: Accessibility

Cost Estimate: \$15,600

\$\$\$\$

No ADA accessible stall is provided in parking lot. - AssetCALC ID: 2946891

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$235,800

| Accessibility                | Potential moderate/major issues have been identified associated with the general site areas and a detailed accessibility study is recommended.                                                        |          |           |
| Key Issues and Findings      | Severe alligator cracking and depression found in the side-walk asphalt pavement. No ADA accessible stall is provided. Metal pole needs to be removed at the entrance to make the pathway accessible. |          |           |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Old Canemah Park, 300 3<sup>rd</sup> Avenue, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Visual Checklist - 2010 ADA Standards for Accessible Design

**Property Name:** Old Canemah Park

**BV Project Number:** 148392.21R000-031.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| <b>1</b> | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | ✕  |    |          |
| <b>2</b> | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | ✕  |          |
| <b>3</b> | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     |    | ✕  |          |

## Abbreviated Accessibility Checklist

## Parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          |     |    | ×  |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        |     |    | ×  |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? |     |    | ×  |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    |     |    | ×  |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  |     |    | ×  |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? |     |    | ×  |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         | ✗   |    |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      |     |    | ✗  |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     |    | ✗  |          |

|   |                                                                                          |  |  |   |  |
|---|------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  |  | × |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  |  | × |  |

# Abbreviated Accessibility Checklist

## Building Entrances

NA

NA

| Question |                                                                                                     | Yes | No | NA | Comments |
|----------|-----------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Do a sufficient number of accessible entrances appear to be provided ?                              |     |    | ✗  |          |
| 2        | If the main entrance is not accessible, is an alternate accessible entrance provided?               |     |    | ✗  |          |
| 3        | Is signage provided indicating the location of alternate accessible entrances ?                     |     |    | ✗  |          |
| 4        | Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ? |     |    | ✗  |          |
| 5        | Do doors at accessible entrances appear to have compliant hardware ?                                |     |    | ✗  |          |
| 6        | Do doors at accessible entrances appear to have a compliant clear opening width ?                   |     |    | ✗  |          |

|   |                                                                                                       |  |  |   |  |
|---|-------------------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ? |  |  | × |  |
| 8 | Do thresholds at accessible entrances appear to have a compliant height ?                             |  |  | × |  |

## Park Findings and Deficiencies

### Historical Summary

The site was originally constructed in 1996. There were renovations made in 2020 which included the playground and installation of the play surface area.

### Architectural

The restroom building is made of CMU block. The exterior doors and windows are in fair condition and are made of steel and aluminum, respectively. The interior flooring is made of ceramic tile and coated floors. The ceiling is made of wood and has two skylights per restroom side. The interior walls for the restroom building are made of ceramic tiles and painted surfaces. There is a major issue on the right side of the restroom building with the gutter and downspouts, it is in failed condition and it is recommended to repair immediately.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There is no main HVAC for the restroom building besides exhaust fans. There is a main distribution panel for the restroom building. There is an electric water heater in fair condition that provides service to the restroom building. The toilet, sink, and urinals are in fair condition. There is a drinking fountain for public use found in the front of the restroom building.

### Site and Amenities

There is no ADA access to the playgrounds, the asphalt trail needs to be cut and repatched. There are park benches, trash receptacles, and bike racks. There is a major crack in the concrete stairs located at the left side of the park. There is a public restroom located at the rear of the park. Lighting is LED and adequate for the park.

### Recommended Additional Studies

Some areas of the facility were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Immediate Needs

| Facility/Building | Total Items | Total Cost      |
|-------------------|-------------|-----------------|
| Park Place Park   | 3           | \$18,200        |
| Restroom Building | 1           | \$600           |
| <b>Total</b>      | <b>4</b>    | <b>\$18,800</b> |

## Key Findings

**Storm Drainage Components in Poor condition.**

Commercial  
Park Place Park Field

Uniformat Code: G3034  
Recommendation: **Install in 2023**

Priority Score: **86.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$13,000

\$\$\$\$

POC reports that field unusable during periods of rain and drainage improvements required - AssetCALC ID: 3144911

**Sidewalk in Poor condition.**

Asphalt  
Park Place Park Walking Trail

Uniformat Code: G2031  
Recommendation: **Replace in 2023**

Priority Score: **85.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$28,600

\$\$\$\$

Severe alligator Cracking throughout trail. Recommended to replace. - AssetCALC ID: 2929994

**Backflow Preventer**

Domestic Water, 2 IN  
Park Place Park Irrigation

Uniformat Code: D2014  
Recommendation: **Replace in 2021**

Priority Score: **84.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$4,200

\$\$\$\$

Irrigation backflow is recommended to be replaced. - AssetCALC ID: 2938927

**Backflow Preventer**

Domestic Water, 2 IN  
Park Place Park

Uniformat Code: D2014  
Recommendation: **Replace in 2021**

Priority Score: **84.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$4,200

\$\$\$\$

Backflow is recommended to be replaced - AssetCALC ID: 2938928

**Roof Appurtenances in Poor condition.**

Gutters and Downspouts, Aluminum with Fittings  
Restroom Building Park Place Park Restrooms

Uniformat Code: B3027  
Recommendation: **Replace in 2021**

Priority Score: **81.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$600

\$\$\$\$

Gutters are falling off on the front to right side of the building. - AssetCALC ID: 2929996

**Stairs in Poor condition.**

Concrete, Exterior  
Park Place Park Site

Uniformat Code: B1081  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$2,100

\$\$\$\$

There is cracking on the left side. - AssetCALC ID: 2929963

**ADA Miscellaneous**

Level III Study, Includes Measurements  
Park Place Park

Uniformat Code: Y1091  
Recommendation: **Evaluate/Report in 2021**

Priority Score: **63.9**

Plan Type: Accessibility

Cost Estimate: \$9,800

\$\$\$\$

Recommended to do a study for pathway throughout the park. - AssetCALC ID: 2937741

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$179,400

## 2. Restroom Building

| Site Utilities | -            | -                      | -                     | \$2,096               | -                       | \$2,096          |
| <b>TOTALS</b>  | <b>\$600</b> | <b>-</b>               | <b>-</b>              | <b>\$45,100</b>       | <b>\$179,000</b>        | <b>\$224,700</b> |

## 4. Property Space Use and Observed Areas

### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e., city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park was originally constructed in 1996 and substantially renovated in 2020.

The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |                          |                          |                                    |
|-----------------------------|--------------------------|--------------------------|------------------------------------|
| Facility                    | Year Built/<br>Renovated | Prior Study<br>Provided? | Major/Moderate<br>Issues Observed? |
| Restroom Building           | 1996                     | No                       | No                                 |
| General Park                | 1996 / 2020              | No                       | Yes                                |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                              |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                       |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall and Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Park Place Park, 16180 Front Avenue, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Significant/Systemic Findings and Deficiencies

### Historical Summary

Pioneer Center was originally constructed in 1978-79. It has two stories and was partially renovated in 2019/20.

### Architectural

The building consists of masonry bearing walls and wood framing on a concrete foundation and there were no indications with any of the building structural systems or façade. There are two roofing systems a flat roofing system and a sloped metal roofing. The flat roofing appears to be functioning normally as is the sloped roofing, however, the metal roofing consists of metal panels of different colors and should be replaced. The ceiling in the lobby area is sagging and should be replaced. It was observed that the ceiling appears to be held up by improper thin metal wiring which is likely contributing to its sag. Typical lifecycle-based interior and exterior finish replacements are budgeted and anticipated.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

The building is heated and cooled by six rooftop packaged units replaced in 2006 and two split-systems consisting of condensing units and furnaces, replaced in 2017. Two of the units are reportedly in poor condition requiring short term replacements.

The plumbing systems are adequate for the facility. Domestic hot water is provided by a gas-fired water heater replaced in 1993 located in the boiler room. The pipes feeding some of the kitchen sinks were observed to be wrapped in concrete, which appeared to be bulging outward. The concrete around the pipes should be removed and as a result the pipes will likely need to be replaced along with any wall or floor finishes in the process.

The building is served by a main switchboard, installed in 1979, located in the electrical room. Interior lighting primarily consists of linear fluorescent fixtures. Electrical service equipment and systems are anticipated for lifecycle replacement.

The building is protected by a fire alarm system and only the downstairs is protected fire sprinkler suppression system. It is recommended the remainder of the building be retrofit with sprinklers for safety systems modernization.

### Site

The site improvements all appear to be in good to fair condition with no deficiencies noted.

### Recommended Additional Studies

No additional studies recommended at this time.

## Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

### FCI Ranges and Description

|                      |                                                                                                 |
|----------------------|-------------------------------------------------------------------------------------------------|
| <b>0 – 5%</b>        | In new or well-maintained condition, with little or no visual evidence of wear or deficiencies. |
| <b>5 – 10%</b>       | Subjected to wear but is still in a serviceable and functioning condition.                      |
| <b>10 – 30%</b>      | Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.         |
| <b>30% and above</b> | Has reached the end of its useful or serviceable life. Renewal is now necessary.                |

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

### FCI Analysis | Pioneer Community Center (1979)

| <i>Replacement Value</i><br>\$ 8,928,000 | <i>Total SF</i><br>16,000 | <i>Cost/SF</i><br>\$ 558 |              |

| <b>Current FCI</b>                       | <b>\$ 33,800</b>          |                          | <b>0.4 %</b> |
| 3-Year                                   | \$ 657,300                |                          | 7.4 %        |
| 5-Year                                   | \$ 1,659,500              |                          | 18.6 %       |
| 10-Year                                  | \$ 2,493,600              |                          | 27.9 %       |

The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures. The capital expenditures allocated for each year (blue bars) are associated with the dollar amounts along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

FCI Analysis: Pioneer Community Center

Replacement Value: \$ 8,928,000; Inflation rate: 3.0%

Immediate Needs

Not applicable, no Immediate Needs identified.

## Key Findings

### Roofing in Poor condition.

Metal  
Pioneer Center Roof

Uniformat Code: B3011  
Recommendation: **Replace in 2023**

Priority Score: **89.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$131,800

\$\$\$\$

The roofing system appear that it may be original, severely discolored and is nearing the end of its useful life - AssetCALC ID: 2927907

### Plumbing System in Poor condition.

Supply and Sanitary, Medium Density  
(excludes fixtures)  
Pioneer Center Kitchen

Uniformat Code: D2014  
Recommendation: **Replace in 2022**

Priority Score: **84.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$2,500

\$\$\$\$

Some of the pipes in the kitchen are wrapped in concrete that appears to be bulging outward. - AssetCALC ID: 2950511

### Packaged Unit in Poor condition.

RTU, Pad or Roof-Mounted  
Pioneer Center Roof

Uniformat Code: D3055  
Recommendation: **Replace in 2021**

Priority Score: **81.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$14,300

\$\$\$\$

Staff reportedly mentioned unit has possibility of imminent failure and should be replaced immediately. - AssetCALC ID: 2927963

Recommendation: **Install in 2025**

Cost Estimate: \$91,000

\$\$\$\$

Only the downstairs is protected by a sprinkler suppression system. - AssetCALC ID: 2949007

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the “why” part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the “best” fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |   |                                                                                                                                                         |
|------------------------------|---|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | ■ | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | ■ | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | ■ | Does not meet ADA, UFAS, and/or other handicap accessibility requirements.                                                                              |
| <b>Environmental</b>         | ■ | Improvements to air or water quality, including removal of hazardous materials from the building or site.                                               |
| <b>Retrofit/Adaptation</b>   | ■ | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | ■ | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$2,493,800**

## 2. Building and Site Information

### 3. Property Space Use and Observed Areas

#### Unit Allocation

All 16,000 square feet of the property are occupied by the City of Oregon City. The spaces are a combination of offices, classrooms, and a multipurpose room, with supporting restrooms and mechanical and other utility spaces.

#### Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roofs.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e., city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1976. The facility was renovated over time, most recently in 2019/20.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported.

A prior accessibility survey was performed in 2012. From BV’s perspective and limited analysis of the documents provided in conjunction with our own site visit, it appears that the recommendations from that study have been addressed in full. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The city of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Pioneer Center, 615 5<sup>th</sup> Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. ## Pioneer Community Center Accessibility: Photographic Overview

1 - ACCESSIBLE PARKING AREA

2 - ACCESSIBLE PARKING AREA

3 - EXTERIOR RAMP

4 - CURB CUT

5 - MAIN ACCESSIBLE ENTRANCE

6 - ALTERNATE ACCESSIBLE ENTRANCE

## Pioneer Community Center Accessibility: Photographic Overview

7 - INTERIOR PATH OF TRAVEL

8 – INTERIOR DOOR HARDWARE

11 - RESTROOM

12 – SINKS AND ACCESSORIES

The table below is intended to be used as a general reference guide to help differentiate the orders of magnitude for some of the more commonly observed accessibility issues. The table is not intended to be all-inclusive, and boxes checked in the tables above do not necessarily mean those specific problems or shortcomings cited as examples below exist at the subject buildings and sites. Reference the data and photos above and/or the *Key Findings* section in the body of the report for visuals and/or more specifics about the particular subject site conditions.

## Park Findings and Deficiencies

### Historical Summary

Richard Bloom Tots' Park is located at 802 6<sup>th</sup> Street. Richard Bloom Tots' Park is located across from the Carnegie Center and very close to the library. The park consists of a playground and a small restroom structure.

### Site & Amenities

The restroom structure is completely abandoned and has not been used for a while, the door handle is broken at the west side restroom. Otherwise, the site amenities appear to be in good condition and conveys the impression of being well maintained.

### Recommended Additional Studies

No additional studies recommended at this time.

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$39,000

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Richard Bloom Tots' Park, 802 6<sup>th</sup> Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

| Inspections |                                      | Date Last Inspected | List any Outstanding Repairs Required |
|-------------|--------------------------------------|---------------------|---------------------------------------|
| 1           | Elevators                            |                     |                                       |
| 2           | HVAC, Mechanical, Electric, Plumbing |                     |                                       |
| 3           | Life-Safety/Fire                     |                     |                                       |
| 4           | Roofs                                |                     |                                       |

| Question |                                                                                                                                              | Response |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5        | List any major capital improvement within the last three years.                                                                              |          |
| 6        | List any major capital expenditures planned for the next year.                                                                               |          |
| 7        | What is the age of the roof(s)?                                                                                                              |          |
| 8        | What building systems (HVAC, roof, interior/exterior finishes, paving, etc.) are the responsibilities of the tenant to maintain and replace? |          |

| Question |                                                                                                | Yes | No | Unk | N/A | Comments |
|----------|------------------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
| 9        | Are there any unresolved building, fire, or zoning code issues?                                |     |    |     |     |          |
| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |
| 43                       | Are there any problems with exterior lighting?                                     |     |    |     |     |          |
| 44                       | Are there any other significant issues/hazards with the property?                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                |     |    |     |     |          |
|--------------------------|----------------------------------------------------------------|-----|----|-----|-----|----------|
| Question                 |                                                                | Yes | No | Unk | N/A | Comments |
| 45                       | Are there any unresolved construction defects at the property? |     |    |     |     |          |
| Comments                 |                                                                |     |    |     |     |          |
|                          |                                                                |     |    |     |     |          |

## Visual Checklist - 2010 ADA Standards for Accessible Design

Property Name: Richard Bloom Tots' Park

BV Project Number: 148392.21R000-033.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | ✗  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | ✗  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     | ✗  |    |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          |     |    | ×  |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        |     |    | ×  |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? |     |    | ×  |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    |     |    | ×  |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  |     |    | ×  |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? |     |    | ×  |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         |     |    | ✗  |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      |     |    | ✗  |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     |    | ✗  |          |

|   |                                                                                          |  |  |   |  |
|---|------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  |  | × |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  |  | × |  |

## Abbreviated Accessibility Checklist

## Building Entrances

NA

NA

| Question |                                                                                                     | Yes | No | NA | Comments |
|----------|-----------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Do a sufficient number of accessible entrances appear to be provided ?                              |     |    | ×  |          |
| 2        | If the main entrance is not accessible, is an alternate accessible entrance provided?               |     |    | ×  |          |
| 3        | Is signage provided indicating the location of alternate accessible entrances ?                     |     |    | ×  |          |
| 4        | Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ? |     |    | ×  |          |
| 5        | Do doors at accessible entrances appear to have compliant hardware ?                                |     |    | ×  |          |
| 6        | Do doors at accessible entrances appear to have a compliant clear opening width ?                   |     |    | ×  |          |

## Park Findings and Deficiencies

### Historical Summary

Rivercrest Park is located in the city of Oregon City at the intersection of Park Avenue and Harding Boulevard. The park includes a spray park, tennis courts, basketball courts, softball diamonds, playgrounds, picnic shelters, picnic tables, and restroom building.

### Architectural

The only building onsite was a CMU framed restroom building. No issues were observed with the metal roof.

No issues were observed with the picnic shelters either.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There was no heating or cooling onsite at the restroom building. The only ventilation was provided by wall mounted exhaust fans.

There was hot water provided to the restrooms by electric water heater located in the restroom storage. No issues were observed with the spray park equipment and controls inside the building.

### Site and Amenities

There were two picnic tables that were showing significant wearing and deterioration. The park benches were also worn out and will need replacement.

A significant concrete crack was observed near the bench on the tennis court. It will need to be sealed and regraded to prevent trip hazards on the playing surface.

### Recommended Additional Studies

Some areas of the facility were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Key Findings

☒ Include/Exclude**Athletic Surfaces & Courts** in **Poor** condition.

Tennis court, Concrete Pavement (Uniformat Code: G2050)

Rivercrest Park Tennis Court

Recommendation: **Replace/Install** in 2023.

Small area in tennis court showing signs of cracks and failure.

AssetCalc ID: 2942450

Priority Score **82.7**Plan Type:  
Performance/Integrity

Cost Estimate: \$ 1,500

\$\$\$

☒ Include/Exclude**Park Bench** in **Poor** condition.

Wood (Uniformat Code: G2060)

Rivercrest Park Site

Recommendation: **Replace** in 2022.

Benches are worn out and needs to be replaced in the near future.

AssetCalc ID: 2942459

Priority Score **81.8**Plan Type:  
Performance/Integrity

Cost Estimate: \$ 3,100

\$\$\$

☒ Include/Exclude**Picnic Table** in **Poor** condition.

Wood (Uniformat Code: G2060)

Rivercrest Park Site

Recommendation: **Replace** in 2022.

Picnic tables showing signs of wearing and deterioration.

AssetCalc ID: 2942480

Priority Score **81.8**Plan Type:  
Performance/Integrity

Cost Estimate: \$ 1,600

\$\$\$

☒ Include/Exclude**ADA Miscellaneous**

Level III Study, Includes Measurements (Uniformat Code: Y1090)

Rivercrest Park Playground

Recommendation: **Evaluate/Report** in 2021.

ADA Study recommended for access to the playground.

AssetCalc ID: 2944920

Priority Score **63.9**

Plan Type: Accessibility

Cost Estimate: \$ 9,800

\$\$\$

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$195,900**

| <b>On-Site Vehicular Paving</b>           | Asphalt street parking areas with concrete parking curbs                                         |          |           |
| <b>Pedestrian paving and Trails</b>       | Concrete sidewalks                                                                               |          |           |
| <b>On-Site Amenities</b>                  | Chain link fencing, picnic tables, benches                                                       |          |           |
| <b>Ancillary Buildings</b>                | Gazebos Shelters                                                                                 |          |           |

| General Site Information |                                                                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Fields and Lots          | Unimproved play fields, Baseball fields, dugouts and fencing, , play structure and other play elements                                              |
| Storm Water Management   | Surface drainage to developed surroundings                                                                                                          |
| Accessibility            | Potential moderate/major issues have been identified associated with the general site areas and a detailed accessibility study is recommended.<br>. |
| Key Issues and Findings  | ADA paths of travel to playground, worn out bench and picnic table, cracked concrete on tennis court.                                               |

## 4. Property Space Use and Observed Areas

### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables // checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The park original construction is UNKNOWN.

The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |                          |                          |                                    |
|-----------------------------|--------------------------|--------------------------|------------------------------------|
| Facility                    | Year Built/<br>Renovated | Prior Study<br>Provided? | Major/Moderate<br>Issues Observed? |
| Restroom Building           | UNKNOWN                  | No                       | No                                 |
| General Park                | UNKNOWN                  | No                       | Yes                                |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Rivercrest Park, 131 Park Drive, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Park Findings and Deficiencies

### Historical Summary

Singer Creek is an 18-acre natural habitat, the park consists of a disc golf course with 8 stations, asphalt sidewalk and a park bench.

### Site & Amenities

The open fields seem to be not well-drained requiring storm drainage improvements. The on-site amenities are limited to a park bench, asphalt sidewalk, gravel parking, disc golf course and the property sign. Overall, all site components appear to be in fair condition.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

Cost Estimate: \$ 5,900

\$\$\$

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$249,300

2. General Park Summary

| Accessibility            | Presently it does not appear an accessibility study is needed for the general site areas. |
| Key Issues and Findings  | No key issues were found.                                                                 |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Singer Creek Park, 130 Linn Avenue, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5        | List any major capital improvement within the last three years.                                                                              |          |
| 6        | List any major capital expenditures planned for the next year.                                                                               |          |
| 7        | What is the age of the roof(s)?                                                                                                              |          |
| 8        | What building systems (HVAC, roof, interior/exterior finishes, paving, etc.) are the responsibilities of the tenant to maintain and replace? |          |

| Question |                                                                                                | Yes | No | Unk | N/A | Comments |
|----------|------------------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
| 9        | Are there any unresolved building, fire, or zoning code issues?                                |     |    |     |     |          |
| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |

## Park Findings and Deficiencies

### Historical Summary

The site was constructed in 2008. There was a renovation in 2019 due to flooding at the pier. The dock is open to the community. There are no major buildings at the site.

