Introduction

This traffic impact analysis (TIA) identifies potential transportation-related impacts associated with the proposed Mixed-Use Development in Oregon City, Oregon. As necessary, mitigation measures are identified that would reduce or offset significant transportation related impacts that the project may have on the surrounding transportation system.

Project Description

The proposed project site is located at 1367 Molalla Avenue in Oregon City, as shown in the vicinity map included in Figure 1. The site is comprised of 4 parcels (3 parcels with land use development and 1 for right-of-way) in which the proposed mixed-use development is anticipated to include the following:

- Parcel A: 13,500 sf retail
- Parcel B: up to 210 multi-family apartment units
- Parcel C: No land use - right-of-way
- Parcel D: 4,915 sf fast food restaurant with drive-through

The existing site is vacant. With the development of the site, a new roadway connection would be completed between the existing signalized intersections along Molalla Avenue at the west side of the site and Beavercreek Road south of the site. The preliminary site plan is illustrated in Figure 2. The proposed project is anticipated to be fully constructed and operational by 2030.

Study Scope and Study Area

The following off-site intersections surrounding the project site were identified for analysis following coordination with City of Oregon City and Oregon Department of Transportation (ODOT) staff:

1. Molalla Ave/Pearl St
2. Molalla Ave/Holmes Ln
3. Molalla Ave/Warner Milne Rd
4. Molalla Ave/Safeway access/Future site access
5. Molalla Ave/Beavercreek Rd
6. Molalla Ave/Clairmont Way
7. Molalla Ave/ OR-213
8. Commercial Access/Beavercreek Rd/Future site access
9. OR-213/Beavercreek Rd

The analysis includes a review of existing conditions in the vicinity of the project site, including the transportation network, planned improvements, existing and future without-project AM and PM[1] peak hour traffic volumes, traffic operations, and traffic safety. Future with-project conditions are evaluated by adding site-generated traffic to future without-project volumes. Future without and with-project conditions are compared to identify the impacts the proposed project has on the surrounding transportation system.

[1] Note that review of additional time periods is included in the TIA below, but as discussed in greater detail below, the operational analysis is limited to the AM and PM peak hours.

Existing & Future Without-Project Conditions

This section describes both existing and future (2030) without-project conditions within the identified study area. Study area characteristics are provided for the transportation system, planned improvements, existing and future forecast without-project traffic volumes, traffic operations, and traffic safety.

Roadway Network

The following sections describe the existing street network within the vicinity of the proposed project and anticipated planned improvements.

Existing

The primary roadways within the study area and their characteristics near the study intersections are described below.

Molalla Avenue is a five-lane roadway functionally classified by the City of Oregon City as a minor arterial and has a speed limit of 30 mph. Molalla Avenue is a 2 to 3 lane roadway north of Warner Milne Road and south of Beavercreek Road, and five lane roadway Warner Milne Road and Beavercreek Road. Sidewalks are provided on both sides of Molalla Avenue through the entirety of the study area. Bike lanes are available on both sides north of Gales Lane, and south of the Safeway access driveway.

Beavercreek Road is a 5-lane roadway functionally classified as a minor arterial west of Molalla Avenue and a major arterial east of Molalla Avenue. Beavercreek Road has a speed limit of 35 mph in the vicinity of the project site. Beavercreek Road is a 3 to 5 lane roadway west of Molalla Avenue and a 5 to 6 lane road east of Molalla Avenue with additional urn lanes present surrounding its intersection with OR-213. Sidewalks and bicycle lanes are provided on both sides of the roadway between Molalla Avenue and OR-213.

OR-213 (Cascade Highway South) is a State Highway Route classified as a principal arterial. OR-213 is a four-lane roadway with a wide median north and south of its intersection with S Beavercreek Road, which transitions to a 6-lane roadway south of Beavercreek Road, and a 7-lane roadway north of Beavercreek Road. The speed limit along OR-213 in the study area is 55 mph. Sidewalks and bike lanes are available on the east side of OR-213 south of Beavercreek Road and wide painted shoulders are present where sidewalks are not within the study area.

Pearl Street is classified by the City of Oregon City as a major collector with 2 travel lanes. The speed limit is 25 mph. West of the intersection with Molalla Avenue, a sidewalk is present on the north side of Pearl Street. East of the intersection, sidewalks are present for approximately 230 feet.

Holmes Lane is classified as a collector west of Molalla Avenue, and continues into Hilda Street, which is a local road, east of Molalla Avenue. Holmes Lane is a 2 to 3 lane roadway with a speed limit of 25 mph. Sidewalks, bike lanes, and/or paved shoulders are present on both sides of Holmes Lane.

Warner Milne Road is classified as a minor arterial with a speed limit of 30 mph. Warner Milne Roadis a two-lane roadway with additional turn lanes provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Clairmont Way is functionally classified by the City of Oregon City as a collector with a speed limit of 25 mph. Clairmont Way is a two-lane roadway with additional turn lanes

provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Planned Improvements

A review of local plans was conducted to identify any changes in the study area that should be accounted for in the analysis. The local plans reviewed included the following: *City of Oregon City's Comprehensive Plan Project List (November 2022)*, *Oregon City's Transportation System Plan* (TSP), Yamhill County's *2015-2035 Transportation System Plan* (TSP)*, and Oregon Department of Transportation's (ODOT) 2024-2027 Statewide Transportation Improvement Program (STIP).* Planned improvements within the study area predominantly included maintenance and resurfacing projects; not impacting intersection capacity. This included the following projects:

- Warner Milne Road resurfacing near Molalla Avenue which was recently completed.
- Holmes Lane will be undergoing resurfacing in 2026.
- Molalla Avene will be undergoing resurfacing in 2027.
- Beavercreek Road will be undergoing microsurfacing in 2026, with more resurfacing planned for 2032.
- Water transmission pipes under Molalla Avenue will be upgraded in 2026.

In addition to the above projects, Beavercreek Road has also been undergoing safety improvements since 2023, including signal modifications and improved signage at the intersection with OR-213 which have since been completed. The Beavercreek Road/OR-213 intersection has an Alternative Mobility Target as the City's TSP identified it would not meet the state's required Oregon Highway Plan Mobility Standards by 2035. An additional project that has been identified as part of the Alternative Mobility Targets in the TSP includes project D95, the Beavercreek Road/OR-213 westbound right turn lane with northbound merge lane on OR 213. The City is collecting a pro-rata share to fund the D95 project; however, this project was not assumed in the future operational conditions.

Non-Motorized Facilities

Dedicated pedestrian and bicycle facilities are provided on roadways surrounding the project site as noted above. Sidewalks are available on both sides of Molalla Avenue, Beavercreek Road, and Holmes Lane. A sidewalk is available on the east side of OR-213 south of the intersection with Beavercreek Lane and on the north side of Pearl Street west of Molalla Avenue.

Transit Service

Transit service in the vicinity of the project site is provided by TriMet's Route 32. The closest transit stops to the site are located at the two site access intersections along Molalla Avenue and Beavercreek Road, directly adjacent to the project site. Additional transit stops served by TriMet's Route 33 are located approximately 0.25 miles west of the project site at the intersection of Beavercreek Road/Danielson Drive. Route 32 provides service 7-days per week between Milwaukie and Clackamas Community College in Oregon City with service between approximately 6:15 a.m. and 7:00 p.m. on weekdays with headways of approximately 30 minutes during peak periods. Route 33 provides service between the Oregon City Transit Center, Milwaukie and Clackamas Town Center 7-days per week between approximately 5:20 a.m. and 12:00 a.m. with peak period headways of approximately 15 minutes.

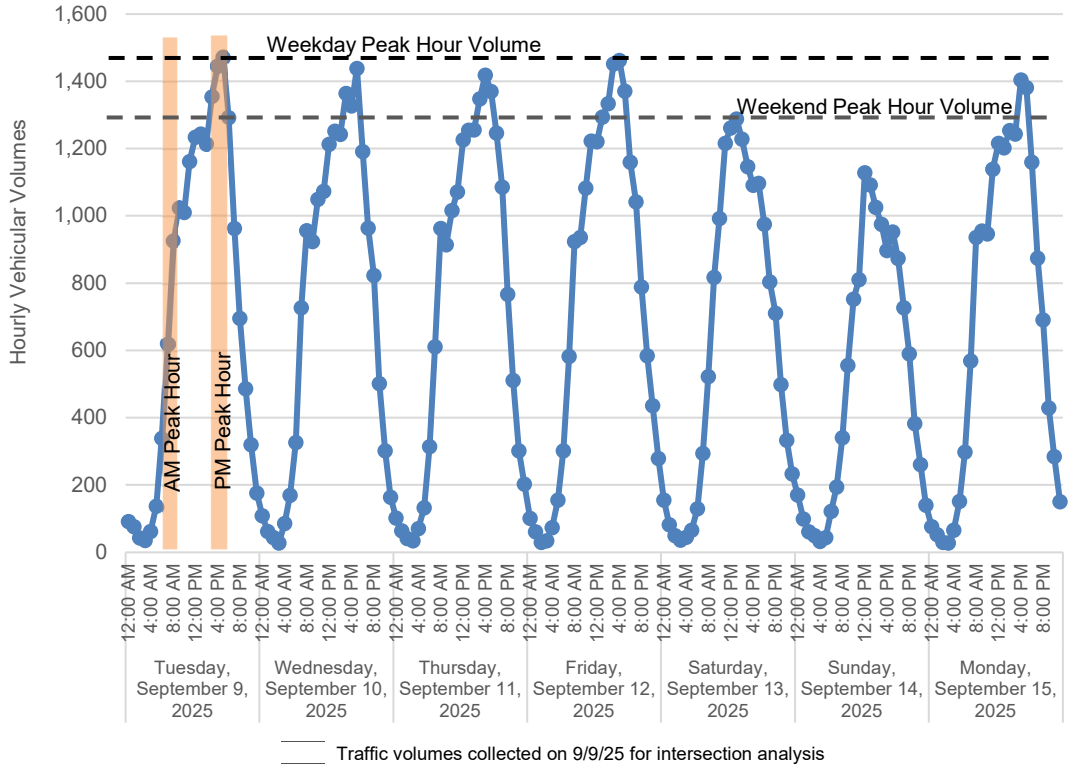
Traffic Volumes

The existing and future (2030) without-project traffic volumes forecasts are summarized in the sections below.

Existing

Existing weekday AM (7 to 9 a.m.) and PM (4 to 6 p.m.) peak period traffic counts were collected at each study intersection in September 2025.[2] The detailed traffic counts are included in Appendix A. Volumes are rounded to the nearest 5 vehicles to account for the daily fluctuations in traffic volumes. Figure 4 illustrates the existing weekday AM and PM peak hour traffic volumes at the study intersections.

In addition to the weekday peak hours, the traffic volumes throughout the week were also reviewed to confirm the time periods for analysis. Traffic volumes were collected along Molalla Avenue, north of Beavercreek Road in the project vicinity for one week in September 2025. The detailed volumes throughout the week are included in Appendix A and the volumes are illustrated in Figure 3.



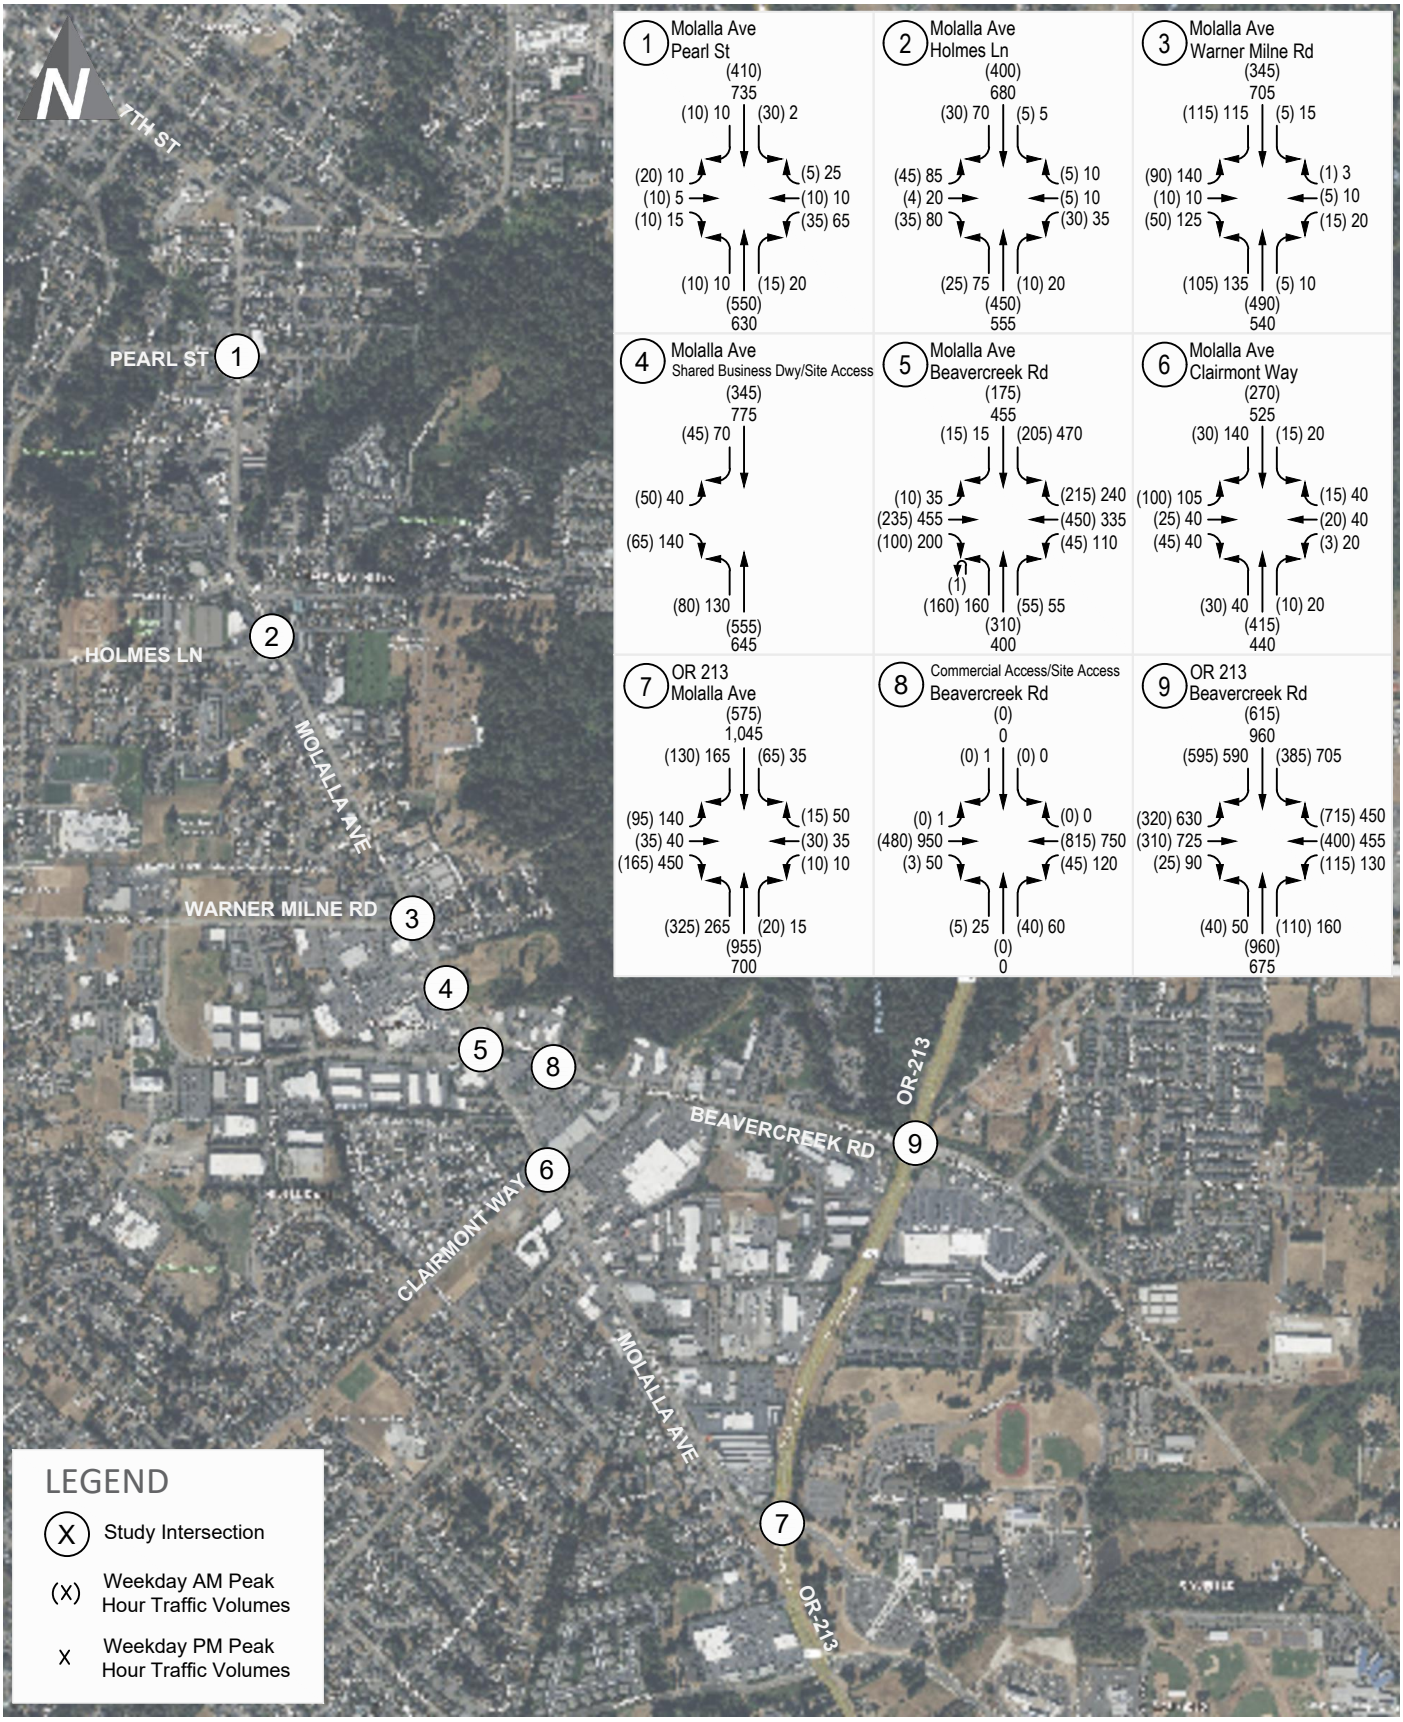


Figure 3. Existing Weekly volumes along Molalla Avenue, north of Beavercreek Road

As shown in the figure, the weekday AM and PM peak hours being studied as part of the project capture the peak traffic volumes that are occurring within the study area throughout the week. The weekend peak hourly volumes are approximately 12 percent less than the weekday peak volumes which occur during the studied PM peak hour.

[2] It was confirmed with City and ODOT staff that given the counts were conducted in September when school was in session, no seasonal adjustment to the volumes was needed.

Existing Weekday Peak Hour Traffic Volumes

Future Without-Project Traffic Volumes

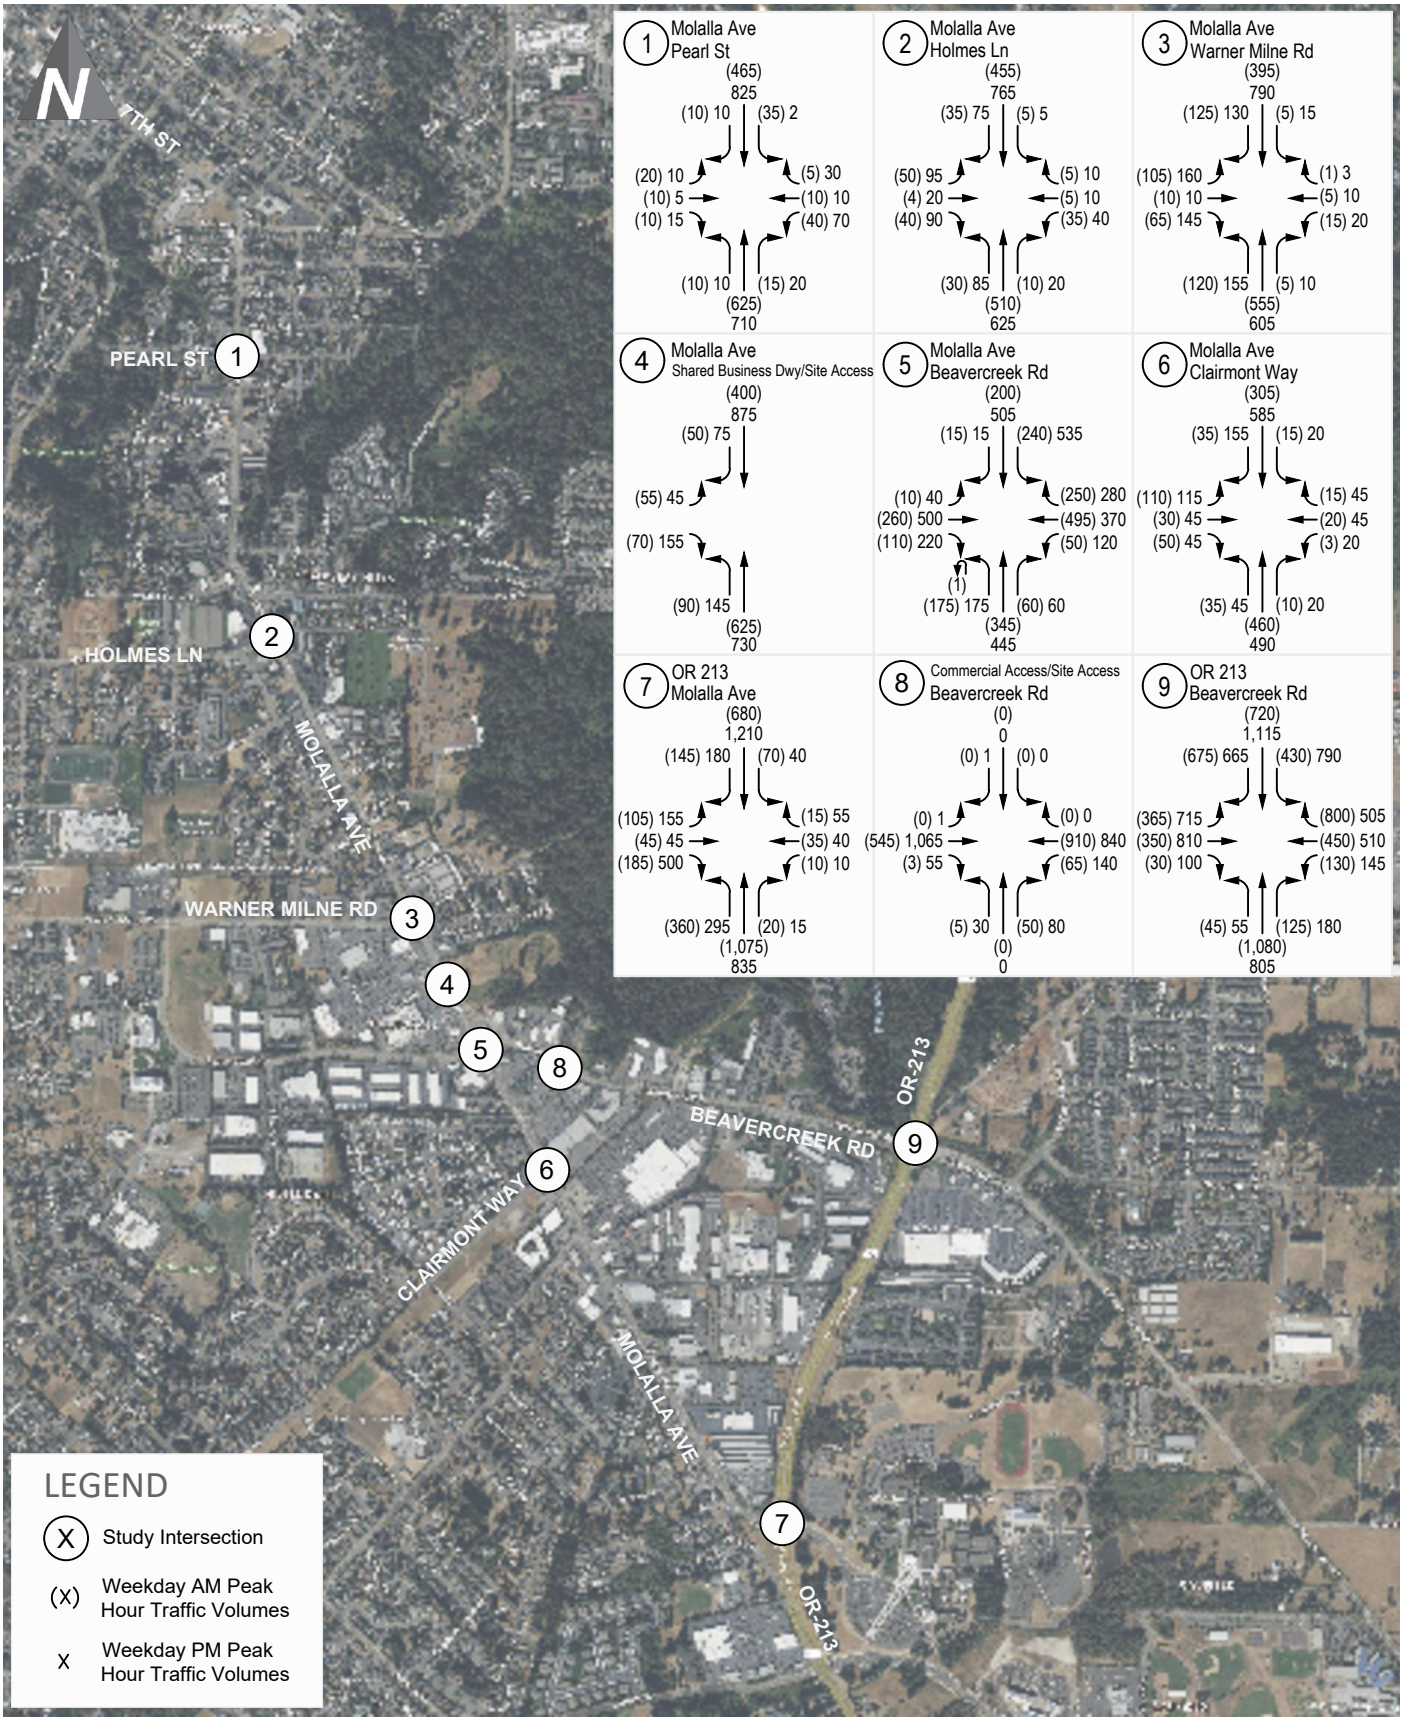
Future (2030) without-project traffic volumes are comprised of background traffic growth and traffic from "in-process developments" in the vicinity of the project site. An annual growth rate of 2.0 percent was applied, as provided by the City. Ten in-process developments in the vicinity of the proposed project site are listed below and were included in the analysis as identified by City staff.

1. 770 Pleasant Townhomes
2. Abernethy Place
3. Canemah Road Subdivision
4. Central Point Subdivision
5. Clackamas Heights Redevelopment
6. Downtown North End Development
7. Park Place Crossing Phase 1
8. Serres Farms Master Plan
9. Thimble Creek South
10. White Lane Subdivision

The forecast future (2030) without-project weekday AM and PM peak hour traffic volumes are shown on Figure 5.

Traffic Operations

The following section summarizes the traffic operations for existing and future without-project conditions for the study intersections.



An operational analysis was conducted for the study area intersections for the weekday AM and PM peak hours. Existing and future without-project volume-to-capacity (v/c) ratios and delay were calculated at study intersections based on the methodologies contained in the *Highway Capacity Manual* 7th Edition (HCM 7). The software program *Synchro* 12 was used to evaluate intersection operations.

ODOT's targets were applied to the signalized intersections along Cascade Highway South (OR 213), while the City of Oregon City's standards were applied to the remaining study intersections along Molalla Avenue and Beavercreek Road.

The City of Oregon City's operational targets are defined in the *City of Oregon City Guidelines for Transportation Impact Analyses* (2021), Section 7.9.1 for *Intersection Level of Service Standards.* The City identified a v/c ratio of 0.99 or less for the overall intersection at signalized intersections with the exception of the intersection of OR 213/Beavercreek Road, which is noted to have a maximum v/c ratio of 1.00. ODOT operational targets are defined in the 1999 *Oregon Highway Plan* (June 2017). Within the study area, Cascade Highway South (OR 213) is functionally classified as a principal arterial route inside the Portland Metro Area's Metropolitan Planning Organization (MPO) requiring a v/c ratio of 0.99 or less for the overall intersections. The Oregon Transportation Commission amended the *Oregon Highway Plan* in November 2018 to approve an alternative mobility target at the intersection of OR 213/Beavercreek Road to align with the City of Oregon City's recommendation of a 1.0 v/c target. Note that OHP identifies that *"ODOT recognizes that there are many variables and levels of uncertainty in calculating volume-to-capacity ratios…ODOT considers calculated values for v/c ratios that are within 0.03 of the adopted target in the OHP to be considered in compliance with the target."*

Signal timing at the study intersections was provided by Clackamas County and ODOT staff. Analysis parameters such as lane channelization, traffic control type, and signal timing were maintained for future (2030) without-project conditions consistent with existing conditions.

Results for the existing and future without-project operations analyses are summarized in Table 1. Detailed operations worksheets for the existing and future without-project analysis are included in Appendix B. The overall intersection v/c for signalized intersections was calculated per ODOT's *Analysis Procedures Manual* (Version 2, July 2025) Section 13.4.4 using Synchro.

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

Table 1 shows that under both existing and future (2030) without project conditions, the study intersections operate acceptably per the respective v/c target during both the existing AM and PM peak hours, operating with a v/c ratio of 0.94 or less.

Traffic Safety

The five most recent years of collision records (January 1, 2019, to December 31, 2023) provided by the Oregon Department of Transportation (ODOT) were reviewed to identify existing traffic safety issues at the study intersections. A summary of the total and average annual number of reported collisions as well as the observed crash rates at the study intersections are provided in 0.

Table 2. Study Intersection Collision Data Summary (2019 – 2023)

Intersection	Number of Reported Collisions					Total	Annual Average	Crash Rate per MEV
	2019	2020	2021	2022	2023			
1. Molalla Ave/Pearl St	4	2	0	2	3	11	2.20	0.39
2. Molalla Ave/Holmes Ln/Hilda St	3	2	3	3	1	12	2.40	0.40
3. Molalla Ave/Warner Milne Rd	6	3	6	2	3	20	4.00	0.60
4. Molalla Ave/Shared Business Dwy (Safeway)	4	3	3	0	0	10	2.00	0.30
5. Molalla Ave/Beavercreek Rd	13	9	5	8	10	45	9.00	0.84
6. Molalla Ave/Clairmont Way	4	2	1	4	3	14	2.80	0.52
7. OR 213/Molalla Ave	10	4	2	5	0	21	4.20	0.39
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	0	0	1	0	0	1	0.20	0.03
9. OR 213/Beavercreek Rd	29	27	23	16	33	128	25.60	1.25

Source: ODOT 2025.
Note: MEV = million entering vehicles

As shown in Table 2, the most collisions that occurred within the study area over the last five-year review period occurred along Beavercreek Road at Molalla Avenue and OR 213 with an annual average of 9 collisions per year and approximately 2 collisions per year, respectively. The most common collision types experienced at the study intersections were rear-end collisions followed by approach turn collisions, primarily resulting in property damage only and minor injury. There were five collisions over the last five-year review period at the study intersections of Molalla Avenue/Pearl Street, Molalla Avenue/Warner Milne Road and Molalla Avenue/Clairmont Way involving a pedestrian, two of which resulting in fatality at Molalla Avenue/Pearl Street and Molalla Avenue/Warner Milne Road, occurring in 2019 and 2022, respectively. Both intersections are signalized with crosswalks provided across all legs of the intersections. No other fatalities were reported within the study area. Based on the review of existing collisions in the study area, no patterns of safety concerns were identified.

The intersections of Molalla Avenue and Beavercreek Road are located along OR 213, a state highway classified as principal arterial. According to the ODOT CAR Unit Crash Rate Table II, the crash rate along the state highway system principal arterial roadways was observed to range from 1.25 in 2022 to 1.40 in 2019. The statewide 90th percentile intersection crash rates detailed in Exhibit 4-1 of ODOT's *Analysis Procedures Manual* (Version 2, October 2024) show a rate of 0.86 for urban four-legged signalized intersections. As shown in Table 2, the crash rate at OR 213/Molalla Avenue is below both the statewide observed crash rates and less than the 90th percentile crash rates. The OR 213/Beavercreek Road intersection is identified within the top 5 percent of sites in the ODOT's *Safety Priority Index System* (SPIS) sites and the crash rate during the study period exceeds the 90th percentile crash rates but is consistent with the lower of the observed crash rates along a principal arterial. As identified above, the City has been undergoing safety improvements at the OR 213/Beavercreek Road intersection since 2023 including signal modifications and improved signage at the intersection with OR-213 which have since been completed.

Project Impacts

This section of the report documents project-generated impacts within the study area. First, peak hour traffic volumes are estimated, distributed, and assigned to adjacent roadways and intersections within the study area. Next, future (2030) traffic volumes including project traffic are developed and the potential impact to traffic volumes and traffic operations are identified.

Trip Generation

Trip generation for the proposed project was calculated based on trip rates using the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021) as coordinated and approved with City and ODOT staff through scoping of the traffic analysis. ITEs Multifamily Housing (Mid-Rise) (LU #221) and Fast-Food Restaurant with Drive-Through Window (LU #934), and Supermarket (LU #850) land uses were assumed for the proposed residential, restaurant, and retail land uses, respectively[3].

The proposed project trip generation was adjusted for pass-by and internal trips. Pass-by trips reflect traffic already on streets in the vicinity of the project site that would visit the commercial components of the project while driving by the site on the way to its final destination. Based on ITE *Trip Generation Manual* (11th Edition, 2021), the pass-by rates for the supermarket and restaurant uses are 24 percent and up to 55 percent, respectively. The inclusion of internal capture was assumed consistent with the methodology per ITE's *Trip Generation Handbook* (3rd Edition, 2017); however, the overall internal capture rate for the full development was assumed not to exceed 20 percent in order to provide a conservative analysis; as coordinated with City staff.[4]

Table 3 shows the weekday vehicle trips generated by the proposed project. The detailed trip generation calculations are included in Appendix C.

Table 3. Estimated Weekday Vehicle Trip Generation

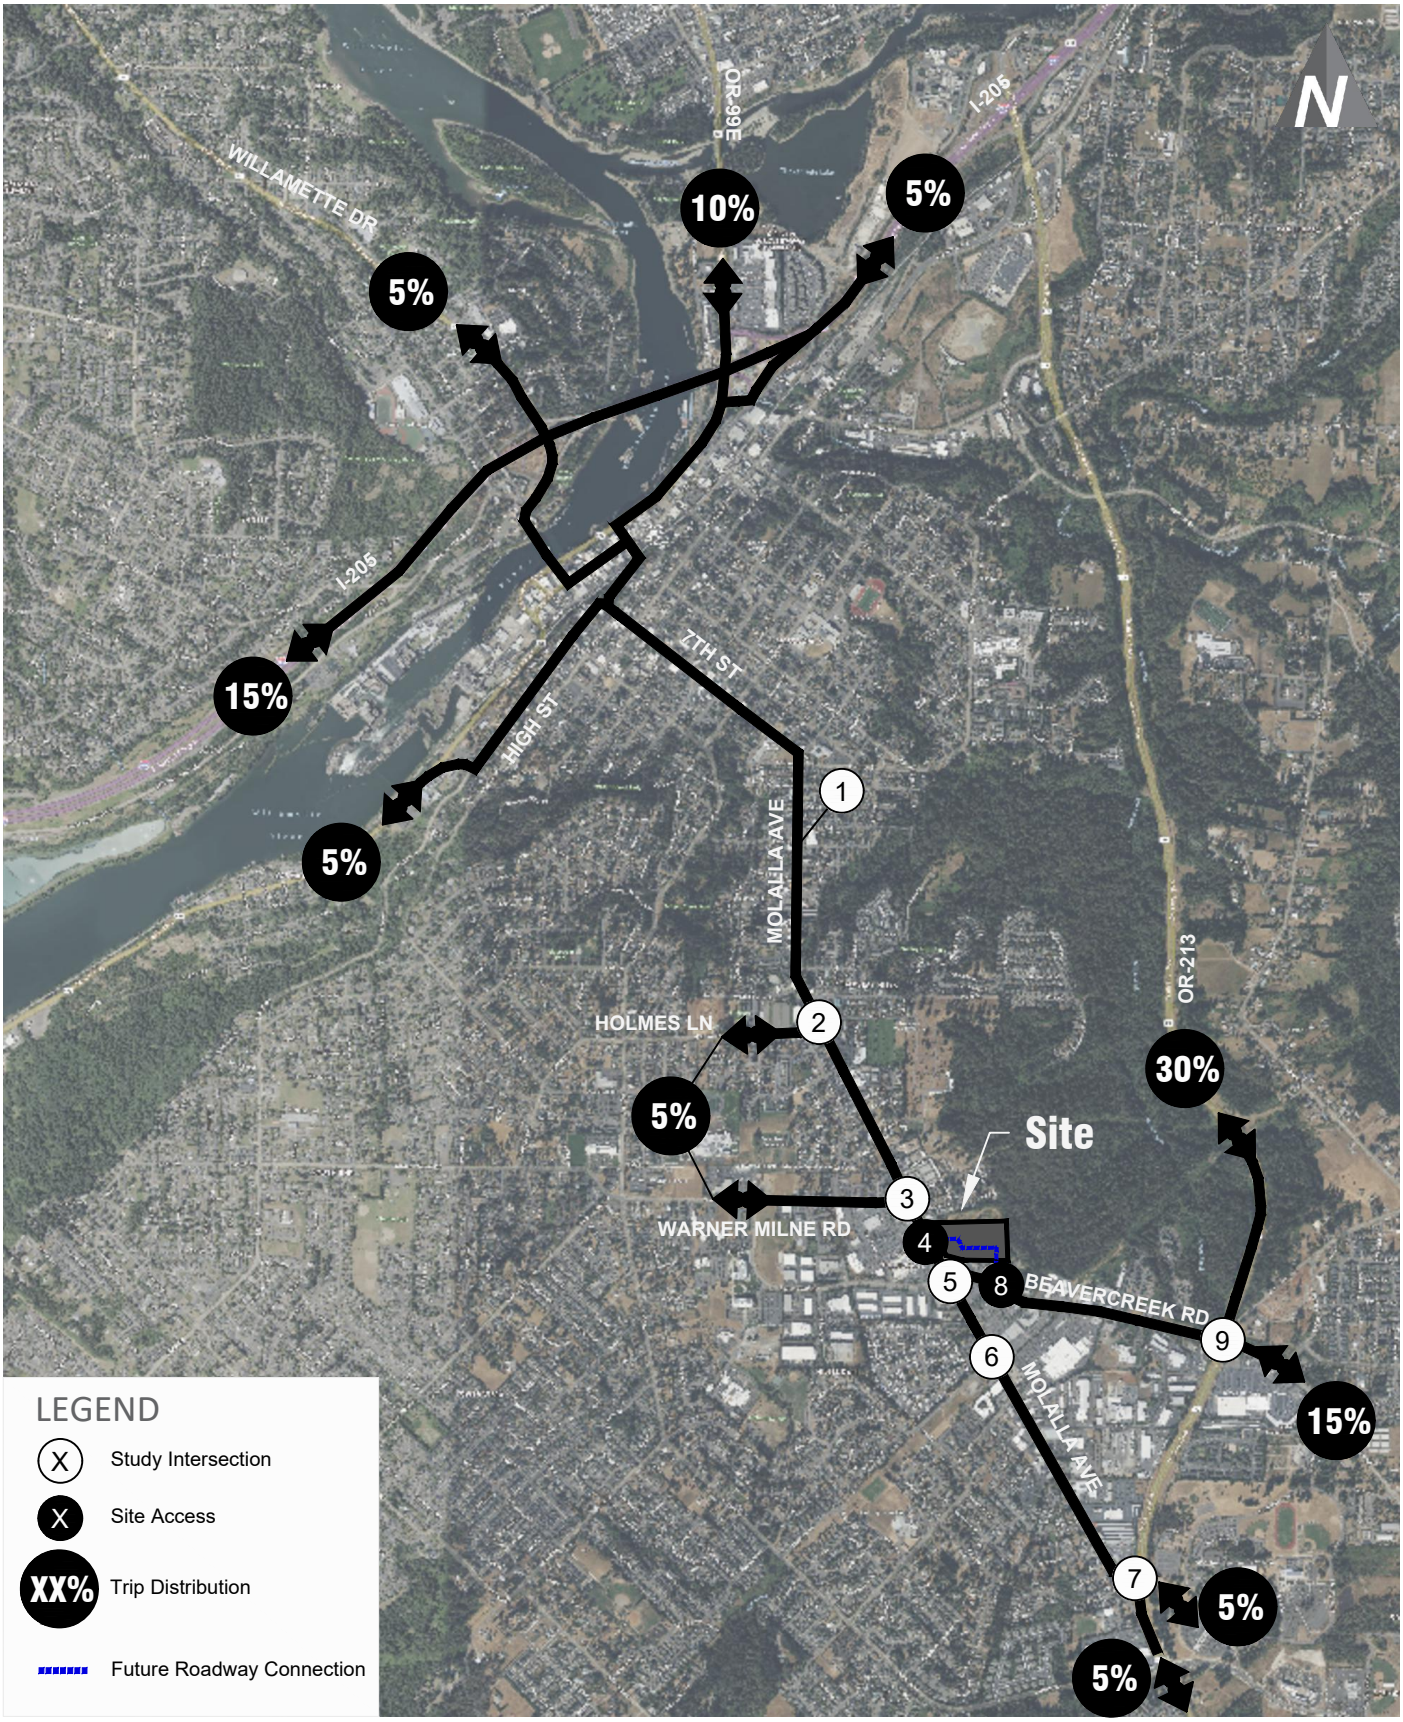
Land Use[1]	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Mid-Rise Apartments (LU #221)	210 du	794	18	49	67	40	26	66
Supermarket (LU #850)	13,500 sf	1,022	20	14	34	45	46	91
Pass-by (24%)		*-246*	*-4*	*-4*	*-8*	*-11*	*-11*	*-22*
Restaurant (LU #934)	4,915 sf	2,006	98	104	202	74	61	135
Pass-by (50% AM, 55% PM)		*-1,054*	*-51*	*-51*	*-102*	*-37*	*-37*	*-61*
Total Primary		**2,522**	**81**	**112**	**193**	**111**	**85**	**196**

Note: du = dwelling units, sf = square feet
1. Average trip rates from ITE *Trip Generation Manual*, 11th Edition (2021).

As shown in Table 3, the proposed project is estimated to generate 2,522 new weekday daily trips with 193 trips occurring in the AM peak hour and 196 trips occurring in the PM peak hour.

[3] Note that the supermarket land use was assumed for the retail to provide a conservative analysis as it has a higher weekday trip rates.

[4] The unadjusted internal capture was estimated to be 47 percent during the PM peak hour based on the ITE methodology. The imposed 20 percent internal capture cap is a reduction in over 50 percent in order to provide a conservative estimate of trip generation.



Trip Distribution and Assignment

Individual trip distribution patterns for the residential and commercial uses were estimated to and from the project site and were coordinated with City staff.

The residential trip distribution pattern was estimated based on U.S. Census Bureau's *OnTheMap* tool. *OnTheMap* is a web-based mapping and reporting application, which shows where workers are employed and where they live based on census data. The *OnTheMap* census data was translated to the number of people that live within a quarter-mile radius of the proposed project and where they work. The residential use project trip distribution for vehicle trips is shown in Figure 6.

Trip distribution patterns assumed for the commercial uses to and from the project site were generally assumed to be local and are based on the existing travel patterns in the vicinity of the project. The commercial use project trip distribution for vehicle trips is shown in Figure 7.

The weekday peak hour primary project trips were assigned to the study area based on the respective anticipated project trip distribution patterns. The commercial pass-by trips were assigned via the adjacent intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The resulting AM and PM peak hour trip assignment is illustrated in Figures 8 and 9, respectively.

Future With-Project Traffic Volumes

Site-generated weekday peak hour traffic volumes were added to the future without-project traffic volumes at the study intersections. Additionally, with the new roadway connection between the existing signalized intersections along Molalla Avenue and Beavercreek Road, driveways are proposed for the project as well as a new driveway serving the existing commercial uses northeast of the Molalla Avenue/Beavercreek Road intersection. A portion of the estimated existing commercial uses were assumed to utilize the proposed driveway. The resulting future (2030) with-project peak hour traffic volumes are illustrated on Figure 10.

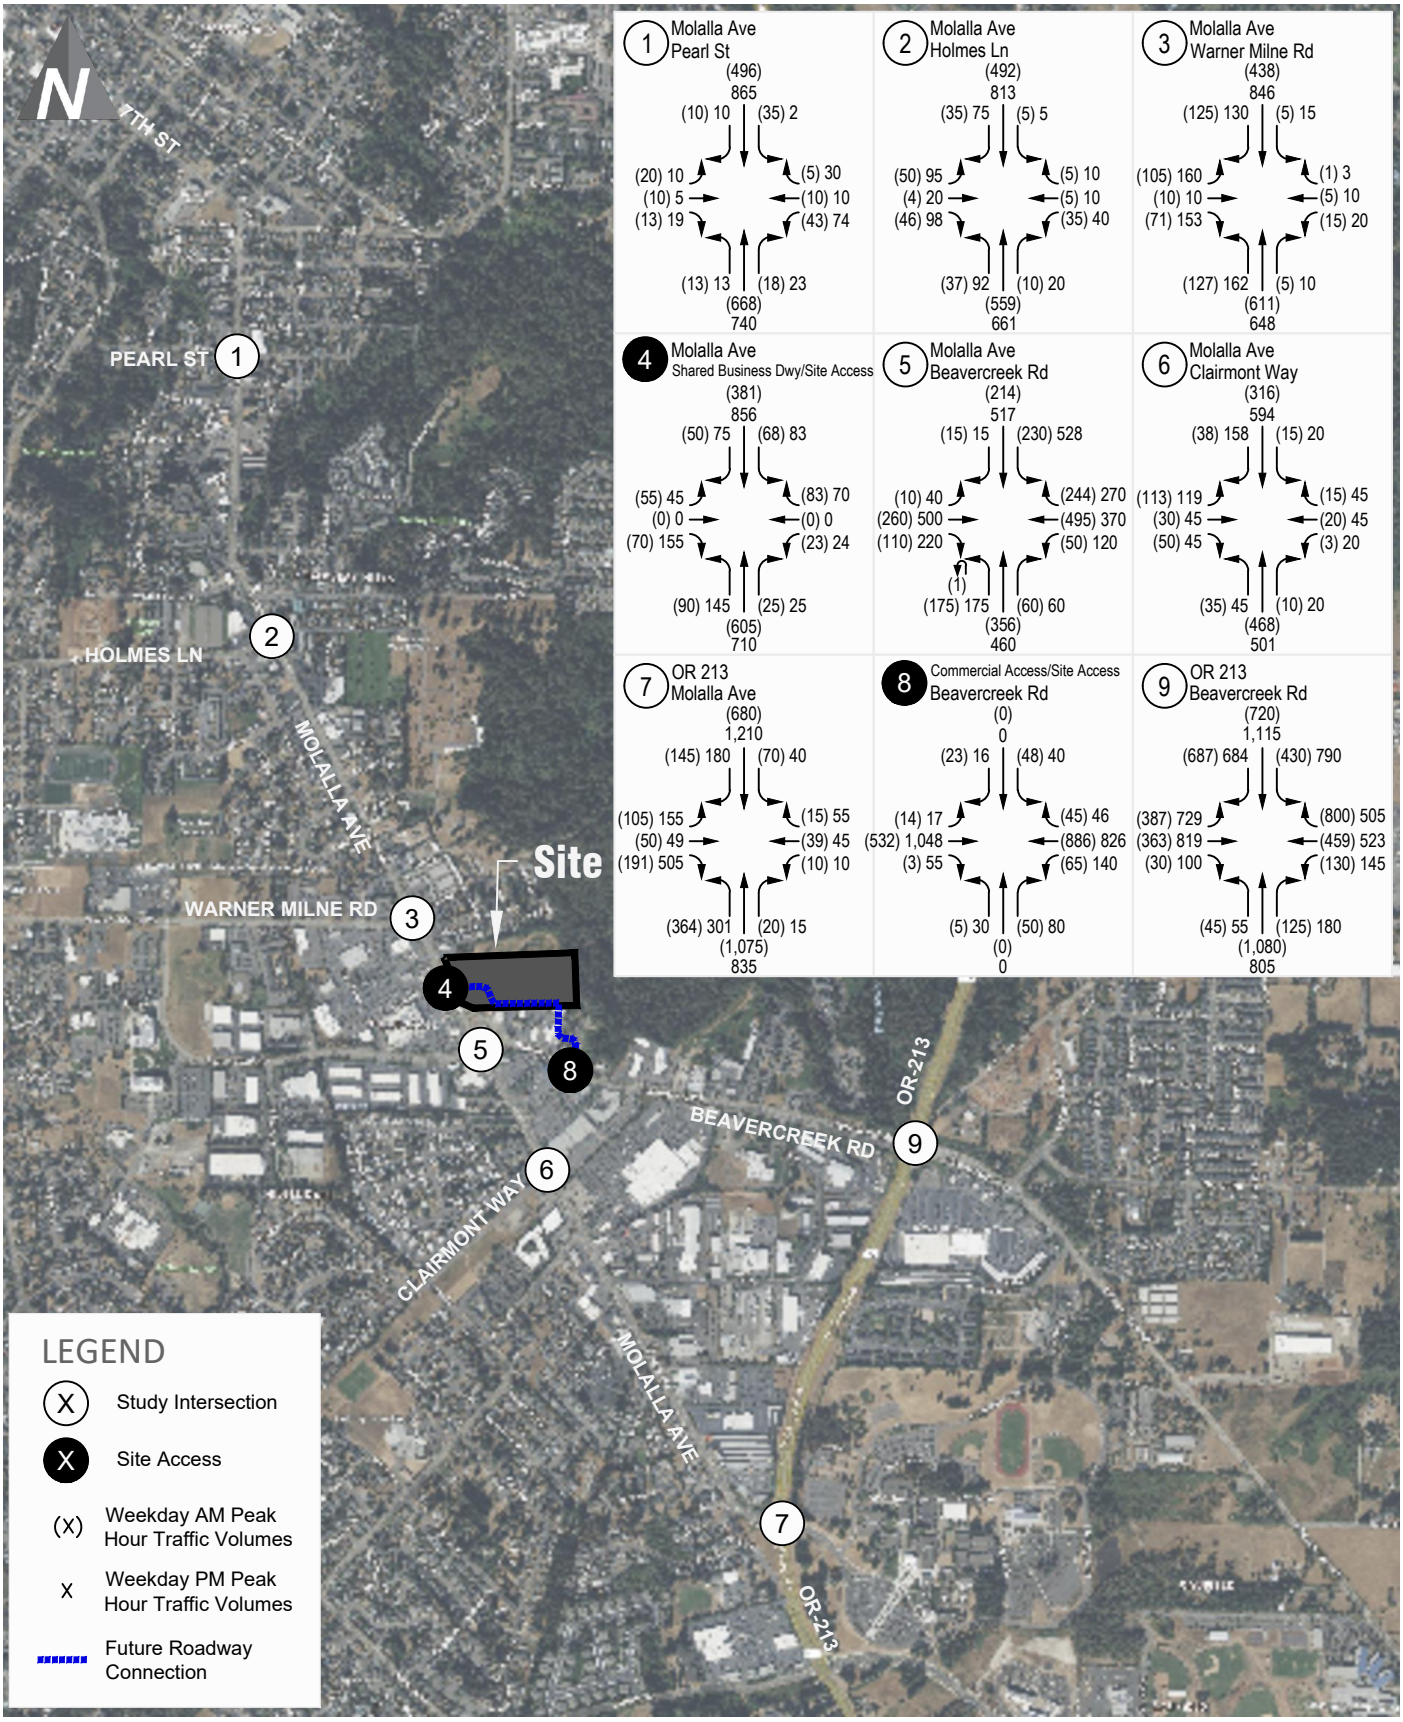

Table 4 summarizes the anticipated increase in total entering traffic at the off-site study intersections as well as the percent of future with-project traffic volumes attributable to the proposed project.

Table 4. Peak Hour Traffic Volume Impacts at Study Intersections

Intersection	Future (2030) Without-Project TEV	Project Trips TEV[1]	Shift of Existing Commercial	Future (2030) With-Project TEV	Percent Share
AM Peak Hour					
1. Molalla Ave/Pearl St	1,255	86	-	1.341	6.4%
2. Molalla Ave/Holmes Ln/Hilda St	1,184	99	-	1,283	7.7%
3. Molalla Ave/Warner Milne Rd	1,406	112	-	1,518	7.4%
4. Molalla Ave/Shared Business Dwy (Safeway)	1,290	160	0	1,450	11.0%
5. Molalla Ave/Beavercreek Rd	2,211	25	-16	2,220	1.1%
6. Molalla Ave/Clairmont Way	1,088	25	-	1,113	2.2%
7. OR 213/Molalla Ave	2,745	19	-	2,764	0.7%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	1,578	88	5	1,671	5.3%
9. OR 213/Beavercreek Rd	5,200	56	-	5,256	1.1%
PM Peak Hour					
1. Molalla Ave/Pearl St	1,717	84	-	1,801	4.7%
2. Molalla Ave/Holmes Ln/Hilda St	1,840	99	-	1,939	5.1%
3. Molalla Ave/Warner Milne Rd	2,053	114	-	2,167	5.3%
4. Molalla Ave/Shared Business Dwy (Safeway)	2,025	163	0	2,188	7.4%
5. Molalla Ave/Beavercreek Rd	3,265	27	-17	3,275	0.8%
6. Molalla Ave/Clairmont Way	1,630	27	-	1,657	1.6%
7. OR 213/Molalla Ave	3,380	20	-	3,400	0.6%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	2,212	81	6	2,298	3.5%
9. OR 213/Beavercreek Rd	6,395	55	-	6,450	0.9%

Note: TEV = Total Entering Vehicles
1. TEV project trips are inclusive of both primary and pass-by trips at the intersection as applicable.

As shown in Table 4, the project share in future (2030) traffic volumes is estimated to be approximately 8 percent or less during the weekday AM peak hours and approximately 5 percent or less during the weekday PM peak hours at all of the off-site study intersections. Traffic volumes may fluctuate day-to-day by 5 to 10 percent; therefore, the increase in traffic at the off-site study intersections as a result of the proposed project is less than the daily fluctuation. The project share at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/ Beavercreek Road are higher during both the weekday AM and PM peak hours given these intersections serve all project traffic.

Future (2030) With-Project Peak Hour Traffic Volumes

FIGURE 10

OR City Mixed-Use

transpogroup

Oct 14, 2025 – 2:50pm lilyh M:\25\1.25192.00 – OR City Retail\Graphics\DWG\25192_Distribution_Graphics.dwg Layout: Future With-Project Vols

Future With-Project Traffic Operations

Future (2030) with-project study intersection operations were evaluated during both the weekday AM and PM peak hours. The v/c ratio and delay were calculated for with-project conditions consistent with the methodology described for existing and without-project conditions. Analysis parameters such as lane channelization and signal timing were assumed to be consistent with the future without-project conditions. Table 5 compares the future (2030) without- and with-project intersection operations for the weekday AM and PM peak hours. Operational worksheets are included in Appendix B.

Note that the intersections of Molalla Avenue/Shared Business Driveway (Safeway) and Shared Business Driveway (South Ridge)/Beavercreek Road both assume the added legs to accommodate the added road connection between the intersections proposed with the project. The new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. Additional discussion of the added roadway segment between Molalla Avenue Beavercreek Road is provided in the site access section in the subsequent section.

Table 5. Future (2030) Without & With-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Future (2030) Without-Project		Future (2030) With-Project	
		v/c[1]	Delay[2]	v/c	Delay
Weekday AM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.46	4.9	0.50	5.1
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.40	8.1	0.44	8.3
3. Molalla Ave/Warner Milne Rd	Signal	0.27	10.5	0.29	10.5
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.51	10.8	0.41	11.8
5. Molalla Ave/Beavercreek Rd	Signal	0.51	17.9	0.51	18.0
6. Molalla Ave/Clairmont Way	Signal	0.44	10.8	0.44	10.9
7. OR 213/Molalla Ave	Signal	0.64	28.7	0.65	28.9
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.72	4.8	0.40	7.3
9. OR 213/Beavercreek Rd	Signal	0.81	47.1	0.82	49.1
Weekday PM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.60	5.9	0.63	6.1
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.66	10.7	0.70	11.5
3. Molalla Ave/Warner Milne Rd	Signal	0.44	12.2	0.48	12.8
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.58	14.5	0.50	15.3
5. Molalla Ave/Beavercreek Rd	Signal	0.76	28.1	0.77	28.5
6. Molalla Ave/Clairmont Way	Signal	0.68	16.4	0.70	17.0
7. OR 213/Molalla Ave	Signal	0.78	36.3	0.78	36.6
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.67	8.5	0.55	9.3
9. OR 213/Beavercreek Rd	Signal	0.94	75.4	0.94	78.0

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

As shown in Table 5, with the addition of the project traffic all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.

Site Access Analysis

Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The proposed road section between Molalla Avenue and Beavercreek Road is illustrated in Figure 2. As shown in the figure, a three-lane section is proposed along the project frontage extending from Molalla Avenue beyond the commercial accesses which then transitions to a two lane section to Beavercreek Road.

The traffic operational review for the site focused on the following key aspects as requested by City staff which are reviewed in the sections below.

- **Modified Traffic Signals** – The operations at the modified signals was evaluated both in terms of v/c of the intersections as well as 95th percentile queues.
- **Left-turn lane warrants** – A three lane section providing a two-way left turn lane is proposed through the project's commercial driveways but then is proposed to transition to a two-lane section. A warrant review is conducted to confirm if left turn lanes are recommended at the two driveways further to the east of this section. The two known driveway locations are illustrated in Figure 2.
- **On-site queueing** – The on-site queuing associated with the proposed restaurant with drive-through.

Modified Traffic Signals

The traffic operations at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/Beavercreek Road intersections were evaluated under future (2030) with-project conditions for the weekday AM and PM peak hours. As noted above, the new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. The resulting operations are summarized in Table 5 above. As shown in the table, both intersections are forecast to meet the required operational standards, operating with a v/c of 0.55 or lower during the weekday AM and PM peak hours.

The 95th percentile queues (the queues that are only exceeded 5% of the time) at the signalized access intersections along Molalla Avenue and Beavercreek Road were also evaluated using synchro, consistent with the operational analysis and are summarized in Table 6.

Table 6. Future (2030) Molalla Ave & Beavercreek Rd Intersection 95th Percentile Queues

	4. Molalla Ave/Shared Business Dwy (Safeway)					8. Shared Business Dwy (South Ridge)/ Beavercreek Rd				
		AM Peak Hour		PM Peak Hour			AM Peak Hour		PM Peak Hour	
Movement	Available Storage[2]	Without-Project	With-Project	Without-Project	With-Project	Available Storage	Without-Project	With-Project	Without-Project	With-Project
Eastbound Left-Turn	110'	25'	25'	30'	30'	115'	<25'	<25'	<25'	<25'
Eastbound through/right	110'	30'	30'	105'	110'	715'	35'	45'	160'	160'
Westbound Left-Turn	-[1]	-	<25'	-	25'	115'	<25'	<25'	25'	25'
Westbound through/right	-[1]	-	35'	-	45'	630'	<25'	65'	60'	80'
Northbound Left-Turn	100'	45'	50'	**110'**	**115'**	50'	<25'	<25'	25'	25'
Northbound through/right	530'	60'	75'	95'	105'	50'	25'	25'	40'	40'
Southbound Left-Turn	-[1]	<25'	25'	<25'	35'	-[1]	-	25'	-	25'
Southbound through/right	500'	75'	75'	225'	230'	-[1]	-	<25'	-	<25'

Note: **Bold** indicates the 95th percentile queues exceeds the available storage.
1. Intersection movement being added and/or modified with project.
2. Available queueing storage distance to the adjacent intersection. Turn lane storage assumes storage plus full width opening (not including the taper).

The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be 2 vehicles or less. These forecast queues will be able to be accomdoated within the provided storage at each intersection. This forecast queues correspond with the forecast weekday AM and PM peak hour volumes along the proposed roadway section with the opening of the project of approximately 300 trips (in/out) split between the 2 accesses as illustrated in Figure 10 above.

The queues of the other approaches are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project). Additionally, all 95th percentile queues at the two signals are forecast to be accomdoated within the available storage with the exception of the northbound left-turn queue at the Molalla Avenue signal during the PM peak hour.

The northbound left-turn 95th percentile queue at the Molalla Avenue signal is forecast to have up to 1 vehicle extending beyond the available storage under both future (2030) without-project and with-project conditions. The table shows that the 95th percentile queue is forecast to increase by 5' (less than 1 vehicle) with the project as compared to without project conditions, even though the project does not add any trips to the northbound left-turn movement. This minimal increase in 95th percentile queue is due to the actuated signal timing of the intersection, which adapts phasing time allocations to movements based on volumes of the intersection. Due to the addition of the east leg added with the project, the phase time at the actuated signal adjusts accordingly, resulting in the slight added forecast 95th percentile queue of the northbound left-turn movement. Although the 95th northbound left-turn percentile queue is forecast to exceed the storage, the average queue is forecast to be accomdoated within the available storage under both future (2030) without- and with-project conditions at approximately 60 feet or less during the PM peak hour.

Left-Turn Lane Warrants

Left-turn lane warrants have been reviewed for the proposed Les Schwab Access and the eastern residential access located on the east side of the project site along the proposed Public Access Road. Based on the City of Oregon City's Turn Lane Warrant guidelines defined in the Transportation Impact Analysis Guidelines (July 2021), Section 7.14.2, the "Engineer shall exercise professional judgement in evaluating the need for, and benefit of, providing dedicated left-turn lanes". The City provided references to consider include the AASHTO *Policy on Geometric Design of Highways and Streets* and the National Cooperative Highway Research Program (NCHRP) Report 457 *Evaluating Intersection Improvements.* The left turn warrants from both sources were evaluated assuming the future (2030) with-project weekday peak hour traffic volumes. The left-turn warrant evaluation is included in Appendix D. As shown in the appendix, no left-turn lanes are warranted at any of the site access intersections under the future (2030) weekday AM or PM peak hours.

In addition to these known driveway locations, as illustrated in Figure 2, additional access(es) are anticipated on the south side of the internal roadway in the future as identified as part of the Beavercreek Road Access Management Plan. These access points would serve the existing commercial development adjacent to Les Schwab. The exact driveway placement is unknown; however, the access would be located between the commercial and residential driveways within the proposed two-lane roadway section. The turn lane needs associated with that potential future development would be evaluated as part of that future project and if shown to be warranted, the widening to accommodate a turn lane could be provided to the south of the proposed road.

On-Site Queueing

Additionally, on-site queuing associated with the proposed restaurant with drive-through was evaluated. The drive-through queue was estimated using the Poisson queuing distribution. The

total external inbound vehicle trips (inclusive of pass-by trips) for the restaurant use were assumed to utilize the drive through for purposes of providing for a conservative queueing analysis. The average service time for a fast-food restaurant drive-through window is approximately 4 minutes based on the annual study conducted by QSR[5]. A detailed Poisson queuing worksheet is provided in Appendix E. The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 12 vehicles or less or approximately 6 vehicles per lane. The proposed site plan illustrates each drive lane can accommodate a queue of at least 275' or 11 vehicles per lane; therefore, the queues are anticipated to be accommodated within the proposed driveway storage.

[5] *25th Anniversary Edition Drive-Thru Study (Intouch Insight and QSR).*

Mitigation Measures

Based on the operational review above for both without and with-project conditions, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane as noted above. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 above, the project is forecast to contribute 55 project trips to the intersection during the PM peak hour. This results in an estimated fee of $22,220 at this location as pro-rata share contribution to the planned improvement project.

Additionally, a Transportation System Development Charge (TSDC) will be required associated with the development of the project's land uses.[6] The project site is located inside the Molalla Avenue Corridor SDC Special Location Discount Area. Based on the current TSDC rates (Effective July 1, 2018), multi-family developments are required to pay a fee of $6,474 per multi-family dwelling unit constructed. Non-residential developments are required to submit a *System Development Charges Request Form* to the City to determine the fee required. The residential portion of the project proposed to construct 210 multifamily dwelling units will require a fee of $1,359,540. The TSDC associated with the non-residential uses proposed on site will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*.

[6] Each of the pad users will pay their own fees when they proceed with their own pad development.

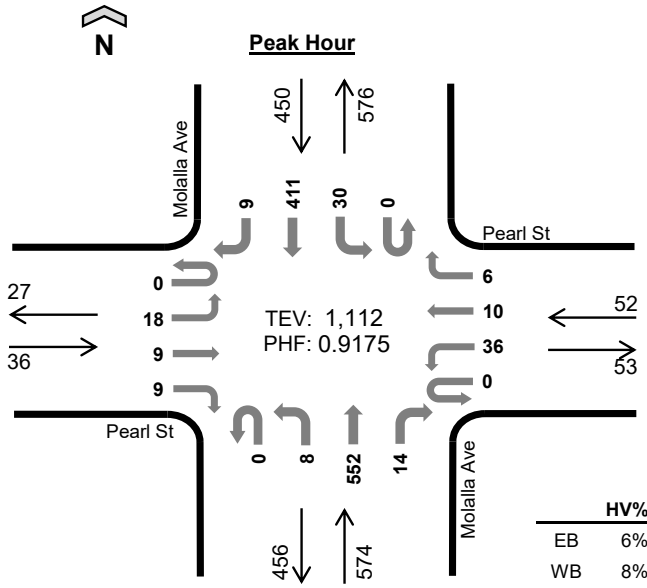
Findings and Recommendations

This traffic impact analysis summarizes the project traffic impacts of the proposed Oregon City Mixed-Use project located at 1367 Molalla Avenue in Oregon City. General findings and recommendations include:

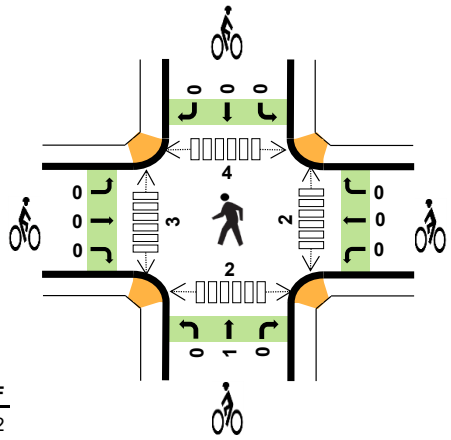
- **Project Description** – The proposed project will construct a 13,500 sf retail, a 4,915 sf fast food restaurant with drive through, and up to 210 multifamily apartment units on 3 parcels in Oregon City along with a 4th parcel being used for right-of-way.

- **Trip Generation** – Accounting for internal capture of trips that will occur between the proposed uses and pass-by trips associated with the commercial uses of the project, the proposed project is estimated to generate 2,522 new primary weekday daily trips with 193 trips occurring in the AM peak hour and 196 trips occurring in the PM peak hour.

- **Traffic Operations** – With the addition of project generated traffic, all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.



- **Site Access** – Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road.
    - The two signalized intersections are forecast to operate acceptably.
    - The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be 2 vehicles or less. Additionally, the queues of the other approaches at the two signalized intersections are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project).
    - The proposed road section is three-lane through the commercial area and then transitions to a two-lane section further east. This proposed section was confirmed through a warrant analysis for current uses. Any future development and associated need for widening to accommodate turn lanes would be assessed and could be provided to the south of the proposed road.



- **Mitigation** – The total TSDC associated with the land uses of the proposed project will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*. Additionally, the project would contribute its pro-rata share at the Beavercreek Road/OR-213 intersection toward TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane.

Subject: RE: M5913944 - PUE questions re: new 208 apt unit construction - NE corner of Molalla Ave & Beavercreek Rd

Scott, we'll work through this as well. Moving a pole will be part of the street improvement portion.

Thanks,

Ron Snodgrass

Subject: RE: M5913944 - PUE questions re: new 208 apt unit construction - NE corner of Molalla Ave & Beavercreek Rd

This email is from someone outside PGE.
Please take care when opening links, attachments or responding to this email.

Thanks, Ron. As an FYI, we will need to move at least one pole due to the bus turnout north of the signal. We don't have to solve that now but it's coming – just wanted to keep you in the loop since the city is requiring the turnout and more ROW dedication.

Subject: RE: M5913944 - PUE questions re: new 208 apt unit construction - NE corner of Molalla Ave & Beavercreek Rd

I assume the poles on Molalla, stay as is. A couple of years ago we did a pole relocation on Molalla further to the south. They did not require them to be undergrounded.

Thanks,

This email is from someone outside PGE.
Please take care when opening links, attachments or responding to this email.

The city has a requirement to put all utility service underground. Obviously, we'll do that for all of the interior of the site but there are some significant lines along Molalla Ave. Does PGE have any plans to place these lines underground or are there barriers against doing so? Seems like a bigger picture issue beyond the scope of our project.

Scott,

I put together a preliminary concept. We can move and adjust vaults, transformers, service points as there is clarity as to where the meter gear equipment will be located on each building. This was just a fist stab.

As this moves forward additional work orders will need to be created. I see the need for at least the following:

- A PGE Work Order TDSWDCUST for the road improvement portion,
  - This will cover the vault and conduit for the main road,
- Work Orders for each building/Service.
  - The apartments may/could be broken up into individual work orders,
    - RSMUT
  - CMDEV for the restaurant and or other commercial buildings.

When you are ready, put in for these Work Orders and the individual I assign this project to can work with you to fine tune.

You can continue to reach out to me for any questions and we can certainly discuss more over the phone and or email.

Thanks,

Thanks, Ron – hugely appreciated! Thanks for turning this around so quick. Looks like the routing we suggested is at least feasible. I'm pretty confident we can provide a widened PUE where we need to add vaults along the street to give you a little more room if you need it. I'm guessing some of the transformer pad will shift slightly in location (see below thoughts), but we can adjust locations of individual transformers based on a more detailed design of each of the pad users.

We'll need street lighting as well. We can coordinate that when we do detailed construction plans if we wouldn't need to allow extra room in the PUE at key location(s). If we need some extra room in certain spots to address street lighting service(s) and have an idea of what that would look like does it make sense to include that now or can that be pushed off to detailed design? Street lighting for Molalla would be the ornamental accord lights along Molalla and the rest of the internal street lighting would be the city's normal lighting. Ultimately, we'd want to provide for street lighting infrastructure for the access road going down to Beavercreek Rd. Presumably, this would fall under the proposed 10.5' wide multi-use sidewalk on the west side of the road (trees will be behind the sidewalk). Would the street lights on this road be served from the system within the internal public road or would it be served via Beavercreek Rd?

