The proposed General Development Plan identifies the proposed uses and street patterns of the subject property which has been vacant for nearly twenty-five years. The proposed development will include mixed uses comprised of multi-family residential, retail, and restaurant uses with various adjustments requested born out of the site's geometry and need for a public roadway through the site. The proposed masterplan will be developed in phases, with Phase 1 being the public street and utility improvements together with rough grading of the site. Parcels A, B, and D include retail, multi-family residential, and restaurant uses and will be constructed based on market demand following their individual Detailed Development Plan approval processes. Construction of the individual parcel uses may be concurrent with each other or may be separate. The master plan process is useful for implementing such a development plan by promoting efficiency in the overall development process and infrastructure needed to support the entire development.

2. Development shall demonstrate compliance with OCMC 12.04 16.12, 17.62, if applicable, and 16.08, if applicable.

Applicant's Response:
Compliance with OCMC 12.04, 16.12, 17.62, and 16.08 is demonstrated in our Masterplan Detailed Development Plan code responses. Please see our accompanying DDP application/code responses.

3. Public services for transportation, water supply, police, fire, sanitary waste disposal, storm-water disposal, and any other needed public services and facilities including schools and parks for proposed residential uses, are capable of serving the proposed development, or will be made capable by the time each phase of the development is completed.

Applicant's Response:
The proposed masterplan development will construct the necessary public roadway and utility improvements associated with the proposed development plan, including roadway and bike facilities, pedestrian improvements, traffic signal improvements, storm sewer, sanitary sewer, water, and dry utilities. When Parcel B submits its Detailed Development Plan, residential open space will be further described.

4. The proposed General Development Plan protects any inventoried Goal 5 natural, historic or cultural resources within the proposed development boundary consistent with the provisions of applicable overlay districts.

Applicant's Response:
The proposed development is adjacent to and overlooks the Newel Creek Canyon, an inventoried Goal 5 natural resource within the city of Oregon City. The property's eastern edge is included in a geologic hazard overlay and a geotechnical report addressing development, including slope stability, is included with this application. The geotechnical analysis recommends a 35-ft setback from the top of bank overlooking Newell Creek Canyon, as well as specific retaining wall recommendations which mitigate the geologic hazard. Additionally, the project's overall stormwater discharge location lies within a Natural Resource Overlay District (NROD) which also drains through the Newell Creek Canyon. The project minimizes impacts to the NROD buffer due to the required public street connection to Beavercreek Rd and mitigates the impact that it does have. The project's stormwater facilities provide both water quality and detention treatment to reduce impacts to the downstream drainage through Newell Creek Canyon. Please see our specific code responses to the Geologic Hazard and NROD code sections included with this application.

5. The proposed General Development Plan, including development standards and impact mitigation thresholds and improvements, adequately mitigates identified impacts from each phase of development. For needed housing, as defined in ORS 197.303(1), the development standards and mitigation thresholds shall contain clear and objective standards.

Applicant's Response:
Oregon City's 2021 Housing Needs Analysis identified the need for 7,435 new dwelling units over the next 20 years. The proposed multi-family residential component of the General Development Plan helps the city achieve their goal of providing more housing. The proposed roadway and signal improvements, together with cost participation in the city's planned Beavercreek Road/Hwy 213 improvements, will mitigate the project's development impact. The roadway and utility improvements are proposed to be constructed with the initial phase of development, with the uses generating the actual impact to follow, thereby providing impact mitigation before the proposed demand.

6. The proposed general development plan is consistent with the Oregon City Comprehensive Plan.

Applicant's Response:
As described in our response to OCMC 17.56.010.A.5, the proposed General Development Plan is consistent with the Oregon City Comprehensive Plan. Please see our response to OCMC 17.56.010.A.5 for the Parcel D drive-through conditional use. The overall General Development Plan provides similar compliance with our responses to OCMC 17.56.010.A.5.

7. The proposed general development plan is consistent with the underlying zoning district(s) and any applicable overlay zone or concept plans.

Applicant's Response:
The proposed General Development Plan is consistent with the underlying MUC-2 zone, Geologic Hazard Overlay, and Natural Resource Overlay District as identified and described in this application and associated code responses and supporting documents.

8. For projects with a residential use component, the proposed general development plan includes common open space for the recreational needs of the development's residents.

a. Required open space shall be located either on-site or off-site within one-quarter mile of the development.

Applicant's Response:
Required open space for the Parcel B multi-family component of the General Development Plan is proposed to be located on-site. While Parcel B's Detailed Development Plan will provide detail on the proposed open space, the proposed open space area is shown on the General Development Plan Sht GDP-C1.0.

b. Minimum required open space shall be 100 square feet per residential unit in the development.

Applicant's Response:
The proposed Parcel B multi-family component of the General Development Plan includes 208 units, resulting in a required open space of 20,800 sf at 100 sf per unit. As shown on General Development Plan Sht GDP-C1.0, Parcel B includes over 12,000 sf of open space between the two northerly buildings (subject to Parcel B Detailed Development Plan submittal/approval) and over 20,000 sf of open space between the top of the slope and the geologic hazard setback line. A pedestrian pathway is proposed within this geologic hazard setback. Additionally, over 42,000 sf of forested open space lies on the east edge of Parcel B between the property boundary and the top of slope. Parcel B provides open space far in excess of the minimum required open space.

Note – OCMC 17.62.057.B.2 identifies a smaller open space requirement for mixed-use zones of 50 square feet per residential unit. This results in an open space requirement of 10,400 square feet. The proposed open space will exceed the criteria identified in both 17.65.050.C.8.b and 17.62.057.B.2.

c. The open space area may be in private ownership or proposed for public dedication, at the City's discretion whether to accept.

Applicant's Response:
The Parcel B open space is currently planned for private ownership.

d. The open space shall be developed with a unified design to provide for a mix of passive and active uses. Passive uses include, but are not limited to sitting benches, picnicking, reading, bird watching and natural areas. Active uses include, but are not limited to playgrounds, sports fields and courts, running and walking areas.

Applicant's Response:
General Development Plan Sht GDP-C1.0 identifies active open space between the two northerly buildings, and the Geologic Hazard setback area contains a pedestrian pathway. Portions of the Geologic Hazard setback area will be planted with NROD mitigation plantings. The steep slope open space area on the east edge of Parcel B is intended to remain in its natural state.

> *e. Land area to be used for the open space area that is required in this section shall not include required setback areas, required landscaping, streets, rights-of-way, driveways, or parking spaces.*

Applicant's Response:
The Geologic Hazard setback area is not a setback required by the city. Instead, it is a setback recommended by the geotechnical engineer to protect against long-term slope stability concerns. Accordingly, it is not considered a building setback for the purpose of this section. However, even if the Geologic Hazard setback area is excluded from open space consideration (not likely, since the project is required to provide a pedestrian pathway), the steep slope area east of the top of slope is more than adequate to satisfy the open space requirements.

> *f. Unless dedicated to the public, the applicant shall also provide an irrevocable legal mechanism for the maintenance of the open space and any related landscaping and facilities. The applicant shall submit, for City review and approval, all proposed deed restrictions or other legal instruments used to reserve open space and maintenance of open space and any related landscaping and facilities.*

Applicant's Response:
Development of Parcel B will be described in more detail with a separate Detailed Development Plan application. Maintenance of the required open space will be addressed with Parcel B's Detailed Development Plan.

> *9. For projects with a residential use component, the proposed general development plan includes a mix of residential uses such that no single residential use exceeds seventy-five percent of the total proposed units. The mix of residential uses shall provide variety of dwelling types and sizes that are integrated throughout the site, rather than isolated from one another, with smooth transitions between residential types including appropriate setbacks, landscaping or screening as necessary, while maintaining street and pedestrian connectivity between all residential uses. Tenancy (i.e. ownership versus rental) shall not be a consideration in determination of the mix of residential use. For the purposes of this section, residential uses include single-family detached, duplex, triplex, quadplex, townhouse, cottage cluster, and multi-family.*

Applicant's Response:
Development of Parcel B will be described in more detail with a separate Detailed Development Plan application. The multi-family units for Parcel B will include a mixture of unit sizes/configurations consistent with this code section.

17.65.060 - Detailed development plan.

A. Submittal Requirements.

1. A transportation impact study documenting the on- and off-site transportation impacts, as specified in OCMC 17.65.050.B.1.h.i. If such an analysis was submitted as part of the general development plan process, the scope of the report may be limited to any changes which have occurred during the interim and any information listed below which was not a part of the initial study.

The on-site portion of the analysis shall include the location, dimensions and names of all proposed streets, alleys, other public ways, sidewalks, bike routes and bikeways, pedestrian/bicycle access ways and other pedestrian and bicycle ways, transit streets and facilities, neighborhood activity centers, and easements on and within two hundred fifty feet of the boundaries of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.

2. The location within the development and in the adjoining streets of existing and proposed sewers, water mains, culverts, drain pipes, underground electric, cable television and telephone distribution lines, gas lines, and the location of existing aerial electric, telephone and television cable lines, if any, to be relocated within the development.

3. For portions of the project that would otherwise be subject to site plan and design review, a site plan or plans, to scale, containing the required information identified in OCMC 17.62.040.

4. For residential portions of the project not otherwise subject to site plan and design review, a site plan or plans, to scale, showing the proposed land uses and densities, building locations, lot patterns, circulation patterns, and open space locations and uses.

5. Any other information the Community Development Director deems necessary to show that the proposed development will comply with all of the applicable Chapter 17 requirements.

B. Approval Criteria. The Community Development Director shall approve an application for detailed development plan approval only upon findings that:

1. All development standards and impact mitigation meet the requirements of the approved general development plan, including conditions of approval.
2. Any other applicable zoning regulations that are not addressed in the general development plan are met, unless an adjustment to those regulations has been applied for and is approved. The approval standards applicable to adjustments required as part of a master plan or planned unit development are contained in OCMC 17.65.070.
3. The detailed development plan conforms with the base zone standards, applicable residential design standards, and applicable standards contained in Chapters 17.62, 17.52, 16.12, and 16.08 unless adjusted as provided in OCMC 17.65.070

Applicant's Response:
Please see our separate response to the Detailed Development Plan submittal for the proposed street and utility improvements and site rough grading.

17.65.070 - Adjustments to development standards.
A. Purpose. In order to implement the purpose of the City's master plan or planned unit development process, which is to foster the growth of major institutions, major residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating their impacts on surrounding properties and public infrastructure, an applicant may request one or more adjustments to the applicable development regulations as part of the master planning or planned unit development process, and are not required to go through the variance process pursuant to OCMC Chapter 17.60.

B. Procedure. Requests for adjustments shall be processed concurrently with a general development plan. An adjustment request at the detailed development plan review shall cause the detailed development plan to be reviewed as a Type III application.

Applicant's Response:
The applicant acknowledges the adjustment standards of this section.

C. Regulations That May be Adjusted. Adjustments may be allowed for the following items:

1. Dimensional standards of the underlying zone of up to twenty percent, except the perimeter of the development shall meet the underlying zone's setbacks when adjacent to residentially zoned property.
2. Site plan and design standards.
3. Residential design standards.
4. Increase in allowed maximum residential density of up to ten percent.
5. Standards for land division approval.
6. Additional uses allowed with residential projects, or residential component of projects:
a. Notwithstanding the use provisions of the underlying zones, neighborhood commercial uses as defined in Chapter 17.24.020, including restaurants and eating and drinking establishments without a drive-through, retail trade, and services, are permitted on up to ten percent of the net developable area. The neighborhood commercial uses shall be planned and constructed so as to support and be compatible with the entire development and shall not alter the character of the surrounding area so as to substantially preclude, impair or limit the use of surrounding properties for the primary uses listed in the underlying district.
b. Public or private parks and playgrounds, community buildings and/or outdoor recreational facilities, such as swimming pools and tennis courts.
c. Indoor recreational facilities, such as racquetball or tennis courts, fitness centers or swimming pools.
d. Common public and private open space including trails.
e. Primary or accessory uses that are not identified as a permitted or conditional use in the underlying zone but which are defined in the code.

Applicant's Response:
The applicant acknowledges the above regulations that may be adjusted via the masterplan process. The General Development Plan application seeks adjustment to the maximum parking standards as described in our responses to OCMC 17.52.015.

D. Regulations That May Not be Adjusted. Adjustments are prohibited for the following items:

1. To allow a primary or accessory use that is not identified as a permitted, or conditional use in the underlying zone, with the exception of the additional uses permitted under OCMC 17.65.070.C.6 above;

2. To any regulation that contains the word "prohibited";

3. As an exception to a threshold review, such as a Type III review process; and

4. Minimum density for residential sites may not be reduced.

Applicant's Response:
The proposed masterplan General development Plan and Detailed Development Plan submittals do not seek any of the above prohibited adjustments.

E. Approval Criteria. A request for an adjustment to one or more applicable development regulations under this section shall be approved if the review body finds that the applicant has shown the following criteria to be met.

1. Granting the adjustment will equally or better meet the purpose of the regulation to be modified;

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015

2. If more than one adjustment is being requested, the cumulative effect of the adjustments results in a project that is still consistent with the overall purpose of the zone;

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015

3. City-designated Goal 5 resources are protected to the extent otherwise required by Title 17;

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015

4. Any impacts resulting from the adjustment are mitigated such that the development does not create significant adverse impacts on adjacent properties;

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015. Denying the adjustment for maximum parking on Parcels A and D could result in customers from those uses taking up parking spaces from the adjacent Parcel D multi-family development or from

existing commercial and residential uses north of the site. Approval of the maximum parking adjustment request is not expected to have adverse impacts on adjacent properties.

5. If an environmental zone, the proposal has as few significant detrimental environmental impacts on the resource and resource values as is practicable; and

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015. the uses subject to the maximum parking adjustment are not located in an environmental zone.

6. The proposed adjustment is consistent with the Oregon City Comprehensive Plan and a concept plan if applicable.

Applicant's Response:
Please see our responses to maximum parking adjustment for Parcels A and D in OCMC 17.52.015. The requested maximum parking adjustment is consistent with the Comprehensive Plan. The Comprehensive Plan Goals were discussed in our response to OCMC 17.56.010.A.5 (our Conditional Use Approval request). The maximum parking request has similar responses to Comprehensive Plan goals as does the Conditional Use response.

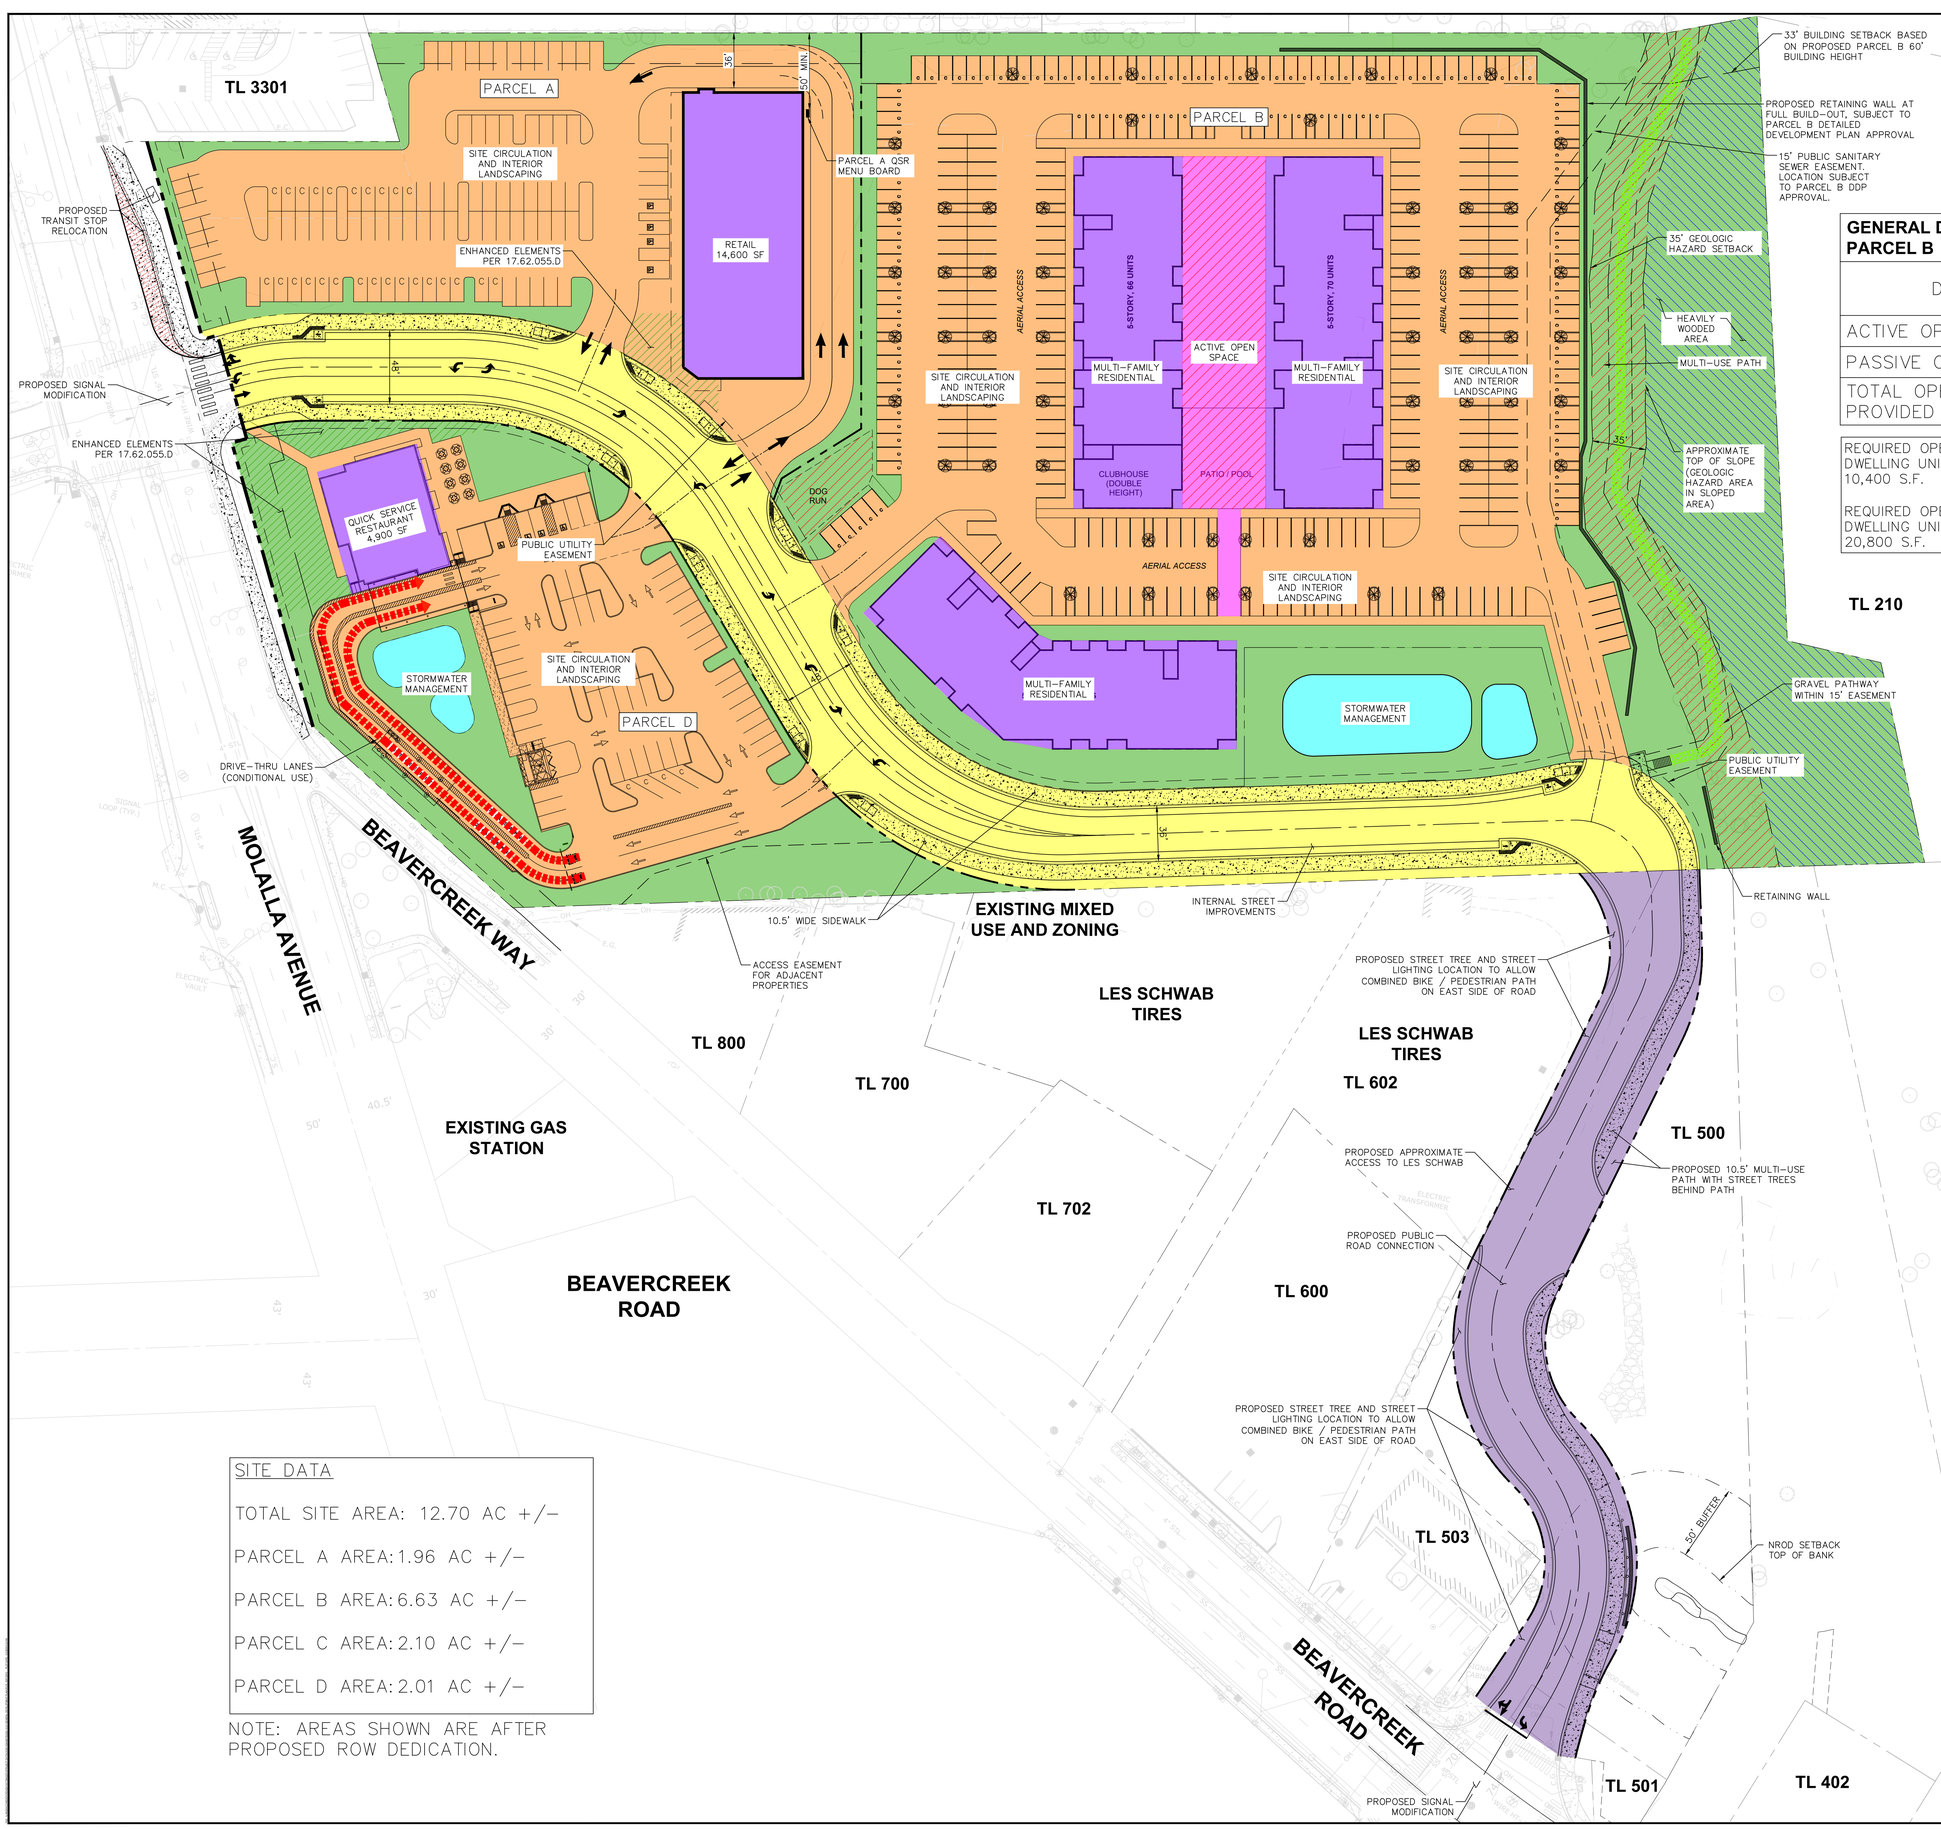
17.65.80 - Amendments to approved plans.
A. When Required. An amendment to an approved general development plan or detailed development plan is required for any use or development that is not in conformance with the applicable plan, as provided below. The approval criteria contained in OCMC 17.65.050 will apply to general development plan amendments, the approval criteria contained in OCMC 17.65.060 will apply to detailed development plan amendments. The thresholds and procedures for amendments are stated below.

Applicant's Response:
The applicant acknowledges the amendment procedures identified in the section.

B. Type III Procedure. Unless the approved general development plan or detailed development plan specifically provides differently, amendments to either plan that require a Type III procedure are:
1. A proposed expansion of the approved boundary;
2. A proposed reduction in the approved boundary that affects a condition of approval, or takes the site out of conformance, or further out of conformance, with a development standard;
3. Proposals that increase the amount, frequency, or scale of a use over ten percent of what was approved (examples include the number of students, patients or members; the number of helicopter flights; the number or size of special events; transportation impacts);
4. New uses not covered in the plan that will increase vehicle trips to the site greater than ten percent of the original amount approved;
5. Increases or decreases in overall floor area of development on the site or number of residential units of over ten percent;
6. A increase/decrease greater than ten percent in the amount of approved or required parking; and

7. Proposed uses or development which were reviewed, but were denied because they were found not to be in conformance with an approved plan.

Applicant's Response:
The applicant acknowledges the amendment procedures identified in the section.



C. Type II Procedure. Unless an approved plan specifically provides otherwise, amendments to a general development plan or detailed development plan not specifically stated in subsection B or D are processed through a Type II procedure.
D. Type I Procedure. Unless an approved plan specifically provides otherwise, the following amendments to a general development plan or detailed development plan shall be processed through a Type I procedure:

1. Accessory uses and structures that meet applicable development regulations;
2. Reconfiguration of approved parking or landscape designs that do not alter the points of ingress or egress, and do not change the number of parking spaces required, so long as the reconfiguration meets applicable development regulations; and
3. Structures for approved uses that do not exceed one thousand five hundred square feet in size and that meet applicable development regulations

Applicant's Response:
The applicant acknowledges the amendment procedures identified in the section.

17.65.090 - Regulations that apply.
An applicant is entitled to rely on land use regulations in effect on the date its general development plan application was initially submitted, pursuant to ORS 227.178(3), as that statute may be amended from time to time. After a general development plan is approved, and so long as that general development plan is in effect, an applicant is entitled to rely on the land use regulations in effect on the date its general development plan application was initially submitted, as provided above, when seeking approval of detailed development plans that implement an approved general development plan. At its option, an applicant may request that a detailed development plan be subject to the land use regulations in effect on the date its detailed development plan is initially submitted.

Applicant's Response:
Application for masterplan approval was made June 27, 2025, and notice of incomplete application was provided July 24, 2025. The applicant intends to resubmit the application materials addressing those items in the incomplete letter within the statutory 180-days to remain vested under the rules in place when the initial application was submitted.

GENERAL DEVELOPMENT PLAN OPEN SPACE - PARCEL B

DESCRIPTION	AREA (SF)	HATCH
ACTIVE OPEN SPACE	35,036	
PASSIVE OPEN SPACE	42,572	
TOTAL OPEN SPACE PROVIDED	77,608	

REQUIRED OPEN SPACE PER 17.62.057.B.2 = 50 S.F. / DWELLING UNIT. AT 208 UNITS, REQUIRED OPEN SPACE IS 10,400 S.F.

REQUIRED OPEN SPACE PER 17.65.050.C.8.b = 100 S.F. / DWELLING UNIT. AT 208 UNITS, REQUIRED OPEN SPACE IS 20,800 S.F.

PHASING

PHASE 1 – MOLALLA AVENUE IMPROVEMENTS, PROPOSED PUBLIC ROAD (AND ASSOCIATED UTILITIES AND EXTENDING TO BEAVERCREEK ROAD), OVERALL SITE ROUGH GRADING, AND PROPOSED STORMWATER MANAGEMENT FACILITY. PHASE 1 DETAILED DEVELOPMENT PLAN IS SUBMITTED CONCURRENTLY WITH THIS GENERAL DEVELOPMENT PLAN.

PHASE 2 – PARCEL D SITE AND UTILITY IMPROVEMENTS, INCLUDING THE PARCEL D STORMWATER MANAGEMENT FACILITY.

PHASE 3 – PARCEL B SITE AND UTILITY IMPROVEMENTS, INCLUDING EXTENSION OF SANITARY SEWER TO NORTHEAST CORNER OF SITE.

PHASE 4 – PARCEL A SITE AND UTILITY IMPROVEMENTS.

PHASES 2–4 ARE MARKET DRIVEN AND CAN BE CONSTRUCTED CONCURRENTLY OR SEPARATELY WITH OTHER PHASES.

PARCELS A, B, AND D LAYOUTS ARE SHOWN SCHEMATICALLY. PARCELS A, B, AND D WILL EACH SUBMIT THEIR OWN DETAILED DEVELOPMENT PLAN FOLLOWING GENERAL DEVELOPMENT PLAN APPROVAL.

GENERAL DEVELOPMENT PLAN DECISIONS:

1. OVERALL GENERAL DEVELOPMENT PLAN APPROVAL
2. CONDITIONAL USE APPROVAL FOR DRIVE-THROUGH FACILITIES ON BOTH PARCELS A AND D
3. MAXIMUM PARKING ADJUSTMENT

SITE DATA

TOTAL SITE AREA: 12.70 AC +/-

PARCEL A AREA: 1.96 AC +/-

PARCEL B AREA: 6.63 AC +/-

PARCEL C AREA: 2.10 AC +/-

PARCEL D AREA: 2.01 AC +/-

NOTE: AREAS SHOWN ARE AFTER PROPOSED ROW DEDICATION.

PROPERTY DESCRIPTION

LOCATED IN THE S.E. 1/4 & S.W. 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, W.M. CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON

VERTICAL BENCHMARK

VERTICAL DATUM IS BASED ON THE CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE ROAD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990".
ELEVATION = 452.739'.

SURVEY MONUMENT PROTECTION

EXISTING SURVEY MONUMENT ARE TO BE PROTECTED DURING CONSTRUCTION OR REPLACED IN ACCORDANCE WITH OREGON REVISED STATUTES 209.140 – 209.155.

GENERAL NOTES

1. ALL WORK AND MATERIALS SHALL COMPLY WITH ALL OREGON CITY REGULATIONS AND CODES AND O.S.H.A. STANDARDS, INCLUDING BUT NOT LIMITED TO THE CURRENT OREGON CITY ROAD DESIGN AND CONSTRUCTION STANDARDS, CLEAN WATER SERVICES DESIGN AND CONSTRUCTION STANDARDS, THE OREGON TRANSPORTATION COMMISSION STANDARDS FOR ACCESSIBLE PARKING DATED AUGUST 2018, AND THE APWA STANDARDS WHICH ARE HEREBY REFERENCED AS PART OF THESE PLANS.

2. THE DESIGN SHOWN IS BASED UPON THE ENGINEER'S UNDERSTANDING OF THE EXISTING CONDITIONS. THE PLAN DOES NOT REPRESENT A DETAILED FIELD SURVEY. THE EXISTING CONDITIONS SHOWN ON THIS PLAN SHEET ARE BASED UPON THE ALTA SURVEY PREPARED BY CES | NW, DATED JULY 9, 2012. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING FIELD CONDITIONS PRIOR TO BIDDING THE PROPOSED SITEWORK IMPROVEMENTS. IF CONFLICTS ARE DISCOVERED, THE CONTRACTOR SHALL NOTIFY THE OWNER/DEVELOPER PRIOR TO INSTALLATION OF ANY PORTION OF THE SITEWORK WHICH WOULD BE AFFECTED. IF CONTRACTOR DOES NOT ACCEPT EXISTING SURVEY, INCLUDING TOPOGRAPHY AS SHOWN ON THE PLANS, WITHOUT EXCEPTION, HE SHALL HAVE MADE, AT HIS OWN EXPENSE, A TOPOGRAPHIC SURVEY BY A REGISTERED LAND SURVEYOR AND SUBMIT IT TO THE OWNER FOR REVIEW.

3. CAUTION – NOTICE TO CONTRACTOR
THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR ELEVATION OF EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITIES, AND WHERE POSSIBLE, MEASUREMENTS TAKEN IN THE FIELD. THE INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE APPROPRIATE UTILITY COMPANY AT LEAST 48 HOURS BEFORE ANY EXCAVATION TO REQUEST EXACT FIELD LOCATION OF UTILITIES. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS.

4. IN THE EVENT OF CONFLICTS BETWEEN THE VARIOUS PROVISIONS OF THIS PLAN SET, THE MORE STRINGENT PROVISION APPLY.

5. ATTENTION: OREGON LAW REQUIRES YOU TO FOLLOW RULES ADOPTED BY THE OREGON UTILITY NOTIFICATION CENTER. THOSE RULES ARE SET FORTH IN OAR 952-001-0001 (ADOPTION OF MODEL RULES) THROUGH 952-001-0100 (RECORD KEEPING REQUIREMENTS). YOU MAY OBTAIN COPIES OF THE RULES BY CALLING THE CENTER.
NOTES: THE TELEPHONE NUMBER FOR THE OREGON UTILITY NOTIFICATION CENTER IS (503) 232-1987.

6. A ROAD CLOSURE WILL NO BE PERMITTED WITHOUT A SEPARATE ROAD CLOSURE PERMIT THROUGH WASHINGTON COUNTY TRAFFIC ENGINEERING.

7. THE CONTRACTOR, AT THE TIME OF MEETING WITH COUNTY INSPECTION STAFF FOR A PRE-CONSTRUCTION MEETING, SHALL PROVIDE THEIR WORK TRAFFIC CONTROL PLAN.

8. ACCOMMODATE ALL ROAD USERS AT ALL TIMES INCLUDING MOTORISTS, BICYCLISTS, PEDESTRIANS, AND THOSE WITH DISABILITIES OR IMPAIRMENTS. INSTALL AND MAINTAIN ADDITIONAL TEMPORARY SIGNING AND TRAFFIC CONTROL DEVICES FOR THE CONTROL OF NON-MOTORIZED VEHICLES AND PEDESTRIANS WHERE A REASONABLE VOLUME OF THESE USERS ARE EXPECTED AND WHERE WORK IS EXPECTED TO LAST LONGER THAN ONE HOUR. MAINTAIN SAFE ACCESSIBILITY OR PROVIDE SUITABLE ALTERNATE ROUTES IN, THROUGH, OR AROUND WORK AREAS.

9. ESTABLISH AND MAINTAIN WORK ZONE TRAFFIC CONTROL IN COMPLIANCE WITH THE OREGON TEMPORARY TRAFFIC CONTROL HANDBOOK FOR OPERATIONS OF THREE DAYS OR LESS (DECEMBER 2011) ANY TIME VEHICLE OR PEDESTRIAN TRAFFIC IS INFLUENCED BY THE WORK. FOR WORK REQUIRING DEVICES IN PLACE LONGER THAN THREE (3) DAYS, A SITE SPECIFIC TRAFFIC CONTROL PLAN BASED ON THE PRINCIPLES IN PART 6 OF THE MUTCD, THE OREGON SUPPLEMENT AND ODOT'S 2015 STANDARD DRAWINGS TM800 –TM871, IS REQUIRED. ALL TRAFFIC CONTROL DEVICES SHALL MEET OR EXCEED THE NCHRP 350 REQUIREMENTS FOR CRASHWORTHINESS. COMPLETED SIGNAL SHUT DOWN REQUESTS MUST BE RECEIVED BY THE COUNTY A MINIMUM OF 3 WORKING DAYS PRIOR TO ANY PROPOSED SIGNAL SHUT DOWN.

GENERAL DEVELOPMENT PLAN OPEN SPACE - PARCEL B

DESCRIPTION	AREA (SF)	HATCH
ACTIVE OPEN SPACE	35,036	
PASSIVE OPEN SPACE	42,572	
TOTAL OPEN SPACE PROVIDED	77,608	

REQUIRED OPEN SPACE PER 17.62.057.B.2 = 50 S.F. / DWELLING UNIT. AT 208 UNITS, REQUIRED OPEN SPACE IS 10,400 S.F.

REQUIRED OPEN SPACE PER 17.65.050.C.8.b = 100 S.F. / DWELLING UNIT. AT 208 UNITS, REQUIRED OPEN SPACE IS 20,800 S.F.

PHASING

PHASE 1 – MOLALLA AVENUE IMPROVEMENTS, PROPOSED PUBLIC ROAD (AND ASSOCIATED UTILITIES AND EXTENDING TO BEAVERCREEK ROAD), OVERALL SITE ROUGH GRADING, AND PROPOSED STORMWATER MANAGEMENT FACILITY. PHASE 1 DETAILED DEVELOPMENT PLAN IS SUBMITTED CONCURRENTLY WITH THIS GENERAL DEVELOPMENT PLAN.

PHASE 2 – PARCEL D SITE AND UTILITY IMPROVEMENTS, INCLUDING THE PARCEL D STORMWATER MANAGEMENT FACILITY.

PHASE 3 – PARCEL B SITE AND UTILITY IMPROVEMENTS, INCLUDING EXTENSION OF SANITARY SEWER TO NORTHEAST CORNER OF SITE.

PHASE 4 – PARCEL A SITE AND UTILITY IMPROVEMENTS.

PHASES 2–4 ARE MARKET DRIVEN AND CAN BE CONSTRUCTED CONCURRENTLY OR SEPARATELY WITH OTHER PHASES.

PARCELS A, B, AND D LAYOUTS ARE SHOWN SCHEMATICALLY. PARCELS A, B, AND D WILL EACH SUBMIT THEIR OWN DETAILED DEVELOPMENT PLAN FOLLOWING GENERAL DEVELOPMENT PLAN APPROVAL.

GENERAL DEVELOPMENT PLAN DECISIONS:

1. OVERALL GENERAL DEVELOPMENT PLAN APPROVAL
2. CONDITIONAL USE APPROVAL FOR DRIVE-THROUGH FACILITIES ON BOTH PARCELS A AND D
3. MAXIMUM PARKING ADJUSTMENT

SITE DATA

TOTAL SITE AREA: 12.70 AC +/-

PARCEL A AREA: 1.96 AC +/-

PARCEL B AREA: 6.63 AC +/-

PARCEL C AREA: 2.10 AC +/-

PARCEL D AREA: 2.01 AC +/-

NOTE: AREAS SHOWN ARE AFTER PROPOSED ROW DEDICATION.

ALTA/ACSM SURVEY

LOCATED IN THE S.E. 1/4 & S.W. 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, W.M. CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON
REFERENCE: STEWART TITLE PRELIMINARY TITLE REPORT SUPPLEMENTAL NO. 1
ORDER NO. 1016646 DATED APRIL 27, 2012

CERTIFICATION FOR SURVEY

1. THE SURVEY WAS MADE ON THE GROUND DURING APRIL AND MAY OF 2012, AND CORRECTLY SHOWS THE AREA OF THE SUBJECT PROPERTY, THE LOCATION AND TYPE OF ALL BUILDINGS, STRUCTURES AND OTHER IMPROVEMENTS SITUATED ON THE SUBJECT PROPERTY.

2. EXCEPT AS SHOWN ON THE SURVEY, THERE ARE NO OBSERVABLE, ABOVE GROUND ENCROACHMENTS BY THE IMPROVEMENTS ON THE SUBJECT PROPERTY UPON ADJOINING PROPERTIES, STREETS OR ALLEYS, OR BY THE IMPROVEMENTS ON ADJOINING PROPERTIES, STREETS OR ALLEYS UPON THE SUBJECT PROPERTY.

3. THE LOCATION OF EACH EASEMENT, RIGHT OF WAY, SERVITUDE, AND OTHER MATTER AFFECTING THE SUBJECT PROPERTY AND LISTED IN STEWART TITLE COMPANY, PRELIMINARY TITLE REPORT SUPPLEMENTAL NO. 1, ORDER NUMBER 1016646, DATED APRIL 27, 2012, WITH RESPECT TO THE SUBJECT PROPERTY, HAS BEEN SHOWN ON THE SURVEY, TOGETHER WITH THE APPROPRIATE RECORDING REFERENCES, TO THE EXTENT THAT SUCH MATTERS CAN BE LOCATED. THE PROPERTY SHOWN ON THE SURVEY IS THE PROPERTY DESCRIBED IN THAT TITLE REPORT.

4. THE SUBJECT PROPERTY HAS ACCESS TO AND FROM DULY DEDICATED AND ACCEPTED PUBLIC STREETS.

5. THE MEASURED BEARINGS AND DISTANCES SHOWN HEREON FORMS A MATHEMATICALLY CLOSED FIGURE WITH A MINIMUM LATITUDE AND DEPARTURE CLOSURE ERROR OF 1 IN 50,000.

6.THIS SITE LIES WITHIN WITHIN THE LIMITS OF FEMA MAP NUMBER 41005C0279D, WHICH IS NOT PRINTED SINCE THE ENTIRE MAP IS IN ZONE 'X' AS REITERATED ON FEMA MAP NUMBER 41005C1ND0A, EFFECTIVE DATE: JUNE 17, 2008.

7.SUBJECT PROPERTY IS ZONED, MUC-2 "MIXED USE CORRIDOR"

8. NO ORTHOPHOTOGRAPHY, PHOTOGRAMMETRIC MAPPING, LASER SCANNING, OR SIMILAR PRODUCTS WERE UTILIZED IN THE PREPARATION OF THIS SURVEY.

I HEREBY CERTIFY TO PACLAND; WAL-MART STORES, INC., A DELAWARE CORPORATION; WAL-MART REAL ESTATE BUSINESS TRUST, A DELAWARE STATUTORY TRUST; WAL-MART TRS, LLC, A DELAWARE LIMITED LIABILITY COMPANY; STEWART TITLE GUARANTY COMPANY;

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE 2011 "MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS", JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS, AND INCLUDES ITEMS 1-6, 7(a), 7(b)(1), 7(c), 8, 9, 10(a), 11(b), 13, 14, 15-19, 20(a), 21 AND 22 OF TABLE 'A' THEREOF. THE FIELD WORK WAS COMPLETED ON JULY 9, 2012.

CES/NW MAKES NO WARRANTIES AS TO MATTER OF UNWRITTEN TITLE SUCH AS ACQUIESCENCE, ESTOPPEL, ADVERSE POSSESSION, ETC.

RYAN H. GODSEY
PROFESSIONAL LAND SURVEYOR
REGISTRATION NO.(OR) 65604

NARRATIVE

THE BASIS OF BEARINGS IS THE MONUMENTED CENTERLINE OF MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), AS ESTABLISHED BY MONUMENTS NO. 140 AND NO. 139 AS SHOWN HEREON PER SN 2010-176, SURVEY RECORDS, CLACKAMAS COUNTY, OREGON.

THE PURPOSE OF THIS SURVEY IS TO RETRACE THE BOUNDARIES AS SHOWN ON CLACKAMAS COUNTY SURVEY NUMBER SN2004-37. ALL MONUMENTS SHOWN WERE VISITED IN THE PROCESS OF THIS RETRACEMENT.

VERTICAL DATUM IS BASED ON A CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE RD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990" ELEVATION = 452.739'

LEGAL DESCRIPTION PER TITLE REPORT

A TRACT OF LAND SITUATED IN THE SOUTHWEST QUARTER AND THE SOUTHEAST QUARTER OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON, SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT A THREE INCH BRASS DISK SET BY THE OREGON STATE HIGHWAY DEPARTMENT IN THE CENTERLINE OF MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213) AT ENGINEER'S STATION 31+00; THENCE SOUTH 73°27'47" EAST A DISTANCE OF 289.83 FEET TO THE NORTHWEST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-010378, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SAID POINT ALSO BEING ON THE SOUTHERLY RIGHT-OF-WAY LINE OF HILLTOP AVENUE; THENCE ALONG THE WESTERLY LINE OF SAID TRACT, SOUTH 27°39'59" EAST A DISTANCE OF 104.03 FEET TO THE SOUTHWEST CORNER OF SAID TRACT, AND BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE NORTHERLY LINE OF THOSE TRACTS DESCRIBED IN FEE NO. 72-08888 AND FEE NO. 69-09411, NORTH 78°20'26" EAST A DISTANCE OF 846.78 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 95-073144 AND FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON, NORTH 67°47'51" EAST A DISTANCE OF 59.75 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 96-010376 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE WESTERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 14°26'42" EAST A DISTANCE OF 407.81 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 96-007471, AND FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE COMMON LINE OF THOSE LANDS DESCRIBED IN FEE NO. 96-046001 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 88°29'47" EAST A DISTANCE OF 62.63 FEET; THENCE SOUTH 23°58'58" EAST A DISTANCE OF 133.44 FEET TO THE SOUTHEASTERLY CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE SOUTHERLY LINE OF SAID TRACT, AND ALONG THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 98-044696 AND FEE NO. 99-004122, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°38'35" WEST A DISTANCE OF 125.26 FEET; THENCE ALONG SAID SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, AND THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 95-045260, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°19'45" WEST A DISTANCE OF 45.33 FEET; THENCE ALONG SAID SOUTHERLY LINE, AND THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 92-21067, FEE NO. 97-004501, AND FEE NO. 98-041108, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°29'26" WEST A DISTANCE OF 750.61 FEET TO A POINT IN THE NORTHEASTERLY RIGHT-OF-WAY OF BEAVERCREEK ROAD (MARKET ROAD NO. 11) (COUNTY ROAD NO. 398), SAID POINT BEING 30' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG SAID NORTHEASTERLY RIGHT-OF-WAY, NORTH 59°27'26" WEST A DISTANCE OF 206.63 FEET TO THE COMMON NORTHEASTERLY RIGHT-OF-WAY INTERSECTION OF SAID BEAVERCREEK ROAD AND MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), SAID POINT BEING 35' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE OF MOLALLA AVENUE; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, ALONG THE ARC OF A 5694.58 FOOT RADIUS CURVE TO THE RIGHT A DISTANCE OF 66.39 FEET, THROUGH A CENTRAL ANGLE OF 00°40'05" (THE LONG CHORD OF WHICH BEARS NORTH 27°43'34" WEST A DISTANCE OF 66.39 FEET); THENCE NORTH 27°23'32" WEST A DISTANCE OF 307.30 FEET; THENCE NORTH 62°36'28" EAST A DISTANCE OF 5.00 FEET TO A POINT 40 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE, SAID POINT ALSO BEING ON THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 97-022793, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE LEAVING SAID NORTHEASTERLY RIGHT-OF-WAY LINE, AND CONTINUING ALONG SAID SOUTHERLY TRACT LINE, NORTH 78°20'26" EAST A DISTANCE OF 176.19 FEET TO THE SOUTHEASTERLY CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, NORTH 27°39'59" WEST A DISTANCE OF 73.67 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 560,272 SQUARE FEET, OR 12.862 ACRES, MORE OR LESS.

RECORD DESCRIPTIONS

2004-091249 PARCEL 1
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 10.28 FEET; THENCE ALONG THE SOUTHERLY LINE THAT TRACT DESCRIBED IN FEE NO. 72-08888 DEED RECORDS, CLACKAMAS COUNTY, OREGON. SOUTH 88°29'47" EAST A DISTANCE OF 653.92 FEET TO THE SOUTHEAST CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, NORTH 12°38'23" WEST A DISTANCE OF 110.72 FEET TO THE NORTHWEST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 81-19662, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, SOUTH 88°29'47" EAST A DISTANCE OF 120.00 FEET TO THE NORTHEAST CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, SOUTH 12°38'23" EAST A DISTANCE OF 120.00 FEET TO A POINT ON THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, NORTH 88°29'47" WEST A DISTANCE OF 771.22 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 19,837 SQUARE FEET, OR 0.455 ACRES, MORE OR LESS.

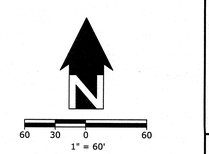
2004-091249 PARCEL 2
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 10.28 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 67.85 FEET; THENCE NORTH 62°36'28" EAST A DISTANCE OF 5.00 FEET TO A POINT 40 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE, SAID POINT ALSO BEING ON THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 97-022793, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE LEAVING SAID NORTHEASTERLY RIGHT-OF-WAY LINE, AND CONTINUING ALONG SAID SOUTHERLY TRACT LINE, NORTH 78°20'26" EAST A DISTANCE OF 176.19 FEET TO THE SOUTHEASTERLY CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-010378, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF THOSE TRACTS DESCRIBED IN FEE NO. 72-08888 AND FEE NO. 69-09411, NORTH 78°20'26" EAST A DISTANCE OF 846.78 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 95-073144 AND FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON, NORTH 67°47'51" EAST A DISTANCE OF 59.75 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 96-010376 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE WESTERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 14°26'42" EAST A DISTANCE OF 407.81 FEET TO THE COMMON CORNER OF THOSE TRACTS DESCRIBED IN FEE NO. 69-09411, FEE NO. 96-007471, AND FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 81-19662, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE EASTERLY LINE OF SAID TRACT DESCRIBED IN FEE NO. 81-19662, NORTH 1238'23" WEST A DISTANCE OF 120.00 FEET; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, NORTH 8829'47" WEST A DISTANCE OF 120.00 FEET; THENCE ALONG THE WESTERLY LINE OF SAID TRACT, SOUTH 12°38'23" EAST A DISTANCE OF 110.72 FEET TO THE SOUTHEAST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 72-08888, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF SAID TRACT DESCRIBED IN FEE NO. 72-08888, NORTH 8829'47" WEST A DISTANCE OF 653.92 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 256,397 SQUARE FEET, OR 5.886 ACRES, MORE OR LESS.

2004-091251
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE SOUTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 81-19662, FEE NO. 69-09411, AND FEE NO. 96-007471 DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 88°29'47" EAST A DISTANCE OF 1156.21 FEET; THENCE SOUTH 23°58'58" EAST A DISTANCE OF 133.44 FEET TO THE SOUTHEASTERLY CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE SOUTHERLY LINE OF SAID TRACT, AND ALONG THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 98-044696 AND FEE NO. 99-004122, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°38'35" WEST A DISTANCE OF 125.26 FEET; THENCE ALONG SAID SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, AND THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 95-045260, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°19'45" WEST A DISTANCE OF 45.33 FEET; THENCE ALONG SAID SOUTHERLY LINE, AND THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 92-21067, FEE NO. 97-004501, AND FEE NO. 98-041108, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°29'26" WEST A DISTANCE OF 750.61 FEET TO A POINT IN THE NORTHEASTERLY RIGHT-OF-WAY OF BEAVERCREEK ROAD (MARKET ROAD NO. 11) (COUNTY ROAD NO. 398), SAID POINT BEING 30' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG SAID NORTHEASTERLY RIGHT-OF-WAY, NORTH 59°27'26" WEST A DISTANCE OF 206.63 FEET TO THE COMMON NORTHEASTERLY RIGHT-OF-WAY INTERSECTION OF SAID BEAVERCREEK ROAD AND MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), SAID POINT BEING 35' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE OF MOLALLA AVENUE; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, ALONG THE ARC OF A 5694.58 FOOT RADIUS CURVE TO THE RIGHT A DISTANCE OF 66.39 FEET, THROUGH A CENTRAL ANGLE OF 00°40'05" (THE LONG CHORD OF WHICH BEARS NORTH 27°43'34" WEST A DISTANCE OF 66.39 FEET); THENCE NORTH 27°23'32" WEST A DISTANCE OF 229.17 FEET TO THE TRUE POINT OF BEGINNING.



CONTAINING AN AREA OF 284,038 SQUARE FEET, OR 6.521 ACRES, MORE OR LESS.

NOTES

1. THIS SURVEY MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN ARE ALL THE UTILITIES IN THE AREA. THE UNDERGROUND UTILITIES SHOWN ARE BASED ON LOCATE PAINT MARKINGS IN THE FIELD AND AS-BUILT MAPPING. UTILITIES SHOWN MAY NOT BE IN THE EXACT LOCATION AS NOTED ON THIS SURVEY, BUT ARE LOCATED AS ACCURATELY AS POSSIBLE FROM PAINT MARKINGS ON THE GROUND. IF KNOWN, DEPTHS OF UTILITIES ARE AS SHOWN. THE GAS LINE DEPTHS HAVE NOT BEEN VERIFIED. NORTHWEST NATURAL DESIGN STANDARDS REQUIRE 12" TO 18" OF COVER FOR SERVICE LINES AND 30" TO 36" OF COVER FOR MAIN LINES IN THIS AREA. THE AGE AND CONDITION OF ALL UTILITIES IS UNKNOWN AND CANNOT BE CERTIFIED BY A LAND SURVEYOR. CITY OF OREGON CITY WATER DISTRIBUTION SYSTEM DESIGN STANDARDS REQUIRE A STANDARD MINIMUM COVER OVER BURIED WATER MAINS OF 36" FROM FINISH GRADE. WATERLINE DEPTHS WERE NOT VERIFIED AS A PART OF THIS SURVEY.

2. STORM DRAIN AND SANITARY SEWER LINES SHOWN ARE APPROXIMATE AND BASED ON VISIBLE ABOVE GROUND EVIDENCE AND AS-BUILT MAPS.

3. AS OF THE DATE OF THE SURVEY, A GEOTECHNICAL REPORT WAS NOT RECEIVED, THEREFORE THE CONDITIONS OF ALL DRIVING SURFACES, SHOULDERS, CURBS AND SIDEWALKS (ON-SITE AND ADJACENT ROADS) ARE NOT NOTED.

4. SPOT ELEVATIONS ARE SHOWN AT TOP OF CURB, EDGE OF PAVEMENT AND CENTERLINE OF ROADWAYS.

5. POSTED SPEED LIMIT ON BEAVERCREEK ROAD IS 35 MPH. POSTED SPEED LIMIT ON THE MOLALLA AVENUE IS 35 MPH.

6. VERTICAL DATUM IS BASED ON THE CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE RD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990" ELEVATION = 452.739'

PROPERTY DESCRIPTION

LOCATED IN THE S.E. 1/4 & S.W. 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, W.M. CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON

VERTICAL BENCHMARK

VERTICAL DATUM IS BASED ON THE CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE ROAD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990".
ELEVATION = 452.739'.

SURVEY MONUMENT PROTECTION

EXISTING SURVEY MONUMENT ARE TO BE PROTECTED DURING CONSTRUCTION OR REPLACED IN ACCORDANCE WITH OREGON REVISED STATUTES 209.140 – 209.155.

GENERAL NOTES

1. ALL WORK AND MATERIALS SHALL COMPLY WITH ALL OREGON CITY REGULATIONS AND CODES AND O.S.H.A. STANDARDS, INCLUDING BUT NOT LIMITED TO THE CURRENT OREGON CITY ROAD DESIGN AND CONSTRUCTION STANDARDS, CLEAN WATER SERVICES DESIGN AND CONSTRUCTION STANDARDS, THE OREGON TRANSPORTATION COMMISSION STANDARDS FOR ACCESSIBLE PARKING DATED AUGUST 2018, AND THE APWA STANDARDS WHICH ARE HEREBY REFERENCED AS PART OF THESE PLANS.