### Site and Amenities

There are two main asphalt parking lots located at the lower and upper section of the boating dock. The seal and stripe at the bottom parking lot is recommended to be replaced. There is a trash receptable, a parking bench, and an ancillary building.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Immediate Needs

Not applicable, no immediate repairs identified

## Key Findings

### Sidewalk in Poor condition.

Asphalt  
Sportcraft Landing Site

Uniformat Code: G2031  
Recommendation: **Replace in 2023**

Priority Score: **85.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$5,000

\$\$\$\$

Root and other damage observed - AssetCALC ID: 2931789

### Parking Lots in Poor condition.

Pavement, Asphalt  
Sportcraft Landing Lower Parking Lot

Uniformat Code: G2021  
Recommendation: **Replace in 2022**

Priority Score: **84.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$214,500

\$\$\$\$

Significant alligator cracking and flood damage reported - AssetCALC ID: 2931792

### Parking Lots in Poor condition.

Pavement, Asphalt  
Sportcraft Landing Lower Parking Lot

Uniformat Code: G2021  
Recommendation: **Seal & Stripe in 2022**

Priority Score: **84.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$17,600

\$\$\$\$

Striping for the parking lot is coming off. - AssetCALC ID: 2931795

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

#### Safety

An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.

#### Performance/Integrity

Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.

Plan Type Descriptions

|                     |                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Accessibility       | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                              |
| Environmental       | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                           |
| Retrofit/Adaptation | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.       |
| Lifecycle/Renewal   | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. |

Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$273,500

2. General Park Summary

| General Site Information   |                                                                                                      |           |           |

| Storm Water Management       | Surface drainage to developed and undeveloped surroundings                                |
| Accessibility                | Presently it does not appear an accessibility study is needed for the general site areas. |
| Key Issues and Findings      | Severe alligator cracking in the lower parking lot.                                       |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The park was originally constructed in 2008 and substantially renovated in 2019.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall and Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Sportcraft Landing, 1701 Clackamette Drive, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

# BV FACILITY CONDITION ASSESSMENT: PRE-SURVEY QUESTIONNAIRE

**Building / Facility Name:** Sportcraft Landing

**Name of person completing form:** Jon Waverly

**Title / Association w/ property:** Facilities Maintenance Manager

**Length of time associated w/ property:** 13 years

**Date Completed:** 3/18/2021

**Phone Number:** 503.519.0377

**Method of Completion:** INTERVIEW - verbally completed during interview

**Directions:** Please answer all questions to the best of your knowledge and in good faith. Please provide additional details in the Comments column, or backup documentation for any **Yes** responses.

## Park Findings and Deficiencies

### Historical Summary

Stafford Park is located at 569 Holmes Lane and is a small undeveloped park. The park consists of picnic areas and an open field.

### Site and Amenities

Amenities are very limited in the park, the only key issue found was a worn-out picnic table. Accessibility is major issue no accessible space is provided and there is no accessible pathway from the parking to the picnic tables and the bench.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

No ADA accessible parking space provided. - AssetCALC ID: 2950991

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$39,300**

2. General Park Summary

| General Site Information |                                                                                                                                                |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| On-Site Amenities        | Bench, Picnic tables and wood bollards                                                                                                         |
| Ancillary Buildings      | None                                                                                                                                           |
| Fields and Lots          | Unimproved play fields                                                                                                                         |
| Accessibility            | Potential moderate/major issues have been identified associated with the general site areas and a detailed accessibility study is recommended. |
| Key Issues and Findings  | Worn out picnic table. No accessible parking or paths.                                                                                         |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

Detailed follow-up accessibility studies are included as recommendations because potential moderate to major issues were observed at the buildings and/or amenities identified above. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall and Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Stafford Park, 569 Holmes Lane, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Cemetery Findings and Deficiencies

### Historical Summary

The subject property is an historic cemetery constructed circa 1871. It appears the site has been used solely for this purpose since first developed.

### Site & Amenities

The property has minimal improvements, beyond the graves themselves limited to perimeter fencing, signage and a sidewalk. Site lighting and on-site parking is not provided. The site is fair condition with the fencing requiring repainting and minor repairs and the sidewalk relatively free of major cracks and spalls. At the time of the on-site, there were a number of downed limbs and branches resulting from a recent ice storm. Short term fence painting and repairs are required as well as typical life cycle replacements.

### Recommended Additional Studies

No additional studies recommended at this time.

### Systems Expenditure Forecast

The chart below breaks down the dollars by system type and groups individual years into time ranges.

| System Expenditure Forecast |                 |                        |                       |                       |                         |                 |
|-----------------------------|-----------------|------------------------|-----------------------|-----------------------|-------------------------|-----------------|
| System                      | Immediate       | Short Term<br>(1-2 yr) | Near Term<br>(3-5 yr) | Med Term<br>(6-10 yr) | Long Term<br>(11-20 yr) | TOTAL           |
| Site Development            | \$11,160        | -                      | \$2,130               | \$4,999               | \$20,155                | \$38,444        |
| Site Pavement               | -               | -                      | -                     | -                     | \$16,905                | \$16,905        |

## Key Findings

### Fences & Gates in Poor condition.

Priority Score: **81.9**

Fence, Wood Board 4'  
Straight Cemetery Site

Plan Type:  
Performance/Integrity

Uniformat Code: G2062  
Recommendation: **Replace in 2021**

Cost Estimate: \$6,200

\$\$\$\$

Fencing in disrepair and being held up by T posts. - AssetCALC ID: 2929961

### Fences & Gates in Poor condition.

Priority Score: **81.8**

Fence, any Painted Surface  
Straight Cemetery Site

Plan Type:  
Performance/Integrity

Uniformat Code: G2062  
Recommendation: **Prep & Paint, Minor Repairs in 2021**

Cost Estimate: \$3,700

\$\$\$\$

Paint coating is old and worn and minor areas of damage noted - AssetCALC ID: 2943569

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

#### Safety

An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.

#### Performance/Integrity

Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.

#### Accessibility

Does not meet ADA, UFAS, and/or other accessibility requirements.

#### Environmental

Improvements to air, water, or soil quality, including removal of hazardous materials from the site.

Plan Type Descriptions

|                     |                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Retrofit/Adaptation | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.       |
| Lifecycle/Renewal   | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted. |

10-YEAR TOTAL: \$18,400

|                              | Low to moderate site slopes throughout                                                                                                                                                                                                 |           |
| On-Site Vehicular Paving     | No on-site parking provided                                                                                                                                                                                                            | NA        |
| Pedestrian paving and Trails | Concrete sidewalks                                                                                                                                                                                                                     | Fair      |
| On-Site Amenities            | Four-foot-high painted wood fencing                                                                                                                                                                                                    | Poor      |
| Ancillary Buildings          | N/A                                                                                                                                                                                                                                    | NA        |
| Fields and Lots              | Dirt cemetery with wood fencing around the property                                                                                                                                                                                    | Fair      |
| Storm Water Management       | Surface drainage to developed and undeveloped surroundings                                                                                                                                                                             | NA        |
| Accessibility                | Presently it does not appear an accessibility study is needed for the general site areas.                                                                                                                                              |           |
| Key Issues and Findings      | Painting and minor repair of the fencing should be completed as well as general clean up of the downed limbs and branches. The fencing work is included in the cost tables, the clean up work is considered to be routine maintenance. |           |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

The entire cemetery was observed in order to gain a clear understanding of the condition of the cemetery and amenities.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The cemetery was originally constructed in 1871. The cemetery has not since been substantially renovated.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the cemetery facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Straight Cemetery, 13014 Clackamas River Drive, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Significant/Systemic Findings and Deficiencies

### Historical Summary

The Swimming Pool Was built in two phases, first the Natatorium was constructed in 1965 and then the community center wing in 1978. Renovations to the interior finishes, natatorium glass, ADA improvements, and rebuilding of the pool deck have been performed between 2014 and 2019.

### Architectural

The building structure, except for the pool deck is original and in above average condition based on the age of the two phases. The roof was resurfaced with a modified bitumen membrane in 2009. The south wall glass of the natatorium was replaced in 2014. The office interiors were renovated in 2017-2018, including ADA improvements. The overall condition of the architectural components is good. The exterior is in need of painting, there is a louver leak that needs repair, several exterior doors and frames are corroding and budgeted for replacement in the near term. There is older sheet flooring in the storage room that is budgeted for replacement in the near term. Lifecycle-based interior and exterior finish replacements are budgeted and anticipated.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

The building is heated by a gas fired steam boiler which also heats the pool water via a heat exchanger. The Natatorium is conditioned by air handlers with steam heat coils in concert with exhaust fans. The pool deck has a radiant heating system fed from a heat exchanger linked to the boiler. The office, community center wing is conditioned by rooftop packed units and small split system units. Replacement of the original air handlers is budgeted for the short term. Replacement of corroding drain piping is budgeted for the short term. The main electrical equipment is original to the two phases of the building and budgeted for upgrades in the short term. Upgrades to some of the pool filter components are budgeted for the short term. Lifecycle-based MEPF component replacements are budgeted and anticipated.

### Site

There are near term repairs needed to the concrete retaining walls and stairs. Resurfacing of the basketball court is budgeted for the near term. Recoating of the wading pool is budgeted for the near term. Lifecycle-based site component and finish replacements are budgeted and anticipated.

### Recommended Additional Studies

No additional studies recommended at this time.

## Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

### FCI Ranges and Description

|                      |                                                                                                 |
|----------------------|-------------------------------------------------------------------------------------------------|
| <b>0 – 5%</b>        | In new or well-maintained condition, with little or no visual evidence of wear or deficiencies. |
| <b>5 – 10%</b>       | Subjected to wear but is still in a serviceable and functioning condition.                      |
| <b>10 – 30%</b>      | Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.         |
| <b>30% and above</b> | Has reached the end of its useful or serviceable life. Renewal is now necessary.                |

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

| FCI Analysis   Swimming Pool (1800)       |                           |                          |
|-------------------------------------------|---------------------------|--------------------------|
| <i>Replacement Value</i><br>\$ 11,170,600 | <i>Total SF</i><br>20,572 | <i>Cost/SF</i><br>\$ 543 |
| <b>Current FCI</b>                        | <b>\$ 75,200</b>          | <b>0.7 %</b>             |
| 3-Year                                    | \$ 757,500                | 6.8 %                    |
| 5-Year                                    | \$ 1,415,400              | 12.7 %                   |
| 10-Year                                   | \$ 2,313,100              | 20.7 %                   |

The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures. The capital expenditures allocated for each year (blue bars) are associated with the dollar amounts along the right Y axis.