APPENDIX J
Preliminary Title Report

Fidelity National Title
Company of Oregon

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein Fidelity National Title Company of Oregon hereby reports that it is prepared to issue, or cause to be issued, as of the specified date, a policy or policies of title insurance describing the land and the estate or interest hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules or Conditions of said policy forms.

The printed Exceptions and Exclusions from the coverage of said policy or policies are set forth in Exhibit One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a/an Florida corporation.

Please read the exceptions shown or referred to herein and the Exceptions and Exclusions set forth in Exhibit One of this report carefully. The Exceptions and Exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

This preliminary report is for the exclusive use of the parties to the contemplated transaction, and the Company does not have any liability to any third parties nor any liability until the full premium is paid and a policy is issued. Until all necessary documents are placed of record, the Company reserves the right to amend or supplement this preliminary report.

Countersigned

EXHIBIT "A"

Legal Description

PARCEL 1:

A tract of land situated in the Southwest one-quarter and the Southeast one-quarter of Section 5, Township 3 South, Range 2 East, Willamette Meridian, in the City of Oregon City, Clackamas County, Oregon, being more particularly described as follows:

Commencing at the extreme Southerly corner of tract described in Clackamas County Deed Book "O", Page 265, said point being in the centerline of Molalla Avenue; thence South 88°29'47" East a distance of 39.98 feet to a point being 35 feet Northeasterly of, when measured at right angles to, the centerline of said road, said point being the true point of beginning; thence along the Northeasterly right-of-way of said Molalla Avenue, North 27°23'32" West a distance of 10.28 feet; thence along the Southerly line that tract described in Fee No. 72-08888 Deed Records, Clackamas County, Oregon, South 88°29'47" East a distance of 653.92 feet to the Southeast corner of said tract; thence along the Easterly line of said tract, North 12°38'23" West a distance of 110.72 feet to the Northwest corner of that tract described in Fee No. 81-19662, Deed Records, Clackamas County, Oregon; thence along the Northerly line of said tract, South 88°29'47" East a distance of 120.00 feet to the Northeast corner of said tract; thence along the Easterly line of said tract, South 12°38'23" East a distance of 120.00 feet to a point on the Northerly line of that tract described in Fee No. 96-046001, Deed Records, Clackamas County, Oregon; thence along the Northerly line of said tract, North 88°29'47" West a distance of 771.22 feet to the true point of beginning.

PARCEL 2:

A tract of land situated in the Southwest one-quarter and the Southeast one-quarter of Section 5, Township 3 South, Range 2 East, Willamette Meridian, in the City of Oregon City, Clackamas County, Oregon, being more particularly described as follows:

Commencing at the extreme Southerly corner of tract described in Clackamas County Deed Book "O", Page 265, said point being in the centerline of Molalla Avenue; thence South 88°29'47" East a distance of 39.98 feet to a point being 35 feet Northeasterly of, when measured at right angles to, the centerline of said road; thence along the Northeasterly right-of-way of said Molalla Avenue, North 27°23'32" West a distance of 10.28 feet to the true point of beginning; thence continuing along the Northeasterly right-of-way of said Molalla Avenue, North 27°23'32" West a distance of 67.85 feet; thence North 62°36'28" East a distance of 5.00 feet to a point 40 feet Northeasterly of, when measured at right angles to, said centerline, said point also being on the Southerly line of that tract described in Fee No. 97-022793, Deed Records, Clackamas County, Oregon; thence leaving said Northeasterly right-of-way line, and continuing along said Southerly line, North 78°20'26" East a distance of 176.19 feet to the Southeasterly corner of said parcel; thence along the Easterly line of said tract, North 27°39'59" West a distance of 73.67 feet to the Southwest corner of that tract described in Fee No. 96-010378, Deed Records, Clackamas County, Oregon; thence along the Northerly line of those tracts described in Fee No. 72-08888 and Fee No. 69-09411, North 78°20'26" East a distance of 846.78 feet to the common corner of those lands described in Fee No. 69-09411, Fee No. 95-073144 and Fee No. 96-010376, Deed Records, Clackamas County, Oregon; thence along the Southerly line of that tract described in Fee No. 96-010376, Deed Records, Clackamas County, North 67°47'51" East a distance of 59.75 feet to the common corner of those lands described in Fee No. 96-010376 and Fee No. 96-007471, Deed Records, Clackamas County, Oregon; thence continuing along the Westerly line of that tract described in Fee No. 96-007471, Deed Records, Clackamas County, Oregon, South 14°26'42" East a distance of 407.81 feet to the common corner of those tracts described in Fee No. 69-09411, Fee No. 96-007471, and Fee No. 96-046001, Deed Records, Clackamas County, Oregon; thence along the Southerly line of that tract of land described in Fee No. 69-09411, Deed Records, Clackamas County, Oregon, North 88°29'47" West a distance of 322.36 feet to the Southeast corner of that tract described in Fee No. 81-19662, Deed Records, Clackamas County, Oregon; thence along the Easterly line of said tract described in Fee No. 81-19662, North 12°38'23" West a distance of 120.00 feet; thence along the Northerly line of said tract, North 88°29'47" West a distance of 120.00 feet; thence along the Westerly line of said tract, South 12°38'23" East a distance of 110.72

EXHIBIT "A"

Legal Description

feet to the Southeast corner of that tract described in Fee No. 72-08888, Deed Records, Clackamas County, Oregon; thence along the Southerly line of said tract described in Fee No. 72-08888, North 88°29'47" West a distance of 653.92 feet to the true point of beginning.

PARCEL 3:

A tract of land situated in the Southwest one-quarter and the Southeast one-quarter of Section 5, Township 3 South, Range 2 East, Willamette Meridian, City of Oregon City, Clackamas County, Oregon. Said tract is more particularly described as follow:

COMMENCING at the extreme Southerly corner of tract described in Clackamas County deed Book "O", Page 265, said point being in the centerline of Molalla Avenue; thence South 88° 29' 47" East a distance of 39.98 feet to a point being 35 feet Northeasterly of, when measured at right angles to, the centerline of said road, said point being the true point of beginning; thence along the Southerly line of those lands described in Fee No. 81-19662, Fee No. 69-09411, and Fee No. 96-007471 Deed Records, Clackamas County, Oregon, South 88° 29' 47" East a distance of 1156.21 feet; thence South 23° 58' 58" East a distance of 133.44 feet to the Southeasterly corner of that tract described in Fee No. 96-046001, Deed Records, Clackamas County, Oregon; thence continuing along the Southerly line of said tract, and along the Northerly line of those lands described in Fee No. 98-044696 and Fee No. 99-004122, Deed Records, Clackamas County, Oregon, South 76° 38' 35" West a distance of 125.26 feet; thence along said Southerly line of that tract described in Fee No. 96-046001, and the Northerly line of that tract described in Fee No. 95-045260, Deed Records, Clackamas County, Oregon, South 76° 19' 45" West a distance of 45.33 feet; thence along said Southerly line, and the Northerly line of those lands described in Fee No. 92-21067, Fee No. 97-004501, and Fee No. 98-041108, Deed Records, Clackamas County, Oregon, South 76° 29' 26" West a distance of 750.61 feet to a point in the Northeasterly right-of-way of Beavercreek road (Market Road No. 11) (County Road No. 398), said point being 30 feet Northeasterly of, when measured at right angles to, the centerline of said road; thence along said Northeasterly right-of-way, North 59° 27' 26" West a distance of 206.63 feet to the common Northeasterly right-of-way intersection of said Beavercreek Road and Molalla Avenue (formerly State Highway No. 213), said point being 35 feet Northeasterly of, when measured at right angles to, said centerline of Molalla Avenue; thence continuing along the Northeasterly right-of-way of said Molalla Avenue, along the arc of a 5694.58 foot radius curve to the right a distance of 66.39 feet, through a central angle of 00° 40' 05" (the long chord of which bears North 27° 43' 34" West a distance of 66.39 feet); thence North, 27° 23' 32" West a distance of 229.17 feet to the true point of beginning.

AS OF THE DATE OF THIS REPORT, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN THE POLICY FORM WOULD BE AS FOLLOWS:

GENERAL EXCEPTIONS:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims, which are not shown by the Public Records but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.

3. Easements, or claims of easement, which are not shown by the Public Records; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.

4. Any encroachment (of existing improvements located on the Land onto adjoining land or of existing improvements located on adjoining land onto the subject Land), encumbrance, violation, variation or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the subject Land.

5. Any lien or right to a lien for services, labor, material, equipment rental or workers compensation heretofore or hereafter furnished, imposed by law and not shown by the Public Records.

SPECIFIC ITEMS AND EXCEPTIONS:

6. City Liens, if any, in favor of the City of Oregon City. None found as of February 25, 2025.

7. Rights of the public to any portion of the Land lying within the area commonly known as

streets, roads and highway.

8. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, sexual orientation, familial status, marital status, disability, handicap, national origin, ancestry, source of income, gender, gender identity, gender expression, medical condition or genetic information, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

   Recording Date: June 3, 1981
   Recording No: 81 19230
   Affects: Parcel 2

9. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

   Granted to: Clackamas County
   Purpose: Road purposes
   Recording Date: May 25, 1982
   Recording No: 82 14415
   Affects: Westerly property line of Parcel 2-also delineated on Survey SN2004-377

10. Easement(s) for the purpose(s) shown below and rights incidental thereto as condemned by an instrument,

    Entitled: Judgment
    Court: Circuit
    Cause No.: CCV96-09-321
    Entered: December 20, 1996
    In favor of: The City of Oregon City
    Purpose: Right of way purposes
    Affects: Westerly portion of Parcels 2 and 3-also delineated on Survey SN2004-377

11. Terms, provisions and conditions, including, but not limited to, maintenance provisions, and a covenant to share the costs of maintenance, contained in Easement

    Recording Date: September 30, 2004
    Recording No.: 2004-091253

12. Terms, provisions and conditions, including, but not limited to, maintenance provisions, and a covenant to share the costs of maintenance, contained in Agreement for Dedication and Mutual Easements
    By and Between: Les Schwab Profit Sharing Plan and Wal-Mart Stores, Inc.

Map No.: 32E05DB03201
Affects: Parcel 1

Prior to close of escrow, please contact the Tax Collector's Office to confirm all amounts owing, including current fiscal year taxes, supplemental taxes, escaped assessments and any delinquencies.

B. Note: Property taxes for the fiscal year shown below are paid in full.

Fiscal Year: 2024-2025
Amount: $10,078.40
Levy Code: 062-002
Account No.: 00848391
Map No.: 32E05DB03200
Affects: Portion of Parcel 2

Prior to close of escrow, please contact the Tax Collector's Office to confirm all amounts owing, including current fiscal year taxes, supplemental taxes, escaped assessments and any delinquencies.

C. Note: Property taxes for the fiscal year shown below are paid in full.

Fiscal Year: 2024-2025
Amount: $10,273.58
Levy Code: 062-002
Account No.: 00848417
Map No.: 32E05DB03300
Affects: Balance of Parcel 2

Prior to close of escrow, please contact the Tax Collector's Office to confirm all amounts owing, including current fiscal year taxes, supplemental taxes, escaped assessments and any delinquencies.

D. Note: Property taxes for the fiscal year shown below are paid in full.

Fiscal Year: 2024-2025
Amount: $20,523.70
Levy Code: 062-002
Account No.: 00848435
Map No.: 32E05DB03400
Affects: Parcel 3

Prior to close of escrow, please contact the Tax Collector's Office to confirm all amounts owing, including current fiscal year taxes, supplemental taxes, escaped assessments and any delinquencies.

E. In addition to the standard policy exceptions, the exceptions enumerated above shall appear on the final ALTA Policy unless removed prior to issuance.

F. Note: If an Owner's Title Insurance Policy is requested, the State of Oregon requires every ALTA Owner's Policy (07-01-2021) to include the OTIRO 110 Endorsement as a supplement to the definition of Insured in said Owner's Policy's Conditions to confirm coverage is the same for an Oregon Registered Domestic Partner as it is for a Spouse.

G. Furnish recording instructions with the documents to be recorded in this transaction. Said instructions must address each requirement made herein, list any endorsements to be issued with the policy and specify the recording order of any documents furnished.

The Company reserves the right to add additional items or make further requirements after review of the requested instructions prior to recording the documents or issuing any requested endorsement.

The Company also reserves the right to charge any applicable additional fees for any endorsement requested.

H. Any claim based on the failure to comply with the provisions of Governmental Laws and Regulations regarding the division of land.

I. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

J. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below.

Limited Liability Company: Cypress Acquisitions, LLC

a. A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

b. If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendment thereto with the appropriate filing stamps.

c. If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.

d. A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created

e. If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

K. Note: There are no matters against the party(ies) shown below which would appear as exceptions to coverage in a title insurance product:

Parties: Cypress Acquisitions, LLC, a Texas limited liability company

L. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, processing, manufacture, sale, dispensing or use of marijuana and psilocybin, the Company is not able to close or insure any transaction involving Land associated with these activities.

M. Note: No utility search has been made or will be made for water, sewer or storm drainage charges unless the City/Service District claims them as liens (i.e. foreclosable) and reflects them on its lien docket as of the date of closing. Buyers should check with the appropriate city bureau or water service district and obtain a billing cutoff. Such charges must be adjusted outside of escrow.

N. Note: Effective January 1, 2008, Oregon law (ORS 314.258) mandates withholding of Oregon income taxes from sellers who do not continue to be Oregon residents or qualify for an exemption. Please contact your Escrow Closer for further information.

O. Recording Charge (Per Document) is the following:

County	First Page	Each Additional Page
Multnomah	$86.00	$5.00
Washington	$81.00	$5.00
Clackamas	$93.00	$5.00

Note: When possible the company will record electronically. An additional charge may be applied.

Note: Please send any documents for recording to the following address:
Portland Title Group
Attn: Recorder
1455 SW Broadway, Suite 1450
Portland, OR. 97201

P. THE FOLLOWING NOTICE IS REQUIRED BY STATE LAW: YOU WILL BE REVIEWING, APPROVING AND SIGNING IMPORTANT DOCUMENTS AT CLOSING. LEGAL CONSEQUENCES FOLLOW FROM THE SELECTION AND USE OF THESE DOCUMENTS. YOU MAY CONSULT AN ATTORNEY ABOUT THESE DOCUMENTS. YOU SHOULD CONSULT AN ATTORNEY IF YOU HAVE QUESTIONS OR CONCERNS ABOUT THE TRANSACTION OR ABOUT THE DOCUMENTS. IF YOU WISH TO REVIEW TRANSACTION DOCUMENTS THAT YOU HAVE NOT SEEN, PLEASE CONTACT THE ESCROW AGENT.

Q. Note: This map/plat is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries and other land. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances or acreage shown thereon.

R. NOTE: IMPORTANT INFORMATION REGARDING PROPERTY TAX PAYMENTS

Fiscal Year:	July 1st through June 30th
Taxes become a lien on real property, but are not yet payable:	July 1st
Taxes become certified and payable (approximately on this date):	October 15th
First one third payment of taxes is due:	November 15th
Second one third payment of taxes is due:	February 15th
Final payment of taxes is due:	May 15th

Discounts: If two thirds are paid by November 15th, a 2% discount will apply.
If the full amount of the taxes are paid by November 15th, a 3% discount will apply.

Interest: Interest accrues as of the 15th of each month based on any amount that is unpaid by the due date. No interest is charged if the minimum amount is paid according to the above mentioned payment schedule.

EXHIBIT ONE

2021 AMERICAN LAND TITLE ASSOCIATION LOAN POLICY (07-01-2021)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
      i. the occupancy, use, or enjoyment of the Land;
      ii. the character, dimensions, or location of any improvement on the Land;
      iii. the subdivision of land; or
      iv. environmental remediation or protection.
   b. any governmental forfeiture, police, regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser or encumbrancer had been given for the Insured Mortgage at the Date of Policy.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business law.
5. Invalidity or unenforceability of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or Consumer Protection Law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction creating the lien of the Insured Mortgage is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extend the Insured Mortgage is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any reason not stated in the Covered Risk 13.b
7. Any claim of a PACA-PSA Trust. Exclusion 7 does not modify or limit the coverage provided under Covered Risk 8.
8. Any lien on the Title for real estate taxes or assessments imposed by a governmental authority and created or attaching between the Date of Policy and the date of recording of the Insured Mortgage in the Public Records. Exclusion 8 does not modify or limit the coverage provided under Covered Risk 2.b. or 11.b.
9. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage.

SCHEDULE B - GENERAL EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Facts, rights, interests or claims which are not shown by the Public Records but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.
3. Easements, or claims of easement, not shown by the Public Records; reservations or exceptions in patents or in Acts authorizing the issuance thereof, water rights, claims or title to water.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land. The term "encroachment" includes encroachments of existing improvements located on the Land onto adjoining land, and encroachments onto the Land of existing improvements located on adjoining land.
5. Any lien for services, labor or material heretofore or hereafter furnished, or for contributions due to the State of Oregon for unemployment compensation or worker's compensation, imposed by law and not shown by the Public Records.

2021 AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY (07-01-2021)
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
      i. the occupancy, use, or enjoyment of the Land;
      ii. the character, dimensions or location of any improvement on the Land;
      iii. the subdivision of land; or
      iv. environmental remediation or protection;
   b. any governmental forfeiture, police, regulatory, or national security power
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed or agreed to by the Insured Claimant;
   b. not known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
   a. fraudulent conveyance or fraudulent transfer, or
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 9.b.
5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
6. Any lien on the Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
7. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage.

SCHEDULE B - GENERAL EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Facts, rights, interests or claims which are not shown by the Public Records but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.
3. Easements, or claims of easement, not shown by the Public Records; reservations or exceptions in patents or in Acts authorizing the issuance thereof, water rights, claims or title to water.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land. The term "encroachment" includes encroachments of existing improvements located on the Land onto adjoining land, and encroachments onto the Land of existing improvements located on adjoining land.
5. Any lien for services, labor or material heretofore or hereafter furnished, or for contributions due to the State of Oregon for unemployment compensation or worker's compensation, imposed by law and not shown by the Public Records.

EXHIBIT ONE

2006 AMERICAN LAND TITLE ASSOCIATION LOAN POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses that arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning) restricting, regulating, prohibiting or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions or location of any improvement erected on the land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed or agreed to by the Insured Claimant;
   (b) not known to the Company, not recorded in the Public Records at Date of Policy, but known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with the applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in the Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage.

SCHEDULE B - GENERAL EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Facts, rights, interests or claims which are not shown by the Public Records but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.
3. Easements, or claims of easement, not shown by the Public Records; reservations or exceptions in patents or in Acts authorizing the issuance thereof, water rights, claims or title to water.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land. The term "encroachment" includes encroachments of existing improvements located on the Land onto adjoining land, and encroachments onto the Land of existing improvements located on adjoining land.
5. Any lien for services, labor or material heretofore or hereafter furnished, or for contributions due to the State of Oregon for unemployment compensation or worker's compensation, imposed by law and not shown by the Public Records.

2006 AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses that arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning) restricting, regulating, prohibiting or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions or location of any improvement erected on the land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed or agreed to by the Insured Claimant;
   (b) not known to the Company, not recorded in the Public Records at Date of Policy, but known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in the Covered Risk 9 of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage.

SCHEDULE B - GENERAL EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Facts, rights, interests or claims which are not shown by the Public Records but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.
3. Easements, or claims of easement, not shown by the Public Records; reservations or exceptions in patents or in Acts authorizing the issuance thereof, water rights, claims or title to water.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land. The term "encroachment" includes encroachments of existing improvements located on the Land onto adjoining land, and encroachments onto the Land of existing improvements located on adjoining land.
5. Any lien for services, labor or material heretofore or hereafter furnished, or for contributions due to the State of Oregon for unemployment compensation or worker's compensation, imposed by law and not shown by the Public Records.

WIRE SAFE™ | Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL
PRIVACY NOTICE

Effective January 1, 2025

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.,* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.,* loan or bank account information);
- biometric data (e.g., fingerprints, retina or iris scans, voiceprints, or other unique biological characteristics; and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for these main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To prevent and detect fraud;
- To maintain the security of our systems, tools, accounts, and applications;
- To verify and authenticate identities and credentials;
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.
- To provide reviews and testimonials about our services, with your consent.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to affiliated or nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to affiliated or nonaffiliated third parties with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

State-Specific Consumer Privacy Information:

For additional information about your state-specific consumer privacy rights, to make a consumer privacy request, or to appeal a previous privacy request, please follow the link Privacy Request, or email privacy@fnf.com or call (888) 714-2710.

Certain state privacy laws require that FNF disclose the categories of third parties to which FNF may disclose the Personal Information and Browsing Information listed above. Those categories are:

- FNF affiliates and subsidiaries;
- Non-affiliated third parties, with your consent;
- Business in connection with the sale or other disposition of all or part of the FNF business and/or assets;
- Service providers;
- Law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (fnf.com/california-privacy) or call (888) 413-1748.

For Nevada Residents: We are providing this notice pursuant to state law. You may be placed on our internal Do Not Call List by calling FNF Privacy at (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. For further information concerning Nevada's telephone solicitation law, you may contact: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: aginquiries@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes. For additional information about your Oregon consumer privacy rights, or to make a consumer privacy request, or appeal a previous privacy request, please email privacy@fnf.com or call (888) 714-2710

FNF is the controller of the following businesses registered with the Secretary of State in Oregon:
Chicago Title Company of Oregon, Fidelity National Title Company of Oregon, Lawyers Title of Oregon, LoanCare, Ticor, Title Company of Oregon, Western Title & Escrow Company, Chicago Title Company, Chicago Title Insurance Company, Commonwealth Land Title Insurance Company, Fidelity National Title Insurance Company, Liberty Title & Escrow, Novare National Settlement Service, Ticor Title Company of California, Exos Valuations, Fidelity & Guaranty Life, Insurance Agency, Fidelity National Home Warranty Company, Fidelity National Management Services, Fidelity Residential Solutions, FNF Insurance Services, FNTG National Record Centers, IPEX, Mission Servicing Residential, National Residential Nominee Services, National Safe Harbor Exchanges, National Title Insurance of New York, NationalLink Valuations, NexAce Corp., ServiceLink Auction, ServiceLink Management Company, ServiceLink Services, ServiceLink Title Company of Oregon, ServiceLink Valuation Solutions, Western Title & Escrow Company

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

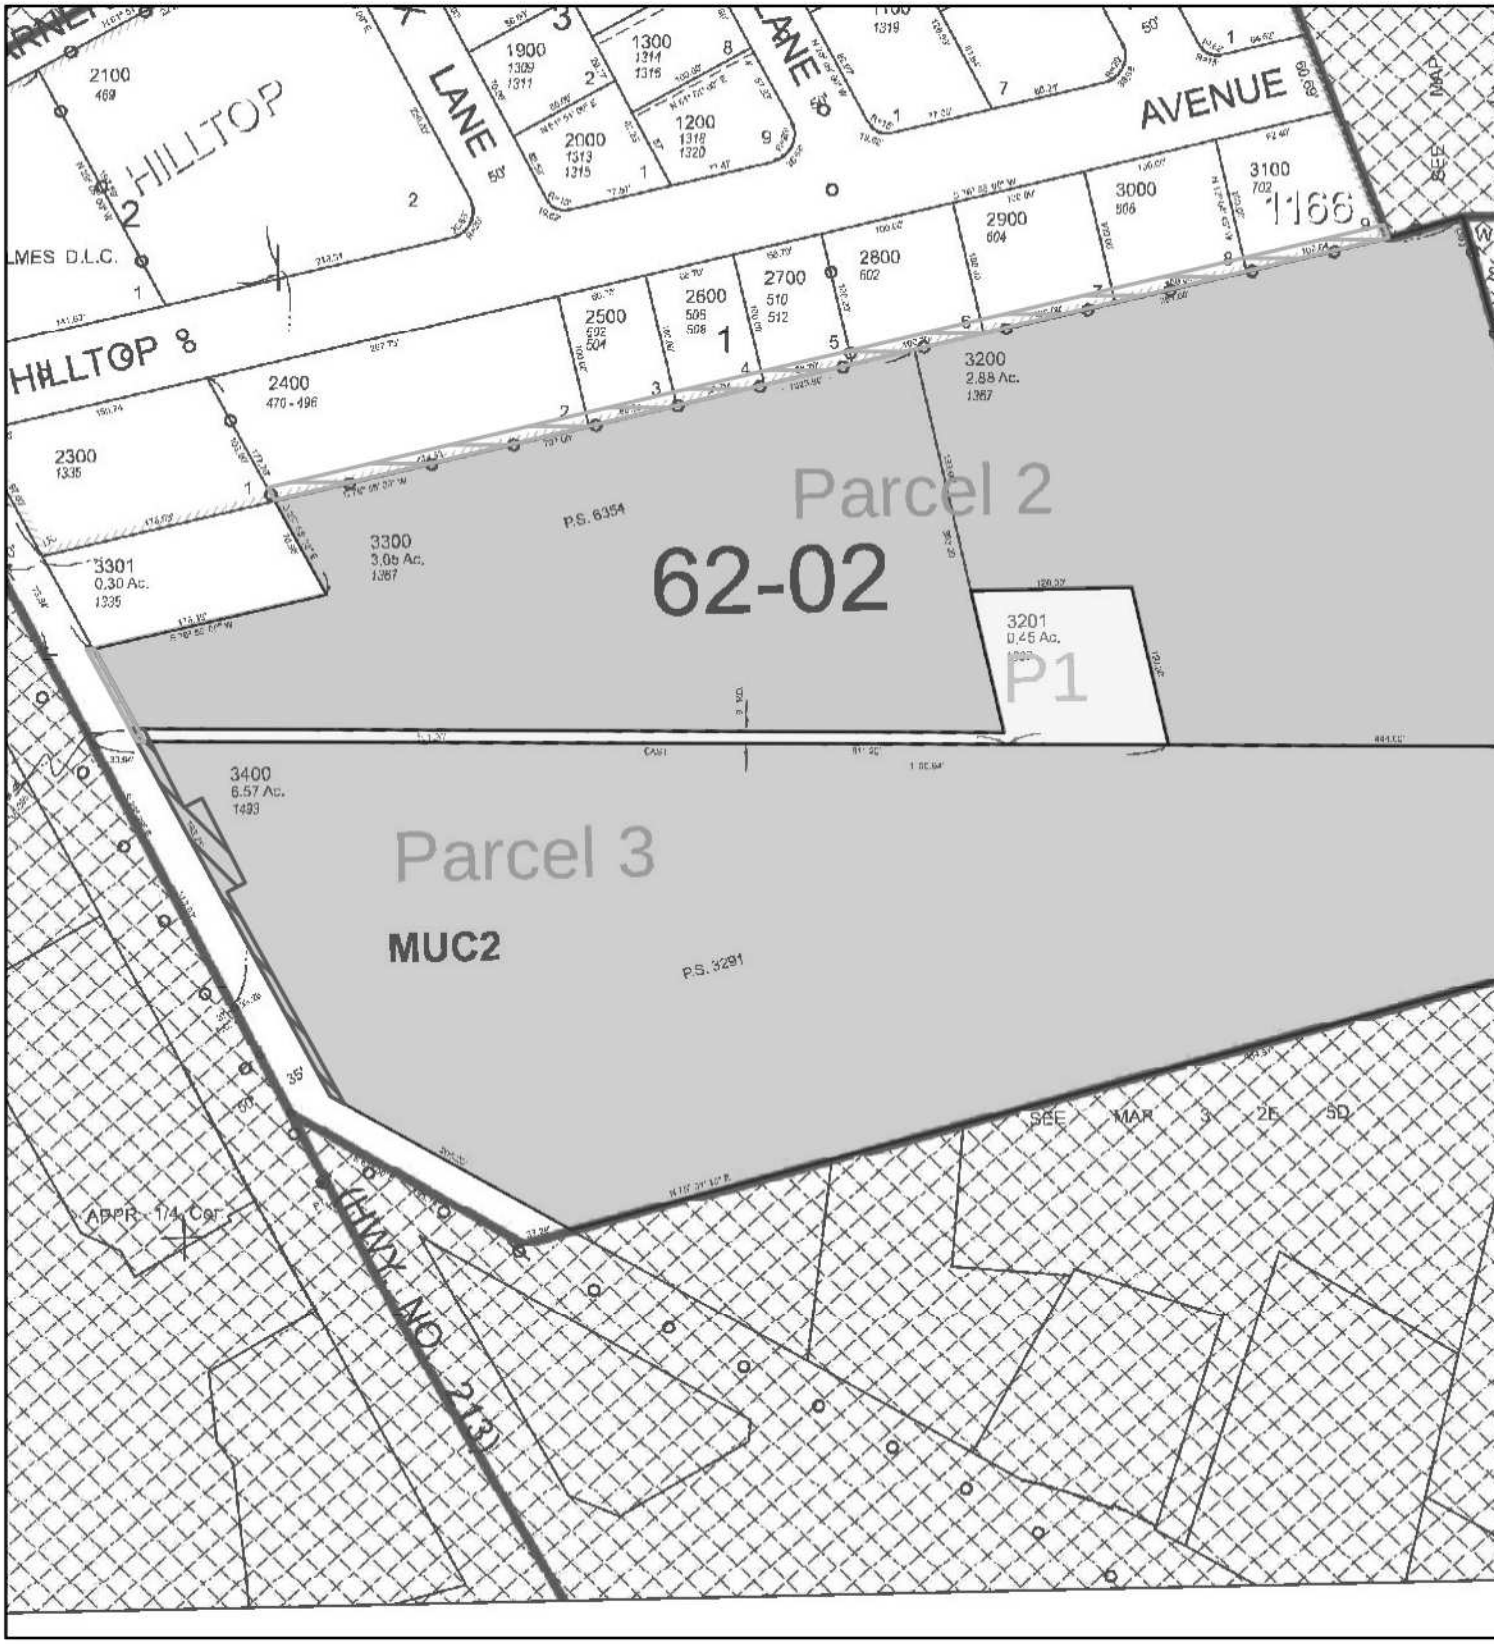
FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us



If you have questions or would like to correct your Personal Information, visit FNF's Privacy Request website or contact us by phone at (888) 714-2710, by email at privacy@fnf.com, or by mail to:

PACLAND – OREGON CITY PROJECT
ARBORIST REPORT AND TREE PRESERVATION PLAN

1228

Purpose

This Arborist Report is the tree inventory, protection and mitigation plan for the Pacland Oregon City project provided pursuant to City of Oregon City Municipal Code Chapter 17.41. This document describes the existing trees located on the project site, provides arborist recommendations for tree retention and protection during construction, and explains the number of replacement trees required to be planted as mitigation for tree removal.

Site Description and Methods

The project site is located at 1367 Molalla Avenue in Oregon City, Oregon. The site is a vacant lot and primarily a flat field. Trees are scattered across the site and along property boundaries, but the majority of trees are located in the southeast portion of the site. Commercial development is planned across the site.

A visual assessment of individual trees located on the Pacland Oregon City project site was conducted on November 28, 2012 by ISA Certified Arborists Morgan Holen (PN-6145A) and Walt Knapp (PN-0497A). Additional fieldwork was performed on January 2 and 8, 2013. Pacland provided us with survey site maps of the existing trees and we collected inventory data for trees measuring 6-inches and larger in diameter as measured 4.5-feet above ground level.

Prior to developing this report, we coordinated with Pacland to discuss the tree inventory data, recommendations for tree removal and preservation, alternative designs to maximize tree preservation, specifications for tree protection during construction, and mitigation requirements.

Tree Inventory

A complete description of individual trees is provided in the enclosed tree inventory data. In all, 487 trees were inventoried, including 97 (20%) trees located off-site on adjacent properties. These neighboring trees are recommended for preservation with protection during construction. An additional 26 (5%) trees located off-site are located within the construction area, specifically in the southeast area where right-of-way improvements are required to connect Beavercreek Road to the project site; these 26 trees are recommended for removal for the purposes of construction.

The inventory data include a numerical condition rating assigned by the arborists to generally describe the condition of individual trees as follows:

7615 SW Dunsmuir Lane, Beaverton, OR 97007
Phone: (503) 646-4349 Fax: (503) 747-4863

0: Off-site, condition not evaluated
1: Dead / Hazardous
2: Poor Condition
3: Fair Condition
4: Good Condition
5: Excellent Condition

Of the 364 on-site trees inventoried, 11 tree species were identified. The trees were highly variable in size and condition, and condition ratings varied depending on species, stand structure and development. None of the trees rated 5 for excellent condition. Refer to the enclosed Arborist Site Plan Mark-up for an illustration of trees color-coded by general condition rating. Table 1 provides a count of trees by species and treatment recommendations.

Table 1. Number of Tree by Species and Treatment Recommendations.

Tree Species	Retain	Remove	Protect Off-Site	Remove Off-Site	Total
apple (*Malus* spp.)		1			**1** (0.2%)
bigleaf maple (*Acer macrophyllum*)	12	98		1	**111** (23%)
black cottonwood (*Populus trichocarpa*)		13		1	**14** (3%)
Douglas-fir (*Pseudotsuga menziesii*)	6	93		24	**123** (25%)
English hawthorn (*Crataegus monogyna*)		11			**11** (2%)
Oregon ash (*Fraxinus latifolia*)		4			**4** (0.8%)
Oregon white oak (*Quercus garryana*)	6	6			**12** (2%)
pear (*Pryus* spp.)		1			**1** (0.2%)
Port-Orford-cedar (*Chamaecyparis lawsoniana*)	8				**8** (2%)
Scouler's willow (*Salix scouleriana*)		4			**4** (0.8%)
sweet cherry (*Prunus avium*)		101			**101** (21%)
Adjacent, Off-Site Tree			97		**97** (20%)
Total Percent of Total Inventory	**32** 7%	**332** 68%	**97** 20%	**26** 5%	**487**

Native species that dominate the relatively natural forest stand located in the southeast portion of the site include bigleaf maple (*Acer macrophyllum*) and Douglas-fir (*Pseudotsuga menziesii*), accounting for 110 (23%) and 99 (20%) of the

on-site trees respectively. Many of the bigleaf maples were senescent and exhibited branch and stem decay. The Douglas-firs were generally in good condition, although the larger and more dominant trees generally appeared more sustainable than the smaller and more suppressed trees, which is natural stand dynamics for the shade intolerant species. Twelve bigleaf maples and six Douglas-firs are suitable for retention with development.

Non-native and invasive tree species were also common, including sweet cherry (*Prunus avium*) and English hawthorn (*Crataegus monogyna*), accounting for 101 (21%) and 11 (2%) of the on-site tree respectively. Invasive species are broadly defined as species that were introduced by humans to locations outside of their native range that spread and persist over large areas, outcompeting native species. Invasive species negatively impact natural ecosystems by displacing native species, reducing biological diversity and interfering with natural succession. The City of Oregon City lists both sweet cherry and English Hawthorn on the City's *Nuisance Plant List.* These fast growing and short-lived trees generally appeared in poor condition. All of the invasive trees are recommended for removal because of species.

A total of 12 (2%) Oregon white oaks (*Quercus garryana*) are located on-site, primarily along the southern property boundary and generally appear in good condition. Six oaks are suitable for preservation with development along the southern property boundary.

Fast growing and short-lived black cottonwoods were identified primarily in the northeast area, including 13 (3%) on-site trees. These trees are all recommended for removal because of inherent species limitations and for construction.

Other species identified on-site include one (<1%) apple (*Malus* spp.), one (<1%) pear (*Pyrus* spp.), and four (<1%) Scouler's willow (*Salix scouleriana*) all recommended for removal because of condition, and eight (2%) Port-Orford-cedars (*Chamaecyparis lawsoniana*) that are small, vigorous and suitable for preservation along the northern property boundary.

Tree Preservation and Mitigation

City of Oregon City Municipal Code Chapter 17.41 intends to ensure that new development is designed in order to maximize tree preservation to the greatest extent feasible. Healthy trees located outside of the construction area—defined in section 17.04.230 as rights-of-way, public utility easements, and within the building footprint of a building site for any mixed-use, commercial or industrial development—must be preserved to the greatest extent possible. Hazardous trees and trees listed as invasive species are exempt from these regulations.

In addition, section 17.41.060 requires tree replacement for the removal of regulated healthy trees that are removed outside of the construction area at a ratio of 1 to 15 trees replanted for each tree removed depending on the size of the tree to be removed

and whether or not that tree is located outside of or within the construction area. Replacement trees must be at least 2-inch caliper deciduous trees or 6-foot tall evergreens. Table 2 duplicates Table 17.41.060-1 from the Oregon City Municipal Code. Note that the number of replacement trees required on a development site must be calculated separately from, and in addition to, any required street trees per City of Oregon City Municipal Code section 12.08.

Table 2. Oregon City Tree Replacement Requirements.

Size of Tree Removed	Number of Tree to be Planted (If removed Outside of construction area)	Number of Tree to be Planted (If removed Within construction area)
6 to 12”	3	1
13 to 18”	6	2
19 to 24”	9	3
25 to 30”	12	4
31”+	15	5

We coordinated with the project team to discuss grading requirements, modify plans to meander sidewalks and utilities away from trees as feasible, and to explore alternative construction techniques to provide sufficient tree protection.

In all, 32 on-site trees are recommended for retention with construction, including 24 trees located outside of the construction area and eight trees located within the construction area. Of the remaining 455 inventoried trees, 97 off-site trees are recommended for protection, 26 off-site trees must be removed for street improvements, and 332 on-site trees must be removed for construction, including 16 hazardous trees (with an assigned condition rating of 1) and 112 invasive trees.

We coordinated with Pacland to account for whether trees were located outside of or within the construction area as defined by the City’s Code. Table 3 provides a summary of the number of trees required to be replanted as mitigation for tree removal based on the criteria described in table 2. Refer to the enclosed tree inventory data for individual tree data.

Table 3. Mitigation Required for Tree Removal

	Outside of Construction Area	Within Construction Area	Total Mitigation Required
Number of trees required as mitigation for the removal of 204 non-invasive and non-hazardous trees located on-site and 26 off-site trees to be removed for street improvements *(refer to tree inventory for individual tree data)*	669	193	**862**

Replanting with 862 trees is required as mitigation for 204 trees to be removed that are non-invasive and non-hazardous and for the 26 off-site trees to be removed for

required street improvements. We recommend replanting with a diverse mix of tree species along the eastern property boundary, including western redcedar (*Thuja plicata*), cascara (*Rhamnus purshiana*), pacific yew (*Taxus brevifolia*), western hemlock (*Tsuga heterophylla*), Oregon ash (*Fraxinus latifolia*), vine maple (*Acer circinatum*) and serviceberry (*Amelanchier alnifolia*). Additionally, Incense-cedar (*Calocedrus decurrens*) would be a good candidate for providing a screen along property lines where needed.

The City's Code also provides options for the applicant to plant mitigation trees off-site or make a cash payment in-lieu-of replanting. Since the amount of available on-site planting space is limited and street trees are not counted towards tree replacement requirements, the applicant will likely rely on a combination of on-site planting and payment in-lieu-of replanting in order to satisfy the required mitigation.

The trees to be retained will require special consideration to ensure their protection during construction.

Some preserved trees will require pruning for clearance and to remove dead and defective branches. The project arborist can help identify where pruning is necessary once trees recommended for removal have been removed and the site is staked and prepared for construction. Tree removal and pruning should be performed by a qualified tree service.

When the proposed sidewalks are staked, the alignment should be adjusted to avoid tree protection areas as feasible. Field-fitting sidewalks around trees and building up from the existing grade to avoid root zone excavation will help to ensure adequate protection. A modified profile is recommended for sidewalks and pathways beneath the dripline of protected trees (figure 1). This approach includes installation of permeable geotextile fabric on the ground surface and building up from the natural grade to avoid excavation in the root zone as much as feasible.

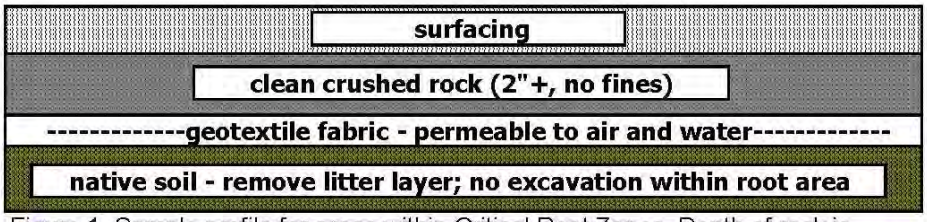

Figure 1. Sample profile for areas within Critical Root Zones. Depth of rock is dependent on grading. Technique based on best management practices.

Standard recommendations for tree protection are provided below.

Tree Protection Recommendations

The tree protection recommendations provided herein may be transferred onto construction drawings. It is the Client's responsibility to implement this Tree Plan

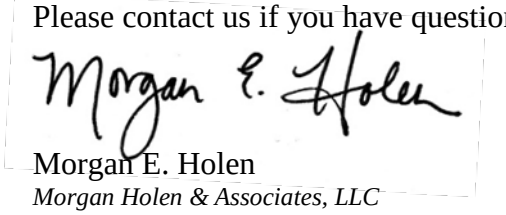
fully, and to monitor the construction process. The project arborist will be available during construction to help with tree related issues.

Before Construction:

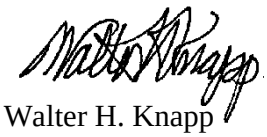
1. **Preconstruction Conference.** The project arborist shall be on site to discuss methods of tree removal and tree protection prior to any construction.
2. **Tree Protection Zone.** The project arborist shall designate the Tree Protection Zone (TPZ). Where feasible, the TPZ shall be established at the dripline of protected trees. If infrastructure (roads, sidewalks, and utilities) must be installed closer to the tree(s), the TPZ may be established at or within the dripline area if the project arborist determines that the tree(s) will not be unduly damaged. The location of the TPZ shall be shown on construction drawings.
3. **Protection Fencing.** All trees to be retained shall be protected by construction fencing. Tree protection fencing shall be minimum four foot tall construction fencing with steel posts placed no farther than ten feet apart.
4. **Signage.** Approved signs shall be attached to the fencing stating that inside the fencing is a tree protection zone, not to be disturbed unless prior approval has been obtained from the Community Development Director.
5. **Verification Inspection.** Fencing shall be installed and then verified by the project arborist prior to construction.
6. **Tree Removal.** To avoid damaging the roots of retained trees, stumps of trees slated for removal located adjacent to retained trees shall be cut flush with the ground surface and left in place, or removed from the ground using a stump grinder.

During Construction:

1. **Tree Protection Zone Maintenance.** The protection fencing shall not be moved, removed, or entered by equipment except under direction of the project arborist. No construction activity shall occur within the TPZ, including, but not limited to:
    a. Dumping or storage of materials such as building supplies, soil, waste items, paints, thinners, cleaning solutions, petroleum products, concrete or drywall excess, construction debris, or run-off;
    b. Passage or parking of vehicles or equipment;
    c. Machinery repair of cleaning, which shall be performed a minimum distance of 10-feet from protected tree driplines;
    d. Excavation, trenching, grading, root pruning or other activities, unless under the direct supervision of the project arborist and only as approved by the Community Development Director. If excavation within the TPZ in unavoidable, the project arborist shall evaluate the proposed excavation to determine methods to minimize impacts to trees. This can include tunneling, hand digging, or other approaches;



e. Digging a trench for placement of public or private utilities or other structure within the critical root zone of any protected tree; nor,
f. Changes in soil hydrology due to soil compaction and site drainage within tree protection areas.
g. Soil compaction, material or spoils storage or other activity deleterious to trees, except under the supervision of the project arborist.



2. **Arborist Coordination.** All construction within the TPZ shall be under the on-site technical supervision of the project arborist. Project managers are responsible for coordinating with the project arborist prior to performing any necessary construction beneath the dripline of protected trees. The project arborist will be available on-call throughout construction.
3. **Tree Protection Inspection.** The project arborist shall monitor construction activities and progress, and provide written reports to the developer and the City at regular intervals.

After Construction:

1. **Final Report.** After the project has been completed, the project arborist shall provide a final report that describes the measures needed to maintain and protect the preserved trees.

PROPOSED DEVELOPMENT
MOLALLA AVE AND BEAVERCREEK RD
OREGON CITY, OREGON

APPENDIX L
NROD Report

Environmental Science & Assessment, LLC

MEMORANDUM

DATE: August 6, 2012

TO: Oregon City Community Development – Planning Department

CC: Jeff Vanderdasson PACLAND

FROM: Jack Dalton

RE: Shopping Center - Molalla and Beavercreek Road NROD Compliance (PA 11-19)

Environmental Science & Assessment (ES&A) prepared this documentation to address Natural Resource Overlay District (NROD) compliance for the proposed improvements associated with the Molalla and Beavercreek Road Shopping Center project located in Oregon City, Oregon (Figure 1). The Oregon City ("City") Municipal Code (17.49) requires the project applicant provide a natural resource documentation to verify the NROD boundary (17.49.250), a maintenance and monitoring plan (17.49.180(F)), and a Mitigation Plan Report (17.49.230).

The proposed shopping center site is located within Tax Map 3-2E-05DB, lots 3200, 3201, 3300 and 3400. The proposed site improvements require an off-site roadway access to Beavercreek Road to the south and the tax lot directly south (Tax Map 3-2E-05D, lot 500) was also included in the study area for this project. A NROD resource is mapped on the off-site tax lot 500(Figure 2). A wetland delineation was completed for the off-site lot, based on existing hydrology and topographic conditions, and a short stream segment extending to the east from a culvert outfall was mapped (Figure 3). The water resource is a tributary to Newell Creek.

Proposed site improvements affecting the off-site NROD include construction of a public roadway access from Beavercreek Road to the southern end of the proposed shopping center site (Figure 5). The mitigation plan for NROD encroachment from the roadway access is included in this documentation, incorporating a maintenance and monitoring plan.

Attachments provided with this memo include the following:

Attachment A	Figures
Attachment B	Photos
Attachment C	ODFW Fish Determination

NROD ECOLOGICAL BASELINE ANALYSIS

A NROD resource is mapped on the off-site tax lot and no NROD is present within the main project area (Figure 2). ES&A senior wetland scientist, Jack Dalton, conducted the site investigation on April 4, 2012. It was determined that the hydrology on site is confined to the ordinary high water line (OHWL) of the waterway. No wetland fringe is present outside the channel top-of-bank due to the steep banks north and south of the channel (Figure 3).

The off-site lot has been used for commercial or light industrial uses and a compacted gravel driveway extends into the middle of the site (Photo 1). Most native vegetation has been cleared in the lot and invasive non-native vegetation, primarily Himalayan blackberry (*Rubus armeniacus*, FACU), has re-established along the eastern edge of the site (Photo 2). The only native vegetation is a small grove of young Douglas fir (*Pseudotsuga menziesii*, FACU) and black cottonwood (*Populus balsamifera*, FAC) located in the middle of the parcel.

The existing functions of the drainage mapped in the NROD were found to be limited to primarily stormwater conveyance from the culvert outfall (Figure 3). No significant wetland functions are provided by the drainage due to the constrained channel morphology, which prevents any wetland outside of the channel top-of-bank. Water quality and sediment control functions are therefore, extremely limited by the existing channelized conditions. Other wetland/waterway habitat functions within the study area are limited, including wildlife corridor cover and forage.

The existing pavement and grading extends up to the existing top of bank (within the mapped 50-foot Oregon City NROD) west of the tributary. The area north and south of the tributary is a mix of impervious/pervious fill material with invasive vegetative cover (Figure 3).

NROD - Waterway

The Newell Creek tributary currently daylights at the 48-inch concrete culvert, but historically extended west and connected to an upstream segment of the Newell Creek, west of Molalla Avenue (Figure 2). The channel segment was piped with the development of the intersection of Beaver Creek Road and Molalla Avenue. The waterway within the study area has been channelized into a linear feature with steep banks up to the surrounding elevation of the site (Photo 2). The channel makes a right angle turn and extends off site to the north east and to lower reaches of Newell Creek in a more natural channel.

The waterway is approximately 68 feet long by an average of 6.5 feet wide at OHWL, totaling 462 square feet (0.01 acres) within the study area. The OHWL is clearly defined in the field by a topographic transition from the channel top-of-bank to the steep bank slopes surrounding the culvert outfall (Figure 3). Vegetative cover outside the channel is upland species, primarily Himalayan blackberry. The channel is a maximum of 6.8 feet wide and the channel top-of-banks range from 1.5 to 2 feet high within the study area. Flow was

observed in the channel at the time of the site investigation and is considered perennial (Photo 2).

NROD – Riparian Buffer

The Newell Creek tributary is a perennial stream with a break to less than 25 percent slope within the first 50 feet from the top-of-bank. The City NROD mapping indicates the minimum NROD buffer is 200 feet since listed fish are present in downstream segments of Newell Creek.

During the site investigation both on-line and state agency sources were consulted to verify the presence of listed fish species in Newell Creek. StreamNet maps downstream segments with winter steelhead (StreamNet 2012). However, a culvert barrier existing on Highway 213 would prevent these fish from being present in the study area. Consultation with Oregon Department of Fish and Wildlife (ODFW) district fish biologist indicates no fish are likely present in the Newell Creek segment on site or any segment upslope of the Highway 213 culvert (Attachment C - Personal Communication Danette Faucera, July 12, 2012).

Since no listed anadromous fish are known on site, the NROD buffer was adjusted for the site following criteria in Municipal Code 17.49.110. The required minimum buffer width was determined to be 50 feet. Including the short tributary segment, the total NROD on site was determined as 10,125 square feet (Figure 3).

The NROD riparian buffer extends north and south into currently undeveloped portions of the tax lot. The buffer extends west into an area of existing encroachment from a packed gravel roadway. This portion of the NROD is not currently functioning as a buffer. The buffer north and south of the tributary is highly degraded from past site disturbance and is primarily Himalayan blackberry with one big leaf maple sapling (*Acer macrophyllum*, FACU) on the south bank outside the channel.

NROD ENCROACHMENT

The proposed off-site roadway improvements through the off-site lot will involve grading and fill work for the roadway access to Beavercreek Road and will result in 685 square feet of permanent encroachment and 1,328 square feet of temporary encroachment within the NROD. A total of 560 square feet of existing encroachment from the packed gravel driveway was excluded from the impact total since it was pre-existing encroachment. The roadway improvements will avoid any encroachment into the waterway (Figure 6).

The applicant has negotiated a roadway right of way dedication with the property owner of the off-site parcel. This agreement only grants the applicant a temporary construction easement to complete the roadway construction and the final roadway will be dedicated as a public right-of-way. All permanent off-site NROD encroachment will extend only to the limits of the roadway right-of-way (Figure 6). Since the applicant will not have access to the remainder of the off-site parcel, mitigation for the proposed NROD encroachment will not

be mitigated adjacent to the water resource, but provided on the eastern edge of the proposed shopping center development. This mitigation is discussed in further detail in the next section.

NROD MITIGATION

17.49.180(A-D) – Mitigation Standards

The Oregon City municipal code requires mitigation for encroachment into the NROD by providing a minimum 2:1 ratio of mitigation area to disturbance area within the NROD (17.49.180). As mitigation for the 685 square feet of off-site NROD encroachment, the applicant proposes to enhance forest habitat on site exceeding the 2:1 ratio minimum area of 1370 square feet and instead providing a larger riparian buffer mitigation area totaling 2055 square feet on site (Figure 6).

The proposed mitigation site is located along the edge of a mature mixed forest of big-leaf maple and Douglas fir that extends down the steep slope to the east, into the adjacent open space parcel (Photo 4). The forest community to the east transitions into a mixed riparian community at the base of the slope and further east, NROD overlays are mapped on tributaries to Newell Creek (Figure 2).

The understory along the edge of the existing forest habitat in the proposed mitigation area has been impacted by past site grading. Fill material has been pushed up to the top of slope, piled into a narrow berm ranging from 2-3 feet high, extending along the entire eastern edge of the site. As a result of this disturbance, invasive weedy species are the dominant understory vegetative cover (Photos 5-6). The geotech consultant recommends a 35-foot setback from the top of bank along the eastern edge of the site for built structures, so this area would not otherwise be improved with the proposed development (Figure 6).

Mitigation will be provided by pulling out the top 2-3 feet of fill material down to the native soil, which will be more conducive to a native plant community. The existing understory strata of the forest community will be restored by the installation of native tree and shrub plantings seeded with native groundcover species.

While the proposed mitigation area is not directly adjacent to the impacted NROD, the proposed mitigation will achieve a larger habitat enhancement area, providing a 3:1 ratio of mitigation to encroachment. Additionally, the expansion of the riparian forest along the eastern edge of the site will allow for a larger native plant community along the existing forest habitat at that location than would otherwise be completed under the existing site plan (Figure 5).

When looking at NROD mitigation options, it was determined that the area of NROD encroachment from the off-site access cannot be adequately off-set adjacent to the waterway resource within the off-site roadway. The site is currently highly constrained by steep slopes and the expansion and enhancement of existing NROD buffer area on the off-site parcel will further constrain access from Beavercreek to the site and make the site

more difficult to develop. Regardless of current proposed roadway improvements, any future development proposed the off-site parcel will have to address existing and proposed NROD encroachment with a mitigation plan. Adding to the NROD area on the off-site lot further encumbers any future site development options.

Therefore, instead of providing NROD mitigation on the off-site parcel, the applicant proposes to provide 2055 square feet of forested habitat enhancement along the eastern edge of the proposed shopping center development (Figure 6). While the NROD buffer cannot be enhanced or expanded adjacent to the tributary on the off-site parcel, the larger mitigation area habitat enhancement adjacent to the mostly intact, mature forest on site provides additional buffer functions not achievable at the impact location.

All temporary encroachment will be mitigated in place.

The proposed NROD mitigation areas will use the plant lists shown in Tables 1, 2 and 3. Invasive and nuisance vegetation shall be removed within the mitigation area prior to planting. Mulching and irrigation shall be applied following the site landscape and irrigation plan.

17.49.180.E - Rehabilitation and Planting Plan

Temporary impacts within the NROD are limited to the bank outside of the waterway. No direct or temporary impacts to the waterway will result from the project (Figure 6).

Using landscape requirements in the Oregon City municipal code (17.49.180) the minimum number of shrub and tree plantings (5 tree/25 shrub per 500sf of disturbance) for the riparian mitigation area was calculated. Table 2 and 3 summarizes the placement and the number of plantings for the enhancement areas which will include 7 trees/34 shrubs for the permanent impact mitigation and 13 trees/66 shrubs for the temporary impact mitigation.

Table 1: Enhancement / Mitigation Area Seed Mix

Common Name	Scientific Name	Seeding Rate*	Percentage of Seed Mix **

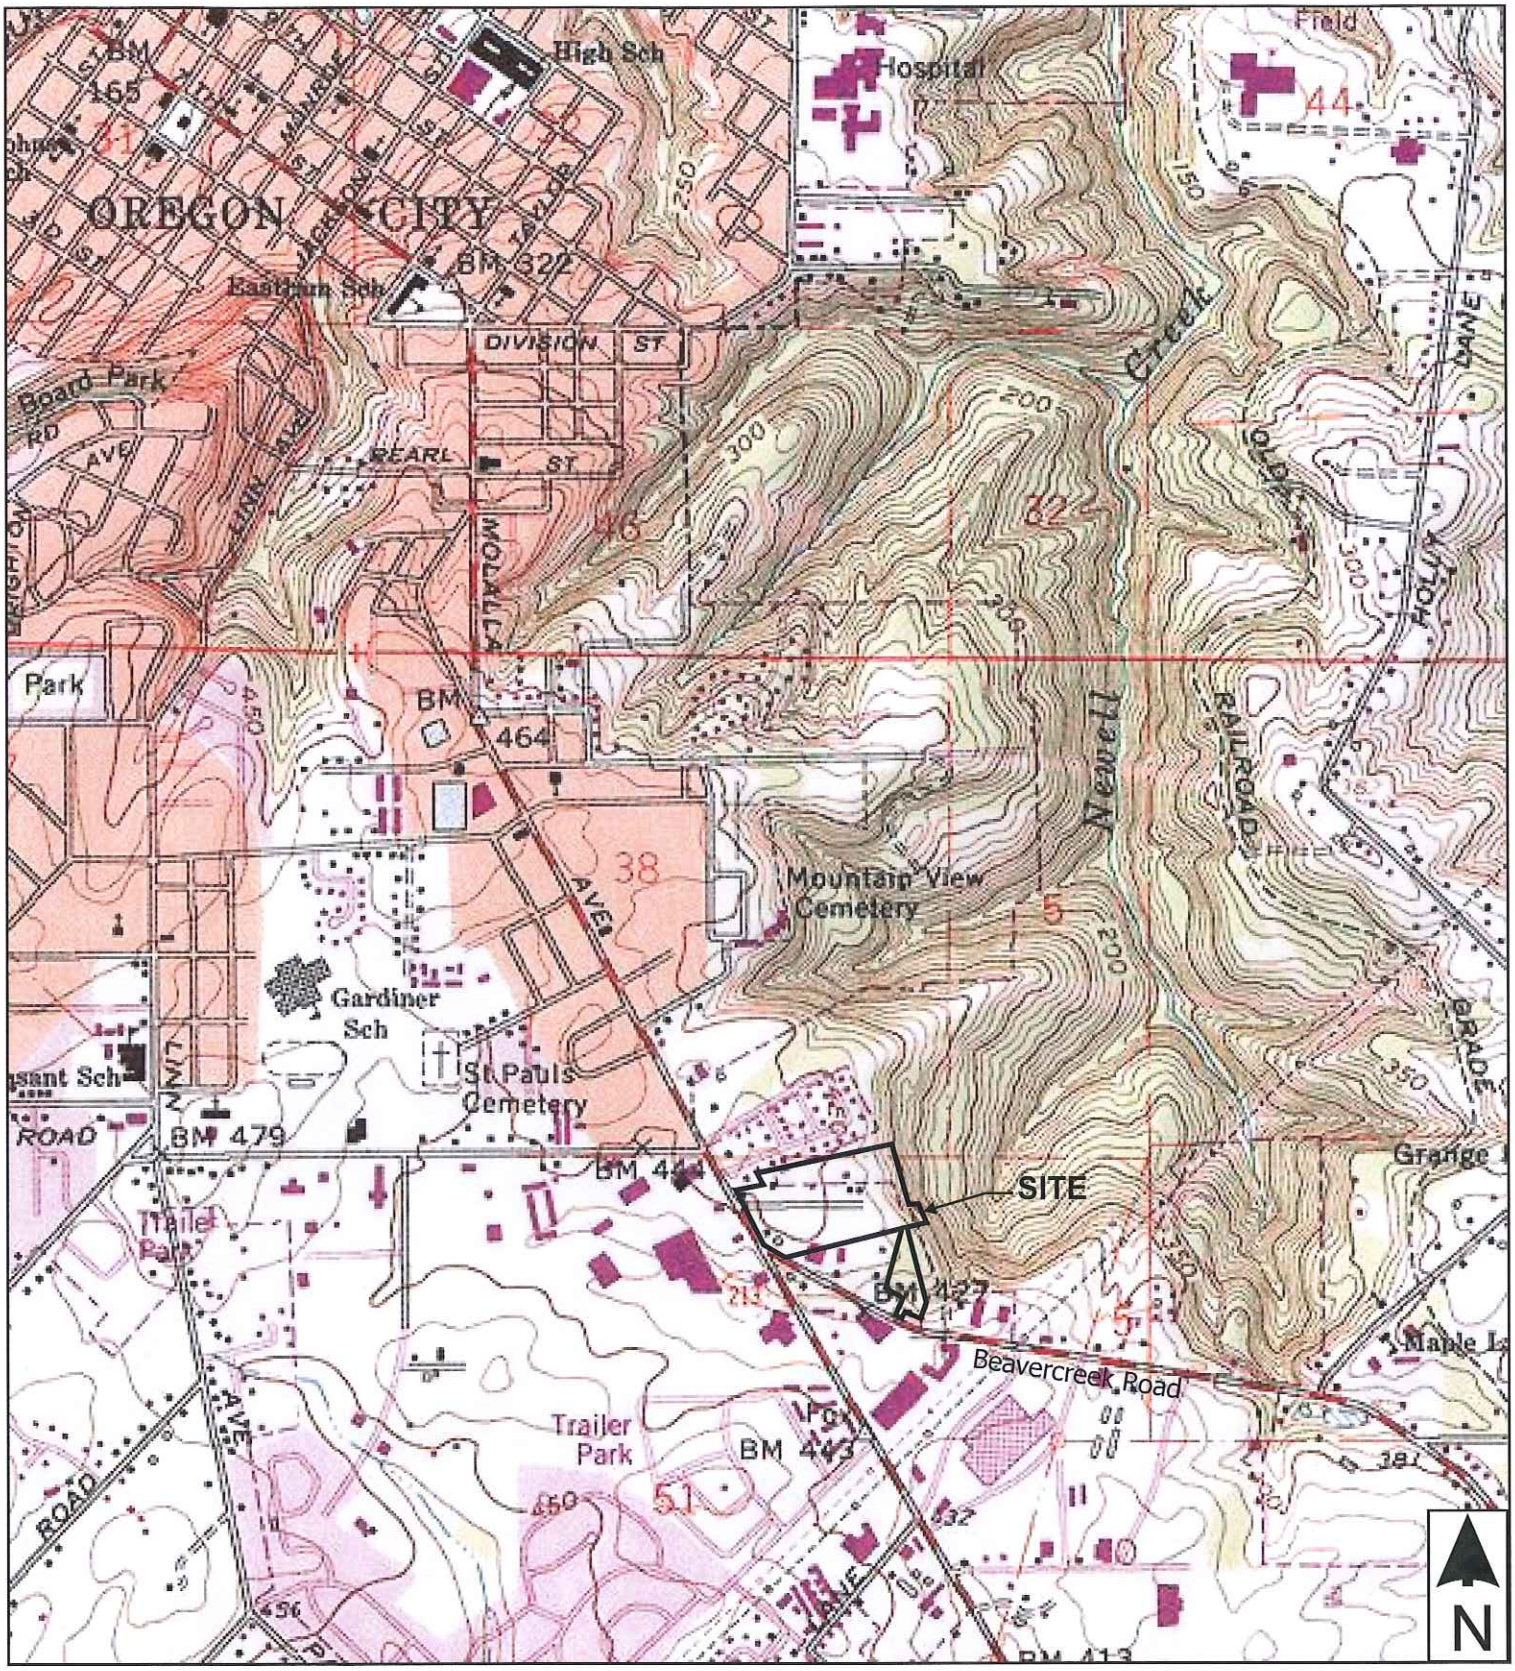
17.49.180(F) - Monitoring and Maintenance

The mitigation area identified as riparian buffer shall be monitored for 5 years following construction (Figure 6). During the five year monitoring and maintenance period, the owner will provide annual reports to be submitted to the city's planning division. The report shall provide a narrative on mitigation site conditions and photographs from designated photo points. The site owner will maintain the entire mitigation site and monitor and maintain any irrigation system installed.

If trees are installed adjacent to the NROD mitigation site, as mitigation for removed trees in the site development, these additional planting areas will not be included in the annual mitigation monitoring report.

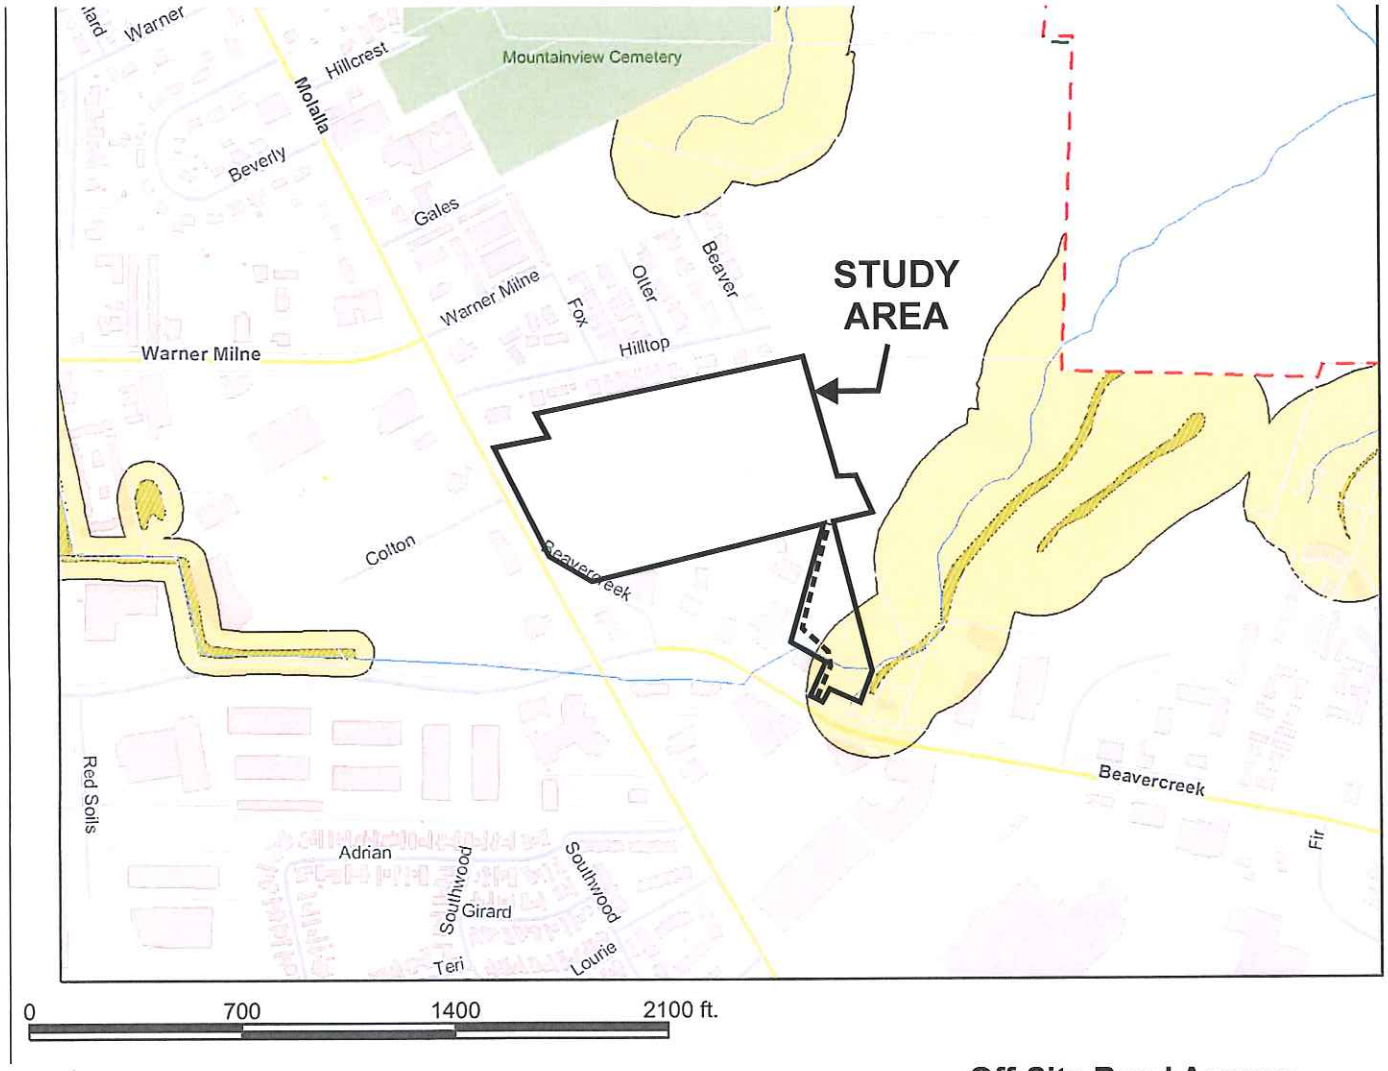
NROD Monitoring Plan



The report shall provide photographs from designated photo points (Figure 7) and provide data on the following:

- Plant Counts and Survival
- General Observation on community condition
- Notes on invasive plant species/recommendations for removal as necessary
- Irrigation/general site maintenance issues as necessary
- Photo Points

Rehabilitation and Riparian Buffer Mitigation Performance Criteria



The NROD Mitigation Plan specifies the following criteria to ensure a successful mitigation:

- A minimum of 80% percent survival of trees and shrubs of the base plant density requirement of 76 trees and shrubs at the end of the five-year maintenance and monitoring period. Plants that die shall be replaced in-kind unless demonstrated that the species is not suitable for the site.
- Periodic maintenance and invasive weed control,
- Installation of irrigation necessary to ensure 80% survival
- Maintenance of ground preparation as needed that includes mulching of shrub and ground areas
- Bare spots and areas of invasive vegetation larger than twenty square feet shall be replanted or reseeded with native grasses and ground cover species.

1.0 INTRODUCTION

On behalf of Cypress Equities, Langan Engineering and Environmental Services, LLC (Langan) has prepared this Aquatic Resource Delineation Report. This report documents the delineation of wetlands and waters for the United States Army Corps of Engineers (USACE) and the Oregon Department of State Lands (DSL) permitting. The 12.95-acre project site is north of Beavercreek Road and east of Molalla Avenue in Oregon City, Clackamas County, Oregon (**Figure 1**). The project site is comprised of four contiguous parcels (tax lot IDs 00848417, 00848408, 00848391, 00848435, and 00847864). Three parcels are within the northern portion of the project site and the remaining parcel extends south to Beavercreek Road (**Figure 2**). The proposed project includes a commercial mixe-used masterplan development in the northern portion with grading activities in the southern parcel (TL 500) to provide access and utilities to the commercial development in the northern portion. The entirety of all four parcels were included within the study area for this field effort.

2.0 LANDSCAPE SETTING AND LAND USE

The study area is situated to the northeast of the intersection of Molalla Road and Beavercreek Road in Oregon City, Oregon (Township 3S, Range 2E, Section 05; Figure 1). Molalla Road forms the western boundary and Beavercreek Road forms the southern boundary of the study area, which is surrounded by developed land featuring parking lots, buildings, and associated landscaping.

Currently, the northern portion of the site is a vacant lot primarily consisting of open space with a woodland segment to the south and east. The open space area is dominated by Kentucky blue grass (*Poa pratensis*, facultative [FAC]) and Armenian blackberry (Himalayan blackberry, *Rubus armeniacus,* FAC). The woodland area to the south and east consist of Douglas fir (*Pseudotsuga menziesii*, facultative upland [FACU]) and big leaf maple (*Acer macrophyllum*, FACU). The northern portion of the study area generally slopes east to west.

The southern parcel of the study area is a vacant commercial lot with developed road access to Beavercreek Road at its southern edge. To the east, there is a mature mixed forest consisting of Douglas fir and big leaf maple. An unnamed tributary to Newell Creek emerges from a culvert outfall at the southeastern corner of the parcel and flows into the forested area to the north and east.

3.0 SITE ALTERATIONS

The site has been used for commercial or industrial uses. The northern portion has been graded and historically used for industrial storage but is currently empty and regularly mowed. In the southern portion, native vegetation has been cleared, and a compacted gravel road extends from Beavercreek Road through the middle of the site. Invasive non-native vegetation, mainly Armenian blackberry, has re-established itself along the eastern boundary of the site. Additionally, a small grove of young Douglas fir and black cottonwood (*Populus balsamifera*, FAC) remains in the center of the parcel.