2. THE DESIGN SHOWN IS BASED UPON THE ENGINEER'S UNDERSTANDING OF THE EXISTING CONDITIONS. THE PLAN DOES NOT REPRESENT A DETAILED FIELD SURVEY. THE EXISTING CONDITIONS SHOWN ON THIS PLAN SHEET ARE BASED UPON THE ALTA SURVEY PREPARED BY CES | NW, DATED JULY 9, 2012. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING FIELD CONDITIONS PRIOR TO BIDDING THE PROPOSED SITEWORK IMPROVEMENTS. IF CONFLICTS ARE DISCOVERED, THE CONTRACTOR SHALL NOTIFY THE OWNER/DEVELOPER PRIOR TO INSTALLATION OF ANY PORTION OF THE SITEWORK WHICH WOULD BE AFFECTED. IF CONTRACTOR DOES NOT ACCEPT EXISTING SURVEY, INCLUDING TOPOGRAPHY AS SHOWN ON THE PLANS, WITHOUT EXCEPTION, HE SHALL HAVE MADE, AT HIS OWN EXPENSE, A TOPOGRAPHIC SURVEY BY A REGISTERED LAND SURVEYOR AND SUBMIT IT TO THE OWNER FOR REVIEW.

3. CAUTION – NOTICE TO CONTRACTOR
THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR ELEVATION OF EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITIES, AND WHERE POSSIBLE, MEASUREMENTS TAKEN IN THE FIELD. THE INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE APPROPRIATE UTILITY COMPANY AT LEAST 48 HOURS BEFORE ANY EXCAVATION TO REQUEST EXACT FIELD LOCATION OF UTILITIES. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS.

4. IN THE EVENT OF CONFLICTS BETWEEN THE VARIOUS PROVISIONS OF THIS PLAN SET, THE MORE STRINGENT PROVISION APPLY.

5. ATTENTION: OREGON LAW REQUIRES YOU TO FOLLOW RULES ADOPTED BY THE OREGON UTILITY NOTIFICATION CENTER. THOSE RULES ARE SET FORTH IN OAR 952–001–0001 (ADOPTION OF MODEL RULES) THROUGH 952–001–0100 (RECORD KEEPING REQUIREMENTS). YOU MAY OBTAIN COPIES OF THE RULES BY CALLING THE CENTER.
NOTES: THE TELEPHONE NUMBER FOR THE OREGON UTILITY NOTIFICATION CENTER IS (503) 232–1987.

6. A ROAD CLOSURE WILL NO BE PERMITTED WITHOUT A SEPARATE ROAD CLOSURE PERMIT THROUGH WASHINGTON COUNTY TRAFFIC ENGINEERING.

7. THE CONTRACTOR, AT THE TIME OF MEETING WITH COUNTY INSPECTION STAFF FOR A PRE–CONSTRUCTION MEETING, SHALL PROVIDE THEIR WORK TRAFFIC CONTROL PLAN.

8. ACCOMMODATE ALL ROAD USERS AT ALL TIMES INCLUDING MOTORISTS, BICYCLISTS, PEDESTRIANS, AND THOSE WITH DISABILITIES OR IMPAIRMENTS. INSTALL AND MAINTAIN ADDITIONAL TEMPORARY SIGNING AND TRAFFIC CONTROL DEVICES FOR THE CONTROL OF NON–MOTORIZED VEHICLES AND PEDESTRIANS WHERE A REASONABLE VOLUME OF THESE USERS ARE EXPECTED AND WHERE WORK IS EXPECTED TO LAST LONGER THAN ONE HOUR. MAINTAIN SAFE ACCESSIBILITY OR PROVIDE SUITABLE ALTERNATE ROUTES IN, THROUGH, OR AROUND WORK AREAS.

9. ESTABLISH AND MAINTAIN WORK ZONE TRAFFIC CONTROL IN COMPLIANCE WITH THE OREGON TEMPORARY TRAFFIC CONTROL HANDBOOK FOR OPERATIONS OF THREE DAYS OR LESS (DECEMBER 2011) ANY TIME VEHICLE OR PEDESTRIAN TRAFFIC IS INFLUENCED BY THE WORK. FOR WORK REQUIRING DEVICES IN PLACE LONGER THAN THREE (3) DAYS, A SITE SPECIFIC TRAFFIC CONTROL PLAN BASED ON THE PRINCIPLES IN PART 6 OF THE MUTCD, THE OREGON SUPPLEMENT AND ODOT'S 2015 STANDARD DRAWINGS TM800 – TM871, IS REQUIRED. ALL TRAFFIC CONTROL DEVICES SHALL MEET OR EXCEED THE NCHRP 350 REQUIREMENTS FOR CRASHWORTHINESS. COMPLETED SIGNAL SHUT DOWN REQUESTS MUST BE RECEIVED BY THE COUNTY A MINIMUM OF 3 WORKING DAYS PRIOR TO ANY PROPOSED SIGNAL SHUT DOWN.

NOTES

1. TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES AS SHOWN SERVE AS THE INTENDED BASIS FOR STORMWATER POLLUTION PREVENTION PLANNING. AS GRADING AND SITEWORK PROGRESS IS MADE AND WEATHER CONDITIONS CHANGE, THE CONTRACTOR IS EXPECTED TO MODIFY THE MEASURES AS NEEDED IN ACCORDANCE WITH THE PROJECT STORMWATER POLLUTION PREVENTION PLAN (SWPPP). MATERIAL QUANTITIES TO ADDRESS CHANGES IN TESC NEEDS ARE TO BE CONSIDERED IN BID.
2. WHEN A DOUBLE ROW OF SILT FENCE IS CALLED FOR ON THE PLANS, THE TWO ROWS SHALL HAVE A MINIMUM SPACING OF 3 FEET AND A MAXIMUM SPACING OF 5 FEET.
3. FINISH GRADE CONTOURS SHOWN REFLECT TOP OF FINISH SURFACE ELEVATIONS WITHIN THE ROADWAY AND TRANSITIONS TO TOP OF ROUGH FUTURE SUBGRADE WITHIN THE SITE DEVELOPMENT PADS IN PREPARATION FOR FUTURE DETAILED DEVELOPMENT PLAN APPROVAL FOR EACH OF THE PADS.
4. ROUGH GRADING AND FUTURE PAD FINISHED FLOOR ELEVATIONS ARE APPROXIMATE AND SUBJECT TO DETAILED DESIGN AND PERMIT APPROVAL. SLIGHT VARIATIONS IN PAD GRADING, INCLUDING BUILDING FINISHED FLOOR ELEVATIONS, MAY OCCUR WITH INDIVIDUAL PAD DETAILED DEVELOPMENT PLAN APPROVAL AND DETAILED DESIGN.

NOTES:

1. ONLY LIGHTS WITHIN THE RIGHT OF WAY HAVE BEEN STUDIED/MODELED AND ASSESSED FOR COMPLIANCE. EXISTING LIGHTS AND ISOLINES SHOWN ARE FOR REFERENCE ONLY.
2. THERE ARE NO AS-BUILTS AVAILABLE AT THE TIME OF THIS PRELIMINARY DESIGN. EXISTING LIGHT INFORMATION IS NOT VERIFIED IN THE FIELD. EXISTING LIGHTS ARE TO REMAIN AND BE PROTECTED UNLESS SHOWN OTHERWISE.
3. CONTRACTOR TO VERIFY EXISTING CONDITIONS PRIOR TO REPLACING OR INSTALLING NEW LIGHT FIXTURES.
4. NEW LIGHT POLES SHALL NOT BE LOCATED IN THE PATH OF TRAVEL AND MAINTAIN A 3' CLEARANCE FROM THE FRONT OF CURB PER CITY STANDARDS.
5. PLAN IS DIAGRAMMATIC.
6. SCOPE OF WORK IS ONLY FOR THE RIGHT-OF-WAY. PRIVATE/ONSITE IS EXCLUDED.
7. ALL STREET LIGHTING RELATED WORK AND MATERIALS SHALL COMPLY WITH CITY, COUNTY, AND OTHER APPLICABLE GOVERNING AUTHORITY REQUIREMENTS.

ALTA/ACSM SURVEY

LOCATED IN THE S.E. 1/4 & S.W. 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, W.M. CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON
REFERENCE: STEWART TITLE PRELIMINARY TITLE REPORT SUPPLEMENTAL NO. 1
ORDER NO. 1016646 DATED APRIL 27, 2012

CERTIFICATION FOR SURVEY

1. THE SURVEY WAS MADE ON THE GROUND DURING APRIL AND MAY OF 2012, AND CORRECTLY SHOWS THE AREA OF THE SUBJECT PROPERTY, THE LOCATION AND TYPE OF ALL BUILDINGS, STRUCTURES AND OTHER IMPROVEMENTS SITUATED ON THE SUBJECT PROPERTY.

2. EXCEPT AS SHOWN ON THE SURVEY, THERE ARE NO OBSERVABLE, ABOVE GROUND ENCROACHMENTS BY THE IMPROVEMENTS ON THE SUBJECT PROPERTY UPON ADJOINING PROPERTIES, STREETS OR ALLEYS, OR BY THE IMPROVEMENTS ON ADJOINING PROPERTIES, STREETS OR ALLEYS UPON THE SUBJECT PROPERTY.

3. THE LOCATION OF EACH EASEMENT, RIGHT OF WAY, SERVITUDE, AND OTHER MATTER AFFECTING THE SUBJECT PROPERTY AND LISTED IN STEWART TITLE COMPANY, PRELIMINARY TITLE REPORT SUPPLEMENTAL NO. 1, ORDER NUMBER 1016646, DATED APRIL 27, 2012, WITH RESPECT TO THE SUBJECT PROPERTY, HAS BEEN SHOWN ON THE SURVEY, TOGETHER WITH THE APPROPRIATE RECORDING REFERENCES, TO THE EXTENT THAT SUCH MATTERS CAN BE LOCATED. THE PROPERTY SHOWN ON THE SURVEY IS THE PROPERTY DESCRIBED IN THAT TITLE REPORT.

4. THE SUBJECT PROPERTY HAS ACCESS TO AND FROM DULY DEDICATED AND ACCEPTED PUBLIC STREETS.

5. THE MEASURED BEARINGS AND DISTANCES SHOWN HEREON FORMS A MATHEMATICALLY CLOSED FIGURE WITH A MINIMUM LATITUDE AND DEPARTURE CLOSURE ERROR OF 1 IN 50,000.

6.THIS SITE LIES WITHIN WITHIN THE LIMITS OF FEMA MAP NUMBER 41005C0279D, WHICH IS NOT PRINTED SINCE THE ENTIRE MAP IS IN ZONE 'X' AS REITERATED ON FEMA MAP NUMBER 41005C1ND0A, EFFECTIVE DATE: JUNE 17, 2008.

7.SUBJECT PROPERTY IS ZONED, MUC-2 "MIXED USE CORRIDOR"

8. NO ORTHOPHOTOGRAPHY, PHOTOGRAMMETRIC MAPPING, LASER SCANNING, OR SIMILAR PRODUCTS WERE UTILIZED IN THE PREPARATION OF THIS SURVEY.

I HEREBY CERTIFY TO PACLAND; WAL-MART STORES, INC., A DELAWARE CORPORATION; WAL-MART REAL ESTATE BUSINESS TRUST, A DELAWARE STATUTORY TRUST; WAL-MART TRS, LLC, A DELAWARE LIMITED LIABILITY COMPANY; STEWART TITLE GUARANTY COMPANY;

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE 2011 "MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS", JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS, AND INCLUDES ITEMS 1-6, 7(a), 7(b)(1), 7(c), 8, 9, 10(a), 11(b), 13, 14, 15-19, 20(a), 21 AND 22 OF TABLE 'A' THEREOF. THE FIELD WORK WAS COMPLETED ON JULY 9, 2012.

CES/NW MAKES NO WARRANTIES AS TO MATTER OF UNWRITTEN TITLE SUCH AS ACQUIESCENCE, ESTOPPEL, ADVERSE POSSESSION, ETC.

RYAN H. GODSEY
PROFESSIONAL LAND SURVEYOR
REGISTRATION NO.(OR) 65604

NARRATIVE

THE BASIS OF BEARINGS IS THE MONUMENTED CENTERLINE OF MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), AS ESTABLISHED BY MONUMENTS NO. 140 AND NO. 139 AS SHOWN HEREON PER SN 2010-176, SURVEY RECORDS, CLACKAMAS COUNTY, OREGON.

THE PURPOSE OF THIS SURVEY IS TO RETRACE THE BOUNDARIES AS SHOWN ON CLACKAMAS COUNTY SURVEY NUMBER SN2004-37. ALL MONUMENTS SHOWN WERE VISITED IN THE PROCESS OF THIS RETRACEMENT.

VERTICAL DATUM IS BASED ON A CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE RD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990" ELEVATION = 452.739'

LEGAL DESCRIPTION PER TITLE REPORT

A TRACT OF LAND SITUATED IN THE SOUTHWEST QUARTER AND THE SOUTHEAST QUARTER OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON, SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT A THREE INCH BRASS DISK SET BY THE OREGON STATE HIGHWAY DEPARTMENT IN THE CENTERLINE OF MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213) AT ENGINEER'S STATION 31+00; THENCE SOUTH 73°27'47" EAST A DISTANCE OF 289.83 FEET TO THE NORTHWEST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-010378, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SAID POINT ALSO BEING ON THE SOUTHERLY RIGHT-OF-WAY LINE OF HILLTOP AVENUE; THENCE ALONG THE WESTERLY LINE OF SAID TRACT, SOUTH 27°39'59" EAST A DISTANCE OF 104.03 FEET TO THE SOUTHWEST CORNER OF SAID TRACT, AND BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE NORTHERLY LINE OF THOSE TRACTS DESCRIBED IN FEE NO. 72-08888 AND FEE NO. 69-09411, NORTH 78°20'26" EAST A DISTANCE OF 846.78 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 95-073144 AND FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON, NORTH 67°47'51" EAST A DISTANCE OF 59.75 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 96-010376 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE WESTERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 14°26'42" EAST A DISTANCE OF 407.81 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 96-007471, AND FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE COMMON LINE OF THOSE LANDS DESCRIBED IN FEE NO. 96-046001 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 88°29'47" EAST A DISTANCE OF 62.63 FEET; THENCE SOUTH 23°58'58" EAST A DISTANCE OF 133.44 FEET TO THE SOUTHEASTERLY CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE SOUTHERLY LINE OF SAID TRACT, AND ALONG THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 98-044696 AND FEE NO. 99-004122, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°38'35" WEST A DISTANCE OF 125.26 FEET; THENCE ALONG SAID SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, AND THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 95-045260, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°19'45" WEST A DISTANCE OF 45.33 FEET; THENCE ALONG SAID SOUTHERLY LINE, AND THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 97-004501, AND FEE NO. 98-041108, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°29'26" WEST A DISTANCE OF 750.61 FEET TO A POINT IN THE NORTHEASTERLY RIGHT-OF-WAY OF BEAVERCREEK ROAD (MARKET ROAD NO. 11) (COUNTY ROAD NO. 398), SAID POINT BEING 30' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG SAID NORTHEASTERLY RIGHT-OF-WAY, NORTH 59°27'26" WEST A DISTANCE OF 206.63 FEET TO THE COMMON NORTHEASTERLY RIGHT-OF-WAY INTERSECTION OF SAID BEAVERCREEK ROAD AND MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), SAID POINT BEING 35' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE OF MOLALLA AVENUE; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, ALONG THE ARC OF A 5694.58 FOOT RADIUS CURVE TO THE RIGHT A DISTANCE OF 66.39 FEET, THROUGH A CENTRAL ANGLE OF 00°40'05" (THE LONG CHORD OF WHICH BEARS NORTH 27°43'34" WEST A DISTANCE OF 66.39 FEET); THENCE NORTH 27°23'32" WEST A DISTANCE OF 307.30 FEET; THENCE NORTH 62°36'28" EAST A DISTANCE OF 5.00 FEET TO A POINT 40 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE, SAID POINT ALSO BEING ON THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 97-022793, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE LEAVING SAID NORTHEASTERLY RIGHT-OF-WAY LINE, AND CONTINUING ALONG SAID SOUTHERLY TRACT LINE, NORTH 78°20'26" EAST A DISTANCE OF 176.19 FEET TO THE SOUTHEASTERLY CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, NORTH 27°39'59" WEST A DISTANCE OF 73.67 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 560,272 SQUARE FEET, OR 12.862 ACRES, MORE OR LESS.

RECORD DESCRIPTIONS

2004-091249 PARCEL 1
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 10.28 FEET; THENCE ALONG THE SOUTHERLY LINE THAT TRACT DESCRIBED IN FEE NO. 72-08888 DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 88°29'47" EAST A DISTANCE OF 653.92 FEET TO THE SOUTHEAST CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, NORTH 12°38'23" WEST A DISTANCE OF 110.72 FEET TO THE NORTHWEST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 81-19662, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, SOUTH 88°29'47" EAST A DISTANCE OF 120.00 FEET TO THE NORTHEAST CORNER OF SAID TRACT; THENCE ALONG THE EASTERLY LINE OF SAID TRACT, SOUTH 12°38'23" EAST A DISTANCE OF 120.00 FEET TO A POINT ON THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, NORTH 88°29'47" WEST A DISTANCE OF 771.22 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 19,837 SQUARE FEET, OR 0.455 ACRES, MORE OR LESS.

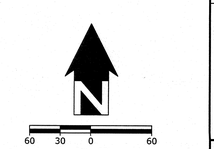
2004-091249 PARCEL 2
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 10.28 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, NORTH 27°23'32" WEST A DISTANCE OF 67.85 FEET; THENCE NORTH 62°36'28" EAST A DISTANCE OF 5.00 FEET TO A POINT 40 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE, SAID POINT ALSO BEING ON THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 97-022793, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE LEAVING SAID NORTHEASTERLY RIGHT-OF-WAY LINE, AND CONTINUING ALONG SAID SOUTHERLY LINE, NORTH 78°20'26" EAST A DISTANCE OF 176.19 FEET TO THE SOUTHWEST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-010378, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE NORTHERLY LINE OF THOSE TRACTS DESCRIBED IN FEE NO. 72-08888 AND FEE NO. 69-09411, NORTH 78°20'26" EAST A DISTANCE OF 846.78 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 69-09411, FEE NO. 95-073144 AND FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-010376, DEED RECORDS, CLACKAMAS COUNTY, OREGON, NORTH 67°47'51" EAST A DISTANCE OF 59.75 FEET TO THE COMMON CORNER OF THOSE LANDS DESCRIBED IN FEE NO. 96-010376 AND FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE WESTERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-007471, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 14°26'42" EAST A DISTANCE OF 407.81 FEET TO THE COMMON CORNER OF THOSE TRACTS DESCRIBED IN FEE NO. 69-09411, FEE NO. 96-007471, AND FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF THAT TRACT OF LAND DESCRIBED IN FEE NO. 69-09411, DEED RECORDS, CLACKAMAS COUNTY, OREGON, NORTH 88°29'47" WEST A DISTANCE OF 322.36 FEET TO THE SOUTHEAST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 81-19662, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE EASTERLY LINE OF SAID TRACT DESCRIBED IN FEE NO. 81-19662, NORTH 1238'23" WEST A DISTANCE OF 120.00 FEET; THENCE ALONG THE NORTHERLY LINE OF SAID TRACT, NORTH 8829'47" WEST A DISTANCE OF 120.00 FEET; THENCE ALONG THE WESTERLY LINE OF SAID TRACT, SOUTH 12°38'23" EAST A DISTANCE OF 110.72 FEET TO THE SOUTHEAST CORNER OF THAT TRACT DESCRIBED IN FEE NO. 72-08888, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE ALONG THE SOUTHERLY LINE OF SAID TRACT DESCRIBED IN FEE NO. 72-08888, NORTH 8829'47" WEST A DISTANCE OF 653.92 FEET TO THE TRUE POINT OF BEGINNING.

CONTAINING AN AREA OF 256,397 SQUARE FEET, OR 5.886 ACRES, MORE OR LESS.

2004-091251
A TRACT OF LAND SITUATED IN THE SOUTHWEST 1/4 AND THE SOUTHEAST 1/4 OF SECTION 5, TOWNSHIP 3 SOUTH, RANGE 2 EAST, WILLAMETTE MERIDIAN, CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON. SAID TRACT IS MORE PARTICULARLY DESCRIBED AS FOLLOW:

COMMENCING AT THE EXTREME SOUTHERLY CORNER OF TRACT DESCRIBED IN CLACKAMAS COUNTY DEED BOOK "O", PAGE 265, SAID POINT BEING IN THE CENTERLINE OF MOLALLA AVENUE; THENCE SOUTH 88°29'47" EAST A DISTANCE OF 39.98 FEET TO A POINT BEING 35 FEET NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE ALONG THE SOUTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 81-19662, FEE NO. 69-09411, AND FEE NO. 96-007471 DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 88°29'47" EAST A DISTANCE OF 1156.21 FEET; THENCE SOUTH 23°58'58" EAST A DISTANCE OF 133.44 FEET TO THE SOUTHEASTERLY CORNER OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, DEED RECORDS, CLACKAMAS COUNTY, OREGON; THENCE CONTINUING ALONG THE SOUTHERLY LINE OF SAID TRACT, AND ALONG THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 98-044696 AND FEE NO. 99-004122, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°38'35" WEST A DISTANCE OF 125.26 FEET; THENCE ALONG SAID SOUTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 96-046001, AND THE NORTHERLY LINE OF THAT TRACT DESCRIBED IN FEE NO. 95-045260, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°19'45" WEST A DISTANCE OF 45.33 FEET; THENCE ALONG SAID SOUTHERLY LINE, AND THE NORTHERLY LINE OF THOSE LANDS DESCRIBED IN FEE NO. 92-21067, FEE NO. 97-004501, AND FEE NO. 98-041108, DEED RECORDS, CLACKAMAS COUNTY, OREGON, SOUTH 76°29'26" WEST A DISTANCE OF 750.61 FEET TO A POINT IN THE NORTHEASTERLY RIGHT-OF-WAY OF BEAVERCREEK ROAD (MARKET ROAD NO. 11) (COUNTY ROAD NO. 398), SAID POINT BEING 30' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, THE CENTERLINE OF SAID ROAD; THENCE ALONG SAID NORTHEASTERLY RIGHT-OF-WAY, NORTH 59°27'26" WEST A DISTANCE OF 206.63 FEET TO THE COMMON NORTHEASTERLY RIGHT-OF-WAY INTERSECTION OF SAID BEAVERCREEK ROAD AND MOLALLA AVENUE (FORMERLY STATE HIGHWAY NO. 213), SAID POINT BEING 35' NORTHEASTERLY OF, WHEN MEASURED AT RIGHT ANGLES TO, SAID CENTERLINE OF MOLALLA AVENUE; THENCE CONTINUING ALONG THE NORTHEASTERLY RIGHT-OF-WAY OF SAID MOLALLA AVENUE, ALONG THE ARC OF A 5694.58 FOOT RADIUS CURVE TO THE RIGHT A DISTANCE OF 66.39 FEET, THROUGH A CENTRAL ANGLE OF 00°40'05" (THE LONG CHORD OF WHICH BEARS NORTH 27°43'34" WEST A DISTANCE OF 66.39 FEET); THENCE NORTH 27°23'32" WEST A DISTANCE OF 229.17 FEET TO THE TRUE POINT OF BEGINNING.



CONTAINING AN AREA OF 284,038 SQUARE FEET, OR 6.521 ACRES, MORE OR LESS.

NOTES

1. THIS SURVEY MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN ARE ALL THE UTILITIES IN THE AREA. THE UNDERGROUND UTILITIES SHOWN ARE BASED ON LOCATE PAINT MARKINGS IN THE FIELD AND AS-BUILT MAPPING. UTILITIES SHOWN MAY NOT BE IN THE EXACT LOCATION AS NOTED ON THIS SURVEY, BUT ARE LOCATED AS ACCURATELY AS POSSIBLE FROM PAINT MARKINGS ON THE GROUND. IF KNOWN, DEPTHS OF UTILITIES ARE AS SHOWN. THE GAS LINE DEPTHS HAVE NOT BEEN VERIFIED. NORTHWEST NATURAL DESIGN STANDARDS REQUIRE 12" TO 18" OF COVER FOR SERVICE LINES AND 30" TO 36" OF COVER FOR MAIN LINES IN THIS AREA. THE AGE AND CONDITION OF ALL UTILITIES IS UNKNOWN AND CANNOT BE CERTIFIED BY A LAND SURVEYOR. CITY OF OREGON CITY WATER DISTRIBUTION SYSTEM DESIGN STANDARDS REQUIRE A STANDARD MINIMUM COVER OVER BURIED WATER MAINS OF 36" FROM FINISH GRADE. WATERLINE DEPTHS WERE NOT VERIFIED AS A PART OF THIS SURVEY.

2. STORM DRAIN AND SANITARY SEWER LINES SHOWN ARE APPROXIMATE AND BASED ON VISIBLE ABOVE GROUND EVIDENCE AND AS-BUILT MAPS.

3. AS OF THE DATE OF THE SURVEY, A GEOTECHNICAL REPORT WAS NOT RECEIVED, THEREFORE THE CONDITIONS OF ALL DRIVING SURFACES, SHOULDERS, CURBS AND SIDEWALKS (ON-SITE AND ADJACENT ROADS) ARE NOT NOTED.

4. SPOT ELEVATIONS ARE SHOWN AT TOP OF CURB, EDGE OF PAVEMENT AND CENTERLINE OF ROADWAYS.

5. POSTED SPEED LIMIT ON BEAVERCREEK ROAD IS 35 MPH. POSTED SPEED LIMIT ON THE MOLALLA AVENUE IS 35 MPH.

6. VERTICAL DATUM IS BASED ON THE CITY OF OREGON CITY BENCHMARK, A BRASS DISK LOCATED BY THE FLAG POLE IN FRONT OF THE OREGON CITY POLICE BUILDING, 320 WARNER MILNE RD, ELEVATION 447.729' (NGVD 1929) AND BENCHMARK 0030, A BRASS DISK STAMPED "DAVID EVANS AND ASSOCIATES, INC. GPS STA. LIBRARY 1990" ELEVATION = 452.739'

Executive Summary

Project Description
The proposed project is located at 1367 Molalla Avenue, in the City of Oregon City, Clackamas County, Oregon. The site is located on Tax lots 32E05DB03300, 32E05DB03400, 32E05DB03200, 32E05DB03201, 32E05D00500, 32E05D00501, and 32E05D00602. The site is under the jurisdiction of Oregon City Public Works and the Clackamas County Water Environment Services (WES).

The existing property is approximately 12.86 acres (13.67 acres including the public access road) of scrub vegetation with isolated groups of trees and remnants of previously developed wrecking yard, gas station, and tavern.

The west portion of the existing site drains primarily on to the adjacent properties to the south. The east portion of the existing site drains primarily on to the adjacent properties to the east and northeast.

The proposed project includes a retail store (Parcel A), and a multi-family use (Parcel B), together with a public road through the site to provide access and utility service to each parcel (Parcel C), and a Quick Service Restaurant (QSR) (Parcel D). Parcels A, B, and D will receive interim rough grading, with finished conditions pending Detailed Development Plan approval for each of the parcels. The public access road includes a Right-of-Way (ROW) dedication at various widths and a 5-foot Public Utility Easement (PUE) along portions of the frontage of the parcels.

Design Criteria
The purpose of this report is to describe the project's stormwater management strategy and to show that the design meets the agency guidelines.

The standard stormwater requirements provided by Oregon City Public Works require detention, treatment, and infiltration. However, due to the presence of silty clay and a steep slope on the east side of the site, infiltration is not feasible on site.

This project utilizes the WES BMP Sizing Tool for designing the on-site stormwater facilities. The BMP Sizing Tool provides stormwater management design that will control flow durations ranging from 42% of the 2-year to the 10-year storm runoff as determined by the continuous model simulation integrated into the tool. Using this design methodology will provide the required treatment and flow control for the site, without the need for infiltration.

Proposed Drainage System
This project proposes to introduce a network of underground pipes, catch basins, curbs and gutters, to collect surface water runoff associated with the on-site and off-site public improvements. The proposed stormwater facilities will consist of lined rain gardens and lined detention ponds for water quality treatment and flow control. Stormwater detention will be required for both on-site private improvements and off-site public improvements. Space for detention of off-site public improvements is limited, and the detention facility cannot be installed within the right-of-way near the ultimate point of connection to the existing public storm system within the Natural Resource Overlay District (NROD) area in TL 500. Accordingly, the on-site stormwater facility will be sized to over-detain the on-site stormwater to compensate for public stormwater runoff as confirmed during the project's pre-application conference. The stormwater facilities will over detain and over treat these drainage basins to

account for the off-site public access road stormwater that will not be routed to the stormwater facilities.

Stormwater from Parcels A, B and C (Parcel C is the proposed public right-of-way within the main development area of TL3200, 3201, 3300, & 3400) will be routed to storm facilities in the southeast portion of the site, just north of the proposed public road, within the ROW. Stormwater for Parcel D will be routed to storm facilities within Parcel D. Parcel D stormwater will bypass the main storm facility after having received its own water quality and detention treatment. After being treated and detained, stormwater will be discharged to an existing storm pipe that discharges ultimately to Newell Creek. Outflows from the stormwater facilities will be regulated by flow control structures designed to release a peak flow rate not to exceed pre-developed runoff flow rates described above.

Conclusion

The proposed stormwater management systems for this project have been designed in accordance with regulatory criteria described above and consistent with sound engineering practice. This design has incorporated stormwater detention and stormwater quality BMP's. Therefore, no significant adverse impacts to the downstream stormwater system are expected because of the proposed development.

Zone:	***MUC-2; Mixed-Use Corridor***

Site Drainage Analysis

Existing Conditions

The project site is located at 1367 Molalla Avenue, in the City of Oregon City, Clackamas County, Oregon. Tax lots 3300, 3201, & 3200 were previously developed as a wrecking yard between approximately 1953 and 2001/2002, with wrecking yard vehicle and structure removal occurring into 2005. Remnant surface features such as broken asphalt and foundations/concrete pads from prior wrecking yard operations are still visible in aerial photos of these parcels after 2005. A gasoline station and tavern formerly operated in the southwest portion of Tax Lot 3400. Each of these prior uses have been demolished and have been described in various Phase I & II Environmental Site Assessments. The southeast portion of TL 3400 and areas down-slope of the top of bluff on TL 3200 are covered in trees, while much of the remainder of the on-site properties exist in scrub vegetation or isolated groups of trees.

The public 18-inch storm line runs to the West of the subject property on the west side of Molalla Boulevard, and to the South of the subject property towards the North side of Beavercreek Road. There is an existing 48-inch stormwater outfall that discharges to Newell Creek. Our proposed stormwater runoff will utilize the existing outfall to Newell Creek.

Proposed Development

The proposed development includes one Quick Service Restaurant (QSR), a retail store, and a multi-family use, together with a public road through the site to provide access and utility service to each parcel. Stormwater from Parcels A, B and C will be routed to a lined rain garden which will then discharge to a lined detention pond for treatment of the 1-inch 24-hour water quality design storm and detention for the 10-year 24-hour storm event. The storm facilities for Parcels A, B and C will be a public storm facility within the public access road ROW. Stormwater from Parcel D will be routed to an on-site, private stormwater facility within Parcel D. The Parcel D storm facility will also consist of a lined rain garden discharging to a lined detention pond for treatment of the 1-inch 24-hour water quality design storm and detention for 42% of the 2-year to the 10-year 24-hour storm event. Following on-site treatment, runoff from Parcel D will bypass the public stormwater management system. The treated and detained stormwater from all the storm facilities will be routed through the off-site public access road to the existing discharge outfall to Newell Creek.

The public stormwater facility will over detain and over treat the on-site drainage basins to account for the off-site public access road stormwater that will not be routed to the stormwater facilities.

Soils

According to the NRCS Web Soil Survey, this site is composed mostly of Jory silty clay loam. Based on a geotechnical engineering report provided by Terracon Consultants, dated September 12th, 2022, the existing soil at the site consists of a surface layer of red clay surface soil. According to the Terracon report, groundwater was encountered from 4 to 20 feet below the surface. The Terracon report states that the groundwater observed in their borings appear to represent perched groundwater and does not

appear to be continuous in nature and groundwater fluctuations occur. See Appendix A of this report for additional information regarding soils and groundwater.

Drainage Basin Areas

The proposed Parcels A, B, and D, together with the public road are assumed in the full-build condition for the purposes of this analysis so that the various stormwater management facilities can be sized correctly. Parcels A, B, and D will undergo future Detailed Development Plan review in the future and will address any design changes from the assumptions in this report. While Parcel D will provide its own on-site storm facility with its DDP application, we've evaluated approximate sizing for this facility to determine impacts to the storm system downstream of Parcel D.

This project will consist of 5 separate drainage basins, as shown in the Drainage Basin Map in Appendix B. The project will create 377,077 sf of private impervious area and 89,144 sf of pervious area and will treat and detain 377,077 sf of impervious and 55,689 sf of pervious area. The project will create or improve 30,169 sf of public impervious and 7,003 sf of public pervious area.

On-site Private Basin 1:

This basin consists of Parcel A, the proposed retail stores. The basin is approximately 1.66 acres of impervious roof, pavement, and sidewalk (PRI-1) and 0.15 acres of pervious landscape area (PRP-1). The basin will be conveyed to the public rain garden and detention pond facilities for treatment and detention, where it will be mixed with stormwater from On-site Basin 2 and On-site Basin 3. The treated and detained stormwater will then be conveyed to the point of connection with the existing 48-inch public storm pipe prior to its existing discharge into a tributary of Newell Creek. The approximately 5,770 sf of existing pervious area on the west side of the parcel that currently drains off-site onto Molalla Ave will be reduced to 1,103 sf of pervious area draining off-site. This area will be graded and stabilized, but will not be treated or detained, as it is infeasible to collect, is not pollution generating, and will continue to naturally drain off site. Please see the Drainage Basin Map in Appendix B.

On-site Private Basin 2:

This basin consists of Parcel B, the proposed multi-family use. The basin is approximately 4.14 acres of impervious roof, pavement, and sidewalk (PRI-2) and 0.48 acres of pervious landscape area (PRP-2). The basin will be conveyed to the public rain garden and detention pond facilities for treatment and detention, where it will be mixed with stormwater from On-site Basin 1 and On-site Basin 3. The treated and detained stormwater will then be conveyed to the point of connection with the existing 48-inch public storm pipe prior to its existing discharge into a tributary of Newell Creek. The approximately 228,279 sf of existing pervious area on the east side of the parcel that currently drains east will be reduced to 16,275 sf of pervious area draining east. This area will be graded and stabilized, but will not be treated or detained, as it is infeasible to collect, is not pollution generating, and will continue to naturally drain off site. The east portion of Parcel B is a Geologic Hazard Area (steep slopes). The limits of disturbance do not get closer than 35 feet from the top of the steep slope near the edge of the Geologic Hazard Area. This portion of the site will remain as is, other than a natural surface pedestrian pathway, and existing drainage patterns here will continue.

On-site Private Basin 3:

This basin consists of Parcel D, the proposed QSR. The basin is approximately 1.21 acres of impervious roof, pavement, storm facilities, and sidewalk (PRI-3) and 0.32 acres of pervious landscape area (PRP-3).

The basin will be conveyed to a private rain garden and detention pond, located within Parcel D, for treatment and detention. The treated and detained stormwater will then bypass the public stormwater facility treating Basins 1, 2, & 3 and connect to the proposed storm system downstream from the public stormwater facility where it will then be conveyed to the point of connection with the existing 48-inch public storm pipe prior to its existing discharge into a tributary of Newell Creek. The approximately 182,811 sf of existing pervious area on the southwest side of the site that currently drains south will be reduced to 15,729 sf of pervious area draining off-site. This area will not be treated or detained, as it is infeasible to collect, is not pollution generating, and will continue to naturally drain off site.

The private stormwater management facility in Basin 4 will be designed concurrently with the detailed development of Parcel D. The analysis in this section is provided to show that the proposed Detailed Development Plan storm system can accommodate the future development of Parcel D. Were the Parcel D storm system to become overwhelmed by a large storm event, we recommend an overflow drainage structure be designed to capture the 100-year 24-hour storm event prior to it overtopping the planned facility and send that flow into the by-pass storm piping provided in the proposed public street. The storm pipes serving Parcel D will be sized to convey the 100-year 24-hour storm event for Basin 4/Parcel D as well.

Off-site Public Basin 1:
The proposed public access road runs through the site from Molalla Avenue to the southeast corner of the site. From the southeast corner of the site, the public access road snakes down to Beavercreek Road. This second portion of the public access road is off-site. The basin is approximately 0.71 acres of impervious pavement and sidewalk (PUI-1) and 0.4 acres of pervious landscape area (PUP-1). Space for detention of off-site public improvements is limited, and the detention facility cannot be installed within the right-of-way near the ultimate point of connection to the existing public storm system within the Natural Resource Overlay District (NROD) area in TL 500. Accordingly, the on-site public stormwater facilities will over detain and over treat the on-site basins to account for the off-site public access road stormwater that will not be routed to the stormwater facilities.

Stormwater in this basin will be captured in catch basins and conveyed to the existing outfall location adjacent to the off-site public access road, that discharges to Newell Creek.

Were this system to become overwhelmed by a large storm event that it was unable to convey or to become clogged, the catch basins would begin to overflow and flow down the off-site public access road to the south, avoiding the steep slope just east of the site and public access road, and overflow near the existing discharge point. To guard against such an overflow, inlets and inlet leads in this low point will be oversized to minimize the chances of overflow.

On-site Public Basin 2:
This basin consists of Parcel C, the on-site public access road. The basin is approximately 1.61 acres of impervious pavement, storm facilities, and sidewalk (PUI-2) and 0.28 acres of pervious landscape area (PUP-2). The basin will be conveyed to the public rain garden and detention pond facilities for treatment and detention, where it will be mixed with stormwater from On-site Basin 1 and On-site Basin 2. The treated and detained stormwater will then be conveyed to point of connection with the existing 48-inch public storm pipe prior to its existing discharge into a tributary of Newell Creek.

The public stormwater facility lies inside a small basin that, if it were to fill up, would overtop into the adjacent street at elevation 433 feet. A HydroCAD model was run (see Appendix C) to model this basin's capacity during a 100-year 24-hour storm event. During this storm event, the water surface elevation within this basin peaks at 428.93 feet. Therefore, the stormwater facility basin will contain the 100-year 24-hour storm event and any overflow into the street or steep slopes to the east is not expected to occur.

For analysis and sizing of BMPs, the project development area is broken into ten Drainage Management Areas (DMAs), as defined in the WES BMP Sizing Tool. The area and condition of the ten DMAs are shown in Table 1 below. See Appendix B for the Basin Map.

Table 1 –Drainage Management Areas

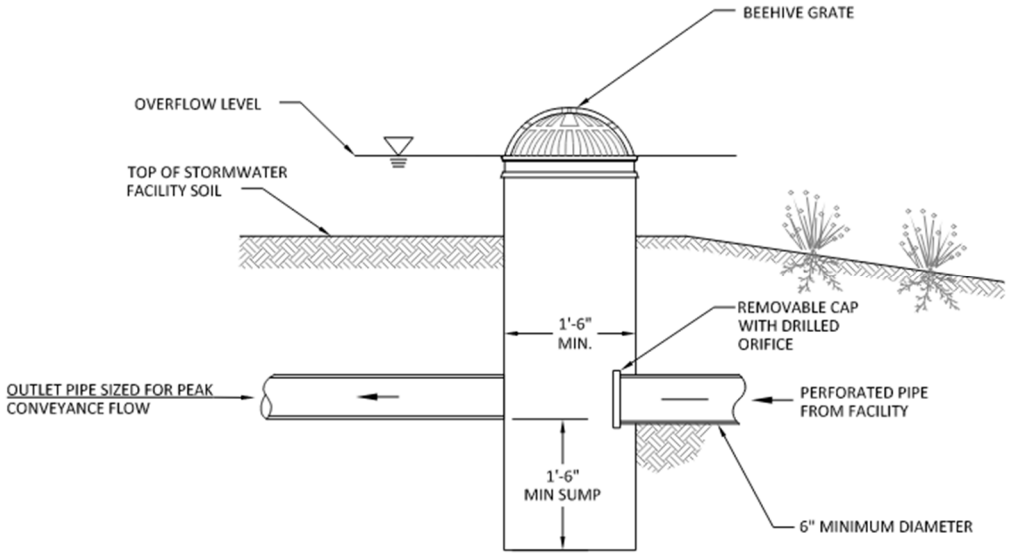
On-Site Basin Areas Draining to Public Storm Facilities			
Basin	**Area (sf)**	**Pre-developed Condition**	**Post-developed Condition**
PRI-1	72,516	Pervious - Forested	Impervious - Roof/Pavement
PRP-1	6,366	Pervious - Forested	Pervious - Landscape
PRI-2	180,369	Pervious - Forested	Impervious - Roof/Pavement
PRP-2	20,996	Pervious - Forested	Pervious - Landscape
PUI-2	70,148	Pervious - Forested	Impervious - Pavement
PUP-2	16,380*	Pervious - Forested	Pervious - Landscape
On-Site Basin Area Draining to Private Storm Facilities			
PRI-3	52,512	Pervious - Forested	Impervious – Roof/Pavement
PRP-3	13,774*	Pervious - Forested	Pervious - Landscape
Total On-site DMA*	***433,061***		
Off-Site Basin Area			
PUI-1	31,087	Pervious - Forested	Impervious - Pavement
PUP-1	6,085	Pervious - Forested	Pervious - Landscape
Total Off-site DMA	***37,172***		
Total DMA's*	***470,233***		

**DMA's do not include the stormwater facility area (BMP's)*

Modeling

The WES BMP Sizing Tool was utilized to assist with BMP sizing and calculations for the water quality, 2-year and 10-year storm events. Stormwater treatment facility's flow control structures were designed using the WES BMP Sizing Tool, for those events as well. Refer to BMP Sizing Report attached in Appendix D.

Flow control structure diagrams are shown in the figures below:



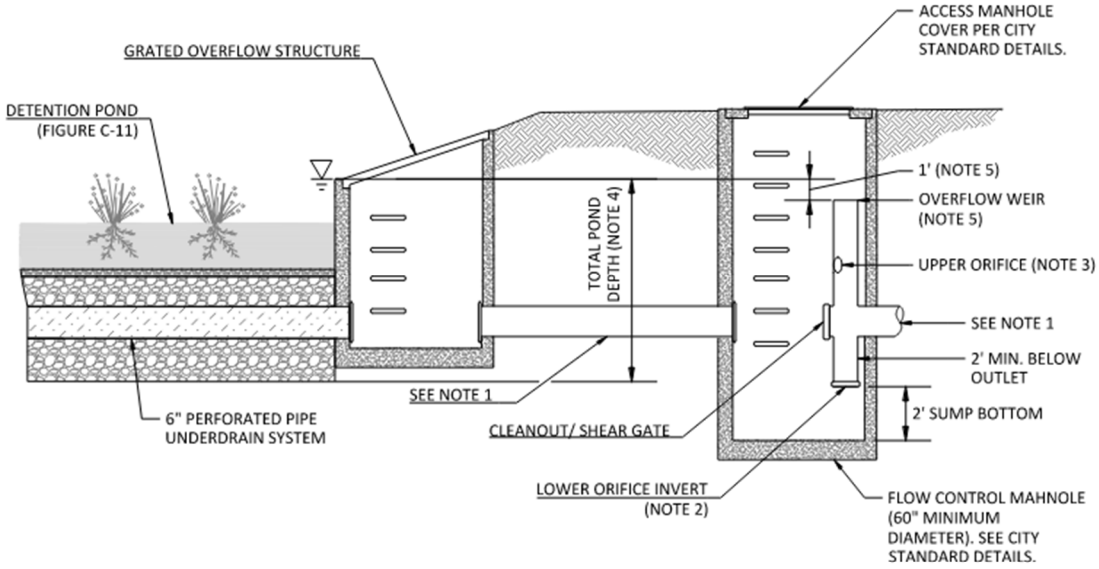


Figure 1 - Rain Garden Flow Control Structure

NOTES:

1. PIPE SIZED FOR PEAK DESIGN STORM AS DETERMINED BY ENGINEER .
2. LOWER ORIFICE: THE INVERT ELEVATION OF THE LOWER ORIFICE MUST BE AT, OR BELOW, THE POND BOTTOM (BOTTOM OF THE 3 FEET OF DRAIN ROCK & GROWING MEDIA).
3. UPPER ORIFICE: THE UPPER ORIFICE SHOULD BE AT AN ELEVATION 2/3 OF THE TOTAL POND DEPTH ABOVE THE POND BOTTOM.
4. TOTAL POND DEPTH, PER FACILITY SIZING MODEL, INCLUDES GROWING MEDIA, SEPARATION LAYER, AND DRAIN ROCK AS SHOWN ON FIGURE C-11.).
5. OVERFLOW WEIR: 1' BELOW MAXIMUM WATER ELEVATION OR TOP OF TOTAL POND DEPTH.

Figure 2 - Detention Pond Flow Control Structure

The required storm facility sizes and proposed facility sizes, according to the BMP Sizing Tool, are shown in Table 2.

Table 2 –Storm Facility Sizing

Rain Garden Storm Facilities		
Storm Facility	**Required Minimum Surface Area (sf)**	**Proposed Surface Area (sf)**
Public Rain Garden (lined)	5,685.5	6,000.0
Private Rain Garden (lined)	891.0	1,700.0
Detention Pond Storm Facilities		
Storm Facility	**Adequate Size?***	**Proposed Facility Volume (cf)**
Public Detention Pond (Lined)	Yes	2,911.8
Private Detention Pond (Lined)	Yes	1,027.7

**According to the BMP Sizing Tool (See Appendix D)*

Conclusion

The proposed stormwater management system for this project has been designed in accordance with regulatory criteria described above and is consistent with sound engineering practice. This design has incorporated stormwater quality treatment and detention BMPs to the maximum extent practicable. Therefore, no significant adverse impacts to surrounding surface water are expected as a result of the proposed improvements.

Terracon Project No. 82215043

Dear Mr. Rossman:

We have completed a Geotechnical Engineering evaluation for the above referenced project. Our services were performed in accordance with our Master Services Agreement dated November 20, 2017, and the Task Order dated June 22, 2021, and our Change Orders dated December 9, 2021, and June 10, 2022.

This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning slope stability, earthwork and the design and construction of foundations, floor slabs, and pavements for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants, Inc.

Ryan T. Houser, RG, CEG
Project Geologist

Kristopher T. Hauck, P.E.

Geotechnical Engineering Report

Oregon City Development
1367 Molalla Avenue
Oregon City, Clackamas County, Oregon

Terracon Project No. 82215043

September 12, 2022

INTRODUCTION

This report presents the results of our subsurface exploration and geotechnical engineering services performed for the proposed apartment complex, retail pads, and related pavements and utilities to be located at 1367 Molalla Avenue in Oregon City, Clackamas County, Oregon. The purpose of these services is to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Site preparation and earthwork
- Demolition considerations
- Excavation considerations
- Slope stability considerations
- Foundation design and construction
- Floor slab design and construction
- Seismic site class per IBC
- Lateral earth pressures
- Pavement design and construction
- Slope hazard mitigation

The geotechnical engineering Scope of Services for this project included the advancement of one drilled boring and installation of a piezometer to monitor groundwater levels. Previous investigations at the site included advancement of 29 drilled borings and excavation of 68 test pits to depths ranging from approximately 3 to 50 feet below existing site grades. Logs of current and previous explorations are included in the **Exploration Results** section.

Maps showing the site and exploration locations are shown on **Figure 1 - Site Location** and **Figures 2 through 4 - Exploration Plans** in the **Figures** section. The results of the laboratory testing performed on soil samples obtained from the site during the field exploration are included on the boring logs and/or as separate graphs in the **Exploration Results** section.

SITE CONDITIONS

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available topographic maps.

Item	Description
Parcel Information	The project is located at 1367 Molalla Avenue in Oregon City, Clackamas County, Oregon. The site consists of 4 tax lots totaling approximately 12.86 acres. The approximate center of the site is located at the following coordinates: ■ Latitude: 45.3356° N ■ Longitude: 122.5881° W
Existing Improvements	Former buildings were removed, although several retaining walls, foundations, and floor slabs remained as of our last site visit in 2022.
Current Ground Cover	The majority of the site was covered with grass, blackberry bushes, and scattered trees. The eastern edge of the site was densely vegetated with trees and blackberry bushes.
Existing Topography	The majority of the site consisted of three graded benches that stepped down to the east. Each bench was nearly level to gently sloping and were separated by graded slopes up to about 10 feet high with gradients up to about 3 horizontal to 1 vertical (3H:1V). The eastern edge of the site drops steeply down at inclinations in the range of 1½H:1V to ½H:1V to the east toward Newell Creek. The overall slope system height is on the order of 200 feet in vertical drop. We understand that this steep slope area contains active and ancient landslide complexes and has been studied extensively by Portland State University geologists and other researchers.

We also collected photographs at the time of our field exploration program. Representative photos are provided in our **Photography Log**.

PROJECT DESCRIPTION

Our initial understanding of the project was provided in our proposal and was discussed during project planning. Several iterations of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Information Provided	The following documents were provided to us: ■ "Site Plan," Sheet 1.11, prepared by Studio 15 Architecture, Inc., dated June 4, 2021. ■ "Preliminary Existing Conditions Survey," prepared by S&F Land Services, dated June 2021. ■ Oregon City Multi-Family Concept Grading Pavement Plans, Sheets C1.0, C2.0, C2.1, C3.0, C3.1, C4.00," prepared by Kimley-Horn, dated May 27, 2022. We were also provided the geotechnical report for the original planned structure.
Project Description	The proposed development is shown on the attached **Exploration Plans** (**Figures 2 through 4**), and includes construction of: ■ 15 multi-story (2 to 3) apartment buildings with a total of 236 dwelling units. Some of the buildings will incorporate ground level parking structures with apartments above. ■ Covered parking areas (carports). ■ 2 "pad-ready" development pads along the Molalla Avenue frontage for single story retail development. ■ A clubhouse building ■ Swimming pool Associated paved parking and drive lane areas
Building Construction	The proposed apartment and clubhouse buildings will be wood-framed with a slab-on-grade ground floor.
Finished Floor Elevation	The proposed apartment complex will be developed close to existing site grades. Final finish floor elevations are undetermined at this time.
Maximum Loads (Assumed)	■ Columns: 40 kips ■ Walls: 4 kips per linear foot (klf) ■ Slabs: 150 pounds per square foot (psf)
Below-Grade Structures	Development will include construction of a subsurface utility vault that will incorporate restrained retaining walls.
Free-Standing Retaining Walls	Development may include construction of free-standing retaining walls to accommodate grade changes along the eastern edge of the site and for the southeast road extension. We understand retaining walls up to 11 feet in height may be constructed.

Item	Description
Pavements	Paved driveway and parking will be constructed on the perimeter of the site. The Site Plan indicates parking will include 423 parking spaces. Both rigid (concrete) and flexible (asphalt) pavement sections will be incorporated into the final design. Anticipated traffic is as follows: ■ Autos/light trucks: 1,393 vehicles per day ■ Light delivery and trash collection vehicles: 20 vehicles per week ■ Tractor-trailer trucks: <5 vehicles per week The pavement design period is 20 years.
Estimated Start of Construction	Summer 2023

EXISTING GEOTECHNICAL REPORTS

Our Scope of Services is based on our understanding of the project as described by The Wolff Company and the expected subsurface conditions as described below. Terracon previously completed the following reports for the project site:

- "Preliminary Results of Slope Stability Evaluation, Proposed Retail Project, Molalla Avenue and Beavercreek Road, Oregon City, Oregon," prepared by Zipper Zeman Associates (ZZA, now Terracon since 2005), dated July 3, 2002.
- "Subsurface Exploration and Geotechnical Engineering Evaluation, Proposed Retail Project, Molalla Avenue and Beavercreek Road, Oregon City, Oregon," prepared by ZZA, dated February 13, 2004.
- "Preliminary Engineering Geology and Soil Engineering Report, Proposed Retail Development, Molalla Avenue and Beavercreek Road Oregon City, Oregon," prepared by Terracon, dated October 8, 2012.

GEOTECHNICAL CHARACTERIZATION

Geology

The site is located in the northern Willamette Valley geologic province, which consists of a structural trough between the Coastal Range and the Cascade Range. This basin is underlain by thick deposits of sand and gravel washed into it during the Pliocene epoch when the climate in the area was very dry. These granular deposits are locally covered by the Boring lavas (Qtb) in northwest Clackamas County.

Based on the *Oregon Geologic Data Standard v. 2.1* and Oregon Department of Geology and Mineral Industries *Geologic Map of the Oregon City 7.5' Quadrangle, Clackamas County, Oregon, 2009* this site is located within a geologic unit mapped as Tbc-Basalt of Canemah defined as flow or flows of grey medium-grained, olivine basalt. The Oregon Department of Geology and Mineral Industries (DOGAMI), Bulletin 99, *Geologic Map of the Canby and Oregon City Quadrangles, Oregon 1979*, maps the site as consisting of Boring lavas (Qtb), which it describes as Pliocene-Pleistocene lavas, light-gray, open-textured olivine basalt; flow structures common; includes some pyroclastic material of local extent; widely spaced joint pattern. Lavas and breccias have weathered to a residual red clay surface soil. Vertical exposures are susceptible to mass movement and deep bedrock sliding because of failure of underlying material (see the description below with clay materials within the Troutdale unit).

The Boring Lava deposits overly the Troutdale (Tpt), which are described as Pliocene sandstone and conglomerate; indurated beds and lenses of well-sorted sand and cobbly gravel with up to 30 percent quartzite clasts. Some sand originally composed of volcanic glass have altered to an impermeable high shrink-swell clay. The clay can be unstable and cause overlying competent units to fail by landslide. The publications indicate that on slopes where this clay layer daylights, one generally encounters a spring. Also, if layers dip out of the slope, it can become a failure plane for a slump or slump-earthflow when the pore water pressure has built up to a critical value on top of the clay layer.

Based on the *Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from Lidar Imagery and Aerial Photographs, O-06-27, 2006* and the *Landslide Inventory Map of the Northwest Quarter of the Oregon City Quadrangle, Clackamas County, Oregon, IMS-26, 2009,* a mapped landslide was identified adjacent to the site to the east. The landslide is identified as a prehistoric or ancient landslide (movement greater than 150 years ago). This is defined by landslide features that are slightly eroded and there is no evidence of historic (recent in last 150 years) movement. In some cases, the observed landslide features have been greatly eroded and/or covered with deposits that result in smoothed and subdued morphology.

The borings completed for this report and the previously referenced 2004 ZZA report are generally consistent with the above geologic mapping for the Boring Lavas/Basalt of Canemah, although the basalt has become deeply weathered in certain areas. The Troutdale unit was not encountered to the maximum depth of the borings at approximately 90½ feet below the ground surface. Although direct evidence of landslide features were not readily observed during our exploration programs for the 2004 report, we did observe the general headscarp area of the ancient landslide area during our 2012 and 2021 slope reconnaissances with the aid of the recent Lidar-based landslide maps.

Seismic Hazards

Seismic hazards resulting from earthquake motions can include slope stability, liquefaction, and surface rupture due to faulting or lateral spreading. Liquefaction is the phenomenon wherein soil strength is dramatically reduced when subjected to vibration or shaking.

We reviewed the Statewide Geohazards Viewer (HazVu) published by the Oregon Department of Geology and Mineral Studies (DOGAMI) and available online[1]. The viewer categorizes the expected earthquake shaking from light, moderate, strong, very strong, severe and violent; and the landslide susceptibility from low, moderate, high, and very high.

- Earthquake Liquefaction Hazard: Non-Liquefiable
- Expected Earthquake Shaking: Very Strong
- Landslide Susceptibility (due to earthquake): Low (Landsliding Unlikely) on the majority of the site, with Moderate (Landsliding Possible) to Very High (Existing Slide) on the eastern margin of the site. See **Engineering Geology Update** section for additional discussion.

Faults

The United States Geological Survey (USGS) Quaternary Fault and Fold Database of the United States published a report containing descriptions of nearby faults. Faults in the project vicinity include the Bolton fault (No.874), the Oatfield fault (No.875), and the Portland Hills fault (No.877). Published information pertaining to each fault or fault zone is provided in the following tables:

Bolton fault (Class B) No. 874

Information	Description
Length	9 km
Strike (degrees)	N53°W
Sense of Movement	Reverse
Dip Direction	SW
Slip-rate Category	Less than 0.2 mm/yr
Most recent prehistoric deformation	Undifferentiated Quaternary (<1.6 Ma)
Distance from Fault	1 km NE

[1] Statewide Geohazards Viewer (HazVu) published by the Oregon Department of Geology and Mineral Industries (DOGAMI) https://gis.dogami.oregon.gov/hazvu/

Oatfield fault (Class A) No. 875

Information	Description
Length	29 km
Strike (degrees)	N41W
Sense of Movement	Reverse, Right lateral
Dip Direction	NE
Slip-rate Category	Less than 0.2 mm/yr
Most recent prehistoric deformation	Undifferentiated Quaternary (<1.6 Ma)
Distance from Fault	2 km NNE

Portland Hills fault (Class A) No. 877

Information	Description
Length	49 km
Strike (degrees)	N37°W
Sense of Movement	Reverse, Right lateral
Dip Direction	SW
Slip-rate Category	Less than 0.2 mm/yr
Most recent prehistoric deformation	Undifferentiated Quaternary (<1.6 Ma)
Distance from Fault	5 km NE

Based on our review of the available fault information, the depth to bedrock, and the site's proximity to the nearest known faults, it is our opinion that the risk of surface rupture due to ground faulting is low.