### Needs by Year with Unaddressed FCI Over Time

#### FCI Analysis: Swimming Pool

Replacement Value: \$ 11,170,596; Inflation rate: 3.0%

#### Immediate Needs

| Facility/Building | Total Items | Total Cost      |
|-------------------|-------------|-----------------|

## Key Findings

**Exterior Walls in Poor condition.**

any painted surface, 1-2 Story Building  
Swimming Pool Exterior Wall

Uniformat Code: B2011

Recommendation: **Prep and Paint in 2023**

Priority Score: **89.6**

Plan Type:  
Performance/Integrity

Cost Estimate: \$37,100

\$\$\$\$

POC reports that the exterior paint is aging and is requesting funds to repaint the exterior - AssetCALC ID: 2959826

**Interior Door in Poor condition.**

Steel, Standard  
Swimming Pool Staff Restroom

Uniformat Code: C1031

Recommendation: **Replace in 2023**

Priority Score: **83.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$4,300

\$\$\$\$

POC reports an unusually high replacement cost for HM doors and frames - AssetCALC ID: 2954851

**Athletic Surfaces and Courts in Poor condition.**

Basketball/General, Concrete Pavement  
Swimming Pool Basketball Court

Uniformat Code: G2051

Recommendation: **Mill and Overlay in 2023**

Priority Score: **82.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$40,500

\$\$\$\$

Basketball court noted to be spalled and cracked. Recommend replacing with asphalt court - AssetCALC ID: 2954815

**Retaining Wall in Poor condition.**

Concrete Cast-in-Place  
Swimming Pool Site

Uniformat Code: G2066

Recommendation: **Repair/Replace in 2021**

Priority Score: **81.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$70,200

\$\$\$\$

The retaining wall near the large Sequoia tree is leaning due to lateral forces from the retained earth. Some stabilization of the wall is recommended - AssetCALC ID: 2954848

### Stair/Ramp Rails in Poor condition.

Metal  
Swimming Pool Retaining Wall Near Pool  
Equipment Room

Uniformat Code: B1085  
Recommendation: **Install in 2021**

Priority Score: **81.9**

Plan Type:  
Performance/Integrity

Cost Estimate: \$5,000

\$\$\$\$

Attachments on railing on top of retaining wall near the pool equipment room is damaged and should be repaired.  
- AssetCALC ID: 2959833

### Louvers in Poor condition.

Aluminum  
Swimming Pool Building Exterior

Uniformat Code: B2071  
Recommendation: **Repair in 2022**

Priority Score: **81.8**

Plan Type:  
Performance/Integrity

Cost Estimate: \$5,900

\$\$\$\$

There is water leaking into the pool equipment room from a louver on the exterior wall. It is not clear if the water is leaking from the louver itself or at the edge of the louver where connects to the exterior wall. Louver and flashing to wall should be repaired/replaced to eliminate leak - AssetCALC ID: 2954809

### Pool Coating in Poor condition.

Elastomeric Coating  
Swimming Pool Wading Pool

Uniformat Code: C2031  
Recommendation: **Prep and Paint in 2022**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$11,700

\$\$\$\$

Pool coating is worn - AssetCALC ID: 2967153

**Stairs in Poor condition.**

Concrete, Exterior  
Swimming Pool Site

Uniformat Code: B1081  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$8,300

\$\$\$\$

The exterior stairs adjacent to the basketball court severely spalled. Should be replaced with stairs and railings  
- AssetCALC ID: 2954874

**Flooring in Poor condition.**

Vinyl Sheet  
Swimming Pool Storage Areas

Uniformat Code: C2035  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$6,800

\$\$\$\$

Flooring old and worn with split seams - AssetCALC ID: 2954876

**Pool Coating in Poor condition.**

Elastomeric Coating  
Swimming Pool Pool

Uniformat Code: C2031  
Recommendation: **Prep and Paint in 2023**

Priority Score: **81.6**

Plan Type:  
Performance/Integrity

Cost Estimate: \$61,400

\$\$\$\$

Pool coating appears to be worn and uneven - AssetCALC ID: 2954845

**Exterior Door/Frame in Poor condition.**

Steel, Standard  
Swimming Pool Building Exterior

Uniformat Code: B2051  
Recommendation: **Replace in 2023**

Priority Score: **54.7**

Plan Type:  
Modernization/Adaptation

Cost Estimate: \$12,500

\$\$\$\$

POC reports unusually high replacement costs for HM doors and frames. Price shown herein reflects this costing - AssetCALC ID: 2954861

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the “why” part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the “best” fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |   |                                                                                                                                                         |
|------------------------------|---|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | ■ | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | ■ | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | ■ | Does not meet ADA, UFAS, and/or other handicap accessibility requirements.                                                                              |
| <b>Environmental</b>         | ■ | Improvements to air or water quality, including removal of hazardous materials from the building or site.                                               |
| <b>Retrofit/Adaptation</b>   | ■ | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | ■ | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$2,313,100**

## 2. Building and Site Information

| Systems Summary |                                                                                                                                                                                                                                   |           |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|

| <b>Accessibility</b>              | Presently it does not appear an accessibility study is needed for this property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |      |
| <b>Key Issues and Findings</b>    | Repainting of the exterior walls is budgeted for the short term. Several exterior doors and door frames are corroded and budgeted for near term replacement. There is leakage at the exterior louver for the main air handler that is budgeted for repairs in the short term. Some drain piping replacements are budgeted for the near term. Upgrades to the older air handlers and electrical distribution panels is budgeted for the short term. Recoating of the pool is budgeted for the short term. Resurfacing of the basketball court is budgeted for the near term. Recoating of the wading pool is budgeted for the short term. Concrete retaining wall and stair repairs are needed and budgeted for the near term. |      |

### 3. Property Space Use and Observed Areas

#### Unit Allocation

All 20,752 square feet of the property are occupied by City of Oregon City. The spaces are a combination of a natatorium, meeting rooms and offices, with supporting restrooms, locker rooms, and mechanical and other utility spaces.

#### Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roof.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title III of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “commercial facilities” on the basis of disability. Regardless of its age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

Buildings completed and occupied after January 26, 1992 are required to comply fully with the ADAAG. Existing facilities constructed prior to this date are held to the lesser standard of compliance to the extent allowed by structural feasibility and the financial resources available. As an alternative, a reasonable accommodation pertaining to barrier removal must be made.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1965 and expanded in 1978. The facility was renovated over the last 5 years or so and accessibility improvements were reportedly implemented at that time.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The city of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of the Swimming Pool, 1211 Jackson Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

| 8                                                                                                                                                                                                                                                  | Are there any wall, window, basement or roof leaks?                                                                                                           | X        |    |     |    | In boiler room, when it rains really hard, rain comes in through the fresh air vent of the natatorium heat exchanger and leaks through the floor to the basement.                                                                                  |
| 9                                                                                                                                                                                                                                                  | Has any part of the facility ever contained visible suspect mold growth, or have there been any indoor air quality or mold related complaints from occupants? |          | X  |     |    |                                                                                                                                                                                                                                                    |
| 10                                                                                                                                                                                                                                                 | Are your elevators unreliable, with frequent service calls?                                                                                                   |          |    |     | X  |                                                                                                                                                                                                                                                    |
| 11                                                                                                                                                                                                                                                 | Are there any plumbing leaks, water pressure, or clogging/back-up problems?                                                                                   | X        |    |     |    | Most of the facility plumbing is original steel water lines and cast iron drain lines. Water lines have rusty water coming out if the fixtures go unused for any length of time. Many of the drains are slow and need roofer service fairly often. |
| 12                                                                                                                                                                                                                                                 | Have there been any leaks or pressure problems with natural gas, HVAC supply/return lines, or steam service?                                                  | X        |    |     |    | The heat exchangers and steam pipes from the boiler are old. There are no current problems, but with such an old system, it could happen any time.                                                                                                 |
| 13                                                                                                                                                                                                                                                 | Are any areas of the facility inadequately heated, cooled or ventilated? Any poorly insulated areas?                                                          | X        |    |     |    | For the most part, the system works pretty good. Since the main office and the locker rooms share the same heat, it can be difficult to maintain a balance. It would be nice if the locker rooms had their own heat systems.                       |
| 14                                                                                                                                                                                                                                                 | Is the electrical service outdated, undersized, or otherwise problematic?                                                                                     | X        |    |     |    | The distribution center in the boiler room is outdated and in need of replacement.                                                                                                                                                                 |
| 15                                                                                                                                                                                                                                                 | Are there any problems or inadequacies with exterior lighting?                                                                                                |          | X  |     |    |                                                                                                                                                                                                                                                    |
| 16                                                                                                                                                                                                                                                 | Is site/parking drainage inadequate, with excessive ponding or other problems?                                                                                | X        |    |     |    | Because of the original design, the 2 sidewalk drains in front of the building, on 12 <sup>th</sup> St, are easily clogged by debris. Larger catch basins would solve the problem.                                                                 |
| 17                                                                                                                                                                                                                                                 | Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?                    |          | X  |     |    |                                                                                                                                                                                                                                                    |
| 18                                                                                                                                                                                                                                                 | ADA: Has an accessibility study been performed at the site? ## Park Findings and Deficiencies

### Historical Summary

Tyrone S. Woods Memorial Park, is located in the city of Oregon City at the intersection of Glen Oak Rd Avenue and High School Ave. The Park includes playgrounds, picnic shelters, picnic tables, and restroom building. The Park was recently built in 2020 and named after Tyrone S. Woods a US Navy seal who served the CIA and died serving the country.

### Architectural

The only building onsite was a wood framed restroom building. No issues were observed with the metal roof. No issues were observed with the picnic shelters either.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There was no heating or cooling onsite at the restroom building. There was security onsite at the park.

### Site and Amenities

Majority of the park site amenities are brand new, so no issues were observed.

### Recommended Additional Studies

No additional studies recommended at this time.

### Immediate Needs

Not applicable, no immediate needs identified.

## Key Findings

No key findings for this set of locations.

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$49,000

2. Restroom Building

| Restroom Building: Systems Summary |                                                                                                                         |           |

| <b>Storm Water Management</b>       | Surface drainage to developed surroundings and Swales connecting to drain inlets                                |          |           |

General Site Information

|                         |                                                                                           |
|-------------------------|-------------------------------------------------------------------------------------------|
| Accessibility           | Presently it does not appear an accessibility study is needed for the general site areas. |
| Key Issues and Findings | No major issues.                                                                          |

## 4. Property Space Use and Observed Areas

---

### Areas Observed

Most of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The park was originally constructed in 2020. The park has not since been substantially renovated.

The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |                          |                          |                                    |
|-----------------------------|--------------------------|--------------------------|------------------------------------|
| Facility                    | Year Built/<br>Renovated | Prior Study<br>Provided? | Major/Moderate<br>Issues Observed? |
| Restroom Building           | 2020                     | No                       | No                                 |
| General Park                | 2020                     | No                       | No                                 |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

#### Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Tyrone S. Woods Memorial Park, 14511 Glen Oak Road, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Any reuse or distribution of this report without such consent shall be at the Client and the recipient's sole risk, without liability to Bureau Veritas.