A tributary of Newell Creek daylights at the 48-inch culvert east of the existing gravel road in the southern parcel but historically extended west. This channel segment was piped with the development of Beaver Creek Road and Molalla Avenue.

4.0 PRECIPITION AND DATA ANALYSIS

The total amount of precipitation that occurred during the two weeks preceding the site investigation is listed in **Table 1**. No precipitation was recorded on the day of the investigation.

Table 1: Recent Precipitation Totals

Date	Actual Precipitation (in)
September 24 – 30, 2025	0.03
October 1 – 6, 2025	0.32
Total	0.35

Source: (National Weather Service 2025)

The Antecedent Precipitation Tool (APT) reported an observed rainfall of 1.69 inches over the 30 days preceding the site investigation. The APT output reported an antecedent precipitation score of 12, indicating conditions were normal for that time of year (**Appendix B**; **Table 2**).

Table 2: Antecedent Precipitation Tool Output Data

Date	Season	30 Day Precipitation (in)	Antecedent Precipitation Score
10/6/2025	Wet Season	1.69	12 – Normal Conditions

5.0 SOILS

The NRCS soil survey maps three soil types within the SA (Figure 4).

- Jory silty clay loam, 2 to 8 percent slopes (45B). This soil type is a well-drained soil typically found on foothills. This soil covers the majority of the study area and is not hydric.

- Bornstedt silt loam, 0 to 8 percent slopes (8B). This soil type is moderately well-drained and found on terraces and rolling uplands. This soil type is found along the western edge and southeastern corner of the study area and is predominantly not hydric.

- Xerochrepts and Haploxerolls, very steep (92F). This soil type is well-drained and primarily found on hillsides and mountainous terrain. The soil makes up the eastern edge of the study area and is not hydric.

None of the soil types mapped in the SA are considered hydric, therefore wetland sample points were not investigated based on the presence of known hydric soils.

6.0 METHODS

The site was delineated in accordance with the 1987 Corps of Engineers Wetland Delineation Manual (Environmental Laboratory, 1987) and the Western Mountains, Valleys, and Coast Regional Supplement (USACE 2010). The following sections describe the methods used to assess the jurisdictional areas within the site. Survey dates are provided in **Table 3**.

Table 3: Field Survey Efforts

Date	Survey Focus	Survey Area
October 6, 2025	Jurisdictional Determination	Oregon City Commercial Masterplan Site

A desktop literature review was completed prior to visiting the site to identify potential jurisdictional resources. The following data sources were reviewed:

- United States (U.S.) Geological Survey (USGS) 7.5-minute Oregon City quadrangle map (USGS 2021);
- U.S. Department of Agriculture (USDA) – Natural Resources Conservation Service (NRCS) Web Soil Mapper (USDA 2025);
- U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI; USFWS 2025);
- Statewide Wetlands Inventory (SWI) Map (State of Oregon 2025); and
- Aerial photography of the site and its surroundings (Google 2025).

Jurisdictional Determinations for the USACE were based on guidance in Clean Water Act Jurisdiction following the U.S. Supreme Court's Decision in Sackett v. United States (33 CFR Part 328). Jurisdictional determinations for the Oregon Department of State Lands (DSL) were made based on Oregon Administrative Rules (OAR) 141-085-0515.

Langan biologists, Steven Neumann and Chrissy Whitacre, conducted the site investigation on October 6, 2025. Jurisdictional boundary determinations were made based on existing topographic conditions, vegetation, and presence of hydrology.

It was determined that the hydrology on site was confined to the ordinary high-water mark (OHWM) of the tributary in the southern parcel of the study area with a wetland channel bar below the OHWM. No wetland fringe is present outside of the channel due to the steep channel banks. No other wetland hydrology was present in both portions of the study area due to the east to west sloping of the landscape. Furthermore, no inundation was present during the aerial photography review (Google 2025) (**Figure 5**).

7.0 WETLANDS AND WATERS

Langan biologists identified one stream within the study area, the Newell Creek tributary. The tributary daylights from a culvert east of the existing gravel road, flowing west to east out of the SA, connecting with Newell Creek off-site (**Figure 6a and 6b**). Newell Creek drains to Willamette River, approximately 2 miles north of the study area, which drains to the Pacific Ocean via the Columbia River. The tributary varies from 6 to 8 feet wide and was observed flowing at the time of the site investigation. The OHWM was determined by the presence of a break in slope, transition from rock to vegetated soil, and undercutting (**Appendix A**). Due to the presence of an OHWM, perennial flow, and connectivity to a traditionally navigable water, this tributary likely meets the definition of waters of the United States and waters of the state regulated by USACE and DSL, respectively. The tributary is further described in **Table 4** below.

Table 4: Waters Within the Study Area

Aquatic Resource Name	Aquatic Resource Classification		Aquatic Resource Size (Square Feet)	Aquatic Resource Size (Linear Feet)
	Streamflow Duration	Location (Lat/Long)		
Newell Creek Tributary	Perennial	45.333881, -122.585161	378.71	70.0

A vegetated channel bar was investigated within the tributary at wetland sample point 1 (WSP-01, **Figure 6b**). WSP-01 was primarily vegetated by reed canary grass (*Phalaris arundinacea*, facultative wetland [FACW]) and was determined to contain hydrophytic vegetation, wetland hydrology indicators, and hydric soils (**Appendix A**). The banks of the channel immediately outside of the channel bar are significantly steep and unable to hold water for sustained periods. Therefore, a flat area above the top of bank was investigated as an upland sample point at WSP-02 (**Figure 6b**). This sample area did not contain hydrophytic vegetation, wetland hydrology, or

hydric soils (**Appendix A**). The channel bar was mapped as a 3-parameter wetland associated with WSP-01. The wetland is further described in **Table 5** below.

Table 5: Wetlands within the Study Area

Aquatic Resource Name	Aquatic Resource Classification			Aquatic Resource Size (Sq. Feet)
	Cowardin Class	HGM Class	Location (Lat/Long)	
Channel Bar (WSP-01)	R3EM	RFT	45.333881, -122.585161	130.99

Note: R3EM = riverine upper perennial emergent wetland
RFT = riverine forested temporarily flooded

Two upland swales were investigated along the northern boundary and southeastern corner of the study area. Both swales were completely vegetated with Armenian blackberry and showed no OHWM indicators (**Appendix C**; Photos 1 & 8). The swale in the southeastern corner study area is approximately 13 feet long before it flows off-site to the northeast (**Figure 6b**). Outside of the stream described above, this swale was the lowest topographical area of the southern portion that could potentially contain a wetland. It was investigated at WSP-03 and determined that hydrophytic vegetation was present but lacked hydric soils and wetland hydrology.

The swale in the northern portion of the study area was investigated at WSP-04, where the swale terminates in a lowland portion of the study area (**Figure 6a**). The swale ends just west of WSP-04 where the topography flattens, and the hydrology becomes sheet flow. This sample point was chosen to investigate the lowest and relatively flattest area of the northern portion of the study area. The tree canopy was dominated by big-leaf maple (FACU) with an understory moderately covered by Armenian blackberry (FAC). It was determined that no wetland indicators were present at WSP-04 (**Appendix A**). Due to the lack of an OHWM and adjacent wetlands, these swales are not anticipated to be regulated by USACE or DSL.

8.0 DEVIATION FROM LWI OR NWI

NWI and LWI map Newell Creek as a riverine feature east of the study area (**Figure 3**). The tributary detailed in this report is not mapped on either NWI or LWI.

9.0 MAPPING METHOD

Aquatic features and points were mapped in the field using ESRI Field Maps mobile application and a Trimble DA2 GPS receiver to achieve sub-meter accuracy.

10.0 ADDITIONAL INFORMATION

Stream net has mapped the presence of steelhead (*Oncorhynchus mykiss*) and other anadromous fish species in Abernethy Creek, downstream of Newell Creek (PSMFC 2025). However, multiple downstream fish barriers along Newell Creek indicates no fish are likely present in the Newell Creek segment on site and directly downstream (ODOT 2025).

The City of Oregon City regulates Newell Creek and its tributaries as a natural resource overlay district (NROD) under Municipal Code 17.49. This code requires a vegetation corridor buffer for aquatic features within the NROD. The tributary on site is a stream with banks greater than 25 percent slope and approximately 20 feet wide on each side of the stream. Since no listed anadromous fish are known on the site, the NROD buffer was adjusted for the site following criteria in Municipal Code 17.49.110. The required minimum buffer width was determined to be 50 feet from the top of bank (**Figure 6b**).

11.0 RESULTS AND CONCLUSIONS

During the site visit in October 2025, Langan identified 378.71 square feet of jurisdictional non-wetland waters and 130.99 square feet of jurisdictional wetlands within the SA (**Figure 6b**).

12.0 DISCLAIMER

This report documents the investigation, best professional judgement and conclusions of the investigators. It is correct and complete to the best of my knowledge. It should be considered a Preliminary Jurisdictional Determination of wetlands and other waters and used at your own risk unless it has been reviewed and approved in writing by the Oregon Department of State Lands in accordance with OAR 141-090-0005 through 141-090-0055.

APPENDIX A
Data Forms

Print Form | Save As | E-mail

U.S. Army Corps of Engineers (USACE)

RAPID ORDINARY HIGH WATER MARK (OHWM) FIELD IDENTIFICATION DATA SHEET

The proponent agency is Headquarters USACE CECW-CO-R.

OMB Control No. 0710-XXXX

Approval Expires:

Project ID #: 794002701	Site Name: Oregon City Masterplan	Date and Time: 10/6/25;1230
Location (lat/long): 45.333889, -122.585187	Investigator(s): Steven Neumann, Christy Whitacre	

Step 1 Site overview from remote and online resources
Check boxes for online resources used to evaluate site:

- [ ] gage data
- [ ] LiDAR
- [ ] geologic maps
- [ ] climatic data
- [x] satellite imagery
- [x] land use maps
- [x] aerial photos
- [x] topographic maps
- [ ] Other: _____

Describe land use and flow conditions from online resources.
Were there any recent extreme events (floods or drought)?

Flow from the culvert consists of stormwater from the developed area to the SW. Climatic conditions have been normal for this time of year with no droughts or floods.

Step 2 Site conditions during field assessment

First look for changes in channel shape, depositional and erosional features, and changes in vegetation and sediment type, size, density, and distribution. Make note of natural or man-made disturbances that would affect flow and channel form, such as bridges, riprap, landslides, rockfalls etc.

The channel is characterized by steeply incised banks, mostly unvegetated, with a cobble covered substrate. The channel includes a channelized bench vegetated with reed canary grass. The banks are densely vegetated by Armenian blackberry (Rubus armeniacus). The average width of the channel is approximately 7 feet and the height of the banks are approximately 20 feet.

Step 3 Check the boxes next to the indicators used to identify the location of the OHWM.

OHWM is at a transition point, therefore some indicators that are used to determine location may be just below and above the OHWM. From the drop-down menu next to each indicator, select the appropriate location of the indicator by selecting either just below `b', at `x', or just above `a' the OHWM.

OHWM. Go to page 2 to describe overall rationale for location of OHWM, write any additional observations, and to attach a photo log.

Geomorphic indicators

- [x] **Break in slope:**
  - [x] *on the bank:* x
  - [x] *undercut bank:* x
  - [ ] *valley bottom:*
  - [ ] Other: _____
- [ ] **Shelving:**
  - [ ] *shelf at top of bank:*
  - [ ] *natural levee:*
  - [ ] *man-made berms or levees:*
  - [ ] *other berms:* _____
- [x] **Channel bar:**
  - [ ] *shelving (berms) on bar:*
  - [ ] *unvegetated:*
  - [x] *vegetation transition (go to veg. indicators)*
  - [ ] *sediment transition (go to sed. indicators)*
  - [ ] *upper limit of deposition on bar:*
- [ ] **Instream bedforms and other bedload transport evidence:**
  - [ ] *deposition bedload indicators (e.g., imbricated clasts, gravel sheets, etc.)*
  - [ ] *bedforms (e.g., poofs, riffles, steps, etc.):*
  - [ ] *erosional bedload indicators (e.g., obstacle marks, scour, smoothing, etc.)*
- [ ] **Secondary channels:**

Sediment indicators

- [ ] **Soil development:**
- [ ] **Changes in character of soil:**
- [ ] **Mudcracks:**
- [x] **Changes in particle-sized distribution:** x
  - [x] *transition from* cobble to clay
  - [ ] *upper limit of sand-sized particles*
  - [ ] *silt deposits:*

Vegetation Indicators

- [x] **Change in vegetation type and/or density:**

Check the appropriate boxes and select the general vegetation change *(e.g., graminoids to woody shrubs).* ***Describe the vegetation transition looking from the middle of the channel, up the banks, and into the floodplain.***

- [x] *vegetation absent to:* forbs
- [ ] *moss to:*
- [ ] *forbs to:*
- [ ] *graminoids to:*
- [ ] *woody shrubs to:*
- [ ] *deciduous trees to:*
- [ ] *coniferous trees to:*
- [x] **Vegetation matted down and/or bent:** b
- [ ] **Exposed roots below intact soil layer:**

Ancillary indicators

- [ ] **Wracking/presence of organic litter:**
- [ ] **Presence of large wood:**
- [ ] **Leaf litter disturbed or washed away:**
- [ ] **Water staining:**
- [ ] **Weathered clasts or bedrock:**

Other observed indicators?

Describe:

Step 4 Is additional information needed to support this determination?

- [ ] Yes
- [x] No

If yes, describe and attach information to datasheet:

Print Form | Save As | E-mail

Project ID #: _____

Step 5 Describe rationale for location of OHWM

channel transitions from unvegetated,rocky surface to densely vegetated banks, above a break in slope. The vegetation on the channel bar is matted down and below the break in slope, therefore the bar is below OHWM. Furthermore, undercutting is present at the OHWM, above the bar.

Additional observations or notes

The channel begins at a 48 inch culvert.

Attach a photo log of the site. Use the table below, or attach separately.

Photo log attached? ☒ Yes ☐ No If no, explain why not: Photos are included in Appendix C of the Aquatic Resources Delineation report

List photographs and include descriptions in the table below.

Number photographs in the order that they are taken. Attach photographs and include annotations of features.

Photo Number	Photograph description

OHWM Field Identification Datasheet Instructions and Field Procedure

Step 1 **Site overview from remote and online resources** **Complete Step 1 prior to site visit.**

Online Resources: Identify what information is available for the site. Check boxes on datasheet next to the resources used to assess this site.

a. gage data
b. aerial photos
c. satellite imagery
d. LiDAR
e. topographic maps
f. geologic maps
g. land use maps
h. climatic data (precipitation and temperature)

Landscape context: Use the online resources to put the site in the context of the surrounding landscape.

a. **Note on the datasheet under Step 1:**
   i. Overall land use and change if known
   ii. Recent extreme events if known (e.g., flood, drought, landslides, debris flows, wildfires)
b. Consider the following to inform weighting of evidence observed during field visit.
   i. What physical characteristics are likely to be observed in specific environments?
   ii. Was there a recent flood or drought? Are you expecting to see recently formed or obscured indicators?
   iii. How will land use affect specific stream characteristics? How natural is the hydrologic regime? How stable has the landscape been over the last year, decade, century?

Step 2 Site conditions during the field assessment (assemble evidence)

a. Identify the assessment area.
b. Walk up and down the assessment area noting all the potential OHWM indicators.
c. Note broad trends in channel shape, vegetation, and sediment characteristics.
   i. Is this a single thread or multi-thread system? Is this a stream-wetland complex?
   ii. Are there any secondary and/or floodplain channels?
   iii. Are there obvious man-made alterations to the system?
   iv. Are there man-made (e.g., bridges, dams, culverts) or natural structures (e.g., bedrock outcrops, Large Wood jams) that will influence or control flow?
d. Look for signs of recurring fluvial action.
   i. Where does the flow converge on the landscape?
   ii. Are there signs of fluvial action (sediment sorting, bedforms, etc.) at the convergence zone?
e. Look for indicators on both banks. If the opposite bank is not accessible, then look across the channel at the bank.
f. **In Step 2 of the datasheet** describe any adjacent land use or flow conditions that may influence interpretation of each line of evidence.
   i. What land use and flow conditions may be affecting your ability to observe indicators at the site?
   ii. What recent extreme events may have caused changes to the site and affected your ability to observe indicators?

Step 3a List evidence

Assemble evidence by checking the boxes next to each line of evidence:

a. If needed, use a separate scratch datasheet to check boxes next to possible indicators, or check boxes of possible indicators in pencil and use pen for final decision.
b. If using fillable form, then follow the instructions for filling in the fillable form.

Context is important when assembling evidence. For instance, pool development may be an indicator of interest on the bed of a dry stream, but may not be a useful indicator to take note of in a flowing stream. On the other hand, if the pool is found in a secondary channel adjacent to the main channel, it could provide a line of evidence for a minimum elevation of high flows. Therefore, consider the site context when deciding which indicators provide evidence for identifying the OHWM. Explain reasoning in Step 5.

Questions to consider while making observations and listing evidence at a site:

Geomorphic indicators	**Sediment and soil indicators**	**Vegetation Indicators**	**Ancillary indicators**
Where are the breaks in slope?	Where does evidence of soil formation appear?	Where are the significant transitions in vegetation species, density, and age?	Is there organic litter present?
Are there identifiable banks?		Is there vegetation growing on the channel bed?	
Is there an easily identifiable top of bank?	Are there mudcracks present?	If no, how long does it take for the non-tolerant vegetation to establish relative to how often flows occur in the channel?	Is there any leaf litter disturbed or washed away?
Are the banks actively eroding?			
Are the banks undercut?	Is there evidence of sediment sorting by grain size?	Where are the significant transitions in vegetation?	Is there large wood deposition?
Are the banks armored?			
Is the channel confined by the surrounding hillslopes?		Is the vegetation tolerant of flowing water?	Is there evidence of water staining?
Are there natural or man-made berms and levees?		Has any vegetation been flattened by flowing water?	
Are there fluvial terraces?			
Are there channel bars?			

Are the following features of fluvial transport present?

Evidence of erosion: obstacle marks, scour, armoring
Bedforms; riffles, pools, steps, knickpoints/headcuts
Evidence of deposition: imbricated clasts, gravel sheets, etc.

In some cases, it may be helpful to explain why an indicator was NOT at the OHWM elevation, but found above or below. It can also be useful to note if specific indicators (e.g., vegetation) are NOT present. For instance, note if the site has no clear vegetation zonation.

OHWM Field Identification Datasheet Instructions and Field Procedure

Step 3b Weight each line of evidence and weigh body of evidence

Weight each indicator by considering its importance based upon:

***Landscape context from Step 1 can help determine the relevance, strength, and reliability of the indicators observed in the field.**

a. Relevance:

i. Is this indicator left by low, high, or extreme flows?

Tips on how to assess the indicator relative to type of flow:

Consider the elevation of the indicator relative to the channel bed. What is the current flow level based on season or nearby gages? Consider the elevation of the indicator relative to the current flow. If the stream is currently at baseflow and indicator is adjacent to that, then it is likely a low flow indicator. The difference between high and extreme flow indicators can sometimes be difficult to determine.

***Information in Chapter 2 of the OHWM field manual provides information on specific indicators which can assist in putting these in context and determining relevance, strength, and reliability.**

ii. Did recent extreme events and/or land use affect this indicator?

1. Recent floods may have left many extreme flow indicators, or temporarily altered channel form. Other resources will likely be needed to support any OHWM identification at this site. Field evidence of the OHWM may have to wait for the site to recover from the recent flood.
2. Droughts may cause field evidence of OHWM to be obscured, because there has been an extended time since the last high flow event. There can be overgrowth of vegetation or deposition of material from surrounding landscape that can obscure indicators.
3. Both man-made (e.g., dams, construction, mining activities, urbanization, agriculture, grazing) and natural (e.g., fires, floods, debris flows, beaver dams) disturbances can all alter how indicators are expected to appear at a site. Chapter 6 and Chapter 7 of the OHWM field manual provides specific case-studies that can help in interpreting evidence at these sites.

b. Strength:

i. Is this indicator persistent across the landscape?

1. Look up and downstream and across the channel to see if you see the same indicator at multiple locations.
2. Does the indicator occur at the same elevation as other indicators?

c. Reliability:

i. Is this indicator persistent on the landscape over time? Will this indicator still persist across seasons?

1. This can be difficult to determine for some indicators and may be specific to climatic region (in terms of persistence of vegetation) and history of land use or other natural disturbances.
2. Chapter 2, Chapter 6, and Chapter 7 of the OHWM field manual describes each indicator in detail and provides examples of areas where indicators are difficult to interpret.

d. Weigh body of evidence:

i. Combine weights: integrate the weighted line of evidence (relevance, strength, reliability) of each indicator.

ii. For each of the observed indicators, which are more heavily weighted? Where do high value indicators co-occur along the stream reach? Do they co-occur at a similar elevation along the banks relative to water surface (or channel bed if there is no water).

iii. On datasheet, select the indicators used to identify the OHWM. Information in Chapter 2 of the OHWM field manual provides descriptions of specific indicators which can assist in putting these in context and determining relevance, strength, and relieability.

e. Take photographs of indicators and attach a log using either page 2 of datasheet or another method of logging photos.

i. Annotate photos with descriptions of indicators.

Step 4 Is additional information needed? Are other resources needed to support the lines of evidence observed in the field?

a. If additional resources are needed, then repeat steps 3a and 3b for the resources selected in Step 1 of assembling, weighting, and weighing evidence collected from online resources. Chapter 5 of the OHWM field manual provides information on using online resources.

b. Any data collected from online tools have strengths and weaknesses. Make sure these are clear when determining relevance, strength, and reliability of the remotely collected data. Clearly describe why other resources were needed to support the lines of evidence observed in the field, as well as the relevance, strength, and reliability of the supporting data and/or resources.

c. Attach any remote data and data analysis to the datasheet.

Step 5 Describe rationale for location of OHWM:

a. Why do the combination of indicators represent the OHWM?

b. If there are multiple possibilites for the OHWM, explain why there are two (or more) possibilities. Include any relevant discussion on why specific indicators were not included in the final decision.

c. If needed, add additional site notes on page 2 of the datasheet under Step 5.

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project/Site: Oregon City Masterplan | City/County: Oregon City, Clacka,as | Sampling Date: 10/6/25

Applicant/Owner: Cypress Equities | State: OR | Sampling Point: WSP1

Investigator(s): Steven Neumann | Section, Township, Range: 3S, 2E, 05

Landform (hillslope, terrace, etc.): channel bar | Local relief (concave, convex, none): none | Slope (%): 1

Subregion (LRR): A | Lat: 45.333889 | Long: -122.585187 | Datum: NAD84

Soil Map Unit Name: Bernstein silt loam | NWI classification: n/a

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✔ No ____ (If no, explain in Remarks.)

Are Vegetation ____, Soil ____, or Hydrology ____ significantly disturbed? Are "Normal Circumstances" present? Yes ✔ No ____

Are Vegetation ____, Soil ✔, or Hydrology ____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ✔	No ____	**Is the Sampled Area within a Wetland?** Yes ✔ No ____
Hydric Soil Present?	Yes ✔	No ____	
Wetland Hydrology Present?	Yes ✔	No ____	

Remarks:

sample area is located just downstream of a culvert and receives stormwater. channel bar likely developed from storm water deposition.

VEGETATION – Use scientific names of plants.

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes ✔ No ____

Remarks:

plot size was determined to characterized channel bar

SOIL

Sampling Point: WSP-01

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 2/1	100		0			san/cl lm	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ✔ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1) (**except MLRA 1**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ☐ 2 cm Muck (A10)
- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12)
- ✔ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: cobble stone

Depth (inches): 16

Hydric Soil Present? Yes ✔ No ☐

Remarks:
uniform sandy clay loam with cobbles. could not dig beyond restrictive cobble layer.
Problematic soils are present. the sample area is a vegetated bar that was likely recently developed from sediment deposition from the upstream culvert.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)

Field Observations:

Surface Water Present? Yes ☐ No ✔ Depth (inches): ____

Water Table Present? Yes ✔ No ☐ Depth (inches): 14

Saturation Present? (includes capillary fringe) Yes ✔ No ☐ Depth (inches): 14

Wetland Hydrology Present? Yes ✔ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Vegetation is matted down indicating drainage patterns.

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project/Site: Oregon City Masterplan City/County: Oregon City, Clacka,as Sampling Date: 10/6/25

Applicant/Owner: Cypress Equities State: OR Sampling Point: WSP-02

Investigator(s): Steven Neumann Section, Township, Range: 3S, 2E, 05

Landform (hillslope, terrace, etc.): top of bank Local relief (concave, convex, none): convex Slope (%): 1

Subregion (LRR): A Lat: 45.333816 Long: -122.585300 Datum: NAD84

Soil Map Unit Name: Bernstein silt loam NWI classification: n/a

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✔ No ____ (If no, explain in Remarks.)

Are Vegetation ____, Soil ✔, or Hydrology ____ significantly disturbed? Are "Normal Circumstances" present? Yes ✔ No ____

Are Vegetation ____, Soil ____, or Hydrology ____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ____	No ✔	**Is the Sampled Area within a Wetland?** Yes ____ No ✔
Hydric Soil Present?	Yes ____	No ✔	
Wetland Hydrology Present?	Yes ____	No ✔	

Remarks:

disturbed soils from previous land alterations. soil contains large amount of rocks, likely from fill soils.

VEGETATION – Use scientific names of plants.

Payment instructions

Please send only a check or money order with your payment stub. **DO NOT** mail cash. **Your cancelled check is proof of payment.**

Property tax payments MUST be credited to the earliest year that taxes are due.

Tax statements for **less** than $40 must be paid in full.

Discounts/payment schedule (choose one)

To receive a discount, payments **MUST** be delivered, U.S. postmarked, or transmitted by private express carrier on or before November 15. Returned checks may cause a loss of the discount.

To receive any applicable discount you **MUST** make:

- **Full payment—**Receive a three percent (3%) discount on the amount of current year tax, as shown on your tax statement, if full payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.**
- **Two-thirds payment—**Receive a two percent (2%) discount on the amount of current year tax paid, as shown on your tax statement, if two-thirds payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.** Pay the final one-third (with no discount) by **May 15** to avoid interest charges.
- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

Payment instructions

Please send only a check or money order with your payment stub. **DO NOT** mail cash. **Your cancelled check is proof of payment.**

Property tax payments MUST be credited to the earliest year that taxes are due.

Tax statements for **less** than $40 must be paid in full.

Discounts/payment schedule (choose one)

To receive a discount, payments **MUST** be delivered, U.S. postmarked, or transmitted by private express carrier on or before November 15. Returned checks may cause a loss of the discount.

To receive any applicable discount you **MUST** make:

- **Full payment—**Receive a three percent (3%) discount on the amount of current year tax, as shown on your tax statement, if full payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.**
- **Two-thirds payment—**Receive a two percent (2%) discount on the amount of current year tax paid, as shown on your tax statement, if two-thirds payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.** Pay the final one-third (with no discount) by **May 15** to avoid interest charges.
- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

Payment instructions

Please send only a check or money order with your payment stub. **DO NOT** mail cash. **Your cancelled check is proof of payment.**

Property tax payments MUST be credited to the earliest year that taxes are due.

Tax statements for **less** than $40 must be paid in full.

Discounts/payment schedule (choose one)

To receive a discount, payments **MUST** be delivered, U.S. postmarked, or transmitted by private express carrier on or before November 15. Returned checks may cause a loss of the discount.

To receive any applicable discount you **MUST** make:

- **Full payment—**Receive a three percent (3%) discount on the amount of current year tax, as shown on your tax statement, if full payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.**
- **Two-thirds payment—**Receive a two percent (2%) discount on the amount of current year tax paid, as shown on your tax statement, if two-thirds payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.** Pay the final one-third (with no discount) by **May 15** to avoid interest charges.
- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

Payment instructions

Please send only a check or money order with your payment stub. **DO NOT** mail cash. **Your cancelled check is proof of payment.**

Property tax payments MUST be credited to the earliest year that taxes are due.

Tax statements for **less** than $40 must be paid in full.

Discounts/payment schedule (choose one)

To receive a discount, payments **MUST** be delivered, U.S. postmarked, or transmitted by private express carrier on or before November 15. Returned checks may cause a loss of the discount.

To receive any applicable discount you **MUST** make:

- **Full payment—**Receive a three percent (3%) discount on the amount of current year tax, as shown on your tax statement, if full payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.**
- **Two-thirds payment—**Receive a two percent (2%) discount on the amount of current year tax paid, as shown on your tax statement, if two-thirds payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.** Pay the final one-third (with no discount) by **May 15** to avoid interest charges.
- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

Payment instructions

Please send only a check or money order with your payment stub. **DO NOT** mail cash. **Your cancelled check is proof of payment.**

Property tax payments MUST be credited to the earliest year that taxes are due.

Tax statements for **less** than $40 must be paid in full.

Discounts/payment schedule (choose one)

To receive a discount, payments **MUST** be delivered, U.S. postmarked, or transmitted by private express carrier on or before November 15. Returned checks may cause a loss of the discount.

To receive any applicable discount you **MUST** make:

- **Full payment—**Receive a three percent (3%) discount on the amount of current year tax, as shown on your tax statement, if full payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.**
- **Two-thirds payment—**Receive a two percent (2%) discount on the amount of current year tax paid, as shown on your tax statement, if two-thirds payment is delivered, U.S. postmarked, or transmitted by private express carrier by **November 15.** Pay the final one-third (with no discount) by **May 15** to avoid interest charges.
- **One-third payment—**No discount allowed. Pay one-third by **November 15,** followed by another one-third payment by **February 15.** Pay the final one-third balance by **May 15.**

Interest is charged at a rate of 1.333% monthly, 16% annually. Interest is accrued on past due installment payments accordingly:

- First one-third installment payment, interest begins accruing on **December 16.**
- Second one-third installment payment, interest begins accruing **February 16.**
- Remaining one-third payment, interest begins accruing on **May 16.**

If the 15th falls on a weekend or legal holiday, the due date will be extended to the next business day.

Delinquent taxes and lien dates

All personal property tax is delinquent when any installment is not paid on time. The responsible taxpayer can be served with a warrant 30 days after delinquency. Personal property can be seized and other financial assets can be garnished.

Real property tax is delinquent if not paid by May 15. Foreclosure proceedings on real property begin when taxes have been delinquent for three years.

(*) Accounts subject to foreclosure

Real property tax accounts with an unpaid balance for any tax year marked with an (*) on the front of this statement are subject to foreclosure if not paid on or before May 15. Payments **MUST** be applied to the oldest tax first.

Review your value

If you think your property value is incorrect or if there has been a change to the value that you did not expect or understand, review it with the county assessor's office. Many assessors provide value information online. Visit your county assessor's website or call them for more details.

Appeal rights

If you think the **VALUE** of your property as shown on this statement is too high, you can appeal. Your appeal is to the county property value appeals board (PVAB), except for state appraised industrial property. To appeal industrial property appraised by the Department of Revenue, you must file a complaint in the Magistrate Division of the Oregon Tax Court.

If you disagree with a **PENALTY** assessed for late filing of a real, personal, or combined property return, you may ask the county PVAB to waive all or a portion of the penalty. See www.oregon.gov/dor/property.

When and where to appeal to PVAB

File your petition by **December 31** with the **county clerk** in the county where the property is located. You can get petition forms and information from your **county clerk,** or at www.oregon.gov/dor/forms.

What to pay if you appeal

Follow the payment schedule to avoid interest charges and to receive applicable discounts. If your tax is reduced after appeal, any overpayment of property tax will be refunded.

Tax statement information is available in alternate formats, in compliance with the Americans with Disabilities Act (ADA). Contact your county tax collector.

Re: Cultural Resources Assessment and Agency/Tribal Notification Documentation
Oregon City Mixed-Use
Oregon City, Clackamas County
Langan Project No.: 794002701

This letter summarizes our cultural resources assessment and agency/tribal notification for the Oregon City Mixed-Use Project (Project or proposed Project), located in Oregon City, Clackamas County. The purposes of this study are to, based on available data: 1) consider project and site information in context of data relevant to cultural resources; 2) provide the potential cultural sensitivity of the project site; 3) assess the likelihood of development to negatively impact cultural resources; 4) outline recommendations for additional cultural resource studies, if appropriate; and 5) provide a cursory review of regulatory involvement. Regarding the latter, the Oregon State Historic Preservation Office (SHPO) reviewed the project and determined that they have "no concerns with the project proceeding as planned". Additionally, information regarding the Oregon SHPO's response is provided in Section 5.

1.0 PROJECT DESCRIPTION

The Project proposes mixed-use development consisting of multi-family residential units, a specialty grocery store and a quick service restaurant, with supporting grading, storm drainage, sanitary sewer, water and dry utility infrastructure. Access to the Project site is achieved via the existing Molalla Ave signalized intersection to the west, as well as via a proposed public accessway from the southeast corner of the site south connecting to Beavercreek Rd traffic signal. Newell Creek Canyon is located east of the site and is a designated natural area as described in the *Newell Creek Canyon Access Master Plan* (March 2016) and the Oregon City Natural Resource Overlay District. Grading and development improvements on the site are set back from the top of the slope to Newell Creek Canyon to the east.

2.0 EXISTING SITE CONDITIONS

The proposed Project site is located within Oregon City, Clackamas County. The proposed Project site is currently free of structures and is generally bound by residential and commercial development to the north, commercial development and Beavercreek Road to the south, Molalla Avenue to the west, and Newell Creek and undeveloped land to the east.

Geotechnical Report Review

The geotechnical report, *Geotechnical Engineering Report, Oregon City Development* (Terracon Consultants, Inc. 2022) summarizes the results of subsurface testing conducted within the proposed Project site. Between 2001 and 2022, thirty (30) borings were drilled, and sixty-eight (68) test pits were excavated within the proposed Project site. The subsurface conditions were characterized as: 1) Existing Fill characterized as topsoil, asphalt, silty sand fill, clayey silt fill, poorly graded gravel fill, gravelly silt fill placed during previous grading at the Project site; 2) Residual Soil (Native) characterized as silt with trace clay, clayey sand with gravel, containing a variable amount of basaltic andesite boulders and cobbles; and 3) Boring Lava characterized as basaltic andesite, fresh to slightly weathered, slightly fractured to very fractured. Fill soils were observed within multiple areas across the Project site, extending from the surface to up to ten (10) feet below the ground surface.

3.0 BACKGROUND RESEARCH

3.1 Oregon Archaeological Records Remote Access (OARRA) Search Results

Langan conducted a search of the Oregon Archaeological Records Remote Access (OARRA) records. The search included all cultural resource studies conducted within a 0.5-mile radius of the proposed Project site and any previously recorded cultural resources identified within a 0.5-mile radius of the proposed Project site.

Results of the OARRA database records search indicate that four (4) previously submitted cultural resource studies have been conducted within the records search area. Of these studies, one (1) addresses the proposed Project site. Report #20, *Cultural Resources Survey of the Revised Tri-City Area Comprehensive Sewerage Plan*, by Ronald Kent (1977) overlaps less than 10 percent of the Project site.

The OARRA records indicate that no cultural resources have been previously recorded within a 0.5-mile radius of the proposed Project site. The closest cultural resource is an aboveground (non-archaeological) resource, the Oregon Electric Willamette Valley Southern Railroad Line, located approximately 0.6-miles east of the Project site.

3.2 Oregon Historic Sites Database

A review of the Oregon Historic Sites Database was conducted and no historic sites, aboveground (non-archaeological) resources, are located within or directly adjacent to the proposed Project site. The closest historic sites are located approximately 0.14-miles northwest of the proposed Project site, along Gales Lane.

3.3 National Register of Historic Places (NRHP)

A review of the National Register of Historic Places (NRHP) was conducted to determine if cultural resources included on the NRHP are present within the proposed Project site and surrounding area. No resources listed on the NRHP are located within or adjacent to the proposed Project site. The closest listed resource is the Holmes House, located approximately 0.70-miles northwest of the Project site.

3.4 Historic Aerial Photographs and Topographic Map Review

Langan reviewed both historical aerial photographs and topographic maps employing the Nationwide Environmental Title Research, LLC (NETR) database. A review of all available historical aerial photographs was conducted and includes the following years: 1952, 1956, 1960, 1970, 1981, 1994, 2000, 2002, 2005, 2009, 2011, 2012, 2014, 2016, 2018, 2020, and 2022 (NETR 2025). A review of available topographic maps was conducted and includes the following years: 1914, 1920, 1937, 1941, 1945, 1956, 1958, 1961, 1963, 1972, 1985, 2014, 2017, and 2020 (NETR 2025). Based on review of historic photographic aerials and topographic maps, small structures occupied the western portion of the proposed Project site as early as 1914. From at least 1970 to 2002 the proposed Project site was in use as a laydown yard. Development of the areas north, south, and west of the proposed Project site took place sometime between 1970 and 1981.

4.0 FIELD SURVEY

4.1 Objectives and Methods

The intensive-level survey methods consisted of a pedestrian survey conducted in parallel transects, spaced no more than 5 meters apart (approximately 15 feet). The ground surface was inspected for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, groundstone tools, ceramics, fire-affected rock, subsistence materials, etc.), soil discoloration that might indicate the presence of a cultural midden; soil depressions; features indicative of structures and/or buildings (e.g., standing exterior walls, post holes, foundations); and historical artifacts (e.g., metal, glass, ceramics, building materials). To overcome visibility issues, small surface/boot scrapes were conducted in 10-meter intervals, or subjectively as needed. Ground disturbances such as rodent burrows, ephemeral trails and areas of barren ground were given specific attention to provide the best opportunity to observe soils and any potential exposed subsurface materials. No artifacts, if found, were to be collected.

All fieldwork was documented using field notes and an Apple Generation 14 iPhone equipped with ESRI Collector with close-scale georeferenced field maps of the prosed Project site, and aerial photographs. Location-specific photographs were taken using the iPhone 14-mega-pixel resolution camera. Cultural resources identified during this inventory within the proposed Project were, if discovered, to be recorded in accordance with the State of Oregon Guideline for

Reporting on Archaeological Investigations (2015). All field notes, photographs, and records related to the current study are on file with Langan. All field practices met the Secretary of Interior's standards and guidelines for a cultural resources inventory.

4.2 Pedestrian Survey Results

An intensive pedestrian survey was conducted by an archaeological technician under the direction of this study's Principal Investigator, Heather McDaniel McDevitt, and according to the methods previously stated (see Figure 2). At the time the survey was conducted, the proposed Project was minimally vegetated and had been recently cut. Exposed soils within periodic barren patches accounted for approximately 80 percent of the Project site and provided very good to excellent ground surface visibility (80-100 percent). Areas covered by vegetation and fill soil piles accounted for approximately 20 percent of the proposed parcel and provided non-existent to fair ground surface visibility (0-50 percent). Modern trash was found in sporadic locations on the surface of the ground, but no cultural materials of a prehistoric or historic nature or any evidence of the same were observed.

5.0 OREGON STATE HISTORIC PRESERVATION OFFICE (SHPO) CONSULTATION

On August 15, 2025, Langan submitted a First Initiation of Consultation to the Oregon State Historic Preservation Office (SHPO), for their consideration of potential impacts to both built environment (above ground) resources and archaeological (below ground) resources. The Oregon SHPO responded on September 10, 2025, stating, "there are no identified archaeological objects or sites (Oregon Revised Statute [ORS] 358.905), and no Native American cairn, burial, human remains, sacred objects and objects of cultural patrimony (ORS 97.740-760) in or adjacent to the project area". As a result, the Oregon SHPO's findings were as follows: "Oregon SHPO does not have any concerns with the project proceeding as planned" and provided direction should the project result in an inadvertent discovery of cultural resources (see section

6.0 TRIBAL OUTREACH

As required, Langan sent notification of the Project, via email, on September 24, 2025, to the following tribes:

- Confederated Tribes of the Grand Ronde
- Confederated Tribes of the Siletz
- Confederated Tribes of the Umatilla
- Confederated Tribes of the Warm Springs
- Confederated Tribes of the Yakama Nation

Follow-up phone calls were conducted by Langan between September 25, 2025 and October 1, 2025. No formal response has been received as of the date of this memorandum. A full summary

of all communication with the above-mentioned tribes is provided in Attachment C - Tribal Notification Summary.

7.0 RECOMMENDATIONS

Based on the findings of the background research, pedestrian survey, and consultation with Oregon SHPO and local tribes, no known resources are present within or adjacent to the proposed Project site. As such, the likelihood of known historic properties or significant cultural resources being adversely impacted by project implementation is null and the potential presence of unknown historic properties or significant cultural resources being adversely impacted by project implementation is low. Additionally, the Oregon SHPO expressly stated that "no concerns with the project proceeding as planned".

According to state law (ORS 358.920 and ORS 97.745), archaeological sites, objects and human remains are protected on both state public and private lands. In the event of inadvertent discovery of archaeological resources during construction or ground disturbance of any kind, such activity should cease within 50 feet of the discovery. To support appropriate treatment and response, it is recommended that an Inadvertent Discovery Plan (IDP) be developed by a qualified archaeologist. The purpose of the IDP is to outline a program of treatment and mitigation in the case of an inadvertent discovery of cultural resources and to provide for their proper identification, evaluation, treatment, and protection in accordance with Oregon laws throughout the duration of the Project. It is also recommended that existence of and importance of adherence to this Plan should be stated on all Project construction plans intended for use by those conducting the ground disturbing activities.

Sincerely,

Langan Engineering and Environmental Services, LLC

RE: SHPO Case No. 25-1149
City of Oregon City, Langan Engineering and Environmental, Langan Project Number 794002701, Oregon City Mixed Use
Proposed mixed use development
35S 2E 5, Oregon City, Clackamas County

Dear Heather McDaniel McDevitt:

Thank you for submitting information for the project referenced above. According to our records there are no identified archaeological objects or sites (Oregon Revised Statute [ORS] 358.905), and no Native American cairn, burial, human remains, sacred objects and objects of cultural patrimony (ORS 97.740-760) in or adjacent to the project area. Based on the information provided, Oregon SHPO does not have any concerns with the project proceeding as planned.

Under ORS 358.920 and ORS 97.745, archaeological sites, objects and human remains are protected on both state public and private lands in Oregon. Please know that if any archaeological artifacts are found during construction all activity in the area should cease and our office should be contacted. We also advise having an Inadvertent Discovery Plan (IDP) in place during construction. A template is available on our website (https://www.oregon.gov/oprd/OH/pages/projectreviewresources.aspx). The IDP explains what to do in the event of a discovery and provides examples of archaeological materials. Using this form can reduce confusion, risk, and liability.

If the project has a federal nexus (lands, funding, permitting, or oversight) coordinate with the lead federal agency to ensure compliance with Section 106 of the National Historic Preservation Act.

If you have not already done so, be sure to consult with all appropriate Native American tribes regarding the proposed project. Additional consultation regarding this case must be sent through Go Digital. In order to help us track the project accurately, reference the SHPO case number above in all correspondence.

Please contact our office if you have any questions, comments or need additional assistance.

Sincerely,

Aspen Kemmerlin
Special Projects Archaeologist

Introduction

This traffic impact analysis (TIA) identifies potential transportation-related impacts associated with the proposed Mixed-Use Development in Oregon City, Oregon. As necessary, mitigation measures are identified that would reduce or offset significant transportation related impacts that the project may have on the surrounding transportation system.

Project Description

The proposed project site is located at 1367 Molalla Avenue in Oregon City, as shown in the vicinity map included in Figure 1.[1] The site is comprised of 4 parcels (3 parcels with land use development and 1 for right-of-way) in which the proposed mixed-use development is anticipated to include the following:

- Parcel A: 14,600 square feet (sf) retail
- Parcel B: up to 210 multi-family apartment units
- Parcel C: *No land use - right-of-way*
- Parcel D: 4,900 sf fast food restaurant with drive-through

The existing site is vacant. With the development of the site, a new roadway connection would be completed between the existing signalized intersections along Molalla Avenue at the west side of the site and Beavercreek Road south of the site. The preliminary site plan is illustrated in Figure 2. The proposed project is anticipated to be fully constructed and operational by 2030.

Study Scope and Study Area

The following off-site intersections surrounding the project site were identified for analysis following coordination with City of Oregon City and Oregon Department of Transportation (ODOT) staff:

1. Molalla Ave/Pearl St
2. Molalla Ave/Holmes Ln
3. Molalla Ave/Warner Milne Rd
4. Molalla Ave/Safeway access/Future site access
5. Molalla Ave/Beavercreek Rd
6. Molalla Ave/Clairmont Way
7. Molalla Ave/ OR-213
8. Commercial Access/Beavercreek Rd/Future site access
9. OR-213/Beavercreek Rd

The analysis includes a review of existing conditions in the vicinity of the project site, including the transportation network, planned improvements, existing and future without-project AM and PM[2] peak hour traffic volumes, traffic operations, and traffic safety. Future with-project conditions are evaluated by adding site-generated traffic to future without-project volumes. Future without and with-project conditions are compared to identify the impacts the proposed project has on the surrounding transportation system.

[1] The proposed land use and overall site plan is revised relative to the previously completed October 2025 TIA.

[2] Note that review of additional time periods is included in the TIA below, but as discussed in greater detail below, the operational analysis is limited to the AM and PM peak hours.

Site Vicinity and Study Intersections

Existing & Future Without-Project Conditions

This section describes both existing and future (2030) without-project conditions within the identified study area. Study area characteristics are provided for the transportation system, planned improvements, existing and future forecast without-project traffic volumes, traffic operations, and traffic safety.

Roadway Network

The following sections describe the existing street network within the vicinity of the proposed project and anticipated planned improvements.

Existing

The primary roadways within the study area and their characteristics near the study intersections are described below.

Molalla Avenue is a five-lane roadway functionally classified by the City of Oregon City as a minor arterial and has a speed limit of 30 mph. Molalla Avenue is a 2 to 3 lane roadway north of Warner Milne Road and south of Beavercreek Road, and five lane roadway Warner Milne Road and Beavercreek Road. Sidewalks are provided on both sides of Molalla Avenue through the entirety of the study area. Bike lanes are available on both sides north of Gales Lane, and south of the Safeway access driveway.

Beavercreek Road is a 5-lane roadway functionally classified as a minor arterial west of Molalla Avenue and a major arterial east of Molalla Avenue. Beavercreek Road has a speed limit of 35 mph in the vicinity of the project site. Beavercreek Road is a 3 to 5 lane roadway west of Molalla Avenue and a 5 to 6 lane road east of Molalla Avenue with additional urn lanes present surrounding its intersection with OR-213. Sidewalks and bicycle lanes are provided on both sides of the roadway between Molalla Avenue and OR-213.

OR-213 (Cascade Highway South) is a State Highway Route classified as a principal arterial. OR-213 is a four-lane roadway with a wide median north and south of its intersection with S Beavercreek Road, which transitions to a 6-lane roadway south of Beavercreek Road, and a 7-lane roadway north of Beavercreek Road. The speed limit along OR-213 in the study area is 55 mph. Sidewalks and bike lanes are available on the east side of OR-213 south of Beavercreek Road and wide painted shoulders are present where sidewalks are not within the study area.

Pearl Street is classified by the City of Oregon City as a major collector with 2 travel lanes. The speed limit is 25 mph. West of the intersection with Molalla Avenue, a sidewalk is present on the north side of Pearl Street. East of the intersection, sidewalks are present for approximately 230 feet.

Holmes Lane is classified as a collector west of Molalla Avenue, and continues into Hilda Street, which is a local road, east of Molalla Avenue. Holmes Lane is a 2 to 3 lane roadway with a speed limit of 25 mph. Sidewalks, bike lanes, and/or paved shoulders are present on both sides of Holmes Lane.

Warner Milne Road is classified as a minor arterial with a speed limit of 30 mph. Warner Milne Roadis a two-lane roadway with additional turn lanes provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Clairmont Way is functionally classified by the City of Oregon City as a collector with a speed limit of 25 mph. Clairmont Way is a two-lane roadway with additional turn lanes

provided surrounding its intersection with Molalla Avenue. Sidewalks and bicycle lanes are present along both sides of the roadway within the study area.

Planned Improvements

A review of local plans was conducted to identify any changes in the study area that should be accounted for in the analysis. The local plans reviewed included the following: *City of Oregon City's Comprehensive Plan Project List (November 2022)*, *Oregon City's Transportation System Plan* (TSP), Yamhill County's *2015-2035 Transportation System Plan* (TSP)*, and Oregon Department of Transportation's (ODOT) 2024-2027 Statewide Transportation Improvement Program (STIP).* Planned improvements within the study area predominantly included maintenance and resurfacing projects; not impacting intersection capacity. This included the following projects:

- Warner Milne Road resurfacing near Molalla Avenue which was recently completed.
- Holmes Lane will be undergoing resurfacing in 2026.
- Molalla Avene will be undergoing resurfacing in 2027.
- Beavercreek Road will be undergoing microsurfacing in 2026, with more resurfacing planned for 2032.
- Water transmission pipes under Molalla Avenue will be upgraded in 2026.

In addition to the above projects, Beavercreek Road has also been undergoing safety improvements since 2023, including signal modifications and improved signage at the intersection with OR-213 which have since been completed. The Beavercreek Road/OR-213 intersection has an Alternative Mobility Target as the City's TSP identified it would not meet the state's required Oregon Highway Plan Mobility Standards by 2035. An additional project that has been identified as part of the Alternative Mobility Targets in the TSP includes project D95, the Beavercreek Road/OR-213 westbound right turn lane with northbound merge lane on OR 213. The City is collecting a pro-rata share to fund the D95 project; however, this project was not assumed in the future operational conditions.

Non-Motorized Facilities

Dedicated pedestrian and bicycle facilities are provided on roadways surrounding the project site as noted above. Sidewalks are available on both sides of Molalla Avenue, Beavercreek Road, and Holmes Lane. A sidewalk is available on the east side of OR-213 south of the intersection with Beavercreek Lane and on the north side of Pearl Street west of Molalla Avenue.

Transit Service

Transit service in the vicinity of the project site is provided by TriMet's Route 32. The closest transit stops to the site are located at the two site access intersections along Molalla Avenue and Beavercreek Road, directly adjacent to the project site. Additional transit stops served by TriMet's Route 33 are located approximately 0.25 miles west of the project site at the intersection of Beavercreek Road/Danielson Drive. Route 32 provides service 7-days per week between Milwaukie and Clackamas Community College in Oregon City with service between approximately 6:15 a.m. and 7:00 p.m. on weekdays with headways of approximately 30 minutes during peak periods. Route 33 provides service between the Oregon City Transit Center, Milwaukie and Clackamas Town Center 7-days per week between approximately 5:20 a.m. and 12:00 a.m. with peak period headways of approximately 15 minutes.

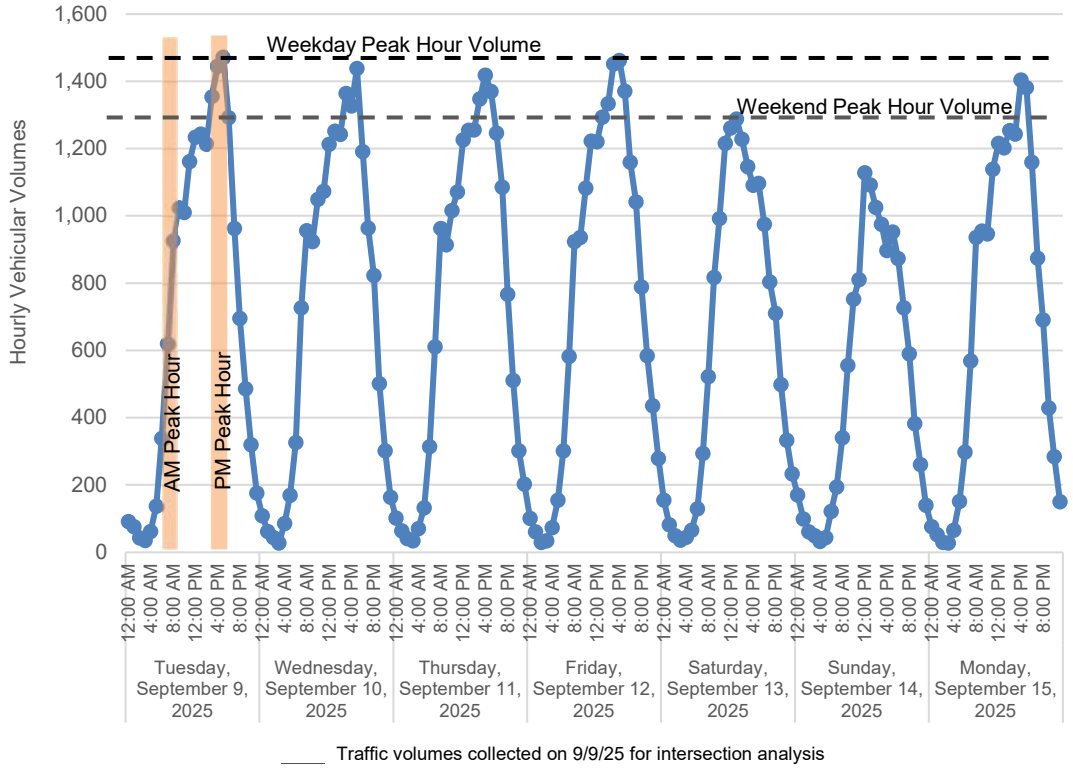
Traffic Volumes

The existing and future (2030) without-project traffic volumes forecasts are summarized in the sections below.

Existing

Existing weekday AM (7 to 9 a.m.) and PM (4 to 6 p.m.) peak period traffic counts were collected at each study intersection in September 2025.[3] The detailed traffic counts are included in Appendix A. Volumes are rounded to the nearest 5 vehicles to account for the daily fluctuations in traffic volumes. Figure 4 illustrates the existing weekday AM and PM peak hour traffic volumes at the study intersections.

In addition to the weekday peak hours, the traffic volumes throughout the week were also reviewed to confirm the time periods for analysis. Traffic volumes were collected along Molalla Avenue, north of Beavercreek Road in the project vicinity for one week in September 2025. The detailed volumes throughout the week are included in Appendix A and the volumes are illustrated in Figure 3.



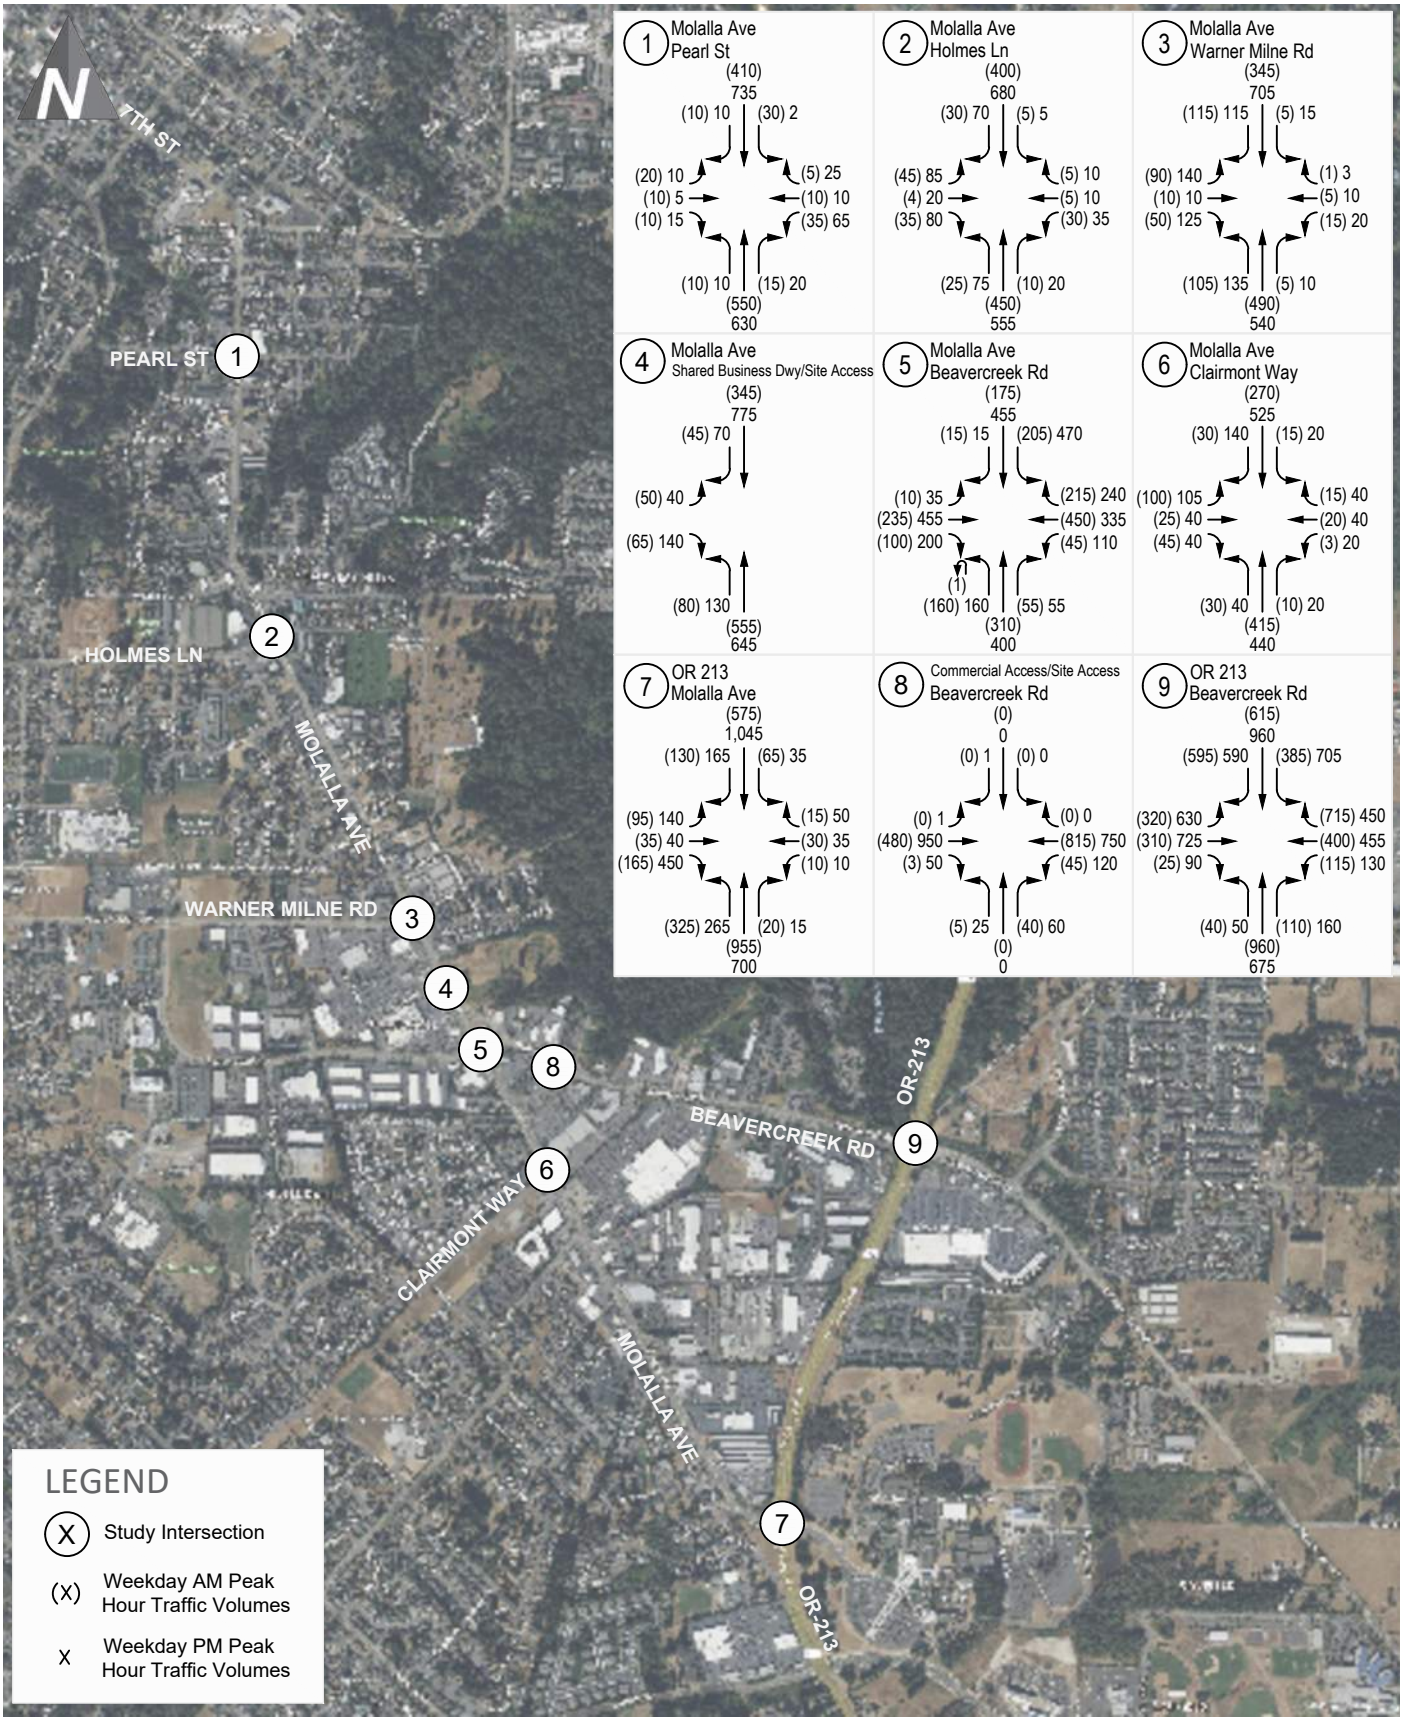


Figure 3. Existing Weekly volumes along Molalla Avenue, north of Beavercreek Road

As shown in the figure, the weekday AM and PM peak hours being studied as part of the project capture the peak traffic volumes that are occurring within the study area throughout the week. The weekend peak hourly volumes are approximately 12 percent less than the weekday peak volumes which occur during the studied PM peak hour.

[3] It was confirmed with City and ODOT staff that given the counts were conducted in September when school was in session, no seasonal adjustment to the volumes was needed.

Existing Weekday Peak Hour Traffic Volumes

FIGURE 4

OR City Mixed-Use

transpogroup

Sep 30, 2025 – 3:10pm lilyh M:\25\1.25192.00 – OR City Retail\Graphics\DWG\25192_Distribution_Graphics.dwg Layout: Existing Vols

Future Without-Project Traffic Volumes

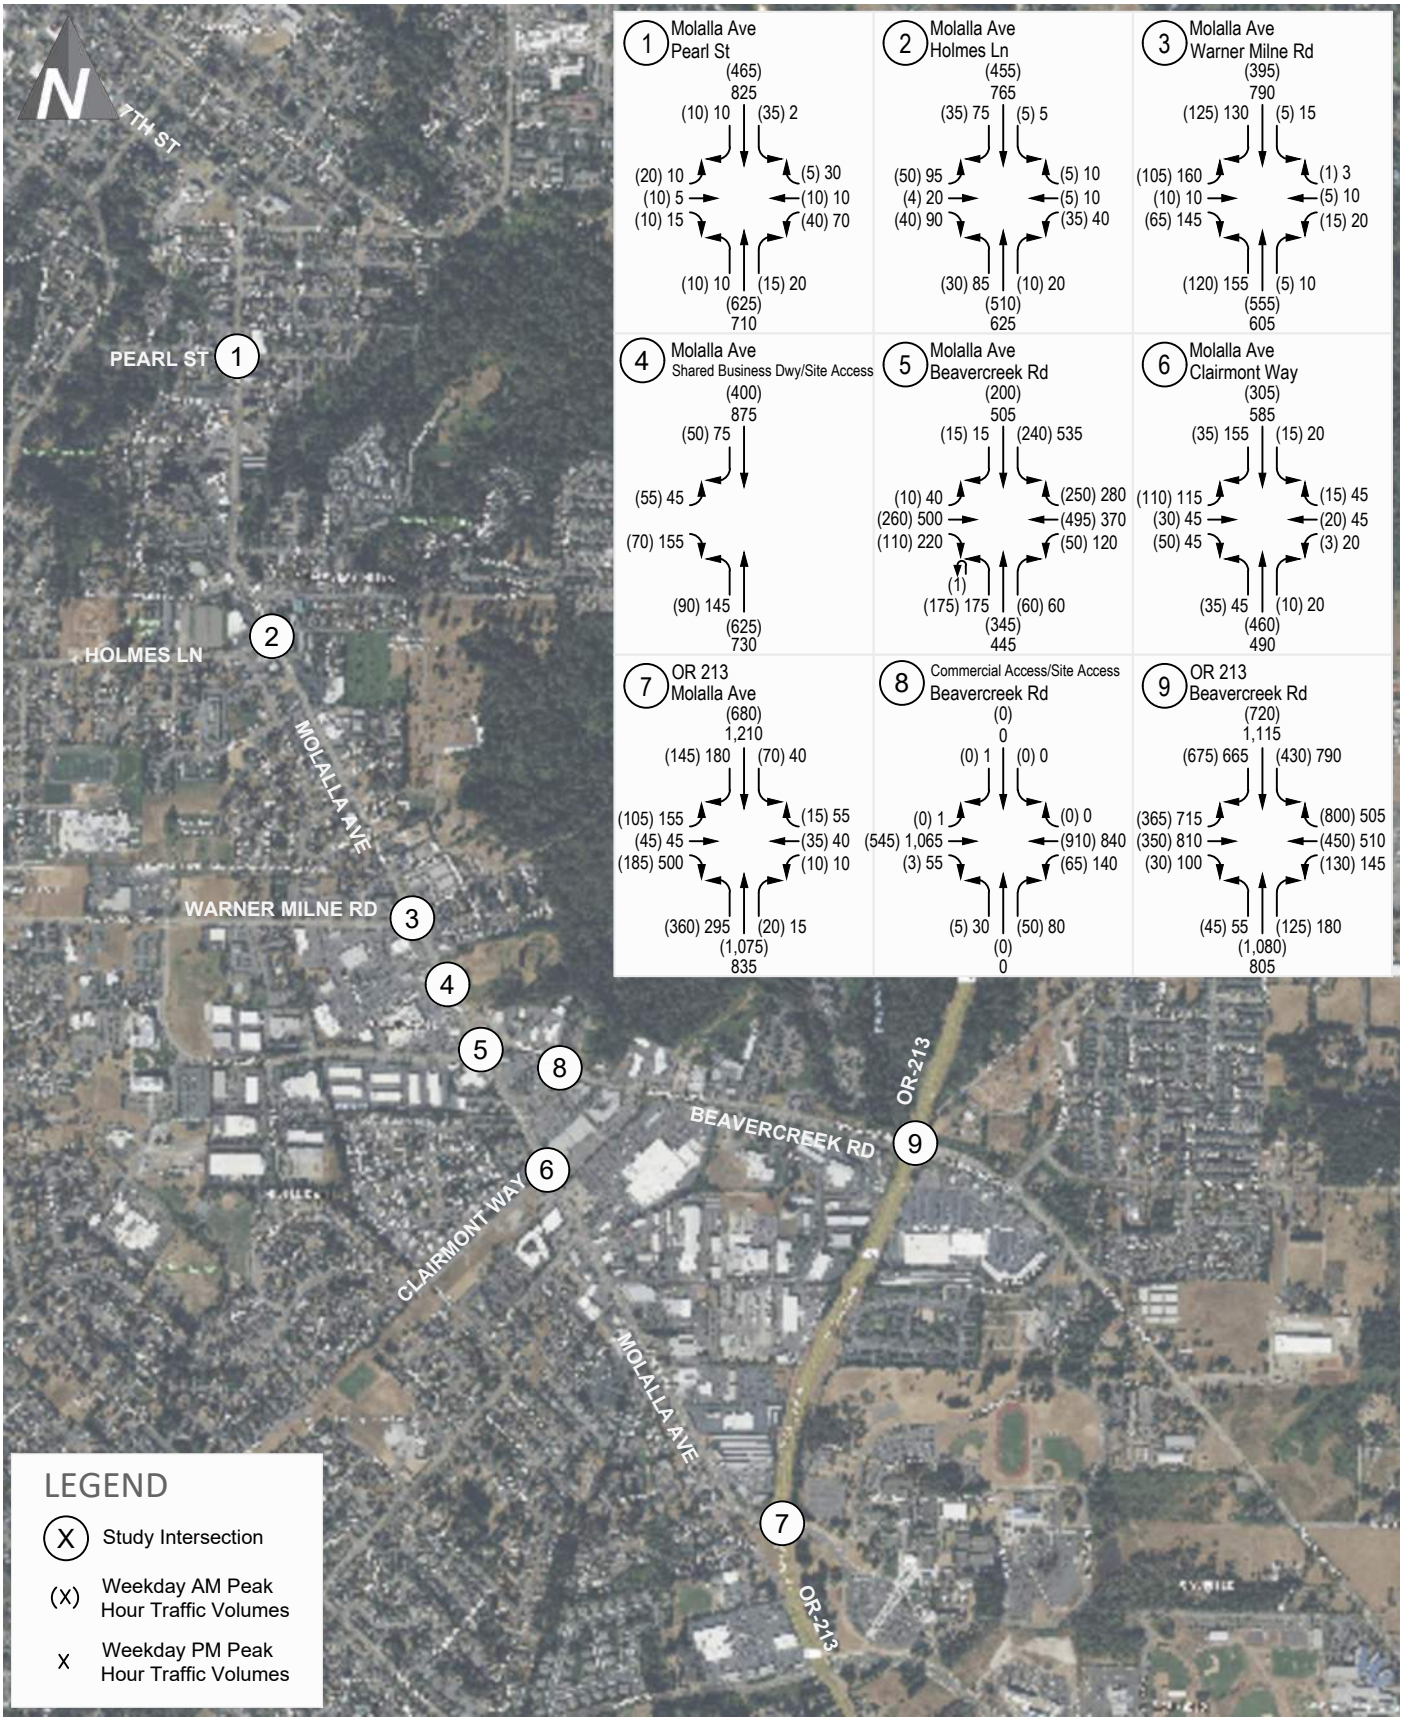
Future (2030) without-project traffic volumes are comprised of background traffic growth and traffic from "in-process developments" in the vicinity of the project site. An annual growth rate of 2.0 percent was applied, as provided by the City. Ten in-process developments in the vicinity of the proposed project site are listed below and were included in the analysis as identified by City staff.

1. 770 Pleasant Townhomes
2. Abernethy Place
3. Canemah Road Subdivision
4. Central Point Subdivision
5. Clackamas Heights Redevelopment
6. Downtown North End Development
7. Park Place Crossing Phase 1
8. Serres Farms Master Plan
9. Thimble Creek South
10. White Lane Subdivision

The forecast future (2030) without-project weekday AM and PM peak hour traffic volumes are shown on Figure 5.

Traffic Operations

The following section summarizes the traffic operations for existing and future without-project conditions for the study intersections.



An operational analysis was conducted for the study area intersections for the weekday AM and PM peak hours. Existing and future without-project volume-to-capacity (v/c) ratios and delay were calculated at study intersections based on the methodologies contained in the *Highway Capacity Manual* 7th Edition (HCM 7). The software program *Synchro* 12 was used to evaluate intersection operations.