Groundwater Conditions

We observed our explorations while drilling and after completion for the presence and level of groundwater. The water levels observed in the explorations are provided on the boring logs in **Exploration Results**, and are summarized below.

Boring Number	Approximate Ground Surface Elevation (feet) [1]	Observation Date	Approximate Depth to Groundwater/ Seepage while Drilling/Excavating (feet) [1]
02-B-3	447	October 29, 2001	19
02-B-22	451	March 7, 2002	20
02-MW-1	445	October 31, 2001	14
02-MW-1	445	November 2, 2001	8
02-MW-3	456	October 31, 2001	16
02-MW-3	456	November 2, 2001	17.5
02-MW-4	447	October 31, 2001	15
02-MW-4	447	November 2, 2001	11.2
02-MW-5	445	October 31, 2001	15
02-MW-5	445	November 2, 2001	11.5
02-TP-8	445	November 1, 2001	11
02-TP-43	426	March 4, 2002	9
02-TP-1A	435	March 1, 2002	9
02-TP-8A	442	March 1, 2002	6½
02-TP-12A	452	March 2, 2002	4
02-TP-20A	452	March 2, 2002	9½
21-B-1[2]	429	December 2021 – July 1, 2022	(not encountered)

1. Based on elevations obtained from the site topographic plan. Elevations may differ from those presented on the attached logs, which were based on a previous topographic map of the site.
2. A vibrating wire piezometer was installed at a depth of 30¾ feet below the ground surface (bgs), at the top of the basaltic bedrock.

Groundwater observations presented above appear to represent perched groundwater and does not appear to be continuous in nature. Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were performed. Therefore, groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

A vibrating wire piezometer was installed in Boring 21-B-1 near the top of the descending slope at the east end of the site. The instrument was placed immediately above the basaltic andesite within the boring at a depth of approximately 30 feet bgs. As of the date of this report, groundwater

was not recorded by this instrument. Groundwater levels will continue to be measured within this boring throughout 2022.

GeoModel

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. Conditions encountered at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** section and the GeoModel can be found on **Sections A-A', B-B', and C-C'** (Figures 10 through 12) in the **Figures** section of this report. As part of our analyses, we identified the following model layers within the subsurface profile.

Model Layer	Layer Name	General Description
1	**Existing Fill**	Topsoil, Asphalt, Silty Sand Fill, Clayey Silt Fill, Poorly Graded Gravel Fill, Gravelly Silt Fill placed during previous grading at the site
2	**Residual Soil (Native)**	Silt with trace Clay, Clayey Sand with Gravel, contains a variable amount of basaltic andesite boulders and cobbles
3	**Boring Lava**	Basaltic Andesite, fresh to slightly weathered, slightly fractured to very fractured

ENGINEERING GEOLOGY UPDATE

Terracon previously prepared an engineering geology report for the site, the results of which were presented in our referenced October 8, 2012, report. A copy of the 2012 report is attached at the end of this report. As part of our current scope of work, Terracon performed an engineering geology reconnaissance of the site slopes to document current site conditions. In addition, we reviewed aerial photographs, geologic maps, and geologic hazard maps produced since completion of our 2012 report, as detailed in the following sections.

RESEARCH

Geologic and Geologic Hazards Maps Review

Terracon reviewed the following geologic and geologic hazard maps that include the project site that have become available since our 2012 reports were issued:

- 2012 Oregon Department of Geology and Mineral Industries (DOGAMI) Open-File Report O-12-02, Lidar-based surficial geologic map and database of the greater Portland, Oregon, area, Clackamas, Columbia, Marion, Multnomah, Washington, and Yamhill Counties, Oregon,

and Clark County, Washington, by Lina Ma, Ian P. Madin, Serin Duplantis, and Kendra J. Williams

- 2013 DOGAMI Open-File Report O-13-08, Landslide hazard and risk study of northwestern Clackamas County, Oregon, by William J. Burns, Katherine A. Mickelson, Cullen B. Jones, Sean G. Pickner, Kaleena L. B. Hughes, and Rachel Sleeter.
- 2020 U.S. Geological Survey Scientific Investigations Map SIM-3443, Geologic map of the greater Portland metropolitan area and surrounding region, Oregon and Washington, by Wells, R.E., Haugerud, R.A., Niem, A.R., Niem, W.A., Ma, Lina, Evarts, R.C., O'Connor, J.E., Madin, I.P., Sherrod, D.R., Beeson, M.H., Tolan, T.L., Wheeler, K.L., Hanson, W.B., and Sawlan, M.G.

Based on our review, the geologic mapping presented on these maps is consistent with the mapped publications discussed in our referenced engineering geology report. The Landslide Hazard mapping (2013) indicates the eastern portion of the site, including the area of the headscarp and recommended setback, has a "high" potential for deep-seated landslides. The mapping indicates the eastern approximate quarter of the area of proposed development has a "moderate" potential for deep-seated landslides. The shallow landslide potential is "high" along the landslide scarp, and "moderate" directly above the landslide scarp. The slope between the site and the residential properties to the north also shows a "moderate" potential for shallow landslides. The landslide hazard susceptibility depicted on these maps is consistent with those discussed in the referenced reports prepared for the site. Portions of the landslide susceptibility maps showing the approximate site boundaries are attached as **Figure 6 - Deep Landslide Susceptibility Map** and **Figure 7 - Shallow Landslide Susceptibility Map** in the **Figures** section of this report.

Aerial Photograph Review

We reviewed aerial photographs taken from 2012 to 2020 showing the site to determine if significant changes to vegetation or slope configuration are apparent, which may indicate a slope failure. Our aerial photograph review did not identify any areas showing significant changes to vegetation or slope configuration on the scarp; however, two areas below the landslide headscarp showed vegetation patterns that appeared to be inconsistent with the surrounding areas. These areas were specifically visited during our site reconnaissance, which is described in the following section.

ENGINEERING GEOLOGIC RECONNAISSANCE

Terracon Consultants, Inc., Project Geologist Ryan T. Houser, CEG, performed a surface reconnaissance of the subject property and adjacent slopes on July 1, 2021.

The property was bordered to the west by Molalla Avenue, to the north by single-family and multi-family residences fronting on Hilltop Avenue, to the south by businesses fronting on Beavercreek

Road, and to the east by a forested natural area (Newell Creek Canyon Natural Area). The majority of the site consisted of three graded benches that stepped down to the east. Each bench was nearly level to gently sloping and were separated by graded slopes up to about 10 feet high with gradients up to about 3 horizontal to 1 vertical (3H:1V). Topography of the site is consistent with that shown on the existing conditions survey map provided by the client, as shown on **Figure 8 - Topographic Map** in the **Figures** section of this report. Photographs taken at the time of our reconnaissance are presented in the **Photography Log**.

The former building pad portions of the site above the headscarp were vacant and free of structures. This portion of the site appeared to be in a condition virtually identical to that described in the referenced reports. No signs of slope instability were noted on this portion of the site.

The headscarp appeared to be in a condition identical to that described in the referenced reports, with no indicators of additional failures noted during our reconnaissance. The slope was generally vegetated with fir and oak trees. The majority of the trees on the slope exhibited straight trunks. We noticed several recent treefalls on the slope, which appeared to be the result of wind and/or ice and not slope failures since the disturbed soils were limited to the root wads of the fallen trees.

The areas of variable vegetation noted during our review of aerial photographs were located near the toe of the headscarp within the natural area, as shown on **Figure 9 - Reconnaissance Plan** in the **Figures** section of this report. Both areas contained vegetation different than the surrounding trees. The soils in these areas had a higher moisture content than the slope or surrounding areas at the base of the headscarp. A spring was located at the base of the slope east of the northeastern property corner at the northern “wet soils” area shown on **Figure 9 - Reconnaissance Plan** in the **Figures** section of this report. Based on topography, these areas represent “sag ponds” that often form at the base of headscarps after a landslide. In this case, the sag ponds did not contain standing water but did maintain a higher soil moisture content than the surrounding soils that was not conducive to tree growth. The areas surrounding the sag ponds were vegetated with mature trees, with no indications of recent reactivations of the landslide.

SEISMIC CONSIDERATIONS

Seismic Design

The seismic design requirements for structures are based on the Seismic Design Category. Site Classification is required to determine the Seismic Design Category for a structure. The Site Classification is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance, or undrained shear strength in accordance with Section 20.4 of ASCE 7-16.

Description	Value
2019 Oregon Structural Specialty Code (OSSC) [1]	D[2]
Site Latitude	45.3360°N
Site Longitude	122.5880°W
S_S MCE_R Ground Motion for a Short Period [3]	0.812g
S_1 MCE_R Ground Motion for a 1-Second Period [3]	0.366g
PGA_M Site Modified Peak Ground Acceleration	0.451

1. Seismic site classification in general accordance with the *2019 Oregon Structural Specialty Code (OSSC)*, which refers to ASCE 7-16.
2. ASCE 7-16 requires a site soil profile extending to a depth of 100 feet be used for seismic site classification. Borings at this site were extended to a maximum depth of 90½ feet. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area.
3. These values were obtained using online seismic design maps and tools available on the Applied Technology Council (ATC) website referenced in Section 1613.2.1 of the 2019 OSSC.

Liquefaction

Liquefaction is the phenomenon where saturated soils develop high pore-water pressures during seismic shaking and lose their strength characteristics. This phenomenon generally occurs in areas of high seismicity, where groundwater is shallow and loose granular soils or relatively low- to non-plastic fine-grained soils are present.

Based on their plasticity characteristics, the shallow high-plasticity soils are considered non-liquefiable. Based on their very stiff/dense nature, the underlying residual soil is considered non-liquefiable within the depths explored. In addition, relatively shallow, non-liquefiable basaltic andesite bedrock underlies the site. These findings are consistent with liquefaction hazard mapping for the site described above, which indicates soils at the site are non-liquefiable.

SLOPE STABILITY

Published geologic maps referenced in the attached October 8, 2012, engineering geology report and in the **Engineering Geology Update** section referenced above indicate that shallow surficial landsliding and debris flows are the primary types of slope failure in Newell Creek Canyon. In addition, recent hazard mapping indicates a moderate to high risk of deep-seated failures on the eastern portion of the site. It is our opinion that the previously discussed deep-seated failure of the mapped landslide was due to significant undercutting of lower-strength materials that underly the basalt by the ancestral Newell Creek. The resultant landslide debris covered the lower strength materials, forcing Newell Creek further to the east. In our opinion, the landslide debris and current location of Newell Creek provide a level of protection against erosion of the lower

strength materials, and a reduced risk of deep seated failures for the life of the current development.

Mechanics of Stability

Slope stability analyses take into consideration material strength, presence and orientation of weak layers, water (piezometric) pressures, surcharge loads, and the slope geometry. Mathematical computations are performed using computer-assisted simulations to calculate a Factor of Safety (FS). Minor changes to slope geometry, surface water flow and/or groundwater levels could result in slope instability. Reasonable FS values are dependent upon the confidence in the parameters utilized in the analyses performed, among other factors related to the project itself.

Geometric Analysis Results

Slope stability analyses were performed for the cross-section geometries based on the provided topographic map and publicly available topographic information. Parameters for the analyses were derived from our exploration program, experience, and laboratory tests. Stability analyses were conducted using the computer program Slope/W Version 7.16 developed by Geo-Slope International.

Unstable or Potentially Unstable Slopes

Based on the results of our field investigation, laboratory testing program, and geotechnical analysis, development of the site is considered feasible from a geotechnical viewpoint provided the conclusions and considerations provided herein are incorporated into the design and construction of the project. A horizontal acceleration of 0.225 (1/2 of the PGA_M) was entered for the seismic stability calculations.

The stability of the slopes at the cross-section locations shown on **Figure 3 –Exploration Plan East** were analyzed based on the provided topography, proposed grading, soil properties derived from our geotechnical exploration, laboratory test results and our experience with similar soil conditions. Soil and bedrock properties used in the analyses are shown below:

Material	Moist Unit Weight (pcf)	Drained Cohesion (psf)	Drained Friction Angle (degrees)
Existing Fill	120	0	27
Proposed Fill	125	0	32
Probable Slide Material	120	100	5
Residual Soil	125	250	30
Fresh Bedrock	150	500	45

Based on the analyses, the calculated FS for the critical surface identified in each section is shown below. It's important to note that these results incorporate the planned grading at this time. However, these analyses do not include any risk mitigation elements recommended later in this section.

Cross-Section	Minimum Calculated Factor-of-Safety for Slopes With Proposed Grading (no mitigation)	
	Static	Seismic
A-A'	1.65	1.06
B-B'	1.36	0.81
C-C'	1.91	1.17

The typically accepted minimum FS for static long-term slope stability supporting improvements is 1.5, and 1.15 for seismic slope stability. As shown in the table above, the proposed fill placement at the top of the slope will result in a factor of safety below the accepted minimums.

Slope Hazard Mitigation Recommendations

We evaluated multiple slope stability mitigation options including the use us deep foundations to support the proposed parking areas, the use of lightweight fill materials, and incorporating geogrid into the new structural fill areas. Based on our analyses, we recommend the proposed retaining wall incorporate a row of soldier piles to reinforce the top of the slope. The soldier piles should consist of a row of drilled shaft cast-in-place concrete piers. In addition, we recommend buildings setback a minimum of 35 feet from the top of the headscarp at the east end of the site. This line is shown on the attached **Figure 9 - Reconnaissance Map** and **Figure 3 - Exploration Plan East**. These piles should be embedded a minimum of 5 feet into the bedrock materials. Additional discussion of these recommendations is provided in **Geotechnical Overview** section. Details of the pile recommendations are provided in the **Soldier Pile Walls** section.

Incorporating these recommendations into the slope stability analyses results in the following calculated FS for the critical surfaces:

Cross-Section	Minimum Calculated Factor-of-Safety for Slopes Mitigated with Soldier Piles	
	Static	Seismic
A-A'	2.48	1.61
B-B'	2.87	1.56
C-C'	2.80	1.75

While these factors of safety appear significantly higher than the goal of design of 1.5 for static and 1.15 for seismic, these are the minimums provided the piles are embedded into the bedrock. Our analyses for piles not embedded into the bedrock did not achieve adequate factors of safety. As indicated in the preceding table, installation of soldier piles will provide sufficient increase in

the factors of safety. The slope stability results for each cross section representing the proposed grading incorporating soldier piles are included as **Figures 13 through 18** in the **Figures** section of this report.

GEOTECHNICAL OVERVIEW

Based on the results of our slope stability and engineering analyses, it is our opinion that the proposed development is feasible from the geotechnical engineering standpoint. The primary geotechnical considerations for development of the site are:

- **Existing Landslide Hazard:** As indicated above, we recommend the retaining wall at the east end of the site incorporate a row of soldier piles to aid in slope stability. The soldier piles should consist of drilled shaft cast-in-place concrete piers that are designed to provide lateral support for new fill and existing native soils (above the bedrock) west of the proposed retaining wall. Soldier pile recommendations are provided in the **Soldier Pile Walls** section. In addition, we recommend a 35-foot building setback from the top of the descending slope at the east end of the site (See **Figure 3 - Exploration Plan East**). The recommended setback is for habitable structures, so minor encroachments of parking and grading can be considered an acceptable use provided the following considerations are incorporated into final grading plans in order to minimize impact to slope stability:
  - Drainage should be controlled so that no water is discharged onto or over the descending slope.
  - Additional area loading of the top of the slope should be avoided (i.e. no additional fill that would increase weight at the top of the slope beyond that included in our slope stability model as shown on the proposed grading plan and cross sections).

- **Existing Fill Pad:** Up to about 7 feet of undocumented fill soils underlie the proposed parking and drive lane area at the east end of the site. “Undocumented” fill is fill that lacks documentation regarding its subgrade conditions or evaluation of compaction while it was placed. Due to the potential of long-term settlement of such fill, we recommend the fill be removed and replaced with properly placed and compacted structural fill as described in the **Earthwork** section. The approximate area of the fill (based on topography) is shown on **Figure 8 - Topographic Map**.

- **Previous Tank Excavations:** Several underground storage tanks related to a former gas station were removed from within the southwest corner of the site in the parking area southwest of southern building pad fronting on Molalla Avenue. The approximate location of the former gas station is shown on the **Figure 8 - Topographic Map**. We are not aware of density test or observation reports regarding the placement of backfill within the excavations remaining after removal of the tanks. Therefore, we recommend the fill be treated as “undocumented,” and that it be removed and replaced with properly placed and compacted

structural fill. The suitability of existing fill for reuse as structural fill can be evaluated during construction. As an alternative, additional test pits could be advanced into the existing fill to determine if it can be reused as structural fill.

- **Moisture Sensitivity:** The near surface, silt soils could become unstable with typical earthwork and construction traffic, especially after precipitation events. The effective drainage should be completed early in the construction sequence and maintained after construction to avoid potential issues. If possible, the grading should be performed during the warmer and drier times of the year. If grading is performed during the winter months, an increased risk for possible undercutting and replacement of unstable subgrade will persist. Additional site preparation recommendations, including subgrade improvement and fill placement, are provided in the **Earthwork** section.

The **General Comments** section provides an understanding of the report limitations.

EARTHWORK

Earthwork is anticipated to include demolition, clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria, as necessary, to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Site Preparation

Prior to placing new fill, existing vegetation and root mat should be removed. Complete stripping of the topsoil should be performed in the proposed building and parking/driveway areas. Existing pavements, foundations, subsurface structures, and utilities remaining from previous development should be removed in their entirety. Existing fill soils should be removed and replaced with controlled structural fill.

The subgrade should be proof rolled with an adequately loaded vehicle such as a fully-loaded tandem-axle dump truck. The proof rolling should be performed under the direction of the Geotechnical Engineer. Areas excessively deflecting under the proof roll should be delineated and subsequently addressed by the Geotechnical Engineer. Such areas should either be removed or modified by stabilizing with cement. Excessively wet or dry material should either be removed or moisture conditioned and recompacted.

Terracon completed an Environmental Site Assessment (ESA) report for the project under separate cover. The ESA indicates contaminated soils within portions of the former wrecking yard at the east end of the site near the top of the descending slope. Any contaminated soils removed

near the top of the descending slope during remediation practices should be replaced with properly controlled, low-permeability structural fill soils. A former fueling station was also identified on the western portion of the site. We understand that the fuel tank was previously removed and the resulting excavation was loosely backfilled with excavated soils. The contractor should be aware that earthwork activities associated with the proposed development may encounter contaminated native and/or undocumented fill soils within these areas. The ESA reports completed for the site should be thoroughly reviewed prior to the start of earthwork activities.

Existing Fill

As noted in **Geotechnical Characterization**, many of the explorations encountered existing fill to depths of up to about 7 feet. The consistency/density of the fill is highly variable. Therefore, we recommend the fill be completely removed and replaced with properly placed and compacted structural fill in proposed building and pavement areas. Removal of undocumented fill soils should extend a minimum of 10 feet beyond building and pavement areas. Once materials have been removed, the entire area should be proof rolled with heavy, rubber tire construction equipment, to aid in delineating areas of soft or otherwise unsuitable soil. Areas of soft or otherwise unsuitable material should be undercut and replaced with either new structural fill or suitable, existing on site materials. Once unsuitable materials have been remediated, and the subgrade has passed the proof roll test, the existing and undocumented fill that was removed can be evaluated for reuse as structural fill.

Subgrade Stabilization

For this site, improvement of working surfaces subgrade with Portland cement could be considered. Cement amendment of soils should be performed by a pre-qualified contractor having experience with successfully stabilizing subgrades in the project area on similar sized projects with similar soil conditions.

For planning purposes, we estimate that pavement subgrades would need to be amended with an approximate 7 to 8 percent cement by dry weight in order to provide a stabilized subgrade for both wet weather and pavement support. We recommend a cement-amendment design be prepared during the full design phase to refine this estimate for construction specifications.

Fill Material Types

Fill required to achieve design grades should be classified as select fill, structural fill and general fill. Select fill is material used below turbine foundations, whereas structural fill is material used above or within 10 feet of foundation structures and within roadways or constructed slopes. General fill is material used to achieve grade outside of these structural areas. Fill materials used should meet the following material property requirements:

Soil Type[1]	Specification	Acceptable Parameters (for Structural Fill)
Common Fill	2021 ODOT Standard Specifications for Construction (ODOT SSC) Section 00330.13 Selected General Backfill[2]	All locations across the site, except beneath footing pads Dry weather only
Granular Common Fill	ODOT SSC Section 0030.13 Selected General Backfill[3]	All locations across the site. Dry weather only
Select Fill	ODOT SSC Section 00330.14 Selected Granular Backfill[4]	All locations across the site. Wet and Dry weather acceptable.
Crushed Aggregate Base (CAB)	ODOT SSC Section 02630.10 Dense Graded Aggregate (2”-0 to 1”-0) with the modification that less than 8% pass the No. 200 sieve as determined by ASTM D 422.	Finished base course materials for roadways and footing subgrades.
Lean Concrete (Mud-Mat)	ODOT SSC 00442 with the exception that minimum 28-day strength shall be 500 psi. Higher strength minimums may be specified by the Structural Engineer as needed.	All locations underneath mat foundations and spread foundations.

1. Controlled, compacted fill should consist of approved materials that are free (free = less than 3% by weight) of organic matter and debris (i.e. wood sticks greater than ½ inch in diameter). Frozen material should not be used, and fill should not be placed on a frozen subgrade. A sample of each material type should be submitted to the geotechnical engineer for evaluation.
2. Material should have a liquid limit less than 40 and plasticity index of less than 10.
3. Material should have less than 50% passing the No. 200 sieve and be non-plastic in nature.
4. Material should have a maximum aggregate size of 2 inches and no more than 8% passing the No. 200 sieve by weight determined by ASTM D 422.
5. Decomposed bedrock and basalt bedrock can be used as fill/backfill provided it is properly processed to a “soil-like consistency” to meet the USCS Classifications presented above with no pieces larger than 2 inches.
6. The contractor shall select the appropriate material for use based on the current and forecasted weather conditions at the time of construction.

Fill Compaction Requirements

Recommended compaction and moisture content criteria for structural fill materials are as follows:

Material Type and Location	Minimum Compaction Requirement (%)	Range of Moisture Contents for Compaction	
		Minimum	Maximum
Common Fill	**Per the Modified Proctor Test (ASTM D 1557)**		
All locations where used	95	-2%	+2%
Select Fill & CAB	**Per the Modified Proctor Test (ASTM D 1557)**		

Material Type and Location	Minimum Compaction Requirement (%)	Range of Moisture Contents for Compaction	
		Minimum	Maximum
All locations where used (e.g. beneath foundations, slabs, pavements)	95	-4%	+2%

Utility Trench Backfill

For low permeability subgrades, utility trenches are a common source of water infiltration and migration. Utility trenches penetrating beneath the buildings should be effectively sealed to restrict water intrusion and flow through the trenches, which could migrate below the buildings. The trench should provide an effective trench plug that extends at least 5 feet from the face of building exteriors. The plug material should consist of cementitious flowable fill or low permeability clay. The trench plug material should be placed to surround the utility line. If used, the clay trench plug material should be placed and compacted to comply with the water content and compaction recommendations for structural fill stated previously in this report.

Grading and Drainage

All grades must provide effective drainage away from the buildings during and after construction and should be maintained throughout the life of the structure. Water retained next to the buildings can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential floor slab and/or foundation movements, cracked slabs and walls, and roof leaks. The roofs should have gutters/drains with downspouts that discharge onto splash blocks at a distance of at least 10 feet from the buildings.

Exposed ground should be sloped and maintained at a minimum 5% away from the buildings for at least 10 feet beyond the perimeter of the buildings. Locally, flatter grades may be necessary to transition ADA access requirements for flatwork. After building construction and landscaping have been completed, final grades should be verified to document effective drainage has been achieved. Grades around the structure should also be periodically inspected and adjusted, as necessary, as part of the structure's maintenance program. Where paving or flatwork abuts the structure, a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

Earthwork Construction Considerations

Shallow excavations for the proposed structures are anticipated to be accomplished with conventional construction equipment. Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of floor slabs. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or

adjacent to construction areas should be removed. If the subgrade freezes, desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to floor slab construction.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, “Excavations” and its appendices, and in accordance with any applicable local, and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer. Monitoring should include documentation of adequate removal of vegetation and topsoil, proof rolling, and mitigation of areas delineated by the proof roll to require mitigation.

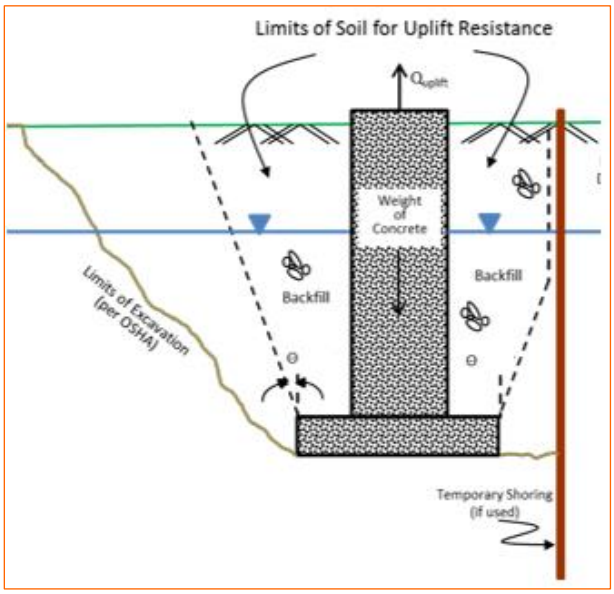
Each lift of compacted fill should be tested, evaluated, and reworked, as necessary, until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the building areas and 5,000 square feet in pavement areas. One density and water content test should be performed for every 50 linear feet of compacted utility trench backfill. In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer. If unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer’s evaluation of subsurface conditions, including assessing variations and associated design changes.

SHALLOW FOUNDATIONS

If the site has been prepared in accordance with the requirements noted in the **Earthwork** section, the following design parameters are applicable for shallow foundations.

Design Parameters – Compressive Loads

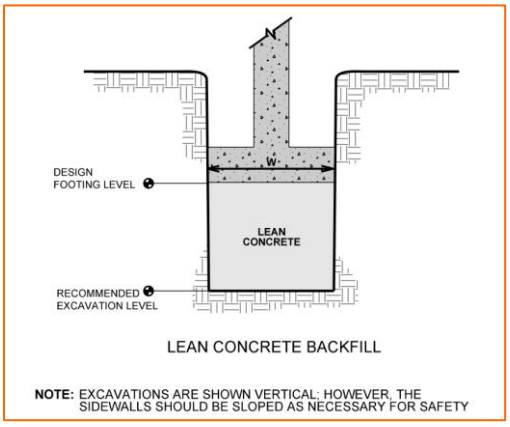


Item	Description
Maximum Net Allowable Bearing Pressure[1,2]	2,000 psf
Required Bearing Stratum[3]	Structural fill or undisturbed native residual soil
Minimum Foundation Dimensions	Columns: 24 inches Continuous: 18 inches
Ultimate Passive Resistance[4] **(equivalent fluid pressures)**	150 pcf (cohesive backfill) 360 pcf (granular backfill)
Ultimate Coefficient of Sliding Friction[5]	0.30 (native silt soils) 0.50 (granular structural fill material)
Minimum Embedment below Finished Grade[6]	Exterior footings in unheated areas: 12 inches Exterior footings in heated areas: 12 inches Interior footings in heated areas: 12 inches
Estimated Total Settlement from Structural Loads[2]	Less than about 1 inch
Estimated Differential Settlement[2,7]	About ⅔ of total settlement

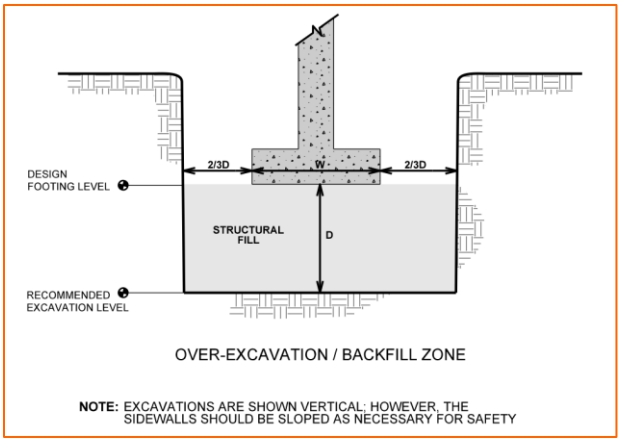
1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. An appropriate factor of safety has been applied. Values assume that exterior grades are no steeper than 20% within 10 feet of structure.
2. Values provided are for maximum loads noted in **Project Description**.
3. Unsuitable or soft soils should be overexcavated and replaced per the recommendations presented in the **Earthwork**.
4. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed and compacted structural fill be placed against the vertical footing face.
5. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions.
6. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure.
7. Differential settlements are as measured over a span of 50 feet.

Design Parameters - Uplift Loads

Uplift resistance of spread footings can be developed from the effective weight of the footing and the overlying soils. As illustrated on the subsequent figure, the effective weight of the soil prism defined by diagonal planes extending up from the top of the perimeter of the foundation to the ground surface at an angle, θ, of 20 degrees from the vertical can be included in uplift resistance. The maximum allowable uplift capacity should be taken as a sum of the effective weight of soil plus the dead weight of the foundation, divided by an appropriate factor of safety. A maximum



total unit weight of 100 pcf should be used for the backfill. This unit weight should be reduced to 40 pcf for portions of the backfill or natural soils below the groundwater elevation.



Foundation Construction Considerations

As noted in **Earthwork**, the footing excavations should be evaluated under the direction of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Concrete should be placed soon after excavating to reduce bearing soil disturbance. Care should be taken to prevent wetting or drying of the bearing materials during construction. Excessively wet or dry material or any loose/disturbed material in the bottom of the footing excavations should be removed/reconditioned before foundation concrete is placed.

If unsuitable bearing soils are encountered at the base of the planned footing excavation, the excavation should be extended deeper to suitable soils, and the footings could bear directly on these soils at the lower level or on lean concrete backfill placed in the excavations. This is illustrated on the sketch below.

Overexcavation for structural fill placement below footings should be conducted as shown below. The overexcavation should be backfilled up to the footing base elevation, with structural fill placed, as recommended in the **Earthwork** section.

FLOOR SLABS

Depending upon the finished floor elevation, unsuitable, undocumented fills may be encountered at the floor slab subgrade levels. These soils should be replaced with structural fill so the floor slab is supported on suitable natural soils or newly placed structural fill.

Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

Floor Slab Design Parameters

Item	Description
Floor Slab Support [1]	Minimum 6 inches of free-draining (less than 6% passing the U.S. No. 200 sieve) crushed aggregate compacted to at least 95% of ASTM D 698 [2, 3]
Estimated Modulus of Subgrade Reaction [2]	100 pounds per square inch per inch (psi/in) for point loads

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation.
2. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in **Earthwork**, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.
3. Free-draining granular material should have less than 5% fines (material passing the No. 200 sieve). Other design considerations such as cold temperatures and condensation development could warrant more extensive design provisions.

The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.

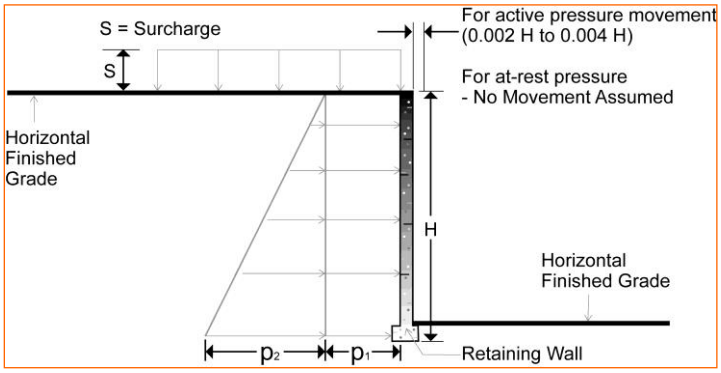
Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual. Joints or cracks should be sealed with a water-proof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing or other means.

Mitigation measures, as noted in **Existing Fill** within the **Earthwork** section, are critical to the performance of floor slabs. In addition to the mitigation measures, the floor slab can be stiffened by adding steel reinforcement, grade beams and/or post-tensioned elements.

Floor Slab Construction Considerations

Finished subgrade, within and for at least 10 feet beyond the floor slab, should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor



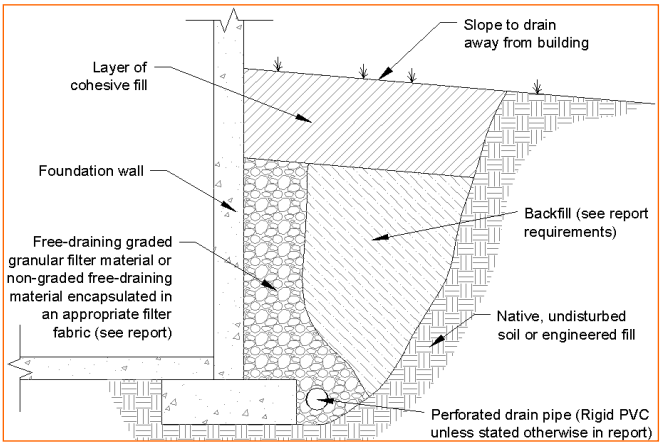
slabs, the affected material should be removed and structural fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel, and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

LATERAL EARTH PRESSURES

Design Parameters

Structures with unbalanced backfill levels on opposite sides should be designed for earth pressures at least equal to values indicated in the following table. Earth pressures will be influenced by structural design of the walls, conditions of wall restraint, methods of construction and/or compaction and the strength of the materials being restrained. Two wall restraint conditions are shown in the diagram below. Active earth pressure is commonly used for design of free-standing cantilever retaining walls and assumes wall movement. The “at-rest” condition assumes no wall movement and is commonly used for basement walls, loading dock walls, or other walls restrained at the top. The recommended design lateral earth pressures do not include a factor of safety and do not provide for possible hydrostatic pressure on the walls (unless stated).



Lateral Earth Pressure Design Parameters				
Earth Pressure Condition [1]	Coefficient for Select Fill Backfill [2]	Surcharge Pressure [3, 4, 5] p_1 (psf)	Effective Fluid Pressures (psf) [2, 4, 5]	
			Unsaturated [6]	Submerged [6]
Active (Ka)	0.31	(0.27)S	(35)H	0.27
At-Rest (Ko)	0.47	(0.43)S	(55)H	0.43
Passive (Kp)	3.25	---	(480)H	3.69

1. For active earth pressure, wall must rotate about base, with top lateral movements 0.002 H to 0.004 H, where H is wall height. For passive earth pressure, wall must move horizontally to mobilize resistance.
2. Uniform, horizontal backfill, compacted to at least 95% of the ASTM D 1557 maximum dry density, rendering a maximum unit weight of 120 pcf.
3. Uniform surcharge, where S is surcharge pressure.
4. Loading from heavy compaction equipment is not included.
5. No safety factor is included in these values.
6. To achieve “Unsaturated” conditions, follow guidelines in Subsurface Drainage for Below-Grade Walls section below. “Submerged” conditions are recommended when drainage behind walls is not incorporated into the design.

Backfill placed against structures should consist of granular soils or low plasticity cohesive soils. For the granular values to be valid, the granular backfill must extend out and up from the base of the wall at an angle of at least 45 and 60 degrees from vertical for the active and passive cases, respectively.

Subsurface Drainage for Below-Grade Walls

A perforated rigid plastic drain line installed behind the base of walls and extends below adjacent grade is recommended to prevent hydrostatic loading on the walls. The invert of a drain line around a below-grade building area or exterior retaining wall should be placed near foundation bearing level. The drain line should be sloped to provide positive gravity drainage to daylight or to a sump pit and pump. The drain line should be surrounded by clean, free-draining granular material having less than 5% passing the No. 200 sieve, such as No. 57 aggregate. The free-draining aggregate should be encapsulated in a filter fabric. The granular fill should extend to within 2 feet of final grade, where it should be capped with compacted cohesive fill to reduce infiltration of surface water into the drain system.

As an alternative to free-draining granular fill, a pre-fabricated drainage structure may be used. A pre-fabricated drainage structure is a plastic drainage core or mesh which is covered with filter fabric to prevent soil intrusion, and is fastened to the wall prior to placing backfill.

SOLDIER PILE WALLS

Based on the slope stability analyses and the proposed development plan, we recommend that the retaining wall along the east end of the proposed fill pad be supported on deep foundations consisting of a row of cast in place concrete piles. Based on our analyses, the piles should be spaced no more than 8 feet apart. The piles should be embedded a minimum of 5 feet into the basalt bedrock encountered at the site, and should be designed to retain the proposed structural fill (under the parking and drive lanes), and underlying native residual soils to the surface of the bedrock. Based on our explorations, the surface of the bedrock ranges from about 20 to 33 feet below site grades along the wall alignment. This depth will likely have more variation during construction to the variable thickness of the fill present at the site.

Lateral Earth Pressures

Based on slope stability analyses attached to this report, we recommend the piles be designed to retain the soils from the proposed finished grade to the surface of the basalt bedrock. The parameters defined in the table below should be utilized in the design of the drilled shafts to determine required embedment depth and spacing, taking into consideration a minimum spacing between piles of 8 feet along the top of the slope and a minimum embedment of 5 feet into the bedrock. Additional embedment into the bedrock may be necessary to provide adequate resistance to overturning.

The design of lateral earth stabilization piers is conventionally accomplished using empirical relationships and apparent earth pressure distributions. These earth pressure distributions or envelopes do not represent the precise distribution of earth pressures but rather constitute

hypothetical pressures from loads can be calculated which would not likely be exceeded in the event of a landslide.

Design of these systems could be based on either “active” or “at-rest” lateral earth pressures, depending on the degree of deformation that can be tolerated. Piers which are free to deform on the order of 0.001 to 0.002 times the height of the exposed potential height is considered to be capable of mobilizing active earth pressures. This lateral deformation is likely to be accomplished by vertical settlement of up to roughly 0.002 times the height of the piers, which may extend back from the side of the slide face a distance equal to roughly the height of the exposed height. A greater amount of lateral deformation could allow greater vertical settlements. Since there are structural elements within the zone considered to be at risk during a potential slide, we believe it is appropriate to design utilizing at-rest earth pressures.

An assumed “at-rest” earth pressure condition theoretically assumes no movement of the soil behind the stabilization piers; however, some settlement should realistically be anticipated due to construction practices and/or the fact that it is not possible to construct a perfectly stiff system and the space between the piers are reliant on soil arching for support should be piers be exposed.

Material	Equivalent Fluid Weight		Strength Parameters (Drained)	
	At Rest (pcf)	Allowable Passive (pcf)	Drained Cohesion (psf)	Drained Friction Angle (degrees)
Existing Fill	120	320	0	27
Proposed Fill	125	407	0	32
Residual Soil	125	375	250	30
Fresh Bedrock	150	874	500	45

In the table above, the at-rest pressures act on the pile spacing above the bedrock and on the pier diameter below that depth. The passive pressures act on twice the pier diameter. We recommend a minimum pier embedment of at least 5 feet into competent basalt bedrock.

Construction Considerations

If soldier piles are installed prior to removal of the existing debris-laden undocumented fill, caving conditions should be expected in the fill materials. Therefore, drilled shaft excavations may require the use of temporary casing and drilling fluid to maintain integrity of the excavation walls and bottom. Groundwater was not encountered within the anticipated depth of drilling, but isolated perched zones may be encountered within the residual soil or at the top of the underlying bedrock, particularly following periods of heavy rainfall. Thick drilling fluid and/or casing may be required to offset the groundwater and caving conditions. Following completion of the excavation and prior

to installing reinforcement or concrete the bottom of the shaft must be cleaned of any soft or loose material.

Caving of the sidewalls and/or heaving of the shaft bottoms may occur during wet weather conditions. We recommend that the contractor be prepared to use casing and/or slurry installation methods in the event that wall sloughing, caving, or heave occurs. The contractor should also be equipped to clean out the bottom of the shafts if loose soil is observed or suspected.

If less than 3 inches of water is present in the bottom of the excavation, groundwater seepage into the excavation is at a rate of no more than 12 inches per hour and the shaft diameter is greater than or equal to 3 feet; concrete may be placed by free-fall. Under free-fall placement, deposit concrete through the center of the reinforcement cage by a method which prevents segregation of aggregates and splashing of concrete on the reinforcement cage. Place concrete so that the free-fall is vertical down the center of the shaft without hitting the sides, the steel reinforcing bars or steel cage bracing.

If the drilled shaft does not meet the above requirements, we recommend placing concrete from the bottom of the holes with a tremie pipe to form a continuous column and prevent aggregate separation. Concrete should be placed with a higher than average slump into the excavation through a tremie pipe extending to the bottom of the excavation. An uninterrupted supply and placement of concrete should be performed to produce a monolithic pier. Use clean, watertight tremie pipes large enough in diameter to allow the free flow of concrete. The tremie pipes should be placed within one to two feet above the bottom of the excavation prior to the commencement of concrete placement. Maintain a minimum 5 feet embedment of the tremie pipe in the concrete during concrete placement.

The bottom of the shaft must be observed or tested to verify that all loose material has been removed and dense granular soil is exposed. The contractor should review the conditions encountered and reported on the boring logs and in this report and provide appropriate equipment to excavate the shafts to the design depths at this site.

Reinforcing steel and concrete should be placed inside the temporary casing. The casing should be pulled as the concrete is placed to provide final contact between the soil and the concrete. A minimum head of 5 feet of concrete should be maintained above the lower edge of the casing as it is pulled to prevent intrusion of soil during extraction.

PAVEMENTS

General Pavement Comments

Pavement designs are provided for the traffic conditions and pavement life conditions as noted in **Project Description** and in the following sections of this report. A critical aspect of pavement performance is site preparation. Pavement designs noted in this section must be applied to the site which has been prepared as recommended in the **Earthwork** section.

Pavement Design Parameters

Design of Asphaltic Concrete (AC) pavements are based on the procedures outlined in the American Association of State Highway and Transportation Officials (AASHTO), 1993. Design of Portland Cement Concrete (PCC) pavements are based upon American Concrete Institute (ACI) 330; Guide for Design and Construction of Concrete Parking Lots.

A subgrade CBR of 9 (from attached laboratory testing) was used for the AC pavement designs, and a modulus of subgrade reaction (k) of 100 pci was used for the PCC pavement designs where subgrade stabilization consisting of CAB or cement treated soil is employed. The values were empirically derived based upon our experience with the fine-grained subgrade soils and our understanding of the quality of the subgrade as prescribed by the **Site Preparation** conditions as outlined in **Earthwork**. A modulus of rupture of 580 psi was used for pavement concrete.

Pavement Section Thicknesses with Subgrade Stabilization

As a minimum, we suggest the following pavement section be considered:

Asphaltic Concrete Design		
Layer	Thickness (inches)	
	Light Duty [1]	Heavy Duty [1]
AC [2]	3	4
Aggregate Base [3]	7	8

1. See **Project Description** for more specifics regarding Light Duty and Medium Duty traffic.
2. All materials should meet the Oregon Department of Transportation (ODOT) Standard Specifications for Construction (2018).
   - Asphaltic Surface - ODOT Type A Asphaltic Cement Concrete: Section 00744
   - Asphaltic Base - ODOT Type B Asphaltic Cement Concrete, Class I: Section 00745
3. A minimum 1.5-inch surface course should be used on ACC pavements.

Portland Cement Concrete Design		
Layer	Thickness (inches)	
	Light Duty [1]	Heavy Duty [3]
PCC [2]	5	6
Aggregate Base [3]	7	8

1. See **Project Description** for more specifics regarding traffic classifications.
2. All materials should meet the current State Department of Transportation ODOT) Standard Specifications for Highway and Construction (2018).
   - Concrete Pavement - ODOT Portland Cement Concrete Type C: Section 00756
3. In areas of anticipated heavy traffic, fire trucks, delivery trucks, or concentrated loads (e.g. dumpster pads), and areas with repeated turning or maneuvering of heavy vehicles.

We understand that typical fire departments require that the proposed pavement sections at the site will support a fire emergency truck once the apartment complex is constructed. Typically, we estimate total fire-truck load of 80,000 pounds for a three axle (single tire) truck. Based on these assumptions and the proposed loading conditions, we computed the ultimate bearing capacity of the pavement sections relative to a 20 percent increase of the factored load of the fire truck. From a bearing failure standpoint, the Truck Loading Section pavements are estimated to be adequate for support of the fire truck vehicle (with a factor of safety of 2.5). Pavement areas may experience some localized cracking from these large fire truck vehicle loads but are not expected to experience bearing failure of the pavement section. Based on this analysis, it is our opinion that pavement will provide adequate support for the temporary use of an emergency fire truck at the site.

Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. The subgrade and the pavement surface should have a minimum ¼ inch per foot slope to promote drainage. Appropriate sub-drainage or connection to a suitable daylight outlet should be provided to remove water from the base layer.

Pavement Maintenance

The pavement sections represent minimum recommended thicknesses and, as such, periodic maintenance should be anticipated. Therefore, preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Maintenance consists of both localized maintenance (e.g., crack and joint sealing and patching) and global maintenance (e.g., surface sealing). Preventive maintenance is usually the priority when implementing a pavement maintenance program. Additional engineering observation is

recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur and repairs may be required. Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

- Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
- Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
- Install below pavement drainage systems surrounding areas anticipated for frequent wetting.
- Install joint sealant and seal cracks immediately.
- Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
- Place compacted, low permeability backfill against the exterior side of curb and gutter.
- Place curb, gutter and/or sidewalk directly on clay subgrade soils rather than on unbound granular base course materials.

GENERAL COMMENTS

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Natural variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence or collaboration through this system are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client, and is not intended for

third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety, and cost estimating including, excavation support, and dewatering requirements/design are the responsibility of others. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

Terracon Project No. 82125030

Dear Mr. Vanderdasson:

Terracon Consultants, Inc. (Terracon) is pleased to present our *Preliminary Engineering Geology and Soil Engineering Report* for the Proposed Retail Development project in Oregon City, Oregon. Our services were completed in general accordance with our *Proposal for Geotechnical Engineering Services – Revised* (P82110035R1), dated July 20, 2012. Email authorization to proceed with our services was provided by PACLAND on July 20, 2012. This report presents our preliminary conclusions regarding the stability of the slopes and soils from the proposed development.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report, or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants, Inc.

APPENDIX A – EXHIBITS

Exhibit A-1	Site Plan
Exhibit A-2	Landslide Map Excerpt
Exhibit A-3	Preliminary Geologic Cross Section
Exhibit A-4	Preliminary Static Slope Stability
Exhibit A-5	Preliminary Seismic Slope Stability

EXECUTIVE SUMMARY

The site's geology and associated geologic hazards were researched with regard to the proposed site development. The preliminary engineering geology and geotechnical considerations associated with the proposed project are summarized below.

- **Existing, Adjacent Landslide Hazards:** The steep slope area to the east is a well-documented landslide hazard area. However, the area immediately adjacent to the site is mapped as an ancient landslide. Recent surface reconnaissance of the steep slope area does not indicate recent movement of the weathered landslide features.

- **Proposed Development Feasibility:** The proposed development is feasible from a geotechnical standpoint provided structures, significant fills, and other loads are located outside a suitable setback. Previous engineering studies established a setback of 35 feet from the top of slope and may be used for planning purposes of the new development.

- **Retaining Walls:** A retaining wall is proposed along the east side of the truck route at the currently proposed 35-foot top of slope setback. Additional engineering design will be necessary for the retaining wall, although our preliminary slope stability models indicate the walls are setback sufficiently from the top of the slope and should not adversely impact the stability of the slope.

- **Site Drainage and Erosion Control:** Surface water should be collected and routed away from the steep slope area. Infiltration facilities should not be implemented due to the potential for the infiltrated water to daylight on the adjacent steep slope areas and decrease slope stability. The area within the setback at the top of the slope may be cleared of invasive vegetation, such as blackberries, and suitably vegetated to reduce erosion towards the steep slope area.

This summary should be used in conjunction with the entire report for design purposes. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein. The **GENERAL COMMENTS** section should be read for an understanding of the report limitation.

PRELIMINARY ENGINEERING GEOLOGY AND SOIL ENGINEERING REPORT PROPOSED RETAIL DEVELOPMENT MOLALLA AVENUE AND BEAVERCREEK ROAD OREGON CITY, OREGON

Project No. 82125030
October 8, 2012

1.0 INTRODUCTION

In accordance with your request and written authorization, Terracon has completed a Preliminary Engineering Geology and Soil Engineering Evaluation for the proposed retail development in Oregon City, Oregon. Terracon, formerly Zipper Zeman Associates (ZZA), previously completed the following reports:

- Preliminary Results of Slope Stability Evaluation, Proposed Retail Project, Molalla Avenue and Beavercreek Road, Oregon City, Oregon, by ZZA, dated July 3, 2002.
- Subsurface Exploration and Geotechnical Engineering Evaluation, Proposed Retail Project, Molalla Avenue and Beavercreek Road, Oregon City, Oregon, by ZZA, dated February 13, 2004.

2.0 PURPOSE AND SCOPE

The purpose of this report is to satisfy the requirement for both a Preliminary Engineering Geology Report and a Preliminary Soil Engineering Report as required by the Oregon City Geologic Hazards Checklist. An updated geotechnical engineering report will be provided at a later date with engineering recommendations to be used for final design of the development.

Our scope of services included a slope reconnaissance, review of previous subsurface boring and test pit explorations, review of published geologic literature, preliminary geotechnical engineering analysis, and preparation of this report.

3.0 PROJECT INFORMATION

3.1 Site Location

ITEM	DESCRIPTION
Location	The site is located at the northeast corner of Molalla Avenue and Beavercreek Road in Oregon City, Oregon as shown in Exhibit A-1 – Site Plan.
Existing improvements	The site is currently vacant and fenced off. All former buildings have been razed, although several slab and foundations remain. Several retaining walls and/or slopes on the order of 4 feet or less in height are on the site.
Surroundings	The site is bounded by single and multi-family residences to the north, Molalla Avenue and commercial properties to the west, commercial properties to the south, and an undeveloped steep slope area dropping off to the east.
Current ground cover	The site is covered with grass, shrubs (blackberries, etc.), and scattered to dense stands of trees. The southeast portion of the site is wooded, and the entire south edge of the property is overgrown with dense blackberry shrubs.
Existing topography	The majority of the site is relatively flat with several low retaining walls creating broad terraces stepping down to the east. The eastern edge of the site drops steeply down at inclinations in the range of 1½H:1V to ½H:1V to the east toward Newell Creek. The overall slope system height is on the order of 200 feet in vertical drop. We understand that this steep slope area contains active and ancient landslide complexes and has been studied extensively by Portland State University geologists and other researchers.

3.2 Project Description

ITEM	DESCRIPTION
Structures	Main Retail Building The project will include a new one-story retail building and loading dock with a proposed total footprint of approximately 60,000 square feet (SF). The building footprint is planned in the northeast portion of the site as shown on the attached Site Plan. Outlots 1- 4 Four outlots are currently planned for the western third of the site for three retail buildings ranging from approximately 3,600 SF to 7,200 SF and a one- to two-story commercial/office building of approximately 23,000 SF. Outlot 2 will potentially include a remote drive-thru banking structure.
Building construction	Main Retail Building We have assumed that the store will be constructed with masonry block load-bearing and non-load-bearing walls; steel columns, girders, and joists for support of the roof structure; and on-grade cast-in-place floor slabs. Outlots 1-4 No information is available on the outlot buildings, but we assume they will be either wood-framed or masonry block construction with slab-on-grade floors.
Finished floor elevations	Main Retail Building: Currently planned at elevation 445 feet. Outlot 1: Currently planned at elevation 448 feet. Outlot 2: Currently planned at elevation 444 feet. Outlot 3: Currently planned at elevation 442 feet. Outlot 4: Currently planned at elevation 448 feet.
Maximum loads	Main Retail Building Columns: 85 kips gravity and 150 kips maximum live loading. Walls: 1.5 to 2 klf non-load bearing and 4 to 6 klf for load bearing. Slabs: 125 psf uniform loading and 5-kip concentrated loading max. Outlot Buildings The loads for these buildings are not known at this time, but are assumed to not exceed those listed above for the main retail building.

ITEM	DESCRIPTION
Maximum allowable settlement	Main Retail Building Total Static Settlement: 1 inch Masonry Walls: L/900 or ½ inch over 40 feet Outlots Total Static Settlement: 1 inch (assumed) Differential: L/900 or ½ inch over 40 feet (assumed)
Grading	Significant fills on the order of 10 to 12 feet in maximum thickness are expected on the east half of the site and in the building pad. Excavation cuts (or removal of stockpile areas) up to approximately 10 feet may be needed in the proposed truck route off the southeast corner of the site in the existing stockpile areas.
Cut and fill slopes	3H:1V slopes approximately 4 feet or less in height are expected.
Free-standing retaining walls	An approximately 626-foot long by 5- to 12-foot high retaining wall is planned along the east edge of the truck route outside the steep slope setback. Guards rails and/or fall protection fencing are anticipated atop the retaining walls. Determination of the wall type, e.g., segmental block, soldier pile, etc., has not yet been determined along the east side of the truck route but will be determined as part of the final design to include slope stability concerns.
Below Grade Areas	A loading dock area is planned on the northeast corner of the building with a finish grade of 4 feet below the finish floor elevation.
Stormwater Management	A buried detention structure is planned in the southeast corner of the site under the parking area. We understand that the depth of the structure is currently planned at approximately 7 feet below finish grade.
Off-site Improvements	A public road and truck route is proposed from the southeast corner of the site south to Beavercreek Road.
Buried Utilities	We understand that stormwater and water pipes will run along the truck route on the east side of the site. Depths are anticipated to be 10 feet or less. A sanitary sewer line is proposed to run east-west from Molalla between Outlot 2 and Outlot 3 to the main retail building. The sanitary sewer will also run north-south up the Outlot 2 parking lot north to Outlots 1 and 4. Depths have not been determined yet, but may exceed 10 feet in depth.

4.0 LITERATURE REVIEW

Per Oregon City Municipal Code 17.44.050, we reviewed the following documents for this report:

- The State of Oregon Department of Geology and Mineral Industries (DOGAMI) in Bulletin 99, Geology and Geological Hazards of North Clackamas County, Oregon (1979), or in any subsequent DOGAMI mapping for the Oregon City area;
- Portland State University study entitled “Environmental Assessment of Newell Creek Canyon, Oregon City, Oregon (1992);
- Portland State University study, "Landslides in the Portland, Oregon, Metropolitan Area Resulting from the Storm of February 1996: Inventory Map, Database and Evaluation" (Burns and others, 1998);
- DOGAMI Open File Report O-06-27, "Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from LIDAR Imagery and Aerial Photographs" (Madin and Burns, 2006);
- "Preliminary Geologic Map of the Oregon City Quadrangle, Clackamas County, Oregon" (Madin, in press).

We also reviewed the following, more recently published documents:

- Map showing faults, bedrock geology, and sediment thickness of west half of Oregon City 1:100,000 quad, Washington, Multnomah, Clackamas and Marion Counties, Oregon, 1998, IMS-4, Burns et al., (DOGAMI)
- *Oregon Geologic Data Standard v. 2.1,* 2009 (DOGAMI)
- *Geologic Map of the Oregon City 7.5’ Quadrangle, Clackamas County, Oregon*, 2009, GMS-119 (DOGAMI)
- *Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from Lidar Imagery and Aerial Photographs*, O-06-27, 2006 (DOGAMI)
- *Landslide Inventory Map of the Northwest Quarter of the Oregon City Quadrangle, Clackamas County, Oregon*, IMS-26, 2009 (DOGAMI)

5.0 PRELIMINARY ENGINEERING GEOLOGY

According to Oregon City’s Geologic Hazards Checklist, a preliminary engineering geology report must be prepared that relates the following items to the actual development proposal:

- (5.1) A description of geologic formations, bedrock and surficial materials including artificial fill; location of any faults, folds, etc.
- (5.2) Structural data including bedding, jointing, and shear zones

- (5.3) Off-site geologic conditions that may pose a hazard to the site or that may be affected by on-site development
- (5.4) Cross sections showing subsurface structure, logs of subsurface explorations and analysis if necessary to evaluate the site
- (5.5) Signature and certification number of the engineering geologist
- (5.6) The report shall also contain a statement as to whether any hazard areas should not be disturbed because of the potential for damage to the site or neighboring properties
- (5.7) The report shall include specific comments resulting from their review of the civil plans for the project including recommendations on maximum cuts, structural fills, rockery walls, drainage behind any type of walls, maximum slopes above walls, removal of toe of slopes, the use of rock hammers and blasting, and so forth.