## Park Findings and Deficiencies

### Historical Summary

Water Board Park is a natural area park with a beautiful view of Oregon City from the top entrance. The park is mostly undeveloped but does contain walk paths and a small parking area and benches.

### Site & Amenities

Significant depressions and other damages in the walking paths requiring replacement. Property management reports that a prior geotechnical investigation performed and a budgetary cost for soil stabilization and path replacement was established. That budgetary cost has been included in the cost tables.

### Recommended Additional Studies

The POC report

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Systems Expenditure Forecast

| Systems Expenditure Forecast |           |                        |                       |                       |                         |                    |
|------------------------------|-----------|------------------------|-----------------------|-----------------------|-------------------------|--------------------|

| Site Development             | -         | \$1,034,929            | \$2,712               | \$1,485               | \$133,832               | \$1,172,958        |
| Site Pavement                | -         | \$60,683               | -                     | -                     | \$42,532                | \$103,215          |
| <b>TOTALS</b>                | <b>-</b>  | <b>\$1,095,700</b>     | <b>\$2,800</b>        | <b>\$1,500</b>        | <b>\$176,400</b>        | <b>\$1,276,400</b> |

## Immediate Needs

| Facility/Building | Total Items | Total Cost |
|-------------------|-------------|------------|
| Total             | 0           | \$0        |

## Key Findings

### Walkway Paths in Poor condition.

Asphalt  
Waterboard Park Site

Uniformat Code: G2031  
Recommendation: **Replace in 2023**

Priority Score: **85.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$57,200

\$\$\$\$

Cracks and depressions in walking paths noted - AssetCALC ID: 2948563

### Trail Surface in Poor condition.

Natural, Soil Stabilization  
Waterboard Park Throughout Park

Uniformat Code: G2053  
Recommendation: **Replace in 2023**

Priority Score: **83.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$975,500

\$\$\$\$

POC reports that a prior geotechnical investigation identified an allowance to stabilize soils throughout park - AssetCALC ID: 3147550

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |

Plan Type Descriptions

Lifecycle/Renewal

Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

10-YEAR TOTAL: \$1,099,900

## 2. General Park Summary

| General Site Information     |                                                                                       |          |           |
|------------------------------|---------------------------------------------------------------------------------------|----------|-----------|
| Asset                        | Description                                                                           | Quantity | Condition |
| Signage                      | Guide and directional pole mounted                                                    | 2 EA     | Fair      |
| Bollard                      | Metal                                                                                 | 15 EA    | Fair      |
| Trash Receptacle             | Medium-Duty, Metal                                                                    | 1 EA     | Fair      |
| Landscaping and Topography   | Heavy landscaping features<br>Irrigation not present<br>Severe site slopes throughout |          |           |
| On-Site Vehicular Paving     | Asphalt parking area                                                                  |          |           |
| Pedestrian paving and Trails | Asphalt pathways                                                                      |          |           |
| On-Site Amenities            | Benches and retaining wall                                                            |          |           |
| Ancillary Buildings          | None                                                                                  |          |           |
| Fields and Lots              | Unimproved play fields                                                                |          |           |

General Site Information

|                         |                                                                                                               |
|-------------------------|---------------------------------------------------------------------------------------------------------------|
| Accessibility           | Presently it does not appear an accessibility study is needed for the general site areas.                     |
| Key Issues and Findings | Major depressions and cracks found throughout the sidewalk and vegetation and algae growth all over the park. |

### 3. Property Space Use and Observed Areas

---

#### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

#### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 5. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 7. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Waterboard Park, 200 South John Adams Street, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5        | List any major capital improvement within the last three years.                                                                              |          |
| 6        | List any major capital expenditures planned for the next year.                                                                               |          |
| 7        | What is the age of the roof(s)?                                                                                                              |          |
| 8        | What building systems (HVAC, roof, interior/exterior finishes, paving, etc.) are the responsibilities of the tenant to maintain and replace? |          |

| Question |                                                                                                | Yes | No | Unk | N/A | Comments |
|----------|------------------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
| 9        | Are there any unresolved building, fire, or zoning code issues?                                |     |    |     |     |          |
| 10       | Are there any "down" or unusable units?                                                        |     |    |     |     |          |
| 11       | Are there any problems with erosion, stormwater drainage or areas of paving that do not drain? |     |    |     |     |          |
| 12       | Is the property served by a private water well?                                                |     |    |     |     |          |
| 13       | Is the property served by a private septic system or other waste treatment systems?            |     |    |     |     |          |
| 14       | Are there any problems with foundations or structures?                                         |     |    |     |     |          |
| 15       | Is there any water infiltration in basements or crawl spaces?                                  |     |    |     |     |          |
| 16       | Are there any wall, or window leaks?                                                           |     |    |     |     |          |
| 17       | Are there any roof leaks?                                                                      |     |    |     |     |          |
| 18       | Is the roofing covered by a warranty or bond?                                                  |     |    |     |     |          |
| 19       | Are there any poorly insulated areas?                                                          |     |    |     |     |          |
| 20       | Is Fire Retardant Treated (FRT) plywood used?                                                  |     |    |     |     |          |

| PRE-SURVEY QUESTIONNAIRE |                                                                                    |     |    |     |     |          |
|--------------------------|------------------------------------------------------------------------------------|-----|----|-----|-----|----------|
|                          | Question                                                                           | Yes | No | Unk | N/A | Comments |
| 21                       | Is exterior insulation and finish system (EIFS) or a synthetic stucco finish used? |     |    |     |     |          |
| 22                       | Are there any problems with the utilities, such as inadequate capacities?          |     |    |     |     |          |
| 23                       | Are there any problems with the landscape irrigation systems?                      |     |    |     |     |          |
| 24                       | Has a termite/wood boring insect inspection been performed within the last year?   |     |    |     |     |          |
| 25                       | Do any of the HVAC systems use R-11, 12, or 22 refrigerants?                       |     |    |     |     |          |
| 26                       | Has any part of the property ever contained visible suspect mold growth?           |     |    |     |     |          |
| 27                       | Is there a mold Operations and Maintenance Plan?                                   |     |    |     |     |          |
| 28                       | Have there been indoor air quality or mold related complaints from tenants?        |     |    |     |     |          |
| 29                       | Is polybutylene piping used?                                                       |     |    |     |     |          |
| 30                       | Are there any plumbing leaks or water pressure problems?                           |     |    |     |     |          |
| 31                       | Are there any leaks or pressure problems with natural gas service?                 |     |    |     |     |          |
| 32                       | Does any part of the electrical system use aluminum wiring?                        |     |    |     |     |          |
| 33                       | Do Residential units have a less than 60-Amp service?                              |     |    |     |     |          |
| 34                       | Do Commercial units have less than 200-Amp service?                                |     |    |     |     |          |
| 35                       | Are there any recalled fire sprinkler heads (Star, GEM, Central, Omega)?           |     |    |     |     |          |
| 36                       | Is there any pending litigation concerning the property?                           |     |    |     |     |          |
| 37                       | Has the management previously completed an ADA review?                             |     |    |     |     |          |
| 38                       | Have any ADA improvements been made to the property?                               |     |    |     |     |          |
| 39                       | Does a Barrier Removal Plan exist for the property?                                |     |    |     |     |          |
| 40                       | Has the Barrier Removal Plan been approved by an arms-length third party?          |     |    |     |     |          |
| 41                       | Has building ownership or management received any ADA related complaints?          |     |    |     |     |          |
| 42                       | Does elevator equipment require upgrades to meet ADA standards?                    |     |    |     |     |          |
| 43                       | Are there any problems with exterior lighting?                                     |     |    |     |     |          |
| 44                       | Are there any other significant issues/hazards with the property?                  |     |    |     |     |          |

## Visual Checklist - 2010 ADA Standards for Accessible Design

Property Name: Waterboard Park

BV Project Number: 148392.21R000-039.017

### Abbreviated Accessibility Checklist

#### Facility History & Interview

| Question |                                                                                                        | Yes | No | NA | Comments |
|----------|--------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | ADA: Has an accessibility study been performed at the site? If so, when?                               |     | X  |    |          |
| 2        | ADA: If a study has occurred, have the associated recommendations been addressed? In full or in part?  |     |    | X  |          |
| 3        | ADA: Have there been regular complaints about accessibility issues, or previous or pending litigation? |     |    | X  |          |

## Abbreviated Accessibility Checklist

## Parking

Overview of accessible parking area

Close-up of stall or 2nd area of accessible parking

| Question |                                                                                             | Yes | No | NA | Comments |
|----------|---------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Does the required number of standard ADA designated spaces appear to be provided ?          | ✗   |    |    |          |
| 2        | Does the required number of van-accessible designated spaces appear to be provided ?        | ✗   |    |    |          |
| 3        | Are accessible spaces on the shortest accessible route to an accessible building entrance ? | ✗   |    |    |          |
| 4        | Does parking signage include the International Symbol of Accessibility ?                    | ✗   |    |    |          |
| 5        | Does each accessible space have an adjacent access aisle ?                                  | ✗   |    |    |          |
| 6        | Do parking spaces and access aisles appear to be relatively level and without obstruction ? | ✗   |    |    |          |

## Abbreviated Accessibility Checklist

## Exterior Accessible Route

Accessible ramp or path

Curb cut or 2nd pathway

| Question |                                                                                                                                                                            | Yes | No | NA | Comments |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|----|----------|
| 1        | Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?                                       | ✗   |    |    |          |
| 2        | Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ? | ✗   |    |    |          |
| 3        | Are curb ramps present at transitions through raised curbs on all accessible routes?                                                                                       | ✗   |    |    |          |
| 4        | Do curb ramps appear to have compliant slopes for all components ?                                                                                                         | ✗   |    |    |          |
| 5        | Do ramp runs on an accessible route appear to have compliant slopes ?                                                                                                      |     |    | ✗  |          |
| 6        | Do ramp runs on an accessible route appear to have a compliant rise and width ?                                                                                            |     |    | ✗  |          |

|   |                                                                                          |  |  |   |  |
|---|------------------------------------------------------------------------------------------|--|--|---|--|
| 7 | Do ramps on an accessible route appear to have compliant end and intermediate landings ? |  |  | × |  |
| 8 | Do ramps on an accessible route appear to have compliant handrails ?                     |  |  | × |  |

## Park Findings and Deficiencies

### Historical Summary

According to Google Earth historical imagery the Park was constructed on a previously undeveloped site in 2005. It has been used as a popular community park since that time.

### Architectural

The only buildings in the park are a restroom structure, a simple storage building, and a picnic shelter with an area for food preparation and grilling. The restroom building consists of a wood and stone veneer façade with a metal roof and steel doors. The storage building is a prefabricated structure with ribbed metal siding and roofing. The picnic shelter is an open-air, wood-framed structure with a metal roof. All the structures appear to be well-maintained, and no deficiencies were identified.