ODOT's targets were applied to the signalized intersections along Cascade Highway South (OR 213), while the City of Oregon City's standards were applied to the remaining study intersections along Molalla Avenue and Beavercreek Road.

The City of Oregon City's operational targets are defined in the *City of Oregon City Guidelines for Transportation Impact Analyses* (2021), Section 7.9.1 for *Intersection Level of Service Standards.* The City identified a v/c ratio of 0.99 or less for the overall intersection at signalized intersections with the exception of the intersection of OR 213/Beavercreek Road, which is noted to have a maximum v/c ratio of 1.00. ODOT operational targets are defined in the 1999 *Oregon Highway Plan* (June 2017). Within the study area, Cascade Highway South (OR 213) is functionally classified as a principal arterial route inside the Portland Metro Area's Metropolitan Planning Organization (MPO) requiring a v/c ratio of 0.99 or less for the overall intersections. The Oregon Transportation Commission amended the *Oregon Highway Plan* in November 2018 to approve an alternative mobility target at the intersection of OR 213/Beavercreek Road to align with the City of Oregon City's recommendation of a 1.0 v/c target. Note that OHP identifies that *"ODOT recognizes that there are many variables and levels of uncertainty in calculating volume-to-capacity ratios…ODOT considers calculated values for v/c ratios that are within 0.03 of the adopted target in the OHP to be considered in compliance with the target."*

Signal timing at the study intersections was provided by Clackamas County and ODOT staff. Analysis parameters such as lane channelization, traffic control type, and signal timing were maintained for future (2030) without-project conditions consistent with existing conditions.

Results for the existing and future without-project operations analyses are summarized in Table 1. Detailed operations worksheets for the existing and future without-project analysis are included in Appendix B. The overall intersection v/c for signalized intersections was calculated per ODOT's *Analysis Procedures Manual* (Version 2, July 2025) Section 13.4.4 using Synchro.

Future (2030) Without-Project Peak Hour Traffic Volumes

Table 1. Existing & Future Without-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Existing		Future (2030) Without-Project	
		v/c[1]	Delay[2]	v/c	Delay
Weekday AM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.41	4.7	0.46	4.9
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.36	7.8	0.40	8.1
3. Molalla Ave/Warner Milne Rd	Signal	0.24	10.3	0.27	10.5
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.45	10.6	0.51	10.8
5. Molalla Ave/Beavercreek Rd	Signal	0.46	17.3	0.51	17.9
6. Molalla Ave/Clairmont Way	Signal	0.40	10.4	0.44	10.8
7. OR 213/Molalla Ave	Signal	0.57	27.0	0.64	28.7
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.65	4.4	0.72	4.8
9. OR 213/Beavercreek Rd	Signal	0.72	35.9	0.81	47.1
Weekday PM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.54	5.5	0.60	5.9
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.59	9.6	0.66	10.7
3. Molalla Ave/Warner Milne Rd	Signal	0.39	11.2	0.44	12.2
4. Molalla Ave/Shared Business Dwy (Safeway)	Signal	0.52	13.4	0.58	14.5
5. Molalla Ave/Beavercreek Rd	Signal	0.69	24.7	0.76	28.1
6. Molalla Ave/Clairmont Way	Signal	0.61	13.1	0.68	16.4
7. OR 213/Molalla Ave	Signal	0.68	33.9	0.78	36.3
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	Signal	0.59	7.6	0.67	8.5
9. OR 213/Beavercreek Rd	Signal	0.82	52.2	0.94	75.4

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

Table 1 shows that under both existing and future (2030) without project conditions, the study intersections operate acceptably per the respective v/c target during both the existing AM and PM peak hours, operating with a v/c ratio of 0.94 or less.

Traffic Safety

The five most recent years of collision records (January 1, 2019, to December 31, 2023) provided by the Oregon Department of Transportation (ODOT) were reviewed to identify existing traffic safety issues at the study intersections. A summary of the total and average annual number of reported collisions as well as the observed crash rates at the study intersections are provided in Table 2.

Table 2. Study Intersection Collision Data Summary (2019 – 2023)

Intersection	Number of Reported Collisions					Total	Annual Average	Crash Rate per MEV
	2019	2020	2021	2022	2023			
1. Molalla Ave/Pearl St	4	2	0	2	3	11	2.20	0.39
2. Molalla Ave/Holmes Ln/Hilda St	3	2	3	3	1	12	2.40	0.40
3. Molalla Ave/Warner Milne Rd	6	3	6	2	3	20	4.00	0.60
4. Molalla Ave/Shared Business Dwy (Safeway)	4	3	3	0	0	10	2.00	0.30
5. Molalla Ave/Beavercreek Rd	13	9	5	8	10	45	9.00	0.84
6. Molalla Ave/Clairmont Way	4	2	1	4	3	14	2.80	0.52
7. OR 213/Molalla Ave	10	4	2	5	0	21	4.20	0.39
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	0	0	1	0	0	1	0.20	0.03
9. OR 213/Beavercreek Rd	29	27	23	16	33	128	25.60	1.25

Source: ODOT 2025.
Note: MEV = million entering vehicles

As shown in Table 2, the most collisions that occurred within the study area over the last five-year review period occurred along Beavercreek Road at Molalla Avenue and OR 213 with an annual average of 9 collisions per year and approximately 2 collisions per year, respectively. The most common collision types experienced at the study intersections were rear-end collisions followed by approach turn collisions, primarily resulting in property damage only and minor injury. There were five collisions over the last five-year review period at the study intersections of Molalla Avenue/Pearl Street, Molalla Avenue/Warner Milne Road and Molalla Avenue/Clairmont Way involving a pedestrian, two of which resulting in fatality at Molalla Avenue/Pearl Street and Molalla Avenue/Warner Milne Road, occurring in 2019 and 2022, respectively. Both intersections are signalized with crosswalks provided across all legs of the intersections. No other fatalities were reported within the study area. Based on the review of existing collisions in the study area, no patterns of safety concerns were identified.

The intersections of Molalla Avenue and Beavercreek Road are located along OR 213, a state highway classified as principal arterial. According to the ODOT CAR Unit Crash Rate Table II, the crash rate along the state highway system principal arterial roadways was observed to range from 1.25 in 2022 to 1.40 in 2019. The statewide 90th percentile intersection crash rates detailed in Exhibit 4-1 of ODOT's *Analysis Procedures Manual* (Version 2, October 2024) show a rate of 0.86 for urban four-legged signalized intersections. As shown in Table 2, the crash rate at OR 213/Molalla Avenue is below both the statewide observed crash rates and less than the 90th percentile crash rates. The OR 213/Beavercreek Road intersection is identified within the top 5 percent of sites in the ODOT's *Safety Priority Index System* (SPIS) sites and the crash rate during the study period exceeds the 90th percentile crash rates but is consistent with the lower of the observed crash rates along a principal arterial. As identified above, the City has been undergoing safety improvements at the OR 213/Beavercreek Road intersection since 2023 including signal modifications and improved signage at the intersection with OR-213 which have since been completed.

Project Impacts

This section of the report documents project-generated impacts within the study area. First, peak hour traffic volumes are estimated, distributed, and assigned to adjacent roadways and intersections within the study area. Next, future (2030) traffic volumes including project traffic are developed and the potential impact to traffic volumes and traffic operations are identified.

Trip Generation

Trip generation for the proposed project was calculated based on trip rates using the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021) as coordinated and approved with City and ODOT staff through scoping of the traffic analysis. The trip generation was adjusted for pass-by and internal trips. Pass-by trips reflect traffic already on streets in the vicinity of the project site that would visit the commercial components of the project while driving by the site on the way to its final destination. The land use assumptions and pass-by rates per parcel are summarized below based on ITE's *Trip Generation Manual* (11th Edition, 2021):

- Parcel A: 14,600 square feet (sf) retail – A drive-through window is planned for the northern side of the retail building with the drive-through lane circulating on the eastern side of the building. For purposes of the traffic analysis, one quarter of the building was assumed as ITE's Coffee Shop with Drive Through Window (LU #937) with the remaining as ITEs Strip Retail Plaza (<40k) (LU #822). Pass-by rates for the retail and drive through land uses are assumed to be 40 percent and up to 55 percent, respectively.
- Parcel B: up to 210 multi-family apartment units – ITE's Multifamily Housing (Mid-Rise) (LU #221). No pass-by is associated with residential.
- Parcel C: No land use - right-of-way
- Parcel D: 4,900 sf fast food restaurant with drive-through – ITE's Fast-Food Restaurant with Drive-Through Window (LU #934). Pass-by rates for the drive through restaurant land use is assumed to be 55 percent.

The inclusion of internal capture was assumed consistent with the methodology per ITE's *Trip Generation Handbook* (3rd Edition, 2017) resulting in an estimated overall internal capture rate for the full development of 5 percent and 25 percent in the AM and PM peak hours, respectively.

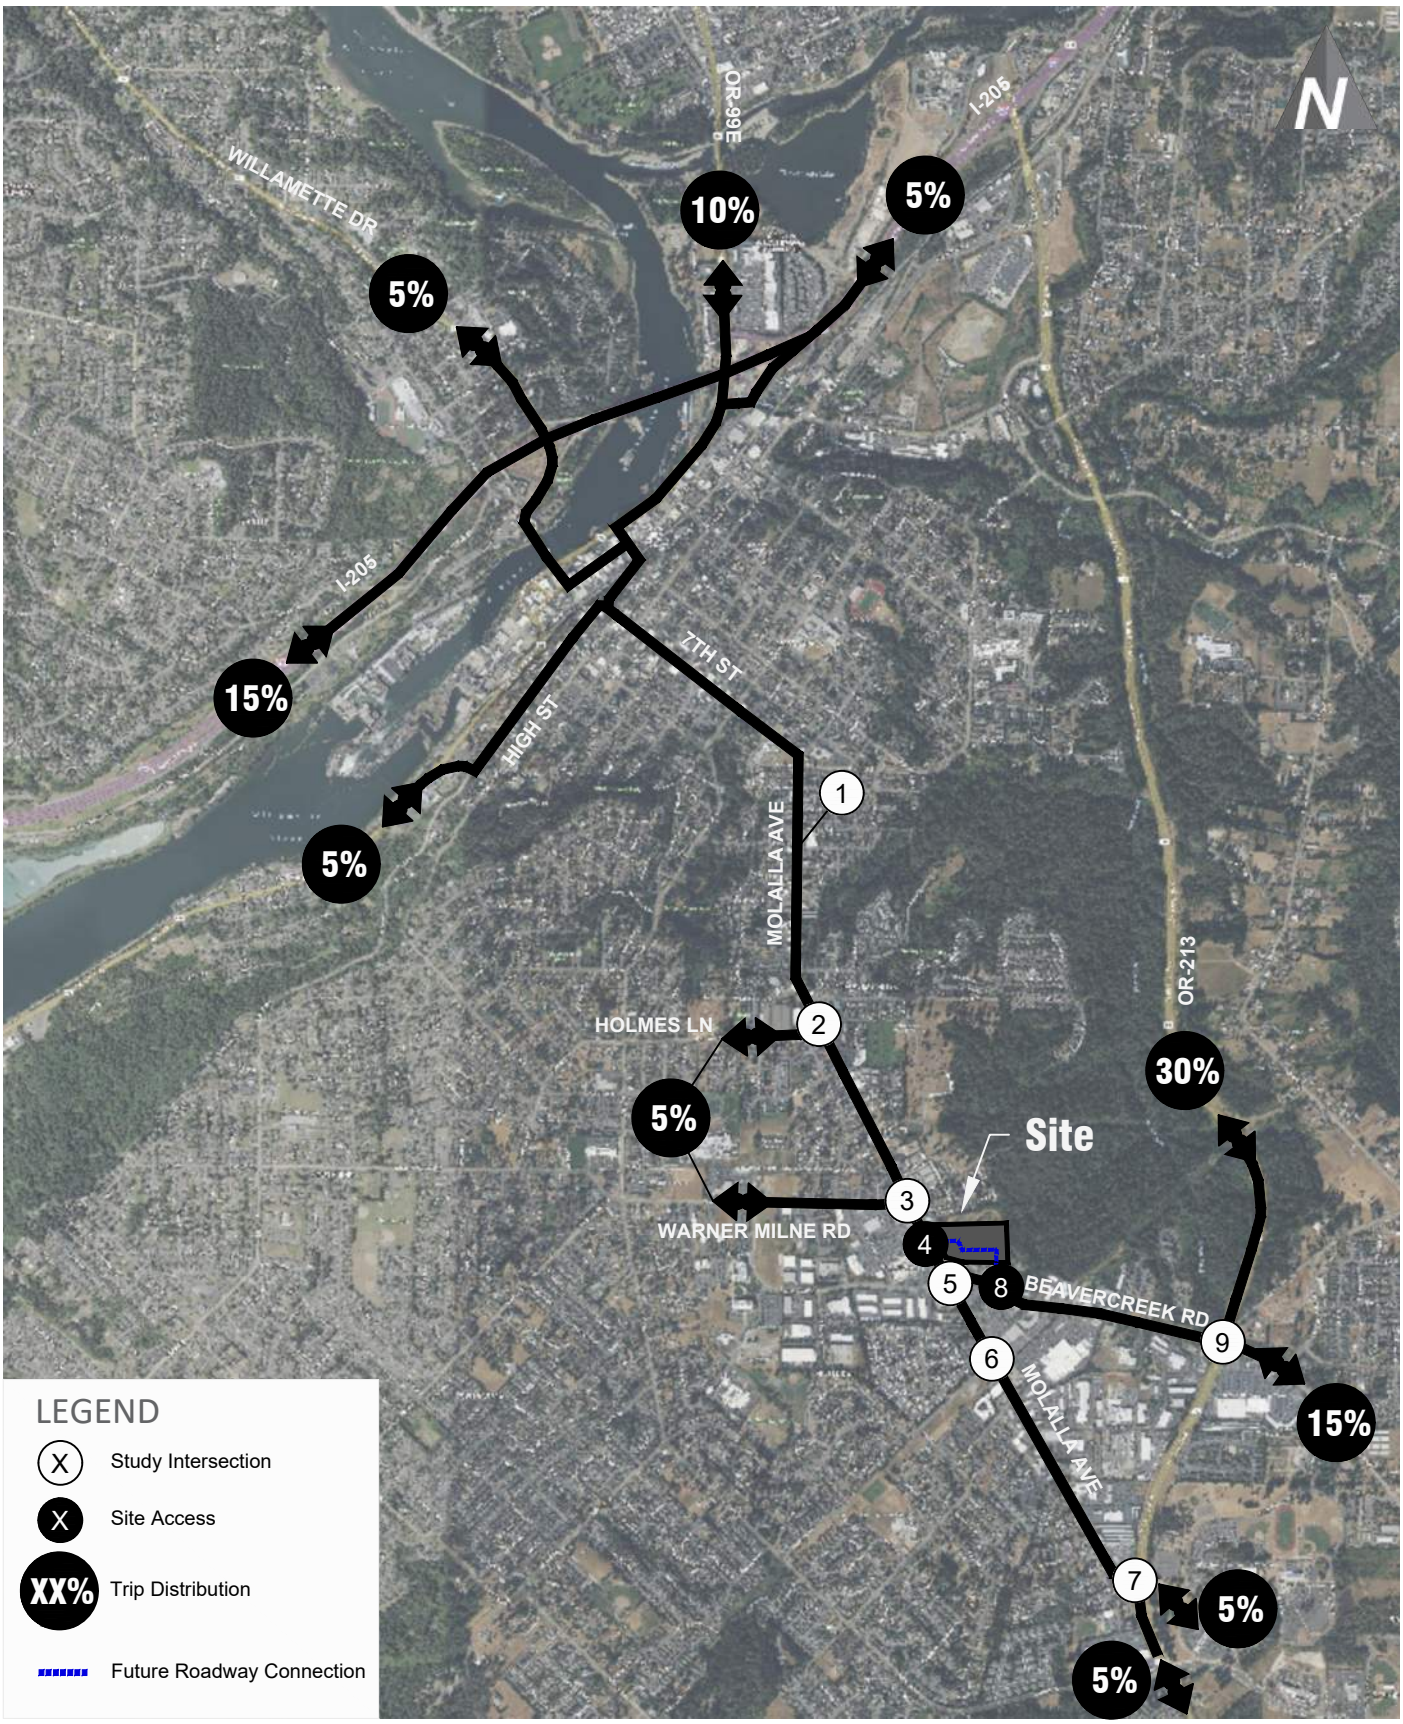
Table 3 shows the weekday vehicle trips generated by the proposed project. The detailed trip generation calculations are included in Appendix C.

Table 3. Estimated Weekday Vehicle Trip Generation

Land Use[1]	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Mid-Rise Apartments (LU #221)	210 du	710	18	49	67	33	21	54
Retail	14,600 sf	2,174	166	161	327	77	76	153
Pass-by		*-1,092*	*-81*	*-81*	*-162*	*-40*	*-40*	*-80*
Restaurant (LU #934)	4,900 sf	2,096	107	106	213	75	64	139
Pass-by		*-1,100*	*-53*	*-53*	*-106*	*-38*	*-38*	*-76*
Total Primary		**2,788**	**157**	**182**	**339**	**107**	**83**	**190**

Note: du = dwelling units, sf = square feet
1. Average trip rates from ITE *Trip Generation Manual*, 11th Edition (2021).

As shown in Table 3, the proposed project is estimated to generate 2,788 new weekday daily trips with 339 trips occurring in the AM peak hour and 190 trips occurring in the PM peak hour.



Trip Distribution and Assignment

Individual trip distribution patterns for the residential and commercial uses were estimated to and from the project site and were coordinated with City staff.

The residential trip distribution pattern was estimated based on U.S. Census Bureau's *OnTheMap* tool. *OnTheMap* is a web-based mapping and reporting application, which shows where workers are employed and where they live based on census data. The *OnTheMap* census data was translated to the number of people that live within a quarter-mile radius of the proposed project and where they work. The residential use project trip distribution for vehicle trips is shown in Figure 6.

Trip distribution patterns assumed for the commercial uses to and from the project site were generally assumed to be local and are based on the existing travel patterns in the vicinity of the project. The commercial use project trip distribution for vehicle trips is shown in Figure 7.

The weekday peak hour primary project trips were assigned to the study area based on the respective anticipated project trip distribution patterns. The commercial pass-by trips were assigned via the adjacent intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The resulting AM and PM peak hour trip assignment is illustrated in Figures 8 and 9, respectively.

Future With-Project Traffic Volumes

Site-generated weekday peak hour traffic volumes were added to the future without-project traffic volumes at the study intersections. Additionally, with the new roadway connection between the existing signalized intersections along Molalla Avenue and Beavercreek Road, driveways are proposed for the project as well as a new driveway serving the existing commercial uses northeast of the Molalla Avenue/Beavercreek Road intersection. A portion of the estimated existing commercial uses were assumed to utilize the proposed driveway. The resulting future (2030) with-project peak hour traffic volumes are illustrated on Figure 10.

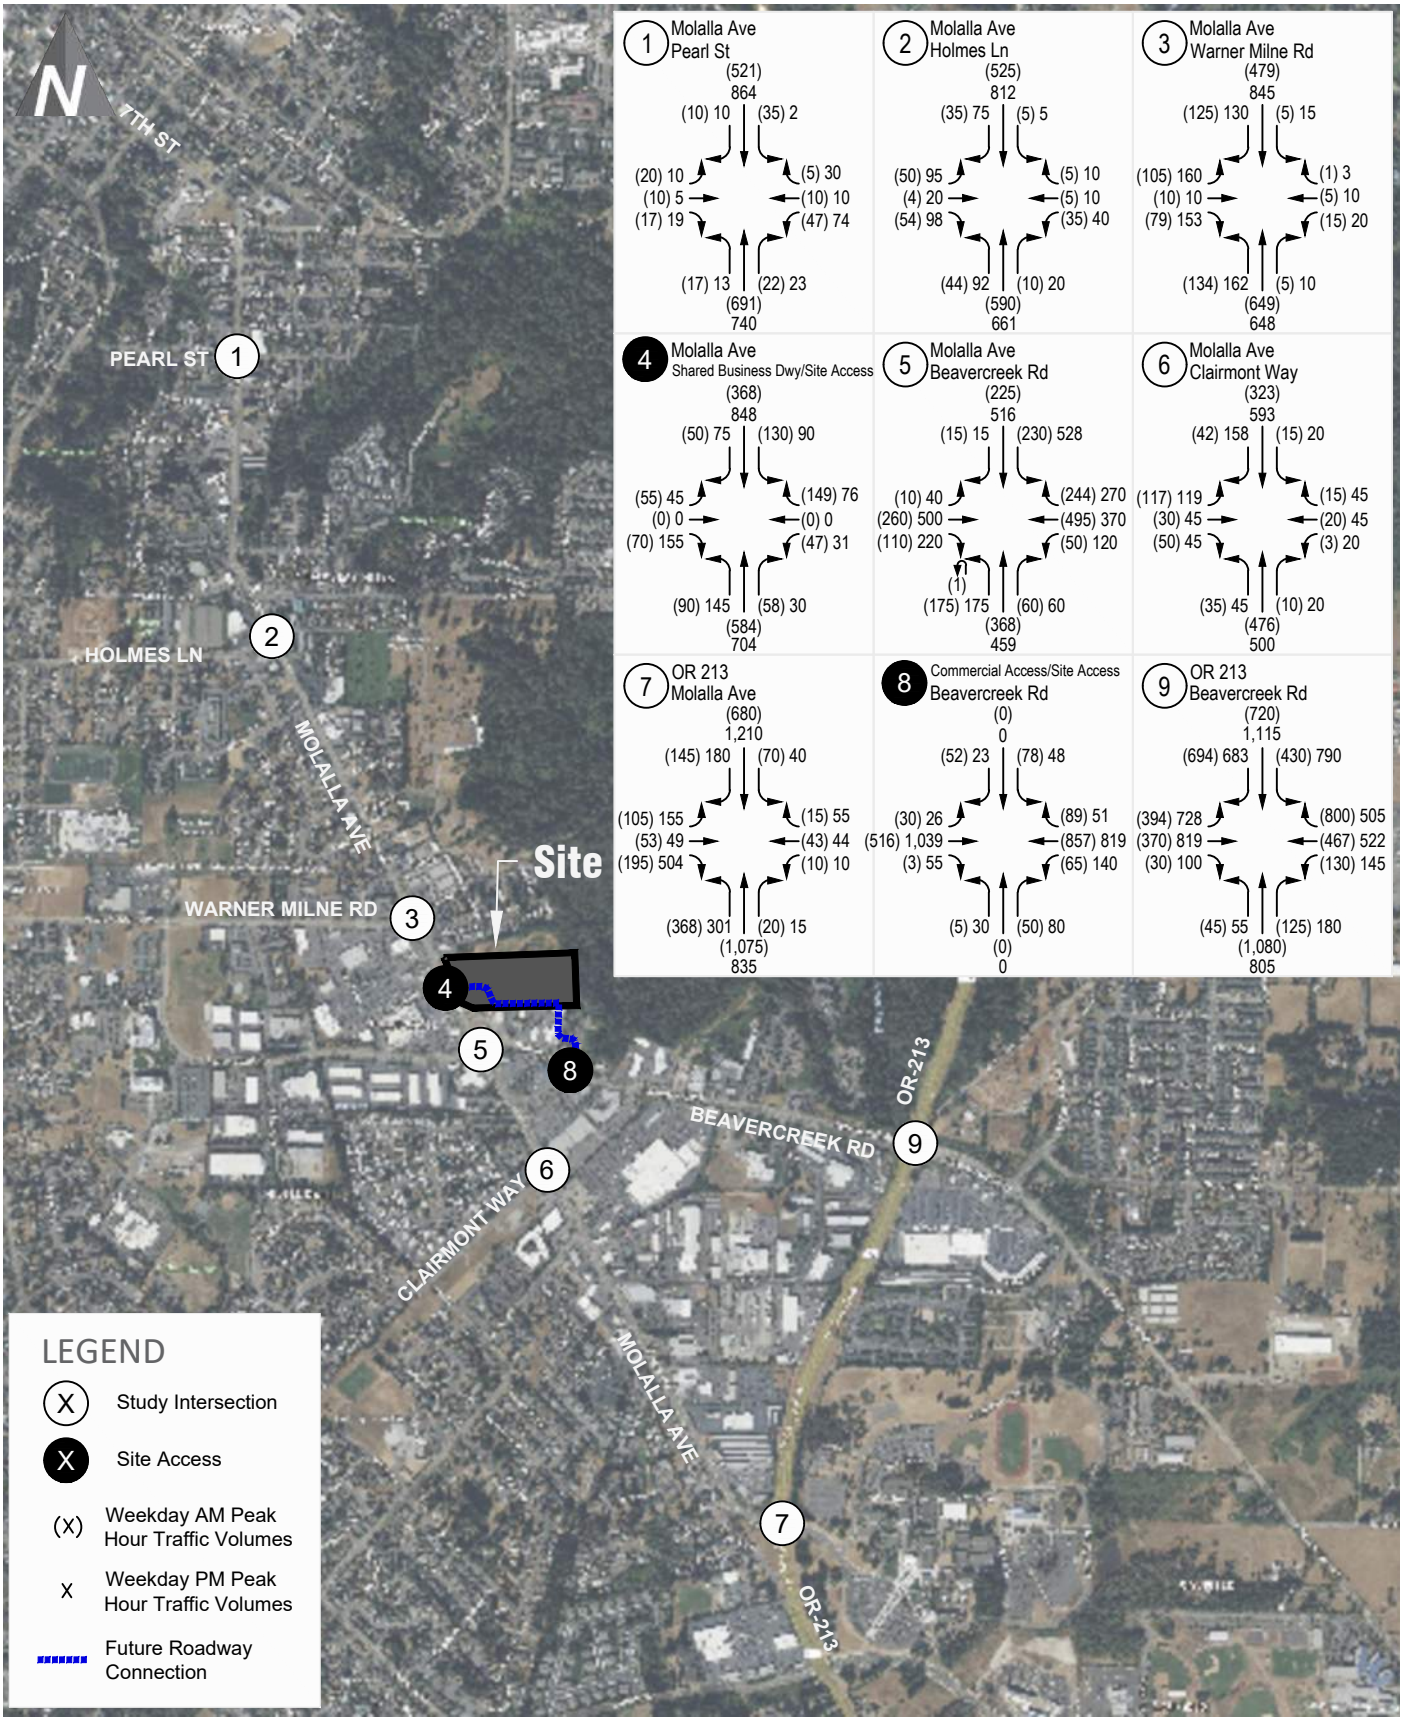

Table 4 summarizes the anticipated increase in total entering traffic at the off-site study intersections as well as the percent of future with-project traffic volumes attributable to the proposed project.

Table 4. Peak Hour Traffic Volume Impacts at Study Intersections

Intersection	Future (2030) Without-Project TEV	Project Trips TEV[1]	Shift of Existing Commercial	Future (2030) With-Project TEV	Percent Share
AM Peak Hour					
1. Molalla Ave/Pearl St	1,255	150	-	1.405	10.7%
2. Molalla Ave/Holmes Ln/Hilda St	1,184	178	-	1,362	13.1%
3. Molalla Ave/Warner Milne Rd	1,406	206	-	1,612	12.8%
4. Molalla Ave/Shared Business Dwy (Safeway)	1,290	311	0	1,601	19.4%
5. Molalla Ave/Beavercreek Rd	2,211	48	-16	2,243	1.4%
6. Molalla Ave/Clairmont Way	1,088	48	-	1,136	4.2%
7. OR 213/Molalla Ave	2,745	34	-	2,779	1.2%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	1,578	162	5	1,745	9.6%
9. OR 213/Beavercreek Rd	5,200	85	-	5,285	1.6%
PM Peak Hour					
1. Molalla Ave/Pearl St	1,717	83	-	1,800	4.6%
2. Molalla Ave/Holmes Ln/Hilda St	1,840	98	-	1,938	5.1%
3. Molalla Ave/Warner Milne Rd	2,053	113	-	2,166	5.2%
4. Molalla Ave/Shared Business Dwy (Safeway)	2,025	174	0	2,199	7.9%
5. Molalla Ave/Beavercreek Rd	3,265	25	-17	3,273	0.3%
6. Molalla Ave/Clairmont Way	1,630	25	-	1,655	1.5%
7. OR 213/Molalla Ave	3,380	18	-	3,398	0.5%
8. Shared Business Dwy (South Ridge)/ Beavercreek Rd	2,212	94	6	2,311	4.3%
9. OR 213/Beavercreek Rd	6,395	52	-	6,447	0.8%

Note: TEV = Total Entering Vehicles
1. TEV project trips are inclusive of both primary and pass-by trips at the intersection as applicable.

As shown in Table 4, the project share in future (2030) traffic volumes is estimated to be approximately 8 percent or less during the weekday PM peak hours and up to 19 percent during the weekday AM peak hours at all of the study intersections.

Future (2030) With-Project Peak Hour Traffic Volumes

FIGURE 10

OR City Mixed-Use

transpogroup

Mar 05, 2026 – 2:09pm lilyh M:\25\1.25192.00 – OR City Retail\Graphics\DWG\OR City Graphics_Update.dwg Layout: Future With–Project Vols

Future With-Project Traffic Operations

Future (2030) with-project study intersection operations were evaluated during both the weekday AM and PM peak hours. The v/c ratio and delay were calculated for with-project conditions consistent with the methodology described for existing and without-project conditions. Analysis parameters such as lane channelization and signal timing were assumed to be consistent with the future without-project conditions. Table 5 compares the future (2030) without- and with-project intersection operations for the weekday AM and PM peak hours. Operational worksheets are included in Appendix B.

Note that the intersections of Molalla Avenue/Shared Business Driveway (Safeway) and Shared Business Driveway (South Ridge)/Beavercreek Road both assume the added legs to accommodate the new road connection between the intersections to be constructed with the proposed project. The new leg at each of the existing traffic signals was analyzed as a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. Additional discussion of the new roadway segment between Molalla Avenue and Beavercreek Road is provided in the site access section in the subsequent section.

Table 5. Future (2030) Without & With-Project Peak Hour Intersection Operations

Intersection	Traffic Control	Future (2030) Without-Project		Future (2030) With-Project	
		v/c[1]	Delay[2]	v/c	Delay
Weekday AM Peak Hour					
1. Molalla Ave/Pearl St	Signal	0.46	4.9	0.52	5.3
2. Molalla Ave/Holmes Ln/Hilda St	Signal	0.40	8.1	0.46	8.5

9. OR 213/Beavercreek Rd	Signal	0.94	75.4	0.94	77.8

Note: **Bold** indicates the required V/C standard is not met.
1. Volume to capacity (v/c) ratio reported for the overall intersection at signalized intersections.
2. Average delay per vehicle in seconds reported for the overall intersection delay at signalized intersections.

As shown in Table 5, with the addition of the project, the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions with the exception of at the

2 intersections of the added roadway segment between Molalla Avenue and Beavercreek Road due to the added legs of the intersection and resulting in a reduction in the v/c ratio.

Site Access Analysis

Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road. The proposed road section between Molalla Avenue and Beavercreek Road is illustrated in Figure 2. As shown in the figure, a three-lane section is proposed along the project frontage extending from Molalla Avenue beyond the commercial accesses which then transitions to a two lane section to Beavercreek Road.

The traffic operational review for the site focused on the following key aspects as requested by City staff which are reviewed in the sections below.

- **Modified Traffic Signals** – The operations at the modified signals were evaluated both in terms of v/c of the intersections as well as 95th percentile queues.
- **Left-turn lane warrants** – A three lane section providing a two-way left turn lane is proposed through the project's commercial driveways but then is proposed to transition to a two-lane section. A warrant review is conducted to confirm if left turn lanes are recommended at the two driveways further to the east of this section. The two known driveway locations are illustrated in Figure 2.
- **On-site queueing** – The on-site queuing associated with the proposed drive-throughs.

Modified Traffic Signals

The traffic operations at the intersections of Molalla Avenue/Shared Business (Safeway) Driveway and Shared Business (South Ridge) Driveway/Beavercreek Road intersections were evaluated under future (2030) with-project conditions for the weekday AM and PM peak hours. As noted above, the new leg at each of the existing traffic signals is assumed to be a three-lane section with a separate left turn lane and shared through-right turn lane. The signal timing at each intersection was assumed to be permissive for the added approaches, consistent with the current timing. The resulting operations are summarized in Table 5 above. As shown in the table, both intersections are forecast to meet the required operational standards, operating with a v/c of 0.58 or lower during the weekday AM and PM peak hours.

The 95th percentile queues (the queues that are only exceeded 5% of the time) at the signalized access intersections along Molalla Avenue and Beavercreek Road were also evaluated using synchro, consistent with the operational analysis and are summarized in Table 6.

The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be approximately 3 vehicles or less. These forecast queues will be able to be accommodated within the provided storage at each intersection. These queues correspond with the forecast weekday AM and PM peak hour volumes along the proposed roadway section with the opening of the project of approximately 630 trips (in/out) split between the 2 accesses as illustrated in Figure 10 above.

The queues of the other approaches are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project). Additionally, all 95th percentile queues at the two signals are forecast to be accommodated within the available storage with the exception of the northbound left-turn queue at the Molalla Avenue signal during the PM peak hour.

Table 6. Future (2030) Molalla Ave & Beavercreek Rd Intersection 95th Percentile Queues

Movement	4. Molalla Ave/Shared Business Dwy (Safeway)					8. Shared Business Dwy (South Ridge)/ Beavercreek Rd				
	Available Storage[2]	AM Peak Hour		PM Peak Hour		Available Storage	AM Peak Hour		PM Peak Hour	
		Without-Project	With-Project	Without-Project	With-Project		Without-Project	With-Project	Without-Project	With-Project
Eastbound Left-Turn	110'	25'	30'	30'	30'	115'	<25'	<25'	<25'	<25'
Eastbound through/right	110'	30'	35'	105'	110'	715'	35'	50'	160'	160'
Westbound Left-Turn	-[1]	-	25'	-	25'	115'	<25'	<25'	25'	25'
Westbound through/right	-[1]	-	80'	-	50'	630'	<25'	95'	60'	85'
Northbound Left-Turn	100'	45'	60'	**110'**	**115'**	50'	<25'	<25'	25'	25'
Northbound through/right	530'	60'	95'	95'	110'	50'	25'	25'	40'	40'
Southbound Left-Turn	-[1]	<25'	60'	<25'	40'	-[1]	-	35'	-	25'
Southbound through/right	500'	75'	85'	225'	230'	-[1]	-	<25'	-	<25'

Note: **Bold** indicates the 95th percentile queues exceeds the available storage. Shading indicates the approaches of the new roadway added with the project.
1. Intersection movement being added and/or modified with project.
2. Available queueing storage distance to the adjacent intersection. Turn lane storage assumes storage plus full width opening (not including the taper).

The northbound left-turn 95th percentile queue at the Molalla Avenue signal is forecast to have up to 1 vehicle extending beyond the available storage under both future (2030) without-project and with-project conditions. The table shows that the 95th percentile queue is forecast to increase by 5' (less than 1 vehicle) with the project as compared to without project conditions, even though the project does not add any trips to the northbound left-turn movement. This minimal increase in 95th percentile queue is due to the actuated signal timing of the intersection, which adapts phasing time allocations to movements based on volumes of the intersection. Due to the addition of the east leg added with the project, the phase time at the actuated signal adjusts accordingly, resulting in the slight added forecast 95th percentile queue of the northbound left-turn movement. Although the 95th northbound left-turn percentile queue is forecast to exceed the storage, the average queue is forecast to be accommodated within the available storage under both future (2030) without- and with-project conditions at approximately 65 feet or less during the PM peak hour.

Left-Turn Lane Warrants

Left-turn lane warrants have been reviewed for the proposed Les Schwab Access and the eastern residential access located on the east side of the project site along the proposed Public Access Road. Based on the City of Oregon City's Turn Lane Warrant guidelines defined in the Transportation Impact Analysis Guidelines (July 2021), Section 7.14.2, the "Engineer shall exercise professional judgement in evaluating the need for, and benefit of, providing dedicated left-turn lanes". The City provided references to consider include the AASHTO *Policy on Geometric Design of Highways and Streets* and the National Cooperative Highway Research Program (NCHRP) Report 457 *Evaluating Intersection Improvements.* The left turn warrants from both sources were evaluated assuming the future (2030) with-project weekday peak hour traffic volumes. The left-turn warrant evaluation is included in Appendix D. As shown in the appendix, no left-turn lanes are warranted at any of the site access intersections under the future (2030) weekday AM or PM peak hours.

In addition to the driveways associated with the project, additional accesses are anticipated on the south side of the internal roadway in the future as identified as part of the Beavercreek Road Access Management Plan as illustrated in Figure 2. These access points would serve the existing commercial development adjacent to Les Schwab located between the commercial and residential driveways within the proposed two-lane roadway section. The turn lane needs associated with that potential future development would be evaluated as part of that future project and if shown to be warranted, the widening to accommodate a turn lane could be provided to the south of the proposed road.

On-Site Queueing

Additionally, on-site queuing associated with the proposed drive-through uses on both Parcels A and D were evaluated. The drive-through queuing was estimated using the Poisson queuing distribution. The total external inbound vehicle trips (inclusive of pass-by trips) were assumed to utilize the drive through for purposes of providing a conservative queueing analysis. The average service time for a fast-food restaurant drive-through window is approximately 4 minutes based on the annual study conducted by QSR[6]. This service time was assumed for both the drive-through uses proposed. The resulting queueing for each is summarized below with detailed Poisson queuing worksheets provided in Appendix E.

- Parcel A – The drive-through proposed along the northern side of the retail building includes approximately 335 feet of storage with dual lanes allowing for approximately 500 feet of total storage or at least 20 vehicles. The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 17 vehicles which would be accommodated within the proposed drive-through storage.

- Parcel D – The weekday AM and PM peak hour anticipated drive-through 95th-percentile queue lengths are estimated to be 13 vehicles or less or up to 7 vehicles per lane. The proposed site plan illustrates each drive lane can accommodate a queue of at least 275’ or 11 vehicles per lane; therefore, the queues are anticipated to be accommodated within the proposed driveway storage.

[6] *25th Anniversary Edition Drive-Thru Study (Intouch Insight and QSR).*

Mitigation Measures

Based on the operational review above for both without and with-project conditions, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane as noted above. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 above, the project is forecast to contribute 52 project trips to the intersection during the PM peak hour. This results in an estimated fee of $21,008 at this location as pro-rata share contribution to the planned improvement project.

Additionally, a Transportation System Development Charge (TSDC) will be required associated with the development of the project's land uses.[7] The project site is located inside the Molalla Avenue Corridor SDC Special Location Discount Area. Based on the current TSDC rates (Effective July 1, 2018), multi-family developments are required to pay a fee of $6,474 per multi-family dwelling unit constructed. Non-residential developments are required to submit a *System Development Charges Request Form* to the City to determine the fee required. The residential portion of the project proposed to construct 210 multifamily dwelling units will require a fee of $1,359,540. The TSDC associated with the non-residential uses proposed on site will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*.

[7] Each of the pad users will pay their own fees when they proceed with their own pad development.

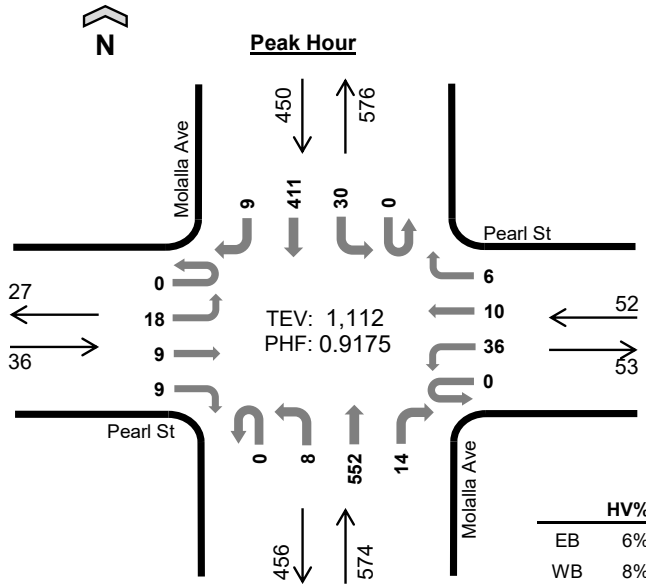
Findings and Recommendations

This traffic impact analysis summarizes the project traffic impacts of the proposed Oregon City Mixed-Use project located at 1367 Molalla Avenue in Oregon City. General findings and recommendations include:

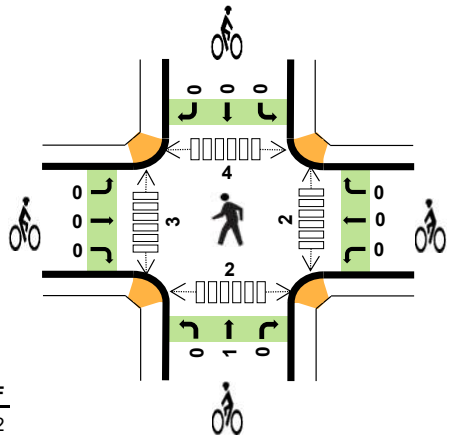
- **Project Description** – The proposed project will construct a 14,600 sf retail, a 4,900 sf fast food restaurant with drive through, and up to 210 multifamily apartment units on 3 parcels in Oregon City along with a 4th parcel being used for right-of-way.

- **Trip Generation** – Accounting for internal capture of trips that will occur between the proposed uses and pass-by trips associated with the commercial uses of the project, the proposed project is estimated to generate 2,788 new weekday daily trips with 339 trips occurring in the AM peak hour and 190 trips occurring in the PM peak hour.

- **Traffic Operations** – With the addition of project generated traffic, all of the study intersections are forecast to continue meeting the required v/c standards with a v/c ratio of 0.94 or less during the weekday AM and PM peak hour conditions. The v/c ratio is forecast to increase by 0.04 or less during both the weekday AM and PM peak hours relative to future (2030) without project conditions.



- **Site Access** – Access to and from the site will be provided via the new roadway constructed between the existing signalized intersections of Molalla Avenue/Shared Business (Safeway) Driveway Shared Business (South Ridge) Driveway/Beavercreek Road.
    - The two signalized intersections are forecast to operate acceptably.
    - The 95th percentile queues of the westbound approach at the Molalla Avenue signal and the southbound approach at the Beavercreek Road signal (i.e. the approaches of the new roadway added with the project) are forecast to be approximately 3 vehicles or less. Additionally, the queues of the other approaches at the two signalized intersections are anticipated to have minimal change with the project relative to without project conditions (i.e. approximately 1 car length or less increase in 95th percentile queues with the project compared to without the project).
    - The proposed road section is three-lane through the commercial area and then transitions to a two-lane section further east. This proposed section was confirmed through a warrant analysis for current uses. Any future development and associated need for widening to accommodate turn lanes would be assessed and could be provided to the south of the proposed road.



- **Mitigation** – The total TSDC associated with the land uses of the proposed project will be determined by the City of Oregon City following the submittal of the *System Development Charges Request Form*. Additionally, the project would contribute its pro-rata share at the Beavercreek Road/OR-213 intersection toward TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane.

Date: March 12, 2026

File No: GLUA-25-00025 PA-25-00016

Request: 1367 Molla Avenue Transportation Comments

Reviewer: Reah Flisakowski, PE, and Hallie Turk EI, RSP$_1$, DKS Associates

DKS Associates has reviewed the Oregon City Mixed-Use Traffic Impact Analysis (TIA)[1] and revised version of the TIA.[2] The project will construct a mixed-use development including retail use, multifamily apartments, and a fast-food restaurant at 1367 Molalla Avenue in Oregon City.

The general comments and recommended conditions of approval are based on a review of the submitted materials.

TRAFFIC IMPACT ANALYSIS REVIEW

Key findings of the TIA are summarized below.

PROPOSED DEVELOPMENT AND STUDY AREA

- The project will construct a mixed-use development at 1367 Molalla Avenue comprised of 14,600 square feet of retail space, up to 210 multi-family apartment units, and one 4,900 square-foot fast food restaurant with a drive-through window. The project site is located on four existing tax lots and is currently vacant.
- The project will construct a new public street that connects to Molalla Avenue at the existing Safeway access and Beavercreek Road at the existing Southridge Shopping Center commercial access. According to the site plan (shown in Figure 2 of the TIA), this future street will provide access to the development at six driveway locations.
- The project is expected to be fully constructed and operational by the year 2030.
- The TIS analyzed nine study intersections:
    - Molalla Ave/Pearl St
    - Molalla Ave/Holmes Ln

[1] Oregon City Mixed-Use: Traffic Impact Analysis. Transpo Group. October 2025.
[2] Oregon City Mixed-Use: Traffic Impact Analysis. Transpo Group. Revised March 2026.

- Molalla Ave/Warner Milne Rd
- Molalla Ave/Safeway access/Future site access
- Molalla Ave/Beavercreek Rd
- Molalla Ave/Clairmont Way
- Molalla Ave/OR-213
- Commercial Access/Beavercreek Rd/Future site access
- OR-213/Beavercreek Rd

VOLUME DEVELOPMENT

- Existing condition intersection counts were collected in September 2025.
- An average annual growth rate of 2%, which was provided by City staff, was applied to represent background growth.
- Trips from the following in-process developments were included in background volumes:
  - 770 Pleasant Townhomes
  - Abernethy Place
  - Canemah Road Subdivision
  - Central Point Subdivision
  - Clackamas Heights Redevelopment
  - Downtown North End Development
  - Park Place Crossing Phase I
  - Serres Farm Master Plan
  - Thimble Creek South Phase I
  - White Lane Subdivision

TRIP GENERATION AND ANALYSIS

- Based on the most recent five years of available crash data (2019 to 2023), critical crash rate calculations, and ODOT SPIS lists, the OR-213/Beavercreek Road intersection was flagged for safety concerns. The TIA notes that since 2023, safety improvements such as signal modifications and improved signage have been completed at this location. As such, no safety mitigations are recommended at this time.
- The development is expected to generate 339 (157 in, 182 out) a.m. peak hour trips, 190 (107 in, 83 out) p.m. peak hour trips, and 2,788 weekday trips. This includes a conservative internal trip capture reduction of 5% in the a.m. peak hour and 25% in the p.m. peak hour, a pass-by rate of 40% for both the a.m. and p.m. peak hours for the Strip Retail (822) land use, and a pass-by rate of 55% for both the a.m. and p.m. peak hours for the Restaurant (934) and Coffee Shop with Drive Through Window (937) land uses.
- Different trip distributions were applied for the commercial and residential land uses.

- *Commercial Trips (Retail and Fast Food):* Approximately 35% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 65% are expected to travel to/from destinations to the north along Molalla Avenue.
- *Residential Trips:* Approximately 55% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 45% are expected to travel to/from destinations to the north along Molalla Avenue.

- Left turn lane warrants were evaluated at future site access intersections. No left turn lane warrants were met.

- All study intersections are expected to meet performance standards under all analysis scenarios.

- A queuing analysis showed queue lengths at the Molalla Avenue/Shared Business Driveway (Safeway) intersection are expected to exceed the available storage for the northbound left turning movement under both background and build conditions in the p.m. peak hour. The 95th percentile queue is expected to exceed the available storage by only one vehicle in the p.m. peak hour only. No mitigation is recommended at this time.

SITE PLAN REVIEW

- The TIA does not address the proposed site plan's compliance with access spacing standards or sight distance standards.

- The TIA does not address the proposed development's pedestrian/bicycle routes to the nearest schools in consideration of safe routes to school.

- The TIA does not discuss the project's internal vehicle, pedestrian, and bicycle circulation.

RECOMMENDED TIA REVISIONS AND CONDITIONS OF APPROVAL

The following conditions of approval are recommended based on a review of the TIA and site plan:

GENERAL DEVELOPMENT PLAN CONDITIONS

- Since the TIA assumes a reduction in vehicle trips due to internal trip capture that would occur as walking and/or biking trips, the TIA shall be revised to discuss the project's internal pedestrian and bicycle circulation needs and how the site plan adequately accommodates active modes.

- Minimum AASHTO sight distance requirements shall be met at all site intersections and driveways. Sight distances on the internal local street system shall be approved by the City Engineer prior to final site plan approval.

- A proportionate share fee contribution of $404 per p.m. peak hour trip shall be collected for planned improvements at OR-213/Beavercreek Road. The fee amount will be determined as part of future detailed development plan applications.
- A transportation system development charge, associated with the Molalla Avenue Corridor SDC Special Location Discount Area, of $6,474 per dwelling unit shall be collected based on the number of multi-family dwelling units constructed. The fee amount will be determined as part of future detailed development plan applications.
- Both the October 2025 and March 2026 versions of the study finds that the existing transportation system will adequately accommodate the proposed master plan uses. The October 2025 analysis included the proposed Trader Joe's grocery store that represents reasonable worst-case development for that parcel.
- Upon development opening, short-term traffic operations will likely exceed the study's reported operations, which may result in traffic congestion and concerns regarding vehicle queuing. This will be addressed in future detailed development plan applications.

STREET IMPROVEMENT CONDITIONS

- The new public street connection shall be constructed as a city collector street with a modified cross-section standard including dedicated bike lanes, sidewalks, center turn lane and street trees. The design of the facility shall be approved by the City Engineer.
    - The proposed three-lane section along the project frontage shall extend from Molalla Avenue beyond the commercial accesses and transition to a two lane section east of the commercial accesses toward Beavercreek Road.

FUTURE DETAILED DEVELOPMENT PLAN CONDITIONS

- Transportation impact studies will be required for future detailed development plan applications for each parcel and used to write additional conditions of approval. They will include items such as:
    - The TIA shall be revised to include a discussion of the proposed site plan's compliance with access spacing standards, sight distance standards, and safe pedestrian/bicycle routes to school. These elements are required in the Oregon City TIA Guidelines.[3] The site plan shall meet the city's transportation standards and requirements.
    - The City may require a traffic management plan to help mitigate short-term traffic operational concerns related to the drive-through restaurant's opening.

Hi Rocky,

I have a call with our attorney this afternoon. Hold off on having your attorney contact her until I talk to her- I will let you know if I need additional information from you. I will send a follow-up email.

It was good seeing you today 😊

EASEMENT

This Easement ("Easement") is made this 30th day of SEPT, 2004, by and between **ROCKY C. YOUNGER and JANICE C. YOUNGER** (collectively, "Grantor"), and **WAL-MART STORES, INC.**, a Delaware corporation ("Wal-Mart").

RECITALS

Grantor is the owner of certain real property legally described on ***Exhibit "A"*** attached hereto (the "Grantor Property"), a portion of which is depicted as the construction easement on ***Exhibit "C"*** attached hereto and incorporated herein by this reference (the "Easement Property");

Wal-Mart owns the certain real property contiguous to the Easement Property as legally described on ***Exhibit "B"*** attached hereto (the "Wal-Mart Property");

Wal-Mart has requested that Grantor grant Wal-Mart an easement over the Easement Property.

NOW, THEREFORE, in consideration of the premises and promises contained herein, and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

AGREEMENTS

1. Accuracy of the Recitals. The parties hereby acknowledge the accuracy of the Recitals.

2. Grant of Easement. Grantor hereby grants and conveys to Wal-Mart a non-exclusive easement (the "Easement") in the area depicted on Exhibit "B" over, on and under the Easement Property for the purpose of constructing and thereafter maintaining a retention wall on the Wal-Mart Property and a new screening fence along the Grantor Property to replace the existing fence, all in connection with Wal-Mart's development of a retail facility on the Wal-Mart Property.

3. Clean-Up. Wal-Mart agrees that it will clean-up, restore and return the Easement Property, and any area of the Grantor Property that may be changed, altered or

FIDELITY NATIONAL TITLE CO.
This instrument filed for record by Fidelity National Title as an accommodation only. It has not been examined as to its execution or as to its effect upon the title.

01-11167-C

affected by Wal-Mart's use of the Easement Property, to the condition that existed prior to Wal-Mart's use thereof under this Easement, including without limitation removing any piles of dirt and debris.

4. Indemnification. Wal-Mart hereby defends, indemnifies and holds Grantor harmless from and against all claims, proceedings, lawsuits, injuries, deaths, demands, losses, liabilities, fines, penalties, judgments, liens, awards, damages, costs, and expenses (including without limitation reasonable attorney's fees) arising out of Wal-Mart's exercise of the rights under this Easement and Wal-Mart's use, operation, maintenance and repair of the Easement Property, exclusive of any claims arising out of or in any way related to the negligent acts, omissions or willful misconduct of Grantor.

5. Running With the Land/Binding Effect. The Easement granted herein shall be appurtenant to and run with the land. This Easement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns.

6. Counterparts. This Easement may be executed in one or more counterparts, each of which in the aggregate shall constitute one and the same instrument.

IN WITNESS WHEREOF, the parties have executed this Easement as of the date and year first written above.

affected by Wal-Mart's use of the Easement Property, to the condition that existed prior to Wal-Mart's use thereof under this Easement, including without limitation removing any piles of dirt and debris.

4. Indemnification. Wal-Mart hereby defends, indemnifies and holds Grantor harmless from and against all claims, proceedings, lawsuits, injuries, deaths, demands, losses, liabilities, fines, penalties, judgments, liens, awards, damages, costs, and expenses (including without limitation reasonable attorney's fees) arising out of Wal-Mart's exercise of the rights under this Easement and Wal-Mart's use, operation, maintenance and repair of the Easement Property, exclusive of any claims arising out of or in any way related to the negligent acts, omissions or willful misconduct of Grantor.

5. Running With the Land/Binding Effect. The Easement granted herein shall be appurtenant to and run with the land. This Easement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns.

6. Counterparts. This Easement may be executed in one or more counterparts, each of which in the aggregate shall constitute one and the same instrument.

IN WITNESS WHEREOF, the parties have executed this Easement as of the date and year first written above.

ODOT Formal Response

Project: Oregon City Mixed Use General Development Plan	**Site Address:** 1367 Molalla Avenue
Jurisdiction: City of Oregon City	**Applicant:** Cypress Acquisitions, LLC
Jurisdiction Case #: GLUA-25-00025: CU-25-00001, MAS-25-00001, PARK-25-00001 (Master Plan) MAS-25-002_GEO-25-007_NROD-25-012 (Detailed Development Plan)	

The site of this proposed land use action is in the vicinity of OR 213 interchange. ODOT has permitting authority for this facility and an interest in ensuring that this proposed land use is compatible with its safe and efficient operation.

These comments, standards, and requirements are current as of the date of this letter. If the project scope and/or timeline is modified, the applicant should contact the ODOT Region 1 Development Review program (ODOT_R1_DevRev@odot.oregon.gov). Updated comments may be necessary.

LAND USE PROPOSAL

ODOT was notified of a land use application submitted to City of Oregon City for a proposed masterplan impacting tax lots 3200, 3201, 3300, 3400, 500, 501, and 602. The formal city notice includes the following project description:

> *"Proposed Master Plan to create development parcels for future development, along with a Conditional Use Review for two future drive-throughs and a Parking Adjustment to allow above the maximum parking requirements on two of the commercial parcels, along with a Detailed Development Plan for the construction of a new public street and associated infrastructure."*

COMMENTS/FINDINGS

ODOT understands the master plan proposes retail development on Parcel A, multi-family residential development on Parcel B, a new public street on Parcel C, and a quick-serve restaurant on Parcel D. Today, ODOT attended a pre-application conference (PA-26-00002) held March 11, 2026 for the proposed construction of a drive through restaurant on proposed Parcel D.

Traffic Impacts

As part of the materials provided to ODOT, ODOT received a copy of a Traffic Impact Study (TIS) prepared by Transpo Group, dated October 2025. ODOT has reviewed the TIS and supports its recommendation for the project to contribute its pro-rata share at the OR-213/Beavercreek Road intersection toward the City's Transportation System Plan (TSP) projects (construction of a westbound right-turn, merge lane at the OR-213/Beavercreek Road intersection).

ODOT RECOMMENDED CONDITIONS OF APPROVAL FOR LOCAL JURISDICTION

Traffic Impacts

☒ The applicant shall contribute proportional share contributions for the intersection improvements at OR 213/Beavercreek Road.

ADVISORY INFORMATION

Permits and Agreements to Work in State Highway Right of Way

☒ An ODOT Miscellaneous Permit must be obtained for all work in the State highway right of way. If applicable, contact the District Contact indicated below to determine permit requirements and to obtain application information.

Note: All ODOT permits and approvals must reach 100% plans before the District Contact signs off on a local jurisdiction building permit or other necessary requirements before construction.

Contact the ODOT Development Review Planner identified below for further coordination or questions regarding ODOT comments and requirements during the land use process.

Please send a copy of the Notice of Decision/Staff Report with conditions of approval to:

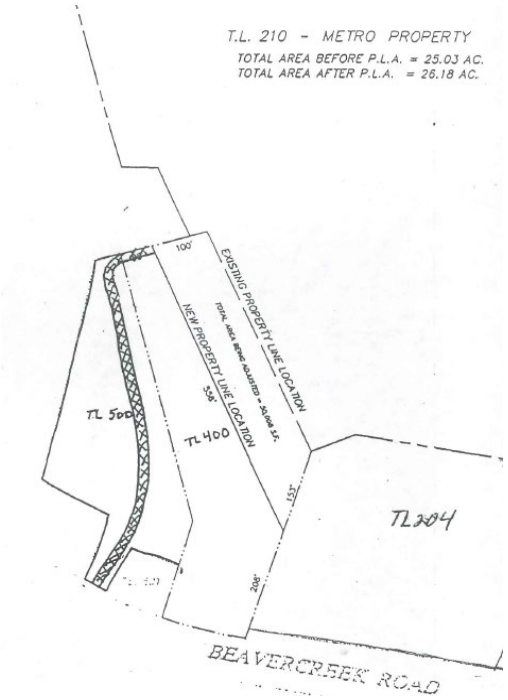
RE: **GLUA-25-00025**: **MAS-25-002_GEO-25-007_NROD-25-012**
(Detailed Development Plan to build a new public street and associated infrastructure) &
GLUA-25-00025: **CU-25-00001, MAS-25-00001, PARK-25-00001**
(Master Plan to create development parcels for future development)

Dear Oregon City Community Development and Oregon City Planning Commission:

Respectfully, Metro submits the following comments responding to the above-referenced Development and Master Plan applications before the City. Please include this letter and attachments in the record of these proceedings.

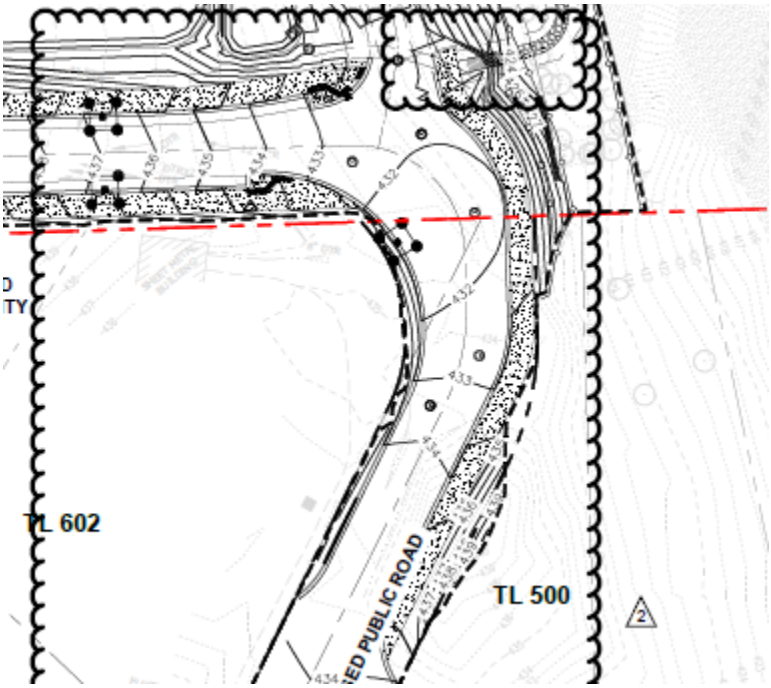


Metro is generally supportive of the Development Proposal and Master Plan. However, there are three matters of concern that warrant further discussion and require resolution: 1) The adverse impact to Metro's access rights, 2) Geological hazards, and 3) Storm water discharge.

Metro's Easement

The new public street plan and associated infrastructure proposed on TL 500 (the new southern access road – colored lavender in the Site Plan) adversely impacts Metro's recorded access easement rights. Metro is a dominant interest holder. TL 500, owned by Mr. Younger, is the servient estate. The project contemplates the City taking ownership and maintenance responsibility of the street from the servient estate.

In 1998, Metro acquired an easement to secure perpetual access to the southern portion of its Newell Creek Canyon Nature Park and Natural Area. The easement, attached, is recorded in Clackamas County records as Document No. 98-044697. The easement area is a 15 ft. wide strip of land taking access from Beavercreek Road, running north through the Younger property, turning east at TL 500's northern property line (the southern property line of the Walmart property) and crossing Younger's TL 401 to Metro's TL 210. Below is a depiction of the easement area.



The easement is associated with a 1998 City approved property line adjustment, providing needed access to Metro property.

A Metro gate is located at the end of the easement area, adjacent to the northeast corner of TL 400, as depicted above. The access easement is generally utilized by Metro for land management and maintenance purposes, supporting Metro and contractor vehicles and equipment. The access easement is also utilized by Metro to support construction and other improvement projects in the park and natural area. Below is an aerial image of the Younger property and Metro property, with the gate location depicted.

The image below is a caption of the proposed public street on TL 500 as it turns onto the Walmart property. Metro's property is to the east (right), with its western line represented by the grey north-south line, to the right of the squiggly line on the right side. As depicted in the image below, the public street development plan does not recognize, protect, or provide suitable alternative access for Metro.

Metro acknowledges the easement allows the servient estate holder to relocate the easement area, however, that right can only be invoked if the remainder of Younger's property is being redeveloped. The subject proposal does not represent redevelopment of the remainder of the Younger property. It only represents a public road over a portion of the property. Additionally, if the first condition is triggered, Metro must be consulted, suitable alternative access proposed, and its permission obtained. In this matter, Metro has not been consulted, and its permission has not been requested or given. To demonstrate compliance with applicable criteria, the application routinely refers to an agreement between the developer and the owner of TL 500. However, Metro, the dominant interest holder, is not a party to that agreement. As proposed, the street improvements would obstruct Metro's access by installing a curb, multi-use path, street trees, and inaccessible graded slopes. As such, Metro objects to its dominant real property interests being adversely impacted by the proposed public street proposal.

As this relates to Oregon City Code, street design and driveway spacing and approaches are governed by OCC § 12.04.170 and OCC Chapter 16.12, including § 16.12.035. Metro has not been presented with any plans that would accommodate Metro's access easement interests. To accommodate Metro's access rights, the street plan must be redesigned to include a code compliant driveway approach, with grades and

surfaces that support access. Since the plans must change, it would be premature for the City to find the application in compliance with street design standards. Additionally, § 12.04.170 provides:

> "All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction."

Metro is a municipal corporation – another jurisdiction. Metro's facilities are adversely impacted by the proposal. Metro has not been consulted. The procedures and requirements in § 12.04.170 have not been followed. The application identifies § 12.04.170 as applicable but does not include any findings of compliance supported by substantial evidence.

Geological Hazards

The second issue of general concern is the proposal to locate the public easement and improved pathway within the geological hazard area. OCC § 17.44.060 requires developments to "be designed to avoid unnecessary disturbance of natural topography." The review standard is "to the maximum extent practicable." The proposal does not meet this and related standards.

Applicants do not avoid unnecessary disturbances. Applicant proposes to locate the public path within a regulated Geological Hazard area – an area its Geological engineer mapped as highly susceptible to deep landslides, when alternatives exist. *See* Stormwater report, Appendix A, Terracon Geotechnical Report – Figure 6. Additionally, Applicant proposes a disturbance in a high-risk area in part to accommodate its adjustment request to include additional on-site parking – above the maximum allowed by City Code. While there is ample room on site to locate this public easement and improvement outside the geological hazard and high-risk area, Applicant proposes to prioritize additional on-site parking. Above maximum allowed parking should not displace land protection requirements and direct that public facilities are sited in high-risk environments.

As we have seen, area slopes are subject to large scale landslides and slumps. These movements often impact property above the top of slope, thus the need to site infrastructure, both public and private, away from the risk. Several dozen area landslides have been documented. We can look just to the south and Forest Edge Apartments (Newell Creek) for example. While Applicant proposes to protect its investment above a Soldier Pile Wall drilled deep down to bedrock, it would leave the City and the public with an improvement that is not so protected. Moving land disturbances and improvements away from these sensitive slopes should be a primary objective of both the City and Applicant.

The Master Plan also proposes to construct the public path below a long, significant retaining wall, away from site development. As the City is aware, the Walmart property, as

well as the Younger and Metro properties, have had to manage and recover from transient encampments for many years now. Significant damage to real property and natural resources has occurred. The Applicant acknowledges this burden by proposing no on-street parking for the two public roads. This appears to be done with City transportation department support. *See* pages 27 and 28 of the DDP application submission. However, the Master Plan proposes to enhance transient encampment conditions with a public pathway, located out of sight. The very impacts that Applicant is trying to avoid would instead be passed to the City and Metro to manage. The City, Metro, and the public would be better served by a public path that is located further away from the steep slopes and natural area, and more integrated into site development. The proposed pathway location also represents a *significant health and safety concern* to users as it is hidden away below a significant retaining wall. Again, this is another risk created by the proposal's path location that can and should be avoided. The City has the discretion and review authority to require as much.

Storm water discharge

Applicant proposes to collect all the storm water from the vast majority of the site, treat it, direct the water to the southeast portion of the site, and connect to an existing City facility that discharges water onto Metro property. Applicant also proposes that the stormwater from the public street would not be treated, but rather discharged directly into the system. The proposal would increase the quantity of water that would naturally discharge onto Metro property. Metro also has quality concerns. The proposed discharge point is near the headwaters of Newell Creek and Metro property. The creek flows for miles through Metro natural area to its confluence with Abernathy Creek. Both creeks support critical habitat for ESA listed species. Pervading the proposal is the assumption that the discharge and eventual storage and disposal of the development's water is permitted on Metro property. Since Applicant cannot or is otherwise choosing not to handle and infiltrate its own storm water on-site, Applicant must demonstrate that public services, including storm-water disposal, are available to serve the development. OCC § 17.65.050.

Metro understands that the City has a NPDES municipal storm system permit to discharge to waters of the state. If the development's storm water is collected through City pipes and permitted outfall facilities discharging directly into Newell Creek, then Metro has no concern. However, that does not seem to be the case. The application says storm water will be collected and directed to an outfall on TL 500. TL 500 is not adjacent to Newell Creek. Metro property is located between TL 500 and Newell Creek. Collected and directed storm water cannot be discharged overland across Metro property to get to the state water way without permission. Metro is not aware of anything in the record that demonstrates permission or the right to discharge the site's development storm water on or through Metro property to get to Newell Creek.

Thank you for your time and consideration of our concerns.

Sincerely,

Gary Shepherd

I certify that the within instrument was received for record on the _____ day of _____, 19____, at _____ o'clock _____.M., and recorded in book/reel/volume No. _____ on page _____ and/or as fee/file/instrument/microfilm/reception No. _____, Records of said County.

Witness my hand and seal of County affixed.

NAME TITLE

By _____, Deputy.

THIS AGREEMENT made and entered into this _____ day of May, 1998, by and between Rocky E. Younger, hereinafter called the first party, and Metro, a municipal corporation, hereinafter called the second party, WITNESSETH:

WHEREAS: The first party is the record owner of the following described real property in Clackamas County County, State of Oregon, to-wit:

See Exhibit A, attached.

and has the unrestricted right to grant the easement hereinafter described relative to the real estate.

NOW, THEREFORE, in view of the premises and in consideration of $ other value given by the second party to the first party paid, the receipt of which is acknowledged by the first party, it is agreed:

The first party hereby grants, assigns and sets over to the second party an easement, to-wit:

owner of the property described in Exhibit B, attached hereto.

See Exhibit C, attached, a 15 foot wide access easement, providing legal access to Metro's property described in Exhibit B.

Metro intends to maintain the property described in Exhibit B in its natural state pursuant to the Greenspaces Master Plan, which maintenance may include suppressing growth of exotic and nuisance plant species. Younger intends to landscape a portion of the property adjacent to Metro's property and would like Metro to maintain Younger's border so that exotic and nuisance plant species at the border are kept at a minimum.

98-044697

(Insert a full description of the nature and type of easement granted by the first party to the second party.)

(OVER)

The second party shall have all rights of ingress and egress to and from the real estate (including the right from time to time, except as hereinafter provided, to cut, trim and remove trees, brush, overhanging branches and other obstructions) necessary for the second party's use, enjoyment, operation and maintenance of the easement hereby granted and all rights and privileges incident thereto.

Except as to the rights herein granted, the first party shall have the full use and control of the above described real estate.

The second party agrees to save and hold the first party harmless from any and all claims of third parties arising from the second party's use of the rights herein granted.

The period of this easement shall be perpetual, always subject, however, to the following specific conditions, restrictions and considerations:

Younger may relocate the easement upon development of the remainder of Younger's property, described in Exhibit A, so long as the relocated easement is 15 feet wide, insurable and provides similar ease of access to Metro's property, described in Exhibit B. Metro shall have the right to approve the relocation of the easement, which approval shall not be unreasonably withheld.

If this easement is for a right of way over or across the real estate, the center line of the easement is described as follows:

and the second party's right of way shall be parallel with the center line and not more than _____ feet distant from either side thereof.

During the existence of this easement, maintenance of the easement and costs of repair of the easement, if damaged by natural disasters or other events for which all holders of an interest in the easement are blameless, shall be the responsibility of (check one): ☒ the first party; ☐ ~~the second party;~~ ☐ ~~both parties, share and share alike;~~ ☐ ~~both parties, with the first party responsible~~ for _____% and the second party responsible for _____%. ~~(If the last alternative is selected, the percentages allocated to each party should total 100.)~~

During the existence of this easement, holders of an interest in the easement who are responsible for damage to the easement because of negligence or abnormal use shall repair the damage at their sole expense.

This agreement shall bind and inure to the benefit of, as the circumstances may require, not only the parties hereto but also their respective heirs, executors, administrators, assigns, and successors in interest.

In construing this agreement, where the context so requires, the singular includes the plural and all grammatical changes shall be made so that this agreement shall apply equally to individuals and to corporations. If the undersigned is a corporation, it has caused its name to be signed and its seal, if any, affixed by an officer or other person duly authorized to do so by its board of directors.

IN WITNESS WHEREOF, the parties have hereunto set their hands in duplicate on the day and year first written above.

Rocky Younger

COMMISSION NO. 045678
MY COMMISSION EXPIRES AUG. 9, 1999

Notary Public for Oregon

My commission expires 8-9-99

SECOND PARTY

STATE OF OREGON, County of _____) ss.

This instrument was acknowledged before me on _____, 19 ____,

by _____

This instrument was acknowledged before me on _____, 19 ____,

by _____

as _____

of _____.

Notary Public for Oregon

My commission expires _____

The second party shall have all rights of ingress and egress to and from the real estate (including the right from time to time, except as hereinafter provided, to cut, trim and remove trees, brush, overhanging branches and other obstructions) necessary for the second party's use, enjoyment, operation and maintenance of the easement hereby granted and all rights and privileges incident thereto.