The above items are discussed individually in the following sections.

5.1 Geologic Description

Geologically, the site is located in the northern Willamette Valley, which consists of a structural trough between the Coastal Range and the Cascade Range. This basin is underlain by thick deposits of sand and gravel washed into it during the Pliocene epoch when the climate in the area was very dry. These granular deposits are locally covered by the Boring lavas (Qtb) in northwest Clackamas County.

Based on the *Oregon Geologic Data Standard v. 2.1* and Oregon Department of Geology and Mineral Industries *Geologic Map of the Oregon City 7.5' Quadrangle, Clackamas County, Oregon, 2009* this site is located within a geologic unit mapped as Tbc-Basalt of Canemah defined as flow or flows of grey medium-grained, olivine basalt. The Oregon Department of Geology and Mineral Industries (DOGAMI), Bulletin 99, *Geologic Map of the Canby and Oregon City Quadrangles, Oregon 1979*, maps the site as consisting of Boring lavas (Qtb), which it describes as Pliocene-Pleistocene lavas, light-gray, open-textured olivine basalt; flow structures common; includes some pyroclastic material of local extent; widely spaced joint pattern. Lavas and breccias have weathered to a residual red clay surface soil. Vertical exposures are susceptible to mass movement and deep bedrock sliding because of failure of underlying material (see the description below with clay materials within the Troutdale unit).

The Boring Lava deposits overly the Troutdale (Tpt), which are described as Pliocene sandstone and conglomerate; indurated beds and lenses of well-sorted sand and cobbly gravel with up to 30 percent quartzite clasts. Some sand originally composed of volcanic glass have altered to an impermeable high shrink-swell clay. The clay can be unstable and cause overlying competent units to fail by landslide. The publications indicate that on slopes where this clay layer daylights, one generally encounters a spring. Also, if layers dip out of the slope, it can become a failure

plane for a slump or slump-earthflow when the pore water pressure has built up to a critical value on top of the clay layer.

Based on the *Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from Lidar Imagery and Aerial Photographs, O-06-27, 2006* and the *Landslide Inventory Map of the Northwest Quarter of the Oregon City Quadrangle, Clackamas County, Oregon, IMS-26, 2009,* a mapped landslide was identified adjacent to the site to the east. The landslide is identified as a prehistoric or ancient landslide (movement greater than 150 years ago). This is defined by landslide features that are slightly eroded and there is no evidence of historic (recent in last 150 years) movement. In some cases, the observed landslide features have been greatly eroded and/or covered with deposits that result in smoothed and subdued morphology.

The borings completed for the previously referenced 2004 ZZA report are generally consistent with the above geologic mapping for the Boring Lavas/Basalt of Canemah, although the basalt has become deeply weathered in certain areas. The Troutdale unit was not encountered to the maximum depth of the borings at approximately 50½ feet below the ground surface. Although direct evidence of landslide features were not readily observed during our exploration programs for the 2004 report, we did observe the general headscarp area of the ancient landslide area during our 2012 slope reconnaissance with the aid of the recent Lidar-based landslide maps. An excerpt of the landslide map is appended as Exhibit A-2.

5.2 Structural Data

Bedrock outcrops or exposures were not observed during our site visits on the subject property or immediately downslope of the subject property. As discussed above, the bedrock in the site vicinity is mapped as Tbc-Basalt of Canemah defined as flow or flows of grey medium-grained, open-textured, olivine basalt. Flow structures are common, includes some pyroclastic material of local extent, and widely spaced joint pattern. Lavas and breccias have weathered to residual red clay surface soil. Vertical exposures are susceptible to mass movement and deep bedrock sliding because of failure of underlying material. The rock cores completed for the previously referenced 2004 ZZA report indicate close fracture spacing in the upper, weathered zones of the bedrock grading to wide fracture spacing in the fresh, competent bedrock at depth.

5.3 Off-Site Geologic Conditions

The *Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from Lidar Imagery and Aerial Photographs, O-06-27, 2006* and the *Landslide Inventory Map of the Northwest Quarter of the Oregon City Quadrangle, Clackamas County, Oregon, IMS-26, 2009,* indicate a mapped landslide area adjacent to the east side of the site. The landslide is identified as a prehistoric or ancient landslide (movement greater than 150 years ago). This is defined by landslide features that are slightly eroded and there is no evidence of historic (recent in last 150

years) movement. In some cases, the observed landslide features have been greatly eroded and/or covered with deposits that result in smoothed and subdued morphology.

During our initial exploration period during 2001-2002, we performed a surface reconnaissance of the steep slope area on the eastern edge of the site and immediately downslope of the site to the east. We also re-visited these areas on July 31, 2012 to determine the current conditions. During our slope reconnaissance visits, we walked and mapped the landslide area. We identified a main head scarp along the eastern site boundary, followed by numerous (3 to 5) internal scarps further east of the site within the ancient mapped landslide itself. A spring was observed at the base of the head scarp approximately 100 feet east of the northeast corner of the site at approximately 350 feet in elevation. A second spring was observed approximately 150 feet east of the southeast corner of the site at approximately 290 feet in elevation. Four nick points (i.e., drops in the streambed from erosion) were observed in the stream bed at the base of the ancient landslide ranging in height from 1½ feet to 6 feet. Gray, stiff to medium stiff, wet, lean clay with cemented clasts of gray clay was observed at various points along the stream bed. These deposits can be correlated to the fine grained portion of the Troutdale formation described above. At the time of our site reconnaissance Terracon did not identify new slide areas immediately downslope of the proposed development.

Our field observations agree with the above-referenced published landslide mapping. We did not observe indications of recent movement during our slope reconnaissance during the 2001-2002 ZZA exploration programs and our recent site visit in July 2012.

5.4 Geologic Cross-Sections

Our interpretation of the site's geologic cross-section is shown in Exhibit A-3 of this report.

5.5 Signature and Certification Number of Engineering Geologist

The signature and certification number of the engineering geologist is provided on the report signature page after the front cover.

5.6 Disturbance of Hazards Statement

The geologic hazards of concern for the site development are the steep slope area and ancient landslide to the east of the site. This geologic hazard area should not be disturbed due to the potential for damage to the site and/or neighboring properties. An exception for disturbance would be the removal of invasive vegetation, such as blackberry bushes, and replanting with species suitable for erosion control purposes. After removal of the invasive vegetation, minor grading may necessary, such as bucket smoothing and track walking the slope with a tracked

excavator, to reduce erosion and help temporary and permanent ground cover (e.g., hydroseed, mulch, bark, plantings, etc.) become established on the slope.

5.7 Civil Plans Review Comments

We have reviewed the current civil grading plans. The current site development plans are described in the Section 3 of this report and do not propose to disturb the geologic hazard area. These plans were developed using the 2004 ZZA report recommendations as a guideline. According to these plans, the maximum permanent cuts are relatively low, on the order of 2 to 3 feet for the retaining walls along the north property line. Fills will be up to approximately 12 feet along the east retaining wall area for the proposed truck route, but this wall will be located outside of a top of slope setback of 35 feet. The retaining walls, drainage behind the walls, and maximum slopes above and below the walls will be engineered as part of future design work for the site, and will consider the weight of the fill and loads on the retaining structure on the stability of the slope area. Consideration of the wall type, bedrock conditions, and associated installation procedures will also be included in the retaining wall design. In our opinion, the proposed site development is feasible from a geotechnical perspective without adverse impacts on the stability to the adjacent slope.

6.0 PRELIMINARY SOIL ENGINEERING REPORT

According to Oregon City's Geologic Hazards Checklist, a preliminary soil engineering report must be prepared that relates the following items to the actual development proposal:

- (6.1) The engineering feasibility of the proposed development and addressing strength properties of surface and subsurface soils with regard to stability of slopes
- (6.2) Appropriate types of foundations together with bearing values and settlement criteria for foundation design, soil erosion potential, permeability and infiltration rates
- (6.3) Excavation, filling and grading criteria including recommended final slopes
- (6.4) Surface and subsurface drainage; planting and maintenance of slopes
- (6.5) Other identified soil or subsurface constraints together with geotechnical remediation and other recommendations to alleviate or minimize their effects; and signature and seal of the geotechnical engineer
- (6.6) The report shall also contain a statement as to whether the proposed development, constructed in accordance with the recommended methods, is reasonably likely to be safe and prevent landslide or other damage to other properties over the long term, and whether any specific areas should not be disturbed by construction.

- (6.7) The report shall include specific comments resulting from their review of the civil plans for the project including recommendations on maximum cuts, structural fills, rockery walls, drainage behind any type of walls, maximum slopes above walls, removal of toe of slopes, the use of rock hammers and blasting, and so forth.

The above items are discussed individually in the following sections.

6.1 Engineering Feasibility

In our opinion, the proposed site development is feasible from a geotechnical perspective. Exhibits A-4 and A-5 show our preliminary slope stability models for static and seismic conditions, respectively. The following soil parameters were used in our analysis.

STRATA	FRICTION ANGLE (DEGREES)	COHESION (PSF)	UNIT WEIGHT (PCF)
Proposed Structural Fill	32	0	125
Existing Fill: Silt w/Debris	27	0	120
Highly – Moderately Weathered Basalt	30	250	125
Slightly Weathered to Fresh Basalt	45	250	150
Possible Slide Material	5	100	120

These parameters were partly based on the direct shear test results reported in the 2004 ZZA report and partly based on our engineering judgment. A horizontal seismic coefficient of 0.13g was used in our analysis, which is approximately one-half of the design earthquake peak ground acceleration determined per 2009 IBC methods. The models indicate factors of safety greater than 1.5 and 1.1 for static and seismic conditions, respectively. Based on the slope stability model, the proposed retaining wall and fill are far enough away from the slope and have low effect on the slope stability at the site from a preliminary standpoint.

6.2 Foundation Types, Soil Erosion Potential, Permeability/Infiltration

The appropriate type of foundation for the proposed buildings are conventional shallow spread footings. Allowable bearing values of 2,000 psf for up to 1 inch of settlement may be used for planning purposes.

According to the USDA Soil Conservation Service, the erosion potential of the site soils are "slight" on the relatively flat areas of the site and "severe" on the steep slope areas east of the site. Permeability ranges from 0.6 to 2.0 in the sites soils, however, infiltration systems are not recommended due to the location of the site adjacent the steep slope area.

6.3 Excavation, Filling, and Grading Criteria

Recommendations for excavation, filling and grading are included in the 2004 ZZA report and may be used for preliminary purposes. This information will be updated in the final geotechnical report.

6.4 Other Soil or Subsurface Constraints

Due to the previous development at the site, including existing foundations and floor slabs, existing fill will likely be encountered during subgrade preparation for fills and foundations. Within the proposed building pad, we recommend that all existing fill be removed down to suitable native soils, and the backfilled with compacted structural fill as recommended in the previous section and the 2004 report. Overexcavation of the existing fill soils will also likely be necessary in the retaining wall area along the east retaining wall (truck route). Alternatives, such as partial overexcavation and replacement or the use of aggregate pier ground improvement, should be considered during the final geotechnical report phase.

6.5 Proposed Development Stability Statement

In our opinion, the proposed development should not adversely affect the stability of the slope nor increase landslide risk to other properties with the incorporation of the 35-foot development setback. Additional fill or loads should not be placed over the unstable steep slope areas. The preliminary setback from the top of slope is currently 35 feet, but this may change on examination of new data and analysis from upcoming exploration and testing. It should be noted that there are documented, existing, ancient and recent landslides further downslope of the property that may continue to move but will not be adversely impacted by the subject site development. One benefit to the site development will actually be control of surface water, which currently is not being controlled above the steep slope area.

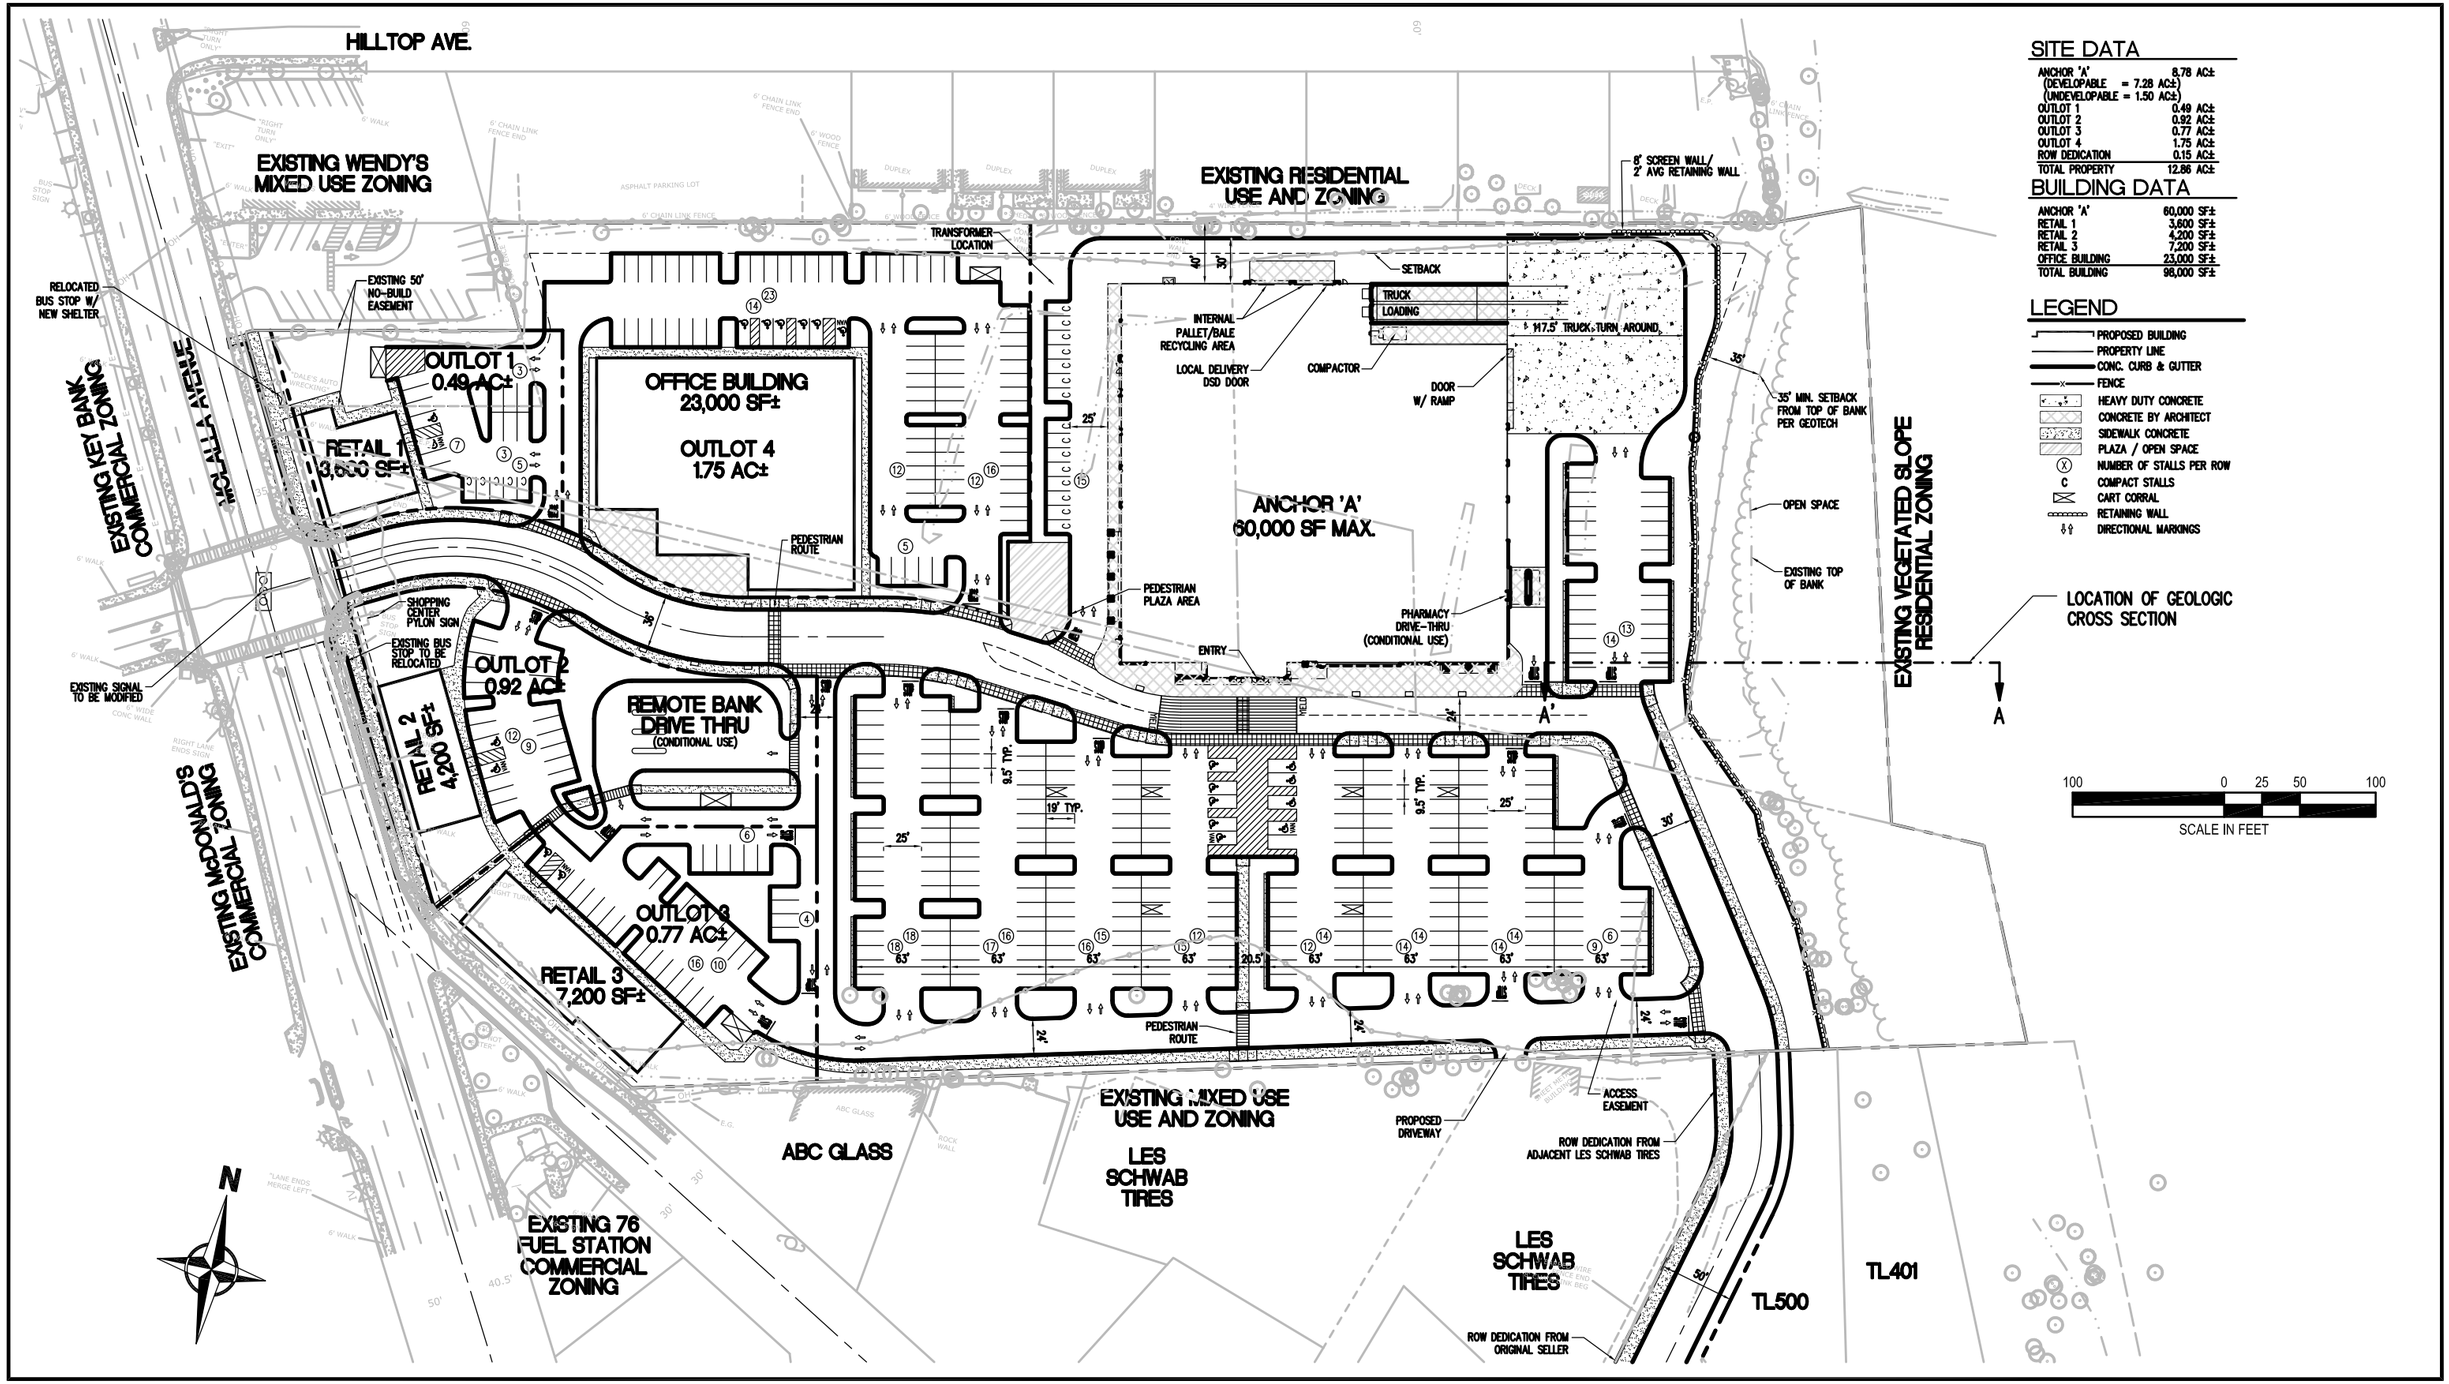
6.6 Civil Plans Review Comments

We have reviewed the current civil grading plans. The current site development plans are described in the Section 3 of this report and do not propose to disturb the geologic hazard area. These plans were developed using the 2004 ZZA report recommendations as a guideline. The maximum permanent cuts are relatively low, on the order of 2 to 3 feet for the retaining walls along the north property line. Fills will be up to approximately 12 feet along the east retaining

wall area for the proposed truck route, but this wall will be located outside of a top of slope setback of 35 feet. The retaining walls, drainage behind the walls, and maximum slopes above and below the walls will be engineered as part of future design work for the site, and will consider the weight of the fill and loads on the retaining structure on the stability of the slope area. Consideration of the wall type, bedrock conditions, and associated installation procedures will also be included in the retaining wall design. In our opinion, the proposed site development is feasible from a geotechnical perspective without adversely impacted the stability of the slope to the east.

7.0 GENERAL COMMENTS

Terracon should be retained to review the final design plans and specifications so comments can be made regarding interpretation and implementation of our geotechnical recommendations in the design and specifications. Terracon also should be retained to provide observation and testing services during grading, excavation, foundation construction and other earth-related construction phases of the project.



The analysis and recommendations presented in this report are based upon the data obtained from the borings performed at the indicated locations and from other information discussed in this report. This report does not reflect variations that may occur between borings, across the site, or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. If variations appear, we should be immediately notified so that further evaluation and supplemental recommendations can be provided.

The scope of services for this project does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

This report has been prepared in accordance with generally accepted geotechnical engineering practices for the exclusive use of PACLAND, and their respective successors and assigns, for specific application to the project location and stated purpose. No warranties, either express or implied, are intended or made. Site safety, excavation support, and dewatering requirements are the responsibility of others. In the event that changes in the nature, design, or location of the project as outlined in this report are planned, the conclusions and recommendations contained in this report shall not be considered valid unless Terracon reviews the changes and either verifies or modifies the conclusions of this report in writing.

LANDSLIDE ACTIVITY: Each landslide has been classified according to the relative age of last movement. This map display uses color to show the activity.

HISTORIC and/or ACTIVE (movement less than 150 years ago): The landslide appears to have moved within historic time or is currently moving (active).

PREHISTORIC or ANCIENT (movement greater than 150 years ago): Landslide features are slightly eroded and there is no evidence of historic movement. In some cases, the observed landslide features have been greatly eroded and/or covered with deposits that result in smoothed and subdued morphology.

2021 Exploration

Exploration Number	Exploration Type	Exploration Depth (feet)	Location	
			Latitude	Longitude
21-B-1	Drilled Boring	90½	45.3363°N	122.5863°W

Exploration Layout and Elevations: Terracon personnel provided the exploration layout. Coordinates were obtained with a handheld GPS unit (estimated horizontal accuracy of about ±10 feet) and approximate elevations were obtained from Google Earth Pro data. If elevations and a more precise exploration layout are desired, we recommend explorations be surveyed following completion of fieldwork.

Subsurface Exploration Procedures: We advance soil borings with a truck-mounted drill rig using continuous flight augers (hollow stem or solid stem). Four samples were typically obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. Soil sampling was performed using thin-wall tube and/or split-barrel sampling procedures. In the thin-walled tube sampling procedure, a thin-walled, seamless steel tube with a sharp cutting edge is pushed hydraulically into the soil to obtain a relatively undisturbed sample. In the split barrel sampling procedure, a standard 2-inch outer diameter split barrel sampling spoon is driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. The samples were placed in appropriate containers, taken to our soil laboratory for testing, and classified by a geotechnical engineer. In addition, we observed and recorded groundwater levels during drilling and sampling.

All explorations were supervised and logged by a field geologist who recorded field test data, classified soils, and collected the samples from the explorations. Our exploration team prepared field boring logs as part of standard drilling operations including sampling depths, penetration distances, and other relevant sampling information. Field logs include visual classifications of materials encountered during drilling, and our interpretation of subsurface conditions between samples. Final boring logs, prepared from field logs, represent the geotechnical engineer's interpretation, and include modifications based on observations and laboratory tests.

Upon encountering bedrock or refusal-to-drilling conditions, rock coring (using NQ/NX rock core barrel) was performed within select borings.

All explorations were supervised and logged by a field engineer or field geologist who recorded field test data, classified soils, and collected the samples from the explorations. Our exploration team prepared field boring logs as part of standard drilling operations including sampling depths, penetration distances, and other relevant sampling information. Field logs include visual classifications of materials encountered during drilling, and our interpretation of subsurface conditions between samples. Final boring logs, prepared from field logs, represent the geotechnical engineer's interpretation, and include modifications based on observations and laboratory tests.

Vibrating Wire Piezometer: We installed one vibrating wire piezometer (VWP) in boring 21-B-1 on December 17, 2021. The VWP was installed at a depth of approximately 30¾ feet below the ground surface (bgs), at the top of the intact, very low permeability, Boring lava (basaltic bedrock). This depth was determined by the project geotechnical engineer following completion of drilling. Prior to installation, the lower portion of the boring was filled with a bentonite chip-grout mixture and low-permeability grout was extended from approximately 35 feet bgs to about 1-foot bgs.

During installation, the VWP was taped to a one-inch diameter PVC pipe with the pressure sensor facing upwards. The VWP cable was taped to the PVC pipe on approximate 3-foot intervals as it was lowered into the boring. Once the VWP was at the target depth, a bentonite chip-grout mixture was placed from the bottom of the exploration to a depth of approximately 35 feet bgs. Then a low permeability grout was introduced to seal the upper portion of the exploration and allow the mini data logger to record changes in the vibrating wire frequency, and thus changes in pressure. The VWP wire was connected to a mini data logger housed within a steel, flush-mount wellhead. The mini data logger was set to record vibrating wire readings every 4 hours, starting December 20, 2021 at 5:00PM. Completion of the VWP is summarized in the following table:

Depth (feet bgs)	Description	Detail
0	Steel, flush-mount wellhead	Approximate 8-inch diameter and 18-inches tall
0 to 1	Void (open space)	---
1 to 35	Low permeability grout	50 PSI Grout for Medium to Hard Soils 30 gallon Water / 94 lb. Portland Cement
30¾	VWP piezometer installation	Geokon 4500S-350KPA (51psi)
35 to 90½	Bentonite chip-low permeability grout mixture	50 PSI Grout for Medium to Hard Soils 30 gallon Water / 94 lb. Portland Cement / 25 lb. Bentonite

Property Disturbance: We backfilled borings according to local jurisdiction requirements after completion of each exploration. Our services do not include repair of the site beyond backfilling our boreholes. Excess auger cuttings were dispersed in the general vicinity of each borehole. Since backfill material often settles below the surface after a period, we recommend boreholes be checked periodically and additional backfill added, if necessary.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests to understand the engineering properties of the various soil strata, as necessary, for this project. The following tests were performed for this project.

- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D6913 Standard Test Methods for Particle-Size Distribution (Gradation) of Soils Using Sieve Analysis
- AASHTO T-267 Standard Method of Test for Determination of Organic Content in Soils by Loss on Ignition
- ASTM D1883 Standard Test Method for California Bearing Ratio (CBR) of Laboratory-Compacted Soils
- ASTM D6913 Standard Test Methods for Particle-Size Distribution (Gradation) of Soils Using Sieve Analysis
- ASTM D1557 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort
- ASTM G51 Standard Test Method for Measuring pH of Soil for Use in Corrosion Testing
- ASTM C 1580 Standard Test Method for Water-Soluble Sulfate in Soil
- ASTM G187 Standard Test Method for Measurement of Soil Resistivity Using the Two-Electrode Soil Box Method
- ASTM D2938 Standard Test Method for Unconfined Compressive Strength of Intact Rock Core Specimens
- ASTM D3080 Standard Test Method for Direct Shear Test Of Soils Under Consolidated Drained Conditions

The laboratory testing program included examination of soil samples by an engineer. Based on the material's texture and plasticity, we described and classified the soil samples in accordance with the Unified Soil Classification System.

Rock classification was conducted using locally accepted practices for engineering purposes; petrographic analysis may reveal other rock types. Rock core samples typically provide an improved specimen for this classification. Boring log rock classification was determined using the Description of Rock Properties.

Zipper Zeman Associates, Inc. Geotechnical & Environmental Consultants	BORING LOG	Figure A-5
	Date Drilled: 10/31/01	Logged By: MJB

Test Pit TP-1
Approximate ground surface elevation: 425 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Duff over soft, damp, brown, SILT with trace fine sand. (Topsoil) Sparse fine roots to 1.2 feet and sparse medium roots to 2 feet.	S-1@0.5' MC=24%
1.0-3.0	Soft grading to stiff, damp, orange-brown, SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, rounded, basaltic andesite cobbles.	S-2@2' MC=16%
3.0-10.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp to moist, reddish orange-brown sandy silt with trace clay.	
	Test pit completed at 10.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-2
Approximate ground surface elevation: 435 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Duff over soft, damp to moist, dark brown, SILT with trace fine sand and occasional fine gravel. (Topsoil) Sparse fine roots to one foot and sparse medium to large roots to 2 ½ feet. Pocket penetrometer at 0.5 feet = 1.75 tons per square foot (tsf.)	
0.8-3.0	Soft grading to stiff, damp, orange-brown, SILT with trace clay, fine sand, and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, rounded, basaltic andesite boulders. Pocket penetrometer at 1.5 feet > 4.5 tsf.	S-1@1.5'
3.0-7.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish orange-brown silt with trace clay to silty SAND. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-2@3.5' MC=31%
	Digging refusal at 7.0 feet on a boulder on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-3
Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Duff over soft, moist to wet, dark brown, SILT with trace fine sand and occasional gray, moderately weathered, round, basaltic andesite boulders. (Topsoil) Sparse fine to medium roots to 1.2 feet.	S-1@0.5' S-2@1.0' MC=41%
1.0-2.5	Soft grading to stiff, damp to moist, orange-brown, SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.0 feet = 2.75 tsf.	S-3@2.0' MC=25%
2.5-11.5	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish orange-brown sandy silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-4@10.5' MC=44%
	Test pit terminated at 11.5 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-4
Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.3	Duff over soft, damp to moist, dark brown, SILT with trace fine sand (Topsoil.) Moderate to dense fine roots to 1.2 feet and sparse medium roots to 1.2 feet.	S-1@1.0' MC=36%
1.3-3.0	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.5 feet = 1.5 tsf.	S-2@2.5' MC=24%
3.0-11.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay.	S-3@6.0' MC=53%
	Test pit terminated at 11.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-5
Approximate ground surface elevation: 441 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.7	Duff over soft, moist to wet, dark brown, SILT with trace fine sand (Topsoil) Moderate to dense fine roots to 1.0 feet and sparse medium roots to 1.2 feet.	S-1@0.5’
0.7-3.5	Medium stiff, damp to moist, orange-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 3 feet > 4.5 tsf.	
3.5-7.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown sandy silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite boulders.	S-2@7.0’
	Test pit terminated at 7.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-6
Approximate ground surface elevation: 442 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.7	Duff over soft, moist, dark brown, SILT with trace fine sand. (Topsoil) Moderate to dense fine roots to 0.8 feet and sparse medium roots to 1.2 feet.	
0.7-3.5	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 3 feet = 2.0 to 2.5 tsf.	S-1@1.0’ S-2 @3.0’
3.5-10.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	S-3@5.5’
	Test pit terminated at 10.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-7
Approximate ground surface elevation: 443 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Short to medium length grass and blackberry vines over soft, moist to wet, dark brown, SILT with trace fine sand and occasional pockets of 3/8" minus crushed rock (Topsoil/FILL) Moderate to dense fine roots to medium roots to 1.2 feet.	S-1@0.5' MC=30%
1.0-3.5	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.0 feet = 3.75 tsf.	S-2@2.0' MC=21%
3.5-10.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional dark gray, subangular, slightly weathered, basalt with visible vesicles.	S-3@10.0' MC=56%
	Test pit terminated at 10.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-8
Approximate ground surface elevation: 443 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.2	Grass over soft, moist to wet, dark brown, sandy, gravelly SILT (Topsoil/FILL) Dense fine roots to 1.0 feet.	S-1@1.0'
1.2-4.0	Medium stiff, damp to moist, orange-brown, SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite boulders. Pocket penetrometer at 3.0 feet > 4.5 tsf.	
4.0-11.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-2@10.5'
	Test pit terminated at 11.0 feet on 11/1/01. Slight groundwater seepage observed at 11.0 feet. No caving observed.	

Test Pit TP-9
Approximate ground surface elevation: 444 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.7	Short grass and blackberry vines over soft, moist to wet, brown, gravelly SILT with trace fine sand. (Topsoil/FILL) Moderate to dense fine to medium roots to 1.0 feet.	S-1@0.5’
0.7-6.0	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
6.0-10.5	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	
	Test pit terminated at 10.5 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-10
Approximate ground surface elevation: 444 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Blackberry vines over soft, moist to wet, brown, SILT with trace fine sand. (Topsoil) Moderate to dense fine to medium roots to 1.2 feet.	S-1@1.0’ MC=28%
1.0-3.0	Soft grading to stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
3.0-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	S-2@5.0’ MC=20%
	Test pit terminated at 11.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-11
Approximate ground surface elevation: 444 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Blackberry vines over soft, moist to wet, dark brown, SILT with occasional gravel. (Topsoil) Moderate to dense fine to medium roots to 1.8 feet.	S-1@0.5 MC=32%
1.0-3.0	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@2.0' MC=29% S-3@5.0' MC=44%
3.0-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders. Test pit terminated at 11.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	S-4@9.0' MC=59%

Test Pit TP-12
Approximate ground surface elevation: 444 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.5	Short grass and blackberry vines over soft, moist to wet, brown, gravelly SILT with trace fine sand. (Topsoil/FILL) Moderate fine to medium roots to 0.9 feet.	S-1@1.0'
1.5-3.5	Soft grading to stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.0 feet = 1.75 tsf. Pocket penetrometer at 3.0 feet > 4.5 tsf.	
3.5-9.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders. Test pit terminated at 9.0 feet on 11/1/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-13
Approximate ground surface elevation: 445 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.5	Short grass and blackberry vines over soft, wet, brown, SILT with trace to some sand. (Topsoil) Moderate fine to medium roots to 1.5 feet.	S-1@0.3' MC=24%
0.5-3.0	Medium stiff grading to stiff, moist to wet, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@2.0'
3.0-6.0	Medium dense grading to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	
	Test pit terminated at 6.0 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-14
Approximate ground surface elevation: 447 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.5	Short grass and blackberry vines over soft, wet, brown, SILT with trace to some sand. (Topsoil) Moderate fine roots to 1.0 feet.	S-1@0.3'
0.5-4.0	Medium stiff to stiff, moist to wet, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@3.0'
4.0-5.5	Medium dense grading to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 5.5 feet on 11/2/01 due to equipment failure. No groundwater seepage observed. No caving observed.	

Test Pit TP-15
Approximate ground surface elevation: 447 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.5	Grass over soft, damp to moist, brown, SILT with SILT and occasional gravel. (Topsoil) Moderate fine roots to 2.0 feet.	S-1@1.0' MC=27%
1.5-7.0	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
7.0-10.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown sandy silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-2@9.0' MC=59%
	Test pit terminated at 10.5 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-16
Approximate ground surface elevation: 446 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Grass and blackberry vines over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate to dense fine roots to 1.0 feet.	S-1@0.5'
1.0-4.0	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
4.0-7.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown sandy silt with trace clay.	S-2@6.0'
7.0-10.0	Medium dense to very dense, dark gray, moderately weathered, subangular to rounded, poorly sorted, vesicular basalt clasts in a matrix of medium stiff to stiff, damp, red silt with trace clay.	
	Test pit terminated at 10.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-17
Approximate ground surface elevation: 447 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.7	Grass and blackberry vines over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate to dense fine roots to 1.0 feet.	S-1@0.5' MC=26% S-2@1.0' MC=26%
1.7-3.0	Medium stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-3@2.5' MC=21%
3.0-7.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	S-4@5.5' MC=26%
7.0-10.5	Medium dense to very dense, dark gray, moderately weathered, subangular to rounded, poorly sorted, vesicular basalt clasts in a matrix of medium stiff to stiff, damp, red silt with trace clay.	S-5@9.5' MC=55%
	Test pit terminated at 10.5 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-18
Approximate ground surface elevation: 405 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Soft, wet, dark brown, SILT with some gravel, organic debris and roots. (Topsoil)	
1.0-7.0	Very dense, moderately weathered, sub-rounded basaltic andesite boulders in matrix of medium dense, moist, orange-gray, silty SAND to sandy SILT.	
	Test pit completed at 7.0 on feet on 11/2/01 with refusal on boulder. No groundwater seepage observed. No caving observed.	

Test Pit TP-19
Approximate ground surface elevation: 402 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Soft, wet, dark brown, SILT with some clay and sand, organic debris and roots. (Topsoil)	
0.8-2.5	Loose to medium dense, moist, orange-gray, silty SAND to sandy SILT with occasional cobbles and boulders of severely weathered basalt.	S-1@2’
2.5-7.5	Very dense basaltic andesite boulders from 2 to 8 feet in diameter in a medium stiff, sandy SILT matrix.	
	Test pit completed at 7.5 feet on 11/2/01 with refusal on boulder. No groundwater seepage observed. No caving observed.	

Test Pit TP-20
Approximate ground surface elevation: 448 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Grass over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate fine roots to 0.8 feet, sparse medium roots to 1.2 feet.	
0.8-2.5	Medium stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1@1.5’ MC=28%
2.5-10.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional, gray, moderately weathered, round basaltic andesite cobbles and boulders.	S-2@4.0’ MC=56%
	Test pit terminated at 10.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-21
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.3	Grass and blackberry vines over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate fine to medium roots to 1.5 feet.	S-1@0.5’
1.3-9.5	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@2.0’
9.5-10.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 10.5 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-22
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Grass and blackberry vines over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate fine and medium roots to 1.0 feet.	
1.0-6.5	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	
6.5-10.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 10.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-23
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.7	Wood debris and blackberry vines over soft, damp, brown, SILT with trace fine sand. (Topsoil) Moderate fine and medium roots to 1.0 feet.	S-1@0.5' MC=25%
0.7-6.5	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.0 feet = 1.75 tsf. Pocket penetrometer at 3.5 feet = 3.0 to >4.5 tsf.	S-2@1.5' MC=26%
6.5-7.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	
	Test pit terminated at 7.5 feet due to space constraints on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-24
Approximate ground surface elevation: 448 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Metal debris over soft, damp, brown, blocky, SILT with trace fine sand. (Fill) Trace fine roots to 0.7 feet.	S-1@0.5' S-2@1.0'
0.8-1.5	Soft to medium stiff, moist, brown, SILT with trace clay. (FILL)	
1.5-3.5	Soft to medium stiff to stiff, moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-3@2.5'
3.5-4.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	
	Test pit terminated at 4.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-25
Approximate ground surface elevation: 448 Feet

Depth (feet)	Material Description	Sample No.
0.0-4.5	Wrecking yard debris over soft to medium stiff, damp, brown, SILT with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite and wrecking yard debris. (Fill) Trace fine to medium roots to 1.0 feet.	S-1@0.5' S-2@2.0'
4.5-7.5	Medium stiff to stiff, moist, orange-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
7.5-10.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-3@10.5'
	Test pit terminated at 10.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-26
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.4	1-inch of asphalt over 3-inches of 5/8" minus crushed rock base.	S-1@0.5' MC=26%
0.4–1.1	Soft to medium stiff, damp to moist, brown, SILT with trace fine sand and occasional gravel (Topsoil prior to paving.) Trace fine to medium roots to 0.6 feet. Pocket penetrometer at 1.0 feet > 1.5 tsf.	S-2@1.0' MC=27%
1.1-4.5	Medium stiff to stiff, damp to moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders. Pocket penetrometer at 2.5 feet = A.5 tsf.	S-3@2.5' MC=37%
4.5-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay to silty SAND.	S-4@10.5' MC=46%
	Test pit terminated at 11.0 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-27
Approximate ground surface elevation: 451 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.6	Grass over loose, damp to wet, brown silty GRAVEL and wrecking yard debris. (FILL). Trace fine to medium roots to 1.6 feet.	S-1@0.5’
0.6–1.3	Soft to medium stiff, damp, brown, SILT with trace fine sand and occasional gravel (Relic topsoil)	
1.3-3.0	Medium stiff to stiff, moist, orange-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@1.5’
3.0-10.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 10.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-28
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Blackberry vines over loose, damp to wet, brown silty GRAVEL and wrecking yard debris. (FILL) Trace fine to medium roots to 1.5 feet.	S-1@0.5' MC=16%
0.8–1.5	Soft to medium stiff, damp to moist, dark brown, SILT with trace fine sand and occasional gravel. (Relic topsoil)	S-2@1.0' MC=32%
1.3-3.2	Medium stiff to stiff, moist, orange-brown grading to reddish-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-3@2.5' MC=31%
3.2-8.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite and boulders.	S-4@6.0' MC=57%
	Test pit terminated at 8.5 feet on a boulder on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-29
Approximate ground surface elevation: 449 Feet

Depth (feet)	Material Description	Sample No.
0.0-4.0	Grass over soft to medium stiff, damp to moist, brown, SILT with gravel and occasional asphalt debris. (Fill) Dense fine roots to 0.5 feet.	S-1@1.5'
4.0-7.5	Medium stiff to stiff, moist, orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@5.0'
7.5-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	
	Test pit terminated at 11.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-30
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.8	Grass and gravel over soft to medium stiff, damp to moist, brown, SILT with gravel and occasional asphalt debris. (FILL) Moderate fine roots to 0.3 feet. Occasional gray, moderately weathered, round, basaltic andesite boulders.	S-1@1.0’
1.8-6.0	Medium stiff to stiff, moist, orange-brown grading to red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
6.0-11.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 11.5 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-31
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-5.0	Grass and gravel over soft to medium stiff, damp to moist, brown, SILT with gravel and occasional asphalt debris. (FILL) Moderate fine roots to 1.1 feet.	
5.0-9.5	Medium stiff to stiff, moist, orange-brown grading to red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1@6.0’ MC=25%
9.5-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-2@11.0’ MC=53%
	Test pit terminated at 11.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-32
Approximate ground surface elevation: 451 Feet

Depth (feet)	Material Description	Sample No.
0.0–1.0	Blackberry vines over loose, damp to moist, dark brown, SILT with gravel and occasional metal debris. (Topsoil/FILL) Moderate fine to medium roots to 1.2'.	S-1@0.5' MC=11%
1.0-1.7	Soft to medium stiff, damp, light brown, SILT with trace sand and occasional gravel and metal debris. (FILL)	S-2@1.3' MC=25%
1.7-3.0	Medium stiff, damp, light brown, SILT with occasional asphalt and metal debris. (FILL)	S-3@2.5' MC=20%
3.0-4.7	Medium stiff, damp, reddish-brown, SILT with occasional fine to medium roots.	
4.7-9.0	Medium stiff to stiff, moist, orange-brown grading to reddish-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-4@7.5' MC=27%
9.0-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-5@9.5'

Test pit terminated at 11.0 feet on 11/2/01.
No groundwater seepage observed.
No caving observed.
Fill was from Molalla Avenue cut, approximately 50 years ago, according to Rocky Younger, property owner.

Test Pit TP-33
Approximate ground surface elevation: 451 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Short grass, blackberry vines, and metal debris over soft, damp, dark brown, SILT with trace fine sand and occasional pockets of gravel. (Topsoil/FILL) Moderate fine to medium roots to 1.0 feet.	S-1@0.8’
1.0-5.5	Medium stiff, damp, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
5.5-11.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 11.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-34
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-2.0	Short grass and metal debris over medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1@1.5’ MC=41%
2.0-12.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-2@9.5’ MC=66% S-3@12.0’ MC=62%
	Test pit terminated at 12.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-35
Approximate ground surface elevation: 449 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Metal debris over loose, damp, dark brown, SILT with trace fine sand and occasional pockets of gravel and wrecking yard debris. (Topsoil/FILL) Moderate fine and medium roots to 1.0 feet.	S-1@0.5’
1.0-3.5	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
3.5-10.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 10.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-36
Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Blackberry vines and metal debris over soft to medium stiff, damp to moist, brown, SILT with trace fine sand and wrecking yard debris (Topsoil/FILL) Moderate fine and medium roots to 1.0 feet. Pocket penetrometer at 1.0 feet = 1.5 tsf.	S-1@1.0’ MC=29%
1.0-5.0	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Pocket penetrometer at 2.0 feet = 1.5 tsf. Pocket penetrometer at 2.5 feet = 2.5 tsf.	S-2@2.0’ MC=29%
5.0-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-3@10.5’ MC=50%
	Test pit terminated at 11.0 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-37
Approximate ground surface elevation: 431 Feet

Depth (feet)	Material Description	Sample No.
0.0-5.0	Blackberry vines over soft to medium stiff, damp to moist, brown, SILT with significant large pieces of concrete and asphalt debris. (FILL) Moderate fine and medium roots to 1.4 feet.	S-1@1.0' MC=19%
5.0-8.0	Medium stiff to stiff, damp to moist, orange-brown grading to reddish-orange, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2@7.0' MC=35%
8.0-12.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-3@10.0' MC=50%
	Test pit terminated at 12.5 feet on a boulder on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-38
Approximate ground surface elevation: 431 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Blackberry vines and short grass over medium dense, moist to wet, brown, silty sandy GRAVEL with significant asphalt debris (FILL) Moderate fine and medium roots to 0.8 feet.	S-1@0.5'
1.0-5.5	Soft to medium stiff, damp, orange-brown SILT with significant large pieces of asphalt and concrete debris. (FILL)	S-2@2.0'
	Digging refusal at 5.5 feet due on concrete debris on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-39
Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-3.5	Duff and asphalt debris over soft to medium stiff, damp to moist, orange-brown, SILT with some sand and occasional asphalt debris and 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-1@1.0' MC=46%
3.5-7.5	Soft to medium stiff, moist, brown, SILT with organics, and occasional wood and metal debris. (FILL)	S-2@4.0' MC=26% S-3@7.0' MC=28%
7.5-10.5	Medium stiff to stiff, damp to moist, orange-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
10.5-13.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, rounded, basaltic andesite cobbles and boulders.	S-4@11.5' MC=42%
	Test pit terminated at 13.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-40
Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.9	Duff over soft, damp, brown, SILT with trace fine sand. (Topsoil) Sparse fine roots to 1.0 feet and sparse medium roots to 1.9 feet.	S-1@1.0' MC=23%
1.9-3.0	Medium stiff, damp, orange-brown, sandy SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, rounded, basaltic andesite boulders. Pocket penetrometer at 2.0 feet >4.5 tsf.	S-2@2.5' MC=21%
3.0-10.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp to moist, reddish orange-brown silt with trace clay. Occasional gray, moderately weathered, rounded, basaltic andesite cobbles and boulders.	S-3@5.5' MC=21%
	Test pit completed at 10.0 feet on 11/3/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-41
Approximate ground surface elevation: 441 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.5	Duff over soft, damp to moist, brown, SILT with trace fine sand and occasional gravel. (Topsoil) Moderate fine to medium roots to 1.2 feet and sparse large roots to 1.5 feet.	S-1@0.5-2.0' S-1A@0.5-2.5'
1.5-2.5	Soft grading to stiff, damp, orange-brown, SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, rounded, basaltic andesite boulders.	S-2@2.5' MC=26%
2.5-6.5	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp to moist, reddish orange-brown silt with trace clay. Occasional gray, moderately weathered, rounded, basaltic andesite cobbles and boulders.	S-3@5.5'
	Digging refusal at 10.0 feet on a boulder on 11/3/01. No groundwater seepage observed. No caving observed. Samples S-1 and S-1A were shelby tube samples.	

Test Pit TP-42
Approximate ground surface elevation: 432 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Soft to medium stiff, wet, brown grading to orange-brown, SILT with some sand, organic debris and roots to 3". (Topsoil)	
1.0-4.0	Soft grading to stiff, damp, orange-brown, SILT with trace clay and trace to some 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, rounded, basaltic andesite boulders.	
4.0-6.5	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp to moist, reddish orange-brown silt with trace clay. Occasional gray, moderately weathered, rounded, basaltic andesite cobbles and boulders to 3 feet in diameter.	
	Test pit completed at 6.5 feet on 11/2/01. No groundwater seepage observed. No caving observed.	

Test Pit TP-43
Approximate ground surface elevation: 426 Feet

Depth (feet)	Material Description	Sample No.
0.0-3.5	Medium stiff, moist to wet, orange-brown, sandy SILT with some gravel, clay, and debris consisting of concrete, asphalt, crushed rock, and wire. (Fill)	S-1@1'
3.5-7.8	Soft to medium stiff, wet, dark gray-brown, SILT with some clay, sand and gravel. Occasional clasts of concrete, asphalt, brick and trace organic material. (Fill)	S-2@5'
7.8-8.0	Pine needles and thin branches to 1-inch in diameter. (Fill)	
8.0-11.0	Large andesitic boulder encountered at east end of test pit. Boulder appeared to be in a matrix of stiff to medium stiff, gray-brown SILT. (Fill)	
	Test pit completed at 11.0 feet on 3/4/02. Very slight seepage observed at 9 feet at time of exploration. No caving observed.	

Test Pit TP-44
Approximate ground surface elevation: 421.5 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.3	Grass sod.	
0.3-6.0	Soft to medium stiff, wet, orange-brown, sandy SILT with some clay and gravels. Occasional clasts of asphalt and concrete to 2 feet in diameter. 2-½ foot diameter andestitic boulder encountered at 1.5 feet. (Fill)	S-1@2'
6.0-8.0	Soft grading to stiff, wet, orange-brown, SILT with some clay and trace to some gray, sub-rounded clasts of severely weathered basaltic ardisite.	
8.0-11.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular to sub-rounded, poorly sorted basaltic andesite clasts in a matrix of medium stiff to stiff, moist, orange-brown, sandy SILT with trace clay.	
	Test pit completed at 11.0 feet on 3/4/02. No groundwater observed at time of exploration. No caving observed.	

Test Pit TP-45
Approximate ground surface elevation: 433.5 Feet

Depth (feet)	Material Description	Sample No.
0.0-2.5	Soft grading to stiff, moist, orange-brown, SILT with trace to some clay, sand, and 3 inch minus fragments of severely weathered basaltic andesite.	S-1@1'
2.5-6.0	Very dense, damp, gray, moderately weathered andesitic boulders to 3 feet in diameter in a matrix of medium stiff to stiff, moist to wet, orange-brown, SILT with trace clay to silty SAND with trace clay. Boulders sub-angular to rounded.	
	Test pit completed at 6.0 feet with refusal on 6-foot diameter andesitic boulder. No groundwater observed at time of exploration. No caving observed.	

Test Pit TP-46
Approximate ground surface elevation: 438 Feet

Depth (feet)	Material Description	Sample No.
0.0-6.0	Concrete and asphalt debris with matrix of sandy GRAVEL with some silt (dirty crushed rock). Approximately 40% asphalt and 20% concrete based on visual estimation. (Fill)	
6.0-7.0	Soft to medium stiff, moist, orange-brown, SILT with some sand and clay.	
	Test pit completed at 7 feet on 3/4/02. No groundwater seepage observed at time of exploration. No caving observed.	

Test Pit TP-47
Approximate ground surface elevation: 435 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.2	Grass sod.	
0.2-3.0	Asphalt debris in matrix of sandy gravel with some silt (crushed rock). Approximately 40-50% asphalt based on visual estimation. (Fill)	S-1@1'
3.0-6.0	Medium stiff, moist, orange-brown, sandy SILT with some gravel and trace clay. (Fill)	
6.0-8.5	Soft grading to stiff, moist, orange-brown, SILT with trace to some clay, sand, and 3 inch minus fragments of severely weathered basaltic andesite.	S-2@4'
8.5-11.0	Very dense, damp, gray, moderately weathered andesitic boulders to 3 feet in diameter in a matrix of medium stiff to stiff, moist to wet, orange-brown, SILT with trace clay to silty SAND with trace clay. Boulders sub-angular to rounded.	
	Test pit completed at 11.0 feet on 3/4/02. No groundwater seepage observed at time of exploration. No caving observed.	

Test Pit TP-48
Approximate ground surface elevation: 433 Feet

Depth (feet)	Material Description	Sample No.
0.0-5.5	Stiff to medium stiff, moist to wet, orange-brown, SILT with some sand and trace clay and occasional clasts of asphalt and concrete. (Fill)	
5.5-10.0	Randomly oriented rebar reinforced concrete debris from 6 to 8 inches thick and up to 4 feet across. Approximately 5% of debris consisted of rebar, asphalt, and wire. (Fill)	
	Test pit completed at 10.0 feet on 3/4/02 due to refusal on large concrete debris. No groundwater seepage observed at time of exploration. No caving observed.	

Test Pit TP-1A
Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-6.0	Duff and asphalt debris over very soft to medium stiff, moist, reddish-brown, SILT with some sand and occasional asphalt debris and 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-1 @ 0.5' S-2 @ 2'
6.0-9.0	Soft to medium stiff, moist, gray SILT with organic and metal debris and occasional cobbles of of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-3 @ 8'
9.0-12.0	Medium stiff, moist, orange-red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-4 @ 9.5'
	Test pit terminated at 12.0 feet on 03/01/2002. Slight groundwater seepage observed at 9.0 feet, perched on native soils. No caving observed.	