### Mechanical, Electrical, Plumbing and Fire (MEPF)

There is very little in the way of MEPF equipment in the park. The restroom building contains the plumbing fixtures and infrastructure consistent with seasonal use where no hot water is present. The building also has both interior and exterior lighting. No fire alarm or suppression elements or HVAC equipment was observed.

### Site & Amenities

Wesley Lynn Park is situated near the Gaffney Lane, Hillendale, and Tower Vista neighborhoods in Oregon City. The park contains softball diamonds, soccer fields, walking paths, a playground, a picnic/BBQ area, and a parking lot. Most of the assets and amenities in the park are approximately 15 years old and were observed to be in satisfactory condition.

### Recommended Additional Studies

No additional studies recommended at this time.

The chart below breaks down the dollars by system type and groups individual years into time ranges.

## Immediate Needs

Not applicable, no immediate needs were identified

## Key Findings

### Drinking Fountain in Poor condition.

Exterior/Site, Precast Pedestal  
Wesley Lynn Park Site

Unifomat Code: D2016  
Recommendation: **Replace in 2023**

Priority Score: **83.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$9,400

\$\$\$\$

Drinking fountain not operational. - AssetCALC ID: 2967285

### Exterior Door in Poor condition.

Wood, Solid-Core  
Wesley Lynn Park Storage

Unifomat Code: B2051  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$2,200

\$\$\$\$

Bottoms of doors water damaged - AssetCALC ID: 2967309

### Picnic Table in Poor condition.

Wood  
Wesley Lynn Park Dog Park

Unifomat Code: G2062  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$2,200

\$\$\$\$

Picnic tables are worn out. - AssetCALC ID: 2967291

### Park Bench in Poor condition.

Wood/Composite/Fiberglass  
Wesley Lynn Park Playground

Unifomat Code: G2062  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$2,300

\$\$\$\$

Park benches are worn out and needs to be replaced in the near future. - AssetCALC ID: 2967292

**Park Bench in Poor condition.**

Wood  
Wesley Lynn Park Dog Park

Uniformat Code: G2062  
Recommendation: **Replace in 2023**

Priority Score: **81.7**

Plan Type:  
Performance/Integrity

Cost Estimate: \$1,100

\$\$\$\$

Bench is worn out. - AssetCALC ID: 2967303

## Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance.

### Plan Type Descriptions

|                              |                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Safety</b>                | An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk. |
| <b>Performance/Integrity</b> | Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.    |
| <b>Accessibility</b>         | Does not meet ADA, UFAS, and/or other accessibility requirements.                                                                                       |
| <b>Environmental</b>         | Improvements to air, water, or soil quality, including removal of hazardous materials from the site.                                                    |
| <b>Retrofit/Adaptation</b>   | Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.                |
| <b>Lifecycle/Renewal</b>     | Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.          |

### Plan Type Distribution (by Cost)

**10-YEAR TOTAL: \$290,900**

## 2. Restroom Building

| <b>Ancillary Buildings</b>          | Picnic shelters, shade shelter, and a storage building                                                                                                                                                                            |
| <b>Fields and Lots</b>              | Unimproved play fields; Baseball fields with natural turf, backstops, dugouts and fencing; Soccer fields with natural turf and movable goals; Playgrounds with wood chips play surfaces, play structures, and other play elements |
| <b>Storm Water Management</b>       | Surface drainage to developed and undeveloped surroundings                                                                                                                                                                        |
| <b>Accessibility</b>                | Presently it does not appear an accessibility study is needed for the general site areas.                                                                                                                                         |
| <b>Key Issues and Findings</b>      | Limited number of degraded benches and picnic tables, aged drinking fountains.                                                                                                                                                    |

## 4. Property Space Use and Observed Areas

---

### Areas Observed

All of the park areas were observed in order to gain a clear understanding of the condition of the park and amenities. The interiors of the buildings in scope were also observed.

### Key Spaces Not Observed

All key areas of the property were accessible and observed.

## 5. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG). A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the tables that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The park was originally constructed in approximately 2005. The park does not appear to have been substantially renovated. The following table summarizes the accessibility conditions of the general site and at each major building within the park:

| Park: Accessibility Summary |            |                       |                                 |
|-----------------------------|------------|-----------------------|---------------------------------|
| Facility                    | Year Built | Prior Study Provided? | Major/Moderate Issues Observed? |
| Restroom Building           | 2005       | No                    | No                              |
| General Park                | 2005       | No                    | No                              |

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

## 6. Purpose and Scope

### Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

| Condition Ratings     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Excellent</b>      | New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                                                                             |
| <b>Good</b>           | Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.                                                                                                                                                                                                                                               |
| <b>Fair</b>           | Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.                                                                                                                                                                      |
| <b>Poor</b>           | Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life. |
| <b>Failed</b>         | Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Not Applicable</b> | Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

## 7. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means*, *CBRE Whitestone*, and *Marshall & Swift*, Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

### Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

### Definitions

#### Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

## Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning systems or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

## Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

## Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

## 8. Certification

The City of Oregon City (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Wesley Lynn Park, 12901 Frontier Parkway, Oregon City, Oregon 97045, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

## Staff Report

---

**To:** City Commission  
**From:** City Manager Tony Konkol

**Agenda Date:** 6/11/2024

### **SUBJECT:**

City Commission 2021-2023 and 2023-2025 Goals Update

### **STAFF RECOMMENDATION:**

Presentation to update the City Commission on the status of the 2021-2023 and 2023-2025 City Commission goals and priority projects.

### **BACKGROUND:**

The City Commission has requested a quarterly update on the status of the Commission goals. The City Commission 2021-2023 and 2023-2025 Goals summaries are attached as an update and for review.

**STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)**

- City Commission authorized the contract with Lamont Browne with Triangle Advising. Staff finalized scope of work and contract April 2024
- City staff and the Triangle Advising team met and held a project kick-off meeting, April 12<sup>th</sup>. Since, had bi-weekly planning meetings to provide updates and discuss different topics:
  - Project communication strategies and opportunities (trail news, website, social media, Juneteenth event)
  - Project branding opportunities
  - Scheduling future training dates, meeting dates, etc.
  - Invitation, development, and coordination of the Employee DEI work group.
- Triangle Advising connected with the past members of the **Community Task Force** and reengaged with them, identifying eight (8) who have recommitting to participate in the next phase of the DEI Community Task Force.
- The project team asked for nominations and volunteers to participate in the Oregon City **Employee DEI Workgroup**. The group has 28 members representing all departments and all levels of the organization.

The first workgroup meeting was held 5/28. Lamont walked through the City's Goals and commitments to DEI and provided an overview of the current phase and objectives.

Future meetings scheduled for July 9, Sept. 24, Nov. 19, Jan. 7, March 4, May 6

- Triangle Advising conducted a **Leadership Training** session on May 29<sup>th</sup> with Oregon City leaders which included all management/supervisory personnel.
- City HR staff met with Triangle Advising to discuss and game plan future steps to analyze and evaluate the City's current recruitment and strategies and processes and recommend any changes to better ensure equitable employment opportunities and a more diverse workforce.

| <p><b>IMPORTANT OR RELEVANT DATES/MILESTONES: (LOOKING AHEAD AT THE NEXT 3 MONTHS)</b></p> <p>WE ENLISTED THE SERVICES OF THE GALARDI ROTHSTEIN GROUP ON JULY 6, 2023, TO ASSIST US IN REVISING OUR SDC METHODOLOGY. SINCE THEN, WE HAVE HELD NUMEROUS MEETINGS WITH THE PROJECT TEAM AND OUR CONSULTANTS FOR THE PARKS MASTER PLAN AND PRESENTED TO THE PARKS AND RECREATION ADVISORY COMMITTEE. WE ARE WORKING ON OUR CAPITAL IMPROVEMENT PLAN AND ANTICIPATE COMPLETING THE REVISION BY 2024. PARKS SDCs WERE LAST REVISED IN 2000.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |                    |          |
| <ul style="list-style-type: none"> <li>• <b>STATUS UPDATE: OUR CONSULTANT HAS REVIEWED THE PROVIDED CAPITAL IMPROVEMENT PLAN (CIP) AND INTEGRATED ITS INFORMATION INTO THE SDC ANALYSIS MODEL. WE HAD A MEETING WITH OUR CONSULTANT ON MAY 15TH TO REVIEW THE CIP AND DISCUSS ISSUES RELATED TO CAPACITY VERSUS MAINTENANCE, DEVELOPMENT COST ASSUMPTIONS, AND GROWTH VERSUS THE EXISTING DEVELOPMENT SHARE OF COSTS. WE HAVE FINALIZED THE PROJECT LIST FOR THE CIP. WE ARE PROVIDING ADDITIONAL DETAILS TO THE SDC METHODOLOGY CONSULTANT, DEB GALARDI, TO LEVERAGE HER EXPERTISE ON THE COMPONENTS THAT MAY BE ELIGIBLE FOR SDC. GOING FORWARD, WE PLAN TO MEET WITH OUR CONSULTANT AND THE PROJECT TEAM TO DISCUSS THE NEXT STEPS AND PROVIDE AN UPDATE ON THE PROJECT TO PRAC AND THE CITY COMMISSION.</b></li> <li>• SENT FINAL DRAFT CIP PLAN TO CONSULTANT – MARCH 28<sup>TH</sup></li> <li>• SENT ROUGH DRAFT CIP PLAN TO CONSULTANT – MARCH 4<sup>TH</sup></li> <li>• DEB GALARDI PRESENTED TO PRAC – SEPTEMBER 28<sup>TH</sup></li> <li>• SDC/MASTER PLAN COLLABORATION MEETING – SEPTEMBER 26<sup>TH</sup></li> <li>• SDC METHODOLOGY KICK-OFF MEETING WITH THE PROJECT TEAM – AUGUST 11<sup>TH</sup></li> <li>• CONTRACT WITH GALARDI ROTHSTEIN GROUP FULLY EXECUTED – JULY 6<sup>TH</sup></li> <li>• MET WITH ECONORTHWEST, FCS GROUP, AND GALARDI ROTHSTEIN – MARCH - MAY</li> </ul> |              |                    |          |

| <p><b>Important or Relevant Dates/Milestones: (looking ahead at the next 3 months)</b></p> <p><b>Oregon City Quiet Zone</b> – this project is federally funded, and the city is supporting ODOT, which is delivering this project. ODOT/Metro has added the project to the Draft STIP/MTIP, as anticipated. The City and ODOT project staff have finalized work on the project intergovernmental agreement, and the agreement was adopted by the City Commission on December 6<sup>th</sup>. The project consultant has been selected and ODOT is currently working through the scope and fee negotiation process. The ODOT negotiated scope and fee process was expected to be completed by mid-April 2024 however this work is still pending. Project design is slated to proceed once the consultant agreement is executed and a Design Verification Workshop will follow and should be completed by September 2024.</p> <p><b>Inflow and Infiltration Program</b> – The Linn Basin Project 1 is complete, and the 2023 Manhole Rehab Project is well underway. Seven additional projects are in various forms of design and 2 pipe rehabilitation projects are soon to be out for bid. Staff is scheduled to provide the City Commission with an I &amp; I Annual Program update in July. The City Commission should expect to see a variety of project related contracts/amendments for approval.</p> <p><b>PMUF</b> – the 2024 PMUF was awarded in May 2024. Work for an updated 5-year PMUF Plan is nearly complete and scheduled to be shared with the City Commission at the June 11th City Commission Meeting; staff has completed the 2022-23 annual PMUF Report which is now available for review on the City's Website.</p> <p><b>WIFIA</b> – The program submitted its third quarterly report in May, and we continue to coordinate with the Confederate Tribes of the Grande Ronde on cultural resource program policies for WIFIA projects. The Molalla Avenue 30-inch Transmission Main project team has submitted final plans for review. The second transmission project includes a new pump station that will serve the Thimble Creek pressure zone. This Thimble Creek project is in the scope and fee negotiation phase with the selected engineering/ design services consultant. The Pipe Rehab program is on track with construction of the Clairmont Water Ph2, nearly complete, and a new pipe rehab project in an accelerated design project is underway for a 12-inch replacement for the waterline in Holmes Lane between Linn Avenue and Prospect Street. Design of the SCADA Isolation project has yet to begin design but is anticipated to begin design in Summer 2024.</p> <p><b>Stormwater</b> – The Barclay Hills Stormwater Outfall is designed and moving through the permitting process.</p> |            |                    |          |

**STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)**

The City's CIP entails approximately \$55 Million for over 40 projects. These projects as outlined in the 2023-25 Biennial Budget include the Roadway Reconstruction (PMUF) program and 10 other transportation projects, the WIFIA program, which makes up much of the 11 water projects listed, the Inflow and Infiltration Program and 10 other sewer projects, and 4 stormwater projects.

FUTURE CONCEPTUAL DESIGN AND PROJECT SCOPING WILL CONSIDER OPPORTUNITIES FOR 2025.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |            |                    |          |
| <p><b>STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)</b></p> <p>THESE SIDEWALK INFILL PROJECTS AND THE FUNDING ALLOCATED ARE TYPICALLY PAIRED WITH ANOTHER TRANSPORTATION PROJECT. THE CITY'S PMUF PROGRAM, THE QUIET ZONE PROJECT, MAIN STREET, OR NEIGHBORING FACILITY NEEDS THAT PAIR WELL WITH AN EXISTING PROJECT ARE OFTEN WHERE THESE FUNDS ARE UTILIZED. THE 2024 CIP WILL UTILIZE THIS BUDGET ITEM TO COMPLETE THE GOAL OF CREATING MORE SIDEWALK AND BIKE LANE INFILL FOR THE COMMUNITY.</p> <p>THE 2024 PMUF PROJECT INCLUDES 2,800 SF OF SIDEWALK WORK MOSTLY FOCUSED ON UPGRADING ACCESSIBLE RAMPS WHICH ARE OUT OF COMPLIANCE WITH CURRENT STANDARDS. THE ANNUAL PMUF PROJECTS ARE ALSO BEING PLANNED TO UPGRADE RAMPS IN PREPARATION FOR IN-HOUSE MAINTENANCE WORK USING A SURFACE PROCESS CALLED MICRO SURFACING. THE MAIN STREET ADA PROJECT IS COMPLETE AND ADDED NEW RAMPS ON MAIN AT 12<sup>TH</sup> AND 13<sup>TH</sup> STREETS. THE HOLCOMB SAFE ROUTES TO SCHOOLS PROJECT IS UNDER CONSTRUCTION AND WILL INCLUDE A NEW SIDEWALK ON THE NORTH SIDE OF HOLCOMB BLVD. BETWEEN HOLCOMB SCHOOL ROAD AND WINSTON DRIVE.</p> |            |                    |          |

- Business Friendly Environment
  - Staff is developing a procurement program that will allow Oregon City's small businesses to do more business with the City.  
Staff is currently interviewing City departments to determine the goods and services being purchased. Program projected to commence in early Fall, 2024.
  - Continue to work on the Ombudsman Initiative (working with the Depts of Community Development and Public Works to educate commercial/business investors on the City's development processes and serve as an advocate for commercial/business investors in the community)
  - City staff launched the new Oregon City Business License program on January 1, 2024. The new initiative reduced the cost of City business licenses for both new and existing businesses. City Commission approved the proposed changes back in November 1, 2023
- Owned/Urban Renewal Owned Properties
  - A Phase I Environmental Assessment was completed for the Stimson Property
  - A geo-technical study has been completed for the Stimson Property
  - A draft Request for Proposals seeking an property appraiser will be presented to the Urban Renewal Commission for approval on June 5, 2024.
- The Arts Commission
  - The Arts Commission reviewed fourteen proposals aimed at replacing the metal sculpture that was situated on the corner of Center and 7<sup>th</sup> street. Two finalists were chosen for further review. On May 16<sup>th</sup> during its regularly scheduled meeting, the Arts Commission made its choice to conduct the work.

**Goal 5.2 Create and promote a tourism infrastructure that doesn't negatively impact neighborhoods and supports economic development to promote a healthy, sustainable local economy.**

#### IMPORTANT OR RELEVANT DATES/MILESTONES: (LOOKING AHEAD AT THE NEXT 3 MONTHS)

- The first round of funding for 2023/2024 City-Sponsored Public Event Program was approved by the City Commission and distributed to eligible applicants.
- Recommend policies and strategies to enable the transferal of tourism activity to a legally organized entity that will serve as a Destination Management Agency ("DMO") to manage and operate tourism programs from outside of City Government.

#### STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)

- City-Sponsored
  - The 2023/2024 City-Sponsored Public Event grants were distributed to eligible and approved program applicants including The Car Show LLC, OC Parks & Recreation, Three Rivers Art Guild, DOCA, and OC Brewing Co, totaling \$50,000 (May 2024)
  - This year, the City Commission approved the use of the funds for a 4<sup>th</sup> of July Celebration.
  - As of this March 4, 2024, staff has received 3 applications. (DOCA, Arts Festival, Parks & Recreation Dept.)
- Destination Management Organization ("DMO")
  - The Committee on DMO Structure including representatives from DOCA, OC Heritage Coordinating Committee, Mt. Hood Territory, OC Parks & Recreation, and OC Economic Development will meet on Thursday, May 23, 2024, to recommend a consultant to the City Commission to help structure a DMO.
  - At the closing of the RFP submission period on April 26, 2024, for DMO consultants, staff received two responses.
  - On March 6, 2024, the City Commission approved an RFP document, drafted by City staff, to be advertised through various channels to obtain responses from qualified DMO consultants.
  - During its work session on November 7, 2023, the City Commission received a comparative analysis of DMOs within the Portland Metro Region and staff recommendations to further the conversation with respect to moving the tourism function from the Economic Development Dept. to a DMO outside of City municipal government.
  - During its work session meeting on January 9, 2024, the City Commission heard from Mt. Hood Territory, "Visit McMinnville, Inc." and "Explore Wilsonville.com" to discuss their respective programs, their organizational structure, and marketing operations.
  - On February 7, 2024, the City Commission directed staff to develop a request for proposals that will result in the creation of a standalone legally operating nonprofit, that operates like a business, and controls and manages its strategic direction.

- As progress is made toward establishing a DMO, staff has developed a broadcast commercial that promotes the downtown, it aired on November 13, 2023.
  - Staff produced a commercial that featured the wineries, breweries, and distilleries in and around the vicinity of Oregon City which aired on Feb. 5, 2024.
- 
- Promotion/Advertising
    - Economic Development placed a full page ad in the 2024 Seattle Mariners Yearbook that featured both tourism and investment opportunities in Oregon City.
    - Oregon City staff produced three commercials that were broadcasted on KATU2. Each commercial featured one tourism-related aspect of the Oregon City community: Downtown Oregon City, wineries and distillery industry in Oregon City, and outdoor recreation within the community.

| Goal 6.1 Expand housing choices and develop a housing strategy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                     |                    |          |
| <p><b>IMPORTANT OR RELEVANT DATES/MILESTONES: (LOOKING AHEAD AT THE NEXT 3 MONTHS)</b></p> <ul style="list-style-type: none"> <li>The Planning Commission will hear a presentation from the Housing Authority of Clackamas County and Northwest Housing Alternatives to learn about what measures a city can take to encourage housing affordability and affordable housing. This presentation is the result of the Planning Commission identifying the need for education around this this topic.</li> <li>The Housing Accountability and Production Office (HAPO) is a new initiative established under the governor's housing production package, also known as Senate Bill 1537</li> <li>After July 1, 2025, HAPO will be able to receive and respond to official inquiries, requests, and complaints from local governments and housing developers. Department of Land Conservation and Development (DLCD) and Department of Consumer and Business Services (DCBS) are actively working on staffing and operational tasks to meet this deadline.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                     |                    |          |
| <p><b>STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)</b></p> <ul style="list-style-type: none"> <li>Every January the City is required to submit a housing report to DLCD that details the number of units produced and the number of units permitted in the previous calendar year. <ul style="list-style-type: none"> <li>Calendar Year 2023: <ul style="list-style-type: none"> <li>Permitted Single Family: 16 units</li> <li>Permitted Multi-Family: 305 units <ul style="list-style-type: none"> <li><b>Total: 321 residential units</b></li> </ul> </li> <li>Produced Single Family: 65 units</li> <li>Produced Multi-Family: 212 <ul style="list-style-type: none"> <li><b>Total: 277 residential units</b></li> </ul> </li> </ul> </li> </ul> </li> <li>SB1537-The Housing Production Package does several things: establishes a new Housing Accountability and Production Office; requires cities grant up to 10 administrative adjustments; establishes and funds a new state revolving fund for local governments to administer loans for low to moderate income housing development; allocates funds to Business Oregon to help small and rural communities access infrastructure programs; and provides one-time urban growth boundary expansion tool.</li> <li>At the conclusion of the 2023 Oregon State Legislative Session, a number of housing bills were passed. Staff recently gave a <a href="#">land use legislative</a> update to the City Commission which included an update on housing bills.</li> </ul> |                     |                    |          |

- The most significant piece of legislation was an Executive Order made by the Governor that established a statewide housing production goal and a Housing Production Advisory Council. The Executive Order also established a goal to produce 36,000 new housing units per year for the next ten years. The Housing Production Advisory Council is charged with identifying recommendations to meet this goal and proposing them for discussion at the 2024 Legislative Session.
- Oregon City will be required to adopt a new Housing Capacity Analysis in the year 2027 and will be required to adopt a Housing Production Strategy the following year by December 31<sup>st</sup> 2028.