Except as to the rights herein granted, the first party shall have the full use and control of the above described real estate.

The second party agrees to save and hold the first party harmless from any and all claims of third parties arising from the second party's use of the rights herein granted.

The period of this easement shall be perpetual, always subject, however, to the following specific conditions, restrictions and considerations:

Younger may relocate the easement upon development of the remainder of Younger's property, described in Exhibit A, so long as the relocated easement is 15 feet wide, insurable and provides similar ease of access to Metro's property, described in Exhibit B. Metro shall have the right to approve the relocation of the easement, which approval shall not be unreasonably withheld.

If this easement is for a right of way over or across the real estate, the center line of the easement is described as follows:

and the second party's right of way shall be parallel with the center line and not more than _____ feet distant from either side thereof.

During the existence of this easement, maintenance of the easement and costs of repair of the easement, if damaged by natural disasters or other events for which all holders of an interest in the easement are blameless, shall be the responsibility of (check one): ☒ the first party; ☐ ~~the second party;~~ ☐ ~~both parties, share and share alike;~~ ☐ ~~both parties, with the first party responsible for _____% and the second party responsible for _____%. (If the last alternative is selected, the percentages allocated to each party should total 100.)~~

During the existence of this easement, holders of an interest in the easement who are responsible for damage to the easement because of negligence or abnormal use shall repair the damage at their sole expense.

This agreement shall bind and inure to the benefit of, as the circumstances may require, not only the parties hereto but also their respective heirs, executors, administrators, assigns, and successors in interest.

In construing this agreement, where the context so requires, the singular includes the plural and all grammatical changes shall be made so that this agreement shall apply equally to individuals and to corporations. If the undersigned is a corporation, it has caused its name to be signed and its seal, if any, affixed by an officer or other person duly authorized to do so by its board of directors.

IN WITNESS WHEREOF, the parties have hereunto set their hands in duplicate on the day and year first written above.

EXHIBIT A

A tract of land in the Samuel Vance DLC No. 51 and being located in the southeast one quarter of Section 5, Township 3 South, Range 2 East, Willamette Meridian, being more particularly described as follows:

Beginning at a brass screw, set in concrete, on the northerly right of way line of Market Road No. 11, South Beavercreek Road, which is located North 39° 62' 50" East 46.20 feet from a 5/8 inch iron rod in a monument box at the point of intersection of the first curve on Market Road No. 11, Survey Record No. LP-060 supplemental map, and which is at the southerly end of the line established by Record Survey P.S. No. 21296, the official survey of judgment Order No. 79-6-427, Circuit Court of Clackamas County; thence North 18° 10' 05" East along the easterly side of the retaining wall, being the line of said judgment survey, 38.48 feet to an angle point; thence North 18° 57' 05" East 28.11 feet to a 5/8 inch iron rod set at the northerly end of said retaining wall; thence North 15° 44' 45" East 120.15 feet to a 2 inch iron pipe with a brass disc on top, marked David Evans and Associates, said point being point "A" mentioned in said judgment document and the north end of said judgment line; thence North 14° 42' 32" West along the easterly line of the Epperson property, 492.02 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked David Evans and Associates; thence South 74° 52' 24" West 45.35 feet to a 5/8 inch iron rod with a yellow plastic cap on top marked George Cathy L. S. 979; thence South 13° 05' 06" West along the agreement line document between Epperson and Les Schwab, et al, recorded as Fee No. 86-40212, Clackamas County Deed Records, 402.34 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked Kampe Associates, Inc. at the northwest corner of the Graham Stationary store tract recorded as Fee No. 86-31986, Clackamas County Deed Records; thence South 60° 51' 50" East along the northeasterly line of Fee 86-31986, 131.98 feet to a 5/8 inch iron rod with a yellow plastic cap on top marked Kampe Associates, Inc.; thence South 20° 58' 20" West along the easterly line of Fee 86-31986, 125.95 feet to a 5/8 inch iron rod with a yellow plastic cap on top, marked Kampe Associates, Inc., on the north line of a 10.00 foot wide strip of land conveyed to the City of Oregon City for road purposes, and recorded as Fee No. 86-34381, deed records of Clackamas County; thence Southeasterly around the arc of a 914.93 foot radius curve to the left, through a central angle of 2° 40' 14", an arc distance of 42.64 feet (the long chord of which is South 03° 25' 28" East 42.61 feet) to the westerly line of Fee 68-23282, Clackamas County Deed Records; thence South 19° 27' 28" West along the west line of Fee No. 68-23282, 10.05 feet to the northerly right of way line of Market Road No. 11; thence southeasterly around the arc of a 924.23 foot radius curve to the left, through a central angle of 6° 44' 57", an arc distance of 108.95 feet (the long chord of which is South 68° 11' 60" East 108.89 feet) to the brass screw at the point of beginning.

A tract of land located in the Samuel N. Vance Donation Land Claim No. 51 in Section 5, Township 3 South, Range 2 East of the Willamette Meridian, in the County of Clackamas and State of Oregon, described as follows:

Beginning at the Southeast corner of a tract of land conveyed to George C. Ely, by deed recorded June 4, 1877 in Book N, Page 401, Deed Records; thence North 25°30' West along the East line of said Ely tract, a distance of 255 feet to an iron pipe, said point being the true point of beginning of the tract herein to be described; thence continuing North 25°30' West along the Easterly corner of said Ely tract, a distance of 405 feet to a stone marking the most Northerly corner of a tract of land conveyed to Minnie S. McFee, by deed recorded October 30, 1951 in Book 450, Page 202, Deed Records; thence South 75° West following the Northerly line of said McFee tract, a distance of 160 feet to an iron pipe; thence South 15°10" East, a distance of 470 feet to an iron pipe, said point being Point A as established in conformance to judgment order entered November 4, 1982 and order confirming boundary Commission Report entered February 25, 1983 in Suit, Ruth C. Barber and Minnie S. McFee, plaintiffs vs. Robert Max Epperson and Margaret Joan Epperson, defendants, No. 79-6-427, Clackamas County Circuit Court; thence running along the said established line South 15°47'40" West, a distance of 120.08 feet to a 5/8 inch iron rod at a building corner; thence South 19° West along the most Easterly edge of the building and retaining wall, a distance of 28.16 feet to an angle point in the retaining wall; thence South 18°13' West along said Easterly edge of the building and retaining wall, a distance of 38.48 feet to the Northerly right of way line of the Beavercreek County Road; thence Southeasterly following the Northerly line of said road, a distance of 141.85 feet to the most Southerly corner of said McFee tract; thence North 19° East following the Easterly line of said McFee tract, a distance of 355.8 feet to the true point of beginning.

Together with:

PARCEL 1: A tract of land situated in the Southeast one-quarter of Section 5, Township 3 South, Range 2 East of the Willamette Meridian, in the County of Clackamas and State of Oregon, being more particularly described as follows, to-wit:

Beginning at a 5/8 iron rod at an angle point in the Westerly line of that certain tract of land conveyed to Breck Construction, Inc., Fee No. 79-32547, Deed Records, Clackamas County, Oregon, which iron rod is further identified as being North 25°30' West 255.00 feet from the Southeast corner of a tract of land described in Deed Book "N", Page 401, Clackamas County, Oregon. From said place of beginning; thence South 19°21'14" West 362.30 feet to a 5/8 inch iron rod in the Northerly right of way line of Market Road No. 11; (Beaver Creek Road); thence Easterly along said Northerly right of way line on a curve to the left having a radius of 924.93 feet through a central angle of 0°27'27" a distance of 7.38 feet to a 1/2 inch iron pipe at a point of tangent; thence South 81°21'30" East along said Northerly right of way line of Market Road No. 11 (Beaver Creek Road) 0.65 feet to a 5/8 inch iron rod; thence leaving said Northerly right of way line, North 18°06' East 360.82 feet (Description Exhibit "A" North 19°00' East 355.8 feet, more or less) to the place of beginning.

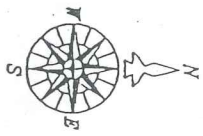
PARCEL 2: A parcel of land located in the Samuel N. Vance and wife Donation Land Claim No. 51 in Section 5, Township 3 South, Range 2 East, of the Willamette Meridian, in the County of Clackamas and State of Oregon, more particularly described as follows:

Beginning at a 5/8 inch iron rod set by Andy Paris in Private Survey (P.S.) No. 16481 for the Northeast corner of a tract of land conveyed by Eva H. Bennett, husband and wife to Minnie S. McFee as described in Book 450, Page 202 on the 20th of October 1951; thence South 83°26'40" West 159.53 feet to a 5/8 inch iron rod set by Norman N. Oleson in P.S. 15707 for the Northeast corner of the Epperson Parcel,

described in Book 546, Page 56 (Colton to Rippey September 26, 1958); thence South 9°37'30" East 23.53 feet to a 5/8 inch iron rod set by Andy Paris in Said P.S. 16481 for the same Northeast corner of the Epperson Parcel and the Northwest corner of said Book 450, Page 202; thence North 75°00'00" East 160.00 feet to the point of beginning of this description.

Excluding therefrom:

A TRACT OF LAND SITUATED IN THE SOUTHEAST 1/4 OF SECTION 5, T.3S., R.2E., W.M., CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:



BEGINNING AT A 5/8 INCH IRON ROD AT THE MOST EASTERLY CORNER OF THAT PARCEL OF LAND CONVEYED TO ROCKY YOUNGER BY WARRANTY DEED RECORDED UNDER FEE NUMBER 97-066827, CLACKAMAS COUNTY DEED RECORDS (SAID POINT BEING ALSO AN ANGLE POINT IN THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14, CLACKAMAS COUNTY PARTITION PLAT RECORDS); THENCE ALONG THE EAST LINE OF SAID YOUNGER PARCEL S.20°05'23"W., 147.64 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "COMPASS CORP."; THENCE LEAVING SAID EAST LINE N.23°30'51"W., 553.56 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "COMPASS CORP." ON THE NORTH LINE OF THE AFOREMENTIONED YOUNGER PARCEL; THENCE ALONG SAID NORTH LINE N.76°33'52"E., 103.42 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "DEA" AT THE MOST NORTHERLY CORNER OF THE AFOREMENTIONED YOUNGER PARCEL (SAID POINT BEING ALSO AN ANGLE POINT IN THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14, CLACKAMAS COUNTY PARTITION PLAT RECORDS); THENCE ALONG THE EASTERLY LINE OF SAID YOUNGER PARCEL (BEING ALSO THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14) S.23°30'51"E., 428.55 FEET TO THE POINT OF BEGINNING CONTAINING 50,000 SQUARE FEET, MORE OR LESS.

EXHIBIT B

A TRACT OF LAND SITUATED IN THE SOUTHEAST 1/4 OF SECTION 5, T.3S., R.2E., W.M., CITY OF OREGON CITY, CLACKAMAS COUNTY, OREGON, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT A 5/8 INCH IRON ROD AT THE MOST EASTERLY CORNER OF THAT PARCEL OF LAND CONVEYED TO ROCKY YOUNGER BY WARRANTY DEED RECORDED UNDER FEE NUMBER 97-066827, CLACKAMAS COUNTY DEED RECORDS (SAID POINT BEING ALSO AN ANGLE POINT IN THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14, CLACKAMAS COUNTY PARTITION PLAT RECORDS); THENCE ALONG THE EAST LINE OF SAID YOUNGER PARCEL S.20°05'23"W., 147.64 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "COMPASS CORP."; THENCE LEAVING SAID EAST LINE N.23°30'51"W., 553.56 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "COMPASS CORP." ON THE NORTH LINE OF THE AFOREMENTIONED YOUNGER PARCEL; THENCE ALONG SAID NORTH LINE N.76°33'52"E., 103.42 FEET TO A 5/8 INCH IRON ROD WITH YELLOW PLASTIC CAP STAMPED "DEA" AT THE MOST NORTHERLY CORNER OF THE AFOREMENTIONED YOUNGER PARCEL (SAID POINT BEING ALSO AN ANGLE POINT IN THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14, CLACKAMAS COUNTY PARTITION PLAT RECORDS); THENCE ALONG THE EASTERLY LINE OF SAID YOUNGER PARCEL (BEING ALSO THE WESTERLY LINE OF PARCEL 3, PARTITION PLAT 1996-14) S.23°30'51"E., 428.55 FEET TO THE POINT OF BEGINNING CONTAINING 50,000 SQUARE FEET, MORE OR LESS.

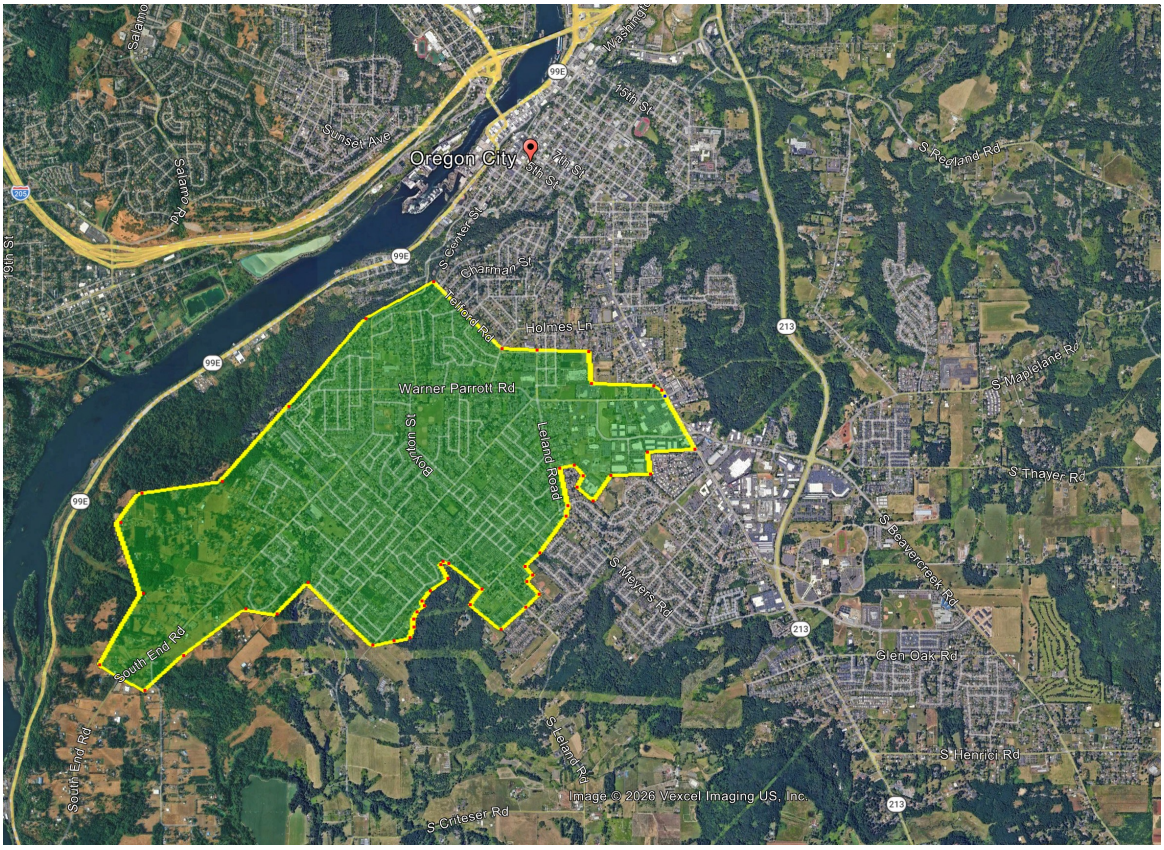
Hi Christina,

I had a few concerns regarding the traffic study that I wanted to provide for the record. I am a registered professional transportation engineer, I have been preparing and reviewing traffic studies professionally for over 20 years, and I own a transportation engineering consulting business (Ard Engineering).

I want to bring a few things to the attention of the Planning Commission.

1) The trip distribution used by the applicant in their transportation analysis looks generally reasonable, but with some problems. Specifically, they appear to show 5% of residential trips that head south on 99E, but they travel through downtown Oregon City to connect to Highway 99E. In reality, these trips would be far more likely to travel on Warner Milne to South End Road to reach Highway 99W. Similarly, the commercial trips are shown with 10% on Warner Milne, 10% on Holmes Lane, and 5% each on Pearl and Jefferson. I would expect some (perhaps 25%) of the trips shown for Pearl and Jefferson to actually take Warner Milne to Linn Avenue to travel to and from those areas, and most of the trips assigned to Holmes would likely take Warner Milne instead. I prepared the map below to show the area of the city that online mapping software suggests routing via Warner Milne to and from the site. It's a substantial area. Note also that for trips to and from the top of the bluff traveling via Telford and S Center Street, the travel time and distance are the same via either Warner Milne or Holmes Lane, so about half would go each way. The point is that the trip assignment under-estimates the number of trips on Warner Milne that will pass through the Linn Avenue/Leland Road intersection. I would have expected to see analysis there, since it will accommodate more than 20 peak hour trips in reality.
   The City transportation consultant has reviewed the application and found:
   Finding: Complies with Condition. The City's transportation consultant has reviewed the applicant's TIA for this development. They have provided to following findings based on the site's master plan TIA:

- Based on the most recent five years of available crash data (2019 to 2023), critical crash rate calculations, and ODOT SPIS lists, the OR-213/Beavercreek Road intersection was flagged for safety concerns. The TIA notes that since 2023, safety improvements such as signal modifications and improved signage have been completed at this location. As such, no safety mitigations are recommended at this time.
- The development is expected to generate 339 (157 in, 182 out) a.m. peak hour trips, 190 (107 in, 83 out) p.m. peak hour trips, and 2,788 weekday trips. This includes a conservative internal trip capture reduction of 5% in the a.m. peak hour and 25% in the p.m. peak hour, a pass-by rate of 40% for both the a.m. and p.m. peak hours for the Strip Retail (822) land use, and a pass-by rate of 55% for both the a.m. and p.m. peak hours for the Restaurant (934) and Coffee Shop with Drive Through Window (937) land uses.
- Different trip distributions were applied for the commercial and residential land uses.
    - *Commercial Trips (Retail and Fast Food):* Approximately 35% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 65% are expected to travel to/from destinations to the north along Molalla Avenue.
    - *Residential Trips:* Approximately 55% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 45% are expected to travel to/from destinations to the north along Molalla Avenue.
- Left turn lane warrants were evaluated at future site access intersections. No left turn lane warrants were met.



- All study intersections are expected to meet performance standards under all analysis scenarios.
- A queuing analysis showed queue lengths at the Molalla Avenue/Shared Business Driveway (Safeway) intersection are expected to exceed the available storage for the northbound left turning movement under both background and build conditions in the p.m. peak hour. The 95th percentile queue is expected to exceed the available storage by only one vehicle in the p.m. peak hour only. No mitigation is recommended at this time.

The City's transportation consultant also notes the following:

- The TIA does not address the proposed site plan's compliance with access spacing standards or sight distance standards.
- The TIA does not address the proposed development's pedestrian/bicycle routes to the nearest schools in consideration of safe routes to school.
- The TIA does not discuss the project's internal vehicle, pedestrian, and bicycle circulation.

The items noted above typically take into account the whole property, but they do relate to this DDP as final locations of driveways and accessways may be impacted. The applicant shall provide an updated TIA addressing compliance with access spacing standards or sight distance standards, pedestrian/bicycle routes to the nearest schools, and the project's internal vehicle, pedestrian and bicycle circulation.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

2) The crash data shows a very high crash rate (top 5% SPIS list) for the intersection of Highway 213 at Beavercreek and notes that the city has attempted some safety improvements. Since the report was prepared, ODOT has released final data for 2024 that was not included in the traffic analysis. It shows 30

crashes in 2024, which is an increasing crash rate. It may be appropriate to do a detailed analysis of crash types and look for new solutions.
ODOT determined a number of years ago to allow the intersection of 213/Beavercreek to be in a failing condition. The City is currently contracting with a consultant to add a right turn slip lane from Beavercreek west to 213 north which is intended to reduce crashes and improve capacity. Other solutions such as clover leafs and triple lefts have been taken off the table by ODOT. The City did install a traffic warning sign a couple years ago on 213 South with ODOT approval to assist with rear end crashed of those stopped at the traffic light. This application is conditioned to monetarily proportionately contribute to the improvements at 213/Beavercreek.

3) I have heard some talk that a fast-food restaurant on the site may be a "High-Volume Fast-Food Restaurant" as defined by the current 12th Edition of the ITE Trip Generation Manual. This land use category applies to facilities that draw more traffic from a larger area and has about 85% higher trip generation than a standard fast-food restaurant with drive-through.
When this land use applies for approval, they will be required to make any required improvements from their TIA and may contribute proportionately monetarily to the improvements at 213/Beavercreek.

For these reasons, I have some concerns remaining regarding the transportation analysis that was provided for the project.

Thank you,

Michael Ard, PE

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I haven't had time to dive into the comments from Mr. Ard but here are my initial thoughts/questions. Overall, an application is required to use the data and resources that are current when the study is conducted and we don't require updates if new data and resources become available prior to the hearing.

1. Trip distribution - It's not clear what data source is being used to determine the alternative trip distribution routes for the project trips. The comment referred to "online mapping software" which is not an established sole source for trip distribution and can be influenced significantly by time of day. I'm assuming the online mapping software is Google maps using the routing feature but I'm not sure. A review of existing intersection turn movement counts, aggregated Big Data and the regional models are other tools to be considered. It's unclear if changes to trip distribution would result in any intersection capacity issues or new conditions of approval.

2. Crash Data - The 2024 data set was not available when the transportation study was conducted. An increase in crash rate does not suggest a new mitigation is needed. ODOT and the city have planned improvements at the intersection to address safety and congestion. It's unlikely that an analysis of 2024 safety data would change the planned improvements or add conditions of approval to the application (who is paying a proportionate share fee to improvements at the intersection).

3. ITE 12th Edition trip rates were not available when the transportation study was conducted. The comment doesn't provide clear information on what 12th edition land use category would be appropriate for the application or how it would change the trip generation estimate and intersection analysis.

Let me know how the hearing goes, I can look into this more if needed.

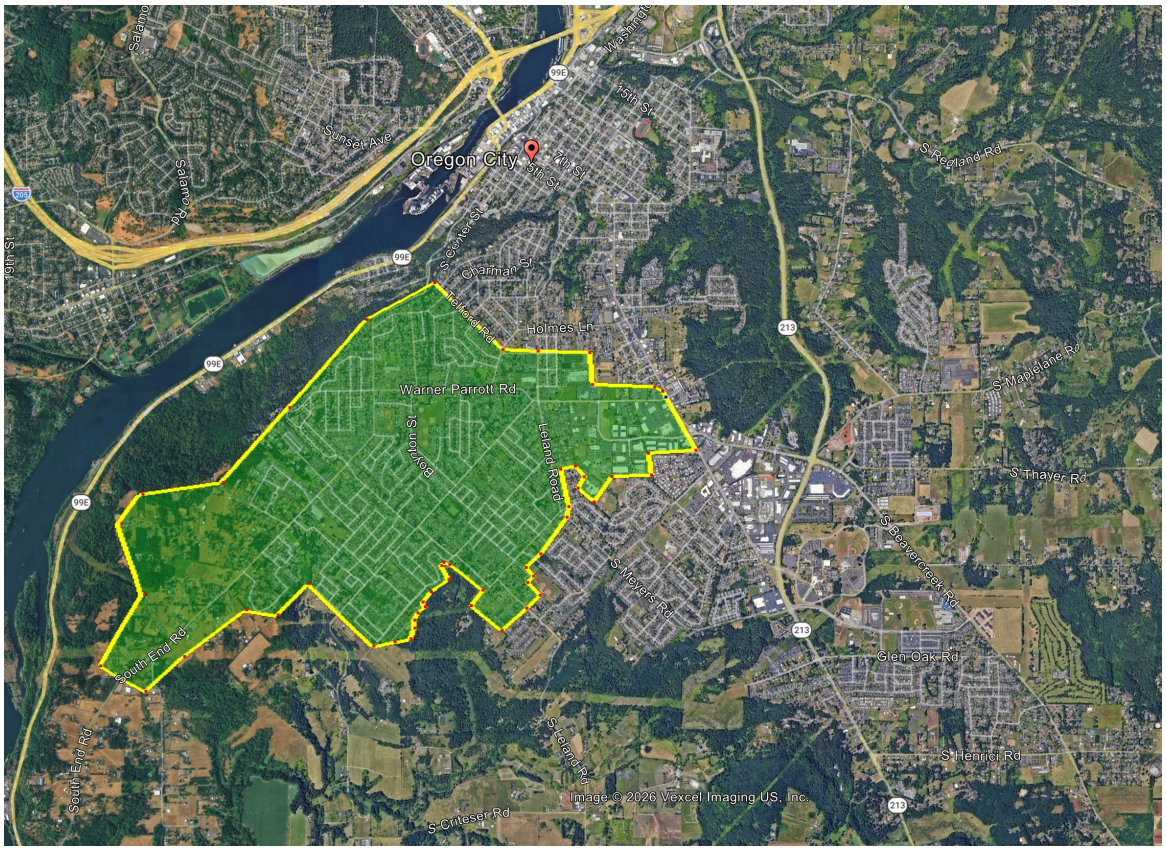
Subject: Re: Request for Link to Testify at Planning Commission Hearing Tonight

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.



Hi Christina,

I had a few concerns regarding the traffic study that I wanted to provide for the record. I am a registered professional transportation engineer, I have been preparing and reviewing traffic studies professionally for over 20 years, and I own a transportation engineering consulting business (Ard Engineering).

I want to bring a few things to the attention of the Planning Commission.

1) The trip distribution used by the applicant in their transportation analysis looks generally reasonable, but with some problems. Specifically, they appear to show 5% of residential trips that head south on 99E, but they travel through downtown Oregon City to connect to Highway 99E. In reality, these trips would be far more likely to travel on Warner Milne to South End Road to reach Highway 99W. Similarly,

the commercial trips are shown with 10% on Warner Milne, 10% on Holmes Lane, and 5% each on Pearl and Jefferson. I would expect some (perhaps 25%) of the trips shown for Pearl and Jefferson to actually take Warner Milne to Linn Avenue to travel to and from those areas, and most of the trips assigned to Holmes would likely take Warner Milne instead. I prepared the map below to show the area of the city that online mapping software suggests routing via Warner Milne to and from the site. It's a substantial area. Note also that for trips to and from the top of the bluff traveling via Telford and S Center Street, the travel time and distance are the same via either Warner Milne or Holmes Lane, so about half would go each way. The point is that the trip assignment under-estimates the number of trips on Warner Milne that will pass through the Linn Avenue/Leland Road intersection. I would have expected to see analysis there, since it will accommodate more than 20 peak hour trips in reality.

2) The crash data shows a very high crash rate (top 5% SPIS list) for the intersection of Highway 213 at Beavercreek and notes that the city has attempted some safety improvements. Since the report was prepared, ODOT has released final data for 2024 that was not included in the traffic analysis. It shows 30 crashes in 2024, which is an increasing crash rate. It may be appropriate to do a detailed analysis of crash types and look for new solutions.

3) I have heard some talk that a fast-food restaurant on the site may be a "High-Volume Fast-Food Restaurant" as defined by the current 12th Edition of the ITE Trip Generation Manual. This land use category applies to facilities that draw more traffic from a larger area and has about 85% higher trip generation than a standard fast-food restaurant with drive-through.

For these reasons, I have some concerns remaining regarding the transportation analysis that was provided for the project.

Thank you,

Michael Ard, PE

SUPPLEMENTAL FINDINGS

Masterplan GDP and DDP approval for Mixed Use development at 1367 Molalla Avenue

File Nos: GLUA-25-00025: CU-25-00001, MAS-25-00001, PARK-25-00001-1367
GLUA-25-00025: MAS-25-00002, GEO-25-00007, NROD-25-0012

The purpose for these supplemental findings is to provide some additional response to testimony received and explanation for revisions to conditions of approval that relate to both decisions.

On March 20, the City received testimony from Metro expressing concerns about how this development would impact Metro's Newell Creek Canyon Nature Park and Natural Area located on Tax Lot 210, east of the subject development.

1) Metro's Easement

Metro has expressed concerns that the proposed development adversely impacts Metro's access to its TL 210 which it claims is guaranteed by a private easement. The City's role here is not to interpret or protect easement rights between private property owners. Rather, its sole role is to review applications for compliance with the applicable approval criteria. No law or other criterion demands that the City guarantee this privately negotiated access.

That said, nothing in this approval shall preclude Metro from obtaining access to its TL 210, Metro Newell Creek Canyon Nature Park. This access may occur upon the public road proposed on TL 500 or include the provision of any stubbed improvements at the northeast corning of TL 500 as necessary to accommodate gated access. The owner of TL 500 is encouraged to seek and obtain a driveway access permit allowing for gated access to TL 210 as may be required to fulfill any easement obligations it may have.

2) The Location of the Shared Use Path

[This finding is added to the GDP approval and will also replace the DDP findings discussing the shared use path on pp 38-39.]

Approval of a general development plan requires a finding that the application is in compliance with the Oregon City Comprehensive Plan. OCMC 17.65.050.C.6. The City's Transportation System Plan is an ancillary component part of the Comprehensive Plan. The City's TSP project S28 identifies a shared use path running north and south along the east side of this property. The purpose of this path is to connect development on this property and throughout the Hilltop Area to the Newell Creek Nature Park, whose access is

located one block north of the subject property. This multimodal path will provide direct access to the 208-unit multi-family residential component on Parcel B as well as serve as a resource for employees and customers of the adjacent businesses.

Goal 1 of Chapter 3 of the Comprehensive Plan provides:

> "Provide a safe, comfortable, and accessible transportation network that serves all modes of travel, including non-motorized modes."

The proposed location of the shared use path as proposed is below the development Parcel B below the top of the hillside and will not be visible to the general public. This is a problem because its lack of visibility will compromise its accessibility but more importantly, could create nuisance concerns. For this reason, the City finds that the proposed path location will not result in a pedestrian connection that is safe and comfortable for public use. In order to satisfy the TSP as well as the Comprehensive Plan, revised conditions of approval are proposed which require that a revised design for the multiuse path be submitted as part of the DDP for Parcel B. The revised design shall include a minimum paved 7-foot width that is ADA accessible and lighted to satisfy OCMC 16.12.032.D standards and most importantly, it is at a similar grade such that it is visible from the development at Parcel B. Added benefits of this approach move the path further away from mapped geologic hazards, avoid providing ADA access for complicated grade changes, can take advantage of parking lot lighting from the Parcel B development and will reduce maintenance concerns. With these conditions, the development will provide a safe and comfortable pedestrian / bicycle connection in compliance with the TSP that is will strengthen the wellbeing of future residents and users of this development.

Revisions to and proposed new conditions include:

Master Plan- MAS-25-00001,CU-25-00001, PARK-25-00001
Share Use Path (S28)-NEW
17. The proposed location of the shared use path (S28), (sheet x) is located below the development on Parcel B in a narrow bench of the hillside that is not visible to the general public which will, as designed and built, create an attractive nuisance and public safety concerns and conflicts with the community's comprehensive plan policies to support design that is to strengthen wellbeing, quality of life, and livability across all Oregon City neighborhoods by creating places that are safe and comfortable with convenient access to community services. The applicant shall remove the path from MAS-25-00002, GEO-25-00007, and NROD-25-00012 (DDP) and resubmit a revised design at the time of DDP development for Parcel B. The revised design of S28 requires a minimum paved 7-foot-wide path that is ADA accessible, lit to the standards of 16.12.032.D, at a similar grade and visible from the development on Parcel B, and designed to connect to the northern property line, which will be extended at a future time to Hilltop Avenue.

Detailed Development Plan - GLUA-25-00025: MAS-25-00002, GEO-25-00007, NROD-25-0012

Share Use Path (S28) – REVISED

~~20.The new shared use path shall transition from the curbed path along the new road to the existing bicycle lane along Beavercreek Road either through modification of the existing ADA ramp or by other means evaluated during technical design review. (DS)~~
21. The applicant shall construct their portion of TSP Project S28 within Parcel C (shared use path) as a public 7-10-foot paved off-street ADA compliant pedestrian/bicycle accessway with lighting and landscaping as regulated by code for the portion on TL 3200 and 3400 per OCMC 16.12.032 standards.
~~22. The applicant shall continue the paved shared-use path (S28) from TL 500/501 to the northern property line of TL 3200. (DS)~~
~~23. The Shared-use Path S28 (accessway) shall be a paved 7-foot-wide path within TL 3400 and 3200 where it deviates from the proposed street. (DS)~~
~~24. The applicantlayout of the proposed development shall provide a lighting plan showing that the shared-use path accessway are lit to the standards of 16.12.032.D. (DS)~~
~~25. The portion of S28 that deviates from the expanded sidewalk on TL 500/501 is an off-street pedestrian and bicycle accessway and shall comply with Americans with Disabilities Act (ADA) standards. (DS)~~
~~26. The portion of S28 on TL 3400 and 3200 shall be landscaped per OCMC 16.12.032.F standards. (DS)~~
~~27. The shared-use path S28 shall be paved with all-weather materials (e.g. asphalt, concrete, etc.) approved by the City Engineer. (DS)~~
~~28. The construction of S28 within TL 3400 and TL 3200 shall be completed prior to occupancy of Parcel B.~~

3) Stormwater Drainage

With respect to Metro's comment on Storm water discharge, the applicant must follow the Oregon City Stormwater and Grading Design Standards. These standards requirement volume control and water quality. Condition #2 requires the applicant to follow the Stormwater and Grading Design Standards prior to receiving a permit. Furthermore, the applicant is connecting to a 48" outfall pipe which conveys water onto Metro's property. Oregon Drainage Law states that stormwater discharges should be conveyed in the direction of the existing topography in the undisturbed state of the land. The existing land drains towards Metro's property. The Stormwater and Grading Design Standards and Oregon Drainage Law ensure stormwater is not conveyed at any higher volume or velocity that in the existing condition. This will be addressed during detailed design permit review as Conditioned.

RE: 1367 Molalla Mixed Use Development
GLUA 25-00025, MAS-25-00002, GEO-25-00007, NROD-25-00012

To Whom it May Concern,

In reviewing your application for the subject site, our geotechnical engineer has recently brought to our attention that the GDP / DDP development applications assume a geologic hazards protection area, based on the top of the slope, that is not consistent with the Geologic Hazards Overlay Zone that is mapped and regulated pursuant to OCMC 17.44. Staff now believes that accurate application of the City's geologic hazard development standards will have a significant impact on your development.

In July 2021, the City Commission adopted revisions to OCMC 17.44 Geologic Hazards. Pursuant to these amendments, the protections were enhanced to include mapped areas based on historic landslides as well as a buffer zone around the landslide. More specifically, OCMC 17.44.025 minimizes any development within the mapped Geologic Hazards Overlay Zone. All limitations on development are keyed from these mapped areas. The areas designated in the map are specifically defined in OCMC 17.04.515 but they are also depicted in the City's GIS mapping as shown:

What these maps show is that the steep slopes and associated buffer of the Geologic Hazard Overlay Zone impact the eastern portion of the subject property and the landslide deposits and associated buffer of the Geologic Hazards Overlay Zone further impacts the eastern portion of the subject property to a much greater degree than what is reflected in your application materials.

For development within the mapped landslide buffer, the following limitations apply:

OCMC 17.44.060.H.2.a.
For those areas with historic landslides where the structure or ground disturbance will be located within any portion of the mapped landslide or buffer zone, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;

OCMC 17.44.060.I.
For properties with slopes of twenty-five to thirty-five percent between grade breaks or are located within any portion of a mapped landslide and buffer zone:

1. *For those portions of the property with slopes of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;*
2. *An individual lot or parcel with slopes between twenty-five and thirty-five percent or located within any portion of a mapped landslide and buffer zone, shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.*

Based on the code and the maps and the proposed site plan, it appears the proposed apartment buildings may exceed the standard of a maximum of 2 dwelling units per acre. If

the apartment buildings are fully outside of the landscape buffer layer, then there are no density constraints.

Based on the code and the maps and the proposed site plan, it appears the proposed development will exceed 4,000 sf of disturbed area (or area that is graded). It appears the parking lot, roadway, and stormwater management area exist within the landslide deposit buffer. The site would need to be redesigned so that a maximum of 4,000 sf of the surface area is graded or stripped of vegetation or covered with structures or impermeable surfaces. There is no adjustment or variance available to alter these strict development limitations.

City staff is working to determine the appropriate modifications of the conditions of approval for the current GDP and DDP applications to largely defer how development on Parcel B can occur through its DDP review while recommending approval of the current GDP and DDP applications. It seems unlikely that this project could be redesigned within the current limited decision timeline but City staff would support such extension, if pursued. Again, staff understands that this is a significant revision raised late in the process. However, City staff's primary obligation is the accurate application of the OCMC. City staff is prepared to meet to discuss this information and any concerns early next week.

REVIEWER: Christina Robertson-Gardiner, Senior Planner AICP
Erik Nichols, Project Engineer

ZONING: Mixed Use Corridor 2

DECISION: Approval with Conditions

PROCESS: Type III decisions involve the greatest amount of discretion and evaluation of subjective approval standards, yet are not required to be heard by the city commission, except upon appeal. Applications evaluated through this process include conditional use permits. The process for these land use decisions is controlled by ORS 197.763. Notice of the application and the planning commission hearing is published and mailed to the applicant, recognized neighborhood association and property owners within three hundred feet of the subject property. Notice must be issued at least twenty days pre-hearing, and the staff report must be available at least seven days pre-hearing. At the evidentiary hearing held before the planning commission, all issues are addressed. The decision is final unless appealed and description of the requirements for perfecting an appeal. The decision of the planning commission is appealable to the city commission within fourteen days of the issuance of the final decision. The city commission hearing on appeal is on the record and no new evidence shall be allowed. Only those persons or a city-recognized neighborhood association who have participated either orally or in writing have standing to appeal the decision of the planning commission. Grounds for appeal are limited to those issues raised either orally or in writing before the close of the public record. A city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal. The city commission decision on appeal from the planning commission is the city's final decision and is appealable to the Land Use Board of Appeals (LUBA) within twenty-one days of when it becomes final.

REVISED Conditions of Approval
Planning File GLUA-25-00025: MAS-25-00002, GEO-25-00007, NROD-25-00012

(P) = Verify that condition of approval has been met with the Planning Division.
(DS) = Verify that condition of approval has been met with the Development Services Division.
(B) = Verify that condition of approval has been met with the Building Division.
(F) = Verify that condition of approval has been met with Clackamas Fire Department.

The applicant shall fulfill the following conditions prior to issuance of a public improvement and/or Building permit associated with the proposed application.

1. The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. (DS)
2. The developer shall relocate portions of the stormwater management area outside of the Geologic Hazards Overlay Zone, separate public and private stormwater management or make all stormwater management private, and provide finalized engineered drainage plan(s), drainage report(s), and design flow calculation report(s) stamped and signed by a licensed engineer addressing all items from Section 9.3 & 9.4 of the Public Works Stormwater and Grading Design Standards prior to receiving a permit and beginning construction. (DS)
3. A City issued erosion and sediment control permit shall be obtained prior to commencement of any earth disturbing activities. (DS)
4. Erosion and sediment control plans shall be submitted for review and approval by the City prior to issuance of an erosion and sediment control permit. (DS)
5. The developer shall obtain a 1200-C (NPDES) permit from Oregon Department of Environmental Quality (DEQ) for construction activities one acre or greater prior to receiving a permit and beginning construction. (DS)
6. The applicant shall provide a grading and erosion control plan identifying onsite environmental cleanup activities. (DS)
7. Erosion control measures shall be in conformance with OCMC Chapter 17.47. (DS)
8. If the proposed roadway encroaches on the mapped stream or wetland, the applicant will coordinate with DSL or USACOE to obtain the proper permitting. (DS)
9. If the proposed roadway encroaches on the mapped stream or wetland, the applicant shall coordinate with ODFW to obtain the proper permitting.
10. The developer shall provide an engineered grading plan prepared by a professional engineer in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards. (DS)
11. Public stormwater facilities shall only treat stormwater from publicly maintained right-of-way (i.e. public streets). The applicant shall either separate the public stormwater

from the private runoff with separate publicly maintained facilities (e.g. streetside planters or other separate facilities) and privately maintain facilities for private stormwater runoff; or the development can provide stormwater management in total for public and private improvements and maintain the facility or facilities privately. (DS)

12. Compliance with the "purpose and general provisions" of chapter 16.12 can be met by adhering to the following: The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. (DS)
13. The applicant shall submit a request to the Community Development Department to receive approval for new street names. Street names shall be provided on the approved plans, and street signs shall be provided for review of the City prior to installation. All traffic control devices, such as signage, flashing lights/beacons, and traffic signals shall be designed using the MUTCD. The applicant shall provide a Traffic Signal Plan conforming to Clackamas County Standards. (DS)
14. On the development's frontage for Molalla Avenue, the applicant shall provide 16 feet of right-of-way-dedication (for a total of 51 feet from the street center to their property line), a 5-foot-wide public utility easement, a 6-foot-wide bicycle lane, and a 10.5-foot-wide sidewalk with tree wells. The frontage improvements on Molalla Avenue shall be consistent with the City's Street Design Standards for Molalla Avenue (e.g. light fixtures, sidewalk patterns, tree wells, etc.). (DS)
15. The applicant shall restripe the center turning lane on Molalla Avenue as a left turn lane into the property at the existing intersection following City, State, and Federal guidelines for left turn lane storage and taper. (DS)
16. The first segment of the new public road connecting Molalla Avenue and Beavercreek Road (~STA 1+46 - STA 8+66) shall have a cross-section with 70 feet of right-of-way with three (3) 12-foot-wide lanes, two (2) 6-foot-wide bicycle lanes, two (2) 10.5-foot-wide sidewalks with 5-foot-wide tree wells. (DS)
17. The second segment of the new public road connecting Molalla Avenue and Beavercreek Road (~STA 8+66 – STA 11+50) shall have 64 feet of right-of-way with two (2) 12-foot-wide lanes, two (2) 6-foot-wide bicycle lanes, two (2) 10.5-foot-wide sidewalks with 5-foot-wide tree wells and shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum of 4,000 sf within the parcel for which segment 2 lies. (DS)
18. Segment 3 of the new public road connecting Molalla Avenue and Beavercreek Road (~STA 11+50 – STA 14+92) shall have 60-feet of right-of-way with two (2) 17 to 21-foot-wide lanes (to accommodate freight through curves), one (1) 10.5 foot-wide shared use path (striped), and landscaping located behind the shared use path or in other approved locations and shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum of 4,000 sf within the parcel for which segment 3 lies.(DS)
19. Segment 4 of the new public road connecting Molalla Avenue and Beavercreek Road (~STA14+92 – STA 18+59) shall vary from 60 to approximately 76 feet of right-of-way with three (3) 12-foot-wide lanes (varied to accommodate freight movements), one (1) 10.5-

foot wide shared-use-path (striped), and landscaping either behind path or in approved locations. (DS)

20. The new shared use path shall transition from the curbed path along the new public road which connects Molalla Avenue to Beavercreek Road to the existing bicycle lane along Beavercreek Road either through modification of the existing ADA ramp or by other means evaluated during technical design review. (DS)
21. TSP Project S28 shall be constructed as a public off-street pedestrian/bicycle accessway for the portion on TL 3200 and 3400 per OCMC 16.12.032 standards. The applicant shall construct their portion of TSP Project S28 within Parcel C (shared use path) and as a 7-10 foot paved off-street ADA compliant pedestrian/bicycle accessway with lighting and landscaping as regulated by the code for the portion on Parcel B per OCMC 16.12.032 standards. S28 shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum of 4,000 sf. The applicant may choose to delay the construction of the Parcel B portion of the path to the DDP whereby the path may be able to be constructed at grade adjacent to the proposed parking lot, potentially making it exempt from the Geologic Hazard code. (DS)
22. The construction of S28 within TL 3400 and TL 3200 shall be completed prior to occupancy of Parcel B.
23. The applicant shall provide a lighting plan on Molalla Avenue and the proposed new public road connecting Molalla Avenue and Beavercreek Road in conformance with all City standards, specifications, codes, and policies and as approved by Portland General Electric (PGE). Street Lights on Molalla Avenue shall be consistent with the City's Street Design Standards for Molalla Avenue. The applicant shall submit a photometric plan with their permitting plans. (DS)
24. Written approval from Trimet to relocate the existing bus stop on Molalla Avenue is required. (DS)
25. The applicant shall provide an updated TIA addressing compliance with access spacing standards or sight distance standards, pedestrian/bicycle routes to the nearest schools, and the project's internal vehicle, pedestrian and bicycle circulation. (DS)
26. All driveways, new and existing, shall meet the minimum driveway spacing standards identified in Table 16.12.035.A. The modified driveway locations for Parcel A and Parcel B appear to meet the intent of the spacing standards. Final driveway locations will be evaluated during the design review phase with the applicant's updated TIA. (DS)
27. All driveways (curb cuts), new and existing, shall meet the minimum driveway width standards identified in Table 16.12.035.D. Approved driveway widths will need to be included on engineering plans prior to receiving a permit and beginning construction. The applicant has proposed a modification to the driveway standard for Parcel D. The proposed modification to Parcel D complies as proposed. (DS)
28. If the NROD area is disturbed with this project, the applicant shall coordinate with the City's Planning Department on mitigations per the City's standards in OCMC 17.49 (P)
29. The proposed water main shall connect to the City's 30-inch Water Main on Molalla Avenue and the City's 20-inch main on Beavercreek Road. (DS)
30. The development shall provide an Access and Water Supply Plan to Clackamas Fire District #1 for review. An approved Access and Water Supply Plan is required prior to issuance of building permits for the development. (DS)

31. The engineering plans shall provide a local benchmark, onsite, using the NAVD88 datum prior to receiving a permit and beginning construction. (DS)
32. The applicant shall display the tree protection fencing specifications and notices per OCMC 17.41.130 on the grading and erosion control plan.
33. Per OCMC 17.41, the number of trees proposed to be removed will be replaced based on the size of the tree and the location of the removed tree according to Table 17.41.060-1 Tree Replacement Requirements. Prior to the release of the construction permits for the new road and any associated grading, the applicant shall update the existing, but out-of-date, 2012 tree inventory, making sure to include tax lots 500, 501, and 602, and confirm the number of mitigation trees required. Before the completion of the construction of the new public road, the applicant shall indicate the mitigation approach—Options 1, 2, 3, or a combination thereof—and confirm that all mitigation trees have been planted or fee-in-lieu paid. (P)

34. The applicant has proposed an NROD mitigation plan for the small section of the new Street that encroaches on the NROD buffer, which is consistent with the mitigation standards in OCMC 17.49.180 and OCMC 17.49.190. Prior to the release of construction permits, the applicant shall provide a final updated delineation with the final design of the new street at the Beavercreek Intersection, indicating the final calculation of NROD buffer impact and the location, size, and number of plantings as required by OCMC 17.49.180 and OCMC 17.49.190 for the mitigation area along the eastern edge of Parcel B or as amended if there are conflicts with the shared use path. The new public street shall be designed in compliance with 17.49.150 - Standards for vehicular or pedestrian paths and roads. (P).
35. The geotechnical report should clearly state recommendations regarding existing local drainage, any impacts on local drainage from the proposed development, and any mitigation required to address adverse impacts. The applicant shall update the report as part of design review. (DS)
36. The geologic assessment and geotechnical report shall address the effect on the site hydrology and provide the information listed in 17.44.050.A.11 as applicable to this project, considering the recommendations and design per the storm drainage analysis report. (DS)
37. The applicant shall provide final grading plans, including representative cross sections through the path and Geologic Hazards Overlay Zone, as necessary, to demonstrate final excavation and grading to be in compliance with Section 17.44. Final cut and fill volumes from excavation shall be stated as required by 17.44.050.A.10. (DS)
38. Impacts to the mapped landslide area and buffer located to the rear of the properties shall be limited to 4,000 square feet of grading, stripped vegetation, or by coverage in impermeable surfaces per parcel. The proposed stormwater pond and roadway improvements shall be redesigned or relocated outside of the geological hazard area to meet this standard. (DS)
39. Construction of retaining walls over 4 feet in height and terraced walls which create total cut or fill greater than 4 feet in height shall be certified by a licensed engineer qualified for the design of such walls. The developer shall submit engineered stamped calculations for proposed retaining walls showing compliance with applicable building codes. The developer shall provide sliding, overturning, bearing capacity, and global

stability design calculation for any retaining walls over 4 feet in height in accordance with the Oregon Structural Specialty Code. (DS)

40. The applicant's geotechnical engineer shall respond to written comments provided by the City's peer reviewer prior to issuance of building permits. (DS)
41. All new service utilities, both on-site and off-site, shall be placed underground and under roadbeds where practicable. The placement of existing utilities underground within areas of geologic hazard shall be reviewed and approved by the City. (DS)
42. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. As-builts conforming to City standards shall be provided within 90 days of completion of the project. (DS)
43. The developer's geotechnical consultant shall review the drainage design for the project so that it does not negatively impact the underlying drainageway cross section and certify that the design is consistent with the conclusions and recommendations stated in their geologic assessment and geotechnical report. The project's civil or geotechnical engineer shall inspect any stormwater management feature and must certify that the stormwater management feature was constructed per plan and with the recommendations of the geotechnical engineer prior to receiving occupancy. (DS)

<u>The following conditions of approval shall be met to the satisfaction of the City during construction.</u>

44. Pavement cuts are proposed within a public street due to proposed utility service installations and required frontage improvements. Pavement cuts or other improvements made in a City street shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. (DS)
45. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City. (DS)
46. The developer's project engineer shall inspect construction of public improvements and stormwater management facilities at the cost of the applicant. The City will perform inspections in accordance with city policies and standards. See section 16.12.014 of this report regarding inspection fees. (DS)
47. New franchise utilities shall be placed underground and all existing overhead utilities adjacent to the property frontage shall be relocated underground unless deemed infeasible by the City and franchise utility provider(s) prior to occupancy of the first parcel. (DS)
48. Underground utilities, waterlines, sanitary sewers and storm drains proposed to be installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer

shall be placed beyond the ten-foot wide franchise utility easement within private property. (DS)

49. The applicant shall construct their portion of the Sewer Master Plan's 8-inch sewer from Beavercreek Road to stub into Parcel B while ensuring it is designed and built to be able to be extended to Hilltop Avenue. (DS)
50. The applicant shall comply with permitted hours of construction as set forth by the City Engineer for any public improvements (in existing public right-of-way or easements or which will be dedicated in public right-of-way or easements) that will not follow OCMC 9.12.023.D. as stated and written in the pre-construction meeting notes. (DS)
51. Grading, drainage improvements or other land disturbances shall be restricted to between May 1 and October 31, unless extended by the City Engineer consistent with 17.44. The developer shall submit a work schedule which has been reviewed and approved by a licensed geotechnical engineer with regard to the viability of completing necessary project goals within the aforementioned time period. Erosion control measures and temporary protective fencing around all trees and vegetation designed for protection shall be installed prior to the commencement of grading or other soil disturbance. Erosion control measures shall be in conformance with OCMC Chapter 17.47. (DS)
52. Existing vegetative cover shall be maintained to the maximum extent practicable within the geological hazard areas. The applicant shall install appropriate barriers or protective fencing during construction to ensure existing vegetation is not disturbed. (DS)
53. The developer shall retain the services of a licensed geotechnical engineer to conduct inspections prior to and during construction activities which involve removal or addition of vegetation, building structures, retaining walls or earth. The geotechnical engineer shall provide reports to confirm that standards from Section 17.44.100 are met. The geotechnical engineer of record shall observe all excavations and geologic conditions exposed during construction and document that the conditions are consistent with the conditions assumed in the geotechnical hazard evaluation. If the conditions are different than assumed in the preliminary report, the effect of the new observations shall be evaluated and mitigation provided as required. Additional geologic hazards review may be required at the City's discretion. (DS)
54. The developer's geotechnical engineer shall certify, during construction, that structural fill used on the site meets the provided design specifications and is placed as designed. The certification shall be in writing and shall be signed and stamped by a licensed engineer in the State of Oregon. (DS)

<u>The following conditions of approval shall be met to the satisfaction of the City prior to recording of the plat associated with the proposed development [final occupancy] or as noted.</u>

55. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer within 90 days of completing improvements. (DS)
56. Public improvements and all items from the city-provided punch list shall be completed and accepted by the City prior to occupancy of the first parcel. (DS)
57. The property owner(s) shall sign a Restrictive Covenant Non-Remonstrance Agreement for the purpose of making storm sewer, sanitary sewer, water, or street improvements in

the future that benefit the property, and all fees associated with processing and recording the Non-Remonstrance Agreement shall be paid prior to occupancy of the first parcel. (DS)

58. A Performance Guarantee, which is equal to 120% of the estimated cost for construction of public improvements as shown in City-approved construction plans, shall be provided prior to receiving a permit and beginning construction. The estimated costs shall be supported by a verified engineering estimate and approved by the City engineer. The guarantee shall be in a form identified in Code 17.50.140.A section of the Oregon City Municipal Code. The guarantee shall remain in effect until the construction of all required improvements are completed and accepted by the City. (DS)
59. Maintenance Guarantee equal to fifteen percent of the estimated cost for construction of public improvements, as shown in City-approved construction plans, shall be provided prior to occupancy of the first parcel. The estimated costs shall be supported by a verified engineering estimate approved by the City Engineer. The guarantee shall be in a form identified in Code 17.50.140.A section of the Oregon City Municipal Code. The maintenance guarantee shall warrant to the City of Oregon City that construction of public improvements will remain, for a period of twenty-four (24) months from the date of acceptance, free from defects in materials and workmanship. (DS)
60. The property owner(s) shall execute an agreement providing maintenance of, and giving Oregon City access to, privately-owned stormwater management facilities and pay associated recording fees. The agreement shall include a site plan identifying all privately-owned stormwater management facilities and an operation and maintenance plan for each type of stormwater facility in accordance with the Public Works Stormwater and Grading Design Standards. The agreement shall run with the land and be applicable to subsequent property owners. The agreement shall be reviewed and accepted by the City prior to occupancy of the first parcel. (DS)
61. Responsibility for maintenance of public stormwater facilities, including all landscaping, irrigation systems, structures, and appurtenances, shall remain with the property owner/developer for two years (known as the warranty or maintenance period). The owner/developer shall provide the City with a separate two-year landscaping maintenance bond equal to one hundred ten percent of the landscaping costs or pay a fee-in-lieu and sign a contract with the City to cover the maintenance period prior to occupancy of the first parcel. (DS)
62. The applicant shall provide a public access easement for TL 800 and TL 700 to facilitate future connections to the new proposed roadway. (DS)
63. A pedestrian and bicycle accessway is proposed along the rear of the property. A public access easement shall be provided, allowing public use of the path through the property. (DS)
64. The applicant shall provide a covenant over the pedestrian and bicycle accessways and be responsible for the future maintenance and liability. (DS)
65. The development shall provide a public utility easement (PUE) along all property lines fronting existing or proposed public right-of-way. Zero setback sites may not require a PUE but may have dry utilities between the property line and curb the developer shall make all necessary arrangements with utility companies to ensure underground lines are not placed within the roadway. Approved PUE will need included on the final plat prior to recording the plat. The development shall provide a public utility easement for

the City's sewer for the sewer connecting Hilltop Avenue to Beavercreek Road. The final location and sizing will be determined during DDP and Design review based on the City's sewer design standards. A 15-foot-wide public access easement will be required for the portion of the shared-use path accessway, S28, that deviates from the public right-of-way. (DS)

66. The proposal includes installation of street trees along approximately 3,535 feet of frontage (Molalla Avenue, Parcel C), requiring 101 street trees (3,535 /35=101). The location of the street trees are subject to change with the placement of street lights, utility meters, etc. Prior to issuance of construction plans of the right-of-way improvements, the applicant shall submit a street tree plan which includes 101 street trees planted, spacing shall be evenly distributed throughout the total development in accordance with OCMC 12.08 or accept a fee-in-lieu of planting pursuant to OCMC 12.08 if site or other constraints prevent meeting the required total number of tree plantings. (P)
67. A financial guarantee for the establishment of the mitigation area, in a form approved by the City, shall be submitted before development within the NROD disturbance area commences. The City will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented. (P)
68. The developer shall submit waiver of damages, indemnity and hold harmless agreement completed by all owners of property disturbed by the development. (DS)
69. A geotechnical engineer provides consultation services to the City. The geotechnical consultant provide review of all geologic assessments and geotechnical reports for the City. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. (DS)
70. Revisions and amendments to this DDP may be reviewed as a Type II administrative review, unless the reason qualifies for a Type III Planning Commission review as described in OCMC 17.6580 - Amendments to approved plans. (P)
71. The applicant shall record a restrictive covenant or conservation easement, in a form provided by the City, requiring the owners and assigns of properties subject to this section to comply with the applicable mitigation requirements of OCMC 17.49. Said covenant shall run with the land and permit the City to complete mitigation work in the event of default by the party responsible. Costs borne by the City for such mitigation shall be borne by the owner. A financial guarantee for the establishment of the mitigation area, in a form approved by the City, shall be submitted before development within the NROD disturbance area commences. The City will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented. (P)
72. Prior to completion of the project, a monitoring and maintenance plan shall be submitted. The mitigation plan shall provide for a five-year monitoring and maintenance plan with annual reports in a form approved by the Community Development Director. Monitoring of the mitigation site is the ongoing responsibility of the property owner, assignee, or designee, who shall submit said annual report to the planning division, documenting plant survival rates of shrubs and trees on the mitigation site. Photographs shall accompany the report that indicates the progress of the mitigation. A minimum of 80% survival of the trees and shrubs of those species planted is required at the end of

the five-year maintenance and monitoring period. Any invasive species shall be removed, and plants that die shall be replaced in kind to meet the eighty percent survival requirement. Bare spots and areas of invasive vegetation larger than ten square feet that remain at the end of the five-year monitoring period shall be replanted or reseeded with native grasses and/or ground cover species. (P)

I. BACKGROUND:

1. Existing Conditions

The subject property is comprised of an assemblage of properties in the main development area which includes TL 3200, 3201, 3300, & 3400, Map 3 2E 05DB (On-Site) and a proposed public road through TL 500 & 501, Map 3 2E 05D (Off-site) that connects the on-site properties to Beavercreek Rd

The on-site properties are currently vacant and include a mixture of grasslands, scrub brush and scattered groves of trees, with more concentrated tree canopy along the north and south edges and in the southeast corner. The east side of the on-site properties extends into Newell Creek Canyon, is heavily forested, and lies within a geologic hazard area.

Past uses on TL 3200, 3201 and 3300 include a former wrecking yard whose operations started in 1953 and continued until late 2001 when the wrecking yard operations ceased. Environmental studies on these properties indicated low concentrations of petroleum hydrocarbons and/or metals in near surface and shallow soils, and that groundwater underlying the former wrecking yard was not impacted with contaminants of concern.

TL 3400 previously included a gas station and tavern in the vicinity of its southwest corner which has been removed. Environmental remediation occurred at the former gas station site and ODEQ issued a “No Further Action” letter indicating that ODEQ should be notified prior to installation of any groundwater supply wells and any construction or excavation in or around the former gas station pocket of contamination.

The on-site properties generally slope to the south with a portion of the west end of the site sloping to the southwest. The east end of the property includes a steep slope extending into Newell Creek Canyon and is heavily forested.

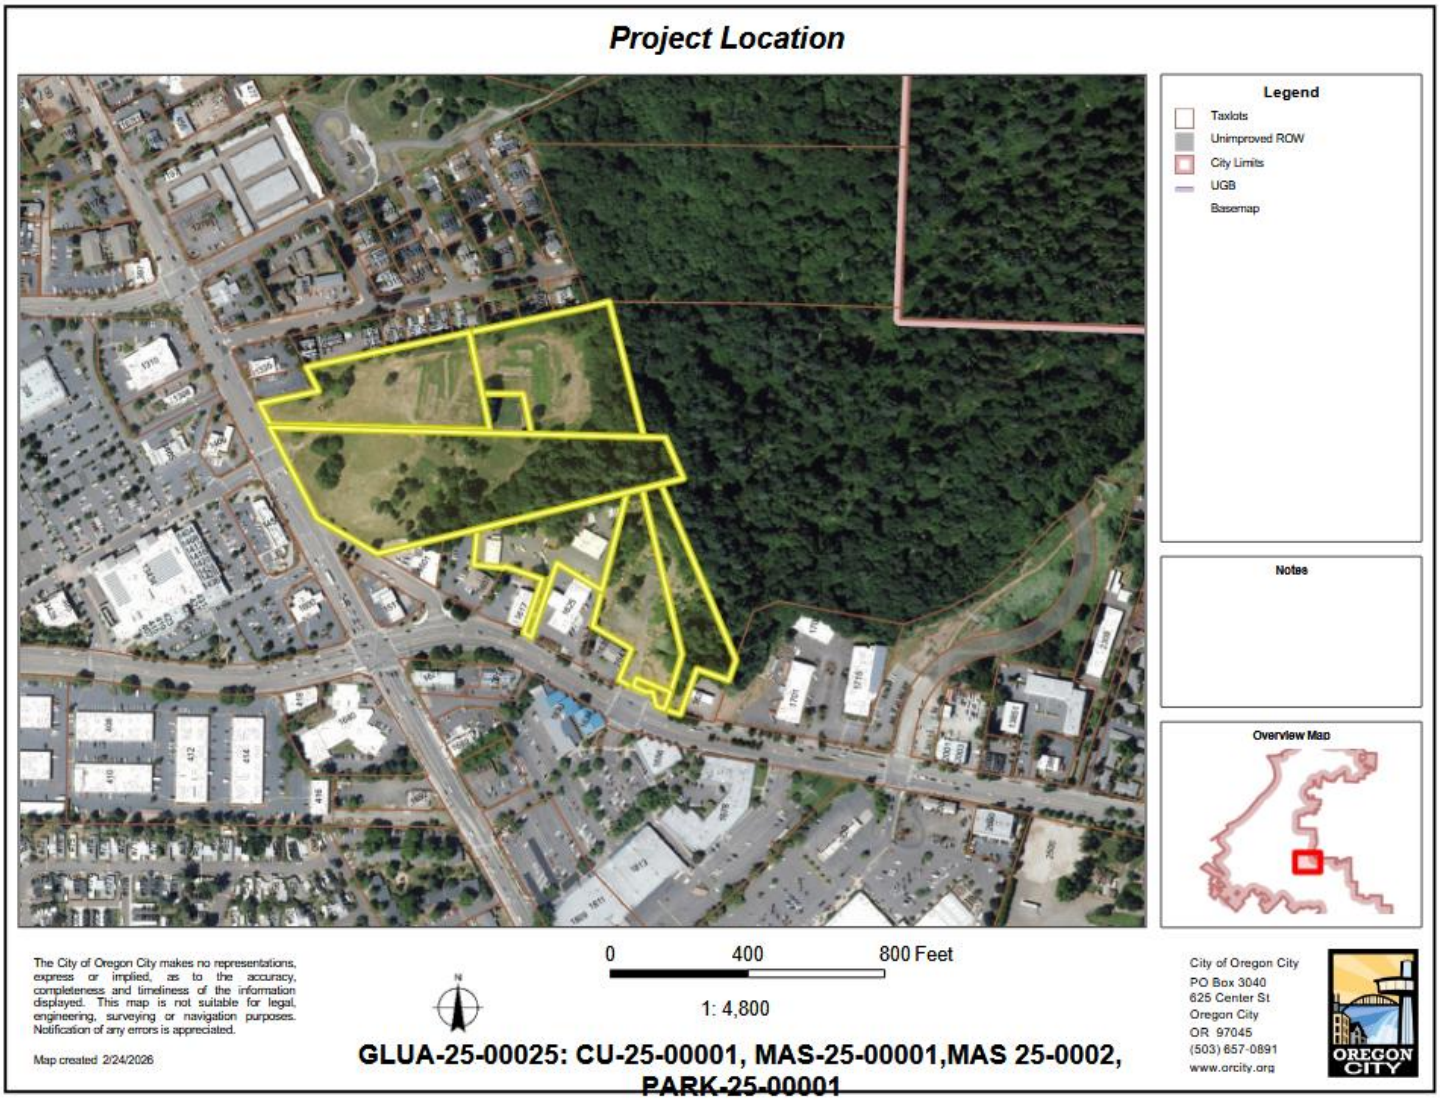

Figure 1. Vicinity Map & Existing Conditions – Aerial Image

2. Project Description

The Applicant is proposing a Master Plan (GLUA-25-00025: CU-25-00001, MAS-25-00001, PARK-25-00001) to create future development parcels for a site zoned Mixed Use Corridor 2. Once approved, each parcel will be submitted for a separate Type II Administrative Detailed Development Plan (DDP) Review when market conditions are ready for each development.

- Creation of 4 development parcels
  - Parcel A: Retail,
  - Parcel B: Multi-Family,
  - Parcel C: New Public Road,
  - Parcel D: Quick Serve Restaurant

A Detailed Development Plan for the construction of a new public road (parcel C) and utilities has been submitted (MAS-25-002_GEO-25-007_NROD-25-012) concurrently with the Master Plan. The staff report will be part of the Planning Commission hearing and can be approved at the same time as the Master Plan.

Figure 3: Proposed Site Plan (New Public Street Parcel C and shared use path)

3. **Permits and Approvals:** The applicant is responsible for obtaining approval and permits from each applicable governmental agency and department in Oregon City, including but not limited to the Engineering and Building Divisions.

4. **Public Comment**
   Public comments submitted include (Exhibit 3):

   Rocky Younger - Mr. Younger owns tax lots 500 and 501, which are part of the application for the purpose of building the Parcel C Road to the intersection of Beavercreek Road. Once completed, it will not be part of the 20-year Master Plan. A private easement was recorded, which requires the owner of the Master Plan lots to build out the full road for tax lots 500

and 501. The city is not a party to the easement, and it is not part of any city review criteria. Mr. Younger is tracking the land use review to ensure that the easement language is being fulfilled by the city's staff report and conditions. He has submitted the private easement to the record with this comment.

None of the comments provided indicates that an approval criterion has not been met or cannot be met through the Conditions of Approval attached to this Staff Report.

CHAPTER 12.04 – STREETS SIDEWALKS AND PUBLIC SPACES

12.04.005 - Jurisdiction and management of the public rights-of-way.
A. The City has jurisdiction and exercises regulatory management over all public rights-of-way within the City under authority of the City Charter and state law by issuing separate public works right-of-way permits or permits as part of issued public infrastructure construction plans. No work in the public right-of-way shall be done without the proper permit. Some public rights-of-way within the City are regulated by the State of Oregon Department of Transportation (ODOT) or Clackamas County and as such, any work in these streets shall conform to their respective permitting requirements.
B. Public rights-of-way include, but are not limited to, streets, roads, highways, bridges, alleys, sidewalks, trails, paths, public easements and all other public ways or areas, including the subsurface under and air space over these areas.
C. The City has jurisdiction and exercises regulatory management over each public right-of-way whether the City has a fee, easement, or other legal interest in the right-of-way. The City has jurisdiction and regulatory management of each right-of-way whether the legal interest in the right-of-way was obtained by grant, dedication, prescription, reservation, condemnation, annexation, foreclosure or other means.
D. No person may occupy or encroach on a public right-of-way without the permission of the City. The City grants permission to use rights-of-way by franchises, licenses and permits.
E. The exercise of jurisdiction and regulatory management of a public right-of-way by the City is not official acceptance of the right-of-way, and does not obligate the City to maintain or repair any part of the right-of-way.

Finding: Applicable. The City of Oregon City has jurisdiction over Beavercreek Road, Molalla Avenue, and the future roadway through the development that will be dedicated as public right-of-way.

12.04.025 - Driveways.
Driveways shall be reviewed in accordance with OCMC 16.12.035. Driveway requirements may be modified through the procedures in OCMC 16.12.013.

Finding: Applicable. See 16.12.035 for more information.

12.04.030 - Maintenance and repair.
The owner of land abutting the street where a sidewalk has been constructed shall be responsible for maintaining said sidewalk and abutting curb, if any, in good repair.

Finding: Applicable. The applicant acknowledges their responsibility to repairing sidewalk panels in disrepair. The sidewalks appear to be in acceptable condition on the property's frontages at the time of this report. However, if conditions worsen either by age or through construction in the future, repairs will be required.

12.04.031 - Liability for sidewalk injuries.
A. The owner or occupant of real property responsible for maintaining the adjacent sidewalk shall be liable to any person injured because of negligence of such owner or occupant in failing to maintain the sidewalk in good condition.
B. If the City is required to pay damages for an injury to persons or property caused by the failure of an owner or occupant to perform the duty that this chapter imposes, the owner or occupant shall compensate the City for the amount of the damages paid. The City may maintain an action in a court of competent jurisdiction to enforce this section.

Finding: Applicable. The property owner abutting the sidewalks is responsible for injuries due to sidewalk disrepair. The applicant acknowledges this standard.

12.04.032 - Required sidewalk repair.
A. When the public works director determines that repair of a sidewalk is necessary, written notice shall be provided to the owner of property adjacent to the defective sidewalk.
B. The notice shall require the owner of the property adjacent to the defective sidewalk to complete the repair of the sidewalk within ninety days after the service of notice. The notice shall also state that if the repair is not made by the owner, the City may do the work and the cost of the work shall be assessed against the property adjacent to the sidewalk.
1. All sidewalks hereafter constructed in the City on improved streets shall be constructed to city standards and widths required in the Oregon City Transportation System Plan and OCMC 16.12. Sidewalks and curbs are to be constructed according to plans and specifications approved by the City Engineer.
2. Sidewalks constructed on unimproved streets shall be constructed of concrete according to lines and grades approved by the City Engineer. On unimproved streets, curbs do not have to be constructed.
C. The public works director shall cause a copy of the notice to be served personally upon the owner of the property adjacent to the defective sidewalk, or the notice may be served by registered or certified mail, return receipt requested. If after diligent search the owner is not discovered, the public works director shall cause a copy of the notice to be posted in a conspicuous place on the property, and such posting shall have the same effect as service of notice by mail or by personal service upon the owner of the property.
D. The person serving the notice shall file with the City Recorder a statement stating the time, place and manner of service or notice.

Finding: Applicable. T The applicant acknowledges their responsibility to repairing sidewalk panels in disrepair. The sidewalks appear to be in acceptable condition on the property's frontages at the time of this report. However, if conditions worsen either by age or through construction in the future, repairs will be required.

12.04.050 - Retaining walls—Required.
Every owner of a lot within the City, abutting upon an improved street, where the surface of the lot or tract of land is above the surface of the improved street and where the soil or earth from the lot, or tract of land is liable to, or does slide or fall into the street or upon the sidewalk, or both, shall build a retaining wall, the outer side of which shall be on the line separating the lot, or tract of land from the improved street, and the wall shall be so constructed as to prevent the soil or earth from the lot or tract of land from falling or sliding into the street or upon the sidewalk, or both, and the owner of any such property shall keep the wall in good repair.

Finding: Complies as Proposed. The applicant acknowledges this section. Potential future retaining walls for Parcel B will be evaluated with it's DDP application. The applicant has also identified potential retaining walls associated with the new roadway.