Test Pit TP-2A
Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Duff over 7-inches of asphalt over 3-inches of 3/8-inch minus crushed rock base.	S-1 @ 1'
0.8-8.0	Soft to medium stiff, damp, reddish-brown SILT with trace clay with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-2 @ 8'
8.0-9.0	Soft, damp to moist, light gray to dark gray, SILT with trace clay and wood, metal, glass, and rubber debris. (FILL)	
9.0-11.0	Medium stiff, moist, orange-red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
	Test pit terminated at 11.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-3A

Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.3	Metal debris over soft, damp to moist, gray SILT with trace clay and occasional fine rootlets. Slight to moderate odor of oil impact. (FILL)	
0.3-7.5	Soft to medium stiff, damp, reddish-brown SILT with trace clay with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-1 @ 0.5' S-2 @ 2'
7.5-8.0	Soft, damp to moist, orange-brown silt with trace clay and fine rootlets. (Relict topsoil horizon)	
8.0-12.0	Medium stiff, moist, orange-red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 12.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-4A

Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.5	Metal debris over 5/8-inch minus crushed rock base. Very strong odor of oil impact. Visible free product (appears to be crankcase oil) in crushed rock. (FILL)	S-1 @ 1'
1.5-8.0	Soft to medium stiff, damp, reddish-brown SILT with trace clay with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-2 @ 3' S-3 @ 7'
8.0-10.0	Medium stiff, moist, orange-red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
	Test pit terminated at 12.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-5A
Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Metal debris and grass over very soft, damp, gray SILT with trace clay and gravel. (FILL)	S-1 @ 1'
1.0-8.5	Soft to medium stiff, damp, reddish-brown SILT with trace clay with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	S-2 @ 8'
8.5-9.0	Loose, damp, brown-gray SILT with trace clay, occasional gravel and fine rootlets. (Relict topsoil horizon.)	
9.0-11.0	Medium stiff, damp, orange-red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	
	Test pit terminated at 11.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-6A
Approximate ground surface elevation: 431 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Blackberry vines and short grass over soft, damp, dark gray SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. (FILL)	
1.0-6.0	Soft to medium stiff, damp, red-brown SILT with occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite and large pieces of asphalt and concrete debris. (FILL)	S-1@2.0'
6.0-6.5	Medium dense, damp, gray sandy SILT with some gravel. (FILL)	
	Digging refusal at 6.5 feet due on concrete debris on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-7A

Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.4	8-inches of asphalt over 8-inches of 3/8-inch minus crushed rock base. Very strong odors of gasoline and weathered gasoline. Gasoline dissolving asphalt.	
1.4-2.5	Soft, moist, red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite and gravel. (FILL)	S-1 @ 1.5'
2.5-5.0	Soft to medium stiff, moist, red-brown SILT with trace clay and occasional 3-inch minus, gray angular fragments of severely to highly weathered, highly fractured basaltic andesite.	S-2 @ 3.5'
5.0-9.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-3 @ 6' S-4 @ 6.5'
	Test pit terminated at 9.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-8A

Approximate ground surface elevation: 430 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Soft, damp to moist, dark brown SILT with trace clay and occasional gravel.	
1.0-3.5	Soft to medium stiff, damp, red-brown SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite and gravel.	S-1 @ 3'
3.5-7.5	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay	S-2 @ 6.5'
	Test pit terminated at 7.5 feet on 03/01/2002. Moderate groundwater seepage observed at 6.5 feet. Slight caving observed below 6.5 feet.	

Test Pit TP-9A

Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-3.5	Medium dense, damp, dark gray silty sandy GRAVEL with occasional cobbles. (FILL)	S-1 @ 1.5'
3.5-5.5	Soft to medium stiff, damp to moist, orange-red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 3.5'
5.5-9.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-3 @ 9.5'
	Test pit terminated at 9.5 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-10A

Approximate ground surface elevation: 440 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.5	Loose to medium dense, damp, gray-brown SILT with trace clay and trace fine sand and occasional fine highly weathered, highly fractured basaltic andesite gravel.	S-1 @ 1'
1.5-4.5	Soft to medium stiff, damp, orange-red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 2'
4.5-6.5	Medium stiff to stiff, damp, red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
6.5-7.0	Medium dense to very dense, gray, highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-3 @ 7'
	Test pit terminated at 7.0 feet on 03/01/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-11A

Approximate ground surface elevation: 448 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.8	Sparse grass and metal debris over 5/8-inch minus crushed rock base. (FILL)	
0.8-2.0	Soft to medium stiff, damp, gray, SILT with trace clay and occasional metal, rubber, and glass debris. Slight odor of weathered gasoline and slight staining observed. (FILL)	S-1 @ 1.5'
2.0-4.5	Soft to medium stiff, damp, red-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-2 @ 3'
4.5-11.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay.	S-3 @ 5.5' S-4 @ 11'

Test pit terminated at 11.0 feet on 03/02/2002.
No groundwater seepage observed.
No caving observed.

Test Pit TP-12A

Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Grass and blackberry vines over soft, damp, dark brown, SILT with trace fine sand, trace clay and occasional gray, highly weathered, round, basaltic andesite gravel.	
1.0-4.0	Medium stiff to stiff, damp to moist, reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	
4.0-10.0	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, wet grading to damp, yellow silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-1 @ 4'

Test pit terminated at 10.0 feet on 03/02/2002
Very slight groundwater seepage observed at 4 feet.
No caving observed.

Test Pit TP-13A

Approximate ground surface elevation: 449 Feet

Depth (feet)	Material Description	Sample No.
0.0-1.0	Metal debris over loose, damp, dark brown, SILT with trace fine sand and occasional pockets of gravel and debris. (Topsoil/FILL)	
1.0-4.0	Medium stiff to stiff, damp to moist, reddish-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1@1'
4.0-9.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles.	S-2 @ 4.5' S-3 @ 9'

Test pit terminated at 9.5 feet on 03/02/2002.
No groundwater seepage observed.
No caving observed.

Test Pit TP-14A

Approximate ground surface elevation: 449 Feet

Depth (feet)	Material Description	Sample No.
0.0-2.0	Loose, damp, gray, SILT with trace clay and occasional pockets of 5/8-inch minus gravel and debris. Slight odor of oil impact to upper foot of soils, slight staining in upper foot of soils. (FILL)	S-1@1'
2.0-4.5	Soft to medium stiff, damp to moist, reddish-orange-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 2.5'

Test pit terminated at 4.5 feet on 03/02/2002.
No groundwater seepage observed.
No caving observed.

Test Pit TP-15A

Approximate ground surface elevation: 451 Feet

Depth (feet)	Material Description	Sample No.
0.0-4.5	5/8-inch minus crushed rock base over soft to medium stiff, damp, gray brown, SILT with trace sand and occasional gravel and asphalt debris. (FILL)	S-1 @ 2'
4.5-7.5	Soft to medium stiff, damp, reddish-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 5'
7.5-9.5	Medium dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-3 @ 8.5'
9.5-11.5	Dense to very dense, gray, highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, reddish-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-4 @ 11.5'
	Test pit terminated at 11.5 feet on 03/02/2002 No groundwater seepage observed. No caving observed. Cesspool cistern discovered at 1.5 to 5 feet. Test pit relocated to north of cistern, adjacent.	

Test Pit TP-16A

Approximate ground surface elevation: 451 Feet

Depth (feet)	Material Description	Sample No.
0.0-0.5	Soft, damp, dark brown, SILT with trace fine sand and occasional pockets of gravel. (Topsoil/FILL)	
0.5-2.5	Soft, damp, orange-brown grading to reddish-orange, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1 @ 2'
2.5-9.5	Medium dense to very dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-2 @ 5' S-3 @ 8.5'
	Test pit terminated at 9.5 feet on 03/02/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-17A
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-4.0	4-inches of asphalt over soft, damp, orange-brown grading to reddish-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1 @ 1' S-2 @ 3'
4.0-10.0	Medium dense grading to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay to silty SAND.	S-3 @5.5' S-4 @ 9'

Test pit terminated at 10.0 feet on 03/02/2002.
No groundwater seepage observed.
No caving observed.

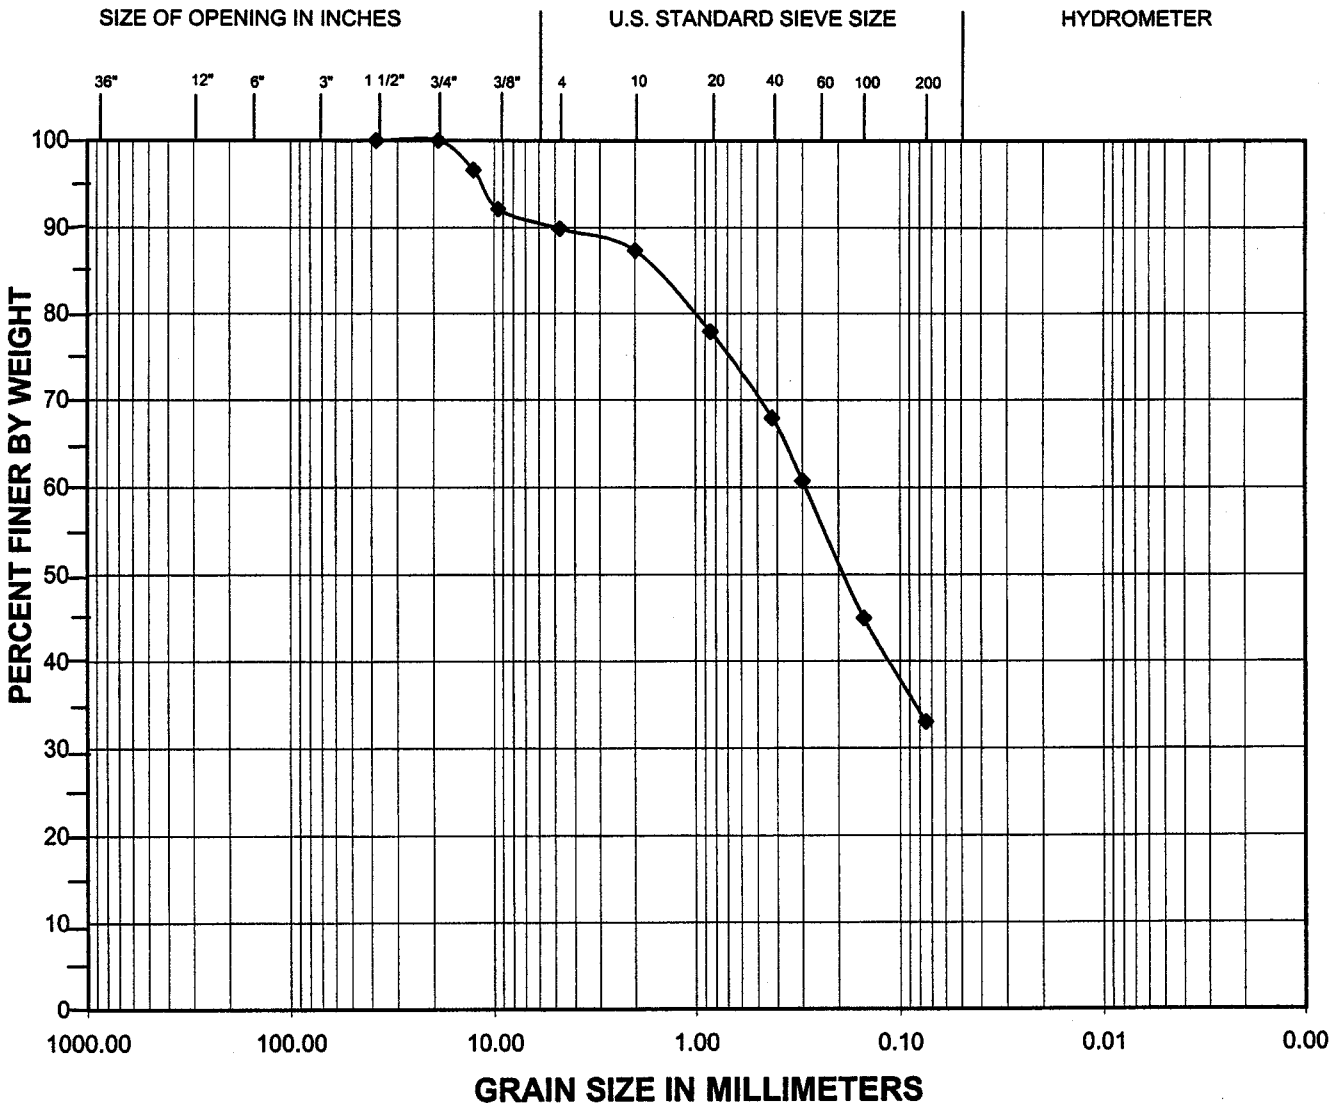
Test Pit TP-18A
Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-6.0	Broken asphalt over soft grading to medium stiff, damp, orange-brown grading to reddish-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-1 @ 3'
6.0-10.0	Medium dense grading to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay to silty SAND.	S-2 @ 6' S-3 @ 10'

Test pit terminated at 10.0 feet on 03/02/2002.
No groundwater seepage observed.
No caving observed.

Test Pit TP-19A

Approximate ground surface elevation: 451 Feet



Depth (feet)	Material Description	Sample No.
0.0-1.5	2-inches of 5/8-inch minus crushed rock over soft, damp to moist, dark brown-gray, SILT with trace clay, occasional gravel and occasional metal debris. (FILL)	S-1 @ 1'
1.5-5.0	Medium stiff to stiff, moist, orange-brown, sandy SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 3'
5.0-8.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-3 @ 7'
	Test pit terminated at 8.0 feet on 03/02/2002. No groundwater seepage observed. No caving observed.	

Test Pit TP-20A

Approximate ground surface elevation: 450 Feet

Depth (feet)	Material Description	Sample No.
0.0-3.5	Gravel over soft to medium stiff, damp, reddish-brown, SILT with gravel and trace clay and occasional asphalt debris. Occasional gray, moderately weathered, round, basaltic andesite boulders. (FILL).	S-1 @ 2'
3.5-4.0	Soft to medium stiff, damp, brown, SILT with trace clay and fine rootlets. (Relict topsoil horizon.)	
4.0-9.0	Medium stiff, damp, orange-brown grading to reddish-brown, SILT with trace clay and occasional 3-inch minus, gray, angular fragments of severely to highly weathered, highly fractured, basaltic andesite.	S-2 @ 4' S-3 @ 7'
9.0-10.0	Medium dense to dense, gray, severely to highly weathered, highly fractured, angular, poorly sorted, basaltic andesite clasts in a matrix of medium stiff to stiff, damp to wet, orange-brown silt with trace clay. Occasional gray, moderately weathered, round, basaltic andesite cobbles and boulders.	S-4 @ 9.5'
	Test pit terminated at 10.0 feet on 03/02/2002. Moderate groundwater seepage observed at 9.5 feet. No caving observed.

Terracon GeoReport

SAMPLING	WATER LEVEL	FIELD TESTS
Rock Core Grab Sample Standard Penetration Test	**Water Initially Encountered** **Water Level After a Specified Period of Time** **Water Level After a Specified Period of Time** **Cave In Encountered** Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	**N** Standard Penetration Test Resistance (Blows/Ft.) **(HP)** Hand Penetrometer **(T)** Torvane **(DCP)** Dynamic Cone Penetrometer **UC** Unconfined Compressive Strength **(PID)** Photo-Ionization Detector **(OVA)** Organic Vapor Analyzer

DESCRIPTIVE SOIL CLASSIFICATION

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

LOCATION AND ELEVATION NOTES

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

STRENGTH TERMS

RELATIVE DENSITY OF COARSE-GRAINED SOILS (More than 50% retained on No. 200 sieve.) Density determined by Standard Penetration Resistance		CONSISTENCY OF FINE-GRAINED SOILS (50% or more passing the No. 200 sieve.) Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance		
Descriptive Term (Density)	**Standard Penetration or N-Value Blows/Ft.**	**Descriptive Term (Consistency)**	**Unconfined Compressive Strength Qu, (tsf)**	**Standard Penetration or N-Value Blows/Ft.**
Very Loose	0 - 3	Very Soft	less than 0.25	0 - 1
Loose	4 - 9	Soft	0.25 to 0.50	2 - 4
Medium Dense	10 - 29	Medium Stiff	0.50 to 1.00	4 - 8
Dense	30 - 50	Stiff	1.00 to 2.00	8 - 15
Very Dense	> 50	Very Stiff	2.00 to 4.00	15 - 30
		Hard	> 4.00	> 30

RELEVANCE OF SOIL BORING LOG

The soil boring logs contained within this document are intended for application to the project as described in this document. Use of these soil boring logs for any other purpose may not be appropriate.

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]					Soil Classification	
					Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	$Cu \geq 4$ and $1 \leq Cc \leq 3$ [E]		GW	Well-graded gravel [F]
			$Cu < 4$ and/or [Cc<1 or Cc>3.0] [E]		GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH		GM	Silty gravel [F, G, H]
			Fines classify as CL or CH		GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	$Cu \geq 6$ and $1 \leq Cc \leq 3$ [E]		SW	Well-graded sand [I]
			$Cu < 6$ and/or [Cc<1 or Cc>3.0] [E]		SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH		SM	Silty sand [G, H, I]
			Fines classify as CL or CH		SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots on or above "A"		CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]		ML	Silt [K, L, M]
		Organic:	Liquid limit - oven dried	< 0.75	OL	Organic clay [K, L, M, N]
			Liquid limit - not dried			Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line		CH	Fat clay [K, L, M]
			PI plots below "A" line		MH	Elastic Silt [K, L, M]
		Organic:	Liquid limit - oven dried	< 0.75	OH	Organic clay [K, L, M, P]
			Liquid limit - not dried			Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor				PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.

[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.

[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.

[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.

[E] $Cu = D_{60}/D_{10}$ $\quad Cc = \dfrac{(D_{30})^2}{D_{10} \times D_{60}}$

[F] If soil contains ≥ 15% sand, add "with sand" to group name.

[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.

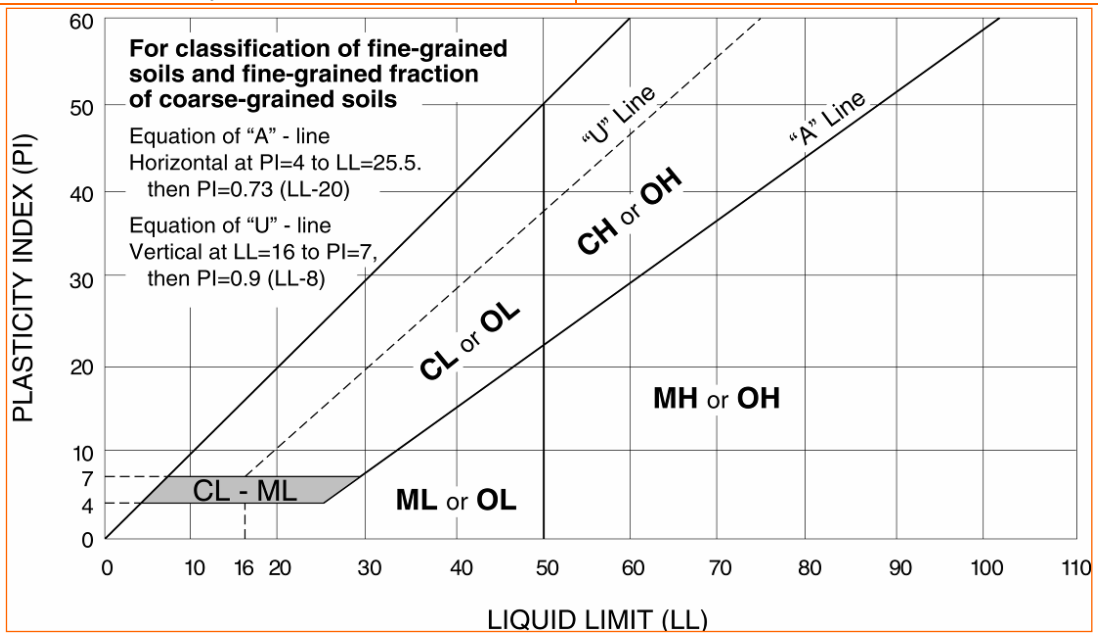
[H] If fines are organic, add "with organic fines" to group name.

[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.

[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.

[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.

[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.



[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.

[N] PI ≥ 4 and plots on or above "A" line.

[O] PI < 4 or plots below "A" line.

[P] PI plots on or above "A" line.

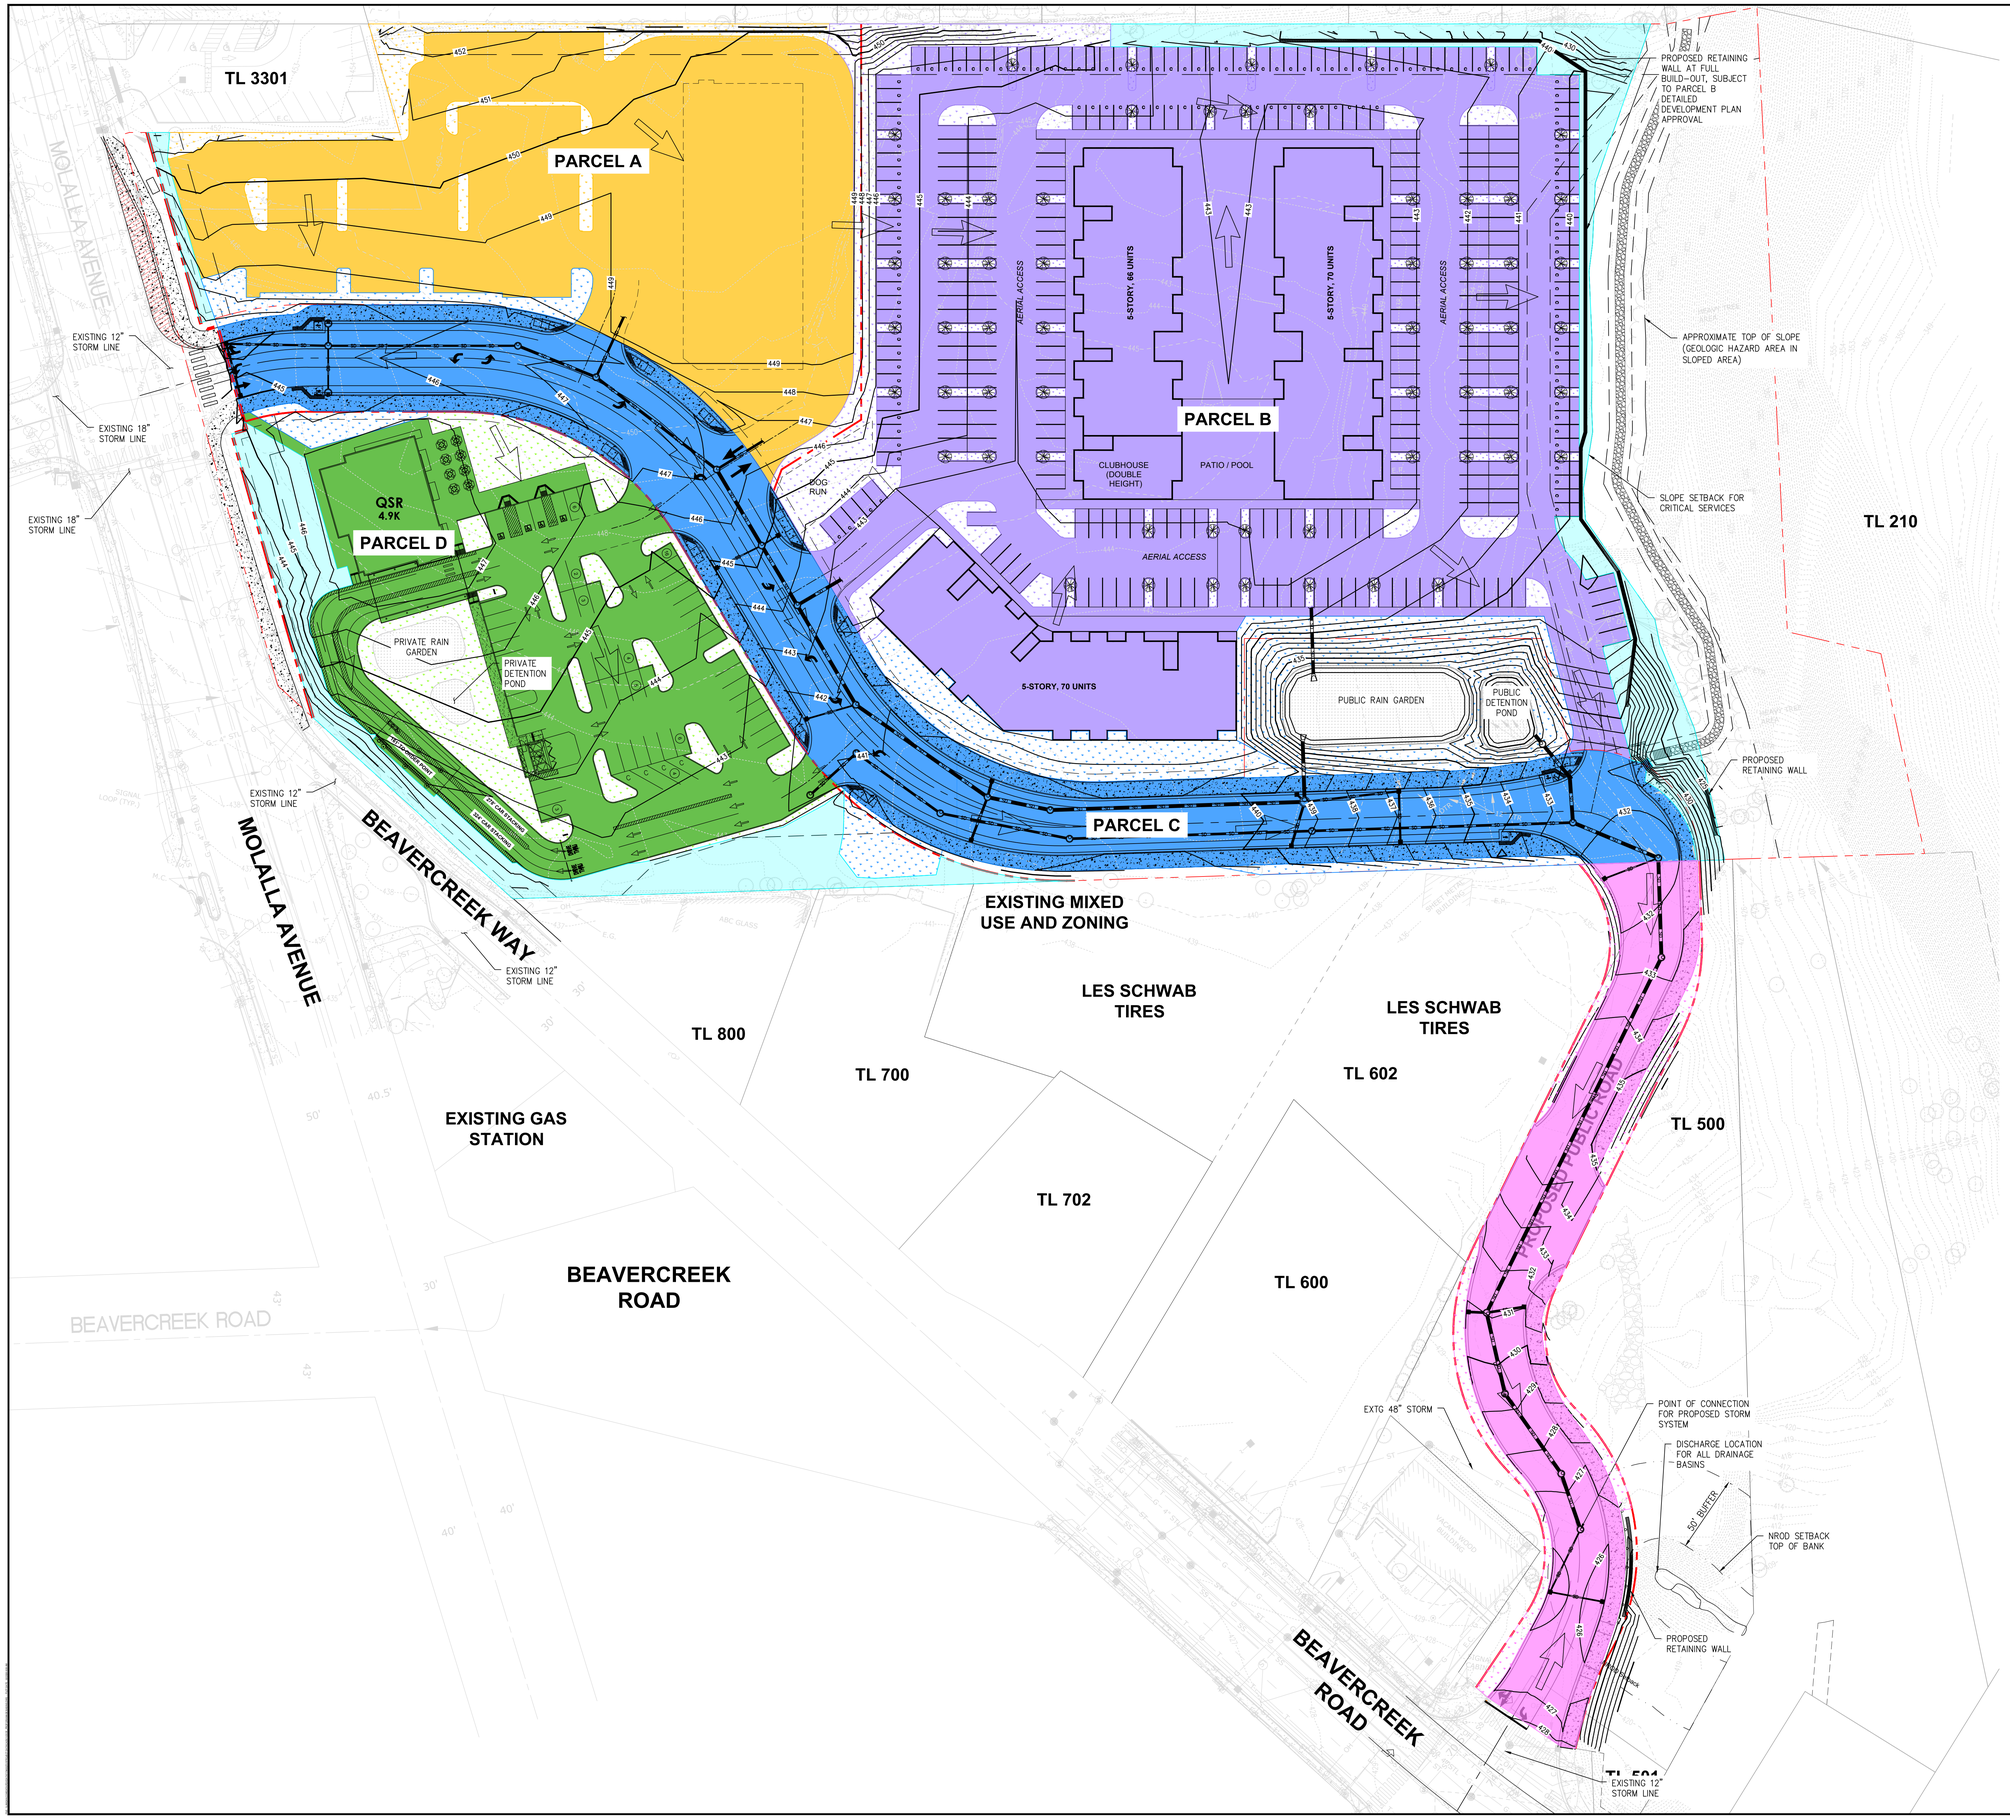
[Q] PI plots below "A" line.

WEATHERING	
Term	**Description**
Unweathered	No visible sign of rock material weathering, perhaps slight discoloration on major discontinuity surfaces.
Slightly weathered	Discoloration indicates weathering of rock material and discontinuity surfaces. All the rock material may be discolored by weathering and may be somewhat weaker externally than in its fresh condition.
Moderately weathered	Less than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a continuous framework or as corestones.
Highly weathered	More than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a discontinuous framework or as corestones.
Completely weathered	All rock material is decomposed and/or disintegrated to soil. The original mass structure is still largely intact.
Residual soil	All rock material is converted to soil. The mass structure and material fabric are destroyed. There is a large change in volume, but the soil has not been significantly transported.

STRENGTH OR HARDNESS		
Description	**Field Identification**	**Uniaxial Compressive Strength, psi (MPa)**
Extremely weak	Indented by thumbnail	40-150 (0.3-1)
Very weak	Crumbles under firm blows with point of geological hammer, can be peeled by a pocket knife	150-700 (1-5)
Weak rock	Can be peeled by a pocket knife with difficulty, shallow indentations made by firm blow with point of geological hammer	700-4,000 (5-30)
Medium strong	Cannot be scraped or peeled with a pocket knife, specimen can be fractured with single firm blow of geological hammer	4,000-7,000 (30-50)
Strong rock	Specimen requires more than one blow of geological hammer to fracture it	7,000-15,000 (50-100)
Very strong	Specimen requires many blows of geological hammer to fracture it	15,000-36,000 (100-250)
Extremely strong	Specimen can only be chipped with geological hammer	>36,000 (>250)

DISCONTINUITY DESCRIPTION			
Fracture Spacing (Joints, Faults, Other Fractures)		**Bedding Spacing (May Include Foliation or Banding)**	
Description	**Spacing**	**Description**	**Spacing**
Extremely close	< ¾ in (<19 mm)	**Laminated**	< ½ in (<12 mm)
Very close	¾ in – 2-1/2 in (19 - 60 mm)	**Very thin**	½ in – 2 in (12 – 50 mm)
Close	2-1/2 in – 8 in (60 – 200 mm)	**Thin**	2 in – 1 ft. (50 – 300 mm)
Moderate	8 in – 2 ft. (200 – 600 mm)	**Medium**	1 ft. – 3 ft. (300 – 900 mm)
Wide	2 ft. – 6 ft. (600 mm – 2.0 m)	**Thick**	3 ft. – 10 ft. (900 mm – 3 m)
Very Wide	6 ft. – 20 ft. (2.0 – 6 m)	**Massive**	> 10 ft. (3 m)

Discontinuity Orientation (Angle): Measure the angle of discontinuity relative to a plane perpendicular to the longitudinal axis of the core. (For most cases, the core axis is vertical; therefore, the plane perpendicular to the core axis is horizontal.) For example, a horizontal bedding plane would have a 0-degree angle.



ROCK QUALITY DESIGNATION (RQD) [1]	
Description	**RQD Value (%)**
Very Poor	0 - 25
Poor	25 – 50
Fair	50 – 75
Good	75 – 90
Excellent	90 - 100

1. The combined length of all sound and intact core segments equal to or greater than 4 inches in length, expressed as a percentage of the total core run length.

Introduction

This traffic impact analysis (TIA) identifies potential transportation-related impacts associated with the proposed Mixed-Use Development in Oregon City, Oregon. As necessary, mitigation measures are identified that would reduce or offset significant transportation related impacts that the project may have on the surrounding transportation system.

Project Description

The proposed project site is located at 1367 Molalla Avenue in Oregon City, as shown in the vicinity map included in Figure 1. The site is comprised of 4 parcels (3 parcels with land use development and 1 for right-of-way) in which the proposed mixed-use development is anticipated to include the following:

- Parcel A: 13,500 sf retail
- Parcel B: up to 210 multi-family apartment units
- Parcel C: No land use - right-of-way
- Parcel D: 4,915 sf fast food restaurant with drive-through

The existing site is vacant. With the development of the site, a new roadway connection would be completed between the existing signalized intersections along Molalla Avenue at the west side of the site and Beavercreek Road south of the site. The preliminary site plan is illustrated in Figure 2. The proposed project is anticipated to be fully constructed and operational by 2030.

Study Scope and Study Area

The following off-site intersections surrounding the project site were identified for analysis following coordination with City of Oregon City and Oregon Department of Transportation (ODOT) staff:

1. Molalla Ave/Pearl St
2. Molalla Ave/Holmes Ln
3. Molalla Ave/Warner Milne Rd
4. Molalla Ave/Safeway access/Future site access
5. Molalla Ave/Beavercreek Rd
6. Molalla Ave/Clairmont Way
7. Molalla Ave/ OR-213
8. Commercial Access/Beavercreek Rd/Future site access
9. OR-213/Beavercreek Rd

The analysis includes a review of existing conditions in the vicinity of the project site, including the transportation network, planned improvements, existing and future without-project AM and PM[1] peak hour traffic volumes, traffic operations, and traffic safety. Future with-project conditions are evaluated by adding site-generated traffic to future without-project volumes. Future without and with-project conditions are compared to identify the impacts the proposed project has on the surrounding transportation system.

[1] Note that review of additional time periods is included in the TIA below, but as discussed in greater detail below, the operational analysis is limited to the AM and PM peak hours.

Existing & Future Without-Project Conditions

This section describes both existing and future (2030) without-project conditions within the identified study area. Study area characteristics are provided for the transportation system, planned improvements, existing and future forecast without-project traffic volumes, traffic operations, and traffic safety.

Roadway Network

The following sections describe the existing street network within the vicinity of the proposed project and anticipated planned improvements.

Existing

The primary roadways within the study area and their characteristics near the study intersections are described below.

Molalla Avenue is a five-lane roadway functionally classified by the City of Oregon City as a minor arterial and has a speed limit of 30 mph. Molalla Avenue is a 2 to 3 lane roadway north of Warner Milne Road and south of Beavercreek Road, and five lane roadway Warner Milne Road and Beavercreek Road. Sidewalks are provided on both sides of Molalla Avenue through the entirety of the study area. Bike lanes are available on both sides north of Gales Lane, and south of the Safeway access driveway.

Beavercreek Road is a 5-lane roadway functionally classified as a minor arterial west of Molalla Avenue and a major arterial east of Molalla Avenue. Beavercreek Road has a speed limit of 35 mph in the vicinity of the project site. Beavercreek Road is a 3 to 5 lane roadway west of Molalla Avenue and a 5 to 6 lane road east of Molalla Avenue with additional urn lanes present surrounding its intersection with OR-213. Sidewalks and bicycle lanes are provided on both sides of the roadway between Molalla Avenue and OR-213.

OR-213 (Cascade Highway South) is a State Highway Route classified as a principal arterial. OR-213 is a four-lane roadway with a wide median north and south of its intersection with S Beavercreek Road, which transitions to a 6-lane roadway south of Beavercreek Road, and a 7-lane roadway north of Beavercreek Road. The speed limit along OR-213 in the study area is 55 mph. Sidewalks and bike lanes are available on the east side of OR-213 south of Beavercreek Road and wide painted shoulders are present where sidewalks are not within the study area.

Pearl Street is classified by the City of Oregon City as a major collector with 2 travel lanes. The speed limit is 25 mph. West of the intersection with Molalla Avenue, a sidewalk is present on the north side of Pearl Street. East of the intersection, sidewalks are present for approximately 230 feet.

Holmes Lane is classified as a collector west of Molalla Avenue, and continues into Hilda Street, which is a local road, east of Molalla Avenue. Holmes Lane is a 2 to 3 lane roadway with a speed limit of 25 mph. Sidewalks, bike lanes, and/or paved shoulders are present on both sides of Holmes Lane.

Warner Milne Road is classified as a minor arterial with a speed limit of 30 mph. Warner Milne Roadis a two-lane roadway with additional turn lanes provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Clairmont Way is functionally classified by the City of Oregon City as a collector with a speed limit of 25 mph. Clairmont Way is a two-lane roadway with additional turn lanes

provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Planned Improvements

A review of local plans was conducted to identify any changes in the study area that should be accounted for in the analysis. The local plans reviewed included the following: *City of Oregon City's Comprehensive Plan Project List (November 2022)*, *Oregon City's Transportation System Plan* (TSP), Yamhill County's *2015-2035 Transportation System Plan* (TSP)*, and Oregon Department of Transportation's (ODOT) 2024-2027 Statewide Transportation Improvement Program (STIP).* Planned improvements within the study area predominantly included maintenance and resurfacing projects; not impacting intersection capacity. This included the following projects:

- Warner Milne Road resurfacing near Molalla Avenue which was recently completed.
- Holmes Lane will be undergoing resurfacing in 2026.
- Molalla Avene will be undergoing resurfacing in 2027.
- Beavercreek Road will be undergoing microsurfacing in 2026, with more resurfacing planned for 2032.
- Water transmission pipes under Molalla Avenue will be upgraded in 2026.

In addition to the above projects, Beavercreek Road has also been undergoing safety improvements since 2023, including signal modifications and improved signage at the intersection with OR-213 which have since been completed. The Beavercreek Road/OR-213 intersection has an Alternative Mobility Target as the City's TSP identified it would not meet the state's required Oregon Highway Plan Mobility Standards by 2035. An additional project that has been identified as part of the Alternative Mobility Targets in the TSP includes project D95, the Beavercreek Road/OR-213 westbound right turn lane with northbound merge lane on OR 213. The City is collecting a pro-rata share to fund the D95 project; however, this project was not assumed in the future operational conditions.

Non-Motorized Facilities

Dedicated pedestrian and bicycle facilities are provided on roadways surrounding the project site as noted above. Sidewalks are available on both sides of Molalla Avenue, Beavercreek Road, and Holmes Lane. A sidewalk is available on the east side of OR-213 south of the intersection with Beavercreek Lane and on the north side of Pearl Street west of Molalla Avenue.

Transit Service

Transit service in the vicinity of the project site is provided by TriMet's Route 32. The closest transit stops to the site are located at the two site access intersections along Molalla Avenue and Beavercreek Road, directly adjacent to the project site. Additional transit stops served by TriMet's Route 33 are located approximately 0.25 miles west of the project site at the intersection of Beavercreek Road/Danielson Drive. Route 32 provides service 7-days per week between Milwaukie and Clackamas Community College in Oregon City with service between approximately 6:15 a.m. and 7:00 p.m. on weekdays with headways of approximately 30 minutes during peak periods. Route 33 provides service between the Oregon City Transit Center, Milwaukie and Clackamas Town Center 7-days per week between approximately 5:20 a.m. and 12:00 a.m. with peak period headways of approximately 15 minutes.

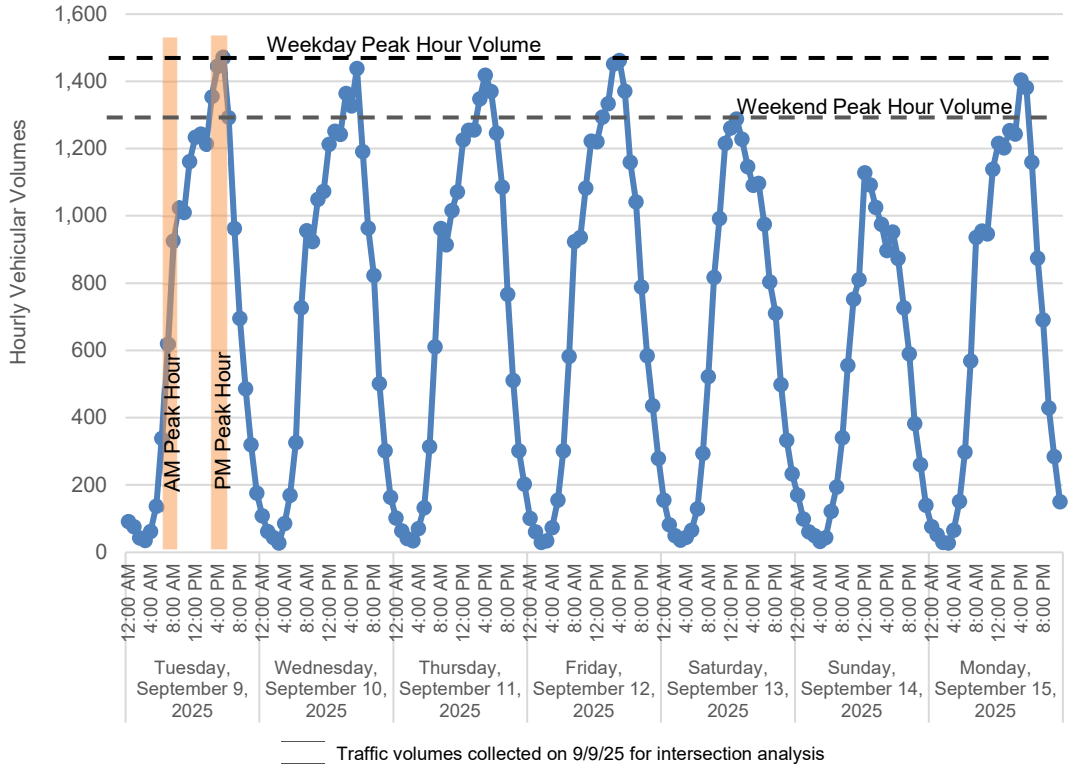
Traffic Volumes

The existing and future (2030) without-project traffic volumes forecasts are summarized in the sections below.

Existing

Existing weekday AM (7 to 9 a.m.) and PM (4 to 6 p.m.) peak period traffic counts were collected at each study intersection in September 2025.[2] The detailed traffic counts are included in Appendix A. Volumes are rounded to the nearest 5 vehicles to account for the daily fluctuations in traffic volumes. Figure 4 illustrates the existing weekday AM and PM peak hour traffic volumes at the study intersections.

In addition to the weekday peak hours, the traffic volumes throughout the week were also reviewed to confirm the time periods for analysis. Traffic volumes were collected along Molalla Avenue, north of Beavercreek Road in the project vicinity for one week in September 2025. The detailed volumes throughout the week are included in Appendix A and the volumes are illustrated in Figure 3.



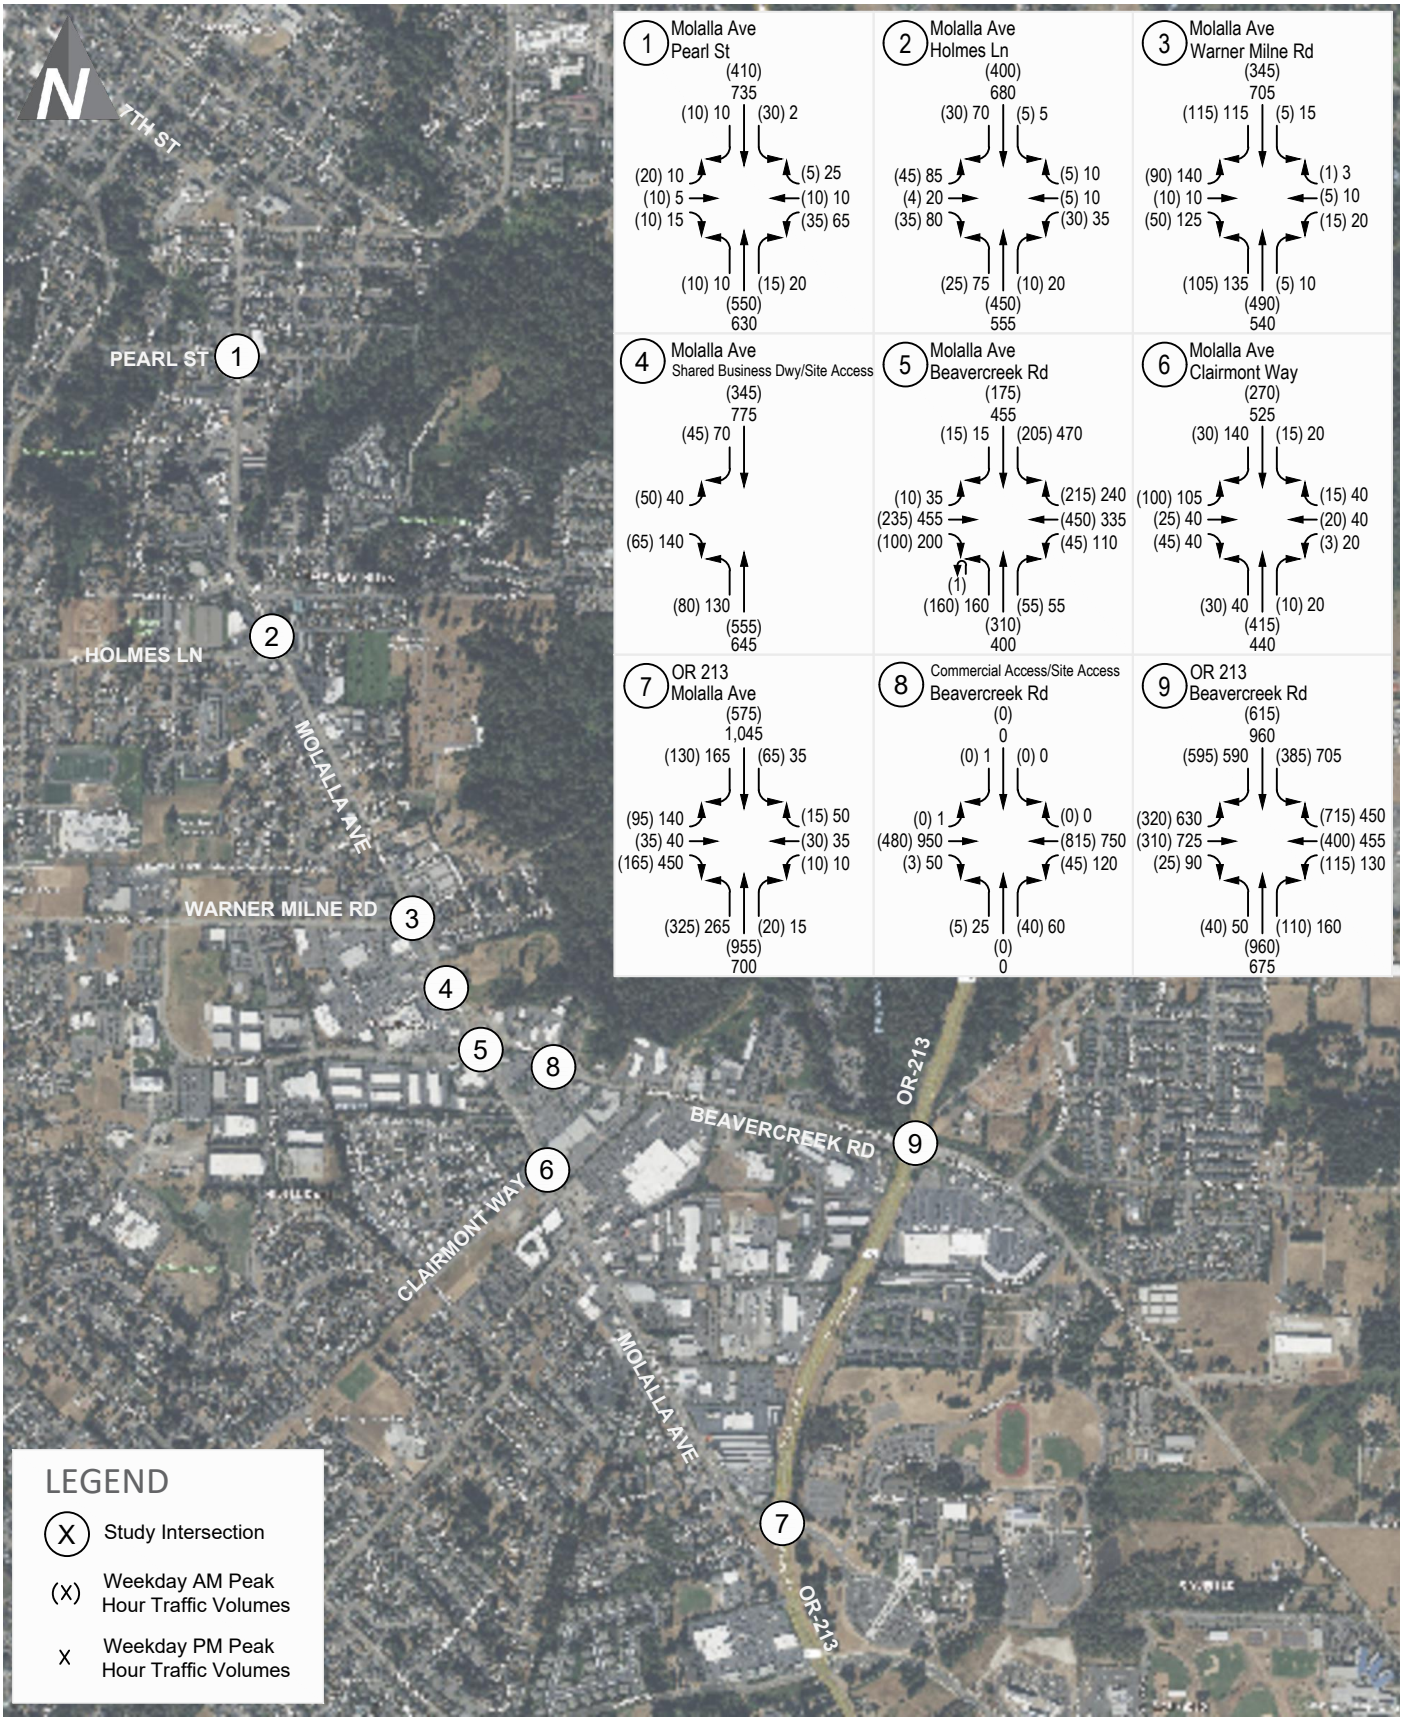


Figure 3. Existing Weekly volumes along Molalla Avenue, north of Beavercreek Road

As shown in the figure, the weekday AM and PM peak hours being studied as part of the project capture the peak traffic volumes that are occurring within the study area throughout the week. The weekend peak hourly volumes are approximately 12 percent less than the weekday peak volumes which occur during the studied PM peak hour.

[2] It was confirmed with City and ODOT staff that given the counts were conducted in September when school was in session, no seasonal adjustment to the volumes was needed.

Existing Weekday Peak Hour Traffic Volumes

Future Without-Project Traffic Volumes

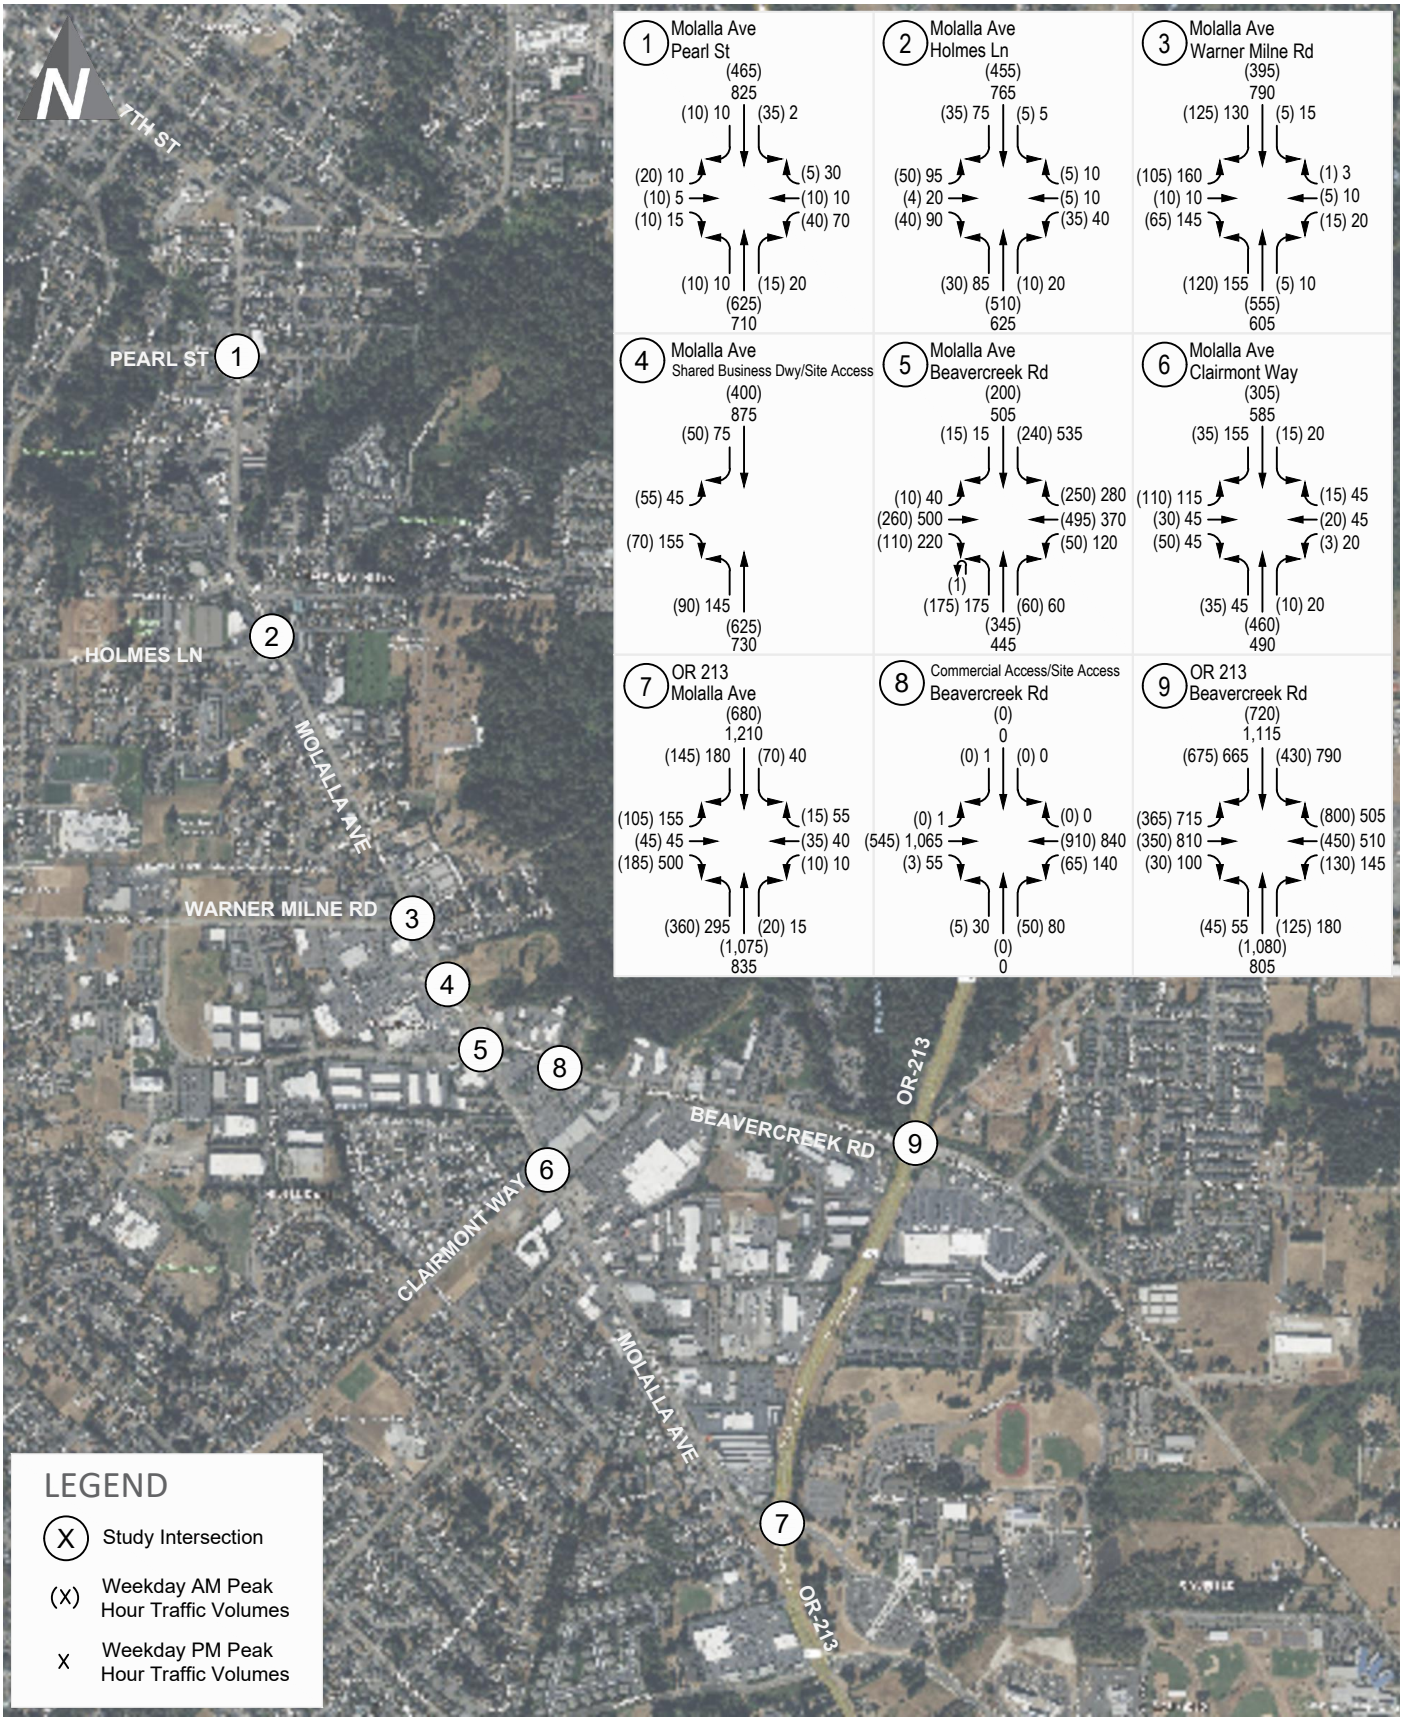
Future (2030) without-project traffic volumes are comprised of background traffic growth and traffic from "in-process developments" in the vicinity of the project site. An annual growth rate of 2.0 percent was applied, as provided by the City. Ten in-process developments in the vicinity of the proposed project site are listed below and were included in the analysis as identified by City staff.