# 2023-2025 Commission Goals and Strategies

#### Goal 7.2 National Pollution Discharge Elimination System (NPDES requirements/sampling)

##### IMPORTANT OR RELEVANT DATES/MILESTONES: (LOOKING AHEAD AT THE NEXT 3 MONTHS)

**NOVEMBER 1, 2023 – PROVIDE THE CITY COMMISSION WITH AN ANNUAL PRESENTATION REGARDING THE CITY’S STORMWATER PROGRAM, MUNICIPAL STORMWATER POLLUTION PREVENTION ACTIVITIES, AND BEST PRACTICES FOR RESIDENTS TO PREVENT STORMWATER POLLUTION. DONE**

**NOVEMBER 2023 – ALIGNED WITH THE CITY’S WINTER WEATHER RESPONSE PLAN, DEVELOP AN SOP FOR THE CITY’S ROAD MAINTENANCE STRATEGY TO DOCUMENT MATERIAL SELECTION, STORAGE, PROPER APPLICATION (TIMING AND RATES), COLLECTION, AND REUSE OPPORTUNITIES. DONE**

**FEBRUARY 26, 2024 - PROVIDE THE PLANNING COMMISSION WITH AN ANNUAL PRESENTATION REGARDING THE CITY’S STORMWATER PROGRAM, MUNICIPAL STORMWATER POLLUTION PREVENTION ACTIVITIES, AND BEST PRACTICES FOR RESIDENTS TO PREVENT STORMWATER POLLUTION. DONE**

**FEBRUARY 28, 2024 - DEVELOP AN SOP THAT OUTLINES POLLUTION PREVENTION MEASURES WHEN CLEANING UP ABANDONED CAMPSITES IN PUBLIC AREAS. SOP MAY BE ADDED TO THE LARGER MUNICIPAL OPERATIONS SOP (BMP OM-2). DONE**

**FEBRUARY 28, 2024 – DEVELOP AN SOP FOR PESTICIDE AND FERTILIZER STORAGE, APPLICATION, AND DISPOSAL. SOP MAY BE ADDED TO MUNICIPAL OPERATIONS SOP IN OM-2. REVISE STANDARD LANGUAGE FOR MAINTENANCE AND LANDSCAPING CONTRACTS TO INCLUDE PROVISIONS AND RESTRICTIONS FOR PESTICIDE AND FERTILIZER APPLICATION. DONE**

**JUNE 2024 - PREPARE AN ILLICIT DISCHARGE ORDINANCE THAT WILL UPDATE OCMC 8.08 TO SPECIFICALLY PROHIBIT ILLICIT DISCHARGES (AND ALLOW OR CONDITIONALLY ALLOW OTHERS), CONSISTENT WITH NPDES MS4 PERMIT SCHEDULE A.1.D. INCLUDE ESCALATING ENFORCEMENT BASED ON SEVERITY AND INTENT OF INCIDENT. ON TRACK**

##### STATUS: (WHAT HAS BEEN DONE/IS BEING DONE)

**THE PUBLIC WORKS DEPARTMENT MANAGES THE NPDES PROGRAM WITHIN THE STORMWATER DIVISION AND IN ACCORDANCE WITH THE NPDES MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PHASE I PERMIT. OUR STORMWATER MANAGEMENT PROGRAM (SWMP) DOCUMENT LAYS OUT A LONG LIST OF ACTIVITIES THE CITY MUST IMPLEMENT TO COMPLY WITH THE CITY’S NPDES MS4 PERMIT. THE PROGRAM CATEGORIES INCLUDE PUBLIC EDUCATION AND OUTREACH, PUBLIC INVOLVEMENT, ILLICIT DISCHARGE DETECTION AND ELIMINATION, EROSION AND SEDIMENT CONTROL, POST CONSTRUCTION, MUNICIPAL OPERATIONS AND MAINTENANCE, INDUSTRIAL AND COMMERCIAL PROGRAM, AND ADDITIONAL PROGRAM ELEMENTS.**

**DETAILS ON THE CITY’S NPDES PROGRAM ARE MOST EASILY FOUND VIA THE CITY’S WEBSITE AT [HTTPS://WWW.OREGONCITY.ORG/1165/NPDES-MS4-PHASE-I-PERMIT---CLACKAMAS-GRO](https://www.oregoncity.org/1165/NPDES-MS4-PHASE-I-PERMIT---CLACKAMAS-GRO)**

**ONE ALL-ENCOMPASSING ACCOMPLISHMENT OF THE NPDES PROGRAM IS THE CITY’S DEDICATED NPDES WEBPAGE. PROVIDING ACCESS TO A LONG LIST OF REFERENCE DOCUMENTS COMPILED IN ONE LOCATION ACCESSIBLE TO THE PUBLIC IS A RECENT ACCOMPLISHMENT. WEBSITE ACCESS PROVIDES EASY ACCESS TO THE MS4 PERMIT, THE SWMP, A LONG HISTORY OF ANNUAL REPORTS, AND SEVERAL OTHER SUPPORTING DOCUMENTS THAT THE CITY HAS CREATED TO MAINTAIN COMPLIANCE WITH FEDERAL AND STATE MANDATES AND TO REDUCE DISCHARGES OF POLLUTANTS TO RECEIVING WATERS.**

**ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE) REMAINS A PRIORITY. STAFF RECENTLY COMPLETED DRY WEATHER OUTFALL INSPECTIONS, AND ALL NINE STRATEGICALLY IDENTIFIED NON-RESIDENTIAL OUTFALLS WERE CONFIRMED TO BE FREE OF ILLICIT DISCHARGE. PUBLIC WORKS TO CONTINUE TO ASSESS NEW OUTFALL SITES FOR CONSIDERATION FOR THIS INSPECTION PROCESS. THE PRIORITIZATION CRITERIA FOR OUTFALL INSPECTIONS WAS REVIEWED AND DEEMED APPROPRIATE FOR CURRENT PERMIT REQUIREMENTS AND LANGUAGE FOR IDDE SOP WAS UPDATED TO REFLECT THE 2021-2026 MS4 PERMIT.**

**THE CONSTRUCTION SITE RUNOFF CONTROL PROGRAM CONTINUES TO REMAIN EFFECTIVE. THIS IS ACCOMPLISHED THROUGH REGULATORY REQUIREMENTS, PLAN REVIEWS, PERMITTING AND CONSTRUCTION SITE INSPECTIONS, ENFORCEMENT PROCEDURES, EDUCATION, AND TRAINING. PROCEDURES ARE CLEARLY OUTLINED IN THE NEWLY COMPLETED OREGON CITY EROSION CONTROL ENFORCEMENT STANDARD OF PRACTICE, AS REQUIRED BY SWMP BMP EC-6.**

**INSPECTIONS OF PUBLIC STORMWATER MANAGEMENT FACILITIES REMAIN A ROUTINE PRACTICE. STAFF IS TASKED WITH IDENTIFYING MAINTENANCE NEEDS AND ISSUING WORK ORDERS WHEN REPAIRS OR MAINTENANCE IS REQUIRED. FOR THE PUBLICLY OWNED FACILITIES STAFF PERFORM MAINTENANCE ACTIONS TO MAINTAIN STORMWATER MANAGEMENT FACILITY PERFORMANCE ON A MONTHLY BASIS.**

**PUBLIC WORKS DEVELOP AN SOP THAT OUTLINES POLLUTION PREVENTION MEASURES WHEN CLEANING UP ABANDONED CAMPSITES IN PUBLIC AREAS.**

**PUBLIC WORKS DEVELOP AN SOP FOR PESTICIDE AND FERTILIZER STORAGE, APPLICATION, AND DISPOSAL. STAFF HAVE CONDUCTED INSPECTIONS OF HIGH-PRIORITY BUSINESSES IDENTIFIED THROUGH THE INDUSTRIAL/COMMERCIAL FACILITY SCREENING PROGRAM. DURING SITE INSPECTIONS, STAFF REVIEWS ONSITE STORMWATER SYSTEMS, POLLUTION PREVENTION MEASURES, MATERIAL TRANSPORT AND STORAGE, AND WASTE DISPOSAL. THE INDUSTRIAL/COMMERCIAL FACILITIES STRATEGY HAS BEEN UPDATED TO REFLECT NEW PERMIT LANGUAGE AND SUBMITTED THE FINAL DOCUMENT (WITH COMMENTS ADDRESSED) TO THE DEQ AND IS NOW AVAILABLE ON THE CITY'S WEBSITE**

**STAFF ARE BEGINNING THE PROCESS OF TRANSLATING PUBLISHED PUBLIC INFORMATIONAL FLIERS AND KEY PROGRAM OUTREACH INFORMATION TO LOAD THEM ON THE DEPARTMENT'S WEBSITE.**

**THE GREEN INFRASTRUCTURE/LOW IMPACT DESIGN (LID) STRATEGY HAS BEEN COMPLETED TO REFLECT NEW, PERMIT LANGUAGE & A GAP ANALYSIS HAS BEEN PERFORMED ON ALL MUNICIPAL CODES AND STANDARDS TO ENSURE THERE ARE NO BARRIERS TO LID IMPLEMENTATION. A TECHNICAL REVIEW MEMO OF THE GAP ANALYSIS HAS BEEN MADE AVAILABLE TO THE PUBLIC AND DEQ IN THE ONLINE LIBRARY.**

**TWO CAPITAL IMPROVEMENT PROJECTS HAVE BEEN CONSTRUCTED AS A RESULT OF ADDRESSING THE 2015 HYDROMODIFICATION ASSESSMENT TO MINIMIZE STREAM BANK EROSION AND IMPROVE WATER QUALITY. SITE PRIORITIZATION, ASSESSMENT, AND PLANNING FOR FUTURE IMPROVEMENTS IS ONGOING. AN UPDATE IS REQUIRED BY THE DEQ AND WAS SUBMITTED WITH THE MS4 ANNUAL REPORT.**

| <p><b>IMPORTANT OR RELEVANT DATES/MILESTONES: (LOOKING AHEAD AT THE NEXT 3 MONTHS)</b></p> <p>THE MASTER PLAN WILL PROVIDE A VISION FOR THE DEVELOPMENT, MAINTENANCE, AND OPERATION OF THE PARK SYSTEM. IT WILL PROVIDE SPECIFIC TOOLS AND GUIDANCE FOR ACHIEVING THE GOALS AND ACTION ITEMS ENVISIONED BY CITY STAFF AND THE COMMUNITY. IT WILL PROVIDE AN INVENTORY OF EXISTING PARKS AND RECREATION FACILITIES, FINDINGS FROM THE PLANNING PROCESS AND COMMUNITY ENGAGEMENT, A VISION STATEMENT, GOALS, AND RECOMMENDATIONS FOR SYSTEM-LEVEL AND PARK-SPECIFIC IMPROVEMENTS, PARKLAND ACQUISITION STRATEGY, AND A SUGGESTED FUNDING STRATEGY. THE PROCESS WILL TAKE APPROXIMATELY 24 MONTHS, AND WE WILL WORK WITH A CONSULTANT TO COMPLETE THIS PLAN.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |              |                           |          |