12.04.100 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the City Engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standard in effect at the time a right-of-way permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.

Finding: Complies with Condition. Pavement cuts are proposed within a public street (Molalla Avenue and Beavercreek Road) due to proposed utility service installations and required frontage improvements. Pavement cuts or other improvements made in a City street shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

12.04.120 - Obstructions—Permit required.
A. Permanent Obstructions. It is unlawful for any person to place, put or maintain any obstruction, other than a temporary obstruction, as defined in subsection B of this section, in any public street or alley in the City, without obtaining approval for a right-of-way permit from the City Commission by passage of a resolution.
1. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.
2. The applicant shall submit at least the following information in the permitting process in order to allow the City Commission to adequately consider whether to allow the placement of an obstruction and whether any conditions may be attached:
a. Site plan showing right-of-way, utilities, driveways as directed by staff;
b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;
c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);
d. Alternative routes if necessary;
e. Minimizing obstruction area; and
f. Hold harmless/maintenance agreement.

3. If the City Commission adopts a resolution allowing the placement of a permanent obstruction in the right-of-way, the City Engineer shall issue a right-of-way permit with any conditions deemed necessary by the City Commission.
4. Signage that acts as an obstruction is approved through OCMC 15.28.
B. Temporary Obstructions.
1. A "temporary obstruction" is defined as an object placed in a public street, sidewalk, road, or alley which is not permanently anchored to another surface such as the pavement, sidewalk, or a building. A "temporary obstruction" includes, but is not limited to, moving containers, debris dumpsters, and seating.
a. Planters and benches are exempt from permitting unless the City Engineer finds by inspection that the planter or bench is impeding use of the right-of-way. If deemed an impeding use, a planter or bench will comply with the requirements for temporary obstructions.
2. The City Engineer, or designee, is authorized to grant a permit for a temporary obstruction.
3. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.
4. The applicant shall submit, and the City Engineer, or designee, shall consider, at least the following items in the permitting process. Additional information may be required in the discretion of the City Engineer:
a. Site plan showing right-of-way, utilities, driveways as directed by staff;
b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;
c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);
d. Handicap accessible route complying with Americans with Disability Act (ADA) standards;
e. Alternative routes if necessary;
f. Minimizing obstruction area; and
g. Hold harmless/maintenance agreement.
5. In determining whether to issue a right-of-way permit to allow a temporary obstruction, the City Engineer may issue such a permit only after finding that the following criteria have been satisfied:
a. The obstruction will not unreasonably impair the safety of people using the right-of-way and nearby residents;
b. The obstruction will not unreasonably hinder the efficiency of traffic affected by the obstruction;
c. No alternative locations are available that would not require use of the public right-of-way; and
d. Any other factor that the City Engineer deems relevant.
6. The permittee shall post a weatherproof copy of the temporary obstruction permit in plain view from the right-of-way.
7. Types
a. A short-term temporary obstruction is allowed for a period of not more than sixty consecutive calendar days. It is permitted with a temporary obstruction in the right-of-way permit.
b. A long-term temporary obstruction is allowed for a period of not more than one year, and it is permitted with a renewable right-of-way permit.
8. Signage that acts as an obstruction is approved through OCMC 15.28
C. Fees. The fee for obtaining a right-of-way permit for either a permanent obstruction or a temporary obstruction shall be set by resolution of the City Commission.

Finding: Complies as Proposed. No obstructions are proposed within the right of way but the applicant has acknowledged this standard if design during the DDP permitting process requires an obstruction.

12.04.150 - Street and alley vacations—Cost.
At the time of filing a petition for vacation of a street, alley, or any part thereof, a fee as established by City Commission resolution shall be paid to the City. The City Commission, upon hearing such petition, may grant the same in whole or in part, or may deny the same in whole or in part, or may grant the same with such reservations as would appear to be for the public interest, including reservations pertaining to the maintenance and use of underground public utilities in the portion vacated.

Finding: Not Applicable. No vacations are proposed as part of this application.

12.04.170 - Street design—Purpose and general provisions.
All development shall be in conformance with the City's public facility master plans, public works policies, standard drawings, and engineering specifications. All streets shall be reviewed and approved by the City Engineer prior to construction. All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Finding: Complies with Condition. See findings from chapter 16.12 of this report.

12.04.270 - Standard construction specifications.
The workmanship and materials for any work performed under permits issued per this chapter shall be in accordance with the current edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City in accordance with this ordinance, in effect at the time of application. The exception to this requirement is where this chapter and the public works street standard drawings provide other design details, in which case the requirements of this chapter and the public works street standard drawings shall control. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards.

Finding: Complies with Condition. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the latest of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 12.08 – PUBLIC AND STREET TREES

12.08.015 - Street tree selection, planting and maintenance requirements.
All development shall provide street trees adjacent to all street frontages. Species and locations of trees shall be selected based upon vision clearance requirements but shall in all cases be selected from the Oregon City Street Tree List, an approved street tree list for a jurisdiction in the Metropolitan region or be approved by a certified arborist unless otherwise approved pursuant to

this section. If a setback sidewalk has already been constructed or the public works department determines that the forthcoming street design shall include a setback sidewalk, then all street trees shall be installed with a planting strip or within tree-wells. If existing street design includes a curb-tight sidewalk, then all street trees shall be placed according to OCMC 12.08.035.C.

A. One street tree shall be planted for every thirty-five feet of property frontage. The tree spacing shall be evenly distributed throughout the total development frontage to meet the clearance distances required in subsection B below. The Community Development Director may approve an alternative street tree plan or accept fee-in-lieu of planting pursuant to OCMC 12.08.035, if site or other constraints prevent meeting the required total number of tree plantings.

B. The following clearance distances shall be maintained when planting trees:
1. Fifteen feet from street lights;
2. Five feet from fire hydrants;
3. Twenty feet from intersections;
4. Five feet from all public utilities (i.e. sewer, storm and water lines, utility meters, etc.).

C. All street trees planted in conjunction with development shall be a minimum of two inches in caliper at six inches above the root crown and installed to City specifications. Larger caliper size trees may be approved if recommended by a certified arborist or registered landscape architect.

D. All established trees shall be pruned tight to the trunk to a height that provides adequate clearance for street cleaning equipment and ensures ADA complaint clearance for pedestrians.

E. All trees planted within the right-of-way shall be planted with root barriers at least eighteen inches in depth adjacent to the sidewalk and curb to ensure proper root growth and reduce potential damage to sidewalks, curbs and gutters.

F. All trees planted beneath powerlines shall be selected based on what is appropriate for the location. In addition, the tree species shall be approved by the associated franchise powerline utility company.

G. Tree species, spacing and selection for stormwater facilities in the public right-of-way and in storm water facilities shall conform to requirements of OCMC 13.12 and the adopted stormwater and grading design standards and be approved by the City engineer.

H. Any public or street trees planted within the natural resource overlay district shall conform to the applicable requirements of OCMC 17.49, Natural Resources Overlay District (NROD).

Finding: Complies with Condition. The proposal includes installation of street trees along approximately 3,535 feet of frontage (Molla Avenue, Parcel C), requiring 101 street trees (3,535 /35=101). The location of the street trees are subject to change with the placement of street lights, utility meters, etc. Prior to issuance of construction plans of the right-of-way improvements, the applicant shall submit a street tree plan which includes 101 street trees planted, spacing shall be evenly distributed throughout the total development in accordance with OCMC 12.08 or accept a

fee-in-lieu of planting pursuant to OCMC 12.08 if site or other constraints prevent meeting the required total number of tree plantings. (P)

CHAPTER 13.12 – STORMWATER MANAGEMENT

13.12.050 - Applicability and exemptions.
This chapter establishes performance standards for stormwater conveyance, quantity and quality. Additional performance standards for erosion prevention and sediment control are established in OCMC 17.47.
A. Stormwater Conveyance. The stormwater conveyance requirements of this chapter shall apply to all stormwater systems constructed with any development activity, except as follows:
1. The conveyance facilities are located entirely on one privately owned parcel;
2. The conveyance facilities are privately maintained; and
3. The conveyance facilities receive no stormwater runoff from outside the parcel's property limits. Those facilities exempted from the stormwater conveyance requirements by the above subsection will remain subject to the requirements of the Oregon Uniform Plumbing Code. Those exempted facilities shall be reviewed by the building official.

Finding: Applicable. Connection to a public stormwater conveyance system is required to serve this development. The applicant has acknowledged this chapter.

B. Water Quality and Flow Control. The water quality and flow control requirements of this chapter shall apply to the following proposed uses or developments, unless exempted under subsection C:
1. Activities located wholly or partially within water quality resource areas pursuant to OCMC 17.49 that will result in the creation of more than five hundred square feet of impervious surface within the NROD or will disturb more than one thousand square feet of existing impervious surface within the NROD as part of a commercial or industrial redevelopment project. These square footage measurements will be considered cumulative for any given five-year period; or
2. Activities that create or replace more than five thousand square feet of impervious surface, cumulated over any given five-year period.

Finding: Applicable. The proposed development will create or replace more than 5000 square feet of impervious area and therefore OCMC 13.12 is applicable to this development.

C. Exemptions. The following exemptions to subsection B of this section apply:
1. An exemption to the flow control requirements of this chapter will be granted when the development site discharges to the Willamette River, Clackamas River or Abernethy Creek; and either lies within the one hundred-year floodplain or is up to ten feet above the design flood elevation as defined in OCMC 17.42, provided that the following conditions are met:
a. The project site is drained by a conveyance system that is comprised entirely of man-made elements (e.g. pipes, ditches, culverts outfalls, outfall protection, etc.) and extends to the ordinary high water line of the exempt receiving water; and
b. The conveyance system between the project site and the exempt receiving water has sufficient hydraulic capacity and erosion stabilization measures to convey discharges from the proposed conditions of the project site and the existing conditions from non-project areas from which runoff is collected.

2. Projects in the following categories are generally exempt from the water quality and flow control requirements:
a. Stream enhancement or restoration projects approved by the city.
b. Farming practices as defined by ORS 30.960 and farm use as defined in ORS 214.000; except that buildings associated with farm practices and farm use are subject to the requirements of this chapter.
c. Actions by a public utility or any other governmental agency to remove or alleviate an emergency condition.
d. Road and parking area preservation/maintenance projects such as pothole and square cut patching, surface sealing, replacing or overlaying of existing asphalt or concrete pavement, provided the preservation/maintenance activity does not expand the existing area of impervious coverage above the thresholds in subsection B of this section.
e. Pedestrian and bicycle improvements (sidewalks, trails, pathways, and bicycle paths/lands) where no other impervious surfaces are created or replaced, built to direct stormwater runoff to adjacent vegetated areas.
f. Underground utility projects that replace the ground surface with in-kind material or materials with similar runoff characteristics.
g. Maintenance or repair of existing utilities.

Finding: Not Applicable. The proposed development does not meet the criteria for exemption to the flow control requirements of this chapter.

D. Uses Requiring Additional Management Practices. In addition to any other applicable requirements of this chapter, the following uses are subject to additional management practices, as defined in the public works stormwater and grading design standards:
1. Bulk petroleum storage facilities;
2. Above ground storage of liquid materials;
3. Solid waste storage areas, containers, and trash compactors for commercial, industrial, or multi-family uses;
4. Exterior storage of bulk construction materials;
5. Material transfer areas and loading docks;
6. Equipment and/or vehicle washing facilities;
7. Development on land with suspected or known contamination;
8. Covered vehicle parking for commercial or industrial uses;
9. Industrial or commercial uses locating in high traffic areas, defined as average daily count trip of two thousand five hundred or more trips per day; and
10. Land uses subject to DEQ 1200-Z Industrial Stormwater Permit Requirements.

Finding: Applicable. The applicant has noted that the site includes environmental contamination from previous historical uses. Remediation will be required and identified as part of the permitting for construction. The applicant acknowledges this standard. The applicant shall provide a grading and erosion control plan identifying onsite environmental cleanup activities. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.080 - Submittal requirements.

A. Applications subject to stormwater conveyance, water quality, and/or flow control requirements of this chapter shall prepare engineered drainage plans, drainage reports, and design flow calculation reports in compliance with the submittal requirements of the public works stormwater and grading design standards.
B. Each project site, which may be composed of one or more contiguous parcels of land, shall have a separate valid City approved plan and report before proceeding with construction.

Finding: Complies with Condition. See findings from section 13.12.090 of this report.

13.12.090 - Approval criteria for engineered drainage plans and drainage report.
An engineered drainage plan and/or drainage report shall be approved only upon making the following findings:
A. The plan and report demonstrate how the proposed development and stormwater facilities will accomplish the purpose statements of this chapter.
B. The plan and report meet the requirements of the public works stormwater and grading design standards adopted by resolution under OCMC 13.12.020.
C. The storm drainage design within the proposed development includes provisions to adequately control runoff from all public and private streets and roof, footing, and area drains and ensures future extension of the current drainage system.
D. Streambank erosion protection is provided where stormwater, directly or indirectly, discharges to open channels or streams.
E. Specific operation and maintenance measures are proposed that ensure that the proposed stormwater quantity control facilities will be properly operated and maintained.

Finding: Complies with Condition. The developer has provided a preliminary stormwater report as part of their application. The stormwater plans may change due to modifications that occur during the design review process. The developer shall relocate portions of the stormwater management area outside of the Geologic Hazards Overlay Zone, separate public and private stormwater management or make all stormwater management private, and provide finalized engineered drainage plan(s), drainage report(s), and design flow calculation report(s) stamped and signed by a licensed engineer addressing all items from Section 9.3 & 9.4 of the Public Works Stormwater and Grading Design Standards prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.100 - Alternative materials, alternative design and methods of construction.
The provisions of this chapter are not intended to prevent the use of any material, alternate design or method of construction not specifically prescribed by this chapter or the public works stormwater and grading design standards, provided any alternate has been approved and its use authorized by the City Engineer. The City Engineer may approve any such alternate, provided that the City Engineer finds that the proposed design is satisfactory and complies with the intent of this chapter and that the material, method, or work offered is, for the purpose intended, at least the equivalent of that prescribed by this chapter in effectiveness, suitability, strength, durability and safety. The City Engineer shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use. The details of any action granting approval of an alternate shall be recorded and entered in the City files.

Finding: Not Applicable. The applicant has not proposed alternative design methods requiring special approval by the City Engineer. However, should the applicant propose such methods with the public facilities construction plan submittal, the proposal will be reviewed and approved by the City Engineer as required.

13.12.110 - Transfer of engineering responsibility.
Project drainage plans shall always have a project engineer. If the project engineer is changed during the course of the work, the City shall be notified in writing and the work shall be stopped until the replacement engineer has agreed to accept the responsibilities of the project engineer. The new project engineer shall provide written notice of accepting project responsibility to the City within seventy-two hours of accepting the position as project engineer.

Finding: See section 16.12.014 regarding requirement to execute a "Developer/Engineer Agreement for Public Works Improvements"

13.12.120 - Standard construction specifications.
The workmanship and materials shall be in accordance with the current edition of the "Standard Specifications for Public Works Construction," as prepared by the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Stormwater and Grading Design Standards provide other design details, in which case the requirements of this chapter and the Public Works Stormwater and Grading Design Standards shall be complied with.

Finding: Complies with Condition. The workmanship and materials for any work performed under permits issued by Oregon City Public Works shall be in accordance with the edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the city. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.140 - Maintenance of public stormwater facilities.
A. A stormwater facility that receives stormwater runoff from a public right-of-way shall be a public facility. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those public stormwater facilities. Access for maintenance of the stormwater facilities shall be provided to the City through the granting of a stormwater easement or other means acceptable to the City.

Finding: Complies with Condition. The applicant has proposed a tract for stormwater on the preliminary plat as a public facility. The proposed stormwater design shows that the stormwater pond within the public tract will receive stormwater from the proposed public right-of-way for treatment. The stormwater pond will also treat stormwater from Parcels A and B, while Parcel D will have it's own stormwater treatment facility. The applicant's stormwater report notes that the combined stormwater collection area to be treated for Parcels A and B is approximately 4 times the size of the proposed public roadway. The proposed Pond is primarily designed to treat the private

properties within this development. Typically, with commercial properties (shopping centers, apartment complexes, industrial complexes, etc.) the stormwater facilities are privately owned and maintained. Public stormwater facilities shall only treat stormwater from publicly maintained rights-of-way (i.e. public streets). The applicant shall either separate the public stormwater runoff from the private runoff with separate publicly maintained facilities (e.g. streetside planters or other separate facilities) and privately maintain facilities for private stormwater runoff; or the development can enter into an agreement with the City to privately maintain a combined pond. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval**

B. Responsibility for maintenance of stormwater facilities including all landscaping, irrigation systems, structures and appurtenances shall remain with the property owner/developer for two years (known as the warranty period). The owner/developer shall provide the City a separate two-year landscaping maintenance surety bond for one hundred ten percent of the landscaping cost. Transfer of maintenance of stormwater conveyance systems shall occur when the City accepts the stormwater conveyance system.

Finding: Complies with Condition. The proposed combined stormwater pond receives approximately 4 times the runoff from the private parcels as it does from the proposed public street. The burden to treat stormwater runoff from private properties should not be the responsibility of the City. Typically, commercial properties, like the proposed, manage and treat their own stormwater runoff. The City does not agree with the proposed combined stormwater management facility to be owned and maintained by the public. The pond shall be privately maintained. If the applicant separates the runoff from the public street, those facilities will be publicly managed. Responsibility for maintenance of public stormwater facilities including all landscaping, irrigation systems, structures and appurtenances shall remain with the property owner/developer for two years (known as the warranty or maintenance period). The owner/developer shall provide the City a separate two-year landscaping maintenance bond equal to one hundred ten percent of the landscaping costs or pay a fee-in-lieu and sign a contract with the City to cover the maintenance period prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.145 - Maintenance of private stormwater facilities.
A. An applicant shall submit an operation and maintenance plan for each proposed stormwater facilities, unless exempted in the Public Works Stormwater and Grading Design Standards. The information in the operation and maintenance plan shall satisfy the requirements of the Public Works Stormwater and Grading Design Standards.
B. Private owners are required to inspect and maintain stormwater facilities on their property in accordance with an approved operation and maintenance plan. A maintenance log is required to document facility inspections and specific maintenance activities. The log shall be available to City inspection staff upon request.
C. Failure to operate or maintain a stormwater facility according to the operation and maintenance plan may result in an enforcement action under Section 13.12.150.

Finding: Complies with Condition. The proposed stormwater pond is designed to collect and treat approximately 4 times the amount of stormwater from private properties as it is from the public roadway. Maintenance and treatment of private stormwater will be the responsibility of the private property owners. The public stormwater can either be separated from the proposed pond into separate treatment facilities, which will be maintained by the City per OCMC 13.14.140, or the development may keep the proposed combined design and maintain the stormwater pond as a private facility. The property owner(s) shall execute an agreement providing maintenance of, and giving Oregon City access to, privately-owned stormwater management facilities and pay associated recording fees. The agreement shall include a site plan identifying all privately-owned stormwater management facilities and an operation and maintenance plan for each type of stormwater facility in accordance with the Public Works Stormwater and Grading Design Standards. The agreement shall run with the land and be applicable to subsequent property owners. The agreement shall be reviewed and accepted by the City prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

13.12.170 - Permits from other jurisdictions.
A. The Oregon State Department of Environmental Quality (DEQ) currently issues NPDES 1200-C permits for projects that cover areas of one acre or greater. No permit shall be issued for projects of this size (or any other size as modified by DEQ) without a copy of said DEQ permit being on file with Oregon City. DEQ is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DEQ representatives.

Finding: Complies with Condition. The development exceeds 1.0 acre in disturbed area and therefore requires DEQ permitting. The developer shall obtain a 1200-C (NPDES) permit from Oregon Department of Environmental Quality (DEQ) for construction activities one acre or greater prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Projects may require Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits. If such permits are required, no permission to construct will be granted until such a time as a copy of such permit is on file with the City or notice is receved from those agencies that a permit is not required. DSL/USACE is responsible for enforcing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DSL/USACE representatives.

Finding: Complies with Condition. Portions of the new access road to Beavercreek Road crosses a culvertized stream. The construction of the new road may impact the wetland and stream that abuts this roadway based on its final design and alignment. If the proposed roadway encroaches on the mapped stream or wetland, the applicant shall coordinate with DSL and/or USACOE to obtain the proper permitting. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Projects may require Oregon State Department of Fish and Wildlife (ODFW) permits. When ODFW permits are required, no work will be authorized until the receipt of a copy of the ODFW permit. ODFW is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate ODFW representatives.

Finding: **Complies with Condition.** Portions of the new access road to Beavercreek Road crosses a culvertized stream. The construction of the new road may impact the wetland and stream that abuts this roadway based on its final design and alignment. If the proposed roadway encroaches on the mapped stream or wetland, the applicant shall coordinate with ODFW to obtain the proper permitting. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 15.48 – GRADING, FILLING AND EXCAVATING

15.48.030 Applicability—Grading permit required.
A. A city-issued grading permit shall be required before the commencement of any of the following filling or grading activities:
1. Grading activities in excess of ten cubic yards of earth;
2. Grading activities which may result in the diversion of existing drainage courses, both natural and man-made, from their natural point of entry or exit from the grading site;
3. Grading and paving activities resulting in the creation of impervious surfaces greater than two thousand square feet or more in area;
4. Any excavation beyond the limits of a basement or footing excavation, having an unsupported soil height greater than five feet after the completion of such a structure; or
5. Grading activities involving the clearing or disturbance of one-half acres (twenty-one thousand seven hundred eighty square feet) or more of land.
B. Those fill and grading activities proposed to be undertaken in conjunction with a land use application, including but not limited to subdivisions, planned unit developments, partitions and site plan reviews, are subject to the standards of this chapter. However, a separate grading permit is not required. Approval of the construction plans submitted through the land use application process shall constitute the grading permit required under this chapter.

Finding: Applicable. The preliminary plan presents grading and paving activities that will result in the disturbance of more than one-half acre. Fill and grading activities are proposed to be undertaken in conjunction with a land use application. A separate grading permit is not required. Construction plans are required to be submitted after the land use application has been processed and associated construction permit issued shall constitute the grading permit required under this chapter.

15.48.040 - Grading permit exemptions.
The following filling and grading activities shall not require the issuance of a grading permit:
A. Excavation for utilities, or for wells or tunnels allowed under separate permit by other governmental agencies;

B. An excavation below finished grade for basements and footings of a building, retaining wall or other structure authorized by a valid building permit. The placement of any fill material removed from such an excavation requires a grading permit if:
1. It exceeds fifty cubic yards,
2. More than ten cubic yards are removed from the site, or
3. The fill is placed on the site to a depth greater than one foot;
C. Farming practices as defined in ORS 30.930 and farm uses as defined in ORS 215.203, except that buildings associated with farm practices and farm uses are subject to the requirements of this chapter;
D. Excavation for cemetery graves;
E. Sandbagging, diking, ditching, filling or similar work when done to protect life or property during an emergency;
F. Repaving of existing paved surfaces that does not alter existing drainage patterns;
G. Maintenance work on public roads performed under the direction of the city, Clackamas County or Oregon State Department of Transportation personnel.

Finding: Not Applicable. The application does not qualify for an exemption.

15.48.090 Submittal requirements.
An engineered grading plan or an abbreviated grading plan shall be prepared in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards whenever a city approved grading permit is required. In addition, a geotechnical engineering report and/or residential lot grading plan may be required pursuant to the criteria listed below.
A. Abbreviated Grading Plan. The city shall allow the applicant to submit an abbreviated grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards if the following criteria are met:
1. No portion of the proposed site is within the flood management area overlay district pursuant to ***Chapter 17.42****, the unstable soils and hillside constraints overlay district pursuant to* ***Chapter 17.44****, or a water quality resource area pursuant to* ***Chapter 17.49****; and*
2. The proposed filling or grading activity does not involve more than fifty cubic yards of earth.
B. Engineered Grading Plan. The city shall require an engineered grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer if the proposed activities do not qualify for abbreviated grading plan.
C. Geotechnical Engineering Report. The city shall require a geotechnical engineering report in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer who specializes in geotechnical work when any of the following site conditions may exist in the development area:
1. When any publicly maintained facility (structure, street, pond, utility, park, etc.) will be supported by any engineered fill;
2. When an embankment for a stormwater pond is created by the placement of fill;
3. When, by excavation, the soils remaining in place are greater than three feet high and less than twenty feet wide.
D. Residential Lot Grading Plan. The city shall require a residential lot grading plan in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer for all land divisions creating new residential

building lots or where a public improvement project is required to provide access to an existing residential lot.

Finding: Complies with Conditions. The developer shall provide an engineered grading plan prepared by a professional engineer in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards. S**taff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

CHAPTER 16.12 – MINIMUM PUBLIC IMPROVEMENTS AND DESIGN STANDARDS FOR DEVELOPMENT

16.12.008 Definitions.
Whenever the words or terms and their derivatives are used in this chapter, they shall have the meaning
herein ascribed to them as described in OCMC 17.04 unless the context dictates application of a different meaning.

16.12.010 - Purpose and general provisions.
The purpose of this chapter is to identify the standards for development in and adjacent to spaces which
benefit the public including right-of-way, access to the right-of-way, public off-street pedestrian and bicycle accessways, and easements. All development shall be in conformance with the policies and design standards established by this chapter and with applicable standards in the City's public facility master plans and city design standards and specifications. In reviewing applications for development, the City Engineer shall take into consideration any approved development and the remaining development potential of adjacent properties. All street, water, sanitary sewer, storm drainage and utility plans associated with any development shall be reviewed and approved by the City Engineer prior to construction. All streets, driveways or storm drainage connections to another jurisdiction's facility or right-of-way shall be reviewed by the appropriate jurisdiction as a condition of the preliminary plat and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Finding: Complies with Condition. Compliance with the "purpose and general provisions" of chapter 16.12 can be met by adhering to the following: The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.011 - Applicability.
A. Compliance with this chapter is required for all development including land divisions, site plan and design review, master plan, detailed development plan and conditional use applications and all public improvements that are required in conjunction with a land use decision.
B. Compliance with this chapter is also required for new construction or additions which exceed fifty percent of the existing square footage of all single-family detached residential and middle housing units' living space. Garages, carports, sheds, and porches may not be included in the calculation if these spaces are not living spaces. Accessory dwelling units are not subject to

compliance with this chapter. All single-family detached residential and middle housing units shall provide any necessary dedications, easements or agreements as identified in the transportation system plan and this chapter, subject to constitutional limitations. In addition, the street frontage shall be improved to include the following priorities for improvements:
1. Improve street pavement, construct curbs, gutters, sidewalks and planter strips; and
2. Plant street trees.
The cost of compliance with the standards identified in subsections 16.12.011.B.1 and 16.12.011.B.2 is calculated based on the square footage valuation from the state of Oregon Building Codes Division and limited to ten percent of the total construction costs. The value of the alterations and improvements is based on the total construction costs for a complete project rather than costs of various project component parts subject to individual building permits. The entire proposed construction project cost includes engineering and consulting fees and construction costs. It does not include permit fees, recording fees, or any work associated with drafting or recording dedications or easements.
C. Exemptions. The following are exempt from review by this chapter unless public improvements, driveways, PUEs, or other items regulated by this chapter are proposed:
1. Minor Site Plan and Design Review applications.
2. Work within the right-of-way.
3. Lot Line Adjustments and Abandonments.
4. Public capital improvement projects.

Finding: Applicable. The application is development design review; therefore, the development shall follow the standards set forth in OCMC 16.12.

16.12.012 - Jurisdiction and management of the public rights-of-way.
The City has jurisdiction and exercises regulatory management over all public rights-of-way as defined and outlined within 12.04 of the Oregon City Municipal Code.

Finding: Applicable. The City has exercised its regulatory management authority by providing findings within this staff report with conditions to be met by the applicant prior to working within all public rights-of-way (e.g Molalla Avenue, Beavercreek Road, Beavercreek Way, etc.).

16.12.013 - Modifications.
The applicant may request and the review body may consider modification of the standards in this chapter resulting from constitutional limitations restricting the City's ability to require the dedication of property or for any other reason, based upon the criteria listed below and other criteria identified in the standard to be modified. All modifications, except for adjustments approved by the City Engineer for tree preservation purposes pursuant to Section 16.12.013.A, shall be processed through a Type II land use application and may require additional evidence from a transportation engineer or others to verify compliance. Compliance with the following criteria is required:
A. Compliance with the following criteria is required:

1. The modification meets the intent of the standard;

2. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

3. The modification is consistent with an adopted transportation or utility plan;

4.The modification is complementary with a surrounding street design; or, in the alternative;

5.If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Finding: Complies with Condition. This development proposes a new street through the site connecting the two major arterial roads of Molalla Avenue and Beavercreek Road. Per discussions with City Staff prior to this application, the proposed roadway was deemed to be a collector road as it connects two major arterial roads together and the proposed street would serve mixed use commercial areas with regular large truck delivery requirements. The Applicant's TIA also notes the need for a center turn lane for the Parcels A, B and part of D which is consistent with the City's collector road standard vs. a two-lane local road for a Mixed-Use area.

The Applicant has made 3 modification requests to the City's collector road standard for a mixed-use development (see Table 16.12.016 below for the standard cross-section):

1. Eliminate the required on-street parking along the proposed collector road.
2. Allow the reduction in the number of travel lanes, from three to two, east of Parcel D to Beavercreek Road.
3. Allow a reduced-cross section street design through Tax Lot 500, 501 and 602.

City Staff agrees and supports each modification request under each catagory:

1. *The modification meets the intent of the standard;*
The proposed cross sections for Modifications 1, 2, and 3 meet the intent of the code as noted in 16.12.013.1.a. Each modification provides safe means of travel for vehicles (including large trucks and emergency vehicles), pedestrians, and bicycles. Modification 1 is consistent with a collector road with the exception of the parking lane. The applicant has noted that the developed parcels will contain more than the required parking and street parking would not be needed. The new street will also act as a connection between Beavercreek Road and Molalla Avenue with commuters not needing to use the standard parking area associated with a collector.
Modification 2 meets the intent of the code by reducing the collector street's standard 3 lanes down to two lanes. The applicant's TIA notes that the proposed roadway will function properly with adequate sizing for freight and emergency vehicles with only two lanes for the site with the exception of the driveway accesses for Parcels A, B, and D. There the standard third lane will be constructed for turning in and out of the businesses, which is consistent with a collector road.

Modification 3 meets the intent by providing a half street type roadway where the applicant has proposed providing two full travel lanes with an expanded sidewalk acting as a shared use path on the eastside of the new street. The west side would not have a bike lane or sidewalk. When the developments on the westside develop they will construct that side of the new proposed roadway. This is consistent with half street improvements and the City's Beavercreek Access Plan.

2. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Modification 1's request to remove the required parking lane does not affect the safety of travel for motorized vehicles, bicyclists, or pedestrians. The applicant has proposed adequate spacing for emergency vehicles and freight and separated bike lanes and sidewalks will be provided.
Modification 2's request also does not affect safety. The applicant's TIA notes that a third lane is not required for the easterly portion of the development. Separated bike lanes and sidewalks are provided. The City concurs.
Modification 3 provides proper spacing for large emergency vehicles and freight to move through the site connecting Beavercreek Road to Molalla Avenue. The share use path on the eastside will allow pedestrians and bicyclists to safely move between the 2 major arterial roads.

3. The modification is consistent with an adopted transportation or utility plan;

The proposed roadway modifications also meet the City's Transportation System Planning (TSP) goals. The new street is consistent with the City's Beavercreek Access Management Plan (2005). Specifically, the Short-Term Access Management Plan identified in Figure 7 for the portion of the new street within Lot 500. The new street provides access points to the properties abutting Beavercreek Road (Lots 600, 602, 700, 800, and 500) allowing for the future closure of driveways on Beavercreek Road and the vacation of Beavercreek Way as identified in the Access Plan. The proposed modification also provides a shared bicycle pedestrian area through TL 500/501 consistent with the TSP Project S28 which is a shared use path connecting the Hilltop Avenue neighborhood with the commercial areas on Beavercreek Road.

4.The modification is complementary with a surrounding street design; or, in the alternative;

The proposed modifications meet the surrounding street designs. Modification 1 only reduces the street section of a collector road by eliminating the parking aisle. The two major arterial roads that this new street connects to (Molalla Avenue and Beavercreek Road) do not have parking aisles as well. All three streets will provide wide sidewalks with landscaping and bicycle lanes.
Modification 2 and are also complementary as Modifcation 1 above. Wide sidewalks with tree wells and bicycle lanes will provide a continuation of of the existing streetscape as travelers commute through the site.

5.If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

The applicant does not seek modification for constitutional reasons.

The applicant's request for reductions in the number of travel lanes, parking lanes and to provide only a "half-street" within Lot 500/501 is supported by City Staff. See OCMC 16.12.016 for specific cross-section dimensions requirements.
Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

B. The following modifications shall be processed as a Type I modification by the City Engineer using the criteria in 16.12.13.A.
1. Modifications to driveway location, size, and sharing standards in 16.12.035;
2. Modifications to sidewalk and planter strips widths and location in 16.12.016 that preserve existing street trees or trees on private property to ensure compliance with ADA standards.

Finding: Complies with Condition. The applicant has made driveway modification request under 16.12.035. It appears that the sizing modification request for the driveway to Parcel D and the spacing request between the easterly driveway for Parcel A and the westerly driveway for Parcel D meet the intent of the code. Final driveway locations for will be evaluated during the design review phase with the applicant's updated TIA. See OCMC 16.12.035. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.014 - Administrative provisions.
An applicant shall submit the following items to the City and complete the following tasks prior to proceeding with construction of proposed development plans. These items include the following:
Pre-Design Meeting;
Final Engineering Plans, Stamped and Signed by an Oregon Licensed Professional Engineer;
Stormwater Report, Stamped and Signed by an Oregon Licensed Professional Engineer;
D. Geotechnical Report, Stamped and Signed by an Oregon Licensed Professional Engineer (if applicable);
E. Engineer's Preliminary and Final Cost Estimates (also may be known as engineer's opinion of probable construction cost);
F. Plan Check and Inspection Fees (as set by City resolution);
G. Certificate of Liability Insurance for City funded public projects contracted by the City (not less than one million dollars single incident and two million dollars aggregate);
H. Preconstruction Meeting;
I. Financial Guarantee(s) per OCMC 17.50.140;
J. Applicable Approvals/Permits from other agencies or entities;
K. Developer/Engineer Agreement for public works improvements.
An applicant shall submit the following additional items to the City and complete the following tasks prior to completing construction of proposed development plans. These items include the following:
L. Project Engineer's Certificate of Completion;
M. Stormwater Operation and Maintenance Easement (if applicable);

N. Deed of Dedication (Bargain and Sale Deed);
O. Recorded Plat and/or Easements (if applicable);
P. Recorded Non-Remonstrance Covenant Agreement;
Q. Land Division Compliance Agreement (if applicable);
R. Permanent Stabilization and/or Restoration of the impact from the development;
S. Fulfillment of all Conditions of Approval;
T. Payment of all Outstanding Fees;
U. Maintenance Guarantee(s). per OCMC 17.50.141;
V. Indemnity Agreement (if applicable);
W. Completed Punchlist;
X. As-Built Drawings;
Details on individual items required by this subsection can be obtained by contacting public works. Many items, such as the engineer's cost estimate and plan check and inspection fee, maybe be submitted in conjunction with documentation for other infrastructure improvements that are done with the development (such as street, sanitary sewer, and water).

Finding: Complies with Condition. The developer shall submit or address all items in section 16.12.014 of the Oregon City Municipal Code based on the timing requirements contained therein and as deemed applicable by the City.
Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

16.12.015 - Street design—Generally.
Development shall be required to provide existing or future connections to adjacent sites through the use of vehicular and pedestrian access easements where applicable. Development shall provide any necessary dedications, easements or agreements as identified in the transportation system plan, trails master plan, and/or parks and recreation master plan and this chapter, subject to constitutional limitations. The location, width and grade of street shall be considered in relation to: Existing and planned streets, topographical conditions, public convenience and safety for all modes of travel, existing and identified future transit routes and pedestrian/bicycle accessways, overlay districts, and the proposed use of land to be served by the streets. The street system shall assure an adequate traffic circulation system with intersection angles, grades, tangents and curves appropriate for the traffic to be carried considering the terrain. To the extent possible, proposed streets shall connect to all existing or approved stub streets that abut the development site. The arrangement of streets shall either:
A. Provide for the continuation or appropriate projection of existing principal streets in the surrounding area and on adjacent parcels or conform to a plan for the area approved or adopted by the City to meet a particular situation where topographical or other conditions make continuance or conformance to existing streets impractical;
B. Where necessary to give access to or permit a satisfactory future development of adjoining land, streets shall be extended to the boundary of the development and the resulting dead-end street (stub) may be approved with a temporary turnaround as approved by the City Engineer. Notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. Access control in accordance with OCMC 16.12.017 shall be required to preserve the objectives of street extensions.

C. Adequate right-of-way and improvements to streets, pedestrian ways, bike routes and bikeways, and transit facilities shall be provided and be consistent with the City's transportation system plan. Consideration shall be given to the need for street widening and other improvements in the area of the proposed development impacted by traffic generated by the proposed development. This shall include, but not be limited to, improvements to the right-of-way, such as installation of lighting, signalization, turn lanes, median and parking strips, traffic islands, paving, curbs and gutters, sidewalks, bikeways, street drainage facilities and other facilities needed because of anticipated vehicular and pedestrian traffic generation.

Finding: Complies with Condition. The location, widths, and grades of the proposed street system provides for the continuation or appropriate projection of existing principal streets in the surrounding area and gives access for future development of adjoining land. The development has provided a convenient street system for the safety of all modes of travel, including pedestrian and bicycle to, from, and through the subject site.

The proposed development abuts Molalla Avenue. The current public facilities along Molalla Avenue abutting the property are not consistent with City Standards for a Major Arterial or the Molalla Avenue Streetscape Standards noted in the City's Street Design Standards. On the development's frontage for Molalla Avenue, the applicant shall provide 16 feet of right-of-way-dedication (for a total of 51 feet from the street center to their property line), a 5-foot-wide public utility easement, a 6-foot-wide bicycle lane, and a 10.5-foot-wide sidewalk with tree wells. The frontage improvements on Molalla Avenue shall be consistent with the City's Street Design Standards for Molalla Avenue (e.g. light fixtures, sidewalk patterns, tree wells, etc.) (e.g. light fixtures, sidewalk patterns, tree wells, etc.).

The development also proposes a new modified street through the properties in this application. The City supports the street modification request above in OCMC 16.12.013. The new street contains multiple cross sections as it makes it way from Molalla Avenue, through this development and then with the Beavercreek Access Road through Lots 602 and 500 for a total of four (4) distinct segments. The first segment of the new road contains three lanes and starts at Molalla Avenue and tapers to 2 lanes roughly 700 feet into the development. The first segment of the new public road connecting Molalla Avenue and Beavercreek Road (~STA 1+46 - STA 8+66) shall have a cross-section with 70 feet of right-of-way with three (3) 12-foot-wide lanes, two (2) 6-foot-wide bicycle lanes, two (2) 10.5-foot-wide sidewalks with 5-foot-wide tree wells. Segment 2 continues eastward from Segment 1 and tapers the three-lane section in Segment 1 down to two lanes. The second segment of the new public road connecting Molalla Avenue and Beavercreek Road (~STA 8+66 – STA 11+50) shall have 64 feet of right-of-way with two (2) 12-foot-wide lanes, two (2) 6-foot-wide bicycle lanes, two (2) 10.5-foot-wide sidewalks with 5-foot-wide tree wells and shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum off 4,000 sf within the parcel which segment 2 lies.

The next portion of the new street continues through Tax Lot 500 to Beavercreek Road and is consistent with Figure 7: Short-Term Access Plan of the Beavercreek Access Management Plan. This portion of the roadway does not include a sidewalks or a bicycle lane on the west side. Future developments along the western lots TL 602 and 600 will complete the public improvements along

their frontages. Segment 3 of the new public road connecting Molalla Avenue with Beavercreek Road (~STA 11+50 – STA 14+92) shall have 60-feet of right-of-way with two (2) 17 to 21-foot-wide lanes (to accommodate freight through curves), one (1) 10.5 foot-wide shared use path (striped), and landscaping located behind the shared use path or in other approved locations and shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum of 4,000 sf within the parcel for which segment 3 lies.

Segment 4 of the new public road connecting Molalla Avenue with Beavercreek Road (~STA14+92 – STA 18+59) of the new roadway is the connection to Beavercreek Road. Segment 4 shall vary from 60 to approximately 76 feet of right-of-way with three (3) 12-foot-wide lanes (varied to accommodate freight movements), one (1) 10.5-foot wide shared-use-path (striped), and landscaping either behind path or in approved locations.

The proposed shared use path along the new street on TL 500/501 connects to the eastern ADA ramp on Beavercreek Road. The existing ramp layout restricts the ability for bicyclists traveling on Beavercreek Road to safely transition onto the proposed shared use path. The new shared use path shall transition from the curbed path along the new road which connects Molalla Avenue to Beavercreek Road to the existing bicycle lane along Beavercreek Road either through modification of the existing ADA ramp or by other means evaluated during technical design review.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

16.12.016 - Street design.
All development regulated by this chapter shall provide street improvements in compliance with the
standards in Table 16.12.016 depending on the street classification set forth in the transportation system plan and the comprehensive plan designation of the adjacent property, unless an alternative plan has been adopted. The table implements the adopted transportation system plan and illustrates the maximum design standards. These standards may be reduced with an alternative street design which may be approved based on the modification criteria in OCMC 16.12.013. The steps for reducing the street design are found in the transportation system plan.

Table 16.12.016 Street Design
To read the table select the road classification as identified in the Transportation System Plan and the Comprehensive Plan designation of the adjacent properties to find the maximum design standards for the road cross section. If the Comprehensive Plan designation for lands on either side of the street differs, the wider right-of-way standard shall apply.

Road Classi-fication	***Compre-hensive Plan Designation***	***Right-of-Way Width***	***Pave-ment Width***	***Public Access***	***Sidewalk***	***Landscape Strip***	***Bike Lane***	***Street Parking***	***Travel Lanes***	***Median***
Major Arterial	*Mixed Use, Commercial or Public/ Quasi Public*	*116 ft.*	*94 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
	Industrial	*120 ft.*	*88 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*N/A*	*(5) 14 ft. Lanes*	*6 ft.*
	Residential	*126 ft.*	*94 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
Minor Arterial	*Mixed Use, Commercial or Public/Quasi Public*	*116 ft.*	*94 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
	Industrial	*118 ft.*	*86 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*7 ft.*	*(5) 12 ft. Lanes*	*N/A*

Collector	*Mixed Use,*	*86 ft.*	*64 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft.*		*6 ft.*	*8 ft.*	*(3) 12 ft.*	*N/A*

Road Classification	Comprehensive Plan Designation	Right-of-Way Width	Pavement Width	Public Access	Sidewalk	Landscape Strip	Bike Lane	Street Parking	Travel Lanes	Median
	Commercial or Public/Quasi Public				*tree wells*				*Lanes*	
	Industrial	*88 ft.*	*62 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 12 ft. Lanes*	*N/A*
	Residential	*85 ft.*	*59 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 11 ft. Lanes*	*N/A*
Local	*Mixed Use, Commercial or Public/ Quasi Public*	*62 ft.*	*40 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*N/A*	*8 ft.*	*(2) 12 ft. Lanes*	*N/A*
	Industrial	*60 ft.*	*38 ft.*	*0.5 ft.*	*5 ft.*	*5.5 ft.*	*(2) 19 ft. Shared Space*			*N/A*
	Residential	*54 ft.*	*32 ft.*	*0.5 ft.*	*5 ft.*	*5.5 ft.*	*(2) 16 ft. Shared Space*			*N/A*

1. Pavement width includes bike lane, street parking, travel lanes and median.
2. Public access, sidewalks, landscape strips, bike lanes and on-street parking are required on both sides of the street in all designations. The right-of-way width and pavement widths identified above include the total street section.
3. A 0.5 foot curb is included in landscape strip or sidewalk width.
4. Travel lanes may be through lanes or turn lanes.
5. The 0.5 foot public access provides access to adjacent public improvements.

6. Alleys shall have a minimum right-of-way width of twenty feet and a minimum pavement width of sixteen feet. If alleys are provided, garage access shall be provided from the alley.
7. A raised concrete median or landscape median shall be utilized for roads identified to have access restrictions.
8. A public utility easement (PUE) shall be provided on both sides of the right-of-way or public access easement on private property as identified in 16.12.085.

Finding: Complies with Condition. See specific street cross sections above in OCMC 16.12.015. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

A. Sidewalks. The applicant shall provide for sidewalks on both sides of all public streets, on any private street if so required by the decision-maker, and in any special pedestrian way within the development. Both sidewalks and curbs are to be constructed to city standards and at widths set forth above, and according to plans and specifications provided by the City Engineer. Exceptions to this requirement may be allowed in order to accommodate topography, trees or some similar site constraint. In the case of major or minor arterials, the decision-maker may approve a development without sidewalks where sidewalks are found to be dangerous or otherwise impractical to construct or are not reasonably related to the applicant's development. The decision-maker may require the applicant to provide sidewalks concurrent with the issuance of the initial building permit within the area that is the subject of the development application. Applicants for partitions may be allowed to meet this requirement by providing the City with a financial guarantee per OCMC 16.12.110.

Finding: Complies as proposed. The applicant has proposed sidewalks along all public streets fronting the development. See OCMC 16.12.015 above for specific requirements of the public sidewalks.

B. Pedestrian and Bicycle Accessways Routes. If deemed appropriate to extend pedestrian and bicycle routes, existing or planned, the decision-maker may require the installation of separate pedestrian and bicycle facilities.

Finding: Complies with Condition. The City's TSP project S28 identifies a shared use path along the eastern boundary of the proposed development. The applicant has proposed to construct an expanded sidewalk along the eastern side of the new street on TL 500/501 as a shared-use path consistent with S28. The applicant shall continue the paved shared-use path from TL 500/501 to the northern property line of TL 3200. See additional conditions under 16.12.032. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Street Name Signs and Traffic Control Devices. The applicant shall install street signs and traffic control devices as directed by the City Engineer. Street name signs and traffic control devices shall be in conformance with all applicable city regulations and standards.

Finding: Complies with Condition. The applicant shall submit a request to the Community Development Department to receive approval for new street names. Street names shall be

provided on the approved plans, and street signs shall be provided for review of the City prior to installation. All traffic control devices, such as signage, flashing lights/beacons, and traffic signals shall be designed using the MUTCD. The applicant shall provide a Traffic Signal Plan conforming to Clackamas County Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Street Lights. The applicant shall install street lights which shall be served from an underground source of supply. Street lights shall be in conformance with all City regulations.

Finding: Complies with Condition. The applicant shall provide a lighting plan on Molalla Avenue and the proposed new public road connecting Molalla Avenue and Beavercreek Road in conformance with all City standards, specifications, codes, and policies and as approved by Portland General Electric (PGE). Street lights on Molalla Avenue shall be consistent with the City's Street Design Standards for Molalla Avenue. The applicant shall submit a photometric plan with their permitting plans. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Any new street proposed with a pavement width of less than thirty-two feet shall be processed through OCMC 16.12.013 and meet minimum life safety requirements, which may include fire suppression devices as determined by the Fire Marshall to assure an adequate level of fire and life safety. The modified street shall have no less than a twenty-foot wide unobstructed travel lane.

Finding: Not applicable. No street is proposed to be less than 32 feet wide.

F. All development shall include vegetated planter strips that are five feet in width or larger and located between the sidewalk and curb unless otherwise approved pursuant to this chapter. All development shall utilize the vegetated planter strip for the placement of street trees or place street trees in other acceptable locations, as prescribed by OCMC 12.08. Development proposed along a collector, minor arterial, or major arterial roads may place street trees within tree wells within a wider sidewalk in lieu of a planter strip. In addition to street trees per OCMC 12.08, vegetated planter strips shall include ground cover and/or shrubs spaced four feet apart and appropriate for the location. No invasive or nuisance plant species shall be permitted.

Finding: Complies with Condition. See section 16.12.016 regarding requirements for vegetated planter strips located between the sidewalk and curb for the placement of street trees. See section 12.08 regarding placement of street trees. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. Vehicle and pedestrian access easements may serve in lieu of streets when approved by the decision maker and only where dedication of a street is deemed impracticable.

Finding: Complies with Condition. A pedestrian and bicycle accessway is proposed along the rear of the property. A public access easement shall be provided, allowing public use of the path through the property. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

H. Vehicular and pedestrian easements shall allow for public access and shall comply with all applicable pedestrian access requirements.

Finding: Complies with Condition. The access easements proposed along the southern properties (TL 800 and Tl 700) complies as proposed. The applicant shall provide a public access easement for TL 800 and TL 700 to facilitate future connections to the new proposed roadway. A shared use path is proposed along the rear of the property. A public access easement shall be provided, allowing public use of the path through the property. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.017 - Street design—Access control.
A. A street which is dedicated to end at the boundary of the development or in the case of half-streets dedicated along a boundary shall have an access control granted to the City as a City controlled plat restriction for the purposes of controlling ingress and egress to the property adjacent to the end of the dedicated street. The access control restriction shall exist until such time as a public street is created, by dedication and accepted, extending the street to the adjacent property.

Finding: Not Applicable. No new streets with access control are required. Access to the new street by adjoining properties will be regulated by code section 16.12.035.

B. The City may grant a permit for the adjoining owner to access through the access control.

Finding: Not Applicable. No new streets with an access control are required. Access to the new street by adjoining properties will be regulated by code section 16.12.035.

C. The plat shall contain the following access control language or similar on the face of the map at the end of each street for which access control is required: "Access Control (See plat restrictions)."

Finding: Not Applicable. No new streets with access control are required. Access to new street by adjoining properties will be regulated by code section 16.12.035.

D. Said plats shall also contain the following plat restriction note(s): "Access to (name of street or tract) from adjoining tracts (name of deed document number[s]) shall be controlled by the City of Oregon City by the recording of this plat, as shown. These access controls shall be automatically terminated upon the acceptance of a public road dedication or the recording of a plat extending the street to adjacent property that would access through those Access Controls."

Finding: Not Applicable. No new streets with access control are required. Access to the new street by adjoining properties will be regulated by code section 16.12.035.

16.12.018 - Street design—Alignment.
The centerline of streets shall be:
A. Aligned with existing streets by continuation of the centerlines; or

B. Offset from the centerline by no more than five feet, provided appropriate mitigation, in the judgment of the City Engineer, is provided to ensure that the offset intersection will not pose a safety hazard.
C. Driveways that are at least twenty-four feet wide shall align with existing or planned streets on adjacent sites.

Finding: Complies as Proposed. The proposed street alignments meet the City requirements. This standard is met.

16.12.019 - Traffic sight obstructions.
All new streets shall comply with the Traffic Sight Obstructions in Chapter 10.32.

Finding: Complies as Proposed. Applicant acknowledges streets will be designed per this standard. No current site obstructions are shown, however if any are proposed during design, the standard shall apply.

16.12.020 - Street design—Intersection angles.
Except where topography requires a lesser angle, streets shall be laid out to intersect at angles as near as possible to right angles. In no case shall the acute angles be less than eighty degrees unless there is a special intersection design. An arterial or collector street intersecting with another street shall have at least one hundred feet of tangent adjacent to the intersection unless topography requires a lesser distance. Other streets, except alleys, shall have at least fifty feet of tangent adjacent to the intersection unless topography requires a lesser distance. All street intersections shall be provided with a minimum curb return radius of twenty-five feet for local streets. Larger radii shall be required for higher street classifications as determined by the City Engineer. Additional right-of-way shall be required to accommodate curb returns and sidewalks at intersections. Ordinarily, intersections should not have more than two streets at any one point.

Finding: Complies as Proposed. The proposed intersection meets the City requirements. This standard is met.

16.12.021 - Street design—Grades and curves.
Grades and center line radii shall conform to standards approved by the City Engineer.

Finding: Complies as Proposed. Applicant acknowledges streets will be designed per this standard.

16.12.022 - Street design—Development abutting arterial or collector street.
Where development abuts or contains an existing or proposed arterial or collector street, the decision maker may require: Access control; screen planting or wall contained in an easement or otherwise protected by a restrictive covenant in a form acceptable to the decision maker along the rear or side property line; or such other treatment it deems necessary to adequately protect residential properties or afford separation of through and local traffic. Reverse frontage lots with suitable depth may also be considered an option for residential property that has arterial frontage. Where access for development abuts and connects for vehicular access to another jurisdiction's facility then authorization by that jurisdiction may be required.

Finding: Complies as proposed. The new street connecting Molalla Avenue (Major Arterial Road) and Beavercreek Road (Major Arterial Road) is considered a collector road. Landscaping along the proposed roadway is proposed as identified above in 16.12.013 and 16.12.016.

16.12.023 - Street design—Pedestrian and bicycle safety.

Where deemed necessary to ensure public safety, reduce traffic hazards and promote the welfare of pedestrians, bicyclists and residents of the subject area, the decision maker may require that local streets be so designed as to discourage their use by nonlocal automobile traffic.

The City Engineer may require that crosswalks include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities. These curb extensions can increase the visibility of pedestrians and provide a shorter crosswalk distance as well as encourage motorists to drive slower. The City Engineer may approve an alternative design that achieves the same standard for constrained sites.

Finding: Not Applicable. The development does not require a street design that discourages use by non-local traffic. The City Engineer has not required that crosswalks include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities.

16.12.024 - Street design—Half street.
Half streets, while generally not acceptable, may be approved where essential to the development, when in conformance with all other applicable requirements, and where it will not create a safety hazard. When approving half streets, the decision maker shall first determine that it will be practical to require the dedication of the other half of the street when the adjoining property is divided or developed. Where the decision maker approves a half street, the applicant shall construct a half street with at least twenty feet of pavement width and provide signage prohibiting street parking so as to make the half street safe until such time as the other half is constructed. Whenever a half street is adjacent to property capable of being divided or developed, the other half of the street shall be provided and improved when that adjacent property divides or develops. Access control may be required to preserve the objectives of half streets.

When the remainder of an existing half-street improvement is completed it shall include the following items: Dedication of required right-of-way, construction of the remaining portion of the street including pavement, curb and gutter, landscape strip, sidewalk, street trees, lighting and other improvements as required for that particular street. It shall also include at a minimum the pavement replacement to the centerline of the street. Any damage to the existing street shall be repaired in accordance with the City's "Pavement Cut Standards" or as approved by the City Engineer.

Finding: Complies as Proposed. The new street within TL 500/501 is a “Half-Street”. See specific cross section requirements in 16.12.015 and the modification request in 16.12.013. The applicant has proposed to construct two full travel lanes (of varying widths) within TL 500/501 to accommodate vehicle access (including freight and emergency vehicles) through the proposed

development connecting Molalla Avenue and Beavercreek Road. They have also proposed an expanded sidewalk on the east side of the proposed street to accommodate a shared use path. They do not propose a sidewalk or bike lane on the west side of the street within TL 500/501.

The applicant proposes this layout due to a previously determined access agreement between the property owner of TL 500/501 and the proposed lots of this development. The access easement was previously sized with a smaller cross-section of roadway that did not take into account large truck movements (freight or emergency). The boundaries of the access agreement were laid out to also provide TL 500/501 space for future development. Due to the constrained size of the access agreement, the applicant has proposed this "half-street" layout. The future abutting properties to the west will add public improvements along their frontages completing the standards roadway when they develop. This is consistent with the City's Beavercreek Road Access Management Plan and typical Half-street standards.

16.12.025 - Street design—Cul-de-sacs and dead-end streets.
The City discourages the use of cul-de-sacs and permanent dead-end streets except where construction of a through street is found by the decision maker to be impracticable due to topography or some significant physical constraint such as geologic hazards, wetland, natural or historic resource areas, pre-existing dedicated open space, pre-existing development patterns, arterial access restrictions or similar situation as determined by the decision maker. This section is not intended to preclude the use of curvilinear eyebrow widening of a street where needed.
A. When permitted, access from new cul-de-sacs and permanent dead-end streets shall be limited to a maximum of twenty-five dwelling units.

Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

B. Cul-de-sacs and permanent dead-end streets shall include pedestrian/bicycle accessways to meet minimum block width standards as prescribed in OCMC 16.12.030.

Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

C. Cul-de-sacs shall have sufficient radius to provide adequate turn-around for emergency vehicles in accordance with fire district and City adopted street standards.

Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

D. Permanent dead-end streets shall provide public street right-of-way/easements sufficient to provide a sufficient amount of turn-around space complete with appropriate no-parking signs or markings to accommodate waste disposal, sweepers, emergency and other long vehicles in the form of a hammerhead or other design to be approved by the decision maker.

Finding: Not Applicable. No cul-de-sacs or dead-end streets are proposed or required for this development.

E. In the case of dead-end stub streets that will connect to streets on adjacent sites in the future, notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. A dead-end street shall include signage or barricade meeting Manual on Uniform Traffic Control Devices (MUTCD).

Finding: Not Applicable. No dead-end stub streets are proposed or required for this development.

16.12.026 - Street design—Alleys.
Alleys with public access easements on private property shall be provided in the Park Place and South End concept plan areas for the following districts R-5, R-3.5, R-2, MUC-1, MUC-2 and NC zones unless other permanent provisions for private access to off-street parking and loading facilities are approved by the decision maker. All alleys intended to provide access for emergency vehicles shall be a minimum width of twenty feet. The corners of alley intersections shall have a radius of not less than ten feet and shall conform to standards approved by the City Engineer. Access easements and maintenance agreements shall be recorded on affected properties.

Finding: Not Applicable. Alleys are not proposed or required for this development.

16.12.027 - Street design—Off-site street improvements.
During consideration of the preliminary plan for a development, the decision maker shall determine whether existing streets impacted by, adjacent to, or abutting the development meet the applicable design or dimensional requirements. Where such streets fail to meet these requirements, the decision-maker shall require the applicant to make proportional improvements sufficient to achieve conformance with minimum applicable design standards required to serve the proposed development.

Finding: Complies with Condition. The proposed development will create a new roadway connecting Molalla Avenue and Beavercreek Road. The Applicant has proposed to modify the existing signals on Molalla Avenue and Beavercreek Road. The City takes no exception to this. The applicant shall restripe the center turning lane on Molalla Avenue as a left turn lane into the property at the existing intersection following City, State, and Federal guidelines for left turn lane storage and taper.

The City has identified TSP Project D95 for the intersection of Beavercreek Road and OR-213. New developments that impact that intersection are identified to contribute to upgrade the intersection as part of D95 with pro-rata share contribution based on the projected trips generated. This DDP does not generate new trips to the D95 intersection. When Parcel's A, B, and D develop, their contributions will be required at that time based on the identified trips noted in their Traffic Impact Analyses at each DDP. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.028 - Street design—Transit.
Streets shall be designed and laid out in a manner that promotes pedestrian and bicycle circulation. The applicant shall coordinate with transit agencies where the application impacts

transit streets as identified in OCMC 17.04.1310. Pedestrian/bicycle access ways shall be provided as necessary to minimize the travel distance to transit streets and stops and neighborhood activity centers. The decision maker may require provisions, including easements, for transit facilities along transit streets where a need for bus stops, bus pullouts or other transit facilities within or adjacent to the development has been identified.

Finding: Complies with Condition. The proposed streets provide bicycle and pedestrian access between Molalla Avenue and Beavercreek Road. The applicant has also proposed to relocate the existing bus stop to the north of the Molalla Traffic signal with a pull out and shelter. Written approval from Trimet to relocate the existing bus stop on Molalla Avenue is required. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.029 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standards in effect at the time the permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.

Finding: Complies with Condition. Pavement cuts are proposed within Molalla Avenue and Beavercreek Road due to proposed utility service installations and required frontage improvements. Pavement cuts or other improvements made in a City street shall be done in accordance with the City of Oregon City Public Works Pavement Cut Standards and restored in accordance with the City of Oregon City Public Works Pavement Cut Standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.030 - Blocks—Width.
The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features.

All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted transportation system plan. The maximum block spacing between streets is five hundred thirty feet and the minimum block spacing between streets is one hundred fifty feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the City Engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every three hundred thirty feet. The spacing standards within this section do not apply to alleys.

Finding: Complies as Proposed. The layout of the proposed development shows block lengths which are less than 530 feet.
16.12.031 - Street design—Street names.
Except for extensions of existing streets, no street name shall be used which will duplicate or be confused with the name of an existing street. Street names shall conform to the established standards in the City and shall be subject to the approval of the City.

Finding: Complies with Condition. The developer shall submit a request to the Community Development Department to receive approval for new street names; only approved street names shall be included on the final construction plans prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval**.

16.12.032 – Public off-street pedestrian and bicycle accessways.
Pedestrian/bicycle accessways are intended to provide direct, safe and convenient connections between
residential areas, retail and office areas, institutional facilities, industrial parks, transit streets, neighborhood activity centers, rights-of-way, and pedestrian/bicycle accessways which minimize out-of-direction travel, and transit orientated developments where public street connections for automobiles, bicycles and pedestrians are unavailable. Pedestrian/bicycle accessways are appropriate in areas where public street options are unavailable, impractical or inappropriate. Pedestrian and bicycle accessways are required through private property or as right-of-way connecting development to the right-of-way at intervals not exceeding three hundred thirty feet of frontage; or where the lack of street continuity creates inconvenient or out of direction travel patterns for local pedestrian or bicycle trips.

Finding: Complies with Condition. The applicant has provided sidewalks and bicycle lanes along the proposed new street connecting Molalla Avenue with Beavercreek Road. The applicant has also proposed providing an expanded sidewalk along the eastern side of the new road within TL 500/501. This expanded sidewalk will act as a shared-use path that is consistent with the City's TSP project S28. The shared-use path S28 is intended to connect Hilltop Avenue to Beavercreek Road for pedestrians and bicycles as part of the City's goals of providing multi-modal forms of transportation throughout the City.

As previously noted, the Applicant has provided a portion of the Share-Use Path along the side of the new street within TL 500/501. The City takes no exception to this portion of the proposed S28 shared use path. The applicant proposes transitioning the shared use path to an unpaved nature trail on TL 3400 and 3200 as it continues north towards Hilltop Avenue. Due to the grades/elevation of the new roadway, a stairwell is shown to access the proposed path below street level from the paved shared-use path on TL 500/501.

The proposed stairwell and nature path are not consistent with the intent of the City's TSP project S28 or as a public off-street accessway which is intended to provide a safe and convenient connection for pedestrians and bicycles outside of the public street system. The proposed stairwell prohibits the continuation of ADA and bicycle access from the new road to the path on TL 3400 and 3200. The applicant has proposed that the pathway be installed below the proposed

future parking lot of Parcel B. Public comment has raised concerns that by locating the trail out of public sight, it creates a safety hazard for the general public. The applicant shall construct TSP Project S28 as a public off-street pedestrian/bicycle accessway for the portion on TL 3200 and 3400 per OCMC 16.12.032 standards. The applicant shall construct their portion of TSP Project S28 within Parcel C (shared use path) and as a 7-10 foot paved off-street ADA compliant pedestrian/bicycle accessway with lighting and landscaping as regulated by the code for the portion on Parcel B per OCMC 16.12.032 standards. S28 shall be designed to minimize grade change within the geologic hazards overlay zone to reduce areas graded or stripped of vegetation or covered with structures or impermeable surfaces to a maximum of 4,000 sf. The applicant may choose to delay the construction of the Parcel B portion of the path to the DDP whereby the path may be able to be constructed at grade adjacent to the proposed parking lot, potentially making it exempt from the Geologic Hazard code. The construction of S28 within TL 3400 and TL 3200 shall be completed prior to occupancy of Parcel D. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

A. Entry points shall align with pedestrian crossing points along adjacent streets and with adjacent street intersections.

Finding: Complies as proposed. The layout of the proposed development shows entry points for accessways aligning with pedestrian crossing points along adjacent streets and with adjacent intersections.

B. Accessways shall be free of horizontal obstructions and have a nine foot six inch high vertical clearance to accommodate bicyclists. To safely accommodate both pedestrians and bicycles, accessway right-of-way widths shall be as follows:
1. Accessways shall have a fifteen foot wide right-of-way with a seven foot wide paved surface with a minimum four foot planter strip on either side.
2. If an accessway also provides secondary fire access, the right-of-way width shall be at least twenty- four feet wide with a sixteen foot paved surface between four foot planter strips on either side.

Finding: Complies with Condition. The applicant has proposed a 15-foot-wide public access easement on the shared-use path on TL 3400 and 3200. The City takes no exception to that. The proposed path appears to be 6-feet-wide. The Shared-use Path S28 (accessway) shall be a paved 7-foot-wide path within TL 3400 and 3200 where it deviates from the proposed street. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Accessways shall be direct with at least one end point of the accessway always visible from any point along the accessway. On-street parking shall be prohibited within fifteen feet of the intersection of the accessway with public streets to preserve safe sight distance and promote safety.

Finding: Applicable. The layout of the proposed development shows accessways that may be without proper visibility. This will be further reviewed as part of the design permitting process.

D. To enhance pedestrian and bicycle safety, accessways shall be lighted with pedestrian-scale lighting. Accessway lighting shall be to a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. Street lighting shall be provided at both entrances.

Finding: Complies with Condition. The layout of the proposed development shall provide a lighting plan showing that the shared-use path accessway on TL 3400 and 3200 are lit to the standards of 16.12.032.D. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Accessways shall comply with Americans with Disabilities Act (ADA).

Finding: Complies with Condition. The applicant has proposed a stairwell as part of the shared-use path S28 to connect pedestrians and bicyclists from the street side portion of S28 on TL500 down to existing grade on TL 3400 and 3200. The stairwell does not meet ADA standards and prohibits bicyclists and people with ADA needs to safely traverse the shared-use path. This portion of S28 that deviates from the expanded sidewalk on TL 500/501 is an off-street pedestrian and bicycle accessway and shall comply with Americans with Disabilities Act (ADA) standards. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

F. The planter strips on either side of the accessway shall be landscaped along adjacent property by installation of the following:
1. Either an evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average; and
2. Ground cover covering one hundred percent of the exposed ground. No bark mulch shall be allowed except under the canopy of shrubs and within two feet of the base of trees; and
3. A two-inch minimum caliper tree for every thirty-five feet along the accessway. Trees may be planted on either side of the accessway, provided they are spaced no more than thirty-five feet apart; and
4. In satisfying the requirements of this section, evergreen plant materials that grow over forty-two inches in height shall be avoided. All plant materials shall be selected from the Oregon City Native Plant List.

Finding: Complies with Condition. The portion of S28 that abuts the street on TL 500/501 is proposed to have landscaping behind sidewalk. The City takes no exception to that proposal. The portion of S28 on TL 3400 and 3200 shall be landscaped per OCMC 16.12.032.F standards. Existing landscaping abutting the accessway may be taken into account for tree requirements. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. Accessways shall be designed to prohibit unauthorized motorized traffic. Curbs and removable, lockable bollards are suggested mechanisms to achieve this.

Finding: Applicable. Bollards or other mechanisms to prohibit unauthorized motorized vehicles onto the shared use path are applicable.

H. Accessway surfaces shall be paved with all-weather materials as approved by the City. Pervious materials are encouraged. Accessway surfaces shall be designed to drain stormwater runoff to the side or sides of the accessway. Minimum cross slope shall be two percent.

Finding: Complies with Condition. The shared-use path S28 shall be paved with all-weather materials (e.g. asphalt, concrete, etc.) as approved by the City Engineer. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

I. In parks, greenways or other natural resource areas, accessways may be approved with a five-foot wide gravel path with wooden, brick or concrete edgings.

Finding: Not Applicable. The layout of the proposed development shows pedestrian and bicycle accessways with no impact to parks, greenways, or natural resource areas.

J. The decision maker may approve an alternative accessway design due to existing site constraints through the modification process set forth in OCMC 16.12.013.

Finding: Not Applicable. No modification from OCMC 16.12.032 has been proposed or requested for pedestrian and bicycle accessways.

K. Ownership, liability and maintenance of accessways. To ensure that all pedestrian/bicycle accessways will be adequately maintained over time, the City Engineer shall require one of the following:
1. Dedicate the accessways to the public as public right-of-way prior to the final approval of the development; or
2. The developer incorporates the accessway into a recorded easement or tract that specifically requires the property owner and future property owners to provide for the ownership, liability and maintenance of the accessway.

Finding: Complies with Condition. The applicant shall provide a covenant over the pedestrian and bicycle accessways and be responsible for the future maintenance and liability. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.033 - Mobility standards.
Development shall demonstrate compliance with intersection mobility standards. When evaluating the
performance of the transportation system, the City of Oregon City requires all intersections, except for the facilities identified in subsection E below, to be maintained at or below the following mobility standards during the two-hour peak operating conditions. The first hour has the highest weekday

traffic volumes and the second hour is the next highest hour before or after the first hour. Except as provided otherwise below, this may require the installation of mobility improvements as set forth in the transportation system plan (TSP) or as otherwise identified by the City Engineer.
A. For intersections within the regional center, the following mobility standards apply:
1. During the first hour, a maximum v/c ratio of 1.10 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
3. Intersections located on the regional center boundary shall be considered within the regional center.
B. For intersections outside of the regional center but designated on the arterial and throughway network, as defined in the regional transportation plan, the following mobility standards apply:
1. During the first hour, a maximum v/c ratio of 0.99 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.
C. For intersections outside the boundaries of the regional center and not designated on the arterial and throughway network, as defined in the regional transportation plan, the following mobility standards apply:
1. For signalized intersections:
a. During the first hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.
b. During the second hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.
2. For unsignalized intersections outside of the boundaries of the regional center:
a. For unsignalized intersections, during the peak hour, all movements serving more than twenty vehicles shall be maintained at LOS "E" or better. LOS "F" will be tolerated at movements serving no more than twenty vehicles during the peak hour.
D. For the intersection of OR 213 and Beavercreek Road, the following mobility standards apply:
1. During the first, second and third hours, a maximum v/c ratio of 1.00 shall be maintained. Calculation of the maximum v/c ratio will be based on an average annual weekday peak hour.
E. Until the City adopts new performance measures that identify alternative mobility targets, the City shall exempt proposed development that is permitted, either conditionally, outright, or through detailed development master plan approval, from compliance with the above-referenced mobility standards for the following state-owned facilities:
I-205/OR 99E Interchange.

State intersections located within or on the regional center boundaries.
1. In the case of conceptual development approval for a master plan that impacts the above references intersections:
a. The form of mitigation will be determined at the time of the detailed development plan review for subsequent phases utilizing the code in place at the time the detailed development plan is submitted; and
b. Only those trips approved by a detailed development plan review are vested.
2. Development which does not comply with the mobility standards for the intersections identified in OCMC 16.12.033 shall provide for the improvements identified in the transportation system plan (TSP) in an effort to improve intersection mobility as necessary to offset the impact caused by development. Where required by other provisions of the code, the applicant shall provide a traffic impact study that includes an assessment of the development's impact on the intersections identified in this exemption and shall construct the intersection improvements listed in the TSP or required by the code.