1. 770 Pleasant Townhomes
2. Abernethy Place
3. Canemah Road Subdivision
4. Central Point Subdivision
5. Clackamas Heights Redevelopment
6. Downtown North End Development
7. Park Place Crossing Phase 1
8. Serres Farms Master Plan
9. Thimble Creek South
10. White Lane Subdivision

The forecast future (2030) without-project weekday AM and PM peak hour traffic volumes are shown on Figure 5.

Traffic Operations

The following section summarizes the traffic operations for existing and future without-project conditions for the study intersections.



An operational analysis was conducted for the study area intersections for the weekday AM and PM peak hours. Existing and future without-project volume-to-capacity (v/c) ratios and delay were calculated at study intersections based on the methodologies contained in the *Highway Capacity Manual* 7th Edition (HCM 7). The software program *Synchro* 12 was used to evaluate intersection operations.

ODOT's targets were applied to the signalized intersections along Cascade Highway South (OR 213), while the City of Oregon City's standards were applied to the remaining study intersections along Molalla Avenue and Beavercreek Road.

The City of Oregon City's operational targets are defined in the *City of Oregon City Guidelines for Transportation Impact Analyses* (2021), Section 7.9.1 for *Intersection Level of Service Standards.* The City identified a v/c ratio of 0.99 or less for the overall intersection at signalized intersections with the exception of the intersection of OR 213/Beavercreek Road, which is noted to have a maximum v/c ratio of 1.00. ODOT operational targets are defined in the 1999 *Oregon Highway Plan* (June 2017). Within the study area, Cascade Highway South (OR 213) is functionally classified as a principal arterial route inside the Portland Metro Area's Metropolitan Planning Organization (MPO) requiring a v/c ratio of 0.99 or less for the overall intersections. The Oregon Transportation Commission amended the *Oregon Highway Plan* in November 2018 to approve an alternative mobility target at the intersection of OR 213/Beavercreek Road to align with the City of Oregon City's recommendation of a 1.0 v/c target. Note that OHP identifies that *"ODOT recognizes that there are many variables and levels of uncertainty in calculating volume-to-capacity ratios…ODOT considers calculated values for v/c ratios that are within 0.03 of the adopted target in the OHP to be considered in compliance with the target."*

Signal timing at the study intersections was provided by Clackamas County and ODOT staff. Analysis parameters such as lane channelization, traffic control type, and signal timing were maintained for future (2030) without-project conditions consistent with existing conditions.

Results for the existing and future without-project operations analyses are summarized in Table 1. Detailed operations worksheets for the existing and future without-project analysis are included in Appendix B. The overall intersection v/c for signalized intersections was calculated per ODOT's *Analysis Procedures Manual* (Version 2, July 2025) Section 13.4.4 using Synchro.

Future (2030) Without-Project Peak Hour Traffic Volumes

Table 1. Existing & Future Without-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Existing		Future (2030) Without-Project	
		v/c[1]	Delay[2]	v/c	Delay
Weekday AM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.41	4.7	0.46	4.9
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.36	7.8	0.40	8.1
3. Molalla Ave/Warner Milne Rd	Signal	0.24	10.3	0.27	10.5
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.45	10.6	0.51	10.8
5. Molalla Ave/Beavercreek Rd	Signal	0.46	17.3	0.51	17.9
6. Molalla Ave/Clairmont Way	Signal	0.40	10.4	0.44	10.8
7. OR 213/Molalla Ave	Signal	0.57	27.0	0.64	28.7
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.65	4.4	0.72	4.8
9. OR 213/Beavercreek Rd	Signal	0.72	35.9	0.81	47.1
Weekday PM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.54	5.5	0.60	5.9
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.59	9.6	0.66	10.7
3. Molalla Ave/Warner Milne Rd	Signal	0.39	11.2	0.44	12.2
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.52	13.4	0.58	14.5
5. Molalla Ave/Beavercreek Rd	Signal	0.69	24.7	0.76	28.1
6. Molalla Ave/Clairmont Way	Signal	0.61	13.1	0.68	16.4
7. OR 213/Molalla Ave	Signal	0.68	33.9	0.78	36.3
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.59	7.6	0.67	8.5
9. OR 213/Beavercreek Rd	Signal	0.82	52.2	0.94	75.4

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

Table 1 shows that under both existing and future (2030) without project conditions, the study intersections operate acceptably per the respective v/c target during both the existing AM and PM peak hours, operating with a v/c ratio of 0.94 or less.

Traffic Safety

The five most recent years of collision records (January 1, 2019, to December 31, 2023) provided by the Oregon Department of Transportation (ODOT) were reviewed to identify existing traffic safety issues at the study intersections. A summary of the total and average annual number of reported collisions as well as the observed crash rates at the study intersections are provided in 0.

Table 2. Study Intersection Collision Data Summary (2019 – 2023)

Intersection	Number of Reported Collisions					Total	Annual Average	Crash Rate per MEV
	2019	2020	2021	2022	2023			
1. Molalla Ave/Pearl St	4	2	0	2	3	11	2.20	0.39
2. Molalla Ave/Holmes Ln/Hilda St	3	2	3	3	1	12	2.40	0.40
3. Molalla Ave/Warner Milne Rd	6	3	6	2	3	20	4.00	0.60
4. Molalla Ave/Shared Business Dwy (Safeway)	4	3	3	0	0	10	2.00	0.30
5. Molalla Ave/Beavercreek Rd	13	9	5	8	10	45	9.00	0.84
6. Molalla Ave/Clairmont Way	4	2	1	4	3	14	2.80	0.52
7. OR 213/Molalla Ave	10	4	2	5	0	21	4.20	0.39
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	0	0	1	0	0	1	0.20	0.03
9. OR 213/Beavercreek Rd	29	27	23	16	33	128	25.60	1.25

Source: ODOT 2025.
Note: MEV = million entering vehicles

As shown in Table 2, the most collisions that occurred within the study area over the last five-year review period occurred along Beavercreek Road at Molalla Avenue and OR 213 with an annual average of 9 collisions per year and approximately 2 collisions per year, respectively. The most common collision types experienced at the study intersections were rear-end collisions followed by approach turn collisions, primarily resulting in property damage only and minor injury. There were five collisions over the last five-year review period at the study intersections of Molalla Avenue/Pearl Street, Molalla Avenue/Warner Milne Road and Molalla Avenue/Clairmont Way involving a pedestrian, two of which resulting in fatality at Molalla Avenue/Pearl Street and Molalla Avenue/Warner Milne Road, occurring in 2019 and 2022, respectively. Both intersections are signalized with crosswalks provided across all legs of the intersections. No other fatalities were reported within the study area. Based on the review of existing collisions in the study area, no patterns of safety concerns were identified.

The intersections of Molalla Avenue and Beavercreek Road are located along OR 213, a state highway classified as principal arterial. According to the ODOT CAR Unit Crash Rate Table II, the crash rate along the state highway system principal arterial roadways was observed to range from 1.25 in 2022 to 1.40 in 2019. The statewide 90th percentile intersection crash rates detailed in Exhibit 4-1 of ODOT's *Analysis Procedures Manual* (Version 2, October 2024) show a rate of 0.86 for urban four-legged signalized intersections. As shown in Table 2, the crash rate at OR 213/Molalla Avenue is below both the statewide observed crash rates and less than the 90th percentile crash rates. The OR 213/Beavercreek Road intersection is identified within the top 5 percent of sites in the ODOT's *Safety Priority Index System* (SPIS) sites and the crash rate during the study period exceeds the 90th percentile crash rates but is consistent with the lower of the observed crash rates along a principal arterial. As identified above, the City has been undergoing safety improvements at the OR 213/Beavercreek Road intersection since 2023 including signal modifications and improved signage at the intersection with OR-213 which have since been completed.

Project Impacts

This section of the report documents project-generated impacts within the study area. First, peak hour traffic volumes are estimated, distributed, and assigned to adjacent roadways and intersections within the study area. Next, future (2030) traffic volumes including project traffic are developed and the potential impact to traffic volumes and traffic operations are identified.

Trip Generation

Trip generation for the proposed project was calculated based on trip rates using the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021) as coordinated and approved with City and ODOT staff through scoping of the traffic analysis. ITEs Multifamily Housing (Mid-Rise) (LU #221) and Fast-Food Restaurant with Drive-Through Window (LU #934), and Supermarket (LU #850) land uses were assumed for the proposed residential, restaurant, and retail land uses, respectively[3].

The proposed project trip generation was adjusted for pass-by and internal trips. Pass-by trips reflect traffic already on streets in the vicinity of the project site that would visit the commercial components of the project while driving by the site on the way to its final destination. Based on ITE *Trip Generation Manual* (11th Edition, 2021), the pass-by rates for the supermarket and restaurant uses are 24 percent and up to 55 percent, respectively. The inclusion of internal capture was assumed consistent with the methodology per ITE's *Trip Generation Handbook* (3rd Edition, 2017); however, the overall internal capture rate for the full development was assumed not to exceed 20 percent in order to provide a conservative analysis; as coordinated with City staff.[4]

Table 3 shows the weekday vehicle trips generated by the proposed project. The detailed trip generation calculations are included in Appendix C.

Table 3. Estimated Weekday Vehicle Trip Generation

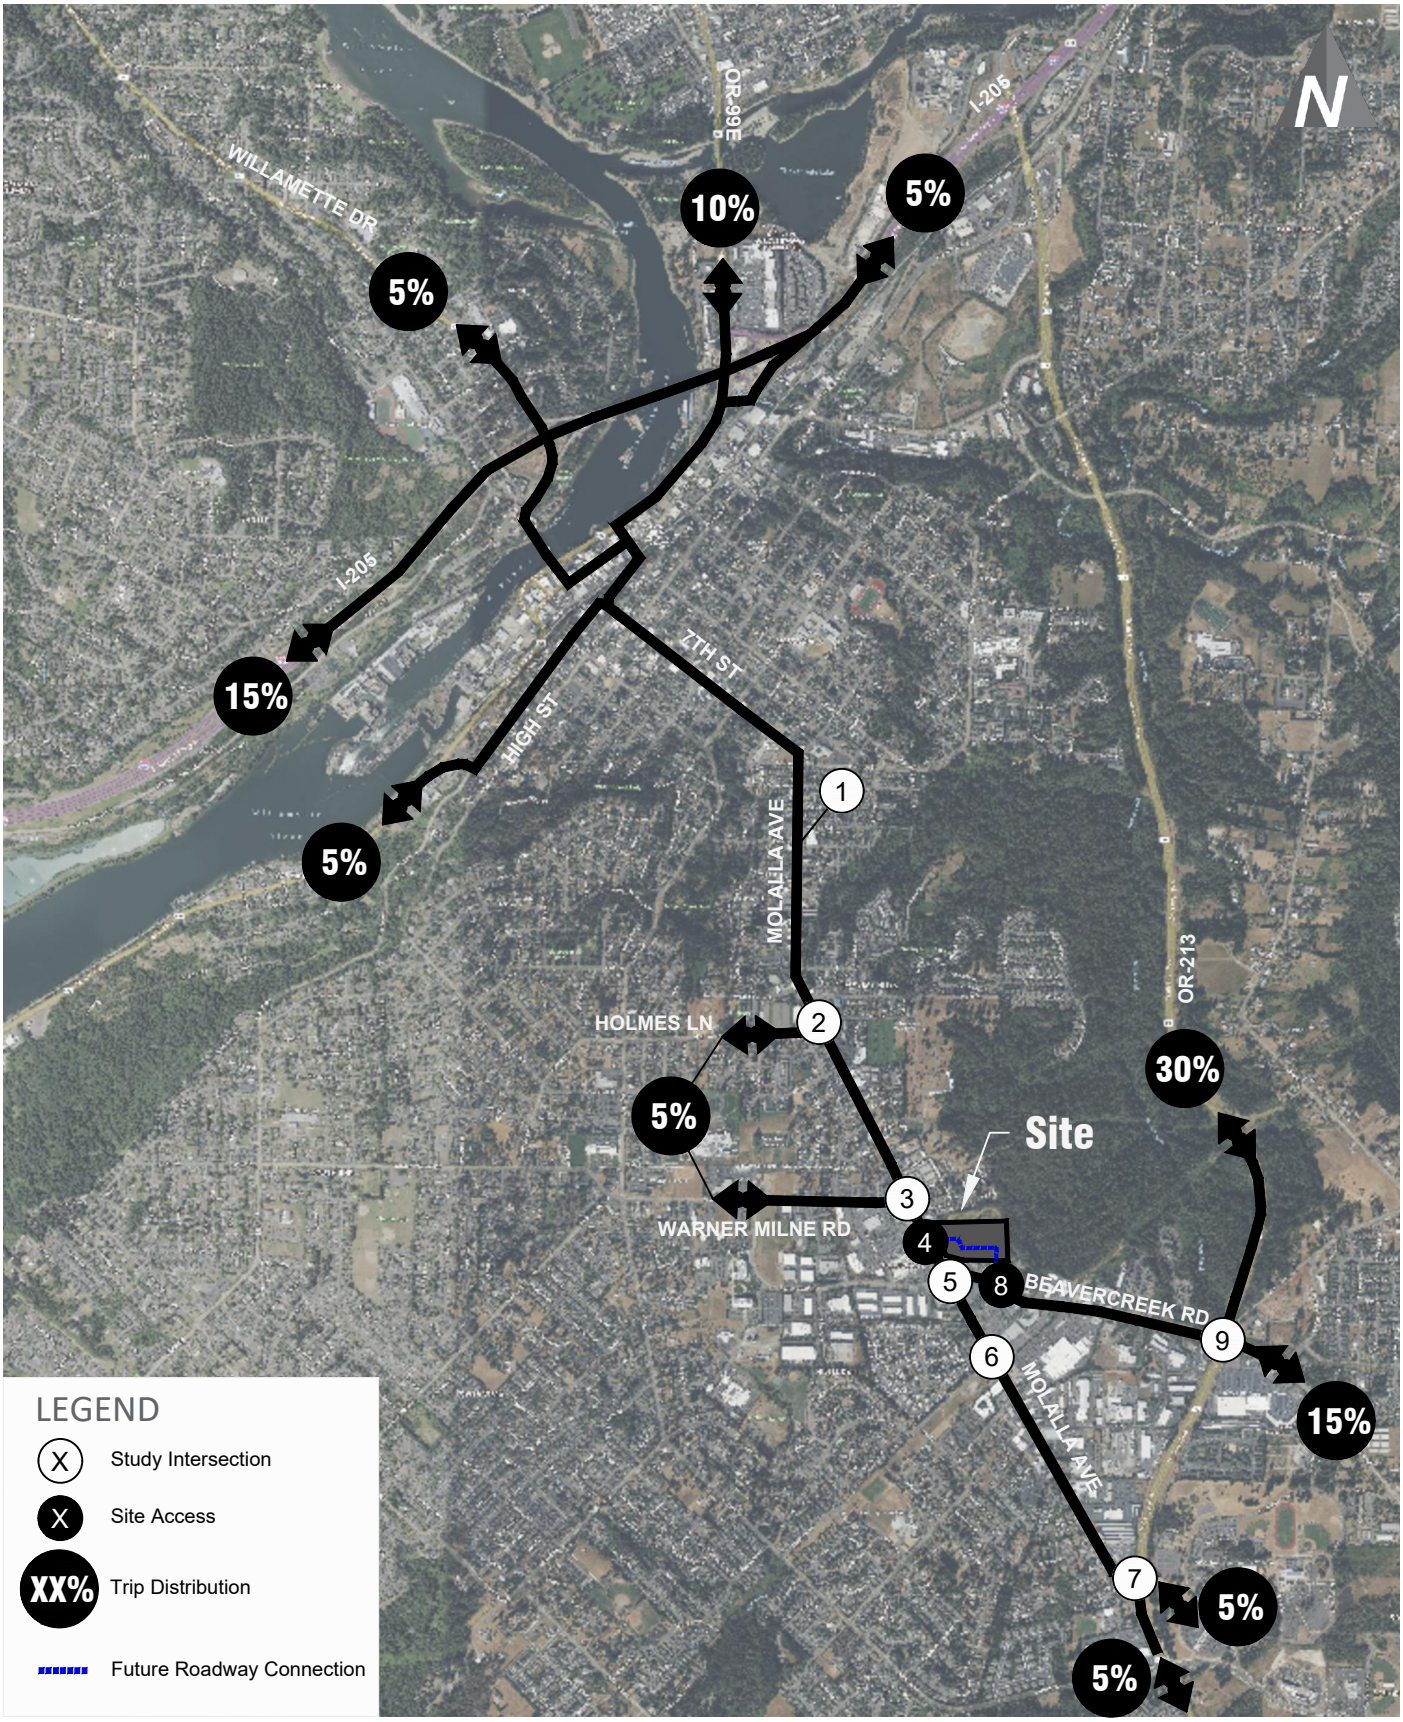
Land Use[1]	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Mid-Rise Apartments (LU #221)	210 du	794	18	49	67	40	26	66
Supermarket (LU #850)	13,500 sf	1,022	20	14	34	45	46	91
Pass-by (24%)		*-246*	*-4*	*-4*	*-8*	*-11*	*-11*	*-22*
Restaurant (LU #934)	4,915 sf	2,006	98	104	202	74	61	135
Pass-by (50% AM, 55% PM)		*-1,054*	*-51*	*-51*	*-102*	*-37*	*-37*	*-61*
Total Primary		**2,522**	**81**	**112**	**193**	**111**	**85**	**196**

Note: du = dwelling units, sf = square feet
1. Average trip rates from ITE *Trip Generation Manual*, 11th Edition (2021).

As shown in Table 3, the proposed project is estimated to generate 2,522 new weekday daily trips with 193 trips occurring in the AM peak hour and 196 trips occurring in the PM peak hour.

[3] Note that the supermarket land use was assumed for the retail to provide a conservative analysis as it has a higher weekday trip rates.

[4] The unadjusted internal capture was estimated to be 47 percent during the PM peak hour based on the ITE methodology. The imposed 20 percent internal capture cap is a reduction in over 50 percent in order to provide a conservative estimate of trip generation.



Trip Distribution and Assignment

Individual trip distribution patterns for the residential and commercial uses were estimated to and from the project site and were coordinated with City staff.

The residential trip distribution pattern was estimated based on U.S. Census Bureau's *OnTheMap* tool. *OnTheMap* is a web-based mapping and reporting application, which shows where workers are employed and where they live based on census data. The *OnTheMap* census data was translated to the number of people that live within a quarter-mile radius of the proposed project and where they work. The residential use project trip distribution for vehicle trips is shown in Figure 6.

Trip distribution patterns assumed for the commercial uses to and from the project site were generally assumed to be local and are based on the existing travel patterns in the vicinity of the project. The commercial use project trip distribution for vehicle trips is shown in Figure 7.

The weekday peak hour primary project trips were assigned to the study area based on the respective anticipated project trip distribution patterns. The commercial pass-by trips were assigned via the adjacent intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The resulting AM and PM peak hour trip assignment is illustrated in Figures 8 and 9, respectively.

Future With-Project Traffic Volumes

Site-generated weekday peak hour traffic volumes were added to the future without-project traffic volumes at the study intersections. Additionally, with the new roadway connection between the existing signalized intersections along Molalla Avenue and Beavercreek Road, driveways are proposed for the project as well as a new driveway serving the existing commercial uses northeast of the Molalla Avenue/Beavercreek Road intersection. A portion of the estimated existing commercial uses were assumed to utilize the proposed driveway. The resulting future (2030) with-project peak hour traffic volumes are illustrated on Figure 10.

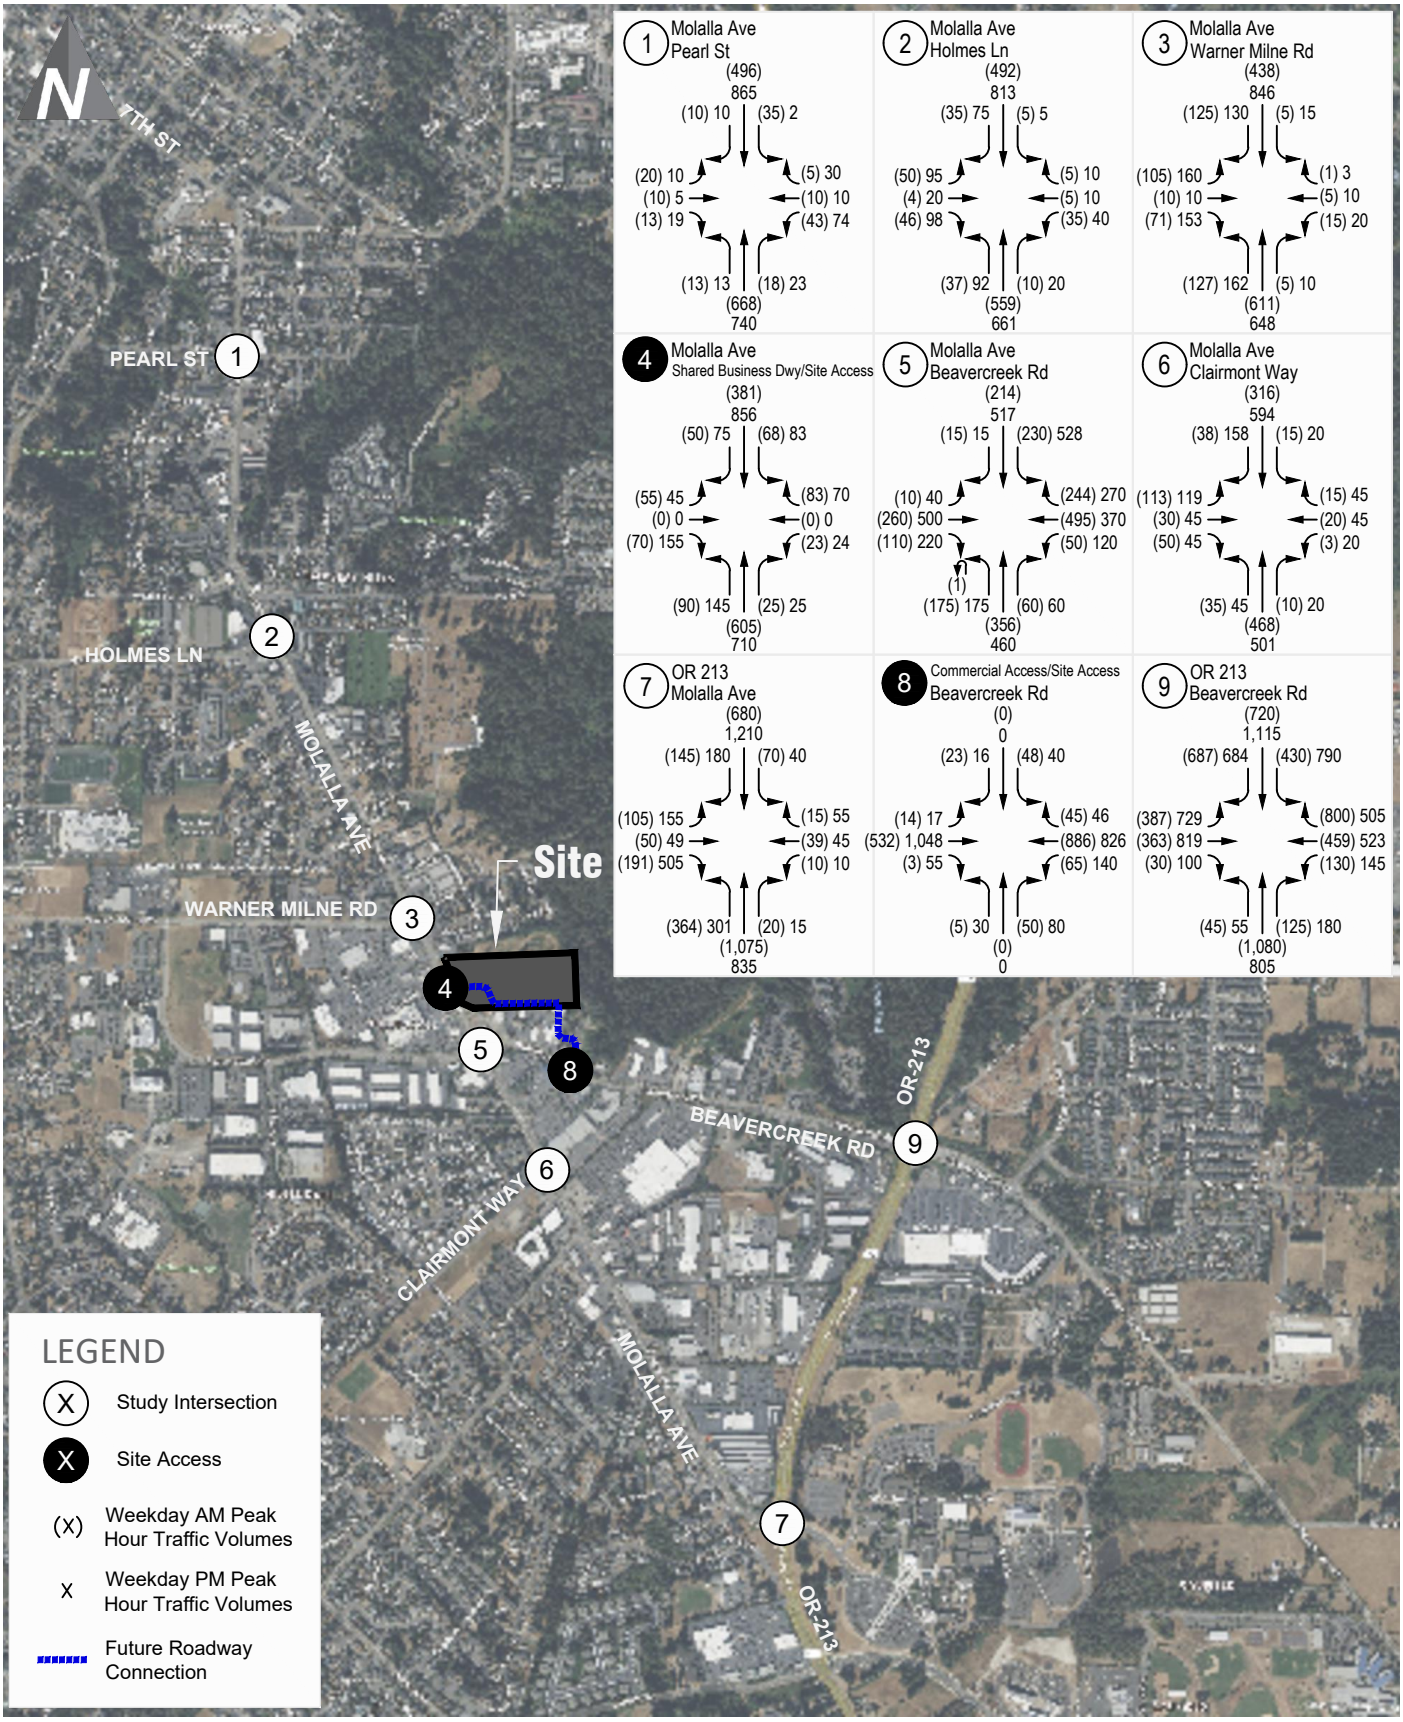

Table 4 summarizes the anticipated increase in total entering traffic at the off-site study intersections as well as the percent of future with-project traffic volumes attributable to the proposed project.

Table 4. Peak Hour Traffic Volume Impacts at Study Intersections

Intersection	Future (2030) Without-Project TEV	Project Trips TEV[1]	Shift of Existing Commercial	Future (2030) With-Project TEV	Percent Share
AM Peak Hour					
1. Molalla Ave/Pearl St	1,255	86	-	1.341	6.4%
2. Molalla Ave/Holmes Ln/Hilda St	1,184	99	-	1,283	7.7%
3. Molalla Ave/Warner Milne Rd	1,406	112	-	1,518	7.4%
4. Molalla Ave/Shared Business Dwy (Safeway)	1,290	160	0	1,450	11.0%

8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	2,212	81	6	2,298	3.5%
9. OR 213/Beavercreek Rd	6,395	55	-	6,450	0.9%

Note: TEV = Total Entering Vehicles
1. TEV project trips are inclusive of both primary and pass-by trips at the intersection as applicable.

As shown in Table 4, the project share in future (2030) traffic volumes is estimated to be approximately 8 percent or less during the weekday AM peak hours and approximately 5 percent or less during the weekday PM peak hours at all of the off-site study intersections. Traffic volumes may fluctuate day-to-day by 5 to 10 percent; therefore, the increase in traffic at the off-site study intersections as a result of the proposed project is less than the daily fluctuation. The project share at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/ Beavercreek Road are higher during both the weekday AM and PM peak hours given these intersections serve all project traffic.

Future (2030) With-Project Peak Hour Traffic Volumes

FIGURE 10

OR City Mixed-Use

transpogroup

Oct 14, 2025 – 2:50pm lilyh M:\25\1.25192.00 – OR City Retail\Graphics\DWG\25192_Distribution_Graphics.dwg Layout: Future With-Project Vols

Future With-Project Traffic Operations

Future (2030) with-project study intersection operations were evaluated during both the weekday AM and PM peak hours. The v/c ratio and delay were calculated for with-project conditions consistent with the methodology described for existing and without-project conditions. Analysis parameters such as lane channelization and signal timing were assumed to be consistent with the future without-project conditions. Table 5 compares the future (2030) without- and with-project intersection operations for the weekday AM and PM peak hours. Operational worksheets are included in Appendix B.

Note that the intersections of Molalla Avenue/Shared Business Driveway (Safeway) and Shared Business Driveway (South Ridge)/Beavercreek Road both assume the added legs to accommodate the added road connection between the intersections proposed with the project. The new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. Additional discussion of the added roadway segment between Molalla Avenue Beavercreek Road is provided in the site access section in the subsequent section.

Table 5. Future (2030) Without & With-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Future (2030) Without-Project		Future (2030) With-Project

8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.67	8.5	0.55	9.3
9. OR 213/Beavercreek Rd	Signal	0.94	75.4	0.94	78.0

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

As shown in Table 5, with the addition of the project traffic all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.

Site Access Analysis

Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The proposed road section between Molalla Avenue and Beavercreek Road is illustrated in Figure 2. As shown in the figure, a three-lane section is proposed along the project frontage extending from Molalla Avenue beyond the commercial accesses which then transitions to a two lane section to Beavercreek Road.

The traffic operational review for the site focused on the following key aspects as requested by City staff which are reviewed in the sections below.

- **Modified Traffic Signals** – The operations at the modified signals was evaluated both in terms of v/c of the intersections as well as 95th percentile queues.
- **Left-turn lane warrants** – A three lane section providing a two-way left turn lane is proposed through the project's commercial driveways but then is proposed to transition to a two-lane section. A warrant review is conducted to confirm if left turn lanes are recommended at the two driveways further to the east of this section. The two known driveway locations are illustrated in Figure 2.
- **On-site queueing** – The on-site queuing associated with the proposed restaurant with drive-through.

Modified Traffic Signals

The traffic operations at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/Beavercreek Road intersections were evaluated under future (2030) with-project conditions for the weekday AM and PM peak hours. As noted above, the new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. The resulting operations are summarized in Table 5 above. As shown in the table, both intersections are forecast to meet the required operational standards, operating with a v/c of 0.55 or lower during the weekday AM and PM peak hours.

The 95th percentile queues (the queues that are only exceeded 5% of the time) at the signalized access intersections along Molalla Avenue and Beavercreek Road were also evaluated using synchro, consistent with the operational analysis and are summarized in Table 6.

Table 6. Future (2030) Molalla Ave & Beavercreek Rd Intersection 95th Percentile Queues

	4. Molalla Ave/Shared Business Dwy (Safeway)					8. Shared Business Dwy (South Ridge)/ Beavercreek Rd				
		AM Peak Hour		PM Peak Hour			AM Peak Hour		PM Peak Hour	
Movement	Available Storage[2]	Without-Project	With-Project	Without-Project	With-Project	Available Storage	Without-Project	With-Project	Without-Project	With-Project
Eastbound Left-Turn	110'	25'	25'	30'	30'	115'	<25'	<25'	<25'	<25'
Eastbound through/right	110'	30'	30'	105'	110'	715'	35'	45'	160'	160'
Westbound Left-Turn	-[1]	-	<25'	-	25'	115'	<25'	<25'	25'	25'
Westbound through/right	-[1]	-	35'	-	45'	630'	<25'	65'	60'	80'
Northbound Left-Turn	100'	45'	50'	**110'**	**115'**	50'	<25'	<25'	25'	25'
Northbound through/right	530'	60'	75'	95'	105'	50'	25'	25'	40'	40'
Southbound Left-Turn	-[1]	<25'	25'	<25'	35'	-[1]	-	25'	-	25'
Southbound through/right	500'	75'	75'	225'	230'	-[1]	-	<25'	-	<25'

Note: **Bold** indicates the 95th percentile queues exceeds the available storage.
1. Intersection movement being added and/or modified with project.
2. Available queueing storage distance to the adjacent intersection. Turn lane storage assumes storage plus full width opening (not including the taper).

The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be 2 vehicles or less. These forecast queues will be able to be accomdoated within the provided storage at each intersection. This forecast queues correspond with the forecast weekday AM and PM peak hour volumes along the proposed roadway section with the opening of the project of approximately 300 trips (in/out) split between the 2 accesses as illustrated in Figure 10 above.

The queues of the other approaches are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project). Additionally, all 95th percentile queues at the two signals are forecast to be accomdoated within the available storage with the exception of the northbound left-turn queue at the Molalla Avenue signal during the PM peak hour.

The northbound left-turn 95th percentile queue at the Molalla Avenue signal is forecast to have up to 1 vehicle extending beyond the available storage under both future (2030) without-project and with-project conditions. The table shows that the 95th percentile queue is forecast to increase by 5' (less than 1 vehicle) with the project as compared to without project conditions, even though the project does not add any trips to the northbound left-turn movement. This minimal increase in 95th percentile queue is due to the actuated signal timing of the intersection, which adapts phasing time allocations to movements based on volumes of the intersection. Due to the addition of the east leg added with the project, the phase time at the actuated signal adjusts accordingly, resulting in the slight added forecast 95th percentile queue of the northbound left-turn movement. Although the 95th northbound left-turn percentile queue is forecast to exceed the storage, the average queue is forecast to be accomdoated within the available storage under both future (2030) without- and with-project conditions at approximately 60 feet or less during the PM peak hour.

Left-Turn Lane Warrants

Left-turn lane warrants have been reviewed for the proposed Les Schwab Access and the eastern residential access located on the east side of the project site along the proposed Public Access Road. Based on the City of Oregon City's Turn Lane Warrant guidelines defined in the Transportation Impact Analysis Guidelines (July 2021), Section 7.14.2, the "Engineer shall exercise professional judgement in evaluating the need for, and benefit of, providing dedicated left-turn lanes". The City provided references to consider include the AASHTO *Policy on Geometric Design of Highways and Streets* and the National Cooperative Highway Research Program (NCHRP) Report 457 *Evaluating Intersection Improvements.* The left turn warrants from both sources were evaluated assuming the future (2030) with-project weekday peak hour traffic volumes. The left-turn warrant evaluation is included in Appendix D. As shown in the appendix, no left-turn lanes are warranted at any of the site access intersections under the future (2030) weekday AM or PM peak hours.

In addition to these known driveway locations, as illustrated in Figure 2, additional access(es) are anticipated on the south side of the internal roadway in the future as identified as part of the Beavercreek Road Access Management Plan. These access points would serve the existing commercial development adjacent to Les Schwab. The exact driveway placement is unknown; however, the access would be located between the commercial and residential driveways within the proposed two-lane roadway section. The turn lane needs associated with that potential future development would be evaluated as part of that future project and if shown to be warranted, the widening to accommodate a turn lane could be provided to the south of the proposed road.

On-Site Queueing

Additionally, on-site queuing associated with the proposed restaurant with drive-through was evaluated. The drive-through queue was estimated using the Poisson queuing distribution. The

total external inbound vehicle trips (inclusive of pass-by trips) for the restaurant use were assumed to utilize the drive through for purposes of providing for a conservative queueing analysis. The average service time for a fast-food restaurant drive-through window is approximately 4 minutes based on the annual study conducted by QSR[5]. A detailed Poisson queuing worksheet is provided in Appendix E. The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 12 vehicles or less or approximately 6 vehicles per lane. The proposed site plan illustrates each drive lane can accommodate a queue of at least 275' or 11 vehicles per lane; therefore, the queues are anticipated to be accommodated within the proposed driveway storage.

[5] *25th Anniversary Edition Drive-Thru Study (Intouch Insight and QSR).*

Mitigation Measures

Based on the operational review above for both without and with-project conditions, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane as noted above. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 above, the project is forecast to contribute 55 project trips to the intersection during the PM peak hour. This results in an estimated fee of $22,220 at this location as pro-rata share contribution to the planned improvement project.

Additionally, a Transportation System Development Charge (TSDC) will be required associated with the development of the project's land uses.[6] The project site is located inside the Molalla Avenue Corridor SDC Special Location Discount Area. Based on the current TSDC rates (Effective July 1, 2018), multi-family developments are required to pay a fee of $6,474 per multi-family dwelling unit constructed. Non-residential developments are required to submit a *System Development Charges Request Form* to the City to determine the fee required. The residential portion of the project proposed to construct 210 multifamily dwelling units will require a fee of $1,359,540. The TSDC associated with the non-residential uses proposed on site will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*.

[6] Each of the pad users will pay their own fees when they proceed with their own pad development.

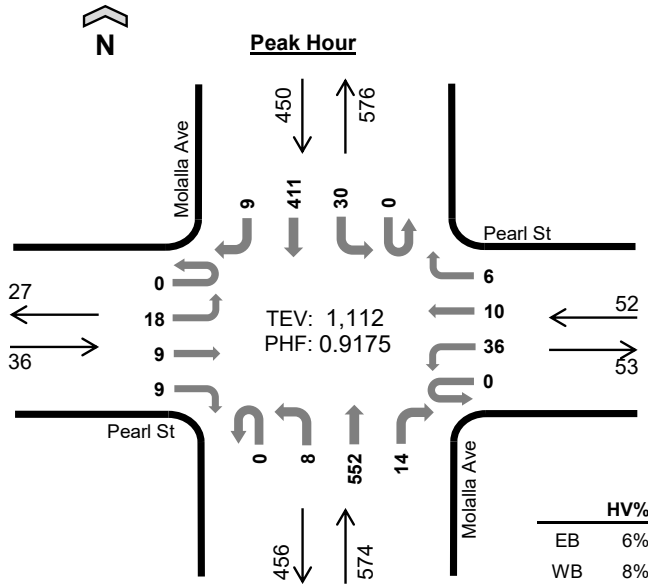
Findings and Recommendations

This traffic impact analysis summarizes the project traffic impacts of the proposed Oregon City Mixed-Use project located at 1367 Molalla Avenue in Oregon City. General findings and recommendations include:

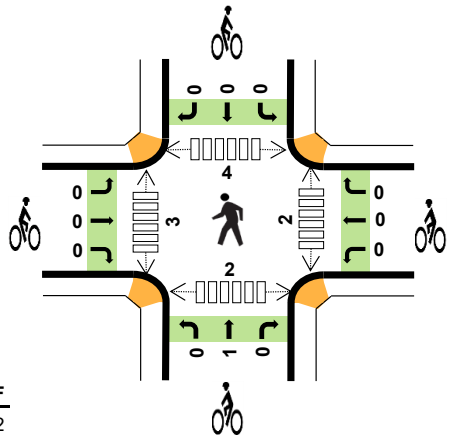
- **Project Description** – The proposed project will construct a 13,500 sf retail, a 4,915 sf fast food restaurant with drive through, and up to 210 multifamily apartment units on 3 parcels in Oregon City along with a 4th parcel being used for right-of-way.

- **Trip Generation** – Accounting for internal capture of trips that will occur between the proposed uses and pass-by trips associated with the commercial uses of the project, the proposed project is estimated to generate 2,522 new primary weekday daily trips with 193 trips occurring in the AM peak hour and 196 trips occurring in the PM peak hour.

- **Traffic Operations** – With the addition of project generated traffic, all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.



- **Site Access** – Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road.
    - The two signalized intersections are forecast to operate acceptably.
    - The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be 2 vehicles or less. Additionally, the queues of the other approaches at the two signalized intersections are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project).
    - The proposed road section is three-lane through the commercial area and then transitions to a two-lane section further east. This proposed section was confirmed through a warrant analysis for current uses. Any future development and associated need for widening to accommodate turn lanes would be assessed and could be provided to the south of the proposed road.



- **Mitigation** – The total TSDC associated with the land uses of the proposed project will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*. Additionally, the project would contribute its pro-rata share at the Beavercreek Road/OR-213 intersection toward TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Introduction

This traffic impact analysis (TIA) identifies potential transportation-related impacts associated with the proposed Mixed-Use Development in Oregon City, Oregon. As necessary, mitigation measures are identified that would reduce or offset significant transportation related impacts that the project may have on the surrounding transportation system.

Project Description

The proposed project site is located at 1367 Molalla Avenue in Oregon City, as shown in the vicinity map included in Figure 1.[1] The site is comprised of 4 parcels (3 parcels with land use development and 1 for right-of-way) in which the proposed mixed-use development is anticipated to include the following:

- Parcel A: 14,600 square feet (sf) retail
- Parcel B: up to 210 multi-family apartment units
- Parcel C: *No land use - right-of-way*
- Parcel D: 4,900 sf fast food restaurant with drive-through

The existing site is vacant. With the development of the site, a new roadway connection would be completed between the existing signalized intersections along Molalla Avenue at the west side of the site and Beavercreek Road south of the site. The preliminary site plan is illustrated in Figure 2. The proposed project is anticipated to be fully constructed and operational by 2030.

Study Scope and Study Area

The following off-site intersections surrounding the project site were identified for analysis following coordination with City of Oregon City and Oregon Department of Transportation (ODOT) staff:

1. Molalla Ave/Pearl St
2. Molalla Ave/Holmes Ln
3. Molalla Ave/Warner Milne Rd
4. Molalla Ave/Safeway access/Future site access
5. Molalla Ave/Beavercreek Rd
6. Molalla Ave/Clairmont Way
7. Molalla Ave/ OR-213
8. Commercial Access/Beavercreek Rd/Future site access
9. OR-213/Beavercreek Rd

The analysis includes a review of existing conditions in the vicinity of the project site, including the transportation network, planned improvements, existing and future without-project AM and PM[2] peak hour traffic volumes, traffic operations, and traffic safety. Future with-project conditions are evaluated by adding site-generated traffic to future without-project volumes. Future without and with-project conditions are compared to identify the impacts the proposed project has on the surrounding transportation system.

[1] The proposed land use and overall site plan is revised relative to the previously completed October 2025 TIA.

[2] Note that review of additional time periods is included in the TIA below, but as discussed in greater detail below, the operational analysis is limited to the AM and PM peak hours.

Existing & Future Without-Project Conditions

This section describes both existing and future (2030) without-project conditions within the identified study area. Study area characteristics are provided for the transportation system, planned improvements, existing and future forecast without-project traffic volumes, traffic operations, and traffic safety.

Roadway Network

The following sections describe the existing street network within the vicinity of the proposed project and anticipated planned improvements.

Existing

The primary roadways within the study area and their characteristics near the study intersections are described below.

Molalla Avenue is a five-lane roadway functionally classified by the City of Oregon City as a minor arterial and has a speed limit of 30 mph. Molalla Avenue is a 2 to 3 lane roadway north of Warner Milne Road and south of Beavercreek Road, and five lane roadway Warner Milne Road and Beavercreek Road. Sidewalks are provided on both sides of Molalla Avenue through the entirety of the study area. Bike lanes are available on both sides north of Gales Lane, and south of the Safeway access driveway.

Beavercreek Road is a 5-lane roadway functionally classified as a minor arterial west of Molalla Avenue and a major arterial east of Molalla Avenue. Beavercreek Road has a speed limit of 35 mph in the vicinity of the project site. Beavercreek Road is a 3 to 5 lane roadway west of Molalla Avenue and a 5 to 6 lane road east of Molalla Avenue with additional urn lanes present surrounding its intersection with OR-213. Sidewalks and bicycle lanes are provided on both sides of the roadway between Molalla Avenue and OR-213.

OR-213 (Cascade Highway South) is a State Highway Route classified as a principal arterial. OR-213 is a four-lane roadway with a wide median north and south of its intersection with S Beavercreek Road, which transitions to a 6-lane roadway south of Beavercreek Road, and a 7-lane roadway north of Beavercreek Road. The speed limit along OR-213 in the study area is 55 mph. Sidewalks and bike lanes are available on the east side of OR-213 south of Beavercreek Road and wide painted shoulders are present where sidewalks are not within the study area.

Pearl Street is classified by the City of Oregon City as a major collector with 2 travel lanes. The speed limit is 25 mph. West of the intersection with Molalla Avenue, a sidewalk is present on the north side of Pearl Street. East of the intersection, sidewalks are present for approximately 230 feet.

Holmes Lane is classified as a collector west of Molalla Avenue, and continues into Hilda Street, which is a local road, east of Molalla Avenue. Holmes Lane is a 2 to 3 lane roadway with a speed limit of 25 mph. Sidewalks, bike lanes, and/or paved shoulders are present on both sides of Holmes Lane.

Warner Milne Road is classified as a minor arterial with a speed limit of 30 mph. Warner Milne Roadis a two-lane roadway with additional turn lanes provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Clairmont Way is functionally classified by the City of Oregon City as a collector with a speed limit of 25 mph. Clairmont Way is a two-lane roadway with additional turn lanes

provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Planned Improvements

A review of local plans was conducted to identify any changes in the study area that should be accounted for in the analysis. The local plans reviewed included the following: *City of Oregon City's Comprehensive Plan Project List (November 2022)*, *Oregon City's Transportation System Plan* (TSP), Yamhill County's *2015-2035 Transportation System Plan* (TSP)*, and Oregon Department of Transportation's (ODOT) 2024-2027 Statewide Transportation Improvement Program (STIP).* Planned improvements within the study area predominantly included maintenance and resurfacing projects; not impacting intersection capacity. This included the following projects:

- Warner Milne Road resurfacing near Molalla Avenue which was recently completed.
- Holmes Lane will be undergoing resurfacing in 2026.
- Molalla Avene will be undergoing resurfacing in 2027.
- Beavercreek Road will be undergoing microsurfacing in 2026, with more resurfacing planned for 2032.
- Water transmission pipes under Molalla Avenue will be upgraded in 2026.

In addition to the above projects, Beavercreek Road has also been undergoing safety improvements since 2023, including signal modifications and improved signage at the intersection with OR-213 which have since been completed. The Beavercreek Road/OR-213 intersection has an Alternative Mobility Target as the City's TSP identified it would not meet the state's required Oregon Highway Plan Mobility Standards by 2035. An additional project that has been identified as part of the Alternative Mobility Targets in the TSP includes project D95, the Beavercreek Road/OR-213 westbound right turn lane with northbound merge lane on OR 213. The City is collecting a pro-rata share to fund the D95 project; however, this project was not assumed in the future operational conditions.

Non-Motorized Facilities

Dedicated pedestrian and bicycle facilities are provided on roadways surrounding the project site as noted above. Sidewalks are available on both sides of Molalla Avenue, Beavercreek Road, and Holmes Lane. A sidewalk is available on the east side of OR-213 south of the intersection with Beavercreek Lane and on the north side of Pearl Street west of Molalla Avenue.

Transit Service

Transit service in the vicinity of the project site is provided by TriMet's Route 32. The closest transit stops to the site are located at the two site access intersections along Molalla Avenue and Beavercreek Road, directly adjacent to the project site. Additional transit stops served by TriMet's Route 33 are located approximately 0.25 miles west of the project site at the intersection of Beavercreek Road/Danielson Drive. Route 32 provides service 7-days per week between Milwaukie and Clackamas Community College in Oregon City with service between approximately 6:15 a.m. and 7:00 p.m. on weekdays with headways of approximately 30 minutes during peak periods. Route 33 provides service between the Oregon City Transit Center, Milwaukie and Clackamas Town Center 7-days per week between approximately 5:20 a.m. and 12:00 a.m. with peak period headways of approximately 15 minutes.

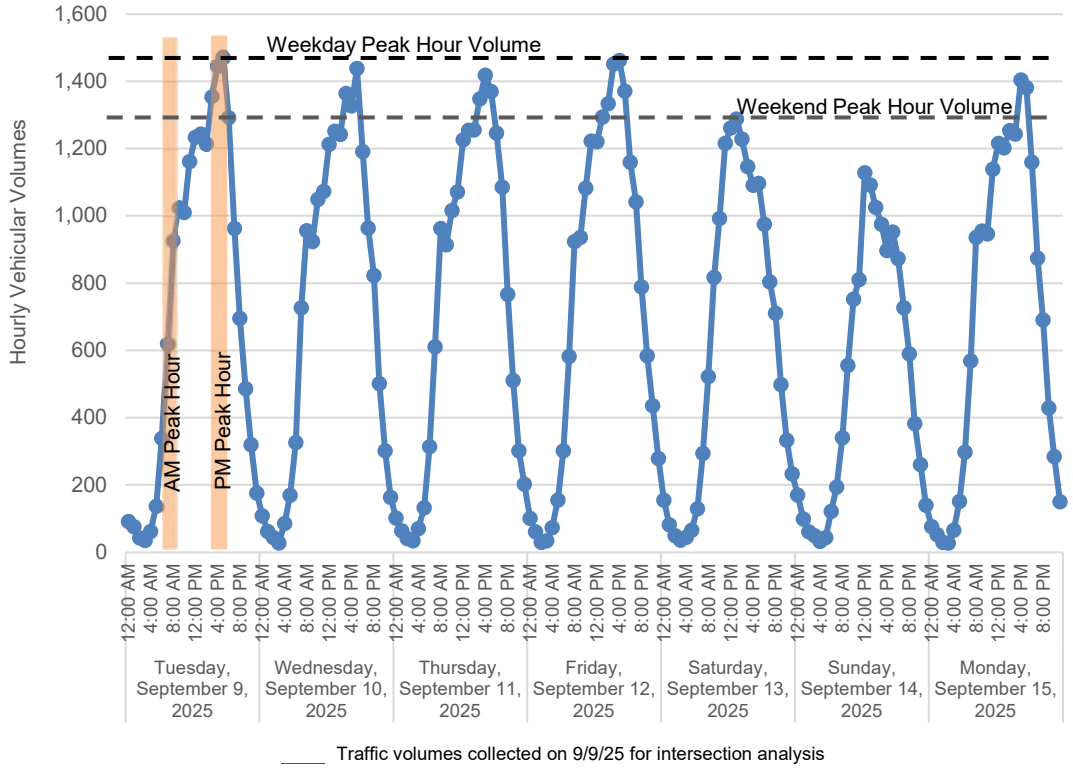
Traffic Volumes

The existing and future (2030) without-project traffic volumes forecasts are summarized in the sections below.

Existing

Existing weekday AM (7 to 9 a.m.) and PM (4 to 6 p.m.) peak period traffic counts were collected at each study intersection in September 2025.[3] The detailed traffic counts are included in Appendix A. Volumes are rounded to the nearest 5 vehicles to account for the daily fluctuations in traffic volumes. Figure 4 illustrates the existing weekday AM and PM peak hour traffic volumes at the study intersections.

In addition to the weekday peak hours, the traffic volumes throughout the week were also reviewed to confirm the time periods for analysis. Traffic volumes were collected along Molalla Avenue, north of Beavercreek Road in the project vicinity for one week in September 2025. The detailed volumes throughout the week are included in Appendix A and the volumes are illustrated in Figure 3.



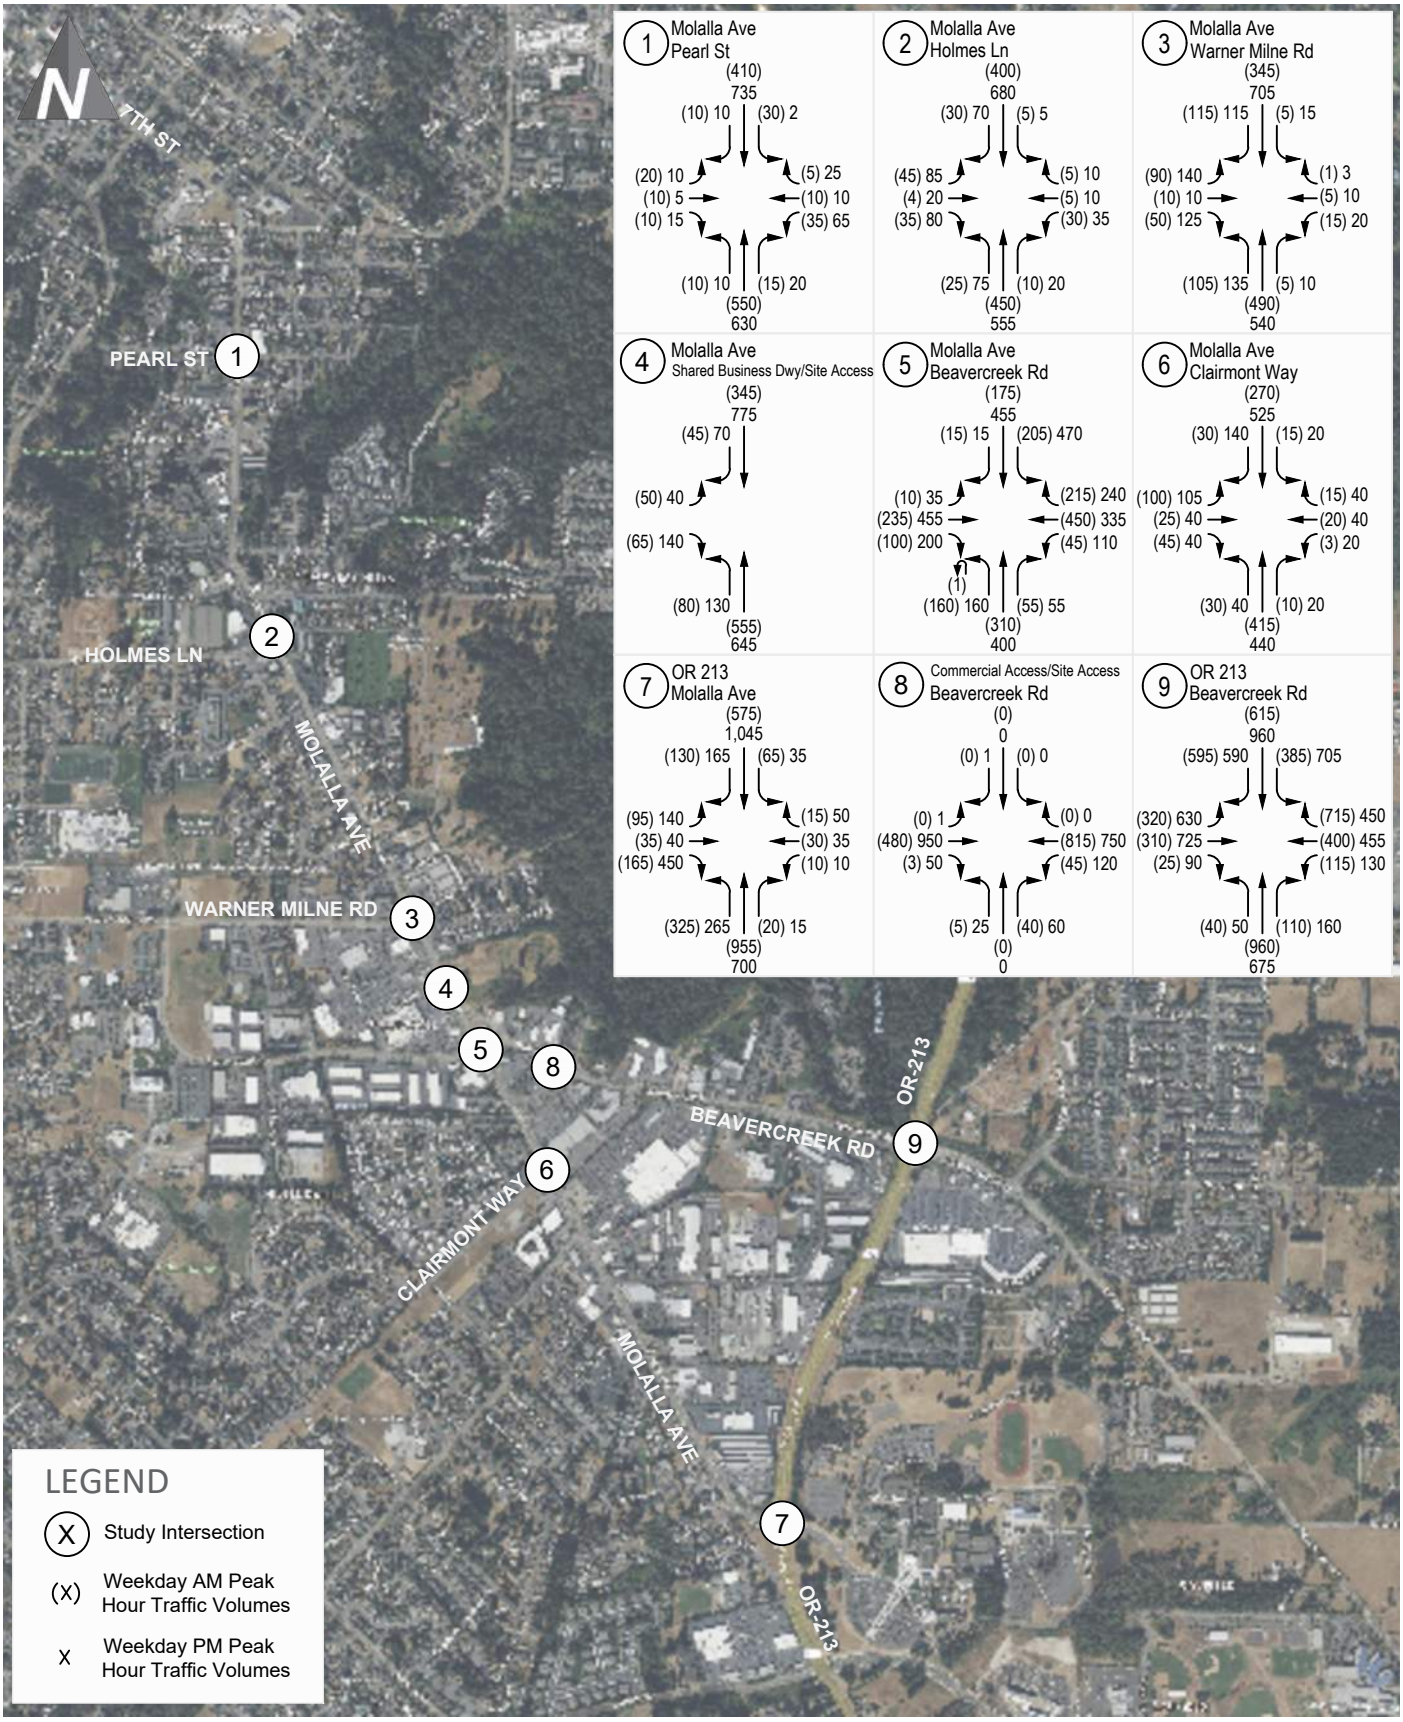


Figure 3. Existing Weekly volumes along Molalla Avenue, north of Beavercreek Road

As shown in the figure, the weekday AM and PM peak hours being studied as part of the project capture the peak traffic volumes that are occurring within the study area throughout the week. The weekend peak hourly volumes are approximately 12 percent less than the weekday peak volumes which occur during the studied PM peak hour.

[3] It was confirmed with City and ODOT staff that given the counts were conducted in September when school was in session, no seasonal adjustment to the volumes was needed.

Existing Weekday Peak Hour Traffic Volumes

Future Without-Project Traffic Volumes

Future (2030) without-project traffic volumes are comprised of background traffic growth and traffic from "in-process developments" in the vicinity of the project site. An annual growth rate of 2.0 percent was applied, as provided by the City. Ten in-process developments in the vicinity of the proposed project site are listed below and were included in the analysis as identified by City staff.

1. 770 Pleasant Townhomes
2. Abernethy Place
3. Canemah Road Subdivision
4. Central Point Subdivision
5. Clackamas Heights Redevelopment
6. Downtown North End Development
7. Park Place Crossing Phase 1

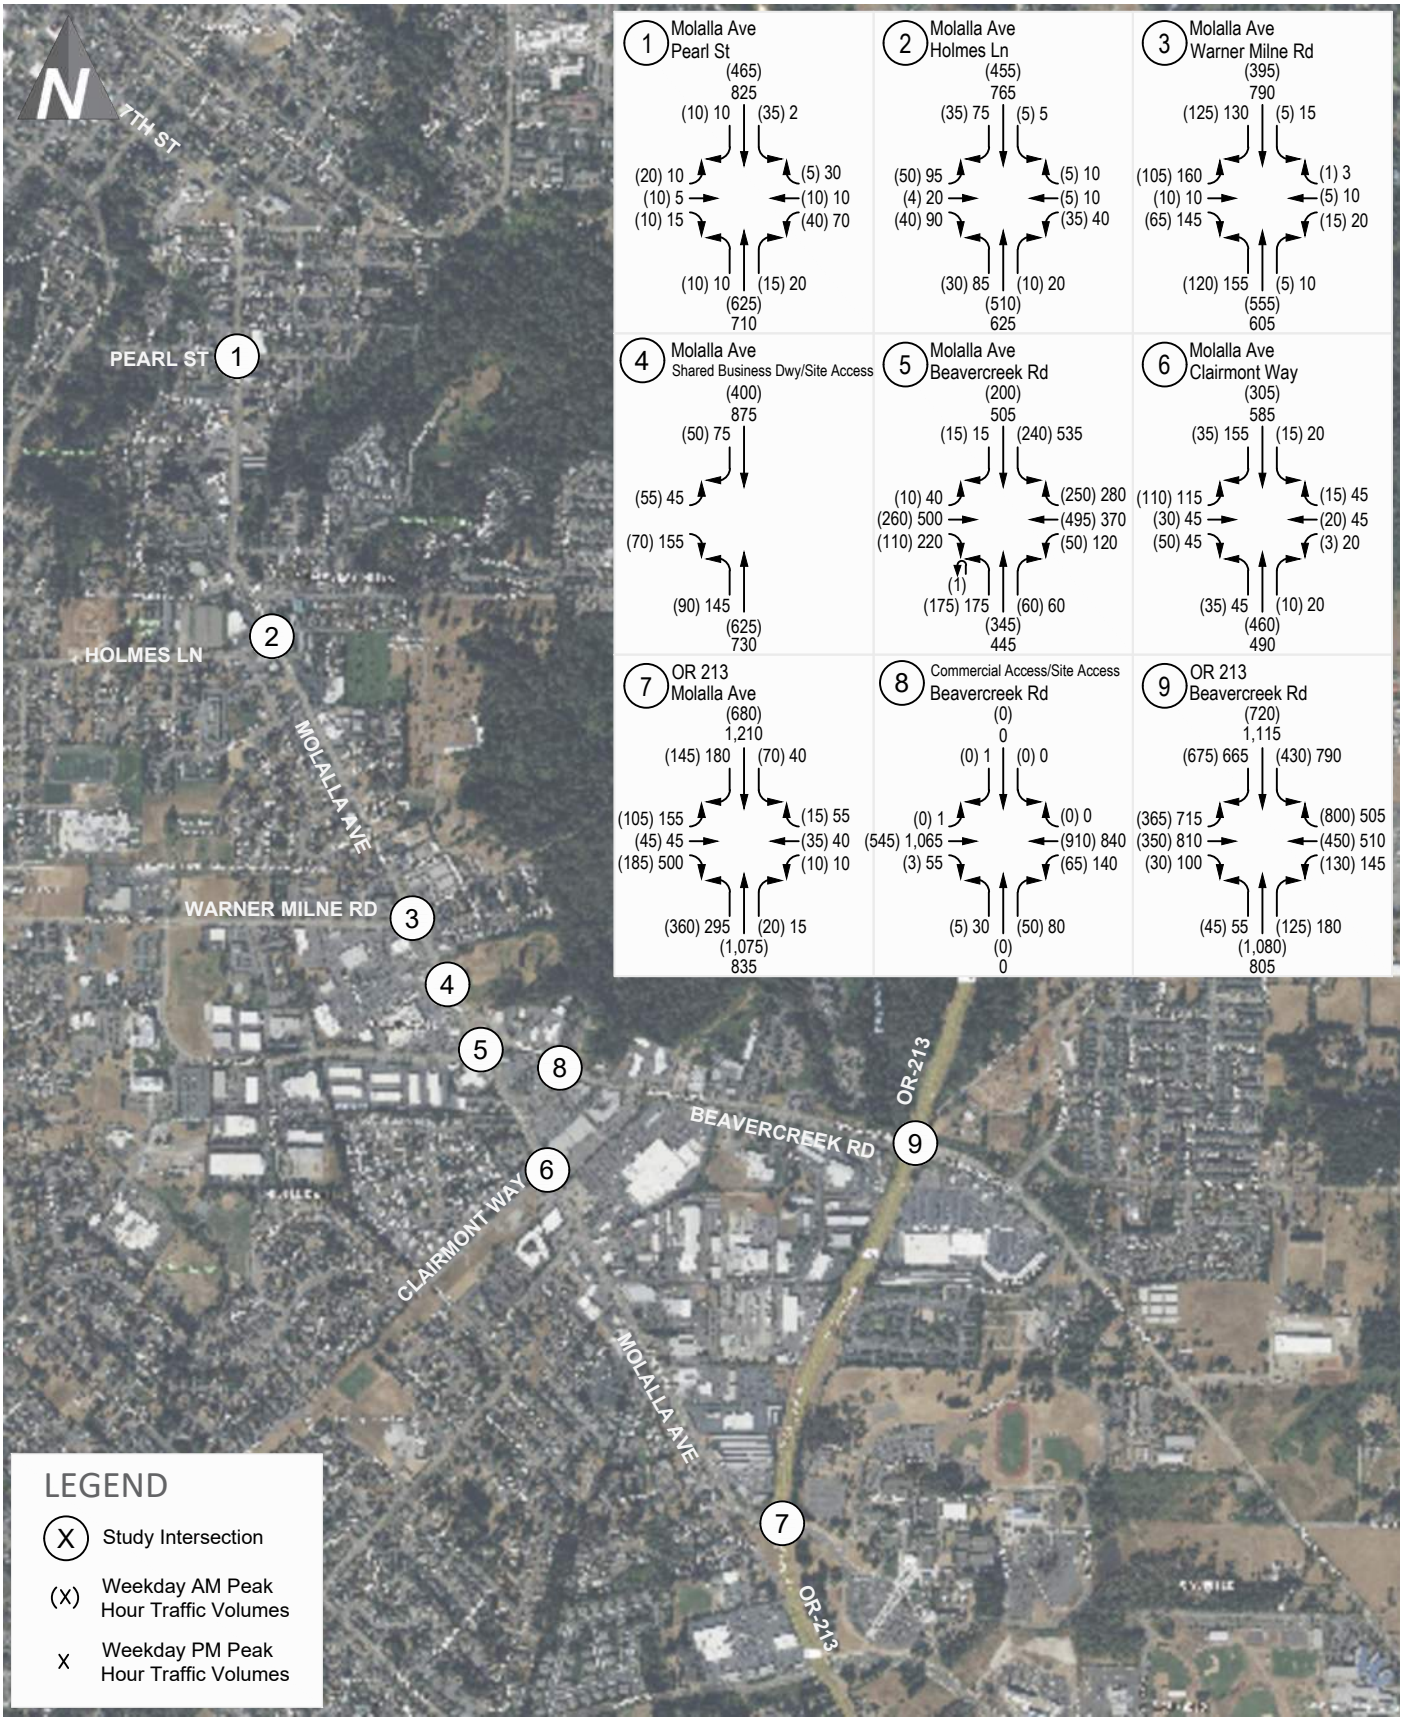
10. White Lane Subdivision

The forecast future (2030) without-project weekday AM and PM peak hour traffic volumes are shown on Figure 5.

Traffic Operations

The following section summarizes the traffic operations for existing and future without-project conditions for the study intersections.



An operational analysis was conducted for the study area intersections for the weekday AM and PM peak hours. Existing and future without-project volume-to-capacity (v/c) ratios and delay were calculated at study intersections based on the methodologies contained in the *Highway Capacity Manual* 7th Edition (HCM 7). The software program *Synchro* 12 was used to evaluate intersection operations.

ODOT's targets were applied to the signalized intersections along Cascade Highway South (OR 213), while the City of Oregon City's standards were applied to the remaining study intersections along Molalla Avenue and Beavercreek Road.

The City of Oregon City's operational targets are defined in the *City of Oregon City Guidelines for Transportation Impact Analyses* (2021), Section 7.9.1 for *Intersection Level of Service Standards.* The City identified a v/c ratio of 0.99 or less for the overall intersection at signalized intersections with the exception of the intersection of OR 213/Beavercreek Road, which is noted to have a maximum v/c ratio of 1.00. ODOT operational targets are defined in the 1999 *Oregon Highway Plan* (June 2017). Within the study area, Cascade Highway South (OR 213) is functionally classified as a principal arterial route inside the Portland Metro Area's Metropolitan Planning Organization (MPO) requiring a v/c ratio of 0.99 or less for the overall intersections. The Oregon Transportation Commission amended the *Oregon Highway Plan* in November 2018 to approve an alternative mobility target at the intersection of OR 213/Beavercreek Road to align with the City of Oregon City's recommendation of a 1.0 v/c target. Note that OHP identifies that *"ODOT recognizes that there are many variables and levels of uncertainty in calculating volume-to-capacity ratios…ODOT considers calculated values for v/c ratios that are within 0.03 of the adopted target in the OHP to be considered in compliance with the target."*

Signal timing at the study intersections was provided by Clackamas County and ODOT staff. Analysis parameters such as lane channelization, traffic control type, and signal timing were maintained for future (2030) without-project conditions consistent with existing conditions.

Results for the existing and future without-project operations analyses are summarized in Table 1. Detailed operations worksheets for the existing and future without-project analysis are included in Appendix B. The overall intersection v/c for signalized intersections was calculated per ODOT's *Analysis Procedures Manual* (Version 2, July 2025) Section 13.4.4 using Synchro.

5. Molalla Ave/Beavercreek Rd	Signal	0.69	24.7	0.76	28.1
6. Molalla Ave/Clairmont Way	Signal	0.61	13.1	0.68	16.4
7. OR 213/Molalla Ave	Signal	0.68	33.9	0.78	36.3
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.59	7.6	0.67	8.5
9. OR 213/Beavercreek Rd	Signal	0.82	52.2	0.94	75.4

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

Table 1 shows that under both existing and future (2030) without project conditions, the study intersections operate acceptably per the respective v/c target during both the existing AM and PM peak hours, operating with a v/c ratio of 0.94 or less.

Traffic Safety

The five most recent years of collision records (January 1, 2019, to December 31, 2023) provided by the Oregon Department of Transportation (ODOT) were reviewed to identify existing traffic safety issues at the study intersections. A summary of the total and average annual number of reported collisions as well as the observed crash rates at the study intersections are provided in Table 2.

Table 2. Study Intersection Collision Data Summary (2019 – 2023)

Intersection	Number of Reported Collisions					Total	Annual Average	Crash Rate per MEV
	2019	2020	2021	2022	2023			
1. Molalla Ave/Pearl St	4	2	0	2	3	11	2.20	0.39
2. Molalla Ave/Holmes Ln/Hilda St	3	2	3	3	1	12	2.40	0.40

9. OR 213/Beavercreek Rd	29	27	23	16	33	128	25.60	1.25

Source: ODOT 2025.
Note: MEV = million entering vehicles

As shown in Table 2, the most collisions that occurred within the study area over the last five-year review period occurred along Beavercreek Road at Molalla Avenue and OR 213 with an annual average of 9 collisions per year and approximately 2 collisions per year, respectively. The most common collision types experienced at the study intersections were rear-end collisions followed by approach turn collisions, primarily resulting in property damage only and minor injury. There were five collisions over the last five-year review period at the study intersections of Molalla Avenue/Pearl Street, Molalla Avenue/Warner Milne Road and Molalla Avenue/Clairmont Way involving a pedestrian, two of which resulting in fatality at Molalla Avenue/Pearl Street and Molalla Avenue/Warner Milne Road, occurring in 2019 and 2022, respectively. Both intersections are signalized with crosswalks provided across all legs of the intersections. No other fatalities were reported within the study area. Based on the review of existing collisions in the study area, no patterns of safety concerns were identified.

The intersections of Molalla Avenue and Beavercreek Road are located along OR 213, a state highway classified as principal arterial. According to the ODOT CAR Unit Crash Rate Table II, the crash rate along the state highway system principal arterial roadways was observed to range from 1.25 in 2022 to 1.40 in 2019. The statewide 90th percentile intersection crash rates detailed in Exhibit 4-1 of ODOT's *Analysis Procedures Manual* (Version 2, October 2024) show a rate of 0.86 for urban four-legged signalized intersections. As shown in Table 2, the crash rate at OR 213/Molalla Avenue is below both the statewide observed crash rates and less than the 90th percentile crash rates. The OR 213/Beavercreek Road intersection is identified within the top 5 percent of sites in the ODOT's *Safety Priority Index System* (SPIS) sites and the crash rate during the study period exceeds the 90th percentile crash rates but is consistent with the lower of the observed crash rates along a principal arterial. As identified above, the City has been undergoing safety improvements at the OR 213/Beavercreek Road intersection since 2023 including signal modifications and improved signage at the intersection with OR-213 which have since been completed.

Project Impacts

This section of the report documents project-generated impacts within the study area. First, peak hour traffic volumes are estimated, distributed, and assigned to adjacent roadways and intersections within the study area. Next, future (2030) traffic volumes including project traffic are developed and the potential impact to traffic volumes and traffic operations are identified.

Trip Generation

Trip generation for the proposed project was calculated based on trip rates using the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021) as coordinated and approved with City and ODOT staff through scoping of the traffic analysis. The trip generation was adjusted for pass-by and internal trips. Pass-by trips reflect traffic already on streets in the vicinity of the project site that would visit the commercial components of the project while driving by the site on the way to its final destination. The land use assumptions and pass-by rates per parcel are summarized below based on ITE's *Trip Generation Manual* (11th Edition, 2021):

- Parcel A: 14,600 square feet (sf) retail – A drive-through window is planned for the northern side of the retail building with the drive-through lane circulating on the eastern side of the building. For purposes of the traffic analysis, one quarter of the building was assumed as ITE's Coffee Shop with Drive Through Window (LU #937) with the remaining as ITEs Strip Retail Plaza (<40k) (LU #822). Pass-by rates for the retail and drive through land uses are assumed to be 40 percent and up to 55 percent, respectively.
- Parcel B: up to 210 multi-family apartment units – ITE's Multifamily Housing (Mid-Rise) (LU #221). No pass-by is associated with residential.
- Parcel C: No land use - right-of-way
- Parcel D: 4,900 sf fast food restaurant with drive-through – ITE's Fast-Food Restaurant with Drive-Through Window (LU #934). Pass-by rates for the drive through restaurant land use is assumed to be 55 percent.

The inclusion of internal capture was assumed consistent with the methodology per ITE's *Trip Generation Handbook* (3rd Edition, 2017) resulting in an estimated overall internal capture rate for the full development of 5 percent and 25 percent in the AM and PM peak hours, respectively.

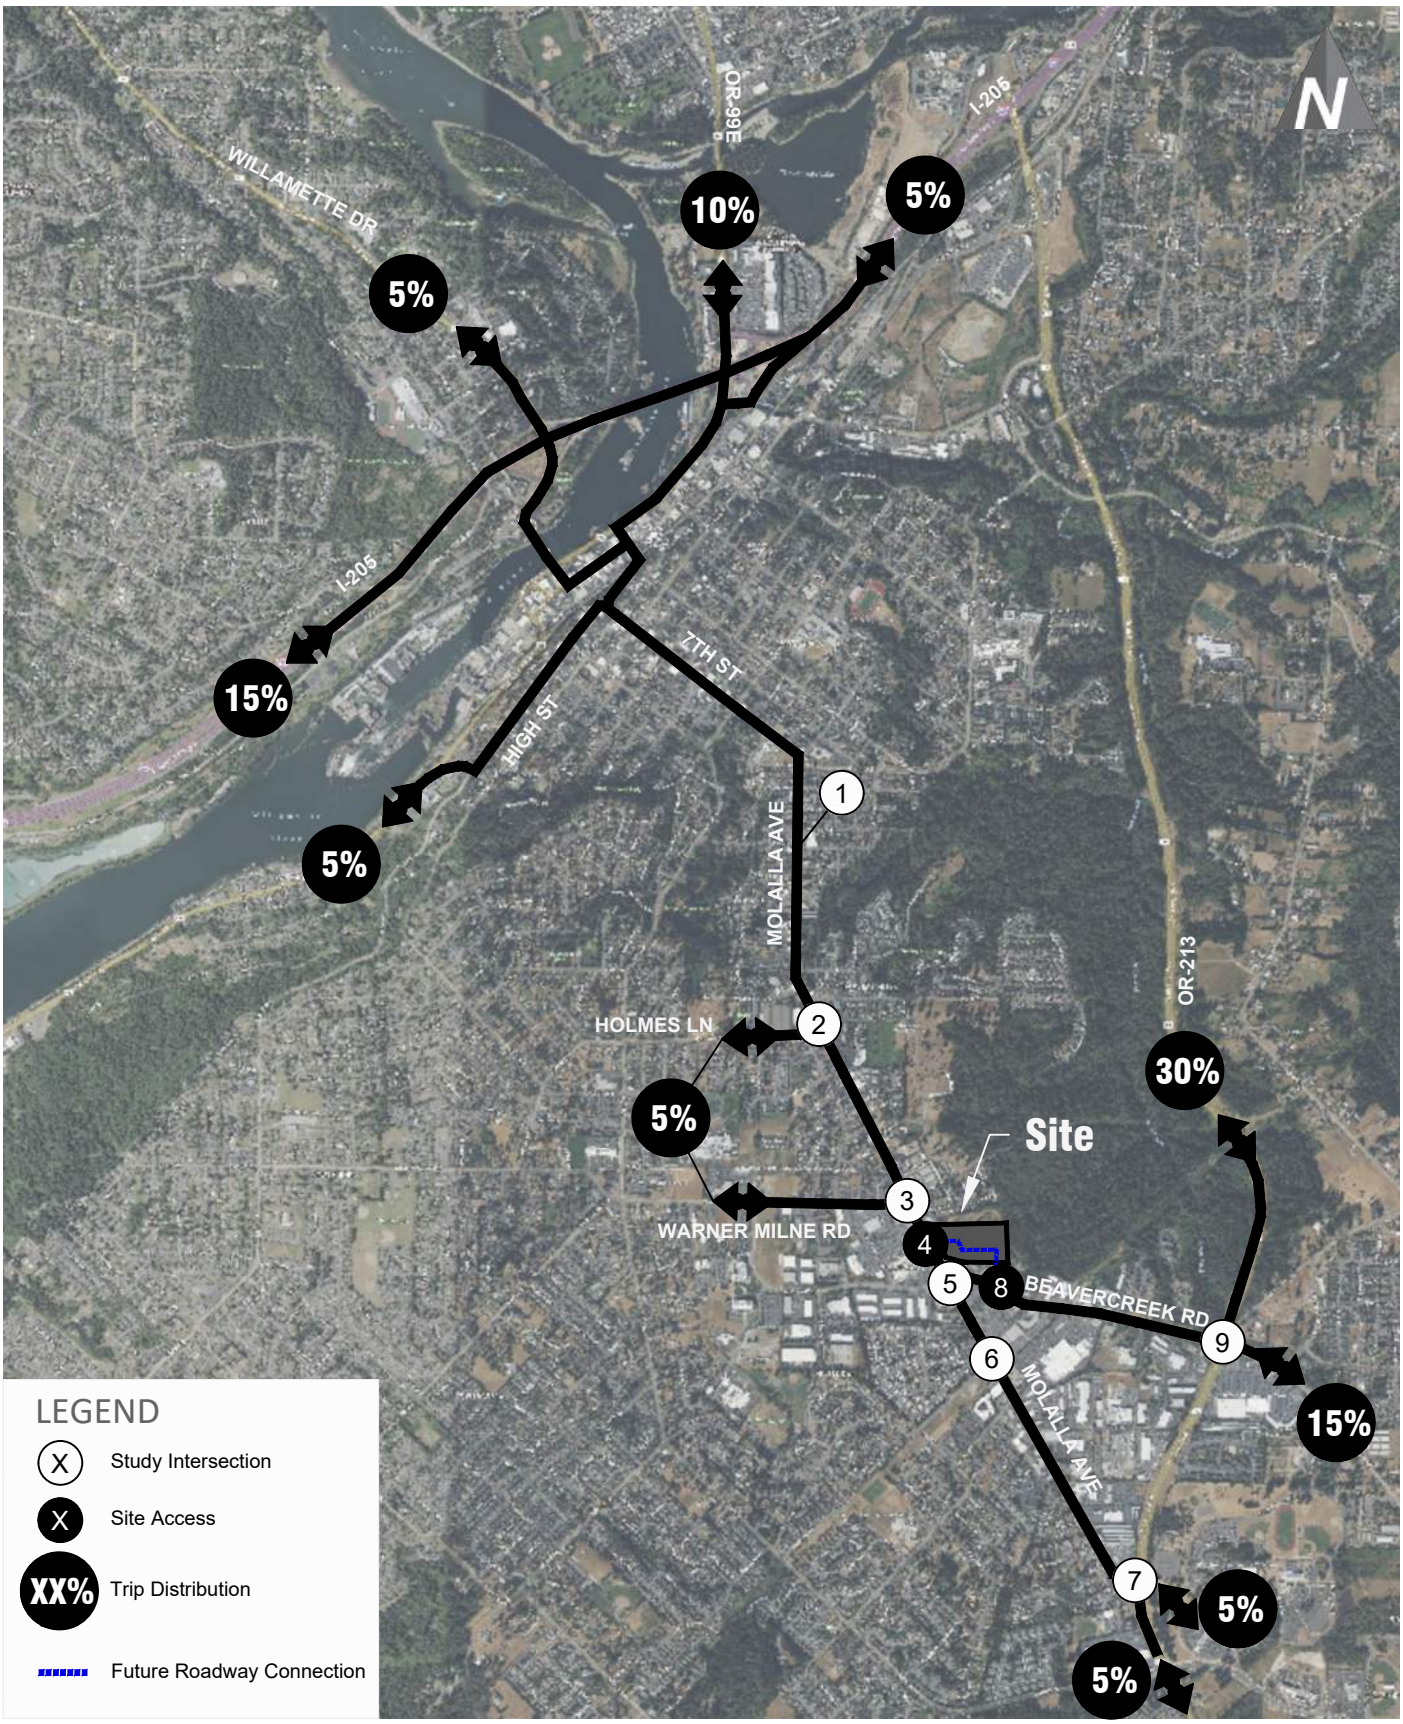
Table 3 shows the weekday vehicle trips generated by the proposed project. The detailed trip generation calculations are included in Appendix C.

Table 3. Estimated Weekday Vehicle Trip Generation

Land Use[1]	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Mid-Rise Apartments (LU #221)	210 du	710	18	49	67	33	21	54
Retail	14,600 sf	2,174	166	161	327	77	76	153
Pass-by		*-1,092*	*-81*	*-81*	*-162*	*-40*	*-40*	*-80*
Restaurant (LU #934)	4,900 sf	2,096	107	106	213	75	64	139
Pass-by		*-1,100*	*-53*	*-53*	*-106*	*-38*	*-38*	*-76*
Total Primary		**2,788**	**157**	**182**	**339**	**107**	**83**	**190**

Note: du = dwelling units, sf = square feet
1. Average trip rates from ITE *Trip Generation Manual*, 11th Edition (2021).

As shown in Table 3, the proposed project is estimated to generate 2,788 new weekday daily trips with 339 trips occurring in the AM peak hour and 190 trips occurring in the PM peak hour.



Trip Distribution and Assignment

Individual trip distribution patterns for the residential and commercial uses were estimated to and from the project site and were coordinated with City staff.

The residential trip distribution pattern was estimated based on U.S. Census Bureau's *OnTheMap* tool. *OnTheMap* is a web-based mapping and reporting application, which shows where workers are employed and where they live based on census data. The *OnTheMap* census data was translated to the number of people that live within a quarter-mile radius of the proposed project and where they work. The residential use project trip distribution for vehicle trips is shown in Figure 6.

Trip distribution patterns assumed for the commercial uses to and from the project site were generally assumed to be local and are based on the existing travel patterns in the vicinity of the project. The commercial use project trip distribution for vehicle trips is shown in Figure 7.

The weekday peak hour primary project trips were assigned to the study area based on the respective anticipated project trip distribution patterns. The commercial pass-by trips were assigned via the adjacent intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The resulting AM and PM peak hour trip assignment is illustrated in Figures 8 and 9, respectively.

Future With-Project Traffic Volumes

Site-generated weekday peak hour traffic volumes were added to the future without-project traffic volumes at the study intersections. Additionally, with the new roadway connection between the existing signalized intersections along Molalla Avenue and Beavercreek Road, driveways are proposed for the project as well as a new driveway serving the existing commercial uses northeast of the Molalla Avenue/Beavercreek Road intersection. A portion of the estimated existing commercial uses were assumed to utilize the proposed driveway. The resulting future (2030) with-project peak hour traffic volumes are illustrated on Figure 10.

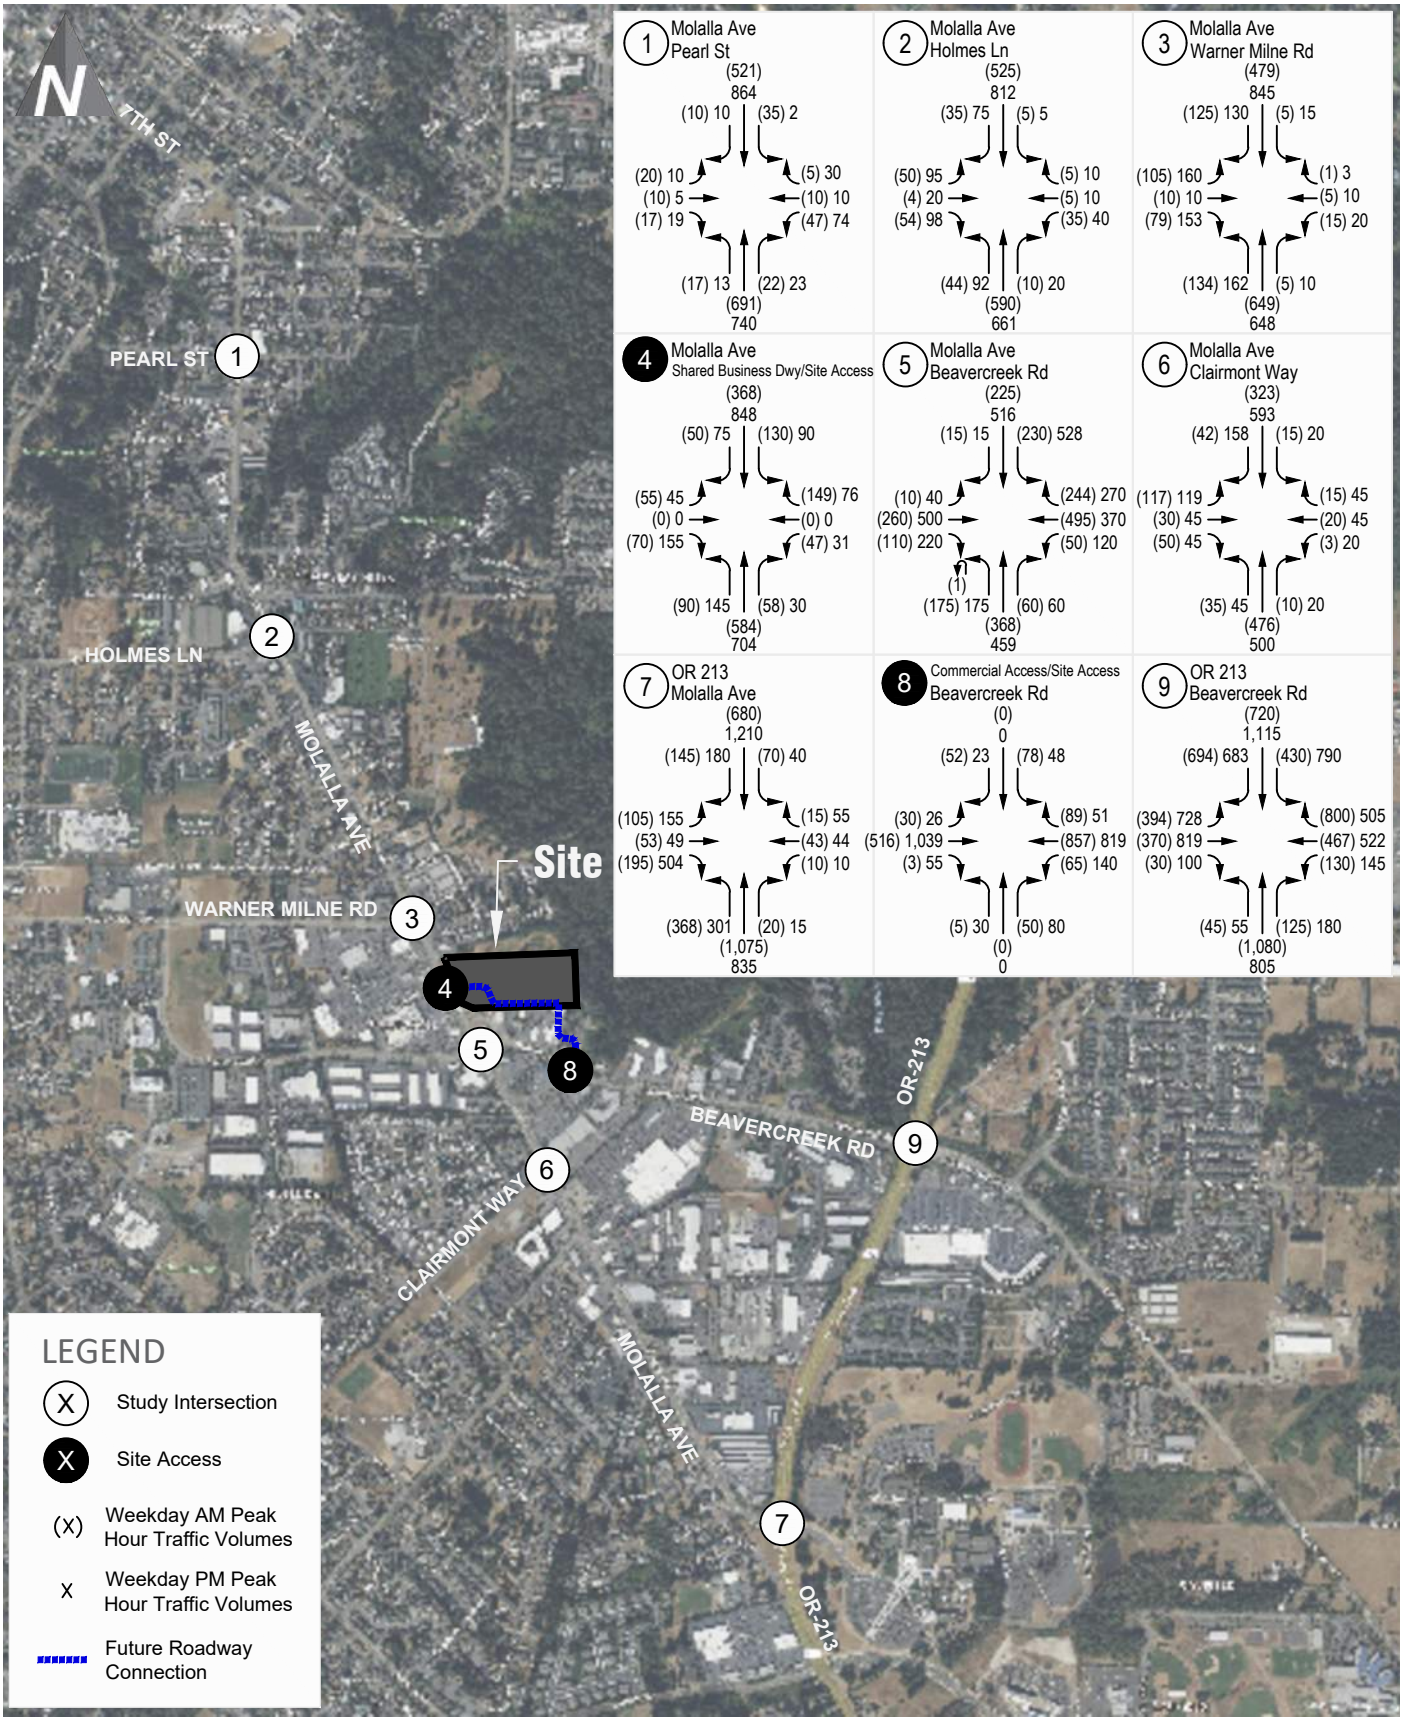

Table 4 summarizes the anticipated increase in total entering traffic at the off-site study intersections as well as the percent of future with-project traffic volumes attributable to the proposed project.

Table 4. Peak Hour Traffic Volume Impacts at Study Intersections

Intersection	Future (2030) Without-Project TEV	Project Trips TEV[1]	Shift of Existing Commercial	Future (2030) With-Project TEV	Percent Share
AM Peak Hour					
1. Molalla Ave/Pearl St	1,255	150	-	1.405	10.7%
2. Molalla Ave/Holmes Ln/Hilda St	1,184	178	-	1,362	13.1%
3. Molalla Ave/Warner Milne Rd	1,406	206	-	1,612	12.8%
4. Molalla Ave/Shared Business Dwy (Safeway)	1,290	311	0	1,601	19.4%
5. Molalla Ave/Beavercreek Rd	2,211	48	-16	2,243	1.4%
6. Molalla Ave/Clairmont Way	1,088	48	-	1,136	4.2%
7. OR 213/Molalla Ave	2,745	34	-	2,779	1.2%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	1,578	162	5	1,745	9.6%
9. OR 213/Beavercreek Rd	5,200	85	-	5,285	1.6%
PM Peak Hour					
1. Molalla Ave/Pearl St	1,717	83	-	1,800	4.6%
2. Molalla Ave/Holmes Ln/Hilda St	1,840	98	-	1,938	5.1%
3. Molalla Ave/Warner Milne Rd	2,053	113	-	2,166	5.2%
4. Molalla Ave/Shared Business Dwy (Safeway)	2,025	174	0	2,199	7.9%
5. Molalla Ave/Beavercreek Rd	3,265	25	-17	3,273	0.3%
6. Molalla Ave/Clairmont Way	1,630	25	-	1,655	1.5%
7. OR 213/Molalla Ave	3,380	18	-	3,398	0.5%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	2,212	94	6	2,311	4.3%
9. OR 213/Beavercreek Rd	6,395	52	-	6,447	0.8%

Note: TEV = Total Entering Vehicles
1. TEV project trips are inclusive of both primary and pass-by trips at the intersection as applicable.

As shown in Table 4, the project share in future (2030) traffic volumes is estimated to be approximately 8 percent or less during the weekday PM peak hours and up to 19 percent during the weekday AM peak hours at all of the study intersections.

Future (2030) With-Project Peak Hour Traffic Volumes

FIGURE 10

OR City Mixed-Use

transpogroup

Mar 05, 2026 – 2:09pm lilyh M:\25\1.25192.00 – OR City Retail\Graphics\DWG\OR City Graphics_Update.dwg Layout: Future With–Project Vols

Future With-Project Traffic Operations

Future (2030) with-project study intersection operations were evaluated during both the weekday AM and PM peak hours. The v/c ratio and delay were calculated for with-project conditions consistent with the methodology described for existing and without-project conditions. Analysis parameters such as lane channelization and signal timing were assumed to be consistent with the future without-project conditions. Table 5 compares the future (2030) without- and with-project intersection operations for the weekday AM and PM peak hours. Operational worksheets are included in Appendix B.

Note that the intersections of Molalla Avenue/Shared Business Driveway (Safeway) and Shared Business Driveway (South Ridge)/Beavercreek Road both assume the added legs to accommodate the new road connection between the intersections to be constructed with the proposed project. The new leg at each of the existing traffic signals was analyzed as a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. Additional discussion of the new roadway segment between Molalla Avenue and Beavercreek Road is provided in the site access section in the subsequent section.

Table 5. Future (2030) Without & With-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Future (2030) Without-Project		Future (2030) With-Project	
		v/c[1]	Delay[2]	v/c	Delay
Weekday AM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.46	4.9	0.52	5.3
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.40	8.1	0.46	8.5
3. Molalla Ave/Warner Milne Rd	Signal	0.27	10.5	0.30	10.6
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.51	10.8	0.58	13.4
5. Molalla Ave/Beavercreek Rd	Signal	0.51	17.9	0.52	18.1
6. Molalla Ave/Clairmont Way	Signal	0.44	10.8	0.45	11.0
7. OR 213/Molalla Ave	Signal	0.64	28.7	0.65	29.2
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.72	4.8	0.45	8.5
9. OR 213/Beavercreek Rd	Signal	0.81	47.1	0.83	50.1
Weekday PM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.60	5.9	0.63	6.1
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.66	10.7	0.70	11.5
3. Molalla Ave/Warner Milne Rd	Signal	0.44	12.2	0.48	12.7
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.58	14.5	0.50	15.5
5. Molalla Ave/Beavercreek Rd	Signal	0.76	28.1	0.77	28.5
6. Molalla Ave/Clairmont Way	Signal	0.68	16.4	0.69	17.0
7. OR 213/Molalla Ave	Signal	0.78	36.3	0.78	36.6
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.67	8.5	0.55	9.5
9. OR 213/Beavercreek Rd	Signal	0.94	75.4	0.94	77.8

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

As shown in Table 5, with the addition of the project, the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions with the exception of at the

2 intersections of the added roadway segment between Molalla Avenue and Beavercreek Road due to the added legs of the intersection and resulting in a reduction in the v/c ratio.

Site Access Analysis

Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The proposed road section between Molalla Avenue and Beavercreek Road is illustrated in Figure 2. As shown in the figure, a three-lane section is proposed along the project frontage extending from Molalla Avenue beyond the commercial accesses which then transitions to a two lane section to Beavercreek Road.

The traffic operational review for the site focused on the following key aspects as requested by City staff which are reviewed in the sections below.

- **Modified Traffic Signals** – The operations at the modified signals were evaluated both in terms of v/c of the intersections as well as 95th percentile queues.
- **Left-turn lane warrants** – A three lane section providing a two-way left turn lane is proposed through the project's commercial driveways but then is proposed to transition to a two-lane section. A warrant review is conducted to confirm if left turn lanes are recommended at the two driveways further to the east of this section. The two known driveway locations are illustrated in Figure 2.
- **On-site queueing** – The on-site queuing associated with the proposed drive-throughs.

Modified Traffic Signals

The traffic operations at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/Beavercreek Road intersections were evaluated under future (2030) with-project conditions for the weekday AM and PM peak hours. As noted above, the new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. The resulting operations are summarized in Table 5 above. As shown in the table, both intersections are forecast to meet the required operational standards, operating with a v/c of 0.58 or lower during the weekday AM and PM peak hours.

The 95th percentile queues (the queues that are only exceeded 5% of the time) at the signalized access intersections along Molalla Avenue and Beavercreek Road were also evaluated using synchro, consistent with the operational analysis and are summarized in Table 6.

The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be approximately 3 vehicles or less. These forecast queues will be able to be accommodated within the provided storage at each intersection. These queues correspond with the forecast weekday AM and PM peak hour volumes along the proposed roadway section with the opening of the project of approximately 630 trips (in/out) split between the 2 accesses as illustrated in Figure 10 above.

The queues of the other approaches are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project). Additionally, all 95th percentile queues at the two signals are forecast to be accommodated within the available storage with the exception of the northbound left-turn queue at the Molalla Avenue signal during the PM peak hour.

Table 6. Future (2030) Molalla Ave & Beavercreek Rd Intersection 95th Percentile Queues

Movement	4. Molalla Ave/Shared Business Dwy (Safeway)					8. Shared Business Dwy (South Ridge)/ Beavercreek Rd				
	Available Storage[2]	AM Peak Hour		PM Peak Hour		Available Storage	AM Peak Hour		PM Peak Hour	
		Without-Project	With-Project	Without-Project	With-Project		Without-Project	With-Project	Without-Project	With-Project
Eastbound Left-Turn	110'	25'	30'	30'	30'	115'	<25'	<25'	<25'	<25'
Eastbound through/right	110'	30'	35'	105'	110'	715'	35'	50'	160'	160'
Westbound Left-Turn	-[1]	-	25'	-	25'	115'	<25'	<25'	25'	25'
Westbound through/right	-[1]	-	80'	-	50'	630'	<25'	95'	60'	85'
Northbound Left-Turn	100'	45'	60'	**110'**	**115'**	50'	<25'	<25'	25'	25'
Northbound through/right	530'	60'	95'	95'	110'	50'	25'	25'	40'	40'
Southbound Left-Turn	-[1]	<25'	60'	<25'	40'	-[1]	-	35'	-	25'
Southbound through/right	500'	75'	85'	225'	230'	-[1]	-	<25'	-	<25'

Note: **Bold** indicates the 95th percentile queues exceeds the available storage. Shading indicates the approaches of the new roadway added with the project.
1. Intersection movement being added and/or modified with project.
2. Available queueing storage distance to the adjacent intersection. Turn lane storage assumes storage plus full width opening (not including the taper).

The northbound left-turn 95th percentile queue at the Molalla Avenue signal is forecast to have up to 1 vehicle extending beyond the available storage under both future (2030) without-project and with-project conditions. The table shows that the 95th percentile queue is forecast to increase by 5' (less than 1 vehicle) with the project as compared to without project conditions, even though the project does not add any trips to the northbound left-turn movement. This minimal increase in 95th percentile queue is due to the actuated signal timing of the intersection, which adapts phasing time allocations to movements based on volumes of the intersection. Due to the addition of the east leg added with the project, the phase time at the actuated signal adjusts accordingly, resulting in the slight added forecast 95th percentile queue of the northbound left-turn movement. Although the 95th northbound left-turn percentile queue is forecast to exceed the storage, the average queue is forecast to be accommodated within the available storage under both future (2030) without- and with-project conditions at approximately 65 feet or less during the PM peak hour.

Left-Turn Lane Warrants

Left-turn lane warrants have been reviewed for the proposed Les Schwab Access and the eastern residential access located on the east side of the project site along the proposed Public Access Road. Based on the City of Oregon City's Turn Lane Warrant guidelines defined in the Transportation Impact Analysis Guidelines (July 2021), Section 7.14.2, the "Engineer shall exercise professional judgement in evaluating the need for, and benefit of, providing dedicated left-turn lanes". The City provided references to consider include the AASHTO *Policy on Geometric Design of Highways and Streets* and the National Cooperative Highway Research Program (NCHRP) Report 457 *Evaluating Intersection Improvements.* The left turn warrants from both sources were evaluated assuming the future (2030) with-project weekday peak hour traffic volumes. The left-turn warrant evaluation is included in Appendix D. As shown in the appendix, no left-turn lanes are warranted at any of the site access intersections under the future (2030) weekday AM or PM peak hours.

In addition to the driveways associated with the project, additional accesses are anticipated on the south side of the internal roadway in the future as identified as part of the Beavercreek Road Access Management Plan as illustrated in Figure 2. These access points would serve the existing commercial development adjacent to Les Schwab located between the commercial and residential driveways within the proposed two-lane roadway section. The turn lane needs associated with that potential future development would be evaluated as part of that future project and if shown to be warranted, the widening to accommodate a turn lane could be provided to the south of the proposed road.

On-Site Queueing

Additionally, on-site queuing associated with the proposed drive-through uses on both Parcels A and D were evaluated. The drive-through queuing was estimated using the Poisson queuing distribution. The total external inbound vehicle trips (inclusive of pass-by trips) were assumed to utilize the drive through for purposes of providing a conservative queueing analysis. The average service time for a fast-food restaurant drive-through window is approximately 4 minutes based on the annual study conducted by QSR[6]. This service time was assumed for both the drive-through uses proposed. The resulting queueing for each is summarized below with detailed Poisson queuing worksheets provided in Appendix E.

- Parcel A – The drive-through proposed along the northern side of the retail building includes approximately 335 feet of storage with dual lanes allowing for approximately 500 feet of total storage or at least 20 vehicles. The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 17 vehicles which would be accommodated within the proposed drive-through storage.

- Parcel D – The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 13 vehicles or less or up to 7 vehicles per lane. The proposed site plan illustrates each drive lane can accommodate a queue of at least 275’ or 11 vehicles per lane; therefore, the queues are anticipated to be accommodated within the proposed driveway storage.

[6] *25th Anniversary Edition Drive-Thru Study (Intouch Insight and QSR).*

Mitigation Measures

Based on the operational review above for both without and with-project conditions, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane as noted above. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 above, the project is forecast to contribute 52 project trips to the intersection during the PM peak hour. This results in an estimated fee of $21,008 at this location as pro-rata share contribution to the planned improvement project.

Additionally, a Transportation System Development Charge (TSDC) will be required associated with the development of the project's land uses.[7] The project site is located inside the Molalla Avenue Corridor SDC Special Location Discount Area. Based on the current TSDC rates (Effective July 1, 2018), multi-family developments are required to pay a fee of $6,474 per multi-family dwelling unit constructed. Non-residential developments are required to submit a *System Development Charges Request Form* to the City to determine the fee required. The residential portion of the project proposed to construct 210 multifamily dwelling units will require a fee of $1,359,540. The TSDC associated with the non-residential uses proposed on site will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*.

[7] Each of the pad users will pay their own fees when they proceed with their own pad development.

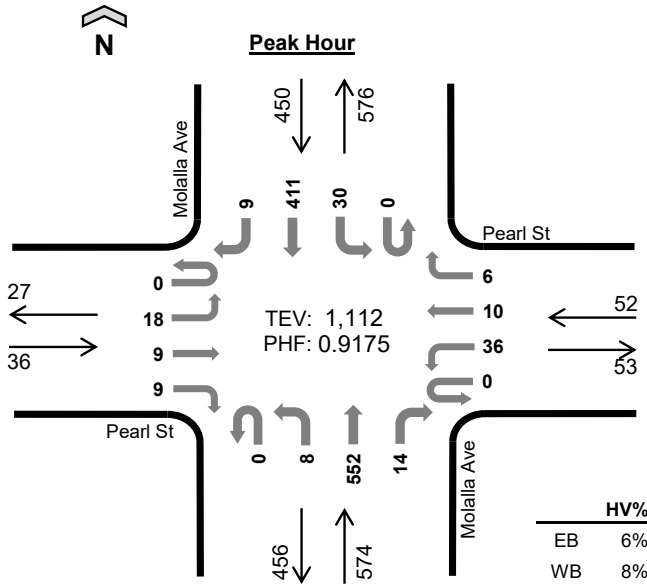
Findings and Recommendations

This traffic impact analysis summarizes the project traffic impacts of the proposed Oregon City Mixed-Use project located at 1367 Molalla Avenue in Oregon City. General findings and recommendations include:

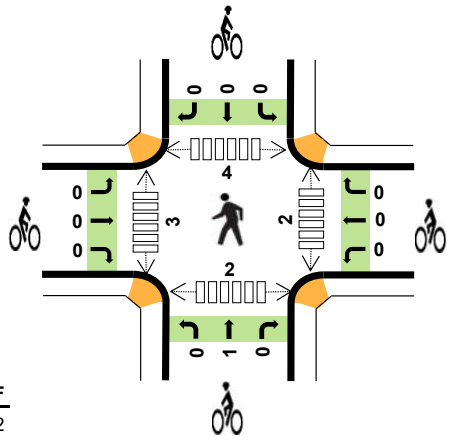
- **Project Description** – The proposed project will construct a 14,600 sf retail, a 4,900 sf fast food restaurant with drive through, and up to 210 multifamily apartment units on 3 parcels in Oregon City along with a 4th parcel being used for right-of-way.

- **Trip Generation** – Accounting for internal capture of trips that will occur between the proposed uses and pass-by trips associated with the commercial uses of the project, the proposed project is estimated to generate 2,788 new weekday daily trips with 339 trips occurring in the AM peak hour and 190 trips occurring in the PM peak hour.

- **Traffic Operations** – With the addition of project generated traffic, all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.



- **Site Access** – Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road.
    - The two signalized intersections are forecast to operate acceptably.
    - The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be approximately 3 vehicles or less. Additionally, the queues of the other approaches at the two signalized intersections are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project).
    - The proposed road section is three-lane through the commercial area and then transitions to a two-lane section further east. This proposed section was confirmed through a warrant analysis for current uses. Any future development and associated need for widening to accommodate turn lanes would be assessed and could be provided to the south of the proposed road.



- **Mitigation** – The total TSDC associated with the land uses of the proposed project will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*. Additionally, the project would contribute its pro-rata share at the Beavercreek Road/OR-213 intersection toward TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane.

Intersection Summary	
HCM 7th Control Delay, s/veh	50.1
HCM 7th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

Unsignalized Delay for [NBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

HCM 7th Control Delay, s/veh	15.5
HCM 7th LOS	B

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

Date: March 12, 2026

File No: GLUA-25-00025 PA-25-00016

Request: 1367 Molla Avenue Transportation Comments

Reviewer: Reah Flisakowski, PE, and Hallie Turk EI, RSP$_1$, DKS Associates

DKS Associates has reviewed the Oregon City Mixed-Use Traffic Impact Analysis (TIA)[1] and revised version of the TIA.[2] The project will construct a mixed-use development including retail use, multifamily apartments, and a fast-food restaurant at 1367 Molalla Avenue in Oregon City.