Finding: Complies with Condition. The City's transportation consultant has reviewed the applicant's TIA for this development. They have provided to following findings based on the site's master plan TIA:

- Based on the most recent five years of available crash data (2019 to 2023), critical crash rate calculations, and ODOT SPIS lists, the OR-213/Beavercreek Road intersection was flagged for safety concerns. The TIA notes that since 2023, safety improvements such as signal modifications and improved signage have been completed at this location. As such, no safety mitigations are recommended at this time.
- The development is expected to generate 339 (157 in, 182 out) a.m. peak hour trips, 190 (107 in, 83 out) p.m. peak hour trips, and 2,788 weekday trips. This includes a conservative internal trip capture reduction of 5% in the a.m. peak hour and 25% in the p.m. peak hour, a pass-by rate of 40% for both the a.m. and p.m. peak hours for the Strip Retail (822) land use, and a pass-by rate of 55% for both the a.m. and p.m. peak hours for the Restaurant (934) and Coffee Shop with Drive Through Window (937) land uses.
- Different trip distributions were applied for the commercial and residential land uses.
    - *Commercial Trips (Retail and Fast Food):* Approximately 35% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 65% are expected to travel to/from destinations to the north along Molalla Avenue.
    - *Residential Trips:* Approximately 55% of site trips are expected to travel to/from destinations to the south along Molalla Avenue and Beavercreek Road, and approximately 45% are expected to travel to/from destinations to the north along Molalla Avenue.
- Left turn lane warrants were evaluated at future site access intersections. No left turn lane warrants were met.

- All study intersections are expected to meet performance standards under all analysis scenarios.
- A queuing analysis showed queue lengths at the Molalla Avenue/Shared Business Driveway (Safeway) intersection are expected to exceed the available storage for the northbound left turning movement under both background and build conditions in the p.m. peak hour. The 95th percentile queue is expected to exceed the available storage by only one vehicle in the p.m. peak hour only. No mitigation is recommended at this time.

The City's transportation consultant also notes the following:

- The TIA does not address the proposed site plan's compliance with access spacing standards or sight distance standards.
- The TIA does not address the proposed development's pedestrian/bicycle routes to the nearest schools in consideration of safe routes to school.
- The TIA does not discuss the project's internal vehicle, pedestrian, and bicycle circulation.

The items noted above typically take into account the whole property, but they do relate to this DDP as final locations of driveways and accessways may be impacted. The applicant shall provide an updated TIA addressing compliance with access spacing standards or sight distance standards, pedestrian/bicycle routes to the nearest schools, and the project's internal vehicle, pedestrian and bicycle circulation.

Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

16.12.035 - Driveways.

A. All new development, redevelopment, and capital improvement projects shall meet the minimum driveway spacing standards identified in Table 16.12.035.A. Minor Site Plan and Design Review do not follow these standards unless a request is made to modify the driveway.

Table 16.12.035.A Minimum Driveway Spacing Standards

Street Functional Classification	***Minimum Driveway Spacing Standards***	***Distance***
Major Arterial Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single-family dwellings, duplexes, triplexes, quadplexes and townhouses*	*175 ft.*
Minor Arterial Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single-family dwellings, duplexes, triplexes, quadplexes and townhouses*	*175 ft.*

Collector Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single-family dwellings, duplexes, triplexes, quadplexes and townhouses*	*100 ft.*
Local Streets	*Minimum distance from a street corner to a driveway and between driveways for all uses other than detached single-family dwellings, duplexes, triplexes, quadplexes and townhouses*	*25 ft.*

1. When driveways are shared (combined), the minimum driveway spacing shall be 20 feet.
2. All driveways, except for shared driveways, shall be placed a minimum of 5 feet from the property line.
3. The distance from a street corner to a driveway is measured along the right-of-way from the edge of the intersection (on the same side of the road) right-of-way to the nearest portion of the driveway and the distance between driveways is measured at the nearest portions of the driveway at the right-of-way.

Finding: Complies with Condition. All driveways, new and existing, shall meet the minimum driveway spacing standards identified in Table 16.12.035.A. The modified driveway locations for Parcel A and Parcel B appear to meet the intent of the spacing standards. Approved driveway locations will need included on engineering plans prior to receiving a permit and beginning construction. Final driveway locations for will be evaluated during the design review phase with the applicant's updated TIA. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. All detached single-family dwellings, duplexes, triplexes, quadplexes and townhouses shall have driveways which meet the minimum distance from a street corner standards except when the lot size is smaller than the minimum distance required. When minimum distance cannot be met due to lot size or due to the location of an overlay district, the driveway shall be located as far away from the intersection as possible, but no more than 5 feet to the neighboring property line, as approved by the City Engineer.

Finding: Not applicable. The development does not propose detached dwelling units or townhouses.

C. Nonresidential or multi-family residential use driveways that generate high traffic volumes as determined by a traffic analysis shall be treated as intersections and shall adhere to requirements of OCMC 16.12.020.

Finding: Complies as proposed. The development has proposed nonresidential or multi-family residential use driveways that generate high traffic volumes. See conditions under 16.12.033.

D. For any detached single-family dwellings, duplexes, triplexes, quadplexes, and townhouses or property developed with an ADU with multiple frontages, only one driveway is allowed per street frontage classified as a local street and in no case shall more than two driveways (one per frontage), unless otherwise approved by the City Engineer.

Two driveways shall never be granted for any property with only one frontage on a local road for any single-family detached residential property or property that contains an ADU unless required by Clackamas Fire District No. 1.

E. Cluster housing properties may be granted more than one driveway per property and per frontage meeting the spacing standards. Driveways should be combined whenever possible to limit the number of driveways per property.

Middle housing properties with only one building may be allowed one driveway for every two units, provided that spacing standards and/or driveway width requirements are met.

Middle housing properties with more than one structure shall meet the cluster housing standards.

F. Townhouses shall have one driveway approach for every two dwelling units (round up for townhouse structures with an odd number of dwellings).

G. Driveways on collectors or arterials shall be provided in such a way that no backing of a vehicle will occur from the driveway to the collector or arterial.

H. When a property fronts multiple roads, access shall be provided from and limited to the road with the lowest classification in the transportation system plan to minimize points of access to arterials and collectors. Access shall not be provided on arterial or collector roads unless there is no other alternative. At the discretion of the City Engineer, properties fronting a collector or arterial road may be allowed a second driveway, for the creation of a circulation pattern that eliminates reverse maneuvers for vehicles exiting a property if applied for and granted through procedures in OCMC 16.12.013. All lots proposed with a driveway and lot orientation on a collector or minor arterial shall combine driveways into one joint access per two or more lots unless the City Engineer determines that:

1. No driveway access may be allowed since the driveway(s) would cause a significant traffic safety hazard; or

2. Allowing a single driveway access per lot will not cause a significant traffic safety hazard.

I. All driveway approaches shall be limited to the dimensions identified in Table 16.12.035.D.

Table 16.12.035.D Driveway Approach Size Standards

Property Use	*Minimum Driveway Approach Width*		*Maximum Driveway Approach Width*
Single-Family Detached and Duplexes	*10 feet*		*24 feet*
Townhouses	*10 feet*		*24 feet*
Triplexes, Quadplex and Cottage Clusters	*10 feet*		*36 feet*
Multi-Family	*18 feet*		*30 feet*
Commercial, Industrial, Office, Institutional, Mixed Use, and/or Nonresidential	*One-Way 12 feet*	*Two-Way 20 feet*	*40 feet*

1. Shared driveways for middle housing structures shall be minimum 18 feet and maximum 36 feet except when section J.4.a applies.

2. Driveway widths shall match the width of the driveway approach where the driveway meets sidewalk or property line but may be widened onsite (for example between the property line and the entrance to a garage). Groups of more than four parking spaces shall be so located and served by

driveways so that their use will not require backing movements or other maneuvering within a street right-of-way other than an alley.

Finding: Complies with Condition. All driveways (curb cuts), new and existing, shall meet the minimum driveway width standards identified in Table 16.12.035.D. Approved driveway widths will need to be included on engineering plans prior to receiving a permit and beginning construction. The applicant has proposed a modification to the driveway standard for Parcel D due to the curvature of the road. The proposed modification to Parcel D complies as proposed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

J. The City Engineer reserves the right to require a reduction in the number and size of driveway approaches as far as practicable for any of the following purposes:
1. To provide adequate space for on-street parking;
2. To facilitate street tree planting requirements;
3. To assure pedestrian and vehicular safety by limiting vehicular access points; and
4. To assure that adequate sight distance requirements are met.
a. Where the decision maker determines any of these situations exist or may occur due to the approval of a proposed development for non-residential uses or attached or multi-family housing, a shared driveway shall be required and limited to twenty-four feet in width adjacent to the sidewalk or property line.

Finding: Not Applicable. No restrictions are proposed by the City Engineer.

K. For all driveways, the following standards apply.
1. Each new or redeveloped curb cut shall have an approved concrete approach or asphalted street connection where there is no concrete curb and a minimum hard surface for at least ten feet back into the property as measured from the current edge of sidewalk or street pavement to provide for controlling gravel tracking onto the public street. The hard surface may be concrete, asphalt, or other surface approved by the City Engineer.
2. Any driveway approach built within public right-of-way shall be built and permitted per city requirements as approved by the City Engineer.
3. No driveway with a slope of greater than fifteen percent shall be permitted without approval of the City Engineer.

Finding: Complies as proposed. All new driveways a shall have a concrete driveway approach or asphalted street connection with a minimum hard surface for at least ten feet back into the lot as measured from the edge of street pavement. The hard surface shall be concrete, asphalt, or other surface approved by the City Engineer.

L. Exceptions. The City Engineer reserves the right to waive these standards or not allow driveway access, if the driveway(s) would cause a significant traffic safety hazard. Narrower or wider driveway widths may be considered where field conditions preclude use of recommended widths. When larger vehicles and trucks will be the predominant users of a particular driveway, turning templates may be utilized to develop a driveway width that can safely and expeditiously accommodate the prevalent type of ingress and egress traffic.

Finding: Not Applicable. No exemptions are proposed.

16.12.065 - Building site—Grading.
Grading of building sites shall conform to the state of Oregon Structural Specialty Code, Title 18, any
approved grading plan and any approved residential lot grading plan in accordance with the requirements of OCMC 13.12, 15.48, 16.12 and the public works stormwater and grading design standards, and the erosion control requirements of OCMC 17.47.

Finding: Applicable. Please refer to the findings within sections 13.12,15.48, 16.12 & 17.47 of this report.

16.12.085 - Easements.
The following shall govern the location, improvement and layout of easements:
A. Utilities. Utility easements shall be required where necessary as determined by the City Engineer.
Insofar as practicable, easements shall be continuous and aligned from block-to-block within the development and with adjoining subdivisions or partitions.
1. Specific public utility easements for water, sanitary or storm drainage shall be provided based on approved final engineering plans conforming to the requirements found within the applicable design standards.
2. Conveyance of public utility easements for gas, electric, telecommunication, and fiberoptic shall be required where necessary as determined by the City Engineer. The City Engineer will require the easement unless it is found that the utility can be placed in a different location or can be placed in a smaller easement than what is required. The easement shall be located adjacent to all public rights-of-way or public access easements within private property. In the event that the provision of a public utility easement would create a conflict with achieving compliance with another part of the code, the location and width may be adjusted by the City Engineer.
a. The easement shall be 10 feet in the R-10, R-8, R-6, R-5, R-3.5, R-2, GI, and CI zones
b. The easement shall be a minimum of 5 feet in the NC, HC, I, C, MUC-1, MUC-2, MUE, MUD, and WFDD zones.
i. The applicant shall obtain a written determination from all utilities that the minimum 5 foot PUE coupled with use of a minimum of a five-foot area under the public sidewalk or parkway area is sufficient to serve the development. Where the minimum width is deemed inadequate, a modification shall be required.
c. An applicant may seek a modification to the public utility easement dedication requirement using 16.12.013.

Finding: Complies with Condition. The development shall provide a public utility easement (PUE) along all property lines fronting existing or proposed public right-of-way. Zero setback sites may not require a PUE but may have dry utilities between the property line and curb the developer shall make all necessary arrangements with utility companies to ensure underground lines are not placed within the roadway. Approved PUE will need to be included on the final plat prior to recording the plat. The development shall provide a public utility easement for the City's sewer for the sewer connecting Hilltop Avenue to Beavercreek Road. The final location and sizing will be

determined during DDP and Design review based on the City's sewer design standards. A 15-foot-wide public access easement will be required for the portion of the shared use path accessway, S28, that deviates from the public right-of-way. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Unusual Facilities. Easements for unusual facilities such as high voltage electric transmission lines, drainage channels and stormwater detention facilities shall be adequately sized for their intended purpose, including any necessary maintenance roads. These easements shall be shown to scale on the preliminary and final plats or maps. If the easement is for drainage channels, stormwater detention facilities or related purposes, the easement shall comply with the requirements of the public works stormwater and grading design standards.

Finding: Complies as proposed. The applicant acknowledges this requirement and is coordinating with PGE on final layout.

C. Watercourses. Where a development is traversed or bounded by a watercourse, drainageway, channel or stream, a stormwater easement or drainage right-of-way shall be provided which conforms substantially to the line of such watercourse, drainageway, channel or stream and is of a sufficient width to allow construction, maintenance and control for the purpose as required by the responsible agency. For those subdivisions or partitions which are bounded by a stream of established recreational value, setbacks or easements may be required to prevent impacts to the water resource or to accommodate pedestrian or bicycle paths.

Finding: Not Applicable. The application does not affect any watercourses.

D. Access. When easements are used to provide vehicular access to lots within a development, the construction standards, but not necessarily width standards, for the easement shall meet City specifications. The minimum width of the easement shall be 20 feet. The easements shall be improved and recorded by the applicant and inspected by the City Engineer. Access easements may also provide for utility placement.

Finding: Complies as proposed. The vehicular access easements for Lots 700 and 800 are consistent with the Beavercreek Road Access Plan. No physical connections are required at this time. When those properties develop in the future, the driveways will be required then.

E. Resource Protection. Easements or other protective measures may also be required as the Community Development Director deems necessary to ensure compliance with applicable review criteria protecting any unusual significant natural feature or features of historic significance.

Finding: Complies with Condition. The access road connecting through TL 3-2E-05D-00500 may encroach on the Natural Resource Overlay District (NROD). The final impacts of that roadway will be evaluated as part of the technical design review of the road. If the NROD area is disturbed with this project, the applicant shall coordinate with the City's Planning Department on mitigations per the City's standards in OCMC 17.49. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.090 - Minimum improvements—Procedures.
In addition to other requirements, improvements installed by the applicant either as a requirement of these or other regulations, or at the applicant's option, shall conform to the requirements of this title and be designed to City specifications and standards as set out in the City's facility master plan and Public Works Stormwater and Grading Design Standards. The improvements shall be installed in accordance with the following procedure:
A. Improvement work shall not commence until construction plans have been reviewed and approved by the City Engineer and to the extent that improvements are located in county or state right-of-way, they shall be approved by the responsible authority. To the extent necessary for evaluation of the proposal, the plans may be required before approval of the preliminary plat of a subdivision or partition. Expenses incurred thereby shall be borne by the applicant and paid for prior to final plan review.

Finding: Complies with Condition. The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Improvements shall be constructed under the inspection and approval of the City Engineer. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. Where required by the City Engineer or other City decision-maker, the applicant's project engineer also shall inspect construction.

Finding: Complies with Condition. The developer's project engineer shall inspect construction of public improvements and stormwater management facilities at the cost of the applicant. The City will perform inspections in accordance with city policies and standards. See section 16.12.014 of this report regarding inspection fees. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Erosion control or resource protection facilities or measures are required to be installed in accordance with the requirements of OCMC 17.47, 17.49 and the Public Works Erosion and Sediment Control Standards.

Finding: See findings from section 17.47, 17.49 of this report.

D. Underground utilities, waterlines, sanitary sewers and storm drains installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the ten-foot-wide public utility easement within private property as defined in OCMC 16.12.85.A.2.

Finding: Compiles with Condition. Underground utilities, waterlines, sanitary sewers and storm drains proposed to be installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the franchise utility easement within private property. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer upon completion of the improvements.

Finding: Complies with Condition. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer within 90 days of completing improvements. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

F. The City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods.

Finding: Complies with Condition. The applicant shall comply with permitted hours of construction as set forth by the City Engineer for any public improvements (in existing public right-of-way or easements or which will be dedicated in public right-of-way or easements) that will not follow OCMC 9.12.023.D. as stated and written in the pre-construction meeting notes. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.095 - Minimum improvements—Public facilities and services.
The following minimum improvements shall be required of all applicants for a development, unless the decision-maker determines that any such improvement is not proportional to the impact imposed on the City's public systems and facilities:
A. Transportation System. Applicants and all subsequent lot owners shall be responsible for improving the City's planned level of service on all public streets, including alleys within the development and those portions of public streets adjacent to but only partially within development. Applicants are responsible for designing and providing adequate vehicular, bicycle and pedestrian access to their developments and for accommodating future access to neighboring undeveloped properties that are suitably zoned for future development. Storm drainage facilities shall be installed and connected to off-site natural or man-made drainageways. Upon completion of the street improvement survey, the applicant shall reestablish and protect monuments of the type required by ORS 92.060 in monument boxes with covers at every public street intersection and all points or curvature and points of tangency of their center line, and at such other points as directed by the City Engineer.

Finding: Complies with Condition. The applicant has provided a transportation system that is consistent with the City's street design standards. The City agrees with the applicant's proposed modified cross-section for a collector road to be used for this development. The modified collector is smaller than the standard cross-section for a local road within a mixed-use development but provides safer spaces for both pedestrians and for bicyclists. The City agrees with the proposed three lanes, consistent with a collector road, providing a turning lane for the businesses on the westside of the development. The Applicant's TIA also notes that necking down the street section to a two-lane road is appropriate as the street moves to the east (away from the proposed commercial developments) and then runs parallel to the property's southern boundary. The City takes no exception to this.

By aligning the new street along the southern boundary on TL 3400, the applicant is providing a layout that is consistent with the City's Beavercreek Road Access Plan. The properties immediately south of this development currently are accessible by driveways along Beavercreek Road. The City's Beavercreek Access Plan's goals include eliminating several of the driveway access points from Beavercreek Road to provide a safer and more efficient commute on that major arterial road. The applicant's layout provides a new public street for those properties to connect to in the future with access easements. The City takes no exception to this proposed layout.

The last segment of the new roadway is proposed through a previously determined access easement through the neighboring properties that are not a part of this development's master plan. The applicant has proposed to provide a "half-street" that will include two full travel lanes connecting their property to Beavercreek Road through TL 500/501. They propose an expanded sidewalk section on the east side of that street to provide space for pedestrians and bicyclists. The expanded sidewalk is consistent with the City's TSP shared-use path S28. The applicant has demonstrated that the proposed alignment can handle large freight to traverse TL 500/501 and continue through the proposed development to Molalla Ave. This "half-street" is consistent with the City's Beavercreek Access Plan, specifically the Short-Term Plan identified on Figure 7 of that plan. When neighboring properties redevelop to the west, that portion of the new street will be completed with the typical street section features. The City takes no exception to the proposed "half-street" on TL 500/501.

The applicant has proposed providing sidewalks and bike lanes along both sides of the street within their master plan development area. The street system then continues through TL 500/501 with a shared use path on the east side of the proposed street. The City's TSP identifies a shared-use path through this development connecting Hilltop Avenue to Beavercreek Road. The proposed half-street on TL 500/501 is consistent with the TSP. The applicant has proposed to continue the shared-use path to the north towards Hilltop Ave on TL 3400 and 3200 away from the proposed street system. See conditions under 16.12.032 regarding the portion of the shared-use path on TL 3400 and 3200.

See conditions of approval under OCMC 16.12.015 and 16.12.032 for specific requirements for the transportation system. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Stormwater Drainage System. Applicants shall design and install drainage facilities within a development and shall connect the development's drainage system to the appropriate downstream storm drainage system as a minimum requirement for providing services to the applicant's development. The applicant shall obtain county or state approval when appropriate. Applicants are responsible for extending the appropriate storm drainage system to the development site and for providing for the connection of upgradient properties to that system. The applicant shall design the drainage facilities in accordance with city drainage master plan requirements, OCMC 13.12 and the public works stormwater and grading design standards.

Finding: Complies with Condition. See findings from section 13.12 for the design of stormwater management facilities to serve the development. The Applicant has proposed a combined stormwater pond that treats stormwater from both private properties (Parcels A and B) and from

the runoff draining from the public roadway. The applicant has proposed to make the facility a public facility and place the burden of maintenance on the City. As previously noted the proposed pond is designed to treat the stormwater from the private properties. The applicant's stormwater report identifies approximately 280,000 square feet of private property runoff contributing to the proposed pond. The area of the public roadway being treated by the pond is approximately 70,000 square feet. This pond is primarily a private stormwater treatment facility as only a fifth of the expected flows to the pond will be from a public right-of-way. The maintenance of the pond should be the responsibility of the private properties.
The City will maintain stormwater facilities dedicated to the stormwater runoff from public spaces. This is consistent across the City with regards to commercial properties. Typically commercial developments (i.e. shopping centers, apartment complexes, restaurants, industrial complexes, etc.) all privately maintain their own stormwater systems. The City does maintain combined systems in the case of residential subdivisions (which this development is not). Public stormwater facilities shall only treat stormwater from publicly maintained right-of-way (i.e. public streets). The applicant shall either separate the public stormwater from the private runoff with separate publicly maintained facilities (e.g. streetside planters or other separate facilities) and privately maintain facilities for private stormwater runoff; or the development can provide stormwater management in total for public and private improvements and maintain the facility or facilities privately. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Sanitary Sewer System. The applicant shall design and install a sanitary sewer system to serve all lots or parcels within a development in accordance with the City's sanitary sewer design standards, and shall connect those lots or parcels to the City's sanitary sewer system, except where connection is required to the county sanitary sewer system as approved by the county. Applicants are responsible for extending the City's sanitary sewer system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development. The applicant shall obtain all required permits and approvals from all affected jurisdictions prior to final approval and prior to commencement of construction. Design shall be approved by the City Engineer before construction begins.

Finding: Complies with Condition. The applicant proposes to install a new sewer main within the proposed new road that connects Molalla Avenue to Beavercreek Road. The new sewer main will collect sanitary flows from Parcels D, B and A to the City's collection system on Beavercreek Road. The City's Sewer Master Plan has identified a sewer capital project to construct an 8" sanitary sewer from Hilltop Avenue (north of this development) to Beavercreek Road. The applicant's sewer within the proposed street alignment is consistent with the master plan. The applicant proposes to provide a stub north as part of this DDP. The applicant shall construct their portion of the Sewer Master Plan's 8-inch sewer from Beavercreek Road to stub into Parcel B while ensuring it is designed and built to be able to be extended to Hilltop Avenue. The future DDP for Parcel B shall construct their portion of the Sewer Master Plan's 8-inch sewer main towards Hilltop Avenue. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Water System. The applicant shall design and install a water system to serve all lots or parcels within a development in accordance with the City public works water system design standards, and shall connect those lots or parcels to the City's water system. Applicants are responsible for extending the City's water system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development.

Finding: Complies with Condition. The applicant has proposed to construct a 12" DI main and create a loop between Molalla Avenue and Beavercreek Road. This is consistent with the City's Water Master Plan. The applicant notes that the development itself does not require a 12" water main but only an 8" Main. The proposed water main shall connect to the City's 30-inch Water Main on Molalla Avenue and the City's 20-inch main on Beavercreek Road. The development shall provide an Access and Water Supply Plan to Clackamas Fire District #1 for review. An approved Access and Water Supply Plan is required prior to issuance of building permits for the development. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Street Trees. Refer to OCMC 12.08, Street Trees.

Finding: See findings from section 12.08.

F. Bench Marks. At least one bench mark shall be located within the subdivision boundaries using datum plane specified by the City Engineer.

Finding: Complies with Condition. The engineering plans shall provide a local benchmark, onsite, using the NAVD88 datum prior to receiving a permit and beginning construction. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. Other Utilities. The applicant shall make all necessary arrangements with utility companies or other affected parties for the installation of underground lines and facilities. All new utilities shall be placed underground unless the respective franchise agreements allow otherwise or unless it is physically or technically impossible to comply with applicable standards. Existing electrical lines and other wires, including but not limited to telecommunication, street lighting and fiberoptic, shall be relocated underground.
1. Exemptions to relocation of existing overhead utilities to underground for property development as follows (Only one exemption criteria is required to be exempt from this requirement):
a. No transmission or feeder lines shall be relocated underground unless approved by the City Engineer.
b. Properties with less than one acre of land area shall not be required to relocate existing overhead utilities unless required by the franchise utility.
c. Properties with less than two hundred feet of frontage on any individual roadway shall not be required to relocate existing overhead utilities unless required by the franchise utility.
d. Land divisions with five or fewer subdivided lots shall not be required to relocate existing overhead utilities unless required by the franchise utility.

2. The exemptions in G.1. do not apply if properties within the same block were required to relocate the overhead utilities within the past ten years. In those cases, the existing overhead utilities shall be relocated underground.
3. When any franchise utility (electric, gas, telecommunication, fiberoptic, street lighting or similar utility) is installed along an existing or new roadway, the utility shall be installed within the existing or proposed public utility easement unless it is physically or technically impossible.
4. These requirements do not apply to work by a franchise utility for improvement, repair, alteration or addition to their existing systems.

Finding: Complies with Condition. New franchise utilities shall be placed underground and all existing overhead utilities adjacent to the property frontage shall be relocated underground unless deemed infeasible by the City and franchise utility provider(s) prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

H. Oversizing of Facilities. All facilities and improvements shall be designed to city standards as set out in the City's facility master plan, public works design standards, or other city ordinances or regulations. Compliance with facility design standards shall be addressed during final engineering. A development may be required to modify or replace existing offsite systems if necessary to provide adequate public facilities. The City may require oversizing of facilities to meet standards in the City's facility master plan or to allow for orderly and efficient development. Where oversizing is required, the applicant may request reimbursement from the City for oversizing based on the City's reimbursement policy and funds available or provide for recovery of costs from intervening properties as they develop.

Finding: Applicable. The City's master plans for water and sewer identify projects within the proposed development site. The applicant has noted that the 12" water main noted in the water master plan is greater than what is needed for this development. Sizing requirements for the water and sewer will be reviewed during the projects technical design review.

I. Erosion Control Plan—Mitigation. The applicant shall be responsible for complying with all applicable provisions of OCMC 17.47 with regard to erosion control.

Finding: See findings from section 17.47 of this report

16.12.100 - Same—Road standards and requirements.
A. The creation of a public street and the resultant separate land parcels shall be in conformance with requirements for subdivisions or partitions and the applicable street design standards of this Chapter. However, the decision-maker may approve the creation of a public street to be established by deed without full compliance with the regulations applicable to subdivisions or partitions where any of the following conditions exist:
1. The establishment of the public street is initiated by the City Commission and is declared essential for the purpose of general traffic circulation and the partitioning of land is an incidental effect rather than the primary objective of the street;

2. The tract in which the street is to be dedicated is within an isolated ownership either not over one acre or of such size and characteristics as to make it impossible to develop building sites for more than three dwelling units.

Finding: Applicable. Please refer to the findings in chapter 16.12.016 within this report for applicable street design standards required for the public street.

B. For any public street created pursuant to subsection A of this section, a copy of a preliminary plan and the proposed deed shall be submitted to the Community Development Director and City Engineer at least ten days prior to any public hearing scheduled for the matter. The plan, deed and any additional information the applicant may submit shall be reviewed by the decision-maker and, if not in conflict with the standards of Title 16 and Title 17, may be approved with appropriate conditions.

Finding: Not Applicable. The applicant has not proposed the creation of a public street to be established by deed without full compliance with the regulations applicable to subdivisions or partitions.

C. The design and construction of public streets shall be per the standards found in this chapter and the most recent version of any City Design and Construction Standards.

Finding: Complies with Condition. The development plans shall comply with all current Oregon City Public Works design standards, specifications, codes, and policies prior to receiving a permit and beginning construction. (Also written in 16.12.010). Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.

16.12.105 - Same—Timing requirements.
A. Prior to applying for final plat approval, the applicant shall either complete construction of all public improvements required as part of the preliminary plat approval or guarantee the construction of those improvements. Whichever option the applicant elects shall be in accordance with OCMC 17.50.140.

Finding: See findings from OCMC 17.50.140 regarding timing of construction of improvements and guarantee for construction of improvements.

B. Construction. The applicant shall construct the public improvements according to approved final engineering plans and all applicable requirements of this Code, and under the supervision of the City Engineer. Under this option, the improvement shall be complete and accepted by the City Engineer prior to final plat approval.

Finding: Complies with Condition. Public improvements and all items from the city provided punch list shall be completed and accepted by the City prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.110 -Public improvements—Financial guarantees.

A. To ensure construction of required public improvements, the applicant shall provide the City with a performance guarantee in accordance with OCMC 17.50.140.

Finding: Please see findings from Section17.50.140 of this report.

B. After satisfactory completion of required public improvements and facilities, all public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period as prescribed in OCMC 17.50.141.

Finding: Please see findings from Section17.50.141 of this report.

16.12.120 Waiver of Remonstrance
The review authority may require a property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district where it deems such a waiver necessary to provide needed improvements reasonably related to the impacts created by the proposed development. To ensure compliance with this chapter, the review authority may require an applicant to sign or accept a legal and enforceable covenant, contract, dedication, easement, performance guarantee, or other document, which shall be approved in form by the City Attorney.

Finding: Complies with Condition. The property owner(s) shall sign a Restrictive Covenant Non-Remonstrance Agreement for the purpose of making storm sewer, sanitary sewer, water or street improvements in the future that benefit the property and all fees associated with processing and recording the Non-Remonstrance Agreement shall be paid prior to occupancy of the first parcel. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

16.12.125 Violation—Penalty.
Any act or omission in violation of this chapter shall be deemed a nuisance. Violation of any provision of this chapter is subject to the code enforcement procedures of OCMC 1.16, 1.20 and 1.24.

CHAPTER 17.44 – GEOLOGIC HAZARDS
17.44.010 – Intent and purpose.
A. To ensure that activities in geologic hazard areas are designed based on detailed knowledge of site conditions in order to reduce the risk of private and public losses;
B. To establish standards and requirements for the use of lands within geologic hazard areas;
C. To provide safeguards to prevent undue hazards to property, the environment, and public health, welfare, and safety in connection with use of lands within geologic hazard areas;
D. To mitigate risk associated with geologic hazard areas, not to act as a guarantee that the hazard risk will be eliminated, nor as a guarantee that there is a higher hazard risk at any location. Unless otherwise provided, the geologic hazards regulations are in addition to generally applicable standards provided elsewhere in the Oregon City Municipal Code.

17.44.025 - When required; regulated activities; permit and approval requirements.

No person shall develop land, construct, reconstruct, structurally alter, relocate or enlarge any building or structure for which a land development, sign, or building permit is required on a property that contains an area mapped within the adopted Oregon City Geologic Hazards Overlay Zone without first obtaining permits or approvals as required by this chapter.

The requirements of this chapter are in addition to other provisions of the Oregon City Municipal Code. Where the provisions of this chapter conflict with other provisions of the Oregon City Municipal Code, the provisions that are the more restrictive of regulated development activity shall govern.

Finding: Applicable. The development property contains an area mapped within the adopted Oregon City Geologic Hazards Overlay Zone.

17.44.030 - Procedures.
No building or site development permit or other authorization for development shall be issued until the plans and other documents required by this chapter have been reviewed and found by the review authority to comply with the requirements of this chapter.

A. Where the development is part of an application that otherwise requires a Type III procedure, review shall occur in the manner established in Chapter 17.50 for a consolidated Type III review.

B. Where the development is part of an application that otherwise requires a Type II procedure, review shall occur in the manner established in Chapter 17.50 for a consolidated Type II review.

C. For any other proposed development not otherwise subject to review as part of a development proposal that requires land use review, review shall occur in the manner established in Chapter 17.50 for a Type II procedure.

Finding: Applicable. This application meets Criteria A and C as the development is part of a general land use application. No building or site development permit or other authorization for development shall be issued until the plans and other documents required by OCMC Chapter 17.44 have been approved by the City.

17.44.035 - Exemptions.
The following activities, and persons engaging in same, are EXEMPT from the provisions of this chapter.
A. An excavation which is less than two feet in depth, or which involves less than twenty-five cubic yards of volume;
B. A fill which does not exceed two feet in depth or which includes less than twenty-five cubic yards of volume;
C. A combined cut and fill that does not involve more than twenty-five cubic yards of volume.
D. Installation, new construction, addition or structural alteration of any existing structure of less than five hundred square feet in building footprint that does not involve grading as defined in this chapter;

E. Installation, construction, reconstruction, or replacement of public and private utility lines in the hardscape portion of the city right-of-way, existing utility crossings, existing basalt lined drainage channels, or public easement, not including electric substations;
F. Tree removal on slopes twenty-five percent or greater where canopy area removal is less than twenty-five percent of the portion of the lot which contains twenty-five percent or greater slopes. For the purpose of this chapter, "tree" shall be as defined in OCMC 17.04.1315.
G. The removal or control of noxious vegetation;
H. Emergency actions which must be undertaken immediately to prevent an imminent threat to public health or safety, or prevent imminent danger to public or private property. The person undertaking emergency action shall notify the building official on all regulated activities associated with any building permit or City Engineer/Public Works Director on all others within one working day following the commencement of the emergency activity. If the City Engineer/Public Works Director or building official determine that the action or part of the action taken is beyond the scope of allowed emergency action, enforcement action may be taken.

Finding: Not Applicable. The application does not meet any of the criteria for an exemption to the geologic hazard code 17.44.

17.44.050 - Development - Application Requirements and Review Procedures and Approvals.
Except as provided by subsection C. of this section, an application for a geologic hazards overlay review shall include the following:
A. A geological assessment and geotechnical report that specifically includes, but is not limited to:
1. Comprehensive information and data regarding the nature and distribution of underlying geology, the physical and chemical properties of existing soils and groundwater; an opinion of site geologic stability, and conclusions regarding the effect of geologic conditions on the proposed development. In addition to any field reconnaissance or subsurface investigation performed for the site, the following resources, as a minimum, shall be reviewed to obtain this information and data:
a. The State of Oregon Department of Geology and Mineral Industries (DOGAMI) in Bulletin 99, Geology and Geological Hazards of North Clackamas County, Oregon (1979), or in any subsequent DOGAMI mapping for the Oregon City area;
b. Portland State University study entitled "Environmental Assessment of Newell Creek Canyon, Oregon City, Oregon" (1992);
c. Portland State University study, "Landslides in the Portland, Oregon, Metropolitan Area Resulting from the Storm of February 1996: Inventory Map, Database and Evaluation" (Burns and others, 1998);
d. DOGAMI Open File Report O-06-27, "Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from LIDAR Imagery and Aerial Photographs" (Madin and Burns, 2006);
e. "Preliminary Geologic Map of the Oregon City Quadrangle, Clackamas County, Oregon" (Madin, in press);

f. Landslide Hazards Land Use Guide for Oregon Communities (October 2019), prepared by the State of Oregon Department of Geology and Mineral Industries (DOGAMI) and the Oregon Department of Land Conservation and Development (DLCD);
g. Landslide hazard and risk study of northwestern Clackamas County, Oregon: Oregon Department of Geology and Mineral Industries, Open-File Report O-13-08, 74 map plates; Burns, W.J., Mickelson, K.A., Jones, C.B., Pickner, S.G., Hughes, K.L., Sleeter, R., 2013.

h. Mapped landslide data shall be from the city's maps as a minimum but may be supplemented with maps from items a through f above.

Finding: Complies as Proposed. The application has provided the information listed in 17.44.050.A.1; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

2. Information and recommendations regarding existing local drainage, proposed permit activity impacts on local drainage, and mitigation to address adverse impacts;

Finding: Complies with Condition. The application has not explicitly provided the information listed in 17.44.050.A.2, but has generally indicated that stormwater will be controlled at the site and referenced detention facilities to be constructed as part of development. The geotechnical report should clearly state recommendations regarding existing local drainage, any impacts on local drainage from the proposed development, and any mitigation required to address adverse impacts. The applicant shall update the report as part of design review. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. Comprehensive information about site topography;

Finding: Complies as Proposed. The application has provided sufficient information on the site topography as listed in 17.44.050.A.3 for project; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

4. Opinion as to the adequacy of the proposed development from an engineering standpoint;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.4; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

5. Opinion as to the extent that instability on adjacent properties may adversely affect the project;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.5; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

6. Description of the field investigation and findings, including logs of subsurface conditions and laboratory testing results;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.6; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

7. Conclusions regarding the effect of geologic conditions on the proposed development, tree removal, or grading activity;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.7; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

8. Specific requirements and recommendations for plan modification, corrective grading, and special techniques and systems to facilitate a safe and stable site;

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.A.8; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

9. Recommendations and types of considerations as appropriate for the type of proposed development:
a. General earthwork considerations, including recommendations for temporary and permanent cut and fill slopes and placement of structural fill;
b. Location of residence on lot;
c. Building setbacks from slopes;
d. Erosion control techniques applicable to the site;
e. Surface drainage control to mitigate existing and potential geologic hazards;
f. Subsurface and/or management of groundwater seepage;
g. Foundations;
h. Embedded/retaining walls;
i. Management of surface water and irrigation water; and
j. Impact of the development on the slope stability of the lot and the adjacent properties.
k. Construction phasing and implementation schedule as it relates to foundation excavation, allowance for stockpiles, imported backfill, site subsurface drainage or dewatering, provision for off season site protections;
l. Stormwater management; and
m. Construction methods.

Finding: Complies as Proposed. The applicant has provided the information listed in 17.44.050.A.9 as applicable to this project; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

10. Scaled drawings that describe topography and proposed site work, including:
a. Natural physical features, topography at two or ten-foot contour intervals locations of all test excavations or borings, watercourses both perennial and intermittent, ravines and all existing and man-made structures or features all fully dimensioned, trees six-inch caliper or greater measured four feet from ground level, rock outcroppings and drainage facilities;
b. All of the features and detail required for the site plan above, but reflecting preliminary finished grades and indicating in cubic yards whether and to what extent there will be a net increase or loss of soil.

c. A cross-section diagram, indicating depth, extent and approximate volume of all excavation and fills.

Finding: Complies with Condition. The submitted grading plan and associated drawings show existing and proposed contours for preliminary grading, however, we understand that some revisions are anticipated, and specifically required grading of the path through the Geologic Hazards Overlay Zone. The applicant shall provide final grading plans, including representative cross sections through the path and Geologic Hazards Overlay Zone, as necessary, to demonstrate final excavation and grading to be in compliance with Section 17.44. Final cut and fill volumes from excavation shall be stated as required by 17.44.050.A.10. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

11. For properties greater than one acre and any property that has any portion of its property existing within a mapped landslide, where the activity is not exempted by 17.44.35, a preliminary hydrology report, prepared by a suitably qualified and experienced hydrology expert, addressing the effect upon the watershed in which the proposed development is located; the effect upon the immediate area's stormwater drainage pattern of flow, the impact of the proposed development upon downstream areas and upon wetlands and water resources; and the effect upon the groundwater supply.

Finding: Complies with Condition. The applicant has provided a separate storm drainage analysis report. The geologic assessment and geotechnical report shall address the effect on the site hydrology and provide the information listed in 17.44.050.A.11 as applicable to this project, considering the recommendations and design per the storm drainage analysis report. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

B. Review Procedures and Approvals require the following:
1. Examination to ensure that:
a. Required application requirements are completed;
b. Geologic assessment and geotechnical report procedures and assumptions are generally accepted; and
c. All conclusions and recommendations are supported and reasonable.

Finding: Complies as Proposed. The application has provided all of the information listed in 17.44.050.B.1; however, detailed review of the report will occur as part of the permit review and revisions may be requested.

2. Conclusions and recommendations stated in an approved assessment or report shall then be directly incorporated as permit conditions or provide the basis for conditions of approval for the regulated activity.

Finding: Complies with Condition. The application has provided the required conclusions and recommendations in the submitted reports, which shall be incorporated as conditions of approval per this section. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

3. All geologic assessments and geotechnical reports shall be reviewed by an engineer certified for expertise in geology or geologic engineering and geotechnical engineering, respectively, as determined by the City. The City will prepare a list of prequalified consultants for this purpose. The cost of review by independent review shall be paid by the applicant.

Finding: Complies with Condition. A geotechnical engineer provides consultation services to the City. The geotechnical consultant provide review of all geologic assessments and geotechnical reports for the City. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. The City Engineer may waive one or more requirements of subsections A and B of this section if the City Engineer determines that site conditions, size or type or development of grading requirements do not warrant such detailed information. If one or more requirements are waived, the City Engineer shall, in the staff report or decision, identify the waived provision(s), explain the reasons for the waiver, and state that the waiver may be challenged on appeal and may be denied by a subsequent review authority.

Finding: Not Applicable. The City Engineer has not waived any of the requirements as all requirements apply to this application.

17.44.060 Development Standards.
Notwithstanding any contrary dimensional or density requirements of the underlying zone, the following standards shall apply to the review of any development proposal subject to this chapter. Requirements of this chapter are in addition to other provision of the Oregon City Municipal Code. Where provision of this chapter conflict with other provision of the Oregon City Municipal Code, the provisions that are more restrictive of regulated development activity shall govern.
A. All developments shall be designed to avoid unnecessary disturbance of natural topography, vegetation and soils. To the maximum extent practicable as determined by the review authority, tree and ground cover removal and fill and grading for residential development on individual lots shall be confined to building footprints and driveways, to areas required for utility easements and for slope easements for road construction, and to areas of geotechnical remediation.

Finding: Complies as Proposed. The project will avoid disturbance of natural topography, vegetation, and soils outside of that required for roadway, path, and utility construction proposed for this phase.

B. All grading, drainage improvements, or other land disturbances shall only occur from May 1 to October 31. "Land disturbance" is defined as any movement of earth, placement of earth, or movement of heavy trucks on earth, not including the right-of-way. Erosion control measures shall be installed and functional prior to any disturbances. Erosion control measures shall also be functioning and in a winterized stable condition once all land disturbance work has ceased for the year. The City Engineer may allow grading, drainage improvements or other land disturbances to begin before May 1 (but no earlier than March 16) and end after October 31 (but no later than November 30), based upon weather conditions and the recommendation and direction of the project's geotechnical engineer. The City Engineer may use the expertise of a city contracted geotechnical consultant to make the decision to allow any work before May 1 or after October 31. The City Engineer has full authority to not allow any extension of work before May 1 or after October 31. In no case shall the applicant be allowed to begin work before May 1 or complete work after October 31 if the average monthly rainfall in any individual month between September and April is exceeded.

Finding: Complies with Condition. Grading, drainage improvements or other land disturbances shall be restricted to between May 1 and October 31, unless extended by the City Engineer consistent with 17.44. The developer shall submit a work schedule which has been reviewed and approved by a licensed geotechnical engineer with regard to the viability of completing necessary project goals within the aforementioned time period. Erosion control measures and temporary protective fencing around all trees and vegetation designed for protection shall be installed prior to the commencement of grading or other soil disturbance. Erosion control measures shall be in conformance with OCMC Chapter 17.47. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

C. Designs shall minimize the number and size of cuts and fills.

Finding: Complies with Condition. Cuts and fills are generally minimized to meet site access and grading requirements for the proposed roadway, path, and utility installations. However, final grading plans shall be submitted which demonstrate compliance with this Section. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Cut and fill slopes greater than seven feet in height (as measured vertically) shall be terraced. Faces on a terraced section shall not exceed five feet. Terrace widths shall be a minimum of three feet and shall be vegetated. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. Except in connection with geotechnical remediation plans approved in accordance with the chapter, cuts shall not remove the toe of any slope that contains a known landslide or is greater than twenty-five percent slope. The top of cut or fill slopes not utilizing structural retaining walls shall be located a minimum of one-half the height of the cut slope from the nearest property line.

Finding: Complies with Condition. Cuts, fills, walls, and terraces are not proposed which exceed the thresholds of this section. No grading will occur at the toe of any landslide or on slopes greater than 25 percent. However, final grading plans shall be submitted which demonstrate compliance

with this Section. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Any structural fill shall be designed by a suitably qualified and experienced civil or geotechnical engineer licensed in Oregon in accordance with standard engineering practice. The applicant's engineer shall certify that the fill has been constructed as designed in accordance with the provisions of this chapter. The structural fill design must be provided prior to any fill being placed onsite. The structural fill design must contain the stamp and signature of a professional engineer licensed in the State of Oregon.

Finding: Complies as Proposed. The project geologic assessment and geotechnical report provided design of structural fill by the licensed geotechnical engineer of record.

F. Retaining walls shall be constructed in accordance with the Oregon Structural Specialty Code adopted by the State of Oregon.
1. Retaining walls that are four feet or greater in height, tiered walls with a total height four feet or greater, and walls on slopes steeper than 2:1 must be designed by a professional engineer licensed in the State of Oregon which includes a stamped and signed set of plans.
2. The construction of the wall must be inspected by the professional engineer responsible for the design and must be certified prior to the structure receiving temporary occupancy. The certification must contain the stamp and signature of a professional engineer licensed in the state of Oregon.
3. All retaining walls required to be designed by a professional engineer shall be reviewed by the City, when expertise exists on staff, or by the City's consultant. When reviewed by the City's consultant, the applicant shall reimburse the City for time spent by the City's consultant to review the design.

Finding: Complies with Condition. Retaining walls up to approximately 7 feet are planned. Construction of retaining walls over 4 feet in height and terraced walls which create total cut or fill greater than 4 feet in height shall be certified by a licensed engineer qualified for the design of such walls. The developer shall submit engineered stamped calculations for proposed retaining walls showing compliance with applicable building codes. The developer shall provide sliding, overturning, bearing capacity, and global stability design calculation for any retaining walls over 4 feet in height in accordance with the Oregon Structural Specialty Code. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. Roads shall be the minimum width necessary to provide safe vehicle and emergency access, minimize cut and fill and provide positive drainage control. The review authority may grant a variance from the City's required road standards upon findings that the variance would provide safe vehicle and emergency access and is necessary to comply with the purpose and policy of this chapter.

Finding: Complies as Proposed. Proposed roads are designed to meet the City's egress and access requirements. However, detailed review of the project plans will occur as part of the permit review and revisions may be requested.

H. Density shall be determined as follows:
1. Slope
a. For those areas with slopes less than twenty-five percent between grade breaks, the allowed density shall be that permitted by the underlying zoning district, unless further limited by the following code section;
b. For those areas with slopes of twenty-five to thirty-five percent between grade breaks, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;
c. For those areas with slopes over thirty-five percent between grade breaks, development shall be prohibited except as otherwise provided in subsection I 4 of this section.
2. Existing landslide (as shown in the Geologic Hazard Overlay Zone)
a. For those areas with historic landslides where the structure or ground disturbance will be located within any portion of the mapped landslide or buffer zone, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;

Finding: Complies as Proposed. The site is 1.0 acre and 0.25 acres contains slopes between 25-35%. The application has provided no structure within the steep slopes, only transitional grading; therefore, the application is complaint with the code.

I. For properties with slopes of twenty-five to thirty-five percent between grade breaks or are located within any portion of a mapped landslide and buffer zone:
1. For those portions of the property with slopes of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;
2. An individual lot or parcel with slopes between twenty-five and thirty-five percent or located within any portion of a mapped landslide and buffer zone, shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.
3. No cut into a slope of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, for the placement of a housing unit shall exceed a maximum vertical height of fifteen feet for the individual lot or parcel.
4. For those portions of the property with slopes over thirty-five percent between grade breaks:
a. Notwithstanding any other city land use regulation, development other than roads, utilities, public facilities and geotechnical remediation shall be prohibited; provided, however, that the review authority may allow development upon such portions of land upon demonstration by an applicant that failure to permit development would deprive the property owner of all economically beneficial use of the property. This determination shall be made considering the entire parcel in question and contiguous parcels in common ownership on or after January 1, 1994, not just the portion where development is otherwise prohibited by this chapter. Where this showing can be made on residentially zoned land, development shall be allowed and limited to one single-family

residence. Any development approved under this chapter shall be subject to compliance with all other applicable city requirements as well as any applicable state, federal or other requirements; b. To the maximum extent practicable as determined by the review authority, the applicant shall avoid locating roads, utilities, and public facilities on or across slopes exceeding thirty-five percent.

Finding: Complies with Condition. The proposed project shows impacts to the mapped geological hazard areas within the development. The proposed stormwater pond and portions of the new roadway are shown to be constructed within the buffer of the mapped landslide. The applicant has proposed to provide a 35 foot buffer from the top of the mapped landslide as shown on the application's plans. The applicant's approach is consistent with previously proposed developments for the property, however the City has updated its Geological Hazard Code in 2021 since those past proposals and this approach is no longer consistent with OCMC 17.44.060.I. Impacts to the mapped landslide area and buffer located to the rear of the properties shall be limited to 4,000 square feet of grading, stripped vegetation, or by coverage in impermeable surfaces per parcel. The proposed stormwater pond and roadway improvements shall be redesigned or relocated outside of the geological hazard area to meet this standard. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

J. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report.

Finding: Complies with Condition. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report. As-builts conforming to City standards shall be provided within 90 days of completion of the project. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

K. At the City's discretion, peer review shall be required for the geotechnical evaluation/investigation report submitted for the development and/or lot plans. The peer reviewer shall be selected by the City. The applicant's geotechnical engineer shall respond to written comments provided by the City's peer reviewer prior to issuance of building permit.

Finding: Complies as conditioned. The applicant's geotechnical engineer shall respond to written comments provided by the City's peer reviewer prior to issuance of building permits. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

L. The review authority shall determine whether the proposed methods of rendering a known or potential hazard site safe for construction, including proposed geotechnical remediation methods, are feasible and adequate to prevent landslides or damage to property and safety. The review authority shall consult with the City's geotechnical engineer in making this determination. Costs for such consultation shall be paid by the applicant. The review authority may allow development in a known or potential hazard area as provided in this chapter if specific findings are made that the

specific provisions in the design of the proposed development will prevent landslides or damage. The review authority may impose any conditions, including limits on type or intensity of land use, which it determines are necessary to assure that landslides or property damage will not occur.

Finding: Complies with Condition. The applicant argues that this subsection grants staff discretion to allow development and grading within the mapped landslide buffer because the development will "prevent landslides or damage" and asks that the City exercise its discretion to allow the Parcel B development in this case. This suggests that city staff has authority to grant a variance or otherwise adjust the otherwise applicable development standards, most specifically OCMC 17.44.060(I)(1) and (2).

The language of subsection (L) does not support the interpretation, when considered in context with other provisions of OCMC 17.44.060. First, this provision is largely directed at providing instructions to city staff about how it must review applications. It requires that city staff employ certain methods for reviewing development proposals within hazard areas, subject to review by the City's geotechnical engineer, at the applicant's cost. Once this review occurs, City staff may allow development within the hazard area only "as provided in this chapter" where findings are made that landslide and damage will be prevented. The term "as provided in this chapter" is critical as it says that staff can only approve development that is otherwise authorized in OCMC 17.44. As noted above, development within the mapped landslide buffer is not allowed "in this chapter." Said differently, where the development includes one single family residence, as authorized by OCMC 17.44.060(I)(1), or grading of less than 4,000 sf as authorized by OCMC 17.44.060(I)(2), city staff must, in addition, provide for geotechnical engineer review of the application to ensure the prevention of landslides. If the City Council had intended to allow development without regard to the mapped landslide boundary and buffer through an adjustment, it would have provided as much. For example, OCMC 17.44.060(G) allows the city to "grant a variance from the city's required road standards" upon a finding that "safe vehicle and emergency access" remains. This suggests that where the City intended to permit deviation from an otherwise applicable standard, it has done so expressly.

Finally, one of the objectives achieved by amending this code in 2021 was to create clear and objective standards in compliance with ORS 197A.400. The applicant's proposed interpretation would inject subjectivity into the city's decision-making with respect to housing that state law does not permit. In conclusion, the city sees no supportable interpretation that subsection (L) can be used to authorize development that would otherwise violate other portions of OCMC 16.44.

A prequalified geotechnical engineer provides consultation services to the City. The geotechnical consultant provide review of all geologic assessments and geotechnical reports for the City. Costs associated with geologic hazard review of the land use application by the City's geotechnical engineer shall be paid by the developer. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.070 - Access to Property.
A. Shared private driveways may be required if the City Engineer or principal planner determines that their use will result in safer location of the driveway and lesser amounts of land coverage than would result if separate private driveways are used.

B. Innovations in driveway design and road construction shall be permitted in order to keep grading and cuts or fills to a minimum and to achieve the purpose and policy of this chapter.
C. Points of access to arterials and collectors shall be minimized.
D. The City Engineer or principal planner shall verify that adequate emergency services can be provided to the site.

Finding: Complies as Proposed. The proposed driveway is designed to be constructed at grade and meets this code.

17.44.080 - Utilities.
All new utilities (storm sewer, sanitary sewer, potable water, and gas), both on-site and off-site, shall be placed underground and under roadbeds where practicable. All other service utilities (including, but not limited to, electric, telephone, telecom, cable, fiberoptic) shall be placed above ground on existing poles if poles exist. If no poles exist, the service lines shall be placed underground. Every effort shall be made to minimize the impact of utility construction. Underground utilities require the geologic hazards permitting and review prescribed herein when applicable.

Finding: Complies with Condition. All new service utilities, both on-site and off-site, shall be placed underground and under roadbeds where practicable. The placement of existing utilities underground within areas of geologic hazard shall be reviewed and approved by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.090 - Stormwater Drainage.
The applicant shall submit a permanent and complete stormwater control plan. The program shall include, but not be limited to the following items as appropriate: Curbs, gutters, inlets, catch basins, detention facilities and stabilized outfalls. Detention facilities shall be designed to city standards as set out in the City's drainage master plan and design standards. The review authority may impose conditions to ensure that waters are drained from the development so as to limit degradation of water quality consistent with Oregon City's Title III section of the Oregon City Municipal Code Chapter 17.49 and the Oregon City Stormwater and Grading Design Standards or other adopted standards subsequently adopted by the City Commission. The review authority may also impose conditions to limit the volume, velocity, or flow rate of water such that it does not negatively impact the underlying drainageway cross section. Drainage design shall be approved by the City Engineer before construction, including grading or other soil disturbance, has begun.

A geotechnical report must include analysis and solutions for infiltration facilities located in areas where these facilities could impact nearby slopes of greater than ten percent. Infiltration shall be minimized as practicable for any site located within a geologic hazard overlay. Infiltration is not allowed for any site located in areas greater than twenty-five percent.

The project's civil or geotechnical engineer shall inspect any stormwater management feature and must certify that the stormwater management feature was constructed per plan and with the recommendations of the geotechnical engineer prior to receiving temporary occupancy. The

certification must contain the stamp and signature of a professional engineer licensed in the state of Oregon.

Finding: Complies with Condition. See findings from 13.12 regarding requirements for the development to meet the Oregon City Stormwater and Grading Design Standards. The developer's geotechnical consultant shall review the drainage design for the project so that it does not negatively impact the underlying drainageway cross section and certify that the design is consistent with the conclusions and recommendations stated in their geologic assessment and geotechnical report. The project's civil or geotechnical engineer shall inspect any stormwater management feature and must certify that the stormwater management feature was constructed per plan and with the recommendations of the geotechnical engineer prior to receiving occupancy. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval**.

17.44.100 - Construction Standards.
During construction on land subject to this chapter, the following standards shall be implemented by the developer:
A. All development activity shall minimize vegetation removal and soil disturbance and shall provide positive erosion prevention measures in conformance with OCMC Chapter 17.47 – Erosion and Sediment Control.

Finding: Complies as proposed. The applicant proposes to minimize vegetation removal and soil disturbance. Detailed review of construction plans will occur as part of the permit review and revisions may be requested to ensure this standard is met.

B. No grading, clearing or excavation of any land shall be initiated prior to approval of the grading plan, except that the City Engineer shall authorize the site access, brush to be cleared and the location of the test pit digging prior to approval of such plan to the extent needed to complete preliminary and final engineering and surveying. The grading plan shall be approved by the City Engineer as part of the City's review under this chapter. The developer shall be responsible for the proper execution of the approved grading plan.

Measures shall be taken to protect against landslides, mudflows, soil slump and erosion. Such measures shall include sediment fences, straw bales, erosion blankets, temporary sedimentation ponds, interceptor dikes and swales, undisturbed buffers, grooving and stair stepping, check dams, etc. The applicant shall comply with the measures described in the Oregon City Public Works Standards for Erosion and Sedimentation Control (Ordinance No. 99-1013). Erosion control measures shall be in place at all times during construction to the maximum extent practicable.

Finding: Complies with Condition. See 15.48 regarding city requirements for grading. A city issued erosion and sediment control permit shall be obtained prior to commencement of any earth disturbing activities. Erosion and sediment control plans shall be submitted for review and approval by the City prior to issuance of an erosion and sediment control permit. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval**

C. All disturbed vegetation shall be replanted with suitable vegetation upon completion of the grading of the steep slope area.

Finding: Complies with Condition. The applicant shall provide a landscape plan that shows vegetative mitigation of all disturbed areas. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

D. Existing vegetative cover shall be maintained to the maximum extent practicable. No grading, compaction or change in ground elevation, soil hydrology and/or site drainage shall be permitted within the drip line of trees designated for protection, unless approved by the City.

Finding: Complies with Condition. Existing vegetative cover shall be maintained to the maximum extent practicable within the geological hazard areas. The applicant shall install appropriate barriers or protective fencing during construction to ensure existing vegetation is not disturbed. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

E. Existing perennial and intermittent watercourses shall not be disturbed unless specifically authorized by the review authority. This includes physical impacts to the stream course as well as siltation and erosion impacts. The City, at its discretion, is not required to but may request the examination and assessment by other State agencies to determine if impacts are acceptable.

Finding: Complies as Proposed. No watercourses exist within the site proposed in the application. This application has construction over a culvertized drainage system that drains into the NROD.

F. All soil erosion and sediment control measures shall be maintained during construction and for one year after development is completed, or until soils are stabilized by revegetation or other measures to the satisfaction of the City Engineer. Such maintenance shall be the responsibility of the developer. If erosion or sediment control measures are not being properly maintained or are not functioning properly due to faulty installation or neglect, the City may order work to be stopped.

Finding: Complies with Condition. Erosion control measures shall be in conformance with OCMC Chapter 17.47. (also written in findings from 17.44.060.B) **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

G. All newly created lots, either by subdivision or partition, shall contain building envelopes with a slope of 35% or less.

Finding: Complies as Proposed. No proposed lots have building envelopes with slopes of 35% or greater.

H. The applicant's geotechnical engineer shall provide special inspection during construction to confirm that the subsurface conditions and assumptions made as part of their geotechnical evaluation/investigation are appropriate. This will allow for timely design changes if site conditions

are encountered that are different from those anticipated. Inspection is required on a daily basis for any day that earth disturbance is occurring or after any rainfall event of one-half inch or greater.

Finding: Complies with Condition. The developer shall retain the services of a licensed geotechnical engineer to conduct inspections prior to and during construction activities which involve removal or addition of vegetation, building structures, retaining walls or earth. The geotechnical engineer shall provide reports to confirm that standards from Section 17.44.100 are met. The geotechnical engineer of record shall observe all excavations and geologic conditions exposed during construction and document that the conditions are consistent with the conditions assumed in the geotechnical hazard evaluation. If the conditions are different than assumed in the preliminary report, the effect of the new observations shall be evaluated and mitigation provided as required. Additional geologic hazards review may be required at the City's discretion. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

I. Prior to issuing an occupancy permit, the geotechnical engineer shall prepare a summary letter stating that the soils- and foundation-related project elements were accomplished in substantial conformance with their recommendations. The summary letter must contain the stamp and signature of a professional engineer licensed in the State of Oregon.

Finding: Complies with Condition. The developer's geotechnical engineer shall certify, during construction, that structural fill used on the site meets the provided design specifications and is placed as designed. The certification shall be in writing and shall be signed and stamped by a licensed engineer in the State of Oregon. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.110 - Approval of development.
The City Engineer shall review the application and verify, based on the applicant's materials and the land use record, whether the proposed development constitutes a hazard to life, property, natural resources or public facilities. If, in the City Engineer's opinion, a particular development poses such a hazard, the City Engineer shall recommend to the review authority permit conditions designed to reduce or eliminate the hazard. These conditions may include, but are not limited to, prohibitions on construction activities between November 1st and April 30th.

Finding: Applicable. City Engineer has reviewed the application and verified, based on the applicant's materials and the land use record, whether the proposed development constitutes a hazard to life, property, natural resources or public facilities. Permit conditions have been written within this document designed to reduce or eliminate the hazard per the recommendations of the City's geotechnical consultant. A condition of approval prohibits construction activities between November 1st and April 30th.

17.44.120 - Liability.
Approval of an application for development on land subject to this chapter shall not imply any liability on the part of the City for any subsequent damage due to earth slides. Prior to the issuance of a building permit, a waiver of damages and an indemnity and hold harmless agreement shall be required which releases the City from all liability for any damages resulting from the development

approved by the City's decision. The indemnity and hold harmless agreement shall be recorded on the property and run with the property.

Finding: Complies with Condition. The developer shall submit waiver of damages, indemnity and hold harmless agreement completed by all owners of property disturbed by the development. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.44.130 - Compliance.
Nothing contained in this chapter shall relieve the developer of the duty to comply with any other provision of law. In the case of a conflict, the more restrictive regulation shall apply.

Finding: Applicable. This is requirement standard across all development.

17.44.140 - Appeal.
The review authority's decision may be appealed in the manner set forth in Chapter 17.50.

CHAPTER 17.47 – EROSION AND SEDIMENT CONTROL

17.47.030- Applicability.
A. This chapter, which may also be referred to as "construction site runoff controls" in this Code, applies to development that may cause discharge of construction site waste materials or the visible or measurable erosion on any property within the city limits of Oregon City.
B. All development that results in 1,000 square feet of new or replaced impervious surface or 1,000 square feet of earth disturbance shall be subject to the construction site runoff controls requirements and the standards found within the Stormwater and Grading Design Standards as referenced in OCMC 13.12.
C. This chapter does not apply to work necessary to protect, repair, maintain or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies, provided that after the emergency has passed, adverse impacts are mitigated in accordance with applicable standards.

Finding: Applicable. The application disturbs more than 1,000 square feet of earth; therefore, erosion and sediment control standards shall be followed.

17.47.060 - Permit required.
The applicant must obtain an erosion and sediment control permit prior to, or contemporaneous with, the approval of an application for any building, land use or other City-issued permit that may cause visible or measurable erosion.

Finding: Complies with Condition. A City issued erosion and sediment control permit shall be obtained prior to commencement of any earth disturbing activities. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.47.070 - Erosion and sediment control plans.

A. An application for an erosion and sediment control permit shall include an erosion and sediment control plan, which contains methods and interim measures to be used during and following construction to prevent or control construction site wastes and erosion prepared in compliance with City of Oregon City public works standards for erosion and sediment control. These standards are incorporated herein and made a part of this title and are on file in the office of the city recorder.
B. Approval Standards. An erosion and sediment control plan shall be approved only upon making the following findings:
1. The erosion and sediment control plan meets the requirements of the City of Oregon City public works standards for construction site wastes and erosion and sediment control incorporated by reference as part of this chapter;
2. The erosion and sediment control plan indicates that construction site wastes and erosion and sediment control measures will be managed and maintained during and following development. The erosion and sediment control plan indicates that construction site wastes and erosion and sediment control measures will remain in place until disturbed soil areas are permanently stabilized by landscaping, grass, approved mulch or other permanent soil stabilizing measures.
C. The erosion and sediment control plan shall be reviewed in conjunction with the requested development approval. If the development does not require additional review, the manager may approve or deny the permit with notice of the decision to the applicant.
D. The city may inspect the development site to determine compliance with the erosion and sediment control plan and permit.
E. Erosion that occurs on a development site that does not have an erosion and sediment control permit, or that results from a failure to comply with the terms of such a permit, constitutes a violation of this chapter.
F. If the manager finds that the facilities and techniques approved in an erosion and sediment control plan and permit are not sufficient to prevent erosion and the discharge of construction site wastes, the manager shall notify the owner or his/her designated representative. Upon receiving notice, the owner or his/her designated representative shall immediately install interim construction site wastes and erosion and sediment control measures as specified in the City of Oregon City public works standards for erosion and sediment control. Within three days from the date of notice, the owner or his/her designated representative shall submit a revised erosion and sediment control plan to the city. Upon approval of the revised plan and issuance of an amended permit, the owner or his/her designated representative shall immediately implement the revised plan.
G. Approval of an erosion and sediment control plan does not constitute an approval of permanent road or drainage design (e.g., size and location of roads, pipes, restrictors, channels, retention facilities, utilities, etc.).

Finding: Complies with Condition. Erosion and sediment control plans shall be submitted for review and approval by the City prior to issuance of an erosion and sediment control permit. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.47.080 - Plan implementation.
An approved erosion control and sediment control plan shall be implemented and maintained as follows:

A. Plan approval, where required, shall be obtained prior to clearing or grading. No grading, clearing or excavation of land requiring a plan shall be undertaken prior to approval of the plan.
B. The erosion and sediment control facilities shall be constructed prior to any clearing and grading activities, and maintained in such a manner as to ensure that sediment laden water does not enter the drainage system or violate applicable water standards.
C. The implementation of an erosion and sediment control plan and the construction, maintenance, replacement, and upgrading of erosion and sediment control facilities is the responsibility of the owner or his/her designated representative until all construction is completed and approved, and vegetation, landscaping or approved finished surfaces is established.
D. The erosion and sediment control facilities herein are the minimum requirements for anticipated site conditions. During the construction period, these construction site waste management controls and erosion and sediment control facilities shall be upgraded as needed for unexpected storm events and to ensure that sediment or pollutant-laden water does not leave the site.
E. Any observation of visible or measurable discharges of construction site wastes or erosion, or an observation of more than a ten-percent increase in downstream channel turbidities, will result in an enforcement action by the city.
F. The owner or his/her designated representative shall implement the measures and construct facilities as provided for and according to the implementation schedule in the approved plan. The manager shall be allowed reasonable access to the development site for inspection purposes.

Finding: Applicable. Plan approval is required be obtained per chapter 16.12. The Oregon City Erosion Control Officer ensures that the development will comply with the City's Erosion and Sediment Control Standards. The Oregon City Erosion Control Officer will access the development site and perform inspections to ensure compliance prior to any clearing and grading activities are permitted. The Oregon City Erosion Control Officer ensures implementation of an erosion and sediment control plan and the construction, maintenance, replacement, and upgrading of erosion and sediment control facilities. The Oregon City Erosion Control Officer may issue a Stop Work Order if the owner or his/her designated representative fails to implement and maintain the approved erosion control and sediment control plan until all construction is completed and approved, and vegetation, landscaping or approved finished surfaces is established.

17.47.090 - Plan performance guarantee and security.
After the plan is approved by the manager and prior to construction or grading, the owner shall provide a financial guarantee. Management of construction site waste as well as erosion and sediment control shall be included in the cost estimate for the primary project, such as land division or site plan, and included in that project's performance guarantee.

Finding: See findings in Section 17.50.140.

CHAPTER 17.29 MUC MIXED USE CORRIDOR DISTRICT

17.29.010 Designated.

The mixed-use corridor (MUC) district is designed to apply along selected sections of transportation corridors such as Molalla Avenue, 7th Street, Beavercreek Road, and along Warner-Milne Road. Land uses are characterized by high-volume establishments such as retail, service, office, multi-family residential, lodging, recreation and meeting facilities, or a similar use as defined by the Community Development Director. A mix of high-density residential, office, and small-scale retail uses are encouraged in this district. Moderate density (MUC-1) and high density (MUC-2) options are available within the MUC zoning district. The area along 7th Street is an example of MUC-1, and the area along Warner-Milne Road is an example of MUC-2.

17.29.020 - Permitted uses—MUC-1 and MUC-2.

A. Banquet, conference facilities and meeting rooms.
B. Bed and breakfast/boarding houses, hotels, motels, and other lodging facilities.
C. Child care centers and/or nursery schools.
D. Indoor entertainment centers and arcades.
E. Health and fitness clubs.
F. Medical and dental clinics, outpatient; infirmary services.
G. Museums, libraries and cultural facilities.
H. Offices, including finance, insurance, real estate and government.
I. Outdoor markets, such as produce stands, craft markets and farmers markets that are operated on the weekends and after six p.m. during the weekday.
J. Postal services.
K. Parks, playgrounds, playfields and community or neighborhood centers.
L. Repair shops, for radio and television, office equipment, bicycles, electronic equipment, shoes and small appliances and equipment.
M. Multi-family residential, triplexes and quadplexes.
N. One or two dwelling units in conjunction with a nonresidential use, provided that the residential use occupies no more than fifty percent of the total square footage of the development.
O. Restaurants, eating and drinking establishments without a drive-through.
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning.
Q. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores, marijuana, and similar, provided the maximum footprint for a standalone building with a single store or multiple buildings with the same business does not exceed sixty thousand square feet.
R. Seasonal sales.
S. Residential care facilities, assisted living facilities; nursing homes and group homes for over fifteen patients licensed by the state.
T. Studios and galleries, including dance, art, photography, music and other arts.

U. Utilities: Basic and linear facilities, such as water, sewer, power, telephone, cable, electrical and natural gas lines, not including major facilities such as sewage and water treatment plants, pump stations, water tanks, telephone exchanges and cell towers.
V. Veterinary clinics or pet hospitals, pet day care.
W. Home occupations.
X. Research and development activities.
Y. Temporary real estate offices in model dwellings located on and limited to sales of real estate on a single piece of platted property upon which new residential buildings are being constructed.
Z. Transportation facilities.
AA. Live/work dwellings.
BB. Accessory dwelling unit in conjunction with a legally established non-conforming single-family dwelling.
CC. Duplex.
DD. After-hours public parking.

Finding: Permitted. The applicant proposed new streets, paths, and associated utilities, allowed in OCMC 17.29.020.U.

CHAPTER 17.49 NATURAL RESOURCES OVERLAY DISTRICT

17.49.010 Purpose.
The natural resource overlay district designation provides a framework for protection of Metro Titles 3 and 13 lands, and Statewide Planning Goal 5 resources within Oregon City. The natural resource overlay district (NROD) implements the Oregon City Comprehensive Plan Natural Resource Goals and Policies, as well as Federal Clean Water Act requirements for shading of streams and reduction of water temperatures, and the recommendations of the Metro ESEE Analysis. It is intended to resolve conflicts between development and conservation of habitat, stream corridors, wetlands, and floodplains identified in the city's maps. The NROD contributes to the following functional values:
A. Protect and restore streams and riparian areas for their ecologic functions and as an open space amenity for the community.
B. Protect floodplains and wetlands, and restore them for improved hydrology, flood protection, aquifer recharge, and habitat functions.
C. Protect upland habitats and enhance connections between upland and riparian habitat.
D. Maintain and enhance water quality and control erosion and sedimentation through the revegetation of disturbed sites and by placing limits on construction, impervious surfaces, and pollutant discharges.
E. Conserve scenic, recreational, and educational values of significant natural resources.
The NROD ecological functions listed above are planned for integration with existing neighborhoods, new residential and commercial developments. The long-term goal of the NROD is to restore and enhance stream corridors, wetlands, and forests to more natural vegetated conditions, recognizing that existing homes and other existing uses will continue in the district. This chapter does not regulate the development within the identified water resource. Separate permits from the Division of State Lands and the Army Corp of Engineers may be required for work within a stream or wetland.