The general comments and recommended conditions of approval are based on a review of the submitted materials.

TRAFFIC IMPACT ANALYSIS REVIEW

Key findings of the TIA are summarized below.

PROPOSED DEVELOPMENT AND STUDY AREA

- The project will construct a mixed-use development at 1367 Molalla Avenue comprised of 14,600 square feet of retail space, up to 210 multi-family apartment units, and one 4,900 square-foot fast food restaurant with a drive-through window. The project site is located on four existing tax lots and is currently vacant.
- The project will construct a new public street that connects to Molalla Avenue at the existing Safeway access and Beavercreek Road at the existing Southridge Shopping Center commercial access. According to the site plan (shown in Figure 2 of the TIA), this future street will provide access to the development at six driveway locations.
- The project is expected to be fully constructed and operational by the year 2030.
- The TIS analyzed nine study intersections:
    - Molalla Ave/Pearl St
    - Molalla Ave/Holmes Ln

[1] Oregon City Mixed-Use: Traffic Impact Analysis. Transpo Group. October 2025.
[2] Oregon City Mixed-Use: Traffic Impact Analysis. Transpo Group. Revised March 2026.

- Molalla Ave/Warner Milne Rd
- Molalla Ave/Safeway access/Future site access
- Molalla Ave/Beavercreek Rd
- Molalla Ave/Clairmont Way
- Molalla Ave/OR-213
- Commercial Access/Beavercreek Rd/Future site access
- OR-213/Beavercreek Rd

VOLUME DEVELOPMENT

- Existing condition intersection counts were collected in September 2025.
- An average annual growth rate of 2%, which was provided by City staff, was applied to represent background growth.
- Trips from the following in-process developments were included in background volumes:
  - 770 Pleasant Townhomes
  - Abernethy Place
  - Canemah Road Subdivision
  - Central Point Subdivision
  - Clackamas Heights Redevelopment
  - Downtown North End Development
  - Park Place Crossing Phase I
  - Serres Farm Master Plan
  - Thimble Creek South Phase I
  - White Lane Subdivision

TRIP GENERATION AND ANALYSIS

- Based on the most recent five years of available crash data (2019 to 2023), critical crash rate calculations, and ODOT SPIS lists, the OR-213/Beavercreek Road intersection was flagged for safety concerns. The TIA notes that since 2023, safety improvements such as signal modifications and improved signage have been completed at this location. As such, no safety mitigations are recommended at this time.
- The development is expected to generate 339 (157 in, 182 out) a.m. peak hour trips, 190 (107 in, 83 out) p.m. peak hour trips, and 2,788 weekday trips. This includes a conservative internal trip capture reduction of 5% in the a.m. peak hour and 25% in the p.m. peak hour, a pass-by rate of 40% for both the a.m. and p.m. peak hours for the Strip Retail (822) land use, and a pass-by rate of 55% for both the a.m. and p.m. peak hours for the Restaurant (934) and Coffee Shop with Drive Through Window (937) land uses.
- Different trip distributions were applied for the commercial and residential land uses.

- *Commercial Trips (Retail and Fast Food):* Approximately 35% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 65% are expected to travel to/from destinations to the north along Molalla Avenue.
- *Residential Trips:* Approximately 55% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 45% are expected to travel to/from destinations to the north along Molalla Avenue.

- Left turn lane warrants were evaluated at future site access intersections. No left turn lane warrants were met.

- All study intersections are expected to meet performance standards under all analysis scenarios.

- A queuing analysis showed queue lengths at the Molalla Avenue/Shared Business Driveway (Safeway) intersection are expected to exceed the available storage for the northbound left turning movement under both background and build conditions in the p.m. peak hour. The 95th percentile queue is expected to exceed the available storage by only one vehicle in the p.m. peak hour only. No mitigation is recommended at this time.

SITE PLAN REVIEW

- The TIA does not address the proposed site plan's compliance with access spacing standards or sight distance standards.

- The TIA does not address the proposed development's pedestrian/bicycle routes to the nearest schools in consideration of safe routes to school.

- The TIA does not discuss the project's internal vehicle, pedestrian, and bicycle circulation.

RECOMMENDED TIA REVISIONS AND CONDITIONS OF APPROVAL

The following conditions of approval are recommended based on a review of the TIA and site plan:

GENERAL DEVELOPMENT PLAN CONDITIONS

- Since the TIA assumes a reduction in vehicle trips due to internal trip capture that would occur as walking and/or biking trips, the TIA shall be revised to discuss the project's internal pedestrian and bicycle circulation needs and how the site plan adequately accommodates active modes.

- Minimum AASHTO sight distance requirements shall be met at all site intersections and driveways. Sight distances on the internal local street system shall be approved by the City Engineer prior to final site plan approval.

- A proportionate share fee contribution of $404 per p.m. peak hour trip shall be collected for planned improvements at OR-213/Beavercreek Road. The fee amount will be determined as part of future detailed development plan applications.
- A transportation system development charge, associated with the Molalla Avenue Corridor SDC Special Location Discount Area, of $6,474 per dwelling unit shall be collected based on the number of multi-family dwelling units constructed. The fee amount will be determined as part of future detailed development plan applications.
- Both the October 2025 and March 2026 versions of the study finds that the existing transportation system will adequately accommodate the proposed master plan uses. The October 2025 analysis included the proposed Trader Joe's grocery store that represents reasonable worst-case development for that parcel.
- Upon development opening, short-term traffic operations will likely exceed the study's reported operations, which may result in traffic congestion and concerns regarding vehicle queuing. This will be addressed in future detailed development plan applications.

STREET IMPROVEMENT CONDITIONS

- The new public street connection shall be constructed as a city collector street with a modified cross-section standard including dedicated bike lanes, sidewalks, center turn lane and street trees. The design of the facility shall be approved by the City Engineer.
    - The proposed three-lane section along the project frontage shall extend from Molalla Avenue beyond the commercial accesses and transition to a two lane section east of the commercial accesses toward Beavercreek Road.

FUTURE DETAILED DEVELOPMENT PLAN CONDITIONS

- Transportation impact studies will be required for future detailed development plan applications for each parcel and used to write additional conditions of approval. They will include items such as:
    - The TIA shall be revised to include a discussion of the proposed site plan's compliance with access spacing standards, sight distance standards, and safe pedestrian/bicycle routes to school. These elements are required in the Oregon City TIA Guidelines.[3] The site plan shall meet the city's transportation standards and requirements.
    - The City may require a traffic management plan to help mitigate short-term traffic operational concerns related to the drive-through restaurant's opening.

Hi Rocky,

I have a call with our attorney this afternoon. Hold off on having your attorney contact her until I talk to her- I will let you know if I need additional information from you. I will send a follow-up email.

It was good seeing you today 😊

EASEMENT

This Easement ("Easement") is made this 30th day of SEPT, 2004, by and between **ROCKY C. YOUNGER and JANICE C. YOUNGER** (collectively, "Grantor"), and **WAL-MART STORES, INC.**, a Delaware corporation ("Wal-Mart").

RECITALS

Grantor is the owner of certain real property legally described on ***Exhibit "A"*** attached hereto (the "Grantor Property"), a portion of which is depicted as the construction easement on ***Exhibit "C"*** attached hereto and incorporated herein by this reference (the "Easement Property");

Wal-Mart owns the certain real property contiguous to the Easement Property as legally described on ***Exhibit "B"*** attached hereto (the "Wal-Mart Property");

Wal-Mart has requested that Grantor grant Wal-Mart an easement over the Easement Property.

NOW, THEREFORE, in consideration of the premises and promises contained herein, and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

AGREEMENTS

1. Accuracy of the Recitals. The parties hereby acknowledge the accuracy of the Recitals.

2. Grant of Easement. Grantor hereby grants and conveys to Wal-Mart a non-exclusive easement (the "Easement") in the area depicted on Exhibit "B" over, on and under the Easement Property for the purpose of constructing and thereafter maintaining a retention wall on the Wal-Mart Property and a new screening fence along the Grantor Property to replace the existing fence, all in connection with Wal-Mart's development of a retail facility on the Wal-Mart Property.

3. Clean-Up. Wal-Mart agrees that it will clean-up, restore and return the Easement Property, and any area of the Grantor Property that may be changed, altered or

FIDELITY NATIONAL TITLE CO.
This instrument filed for record by Fidelity National Title as an accommodation only. It has not been examined as to its execution or as to its effect upon the title.

affected by Wal-Mart's use of the Easement Property, to the condition that existed prior to Wal-Mart's use thereof under this Easement, including without limitation removing any piles of dirt and debris.

4. Indemnification. Wal-Mart hereby defends, indemnifies and holds Grantor harmless from and against all claims, proceedings, lawsuits, injuries, deaths, demands, losses, liabilities, fines, penalties, judgments, liens, awards, damages, costs, and expenses (including without limitation reasonable attorney's fees) arising out of Wal-Mart's exercise of the rights under this Easement and Wal-Mart's use, operation, maintenance and repair of the Easement Property, exclusive of any claims arising out of or in any way related to the negligent acts, omissions or willful misconduct of Grantor.

5. Running With the Land/Binding Effect. The Easement granted herein shall be appurtenant to and run with the land. This Easement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns.

6. Counterparts. This Easement may be executed in one or more counterparts, each of which in the aggregate shall constitute one and the same instrument.

IN WITNESS WHEREOF, the parties have executed this Easement as of the date and year first written above.

ODOT Formal Response

Project: Oregon City Mixed Use General Development Plan	**Site Address:** 1367 Molalla Avenue
Jurisdiction: City of Oregon City	**Applicant:** Cypress Acquisitions, LLC
Jurisdiction Case #: GLUA-25-00025: CU-25-00001, MAS-25-00001, PARK-25-00001 (Master Plan) MAS-25-002_GEO-25-007_NROD-25-012 (Detailed Development Plan)	

The site of this proposed land use action is in the vicinity of OR 213 interchange. ODOT has permitting authority for this facility and an interest in ensuring that this proposed land use is compatible with its safe and efficient operation.

These comments, standards, and requirements are current as of the date of this letter. If the project scope and/or timeline is modified, the applicant should contact the ODOT Region 1 Development Review program (ODOT_R1_DevRev@odot.oregon.gov). Updated comments may be necessary.

LAND USE PROPOSAL

ODOT was notified of a land use application submitted to City of Oregon City for a proposed masterplan impacting tax lots 3200, 3201, 3300, 3400, 500, 501, and 602. The formal city notice includes the following project description:

> *"Proposed Master Plan to create development parcels for future development, along with a Conditional Use Review for two future drive-throughs and a Parking Adjustment to allow above the maximum parking requirements on two of the commercial parcels, along with a Detailed Development Plan for the construction of a new public street and associated infrastructure."*

COMMENTS/FINDINGS

ODOT understands the master plan proposes retail development on Parcel A, multi-family residential development on Parcel B, a new public street on Parcel C, and a quick-serve restaurant on Parcel D. Today, ODOT attended a pre-application conference (PA-26-00002) held March 11, 2026 for the proposed construction of a drive through restaurant on proposed Parcel D.

Traffic Impacts

As part of the materials provided to ODOT, ODOT received a copy of a Traffic Impact Study (TIS) prepared by Transpo Group, dated October 2025. ODOT has reviewed the TIS and supports its recommendation for the project to contribute its pro-rata share at the OR-213/Beavercreek Road intersection toward the City's Transportation System Plan (TSP) projects (construction of a westbound right-turn, merge lane at the OR-213/Beavercreek Road intersection).

ODOT RECOMMENDED CONDITIONS OF APPROVAL FOR LOCAL JURISDICTION

Traffic Impacts

☒ The applicant shall contribute proportional share contributions for the intersection improvements at OR 213/Beavercreek Road.

ADVISORY INFORMATION

Permits and Agreements to Work in State Highway Right of Way

☒ An ODOT Miscellaneous Permit must be obtained for all work in the State highway right of way. If applicable, contact the District Contact indicated below to determine permit requirements and to obtain application information.

Note: All ODOT permits and approvals must reach 100% plans before the District Contact signs off on a local jurisdiction building permit or other necessary requirements before construction.

Contact the ODOT Development Review Planner identified below for further coordination or questions regarding ODOT comments and requirements during the land use process.

Please send a copy of the Notice of Decision/Staff Report with conditions of approval to:

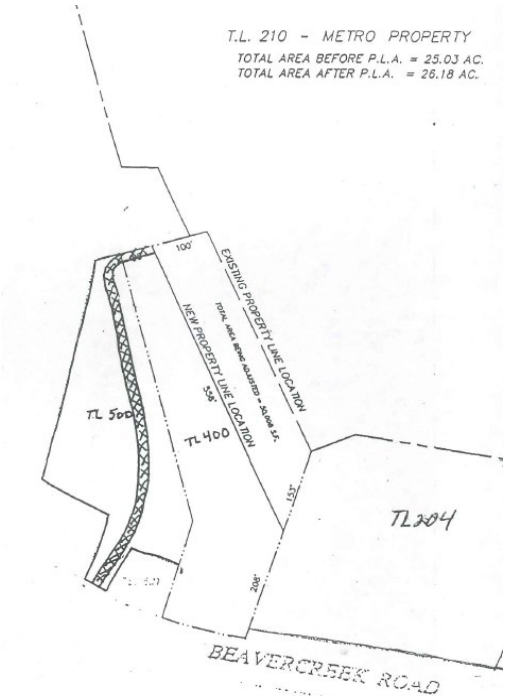
RE: **GLUA-25-00025**: **MAS-25-002_GEO-25-007_NROD-25-012**
(Detailed Development Plan to build a new public street and associated infrastructure) &
GLUA-25-00025: **CU-25-00001, MAS-25-00001, PARK-25-00001**
(Master Plan to create development parcels for future development)

Dear Oregon City Community Development and Oregon City Planning Commission:

Respectfully, Metro submits the following comments responding to the above-referenced Development and Master Plan applications before the City. Please include this letter and attachments in the record of these proceedings.

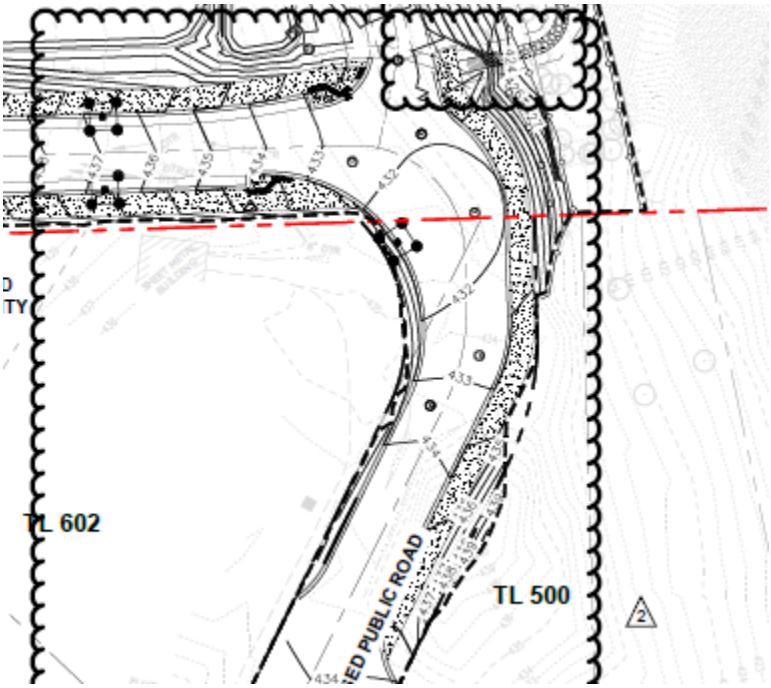


Metro is generally supportive of the Development Proposal and Master Plan. However, there are three matters of concern that warrant further discussion and require resolution: 1) The adverse impact to Metro's access rights, 2) Geological hazards, and 3) Storm water discharge.

Metro's Easement

The new public street plan and associated infrastructure proposed on TL 500 (the new southern access road – colored lavender in the Site Plan) adversely impacts Metro's recorded access easement rights. Metro is a dominant interest holder. TL 500, owned by Mr. Younger, is the servient estate. The project contemplates the City taking ownership and maintenance responsibility of the street from the servient estate.

In 1998, Metro acquired an easement to secure perpetual access to the southern portion of its Newell Creek Canyon Nature Park and Natural Area. The easement, attached, is recorded in Clackamas County records as Document No. 98-044697. The easement area is a 15 ft. wide strip of land taking access from Beavercreek Road, running north through the Younger property, turning east at TL 500's northern property line (the southern property line of the Walmart property) and crossing Younger's TL 401 to Metro's TL 210. Below is a depiction of the easement area.



The easement is associated with a 1998 City approved property line adjustment, providing needed access to Metro property.

A Metro gate is located at the end of the easement area, adjacent to the northeast corner of TL 400, as depicted above. The access easement is generally utilized by Metro for land management and maintenance purposes, supporting Metro and contractor vehicles and equipment. The access easement is also utilized by Metro to support construction and other improvement projects in the park and natural area. Below is an aerial image of the Younger property and Metro property, with the gate location depicted.

The image below is a caption of the proposed public street on TL 500 as it turns onto the Walmart property. Metro's property is to the east (right), with its western line represented by the grey north-south line, to the right of the squiggly line on the right side. As depicted in the image below, the public street development plan does not recognize, protect, or provide suitable alternative access for Metro.

Metro acknowledges the easement allows the servient estate holder to relocate the easement area, however, that right can only be invoked if the remainder of Younger's property is being redeveloped. The subject proposal does not represent redevelopment of the remainder of the Younger property. It only represents a public road over a portion of the property. Additionally, if the first condition is triggered, Metro must be consulted, suitable alternative access proposed, and its permission obtained. In this matter, Metro has not been consulted, and its permission has not been requested or given. To demonstrate compliance with applicable criteria, the application routinely refers to an agreement between the developer and the owner of TL 500. However, Metro, the dominant interest holder, is not a party to that agreement. As proposed, the street improvements would obstruct Metro's access by installing a curb, multi-use path, street trees, and inaccessible graded slopes. As such, Metro objects to its dominant real property interests being adversely impacted by the proposed public street proposal.

As this relates to Oregon City Code, street design and driveway spacing and approaches are governed by OCC § 12.04.170 and OCC Chapter 16.12, including § 16.12.035. Metro has not been presented with any plans that would accommodate Metro's access easement interests. To accommodate Metro's access rights, the street plan must be redesigned to include a code compliant driveway approach, with grades and

surfaces that support access. Since the plans must change, it would be premature for the City to find the application in compliance with street design standards. Additionally, § 12.04.170 provides:

> "All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction."

Metro is a municipal corporation – another jurisdiction. Metro's facilities are adversely impacted by the proposal. Metro has not been consulted. The procedures and requirements in § 12.04.170 have not been followed. The application identifies § 12.04.170 as applicable but does not include any findings of compliance supported by substantial evidence.

Geological Hazards

The second issue of general concern is the proposal to locate the public easement and improved pathway within the geological hazard area. OCC § 17.44.060 requires developments to "be designed to avoid unnecessary disturbance of natural topography." The review standard is "to the maximum extent practicable." The proposal does not meet this and related standards.

Applicants do not avoid unnecessary disturbances. Applicant proposes to locate the public path within a regulated Geological Hazard area – an area its Geological engineer mapped as highly susceptible to deep landslides, when alternatives exist. *See* Stormwater report, Appendix A, Terracon Geotechnical Report – Figure 6. Additionally, Applicant proposes a disturbance in a high-risk area in part to accommodate its adjustment request to include additional on-site parking – above the maximum allowed by City Code. While there is ample room on site to locate this public easement and improvement outside the geological hazard and high-risk area, Applicant proposes to prioritize additional on-site parking. Above maximum allowed parking should not displace land protection requirements and direct that public facilities are sited in high-risk environments.

As we have seen, area slopes are subject to large scale landslides and slumps. These movements often impact property above the top of slope, thus the need to site infrastructure, both public and private, away from the risk. Several dozen area landslides have been documented. We can look just to the south and Forest Edge Apartments (Newell Creek) for example. While Applicant proposes to protect its investment above a Soldier Pile Wall drilled deep down to bedrock, it would leave the City and the public with an improvement that is not so protected. Moving land disturbances and improvements away from these sensitive slopes should be a primary objective of both the City and Applicant.

The Master Plan also proposes to construct the public path below a long, significant retaining wall, away from site development. As the City is aware, the Walmart property, as

well as the Younger and Metro properties, have had to manage and recover from transient encampments for many years now. Significant damage to real property and natural resources has occurred. The Applicant acknowledges this burden by proposing no on-street parking for the two public roads. This appears to be done with City transportation department support. *See* pages 27 and 28 of the DDP application submission. However, the Master Plan proposes to enhance transient encampment conditions with a public pathway, located out of sight. The very impacts that Applicant is trying to avoid would instead be passed to the City and Metro to manage. The City, Metro, and the public would be better served by a public path that is located further away from the steep slopes and natural area, and more integrated into site development. The proposed pathway location also represents a *significant health and safety concern* to users as it is hidden away below a significant retaining wall. Again, this is another risk created by the proposal's path location that can and should be avoided. The City has the discretion and review authority to require as much.

Storm water discharge

Applicant proposes to collect all the storm water from the vast majority of the site, treat it, direct the water to the southeast portion of the site, and connect to an existing City facility that discharges water onto Metro property. Applicant also proposes that the stormwater from the public street would not be treated, but rather discharged directly into the system. The proposal would increase the quantity of water that would naturally discharge onto Metro property. Metro also has quality concerns. The proposed discharge point is near the headwaters of Newell Creek and Metro property. The creek flows for miles through Metro natural area to its confluence with Abernathy Creek. Both creeks support critical habitat for ESA listed species. Pervading the proposal is the assumption that the discharge and eventual storage and disposal of the development's water is permitted on Metro property. Since Applicant cannot or is otherwise choosing not to handle and infiltrate its own storm water on-site, Applicant must demonstrate that public services, including storm-water disposal, are available to serve the development. OCC § 17.65.050.

Metro understands that the City has a NPDES municipal storm system permit to discharge to waters of the state. If the development's storm water is collected through City pipes and permitted outfall facilities discharging directly into Newell Creek, then Metro has no concern. However, that does not seem to be the case. The application says storm water will be collected and directed to an outfall on TL 500. TL 500 is not adjacent to Newell Creek. Metro property is located between TL 500 and Newell Creek. Collected and directed storm water cannot be discharged overland across Metro property to get to the state water way without permission. Metro is not aware of anything in the record that demonstrates permission or the right to discharge the site's development storm water on or through Metro property to get to Newell Creek.

Thank you for your time and consideration of our concerns.

Sincerely,

Gary Shepherd

SPACE RESERVED FOR RECORDER'S USE

STATE OF OREGON,
County of _____ } ss.

I certify that the within instrument was received for record on the _____ day of _____, 19____, at _____ o'clock _____.M., and recorded in book/reel/volume No. _____ on page _____ and/or as fee/file/instrument/microfilm/reception No. _____, Records of said County.

Witness my hand and seal of County affixed.

NAME TITLE

By _____, Deputy.

THIS AGREEMENT made and entered into this _____ day of May, 1998, by and between Rocky E. Younger, hereinafter called the first party, and Metro, a municipal corporation, hereinafter called the second party, WITNESSETH:

WHEREAS: The first party is the record owner of the following described real property in Clackamas County County, State of Oregon, to-wit:

See Exhibit A, attached.

and has the unrestricted right to grant the easement hereinafter described relative to the real estate.

NOW, THEREFORE, in view of the premises and in consideration of $ other value given by the second party to the first party paid, the receipt of which is acknowledged by the first party, it is agreed:

The first party hereby grants, assigns and sets over to the second party an easement, to-wit:

owner of the property described in Exhibit B, attached hereto.

See Exhibit C, attached, a 15 foot wide access easement, providing legal access to Metro's property described in Exhibit B.

Metro intends to maintain the property described in Exhibit B in its natural state pursuant to the Greenspaces Master Plan, which maintenance may include suppressing growth of exotic and nuisance plant species. Younger intends to landscape a portion of the property adjacent to Metro's property and would like Metro to maintain Younger's border so that exotic and nuisance plant species at the border are kept at a minimum.

98-044697

(Insert a full description of the nature and type of easement granted by the first party to the second party.)

(OVER)

The second party shall have all rights of ingress and egress to and from the real estate (including the right from time to time, except as hereinafter provided, to cut, trim and remove trees, brush, overhanging branches and other obstructions) necessary for the second party's use, enjoyment, operation and maintenance of the easement hereby granted and all rights and privileges incident thereto.

Except as to the rights herein granted, the first party shall have the full use and control of the above described real estate.

The second party agrees to save and hold the first party harmless from any and all claims of third parties arising from the second party's use of the rights herein granted.

The period of this easement shall be perpetual, always subject, however, to the following specific conditions, restrictions and considerations:

Younger may relocate the easement upon development of the remainder of Younger's property, described in Exhibit A, so long as the relocated easement is 15 feet wide, insurable and provides similar ease of access to Metro's property, described in Exhibit B. Metro shall have the right to approve the relocation of the easement, which approval shall not be unreasonably withheld.

If this easement is for a right of way over or across the real estate, the center line of the easement is described as follows:

and the second party's right of way shall be parallel with the center line and not more than _____ feet distant from either side thereof.

During the existence of this easement, maintenance of the easement and costs of repair of the easement, if damaged by natural disasters or other events for which all holders of an interest in the easement are blameless, shall be the responsibility of (check one): ☒ the first party; ☐ ~~the second party;~~ ☐ ~~both parties, share and share alike;~~ ☐ ~~both parties, with the first party responsible~~ for _____% and the second party responsible for _____ ~~%. (If the last alternative is selected, the percentages allocated to each party should total 100.)~~

During the existence of this easement, holders of an interest in the easement who are responsible for damage to the easement because of negligence or abnormal use shall repair the damage at their sole expense.

This agreement shall bind and inure to the benefit of, as the circumstances may require, not only the parties hereto but also their respective heirs, executors, administrators, assigns, and successors in interest.

In construing this agreement, where the context so requires, the singular includes the plural and all grammatical changes shall be made so that this agreement shall apply equally to individuals and to corporations. If the undersigned is a corporation, it has caused its name to be signed and its seal, if any, affixed by an officer or other person duly authorized to do so by its board of directors.

IN WITNESS WHEREOF, the parties have hereunto set their hands in duplicate on the day and year first written above.

EXHIBIT A

A tract of land in the Samuel Vance DLC No. 51 and being located in the southeast one quarter of Section 5, Township 3 South, Range 2 East, Willamette Meridian, being more particularly described as follows:

Beginning at a brass screw, set in concrete, on the northerly right of way line of Market Road No. 11, South Beavercreek Road, which is located North 39° 62' 50" East 46.20 feet from a 5/8 inch iron rod in a monument box at the point of intersection of the first curve on Market Road No. 11, Survey Record No. LP-060 supplemental map, and which is at the southerly end of the line established by Record Survey P.S. No. 21296, the official survey of judgment Order No. 79-6-427, Circuit Court of Clackamas County; thence North 18° 10' 05" East along the easterly side of the retaining wall, being the line of said judgment survey, 38.48 feet to an angle point; thence North 18° 57' 05" East 28.11 feet to a 5/8 inch iron rod set at the northerly end of said retaining wall; thence North 15° 44' 45" East 120.15 feet to a 2 inch iron pipe with a brass disc on top, marked David Evans and Associates, said point being point "A" mentioned in said judgment document and the north end of said judgment line; thence North 14° 42' 32" West along the easterly line of the Epperson property, 492.02 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked David Evans and Associates; thence South 74° 52' 24" West 45.35 feet to a 5/8 inch iron rod with a yellow plastic cap on top marked George Cathy L. S. 979; thence South 13° 05' 06" West along the agreement line document between Epperson and Les Schwab, et al, recorded as Fee No. 86-40212, Clackamas County Deed Records, 402.34 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked Kampe Associates, Inc. at the northwest corner of the Graham Stationary store tract recorded as Fee No. 86-31986, Clackamas County Deed Records; thence South 60° 51' 50" East along the northeasterly line of Fee 86-31986, 131.98 feet to a 5/8 inch iron rod with a yellow plastic cap on top marked Kampe Associates, Inc.; thence South 20° 58' 20" West along the easterly line of Fee 86-31986, 125.95 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked Kampe Associates, Inc., on the north line of a 10.00 foot wide strip of land conveyed to the City of Oregon City for road purposes, and recorded as Fee No. 86-34381, deed records of Clackamas County; thence Southeasterly around the arc of a 914.93 foot radius curve to the left, through a central angle of 2° 40' 14", an arc distance of 42.64 feet (the long chord of which is South 03° 25' 28" East 42.61 feet) to the westerly line of Fee 68-23282, Clackamas County Deed Records; thence South 19° 27' 28" West along the west line of Fee No. 68-23282, 10.05 feet to the northerly right of way line of Market Road No. 11; thence southeasterly around the arc of a 924.23 foot radius curve to the left, through a central angle of 6° 44' 57", an arc distance of 108.95 feet (the long chord of which is South 68° 11' 60" East 108.89 feet) to the brass screw at the point of beginning.

A tract of land located in the Samuel N. Vance Donation Land Claim No. 51 in Section 5, Township 3 South, Range 2 East of the Willamette Meridian, in the County of Clackamas and State of Oregon, described as follows:

Beginning at the Southeast corner of a tract of land conveyed to George C. Ely, by deed recorded June 4, 1877 in Book N, Page 401, Deed Records; thence North 25°30' West along the East line of said Ely tract, a distance of 255 feet to an iron pipe, said point being the true point of beginning of the tract herein to be described; thence continuing North 25°30' West along the Easterly corner of said Ely tract, a distance of 405 feet to a stone marking the most Northerly corner of a tract of land conveyed to Minnie S. McFee, by deed recorded October 30, 1951 in Book 450, Page 202, Deed Records; thence South 75° West following the Northerly line of said McFee tract, a distance of 160 feet to an iron pipe; thence South 15°10" East, a distance of 470 feet to an iron pipe, said point being Point A as established in conformance to judgment order entered November 4, 1982 and order confirming boundary Commission Report entered February 25, 1983 in Suit, Ruth C. Barber and Minnie S. McFee, plaintiffs vs. Robert Max Epperson and Margaret Joan Epperson, defendants, No. 79-6-427, Clackamas County Circuit Court; thence running along the said established line South 15°47'40" West, a distance of 120.08 feet to a 5/8 inch iron rod at a building corner; thence South 19° West along the most Easterly edge of the building and retaining wall, a distance of 28.16 feet to an angle point in the retaining wall; thence South 18°13' West along said Easterly edge of the building and retaining wall, a distance of 38.48 feet to the Northerly right of way line of the Beavercreek County Road; thence Southeasterly following the Northerly line of said road, a distance of 141.85 feet to the most Southerly corner of said McFee tract; thence North 19° East following the Easterly line of said McFee tract, a distance of 355.8 feet to the true point of beginning.

Together with:

PARCEL 1: A tract of land situated in the Southeast one-quarter of Section 5, Township 3 South, Range 2 East of the Willamette Meridian, in the County of Clackamas and State of Oregon, being more particularly described as follows, to-wit:

Beginning at a 5/8 iron rod at an angle point in the Westerly line of that certain tract of land conveyed to Breck Construction, Inc., Fee No. 79-32547, Deed Records, Clackamas County, Oregon, which iron rod is further identified as being North 25°30' West 255.00 feet from the Southeast corner of a tract of land described in Deed Book "N", Page 401, Clackamas County, Oregon. From said place of beginning; thence South 19°21'14" West 362.30 feet to a 5/8 inch iron rod in the Northerly right of way line of Market Road No. 11; (Beaver Creek Road); thence Easterly along said Northerly right of way line on a curve to the left having a radius of 924.93 feet through a central angle of 0°27'27" a distance of 7.38 feet to a 1/2 inch iron pipe at a point of tangent; thence South 81°21'30" East along said Northerly right of way line of Market Road No. 11 (Beaver Creek Road) 0.65 feet to a 5/8 inch iron rod; thence leaving said Northerly right of way line, North 18°06' East 360.82 feet (Description Exhibit "A" North 19°00' East 355.8 feet, more or less) to the place of beginning.

PARCEL 2: A parcel of land located in the Samuel N. Vance and wife Donation Land Claim No. 51 in Section 5, Township 3 South, Range 2 East, of the Willamette Meridian, in the County of Clackamas and State of Oregon, more particularly described as follows:

Beginning at a 5/8 inch iron rod set by Andy Paris in Private Survey (P.S.) No. 16481 for the Northeast corner of a tract of land conveyed by Eva H. Bennett, husband and wife to Minnie S. McFee as described in Book 450, Page 202 on the 20th of October 1951; thence South 83°26'40" West 159.53 feet to a 5/8 inch iron rod set by Norman N. Oleson in P.S. 15707 for the Northeast corner of the Epperson Parcel,

described in Book 546, Page 56 (Colton to Rippey September 26, 1958); thence South 9°37'30" East 23.53 feet to a 5/8 inch iron rod set by Andy Paris in Said P.S. 16481 for the same Northeast corner of the Epperson Parcel and the Northwest corner of said Book 450, Page 202; thence North 75°00'00" East 160.00 feet to the point of beginning of this description.

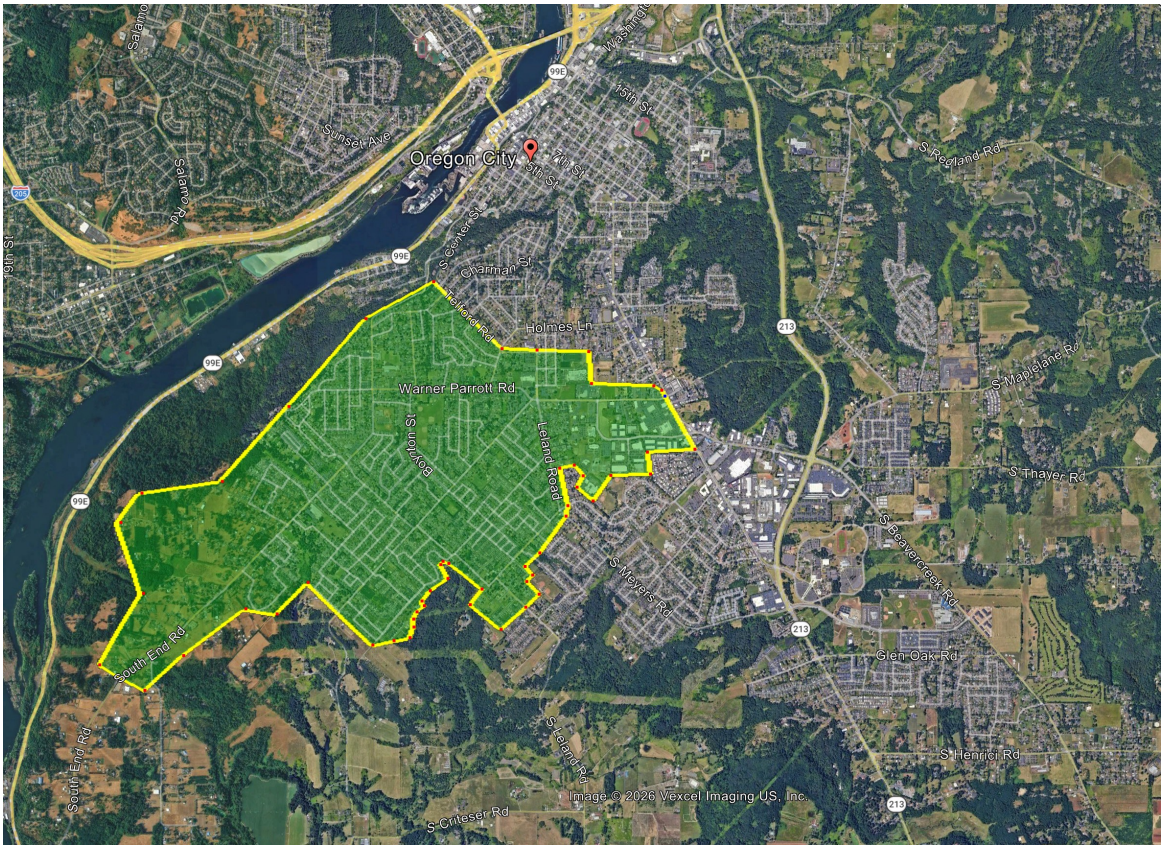
Hi Christina,

I had a few concerns regarding the traffic study that I wanted to provide for the record. I am a registered professional transportation engineer, I have been preparing and reviewing traffic studies professionally for over 20 years, and I own a transportation engineering consulting business (Ard Engineering).

I want to bring a few things to the attention of the Planning Commission.

1) The trip distribution used by the applicant in their transportation analysis looks generally reasonable, but with some problems. Specifically, they appear to show 5% of residential trips that head south on 99E, but they travel through downtown Oregon City to connect to Highway 99E. In reality, these trips would be far more likely to travel on Warner Milne to South End Road to reach Highway 99W. Similarly, the commercial trips are shown with 10% on Warner Milne, 10% on Holmes Lane, and 5% each on Pearl and Jefferson. I would expect some (perhaps 25%) of the trips shown for Pearl and Jefferson to actually take Warner Milne to Linn Avenue to travel to and from those areas, and most of the trips assigned to Holmes would likely take Warner Milne instead. I prepared the map below to show the area of the city that online mapping software suggests routing via Warner Milne to and from the site. It's a substantial area. Note also that for trips to and from the top of the bluff traveling via Telford and S Center Street, the travel time and distance are the same via either Warner Milne or Holmes Lane, so about half would go each way. The point is that the trip assignment under-estimates the number of trips on Warner Milne that will pass through the Linn Avenue/Leland Road intersection. I would have expected to see analysis there, since it will accommodate more than 20 peak hour trips in reality.
   The City transportation consultant has reviewed the application and found:
   Finding: Complies with Condition. The City's transportation consultant has reviewed the applicant's TIA for this development. They have provided to following findings based on the site's master plan TIA:

- Based on the most recent five years of available crash data (2019 to 2023), critical crash rate calculations, and ODOT SPIS lists, the OR-213/Beavercreek Road intersection was flagged for safety concerns. The TIA notes that since 2023, safety improvements such as signal modifications and improved signage have been completed at this location. As such, no safety mitigations are recommended at this time.
- The development is expected to generate 339 (157 in, 182 out) a.m. peak hour trips, 190 (107 in, 83 out) p.m. peak hour trips, and 2,788 weekday trips. This includes a conservative internal trip capture reduction of 5% in the a.m. peak hour and 25% in the p.m. peak hour, a pass-by rate of 40% for both the a.m. and p.m. peak hours for the Strip Retail (822) land use, and a pass-by rate of 55% for both the a.m. and p.m. peak hours for the Restaurant (934) and Coffee Shop with Drive Through Window (937) land uses.
- Different trip distributions were applied for the commercial and residential land uses.
    - *Commercial Trips (Retail and Fast Food):* Approximately 35% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 65% are expected to travel to/from destinations to the north along Molalla Avenue.
    - *Residential Trips:* Approximately 55% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 45% are expected to travel to/from destinations to the north along Molalla Avenue.
- Left turn lane warrants were evaluated at future site access intersections. No left turn lane warrants were met.



- All study intersections are expected to meet performance standards under all analysis scenarios.
- A queuing analysis showed queue lengths at the Molalla Avenue/Shared Business Driveway (Safeway) intersection are expected to exceed the available storage for the northbound left turning movement under both background and build conditions in the p.m. peak hour. The 95th percentile queue is expected to exceed the available storage by only one vehicle in the p.m. peak hour only. No mitigation is recommended at this time.

The City's transportation consultant also notes the following:

- The TIA does not address the proposed site plan's compliance with access spacing standards or sight distance standards.
- The TIA does not address the proposed development's pedestrian/bicycle routes to the nearest schools in consideration of safe routes to school.
- The TIA does not discuss the project's internal vehicle, pedestrian, and bicycle circulation.

The items noted above typically take into account the whole property, but they do relate to this DDP as final locations of driveways and accessways may be impacted. The applicant shall provide an updated TIA addressing compliance with access spacing standards or sight distance standards, pedestrian/bicycle routes to the nearest schools, and the project's internal vehicle, pedestrian and bicycle circulation.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

2) The crash data shows a very high crash rate (top 5% SPIS list) for the intersection of Highway 213 at Beavercreek and notes that the city has attempted some safety improvements. Since the report was prepared, ODOT has released final data for 2024 that was not included in the traffic analysis. It shows 30

crashes in 2024, which is an increasing crash rate. It may be appropriate to do a detailed analysis of crash types and look for new solutions.
ODOT determined a number of years ago to allow the intersection of 213/Beavercreek to be in a failing condition. The City is currently contracting with a consultant to add a right turn slip lane from Beavercreek west to 213 north which is intended to reduce crashes and improve capacity. Other solutions such as clover leafs and triple lefts have been taken off the table by ODOT. The City did install a traffic warning sign a couple years ago on 213 South with ODOT approval to assist with rear end crashed of those stopped at the traffic light. This application is conditioned to monetarily proportionately contribute to the improvements at 213/Beavercreek.

3) I have heard some talk that a fast-food restaurant on the site may be a "High-Volume Fast-Food Restaurant" as defined by the current 12th Edition of the ITE Trip Generation Manual. This land use category applies to facilities that draw more traffic from a larger area and has about 85% higher trip generation than a standard fast-food restaurant with drive-through.
When this land use applies for approval, they will be required to make any required improvements from their TIA and may contribute proportionately monetarily to the improvements at 213/Beavercreek.

For these reasons, I have some concerns remaining regarding the transportation analysis that was provided for the project.

Thank you,

Michael Ard, PE

I haven't had time to dive into the comments from Mr. Ard but here are my initial thoughts/questions. Overall, an application is required to use the data and resources that are current when the study is conducted and we don't require updates if new data and resources become available prior to the hearing.

1. Trip distribution - It's not clear what data source is being used to determine the alternative trip distribution routes for the project trips. The comment referred to "online mapping software" which is not an established sole source for trip distribution and can be influenced significantly by time of day. I'm assuming the online mapping software is Google maps using the routing feature but I'm not sure. A review of existing intersection turn movement counts, aggregated Big Data and the regional models are other tools to be considered. It's unclear if changes to trip distribution would result in any intersection capacity issues or new conditions of approval.

2. Crash Data - The 2024 data set was not available when the transportation study was conducted. An increase in crash rate does not suggest a new mitigation is needed. ODOT and the city have planned improvements at the intersection to address safety and congestion. It's unlikely that an analysis of 2024 safety data would change the planned improvements or add conditions of approval to the application (who is paying a proportionate share fee to improvements at the intersection).

3. ITE 12th Edition trip rates were not available when the transportation study was conducted. The comment doesn't provide clear information on what 12th edition land use category would be appropriate for the application or how it would change the trip generation estimate and intersection analysis.

Let me know how the hearing goes, I can look into this more if needed.

SUPPLEMENTAL FINDINGS

Masterplan GDP and DDP approval for Mixed Use development at 1367 Molalla Avenue

File Nos: GLUA-25-00025: CU-25-00001, MAS-25-00001, PARK-25-00001-1367
GLUA-25-00025: MAS-25-00002, GEO-25-00007, NROD-25-0012

The purpose for these supplemental findings is to provide some additional response to testimony received and explanation for revisions to conditions of approval that relate to both decisions.

On March 20, the City received testimony from Metro expressing concerns about how this development would impact Metro's Newell Creek Canyon Nature Park and Natural Area located on Tax Lot 210, east of the subject development.

1) Metro's Easement

Metro has expressed concerns that the proposed development adversely impacts Metro's access to its TL 210 which it claims is guaranteed by a private easement. The City's role here is not to interpret or protect easement rights between private property owners. Rather, its sole role is to review applications for compliance with the applicable approval criteria. No law or other criterion demands that the City guarantee this privately negotiated access.

That said, nothing in this approval shall preclude Metro from obtaining access to its TL 210, Metro Newell Creek Canyon Nature Park. This access may occur upon the public road proposed on TL 500 or include the provision of any stubbed improvements at the northeast corning of TL 500 as necessary to accommodate gated access. The owner of TL 500 is encouraged to seek and obtain a driveway access permit allowing for gated access to TL 210 as may be required to fulfill any easement obligations it may have.

2) The Location of the Shared Use Path

[This finding is added to the GDP approval and will also replace the DDP findings discussing the shared use path on pp 38-39.]

Approval of a general development plan requires a finding that the application is in compliance with the Oregon City Comprehensive Plan. OCMC 17.65.050.C.6. The City's Transportation System Plan is an ancillary component part of the Comprehensive Plan. The City's TSP project S28 identifies a shared use path running north and south along the east side of this property. The purpose of this path is to connect development on this property and throughout the Hilltop Area to the Newell Creek Nature Park, whose access is

located one block north of the subject property. This multimodal path will provide direct access to the 208-unit multi-family residential component on Parcel B as well as serve as a resource for employees and customers of the adjacent businesses.

Goal 1 of Chapter 3 of the Comprehensive Plan provides:

> "Provide a safe, comfortable, and accessible transportation network that serves all modes of travel, including non-motorized modes."

The proposed location of the shared use path as proposed is below the development Parcel B below the top of the hillside and will not be visible to the general public. This is a problem because its lack of visibility will compromise its accessibility but more importantly, could create nuisance concerns. For this reason, the City finds that the proposed path location will not result in a pedestrian connection that is safe and comfortable for public use. In order to satisfy the TSP as well as the Comprehensive Plan, revised conditions of approval are proposed which require that a revised design for the multiuse path be submitted as part of the DDP for Parcel B. The revised design shall include a minimum paved 7-foot width that is ADA accessible and lighted to satisfy OCMC 16.12.032.D standards and most importantly, it is at a similar grade such that it is visible from the development at Parcel B. Added benefits of this approach move the path further away from mapped geologic hazards, avoid providing ADA access for complicated grade changes, can take advantage of parking lot lighting from the Parcel B development and will reduce maintenance concerns. With these conditions, the development will provide a safe and comfortable pedestrian / bicycle connection in compliance with the TSP that is will strengthen the wellbeing of future residents and users of this development.

Revisions to and proposed new conditions include:

Master Plan- MAS-25-00001,CU-25-00001, PARK-25-00001
Share Use Path (S28)-NEW
17. The proposed location of the shared use path (S28), (sheet x) is located below the development on Parcel B in a narrow bench of the hillside that is not visible to the general public which will, as designed and built, create an attractive nuisance and public safety concerns and conflicts with the community's comprehensive plan policies to support design that is to strengthen wellbeing, quality of life, and livability across all Oregon City neighborhoods by creating places that are safe and comfortable with convenient access to community services. The applicant shall remove the path from MAS-25-00002, GEO-25-00007, and NROD-25-00012 (DDP) and resubmit a revised design at the time of DDP development for Parcel B. The revised design of S28 requires a minimum paved 7-foot-wide path that is ADA accessible, lit to the standards of 16.12.032.D, at a similar grade and visible from the development on Parcel B, and designed to connect to the northern property line, which will be extended at a future time to Hilltop Avenue.

Detailed Development Plan - GLUA-25-00025: MAS-25-00002, GEO-25-00007, NROD-25-0012

Share Use Path (S28) – REVISED

~~20.The new shared use path shall transition from the curbed path along the new road to the existing bicycle lane along Beavercreek Road either through modification of the existing ADA ramp or by other means evaluated during technical design review. (DS)~~
21. The applicant shall construct their portion of TSP Project S28 within Parcel C (shared use path) as a public 7-10-foot paved off-street ADA compliant pedestrian/bicycle accessway with lighting and landscaping as regulated by code for the portion on TL 3200 and 3400 per OCMC 16.12.032 standards.
~~22. The applicant shall continue the paved shared-use path (S28) from TL 500/501 to the northern property line of TL 3200. (DS)~~
~~23. The Shared-use Path S28 (accessway) shall be a paved 7-foot-wide path within TL 3400 and 3200 where it deviates from the proposed street. (DS)~~
~~24. The applicantlayout of the proposed development shall provide a lighting plan showing that the shared-use path accessway are lit to the standards of 16.12.032.D. (DS)~~
~~25. The portion of S28 that deviates from the expanded sidewalk on TL 500/501 is an off-street pedestrian and bicycle accessway and shall comply with Americans with Disabilities Act (ADA) standards. (DS)~~
~~26. The portion of S28 on TL 3400 and 3200 shall be landscaped per OCMC 16.12.032.F standards. (DS)~~
~~27. The shared-use path S28 shall be paved with all-weather materials (e.g. asphalt, concrete, etc.) approved by the City Engineer. (DS)~~
~~28. The construction of S28 within TL 3400 and TL 3200 shall be completed prior to occupancy of Parcel B.~~

3) Stormwater Drainage

With respect to Metro's comment on Storm water discharge, the applicant must follow the Oregon City Stormwater and Grading Design Standards. These standards requirement volume control and water quality. Condition #2 requires the applicant to follow the Stormwater and Grading Design Standards prior to receiving a permit. Furthermore, the applicant is connecting to a 48" outfall pipe which conveys water onto Metro's property. Oregon Drainage Law states that stormwater discharges should be conveyed in the direction of the existing topography in the undisturbed state of the land. The existing land drains towards Metro's property. The Stormwater and Grading Design Standards and Oregon Drainage Law ensure stormwater is not conveyed at any higher volume or velocity that in the existing condition. This will be addressed during detailed design permit review as Conditioned.

RE: 1367 Molalla Mixed Use Development
GLUA 25-00025, MAS-25-00002, GEO-25-00007, NROD-25-00012

To Whom it May Concern,

In reviewing your application for the subject site, our geotechnical engineer has recently brought to our attention that the GDP / DDP development applications assume a geologic hazards protection area, based on the top of the slope, that is not consistent with the Geologic Hazards Overlay Zone that is mapped and regulated pursuant to OCMC 17.44. Staff now believes that accurate application of the City's geologic hazard development standards will have a significant impact on your development.

In July 2021, the City Commission adopted revisions to OCMC 17.44 Geologic Hazards. Pursuant to these amendments, the protections were enhanced to include mapped areas based on historic landslides as well as a buffer zone around the landslide. More specifically, OCMC 17.44.025 minimizes any development within the mapped Geologic Hazards Overlay Zone. All limitations on development are keyed from these mapped areas. The areas designated in the map are specifically defined in OCMC 17.04.515 but they are also depicted in the City's GIS mapping as shown:

What these maps show is that the steep slopes and associated buffer of the Geologic Hazard Overlay Zone impact the eastern portion of the subject property and the landslide deposits and associated buffer of the Geologic Hazards Overlay Zone further impacts the eastern portion of the subject property to a much greater degree than what is reflected in your application materials.

For development within the mapped landslide buffer, the following limitations apply:

OCMC 17.44.060.H.2.a.
For those areas with historic landslides where the structure or ground disturbance will be located within any portion of the mapped landslide or buffer zone, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;

OCMC 17.44.060.I.
For properties with slopes of twenty-five to thirty-five percent between grade breaks or are located within any portion of a mapped landslide and buffer zone:

1. *For those portions of the property with slopes of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;*
2. *An individual lot or parcel with slopes between twenty-five and thirty-five percent or located within any portion of a mapped landslide and buffer zone, shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.*

Based on the code and the maps and the proposed site plan, it appears the proposed apartment buildings may exceed the standard of a maximum of 2 dwelling units per acre. If

the apartment buildings are fully outside of the landscape buffer layer, then there are no density constraints.

Based on the code and the maps and the proposed site plan, it appears the proposed development will exceed 4,000 sf of disturbed area (or area that is graded). It appears the parking lot, roadway, and stormwater management area exist within the landslide deposit buffer. The site would need to be redesigned so that a maximum of 4,000 sf of the surface area is graded or stripped of vegetation or covered with structures or impermeable surfaces. There is no adjustment or variance available to alter these strict development limitations.

City staff is working to determine the appropriate modifications of the conditions of approval for the current GDP and DDP applications to largely defer how development on Parcel B can occur through its DDP review while recommending approval of the current GDP and DDP applications. It seems unlikely that this project could be redesigned within the current limited decision timeline but City staff would support such extension, if pursued. Again, staff understands that this is a significant revision raised late in the process. However, City staff's primary obligation is the accurate application of the OCMC. City staff is prepared to meet to discuss this information and any concerns early next week.

Staff Report

To:	Planning Commission	**Agenda Date:**	April 13, 2026
From:	Pete Walter, Planning Manager		

SUBJECT:
GLUA-24-SUB-24-03-GEO-24-07-NROD-24-032 - Request for continuation of the Park Place II Subdivision Proposal.

STAFF RECOMMENDATION:
Staff recommends the Planning Commission open the public hearing on April 13, take any testimony, and then continue the public hearing until May 11, with the record open.

EXECUTIVE SUMMARY:
See attached staff report and recommendation.

NEXT STEPS:

OPTIONS:

TYPE III PLANNING COMMISSION DECISION
STAFF RECOMMENDATION
April 6, 2026

HEARING DATE: **Planning Commission**
April 13, 2026, 7:00 pm
Hanlon Commission Chambers, Robert Libke Public Safety Building
1234 Linn Ave, Oregon City, OR 97045

FILE NUMBERS: GLUA-24-034 / SUB-24-03 / GEO-24-07 / NROD-24-032

APPLICANT: Icon Construction & Development
1969 Willamette Falls Drive, Suite 260
West Linn, Oregon 97068

REPRESENTATIVE: Emerio Design
1500 Valley River Dr, Ste 100
Eugene, OR 97401

Submitted: 1/7/2025
Complete: 7/3/2025
120 Day Deadline: n/a
NOD: TBD

OWNERS: Redland Road LLC
Hidden Falls Development LLC

REQUEST: 219-lot residential subdivision on 59.54 acres, partially located within the Natural Resources Overlay District (NROD) and the Geologic Hazards Overlay District. This is a subdivision application that is subject to the non-discretionary criteria in the OCMC, that also proposes development of a portion of the sanitary sewer system and stormwater pond in the Natural Resources Overlay District, which requires an adjustment pursuant to OCMC 17.49.200, requiring a Type III decision.

LOCATION: 16472/16582 S Livesay Road Oregon City, OR 97045
Clackamas County Assessor's Map No. 22E28D, Tax Lots 190, 100, 301, 3700, 302, 400 & 500

REVIEWERS: Pete Walter, Planning Manager
Erik Nichols, Project Engineer

ZONING: R-5 Medium Density Residential District
R-10 Medium Density Residential District
Natural Resources Overlay District
Geologic Hazards Overlay District

RECOMMENDATION: ICON has verbally informed the city that it has decided to no longer pursue the NROD crossing and is planning to submit amended materials that route the sewer via one their midblock Pedestrian Accessways to Redland Rd per the city's SMP and PPCP, and remove the stormpond encroachments from the NROD. ICON has asked for a continuance of the hearing to May in order to submit amended plans and materials. Staff recommends the Planning

Commission open the public hearing on April 13, and then continue the public hearing until May 11, with the record open.

PROCESS: Type III decisions involve the greatest amount of discretion and evaluation of subjective approval standards, yet are not required to be heard by the city commission, except upon appeal. Applications evaluated through this process include conditional use permits. The process for these land use decisions is controlled by ORS 197.797. Notice of the application and the planning commission hearing is published and mailed to the applicant, recognized neighborhood association and property owners within three hundred feet of the subject property. Notice must be issued at least twenty days pre-hearing, and the staff report must be available at least seven days pre-hearing. At the evidentiary hearing held before the planning commission, all issues are addressed. The decision is final unless appealed. The decision of the planning commission is appealable to the city commission within fourteen days of the issuance of the final decision. The city commission hearing on appeal is on the record and no new evidence shall be allowed. Only those persons or a city-recognized neighborhood association who have participated either orally or in writing have standing to appeal the decision of the planning commission. Grounds for appeal are limited to those issues raised either orally or in writing before the close of the public record. A city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal. The city commission decision on appeal from the planning commission is the city's final decision and is appealable to the Land Use Board of Appeals (LUBA) within twenty-one days of when it becomes final.

Staff Report

To:	Planning Commission	**Agenda Date:**	April 13, 2026
From:	Christina Robertson-Gardiner, Senior Planner		

SUBJECT:
Request for Continuance to April 27, 2026: GLUA-25-057 / CU-25-02 / SP-25-0145 / PI-25-08 / PARK-25-02 - PGE Line Center Expansion

STAFF RECOMMENDATION:
Open the public hearing and continue to the April 27, 2026, Planning Commission meeting.

EXECUTIVE SUMMARY:
The applicant has requested a continuance to allow time to work with staff to address questions associated with the staff report to obtain clarity.