17.49.040 - NROD permit and review process.
An NROD permit is required for those uses regulated under OCMC 17.49.090, Uses Allowed under Prescribed Conditions. An NROD permit shall be processed under the Type II development permit procedure unless an adjustment of standards pursuant to OCMC 17.49.200 is requested or the application is being processed in conjunction with a concurrent application or action requiring a Type III or Type IV development permit.

Finding: Complies. The applicant is proposing to construct a new city street, which is a *Use Allowed under Prescribed Conditions*

17.49.050 - Emergencies.
The provisions of this chapter do not apply to work necessary to protect, repair, maintain, or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies. After the emergency has passed, any disturbed native vegetation areas shall be replanted with similar vegetation found in the Oregon City Native Plant List pursuant to the mitigation standards of OCMC 17.49.180. For purposes of this section emergency shall mean any man-made or natural event or circumstance causing or threatening loss of life, injury to person or property, and includes, but is not limited to fire, explosion, flood, severe weather, drought, earthquake, volcanic activity, spills or releases of oil or hazardous material, contamination, utility or transportation disruptions, and disease.

Finding: Not Applicable. This proposal does not include an emergency.

17.49.060 - Consistency and relationship to other regulations.
A. Where the provisions of the NROD are less restrictive or conflict with comparable provisions of the OCMC, other City requirements, regional, state or federal law, the provisions that provides the greater protection of the resource shall govern.

Finding: Complies. Staff has provided mitigation and implementation conditions related to this chapter, and other conditions that provide the greater protection of the resource shall govern.

B. Compliance with Federal and State Requirements.
1. If the proposed development requires the approval of any other governmental agency, such as the Division of State Lands or the U.S. Army Corps of Engineers, the applicant shall make an application for such approval prior to or simultaneously with the submittal of its development application to the City. The planning division shall coordinate City approvals with those of other agencies to the extent necessary and feasible. Any permit issued by the City pursuant to this chapter shall not become valid until other agency approvals have been obtained or those agencies indicate that such approvals are not required.

Finding: Complies with the Condition. The applicant shall ensure that all required state and federal permits have been approved before disturbance activities are commenced onsite .

2. The requirements of this chapter apply only to areas within the NROD and to locally significant wetlands that may be added to the boundary during the course of development review pursuant to

OCMC 17.49.035. If, in the course of a development review, evidence suggests that a property outside the NROD may contain a wetland or other protected water resource, the provisions of this chapter shall not be applied to that development review. However, the omission shall not excuse the applicant from satisfying any state and federal wetland requirements which are otherwise applicable. Those requirements apply in addition to, and apart from the requirements of the City's comprehensive plan and this code.

Finding: Complies. No additional wetlands or streams were identified as part of this delineation.

17.49.070 - Prohibited uses.
The following development and activities are not allowed within the NROD:
A. Any new gardens, lawns, structures, development, other than those allowed outright (exempted) by the NROD or that is part of a regulated use that is approved under prescribed conditions. Note: Gardens and lawns within the NROD that existed prior to the time the overlay district was applied to a subject property are allowed to continue but cannot expand further into the overlay district.
B. New lots that would have their buildable areas for new development within the NROD are prohibited.
C. The dumping of materials of any kind is prohibited except for placement of fill as provided in subsection D. below. The outside storage of materials of any kind is prohibited unless they existed before the overlay district was applied to a subject property. Uncontained areas of hazardous materials as defined by the Oregon Department of Environmental Quality (ORS 466.005) are also prohibited.
D. Grading, the placement of fill in amounts greater than ten cubic yards, or any other activity that results in the removal of more than ten percent of the existing native vegetation on any lot within the NROD is prohibited, unless part of an approved development activity.

Finding: Complies. No prohibited uses are proposed with this project**.** The NROD area will be restored and revegetated, and any impacts associated with the new development will be mitigated in accordance with this chapter.

17.49.080 - Uses allowed outright (exempted).
The following uses are allowed within the NROD and do not require the issuance of an NROD permit:
A. Stream, wetland, riparian, and upland restoration or enhancement projects as authorized by the City.
B. Farming practices as defined in ORS 215.203 and farm uses, excluding buildings and structures, as defined in ORS 215.203.
C. Utility service using a single utility pole.
D. Boundary and topographic surveys leaving no cut scars greater than three inches in diameter on live parts of native plants listed in the Oregon City Native Plant List.
E. Soil tests, borings, test pits, monitor well installations, and other minor excavations necessary for
geotechnical, geological or environmental investigation, provided that disturbed areas are restored to pre-existing conditions as approved by the Community Development Director.

F. Trails meeting all of the following:

1. Construction shall take place between May 1 and October 30 with hand held equipment;
2. Widths shall not exceed forty-eight inches and trail grade shall not exceed twenty percent;
3. Construction shall leave no scars greater than three inches in diameter on live parts of native plants;
4. Located no closer than twenty-five feet to a wetland or the top of banks of a perennial stream, or no closer than ten feet of an intermittent stream;
5. No impervious surfaces; and
6. No native trees greater than one-inch in diameter may be removed or cut, unless replaced with an equal number of native trees of at least two-inch diameter and planted within ten feet of the trail.

G. Land divisions provided they meet the following standards, and indicate the following on the final plat:
1. Lots shall have their building sites (or buildable areas) entirely located at least five feet from the NROD boundary shown on the City's adopted NROD map. For the purpose of this subparagraph, "building site" means an area of at least three thousand five hundred square feet with minimum dimensions of forty feet wide by forty feet deep;
2. All public and private utilities (including water lines, sewer lines or drain fields, and stormwater disposal facilities) are located outside the NROD;
3. Impervious streets, driveways and parking areas shall be located at least ten feet from the NROD; and
4. The NROD portions of all lots are protected by:
a. A conservation easement; or
b. A lot or tract created and dedicated solely for unimproved open space or conservation purposes.

H. Site plan and design review applications where all new construction is located outside of the NROD boundary shown on the City's adopted NROD map, and the NROD area is protected by a conservation easement approved in form by the City.
I. Routine repair and maintenance of existing structures, roadways, driveways and utilities.
J. Replacement, additions, alterations and rehabilitation of existing structures, roadways, utilities, etc., where the ground level impervious surface area is not increased.
K. Measures approved by the City of Oregon City to remove or abate nuisances or hazardous conditions.
L. Tree Removal. The Community Development Director may permit the removal of any tree determined to be a dead, hazardous, or diseased tree as defined in OCMC 17.04. Any tree that is removed in accordance with this subsection L shall be replaced with a new tree of at least one-half-inch caliper or at least six-foot overall height. An exception to this requirement may be granted if the applicant demonstrates that a replacement tree has already been planted in anticipation of tree removal, or if the existing site conditions otherwise preclude tree replacement (due to existing dense canopy coverage or other ecological reasons).
The replacement tree(s) shall be located in the general vicinity of the removed tree(s), somewhere within NROD on the property. The replacement tree(s) shall be identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland). The property owner shall ensure that the replacement tree(s) survives at least two years beyond the date of its planting.

M. Planting of native vegetation and the removal of non-native, invasive vegetation (as identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland), or as

recommended by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, arboriculture, horticulture, wildlife biology, botany, hydrology or forestry), and removal of refuse and fill, provided that:
1. All work is done using hand-held equipment;
2. No existing native vegetation is disturbed or removed; and
3. All work occurs outside of wetlands and the top-of-bank of streams.
N. Activities in which no more than one hundred square feet of ground surface is disturbed outside of the bank-full stage of water bodies and where the disturbed area is restored to the pre-construction conditions, notwithstanding that disturbed areas that are predominantly covered with invasive species shall be required to remove the invasive species from the disturbance area and plant trees and native plants pursuant to this chapter.

O. New fences meeting all of the following:
1. No taller than three and a half feet and of split rail or similar open design;
2. Two feet width on both sides of fence shall be planted or seeded with native grasses, shrubs, herbs, or trees to cover any bare ground;
3. Six inches of clearance from ground level;
4. Fence posts shall be placed outside the top-of-bank of streams and outside of delineated wetlands.
P. Gardens, fences and lawns within the NROD that existed prior to the time the overlay district was applied to a subject property are allowed to be maintained but cannot expand further into the overlay district.

Finding: Complies with Conditions. The proposed work is a combination of exempted (plantings) and prescribed uses (streets). Therefore, the proposed project will require the issuance of an NROD permit consistent with these provisions.

17.49.090 - Uses allowed under prescribed conditions.
The following uses within the NROD are subject to the applicable standards listed in OCMC 17.49.100 through 17.49.190 pursuant to a Type II process:
A. Alteration to existing structures within the NROD when not exempted by OCMC 17.49.080, subject to OCMC 17.49.130.
B. A single-family detached residential unit or duplex on a highly constrained vacant lot of record that has less than three thousand square feet of buildable area, with minimum dimensions of fifty feet by fifty feet, remaining outside the NROD portion of the property, subject to the maximum disturbance allowance prescribed in OCMC 17.49.120.A.
C. A land division that would create a new lot for an existing residence currently within the NROD, subject to OCMC 17.49.160.
D. Land divisions when not exempted by OCMC 17.49.080, subject to the applicable standards of OCMC 17.49.160.
E. Trails/pedestrian paths when not exempted by OCMC 17.49.080, subject to OCMC 17.49.170 (for trails) or OCMC 17.49.150 (for paved pedestrian paths).
F. New roadways, bridges/creek crossings, utilities or alterations to such facilities when not exempted by OCMC 17.49.080.
G. Roads, bridges/creek crossings subject to OCMC 17.49.150.
H. Utility lines subject to OCMC 17.49.140.

I. Stormwater detention or pre-treatment facilities subject to OCMC 17.49.155.
J. Institutional, industrial or commercial development on a vacant lot of record situated in an area designated for such use that has more than seventy-five percent of its area covered by the NROD, subject to OCMC 17.49.120.B.
K. City, county and state capital improvement projects, including sanitary sewer, water and stormwater facilities, water stations, and parks and recreation projects.
L. Non-hazardous tree removal that is not exempted pursuant to OCMC 17.49.080.K.
M. Fences that do not meet the standards for exemption pursuant to OCMC 17.49.080.O.4.

Finding: Complies with Conditions. The proposed work is a combination of exempted (plantings) and prescribed uses (streets). Therefore, the proposed project will require the issuance of an NROD permit. Consistent with these provisions. All impacts to the NROD that are allowed under prescribed conditions are mitigated in accordance with this chapter.

17.49.100 - General development standards.
The following standards apply to all uses allowed under prescribed conditions within the NROD with the
exception of rights-of-way (subject to OCMC 17.49.150), trails (subject to OCMC 17.49.170), utility lines (subject to OCMC 17.49.140), land divisions (subject to OCMC 17.49.160), and mitigation projects (subject to OCMC 17.49.180 or 17.49.190):
A. Native trees shall be preserved unless they are located within ten feet of any proposed structures or within five feet of new driveways, or if deemed not wind-safe by a certified arborist. Trees listed on the Oregon City Nuisance Plant List or Prohibited Plant List are exempt from this standard and may be removed. A protective covenant shall be required for any native trees that remain;
B. The Community Development Director may allow the landscaping requirements of the base zone, other than landscaping required for parking lots, to be met by preserving, restoring and permanently protecting habitat on development sites in the natural resource overlay district;
C. All vegetation planted in the NROD shall be native and listed on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland), or as recommended by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, arboriculture, horticulture, wildlife biology, botany, hydrology or forestry);
D. Grading is subject to installation of erosion control measures required by the City;
E. The minimum front, street, or garage setbacks of the base zone may be reduced to any distance between the base zone minimum and zero in order to minimize the disturbance area within the NROD portion of the lot;
F. Any maximum required setback in any zone, such as for multi-family, commercial or institutional development, may be increased to any distance between the maximum and the distance necessary to minimize the disturbance area within the NROD portion of the lot;
G. Fences in compliance with OCMC 17.49.080.N;
H. Exterior lighting shall be placed or shielded so that they do not shine directly into resource areas;
I. If development will occur within the one hundred-year floodplain, the standards of OCMC 17.42 shall be met; and
J. Mitigation of impacts to the regulated buffer is required, subject to OCMC 17.49.180 or 17.49.190.

Finding: Complies with Conditions. The project proposes to construct a public street and associated utilities, retaining wall (with fence on top for safety), and a guard rail within the NROD buffer as shown on the enclosed DDP plan sheets, and more specifically Sht DDP-C1.3, which will require NROD permit approval. Construction activity impacting the wetland or water resource is not proposed. The development standards of OCMC 17.49.150 govern the development of the proposed street improvements.

The applicant provided the following response to the section:

Nonetheless, the following discussion addresses the above concerns so the project can comply with as many of the requirements in this section as possible. The proposed masterplan development does not rely on NROD mitigation for meeting the project's landscape requirements. The project proposes mitigation vegetation both in the temporary impacts area shown on Sht DDP-C1.3 and the larger mitigation area within the Geologic Hazard setback. Erosion control measures are proposed to protect the NROD resource as should on DDP-C0.1. These erosion control measures will be finalized with the final design and construction plan preparation following GDP/DDP approval. Minimum/maximum setbacks are not applicable with the proposed roadway improvements. The proposed fence on top of the retaining wall is considered a safety fence and is not proposed to be split-rail as indicated in OCMC 17.49.080.O. Street lighting is located on the west side of the proposed road to minimize lighting impacts to the NROD resource while still providing adequate light levels for the street and accompanying sidewalk. If final design indicates shields are necessary to avoid directly shining into the resource area they can be provided if doing so still enables the project to meet required street and pedestrian light levels. Development will not occur within the 100-yr floodplain of this tributary. While the ravine containing the NROD resource does not include a mapped 100-yr floodplain, the lowest level of the proposed retaining wall lies 11'-12' above the resource and the ravine capacity far exceeds the capacity of the storm pipe discharging into the ravine. Mitigation to the NROD buffer is as proposed on the 2012 NROD memo, as modified on Sht DDP-C1.3 to reflect an updated buffer location/impact, and as described in our responses to this chapter.

17.49.110 - Width of vegetated corridor.
A. Calculation of Vegetated Corridor Width within City Limits. The NROD consists of a vegetated corridor measured from the top of bank or edge of a protected habitat or water feature. The minimum required width is the amount of buffer required on each side of a stream, or on all sides of a feature if non-linear. The width of the vegetated corridor necessary to adequately protect the habitat or water feature is specified in Table 17.49.110.
Table 17.49.110

Protected Water Feature Type (see definitions)	***Slope Adjacent to Protected Water Feature***	***Starting Point for Measurements from Water Feature***	***Width of Vegetated Corridor (see Note 1)***
Anadromous fish-bearing streams	*Any slope*	*• Edge of bankfull flow*	*200 feet*
Intermittent streams with slopes less than 25	*< 25 percent*	*• Edge of bankfull flow*	*15 feet*

percent and which drain less than 100 acres			
All other protected water features	*< 25 percent*	*•Edge of bankfull flow • Delineated edge of Title 3 wetland*	*50 feet*
	≥25 percent for 150 feet or more (see Note 2)		*200 feet*
	≥25 percent for less than 150 feet (see Note 2)		*Distance from starting point of measurement to top of ravine (break in ≥25 percent slope) (See Note 3) plus 50 feet.*

Notes:
1. Required width (measured horizontally) of vegetated corridor unless reduced pursuant to the provisions of OCMC 17.49.120.
2. Vegetated corridors in excess of fifty feet apply on steep slopes only in the uphill direction from the protected water feature.
3. Where the protected water feature is confined by a ravine or gully, the top of the ravine is the break in the ≥25 percent slope.

Finding: Complies with Condition. Based on the 2012 NROD report, anadromous fish are not present in the immediate downstream drainage. The existing stream channel is not considered intermittent. The existing slope adjacent to the protected wetland/water resource varies in slope, with the vast majority of the adjacent slope ≥25 percent for less than 150 feet. The width of the vegetated corridor (NROD Buffer) is governed by Note #3 in Table 17.49.110, which requires a 50-ft buffer outside of the top of the ravine. This is shown on Sht DDP-C1.3**.** While the submitted 2012 delineation is sufficient for a land-use-level review, the applicant shall submit an updated delineation confirming the location of the resource and the subsequent buffer area to be used as base data for the final mitigation plan.

B. Habitat Areas within City Parks. For habitat and water features identified by Metro as regionally Nortsignificant which are located within city parks, the NROD Boundary shall correspond to the Metro Regionally Significant Habitat Map.

Finding: Not applicable. The existing NROD impact area is not located within a city park**.**

C. Habitat Areas outside City limit/within UGB. For habitat and water features identified by Metro as regionally significant which are located outside of the City limits as of the date of adoption of the ordinance codified in this chapter, the minimum corridor width from any non-anadromous fish bearing stream or wetland shall be fifty feet.

Finding: Complies. The existing NROD impact area is located within the city limits.

17.49.120 - Maximum disturbance allowance for highly constrained lots of record.
In addition to the General Development Standards of OCMC 17.49.100, the following standards apply to a vacant lot of record that is highly constrained by the NROD, per OCMC 17.49.090.B and 17.49.090.F:
A. Standard for Residential Development. In the NROD where the underlying zone district is zoned Residential (R-10, R-8, R-6, R-5, R-3.5): The maximum disturbance area allowed for new residential development within the NROD area of the lot is three thousand square feet.

Finding: Not applicable. The proposed NROD disturbance is not located within the above-referenced residential zones.

B. Standard for all developments not located in R-10, R-8, R-6, R-5, and R-3.5. For all other underlying zone districts, the maximum disturbance area allowed for a vacant, constrained lot of record development within the NROD is that square footage which when added to the square footage of the lot lying outside the NROD portion equals twenty-five percent of the total lot area.
1. Lots that are entirely covered by the NROD will be allowed to develop twenty-five percent of their area.
2. This can be determined by:
a. Multiplying the total square footage of the lot by .25; or
b. Subtracting from that amount the square footage of the lot that is located outside the NROD.
The result is the maximum square footage of disturbance to be allowed in the NROD portion of the lot. If the result is < or = to 0, no disturbance is permitted and the building shall be located outside of the boundary.
C. In all areas, the disturbance area of a vacant, highly constrained lot of record within the NROD shall be set back at least fifty feet from the top of bank on Abernethy Creek, Newell Creek, or Livesay Creek or twenty-five feet from the top of bank of any tributary of the aforementioned creeks, other water body or from the delineated edge of a wetland located within the NROD area.
D. If the highly constrained lot of record cannot comply with the above standards, a maximum 1,500 square foot disturbance within the NROD area may be allowed.

Finding: Not Applicable. While the remainder of TL 500 is vacant, it does not qualify as being highly constrained per OCMC 17.49.090.B or F. Accordingly, this section does not apply.

17.49.130 - Existing development standards.
In addition to the General Development Standards of OCMC 17.49.100, the following standards apply to alterations and additions to existing development within the NROD, except for trails, rights of way, utility lines, land divisions and mitigation projects. As of June 1, 2010, applicants for alterations and additions to existing development that are not exempt pursuant to OCMC 17.49.080.J. shall submit a Type II or Type III application pursuant to this section.
Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Finding: Complies. TL 500 has been altered over time by various gravel maintenance drives and equipment storage. That prior activity has impacted a portion of the NROD buffer/vegetated corridor. The currently proposed Masterplan development represents a formal impact to the

NROD buffer by virtue of the proposed masterplan improvements and is being processed as a Type II application.

17.49.140 - Standards for utility lines.
The following standards apply to new utilities, private connections to existing or new utility lines, and upgrades of existing utility lines within the NROD:
A. The disturbance area for private connections to utility lines shall be no greater than ten feet wide;
B. The disturbance area for the upgrade of existing utility lines shall be no greater than fifteen feet wide;
C. New utility lines shall be within the right-of-way, unless reviewed under subsection D.
D. New utility lines that cross above or underneath a drainage way, wetland, stream, or ravine within the NROD but outside of a right-of-way shall be processed as a Type III permit pursuant to OCMC 17.49.200, Adjustment from Standards.
E. No fill or excavation is allowed within the ordinary high water mark of a stream without the approval of the Division of State Lands and/or the U.S. Army Corps of Engineers;
F. The Division of State Lands must approve any work that requires excavation or fill in a wetland;
G. Native trees more than ten inches in diameter shall not be removed unless it is shown that there are no feasible alternatives; and
H. Each six to ten-inch diameter native tree cut shall be replaced at a ratio of three trees for each one removed. Each eleven-inch or greater diameter native tree shall be replaced at a ratio of five trees for each removed. The replacement trees shall be a minimum one-half inch diameter and selected from the Oregon City Native Plant List. All trees shall be planted within the NROD on the subject property. Where a utility line is approximately parallel with the stream channel, at least half of the replacement trees shall be planted between the utility line and the stream channel.
I. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.
Finding: Complies. The project proposes both street and utility improvements, which are governed by OCMC 17.49.150. New utilities are located within the proposed right-of-way.
The project does not propose to remove any native trees within the NROD buffer area. The project does not propose cuts or fills within the ordinary high-water mark of the existing channel, nor does it propose to cross or go underneath a drainage way.

The project proposes mitigation for roadway and utility impacts to the NROD buffer through a combination of plantings within the temporary impact area shown on DDP-C1.3 and the remainder of the mitigation plantings occurring within the proposed 35' Geologic Hazard setback area on the east side of Parcel B. Please see our responses to OCMC 17.49.180 & 17.49.190. The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource.

17.49.150 - Standards for vehicular or pedestrian paths and roads.
The following standards apply to public rights-of-way and private roads within the NROD, including roads, bridges/stream crossings, driveways and pedestrian paths with impervious surfaces:
A. Stream crossings shall be limited to the minimum number and width necessary to ensure safe and convenient pedestrian, bicycle and vehicle connectivity, and shall cross the stream at an angle as close to perpendicular to the stream channel as practicable. Bridges shall be used instead of culverts wherever practicable.

B. Where the right-of-way or private road crosses a stream the crossing shall be by bridge or a bottomless culvert;
C. No fill or excavation shall occur within the ordinary high water mark of a stream without the approval of the Division of State Lands and/or the U.S. Army Corps of Engineers;
D. If the Oregon Department of State Lands (DSL) has jurisdiction over any work that requires excavation or fill in a wetland, required permits or authorization shall be obtained from DSL prior to release of a grading permit;
E. Any work that will take place within the banks of a stream shall be conducted between June 1 and August 31, or shall be approved by the Oregon Department of Fish and Wildlife; and
F. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Finding: Complies with Conditions. The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No stream impact is proposed, and if there is any impact to the stream during final design, the applicant shall ensure, as conditioned, that the above approval criteria are met.

The project proposes mitigation for roadway and utility impacts to the NROD buffer through a combination of plantings within the temporary impact area shown on DDP-C1.3 and the remainder of the mitigation plantings occurring within the proposed 35' Geologic Hazard setback area on the east side of Parcel B. Refer to additional findings in OCMC 17.49.180 & 17.49.190. The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource.

17.49.155 - Standards for stormwater facilities.
Approved facilities that infiltrate stormwater on-site in accordance with public works low-impact development standards, including but not limited to; vegetated swales, rain gardens, vegetated filter strips, and vegetated infiltration basins, and their associated piping, may be placed within the NROD boundary pursuant to the following standards:
A. The forest canopy within the driplines of existing trees shall not be disturbed.
B. Only vegetation from the Oregon City Native Plant List shall be planted within these facilities.
C. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.
D. The stormwater facility may encroach up to one-half the distance of the NROD corridor.
E. The stormwater facility shall not impact more than one thousand square feet of the NROD. Impacts greater than one thousand square feet shall be processed as a Type III application.
F. The Community Development Director may allow landscaping requirements of the base zone, other than landscaping required for parking lots, to be met by preserving, restoring and permanently protecting habitat on development sites within the natural resource overlay district.
G. The design of the stormwater facility shall be subject to OCMC 13.12.

Finding: Complies. The project does not propose installing stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment, but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

17.49.160 - Standards for land divisions.

Other than those land divisions exempted by OCMC 17.49.070.G., new residential lots created within the NROD shall conform to the following standards:
A. For a lot for an existing residence currently within the NROD. This type of lot is allowed within the NROD for a residence that existed before the NROD was applied to a subject property. A new lot for an existing house may be created through a partition or subdivision process when all of the following are met:
1. There is an existing house on the site that is entirely within the NROD area; and
2. The existing house will remain; and
3. The new lot is no larger than required to contain the house, minimum required side setbacks, garage, driveway and a twenty-foot deep rear yard, with the remaining NROD area beyond that point protected by a conservation easement, or by dedicating a conservation tract or public open space.
B. Protection and ownership of NROD areas in land divisions:
1. New partitions shall delineate the NROD area either as a separate tract or conservation easement that meets the requirements of subsection 2. of this section.
2. Prior to final plat approval, ownership and maintenance of the NROD area shall be identified to distinguish it from the buildable areas of the development site. The NROD area may be identified as any one of the following:
a. A tract of private open space held by the homeowners association;
b. For residential land divisions, a tract of private open space held by a homeowner's association subject to an easement conveying stormwater and surface water management rights to the City and preventing the owner of the tract from activities and uses inconsistent with the purpose of this document;
c. Public open space where the tract has been dedicated to the City or other governmental unit;
d. Conservation easement area pursuant to OCMC 17.49.180.G and approved in form by the Community Development Director;
e. Any other ownership proposed by the owner and approved by the Community Development Director; or
f. NROD tracts shall be exempt from minimum frontage requirements, dimensional standards of the zoning designation, street frontage requirements, or flag lot standards pursuant to OCMC 16.08.053.

Finding: Not applicable. This proposal does not include a land division.

17.49.170 - Standards for trails.
All trails that are not exempt pursuant to OCMC 17.49.80.F shall be processed through a Type II or Type III process pursuant to this chapter; and shall provide mitigation, subject to OCMC 17.49.180 or 17.49.190.

Finding: Not applicable. This proposal does not include a trail within the NROD buffer.

17.49.180 - Mitigation standards.
The following standards (or the alternative standards of OCMC 17.49.190) apply to required mitigation:
A. Mitigation shall occur at a two-to-one ratio of mitigation area to proposed NROD disturbance area. Mitigation of the removal or encroachment of a wetland or stream shall not be part of this

chapter and will be reviewed by the Division of State Lands or the Army Corp of Engineers during a separate review process.

Finding: Complies with Condition.

As shown on Sht DDP-C1.3 impacts to the NROD buffer are as follow:

- Temporary Impacts: 790 sf
- Permanent Impacts: 3,346 sf
- Existing Impacts: 2,040 sf

The existing impact is excluded from mitigation since it's a pre-existing encroachment into the NROD buffer. As noted in the 2012 NROD report, the applicant does not have access to the remainder of TL 500 for any mitigation other than the temporary mitigation area. This continues to be the case with this application. The 2012 NROD report proposed a 3:1 mitigation ratio, with mitigation to occur within the 35-ft Geologic Hazard setback. This project proposes to maintain that 3:1 mitigation area due to the mitigation area being detached from the NROD resource as identified in the 2012 report. With a 3,346-sf permanent impact, proposed mitigation at a 3:1 ratio results in a mitigation area of 10,038 sf.

B. Mitigation shall occur on the site where the disturbance occurs, pursuant to the following:
1. The mitigation required for disturbance associated with a right-of-way or utility in the right-of way shall be located as close to the impact area as possible within the NROD;
2. If not possible to locate mitigation on the same site, the mitigation shall occur first on the same stream tributary, secondly in the Abernethy, Newell or Livesay Creek or a tributary thereof, or thirdly as close to the impact area as possible within the NROD; and
3. An easement that allows access to the mitigation site for monitoring and maintenance shall be provided as part of the mitigation plan.

Finding: Complies with Condition. As identified in the 2012 NROD report, the area of NROD encroachment cannot be adequately offset adjacent to the waterway resource within the TL 500 waterway ravine. TL 500 is still highly constrained by steep slopes, and the expansion and enhancement of the existing NROD buffer area on TL 500 will further constrain access to TL 500, making it more difficult to develop in the future. The 2012 NROD report goes on to say that regardless of current proposed roadway improvements, any future development proposed on TL 500 will have to address existing and proposed NROD encroachment with a mitigation plan. Adding to the NROD area on TL 500 via this project's proposed mitigation further encumbers any future site development options.

Prior to the release of construction permits, the applicant shall provide an updated delineation with the final design of the new street at the Beavercreek Intersection, indicating the final calculation of NROD buffer impact and the location, size, and number of plantings as required by OCMC 17.49.180 and OCMC 17.49.190 for the mitigation area along the eastern edge of Parcel B or as amended, consistent with this section, If there are conflicts with the shared use path. The new public street shall be designed in compliance with 17.49.150 - Standards for vehicular or pedestrian paths and roads. (P).

C. Mitigation shall occur within the NROD area of a site unless it is demonstrated that this is not feasible because of a lack of available and appropriate area. In such cases, the proposed mitigation area shall be contiguous to the existing NROD area so the NROD boundary can be easily extended in the future to include the new resource site.

Finding: Complies with Condition. Prior to the release of construction permits, the applicant shall provide an updated delineation with the final design of the new street at the Beavercreek Intersection, indicating the final calculation of NROD buffer impact and the location, size, and number of plantings as required by OCMC 17.49.180 and OCMC 17.49.190 for the mitigation area along the eastern edge of Parcel B or as amended, consistent with this section, If there are conflicts with the shared use path. The new public street shall be designed in compliance with 17.49.150 - Standards for vehicular or pedestrian paths and roads. (P).

D. Invasive and nuisance vegetation shall be removed within the mitigation area;

Finding: Complies with Condition. Invasive species and nuisance vegetation will be removed in the NROD mitigation area.

E. Required Mitigation Planting. An applicant shall meet Mitigation Planting Option 1 or 2 below, whichever option results in more tree plantings, except that where the disturbance area is one acre or more, Mitigation Option 2 shall be required. All trees, shrubs and ground cover shall be selected from the Oregon City Native Plant List.
NOTE: Applications on sites where no trees are present or which are predominantly covered with invasive species shall be required to mitigate the site, remove the invasive species and plant trees and native plants pursuant to Option 2.
1. Mitigation Planting Option 1.
a. Planting Quantity. This option requires mitigation planting based on the number and size of trees that are removed from the site pursuant to Table 17.49.180E.1.a.
Table 17.49.180E.1.a.—Required Planting

Size of Tree to be Removed (DBH)	***Number of Trees and Shrubs to be Replanted***
6 to 12"	*2 trees and 3 shrubs*
13 to 18"	*3 trees and 6 shrubs*
19 to 24"	*5 trees and 12 shrubs*
25 to 30"	*7 trees and 18 shrubs*
Over 30"	*10 trees and 30 shrubs*

Finding: Complies. The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

b. Plant Size. Replacement trees shall be at least one-half inch in caliper on average, measured at six inches above the ground level for field grown trees or above the soil line for container grown trees. Oak, madrone, ash or alder may be one gallon size. Conifers shall be a minimum of six feet in height. Shrubs shall be at least one-gallon container size or the equivalent in ball and burlap and shall be at least twelve inches in height at the time of planting. All other species shall be a minimum of four-inch pots;
c. Plant Spacing. Except for the outer edges of mitigation areas, trees and shrubs shall be planted in a non-linear fashion. Plant spacing for new species shall be measured from the driplines of existing trees when present. Trees shall be planted on average between eight and twelve feet on center, and shrubs shall be planted on average between four and five feet on center, or clustered in single species groups of no more than four plants, with each cluster planted on average between eight and ten feet on center.
d. Mulching and Irrigation. Mulch new plantings a minimum of three inches in depth and eighteen inches in diameter. Water new plantings one inch per week from June 30th to September 15th, for the three years following planting.
e. Plant Species. Shrubs shall consist of at least two different species. If ten trees or more are planted, no more than one-half of the trees may be of the same genus. Conifers shall be replaced with conifers. Bare ground shall be planted or seeded with native grasses and ground cover species.
Finding: Not Applicable. The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

2. Mitigation Planting Option 2.
a. Planting Quantity. In this option, the mitigation requirement is calculated based on the size of the disturbance area within the NROD. Native trees and shrubs are required to be planted at a rate of five trees and twenty-five shrubs per every five hundred square feet of disturbance area (calculated by dividing the number of square feet of disturbance area by five hundred, and then multiplying that result times five trees and twenty-five shrubs, and rounding all fractions to the nearest whole number of trees and shrubs; for example, if there will be three hundred thirty square feet of disturbance area, then three hundred thirty divided by five hundred equals .66, and .66 times five equals 3.3, so three trees shall be planted, and .66 times twenty-five equals 16.5, so seventeen shrubs shall be planted). Bare ground shall be planted or seeded with native grasses or herbs. Non-native sterile wheat grass may also be planted or seeded, in equal or lesser proportion to the native grasses or herbs.

Finding: Complies with Conditions. To mitigate the impacts for the permanent impacts (3,346 sf) a total of 33 trees and 167 shrubs will be planted within the 10,038 sf area in the Geologic Hazard Area. Within the temporary impact area (790 sf) a total of 7 trees and 39 shrubs will be planted. As identified in the 2012 NROD report, the Enhancement/Mitigation Area will be seeded with the seed mix provided in Table 1. Plantings at the Enhancement/Mitigation Area will be completed using container plant size and plant spacing identified in Table 2 and 3. The total number of plants have been updated below for the current encroachment areas.

Plant List for Enhancement/NROD Mitigation Area (3346 sf)				
Common Name	**Scientific Name**	**Plant Form/Size[1]**	**Plant Spacing (ft on center)**	**Total Number of Plants**
NROD ENHANCEMENT				

Trees				
Big-leaf maple	*Acer macrophyllum*	1 gal/24”	10 ft. O.C.	11
Bitter cherry	*Prunus emarginata*	1 gal/24”	10 ft. O.C.	11
Douglas fir	*Pseudotsuga menziesii*	1 gal/24”	10 ft. O.C.	11
			Subtotal	**33**
Shrubs				
Nookta rose	*Rosa nutkana*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	34
Mock orange	*Philadelphus lewisii*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Red-flowering currant	*Ribes sanguineum*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Snowberry	*Symphoricarpos albus*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	29
Kinnikinnick	*Arctostaphylos uva-ursi*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Tall Oregon grape	*Mahonia aquifolium*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	29
			Subtotal	**167**
			Total	**200**

[1]Recommended plant form and size. Suitable replacement may be used based on availability.

Common Name	**Scientific Name**	**Plant Form/Size**	**Plant Spacing (ft on center)**	**Total Number of Plants**
NROD ENHANCEMENT				
Trees				
Big-leaf maple	*Acer macrophyllum*	1 gal/24”	10 ft. O.C.	3
Douglas fir	*Pseudotsuga menziesii*	1 gal/24”	10 ft. O.C.	4
			Subtotal	**7**
Shrubs				
Oceanspray	*Holodiscus discolor*	1 gal/18”	8 ft O.C.	9
Red-flowering currant	*Ribes sanguineum*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	9
Snowberry	*Symphoricarpos albus*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	11
Tall Oregon grape	*Mahonia aquifolium*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	10
			Subtotal	**39**
			Total	**46**

[1]Recommended plant form and size. Suitable replacement may be used based on availability.

b. Plant Size. Plantings may vary in size dependent on whether they are live cuttings, bare root stock or container stock, however, no initial plantings may be shorter than twelve inches in height.
c. Plant Spacing. Trees shall be planted at average intervals of seven feet on center. Shrubs may be planted in single-species groups of no more than four plants, with clusters planted on average between eight and ten feet on center.

d. Mulching and Irrigation shall be applied in the amounts necessary to ensure eighty percent survival at the end of the required five-year monitoring period.

Finding: Complies. Mulching and irrigation will be placed on the final construction plans.

e. Plant Diversity. Shrubs shall consist of at least three different species. If twenty trees or more are planted, no more than one-third of the trees may be of the same genus.

Finding: Complies. The ratio of plantings for each species in the Enhancement/NROD Mitigation Area from the 2012 NROD report was adjusted to ensure no genus of trees accounted for more than one-third of the trees.

F. An alternative planting plan using native plants may be approved in order to create a new wetland area, if it is part of a wetlands mitigation plan that has been approved by the DSL or the U.S. Army Corps of Engineers (USACE) in conjunction with a wetland joint removal/fill permit application.

Finding: Not Applicable. An alternative planting plan is not proposed for the creation of new wetlands.

G. Monitoring and Maintenance. The mitigation plan shall provide for a five-year monitoring and maintenance plan with annual reports in a form approved by the Community Development Director. Monitoring of the mitigation site is the on-going responsibility of the property owner, assign, or designee, who shall submit said annual report to the planning division, documenting plant survival rates of shrubs and trees on the mitigation site. Photographs shall accompany the report that indicate the progress of the mitigation. A minimum of eighty percent survival of trees and shrubs of those species planted is required at the end of the five-year maintenance and monitoring period. Any invasive species shall be removed and plants that die shall be replaced in kind to meet the eighty percent survival requirement. Bare spots and areas of invasive vegetation larger than ten square feet that remain at the end the five-year monitoring period shall be replanted or reseeded with native grasses and/or ground cover species.

Finding: Complies with Condition. A *Monitoring and Maintenance plan that adheres to the above section will be required prior to the project's final.*

H. Covenant or Conservation Easement. The applicant shall record a restrictive covenant or conservation easement, in a form provided by the City, requiring the owners and assigns of properties subject to this section to comply with the applicable mitigation requirements of this section. Said covenant shall run with the land and permit the City to complete mitigation work in the event of default by the responsible party. Costs borne by the City for such mitigation shall be borne by the owner.

Finding: Complies with Condition. The applicant shall record a restrictive covenant or conservation easement, in a form provided by the City, requiring the owners and assigns of properties subject to this section to comply with the applicable mitigation requirements of OCMC 17.49. Said covenant shall run with the land and permit the City to complete mitigation work in the

event of default by the party responsible. Costs borne by the City for such mitigation shall be borne by the owner.

I. Financial Guarantee. A financial guarantee for establishment of the mitigation area, in a form approved by the City, shall be submitted before development within the NROD disturbance area commences. The City will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented pursuant to this section.

Finding: Complies with Condition. A financial guarantee for the establishment of the mitigation area, in a form approved by the City, shall be submitted before development within the NROD disturbance area commences. The City will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented. (P)

17.49.200 - Adjustment from standards.
If a regulated NROD use cannot meet one or more of the applicable NROD standards then an adjustment may be issued if all of the following criteria are met. Compliance with these criteria shall be demonstrated by the applicant in a written report prepared by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, wildlife biology, botany, hydrology or forestry. At the applicant's expense, the City may require the report to be reviewed by an environmental consultant. Such requests shall be processed under the Type III development permit procedure. The applicant shall demonstrate:
A. There are no feasible alternatives for the proposed use or activity to be located outside the NROD area or to be located inside the NROD area and to be designed in a way that will meet all of the applicable NROD development standards;
B. The proposal has fewer adverse impacts on significant resources and resource functions found in the local NROD area than actions that would meet the applicable environmental development standards;
C. The proposed use or activity proposes the minimum intrusion into the NROD area that is necessary to meet development objectives;
D. Fish and wildlife passage will not be impeded;
E. With the exception of the standard(s) subject to the adjustment request, all other applicable NROD standards can be met; and
F. The applicant has proposed adequate mitigation to offset the impact of the adjustment.

Finding: Not Applicable. The applicant is not proposing an addition to the standards.

17.49.210 - Type II development permit application.
Unless otherwise directed by the NROD standards, proposed development within the NROD shall be processed as a Type II development permit application. All applications shall include the items required for a complete application by OCMC 17.49.220—17.49.230, and 17.50.080 as well as a

discussion of how the proposal meets all of the applicable NROD development standards in OCMC 17.49.100—17.49.170.

Finding: Complies. This proposal qualifies for a Type II review.

17.49.230 - Mitigation plan report.
A mitigation plan report that accompanies the above mitigation site plan is also required. The report shall be prepared by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, wildlife biology, botany, hydrology or forestry. The mitigation plan report shall, at a minimum, discuss:
A. Written responses to each applicable mitigation standard in OCMC 17.49.180 or 17.49.190 indicating how the proposed development complies with the mitigation standards;
B. The resources and functional values to be restored, created, or enhanced through the mitigation plan;
C. Documentation of coordination with appropriate local, regional, state and federal regulatory/resource agencies such as the Oregon Department of State Lands (DSL) and the United States Army Corps of Engineers (USACE);
D. Construction timetables;
E. Monitoring and maintenance practices pursuant to OCMC 17.49.230.F and a contingency plan for undertaking remedial actions that might be needed to correct unsuccessful mitigation actions during the first five years of the mitigation area establishment.

Finding: Complies. The 2012 NROD report, together with the 2025 supplemental information contained in these responses, includes the above information.

17.49.240 - Density transfer.
The NROD allocates urban densities to the non-NROD portions of properties located partially within the NROD, generally resulting in a substantial increase in net development potential. For lots of record that are located within the NROD, density transfer is allowed, subject to the following provisions:
Finding: Not Applicable. Density transfers are not needed for the proposed application, nor are they proposed

17.49.250 - Verification of NROD boundary.
The NROD boundary may have to be verified occasionally to determine the true location of a resource and its functional values on a site. This may be through a site specific environmental survey or a simple site visit in those cases where existing information demonstrates that the NROD significance rating does not apply to a site-specific area. Applications for development on a site located in the NROD area may request a determination that the subject site is not in an NROD area and therefore is not subject to the standards of OCMC 17.49.100. Verifications shall be processed as either a Type I or Type II process.
Finding: Not applicable. The application does not request verification as part of this process. An update delinquency will occur as conditioned to ensure no changes have occurred since 2012.

CHAPTER 17.50 – ADMINISTRATION AND PROCEDURES

17.50.010 Purpose.
This chapter provides the procedures by which Oregon City reviews and decides upon applications for all
permits relating to the use of land authorized by ORS 92, 197 and 227. These permits include all form of land divisions, land use, limited land use and expedited land division and legislative enactments and amendments to the Oregon City Comprehensive Plan and Titles 16 and 17 of this code. Pursuant to ORS 227.175, any applicant may elect to consolidate applications for two or more related permits needed for a single development project. Any grading activity associated with development shall be subject to preliminary review as part of the review process for the underlying development. It is the express policy of the City of Oregon City that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.

17.50.050 – Pre-application conference.
A. Pre-application Conference. Prior to a Type II – IV or Legislative application, excluding Historic Review, being deemed complete, the applicant shall schedule and attend a pre-application conference with City staff to discuss the proposal, unless waived by the Community Development Director. The purpose of the pre-application conference is to provide an opportunity for staff to provide the applicant with information on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal.
1. To schedule a pre-application conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee.
2. At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans.
3. The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the pre-application conference.

Finding: Complies as Proposed. The applicant held a pre-application conference (PA 25-16) for this proposal on April 22, 2025

17.50.055 - Neighborhood association meeting.
Neighborhood Association Meeting. The purpose of the meeting with the recognized neighborhood association is to inform the affected neighborhood association about the proposed development and to receive the preliminary responses and suggestions from the neighborhood association and the member residents.
A. Applicants applying for annexations, zone change, comprehensive plan amendments, conditional use, Planning Commission variances, subdivision, or site plan and design review (excluding minor site plan and design review), general development master plans or detailed development plans applications shall schedule and attend a meeting with the City-recognized neighborhood association in whose territory the application is proposed no earlier than one year prior to the date of application. Although not required for other projects than those identified above, a meeting with the neighborhood association is highly recommended.

B. The applicant shall request via email or regular mail a request to meet with the neighborhood association chair where the proposed development is located. The notice shall describe the proposed project. A copy of this notice shall also be provided to the chair of the citizen involvement committee.
C. A meeting shall be scheduled within thirty days of the date that the notice is sent. A meeting may be scheduled later than thirty days if by mutual agreement of the applicant and the neighborhood association. If the neighborhood association does not want to, or cannot meet within thirty days, the applicant shall host a meeting inviting the neighborhood association, citizen involvement committee, and all property owners within three hundred feet to attend. This meeting shall not begin before six p.m. on a weekday or may be held on a weekend and shall occur within the neighborhood association boundaries or at a city facility.
D. If the neighborhood association is not currently recognized by the City, is inactive, or does not exist, the applicant shall request a meeting with the citizen involvement committee.
E. To show compliance with this section, the applicant shall submit a copy of the email or mail notice to the neighborhood association and CIC chair, a sign-in sheet of meeting attendees, and a summary of issues discussed at the meeting. If the applicant held a separately noticed meeting, the applicant shall submit a copy of the meeting flyer, postcard or other correspondence used, and a summary of issues discussed at the meeting and submittal of these materials shall be required for a complete application.

Finding: Complies as Proposed. The applicant met with the Hillendale Neighborhood Association on October 7, 2025

17.50.070 Completeness review and one hundred twenty-day rule.
A. Upon submission, the Community Development Director shall date stamp the application form and verify that all of the appropriate application review fee(s) have been submitted. Upon receipt of all review fees and an application form, the Community Development Director will then review the application and all information submitted with it and evaluate whether the application is complete enough to process. Within thirty days of receipt of the application and all applicable review fees, the Community Development Director shall complete this initial review and issue to the applicant a written statement indicating whether the application is complete enough to process, and if not, what information shall be submitted to make the application complete.
B. The applicant has one hundred eighty days from the date the application was made to submit the missing information or the application shall be rejected and the unused portion of the application fee returned to the applicant. If the applicant submits the requested information within the one hundred eighty-day period, the Community Development Director shall again verify whether the application, as augmented, is complete. Each such review and verification shall follow the procedure in subsection A of this section.
The application will be deemed complete for the purpose of this section upon receipt by the Community Development Director of:
1. All the missing information;
2. Some of the missing information and written notice from the applicant that no other information will be provided; or
3. Written notice from the applicant that none of the missing information will be provided.
C. Once the Community Development Director determines the application is complete enough to process, or the applicant refuses to submit any more information, the City shall declare the

application complete. Pursuant to ORS 227.178, the City will reach a final decision on an application within one hundred twenty calendar days from the date that the application is determined to be or deemed complete unless the applicant agrees to suspend the one hundred twenty-calendar-day timeline or unless state law provides otherwise. The one hundred twenty-day period, however, does not apply in the following situations:
1. Any hearing continuance or other process delay requested by the applicant shall be deemed an extension or waiver, as appropriate, of the one hundred twenty-day period.
2. Any delay in the decision-making process necessitated because the applicant provided an incomplete set of mailing labels for the record property owners within three hundred feet of the subject property shall extend the one hundred twenty-day period for the amount of time required to correct the notice defect.
3. The one hundred twenty-day period does not apply to any application for a permit that is not wholly within the City's authority and control.

4. The one hundred twenty-day period does not apply to any application for an amendment to the City's comprehensive plan or land use regulations nor to any application for a permit, the approval of which depends upon a plan amendment.
D. A one hundred day-period applies in place of the one hundred twenty-day period for affordable housing projects where:
1. The project includes five or more residential units, including assisted living facilities or group homes;
2. At least fifty percent of the residential units will be sold or rented to households with incomes equal to or less than sixty percent of the median family income for Clackamas County or for the state, whichever is greater; and
3. Development is subject to a covenant restricting the owner and successive owner from selling or renting any of the affordable units as housing that is not affordable for a period of sixty years from the date of the certificate of occupancy.
E. The one hundred twenty-day period specified in OCMC 17.50.070.C or D may be extended for a specified period of time at the written request of the applicant. The total of all extensions may not exceed two hundred forty-five calendar days.
F. The approval standards that control the City's review and decision on a complete application are those which were in effect on the date the application was first submitted.

Finding: Complies. The application was deemed complete on December 18, 2025. The 120-day decision date for this application is April 7, 2025, and was extended by the applicant to May 17, 2026

17.50.080 Complete application—Required information.
Unless stated elsewhere in OCMC 16 or 17, a complete application includes all the materials listed in this
subsection. The Community Development Director may waive the submission of any of these materials if not deemed to be applicable to the specific review sought. Likewise, within thirty days of when the application is first submitted, the Community Development Director may require additional information, beyond that listed in this subsection or elsewhere in Titles 12, 14, 15, 16, or 17, such as a traffic study or other report prepared by an appropriate expert. In any event, the applicant is responsible for the completeness and accuracy of the application and all of the

supporting documentation, and the City will not deem the application complete until all information required by the Community Development Director is submitted. At a minimum, the applicant shall submit the following:
A. One copy of a completed application form that includes the following information:
1. An accurate address and tax map and location of all properties that are the subject of the application;
2. Name, address, telephone number and authorization signature of all record property owners or contract owners, and the name, address and telephone number of the applicant, if different from the property owner(s);
B. A complete list of the permit approvals sought by the applicant;
C. A complete and detailed narrative description of the proposed development;
D. A discussion of the approval criteria for all permits required for approval of the development proposal that explains how the criteria are or can be met or are not applicable, and any other information indicated by staff at the pre-application conference as being required;
E. One copy of all architectural drawings and site plans shall be submitted for Type II—IV applications.
One paper copy of all application materials shall be submitted for Type I applications;
F. For all Type II—IV applications, the following is required:
1. An electronic copy of all materials.
2. Mailing labels or associated fee for notice to all parties entitled under OCMC 17.50.090 to receive mailed notice of the application. The applicant shall use the names and addresses of property owners within the notice area indicated on the most recent property tax rolls.
3. Documentation indicating there are no liens favoring the City on the subject site.
4. A receipt from the county assessor's office indicating that all taxes for the lot or parcels involved are paid in full for the preceding tax year.
5. A current preliminary title report or trio for the subject property(ies);
G. All required application fees;
H. Annexation agreements, traffic or technical studies (if applicable);
I. Additional documentation, as needed and identified by the Community Development Director.

Finding: Complies The application was deemed complete on December 18, 2025.

17.50.090 - Public notices.
All public notices issued by the City announcing applications or public hearings of quasi-judicial or legislative actions, shall comply with the requirements of this section.
A. Notice of Type II Applications. Once the Community Development Director has deemed a Type II application complete, the City shall prepare and send notice of the application, by first class mail, to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The applicant shall provide or the City shall prepare for a fee an accurate and complete set of mailing labels for these property owners and for posting the subject property with the City-prepared notice in accordance with OCMC 17.50.100. The City's Type II notice shall include the following information:
1. Street address or other easily understood location of the subject property and city-assigned planning file number;
2. A description of the applicant's proposal, along with citations of the approval criteria that the City will use to evaluate the proposal;

3. A statement that any interested party may submit to the City written comments on the application during a fourteen-day comment period prior to the City's deciding the application, along with instructions on where to send the comments and the deadline of the fourteen-day comment period;
4. A statement that any issue which is intended to provide a basis for an appeal shall be raised in writing during the fourteen-day comment period with sufficient specificity to enable the City to respond to the issue;
5. A statement that the application and all supporting materials may be inspected, and copied at cost, at City Hall during normal business hours;
6. The name and telephone number of the planning staff person assigned to the application or is otherwise available to answer questions about the application;
7. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal.

Finding: Complies. A public notice was sent to all properties within 300 feet of the site and signs were placed on the property within 20 days of the scheduled hearing. Copies of the public notice and affidavit of sign posting are in the record.

B. Notice of Public Hearing on a Type III or IV Quasi-Judicial Application. Notice for all public hearings concerning a quasi-judicial application shall conform to the requirements of this subsection. At least twenty days prior to the hearing, the City shall prepare and send, by first class mail, notice of the hearing to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The City shall also publish the notice on the City website within the City at least twenty days prior to the hearing. Pursuant to OCMC 17.50.080.H, the applicant is responsible for providing an accurate and complete set of mailing labels for these property owners and for posting the subject property with the City-prepared notice in accordance with OCMC 17.50.100. Notice of the application hearing shall include the following information:
1. The time, date and location of the public hearing;
2. Street address or other easily understood location of the subject property and city-assigned planning file number;
3. A description of the applicant's proposal, along with a list of citations of the approval criteria that the City will use to evaluate the proposal;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing and that a staff report will be prepared and made available to the public at least seven days prior to the hearing;
5. A statement that any issue which is intended to provide a basis for an appeal to the City Commission shall be raised before the close of the public record. Issues must be raised and accompanied by statements or evidence sufficient to afford the City and all parties to respond to the issue;
6. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal;

7. A statement that the application and all supporting materials and evidence submitted in support of the application may be inspected at no charge and that copies may be obtained at reasonable cost at the planning division offices during normal business hours; and
8. The name and telephone number of the planning staff person responsible for the application or is otherwise available to answer questions about the application.

17.50.100 - Notice posting requirements.
Where this chapter requires notice of a pending or proposed permit application or hearing to be posted on the subject property, the requirements of this section shall apply.
A. City Guidance and the Applicant's Responsibility. The City shall supply all of the notices which the applicant is required to post on the subject property and shall specify the dates the notices are to be posted and the earliest date on which they may be removed. The City shall also provide a statement to be signed and returned by the applicant certifying that the notice(s) were posted at the correct time and that if there is any delay in the City's land use process caused by the applicant's failure to correctly post the subject property for the required period of time and in the correct location, the applicant agrees to extend the applicable decision-making time limit in a timely manner.
B. Number and Location. The applicant shall place the notices on each frontage of the subject property. If the property's frontage exceeds six hundred feet, the applicant shall post one copy of the notice for each six hundred feet or fraction thereof. Notices do not have to be posted adjacent to alleys or unconstructed right-of-way. Notices shall be posted within ten feet of the street and shall be visible to pedestrians and motorists. Notices shall not be posted within the public right-of-way or on trees. The applicant shall remove all signs within ten days following the event announced in the notice.
Finding: Complies A public notice was sent to all properties within 300 feet of the site and signs were placed on the property within 20 days of the scheduled hearing. Copies of the public notice and affidavit of sign posting are in the record.

17.50.140 – Financial guarantees.
When conditions of permit approval require a permitee to construct certain public improvements, the City shall require the permitee to provide financial guarantee for construction of the certain public improvements. Financial guarantees shall be governed by this section.
A. Form of Guarantee. Guarantees shall be in a form approved by the City attorney. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City attorney. The guarantee shall be filed with the City engineer.
B. Performance Guarantees. A permittee shall be required to provide a performance guarantee as follows.
1. After Final Approved Design by the City. The City may request the permittee to submit a performance guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee when prepared for temporary/final occupancy. The guarantee shall be one hundred twenty percent of the estimated cost of constructing the public

improvements as submitted by the permittee's engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer.
2. Before Complete Design Approval and Established Engineered Cost Estimate. The City may request a permittee to submit a performance guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee before public improvements are designed and completed. The guarantee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer.
C. Release of Guarantee. The guarantee shall remain in effect until the improvement is actually constructed and accepted by the City. Once the City has inspected and accepted the improvement, the City shall release the guarantee to the permittee. If the improvement is not completed to the City's satisfaction within the time limits specified in the permit approval, the City engineer may, at their discretion, draw upon the guarantee and use the proceeds to construct or complete construction of the improvement and for any related administrative and legal costs incurred by the City in completing the construction, including any costs incurred in attempting to have the permittee complete the improvement. Once constructed and approved by the City, any remaining funds shall be refunded to the permittee. The City shall not allow a permittee to defer construction of improvements by using a performance guarantee, unless the permittee agrees to construct those improvements upon written notification by the City, or at some other mutually agreed-to time. If the permittee fails to commence construction of the required improvements within six months of being instructed to do so, the City may, without further notice, undertake the construction of the improvements and draw upon the permittee's performance guarantee to pay those costs.
D. Fee-in-lieu. When conditions of approval or the City engineer allows a permittee to provide a fee-in-lieu of actual construction of public improvements, the fee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City engineer. The percentage required is to ensure adequate funds for the future work involved in design, bid, contracting, and construction management and contract closeout. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer. The fee-in-lieu shall be submitted as cash, certified check, or other negotiable instrument acceptable by the City attorney.

Finding: Complies with Condition. A Performance Guarantee which is equal to 120% of the estimated cost for construction of public improvements as shown in City approved construction plans shall be provided prior to receiving a permit and beginning construction. The estimated costs shall be supported by a verified engineering estimate and approved by the City engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The guarantee shall remain in effect until the construction of all required improvements are completed and accepted by the City. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**

17.50.141 – Public improvements – Warranty
All public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period. The warranty is to be used at the discretion of the

City engineer or designee to correct deficiencies in materials or maintenance of constructed public infrastructure, or to address any failure of engineering design.
A. Duration of Warranty. Responsibility for maintenance of public improvements shall remain with the property owner or developer for a warranty period of two years.
B. Financial Guarantee. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, bond, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City attorney. The guarantee shall be filed with the City engineer.
C. Amount of Warranty. The amount of the warranty shall be equal to fifteen percent of the estimated cost of construction of all public improvements (including those improvements that will become owned and maintained by the City at the end of the two-year maintenance period), and shall be supported by a verified engineering estimate and approved by the City engineer. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those improvements.
D. Transfer of Maintenance. The City will perform an inspection of all public improvements approximately forty-five days before the two-year warranty period expires. The public improvements shall be found to be in a clean, functional condition by the City engineer before acceptance of maintenance responsibility by the City. Transfer of maintenance of public improvements shall occur when the City accepts the improvements at the end of the two-year warranty period.

Finding: Complies with Condition. Maintenance Guarantee equal to fifteen percent of the estimated cost for construction of public improvements as shown in City approved construction plans shall be provided prior to occupancy of the first parcel. The estimated costs shall be supported by a verified engineering estimate approved by the City Engineer. The guarantee shall be in a form identified in Code 17.50.140.A of the Oregon City Municipal Code. The maintenance guarantee shall warrant to the City of Oregon City that construction of public improvements will remain, for a period of twenty-four (24) months from the date of acceptance, free from defects in materials and workmanship. **Staff has determined that it is possible, likely and reasonable that the applicant can meet this standard through the Conditions of Approval.**
CHAPTER 17.65 MASTER PLANS AND PLANNED UNIT DEVELOPMENT17.65.010 Purpose and intent.
It is the intent of this chapter to foster the growth of major institutions, phased residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating the impacts of such growth on surrounding properties and public infrastructure. The City recognizes the valuable housing options, services and/or employment opportunities that these developments bring to Oregon City residents. The master plan or planned unit development process is intended to facilitate an efficient and flexible review process for major developments, support innovative and creative land development, and to provide long-term assurance to plan for and execute developments in a phased manner. To facilitate this, the master plan process is structured to allow an applicant to address larger development issues, such as adequacy of infrastructure and transportation capacity, and reserve capacity of the infrastructure and transportation system before expenditure of final design costs. The master plan or planned unit development process is further intended to promote efficiency in land development, maintenance,

street systems and utility networks while providing site layouts that integrate usable and attractive open spaces, site circulation, and the general wellbeing of site users. For the purposes of this chapter planned unit developments are considered the same as master plans.

17.65.040 - Procedure.

Detailed Development Plan. An application for a detailed development plan, is processed through a Type II procedure, as long as it is in conformance with the approved general development plan. Amendments to an approved detailed development plan shall be processed pursuant to OCMC 17.65.080. Once a development has an approved detailed development plan, OCMC **17.62**, Site Plan and Design Review is not required.

D. Concurrent Review. An applicant may concurrently apply for a general development plan and a detailed development plan. Such a concurrent application is reviewed through the highest procedure that applies to any element of the combined application.

Finding: Complies. The applicant has concurrently applied for a general development plan and a detailed development plan

17.65.060 - Detailed development plan.

A. Submittal Requirements.

1. A transportation impact study documenting the on- and off-site transportation impacts, as specified in OCMC 17.65.050.B.1.h.i. If such an analysis was submitted as part of the general development plan process, the scope of the report may be limited to any changes which have occurred during the interim and any information listed below which was not a part of the initial study.

The on-site portion of the analysis shall include the location, dimensions and names of all proposed streets, alleys, other public ways, sidewalks, bike routes and bikeways, pedestrian/bicycle access ways and other pedestrian and bicycle ways, transit streets and facilities, neighborhood activity centers, and easements on and within two hundred fifty feet of the boundaries of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.

2. The location within the development and in the adjoining streets of existing and proposed sewers, water mains, culverts, drain pipes, underground electric, cable television and telephone distribution lines, gas lines, and the location of existing aerial electric, telephone and television cable lines, if any, to be relocated within the development.

3. For portions of the project that would otherwise be subject to site plan and design review, a site plan or plans, to scale, containing the required information identified in OCMC 17.62.040.

4. For residential portions of the project not otherwise subject to site plan and design review, a site plan or plans, to scale, showing the proposed land uses and densities, building locations, lot patterns, circulation patterns, and open space locations and uses.

5. Any other information the Community Development Director deems necessary to show that the proposed development will comply with all of the applicable Chapter 17 requirements.

B. Approval Criteria. The Community Development Director shall approve an application for detailed development plan approval only upon findings that:

1. All development standards and impact mitigation meet the requirements of the approved general development plan, including conditions of approval.
2. Any other applicable zoning regulations that are not addressed in the general development plan are met, unless an adjustment to those regulations has been applied for and is approved. The approval standards applicable to adjustments required as part of a master plan or planned unit development are contained in OCMC 17.65.070.
3. The detailed development plan conforms with the base zone standards, applicable residential design standards, and applicable standards contained in Chapters 17.62, 17.52, 16.12, and 16.08 unless adjusted as provided in OCMC 17.65.070

Finding: Complies as Conditioned. The applicant has concurrently applied for a general development plan and a detailed development plan. For more details regarding public services and facilities required for this DDP, please see findings from 16.12.095.

RECOMMENDATION:
Based on the analysis and findings as described above, Staff concludes that the proposed development located at 1367 Molalla Ave Oregon City, Oregon 97045, identified as Clackamas County Map 3-2E-06DB Tax 3-2E-05DB TL 3200, 3201, 3300, & 3400, 500, 501, 602, can meet the requirements as described in the Oregon City Municipal Code by complying with the Conditions of Approval provided in this report. Therefore, the Community Development Director recommends approval with conditions, based upon the findings and exhibits contained in this staff report.

EXHIBITS:

1. Applicant's Submittal
    a. Detailed Development Plan Narrative
    b. Master Plan Parcel Site Plan
    c. GDP and DDP Plans
    d. Storm Drainage Analysis
    e. Appendix A-0 (Geotech, TIA, Wetland Delineation and Mitigation Plan, Tree Survey, etc.)

REQUEST: Type III
Masterplan General Development Plan Approval
Conditional Use Approval for Drive-Through Use
Maximum Parking Adjustment

Type II
Masterplan Detailed Development Plan Approval
Natural Resource Overlay District (NROD) Approval
Geologic Hazard Overlay
Modification to Certain Public Improvements and Design Standards

LOCATION: 1367 Molalla Ave
Oregon City, OR 97045

BACKGROUND:

<u>Current Land-Use Action</u>

Pre-Application Conference:	April 22, 2025 (Appendix A)
Masterplan Application submittal:	June 27, 2025
Incomplete Notice:	July 24, 2025 (Appendix B)
Neighborhood Meeting:	October 7, 2025 (Appendix C)
Masterplan Resubmittal:	November 14, 2025 – Revised March 2, 2026 (Appendix D)
Project Plans:	November 14, 2025 – Revised March 2, 2026 (Appendix E)

Existing Conditions

The subject property is comprised of an assemblage of properties in the main development area which includes TL 3200, 3201, 3300, & 3400, Map 3 2E 05DB (On-Site) and a proposed public road through TL 500 & 501, Map 3 2E 05D (Off-site) that connects the on-site properties to Beavercreek Rd

The on-site properties are currently vacant and include a mixture of grasslands, scrub brush and scattered groves of trees, with more concentrated tree canopy along the north and south edges and in the southeast corner. The east side of the on-site properties extends into Newell Creek Canyon, is heavily forested, and lies within a geologic hazard area.

Past uses on TL 3200, 3201 and 3300 include a former wrecking yard whose operations started in 1953 and continued until late 2001 when the wrecking yard operations ceased. Environmental studies on these properties indicated low concentrations of petroleum hydrocarbons and/or metals in near surface and shallow soils, and that groundwater underlying the former wrecking yard was not impacted with contaminants of concern.

TL 3400 previously included a gas station and tavern in the vicinity of its southwest corner which has been removed. Environmental remediation occurred at the former gas station site and ODEQ issued a "No Further Action" letter indicating that ODEQ should be notified prior to installation of any groundwater supply wells and any construction or excavation in or around the former gas station pocket of contamination.

The on-site properties generally slope to the south with a portion of the west end of the site sloping to the southwest. The east end of the property includes a steep slope extending into Newell Creek Canyon and is heavily forested.

Proposed Project

The project proposes to develop the on-site properties into a mixed-use development via the Oregon City Masterplan process. Three parcels are proposed in addition to a public street extending from the existing signal at Molalla Ave through the on-site properties and through TL 500/501 to the existing signal at Beavercreek Rd. Uses on the parcels include an approximately 14,600 sf retail building on Parcel A that includes shops and a Quick Service Restaurant at the north end of the building, an approximately 208-unit multi-family residential component on Parcel B, and a Quick Service Restaurant on Parcel D. Parcel C is proposed as a public road through the site. The Quick Service Restaurants (Parcels A & D) include drive-through facilities, which require Conditional Use Approval. Parcels A and D will also seek an adjustment to the maximum parking ratio.

The project seeks Type III Masterplan General Development Plan approval and Type II Detailed Development Plan approval for the proposed public roadway and utility improvements through both the on- and off-site areas, and rough grading of the entire on-site area.

Overall phasing on the Masterplan includes the proposed public roadway and utility improvements as well as on-site rough grading in Phase 1. The remaining parcels are proposed as separate phases, though their development will be market-driven and could be developed separately or simultaneously with each other.

Municipal Code Standards and Requirements: The following sections of the Oregon City Municipal Code are applicable to this land use approval:

Chapter 12.04 Streets Sidewalks and Public Spaces (incl by reference in other sections)
Chapter 12.08 Public And Street Trees
Chapter 13.12 Stormwater Management
Chapter 15.48 Grading, Filling And Excavating
Chapter 16.08 Land Division Process and Standards (incl by reference in other sections)
Chapter 16.12 Min Public Imprvmnts and Design Stds For Develpmnt (incl by reference in other sections)
Chapter 16.20 Property Line Adjustments and Abandonment Process and Standards
Chapter 17.29 MUC Mixed Use Corridor District
Chapter 17.41 Tree Protection, Preservation, Removal And Replanting Standards
Chapter 17.44 Geologic Hazards
Chapter 17.49 Natural Resources Overlay District
Chapter 17.50 Administration And Procedures
Chapter 17.52 Off-Street Parking And Loading
Chapter 17.54 Supplemental Zoning Regulations And Exceptions
Chapter 17.62 Site Plan And Design Review
Chapter 17.65 Master Plans and Planned Unit Development

Following are detailed code responses to all applicable code criteria for Detailed Development Plan Approval as presented in this application:

CHAPTER 12.04 STREETS SIDEWALKS AND PUBLIC SPACES

12.04.005 - Jurisdiction and management of the public rights-of-way.

A. The City has jurisdiction and exercises regulatory management over all public rights-of-way within the City under authority of the City Charter and state law by issuing separate public works right-of-way permits or permits as part of issued public infrastructure construction plans. No work in the public right-of-way shall be done without the proper permit. Some public rights-of-way within the city are regulated by the State of Oregon Department of Transportation (ODOT) or Clackamas County and as such, any work in these streets shall conform to their respective permitting requirements.

C. The City has jurisdiction and exercises regulatory management over each public right-of-way whether the City has a fee, easement, or other legal interest in the right-of-way. The City has jurisdiction and regulatory management of each right-of-way whether the legal interest in the right-of-way was obtained by grant, dedication, prescription, reservation, condemnation, annexation, foreclosure or other means.

D. No person may occupy or encroach on a public right-of-way without the permission of the City. The City grants permission to use rights-of-way by franchises, licenses and permits.

E. The exercise of jurisdiction and regulatory management of a public right-of-way by the City is not official acceptance of the right-of-way, and does not obligate the City to maintain or repair any part of the right-of-way.

Applicant's Response:
The applicant acknowledges the city's jurisdictional authority over public rights-of-way.

12.04.025 - Driveways.

Driveways shall be reviewed in accordance with OCMC 16.12.035. Driveway requirements may be modified through the procedures in OCMC 16.12.013.

Applicant's Response:
The applicant acknowledges this criterion. Please see our response to proposed driveway design/configuration in OCMC 16.12.035

12.04.030 - Maintenance and repair.

The owner of land abutting the street where a sidewalk has been constructed shall be responsible for maintaining said sidewalk and abutting curb, if any, in good repair.

Applicant's Response:
The applicant acknowledges the maintenance obligations identified in this section.

12.04.032 - Required sidewalk repair.

A. When the Public Works Director determines that repair of a sidewalk is necessary, written notice shall be provided to the owner of property adjacent to the defective sidewalk.

B. The notice shall require the owner of the property adjacent to the defective sidewalk to complete the repair of the sidewalk within ninety days after the service of notice. The notice shall also state that if the repair is not made by the owner, the City may do the work and the cost of the work shall be assessed against the property adjacent to the sidewalk.

1. All sidewalks hereafter constructed in the City on improved streets shall be constructed to city standards and widths required in the Oregon City Transportation System Plan and OCMC 16.12. Sidewalks and curbs are to be constructed according to plans and specifications provided by the City Engineer.

2. Sidewalks constructed on unimproved streets shall be constructed of concrete according to lines and grades established by the City Engineer. On unimproved streets, curbs do not have to be constructed.

C. The Public Works Director shall cause a copy of the notice to be served personally upon the owner of the property adjacent to the defective sidewalk, or the notice may be served by registered or certified mail, return receipt requested. If after diligent search the owner is not discovered, the Public Works Director shall cause a copy of the notice to be posted in a conspicuous place on the property, and such posting shall have the same effect as service of notice by mail or by personal service upon the owner of the property.

D. The person serving the notice shall file with the City recorder a statement stating the time, place and manner of service or notice.

Applicant's Response:
The applicant acknowledges the repair obligations and processes identified in this section.

12.04.050 - Retaining walls—Required.
Every owner of a lot within the City, abutting upon an improved street, where the surface of the lot or tract of land is above the surface of the improved street and where the soil or earth from the lot, or tract of land is liable to, or does slide or fall into the street or upon the sidewalk, or both, shall build a retaining wall, the outer side of which shall be on the line separating the lot, or tract of land from the improved street, and the wall shall be so constructed as to prevent the soil or earth from the lot or tract of land from falling or sliding into the street or upon the sidewalk, or both, and the owner of any such property shall keep the wall in good repair.

Applicant's Response:
The applicant acknowledges this section. This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information, including any proposed retaining walls adjacent to public right-of-way will be included with the DDP applications for each parcel.

12.04.100 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall be the duty of the person making the excavation to restore the pavement in accordance with the City of

Oregon City Public Works Pavement Cut Standard in effect at the time a right-of-way permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.

Applicant's Response:
The applicant acknowledges the repair obligations identified in this section. Any necessary repair or restoration of existing streets will be addressed during the detailed design of the proposed improvements.

12.04.120 - Obstructions—Permit required.

A. Permanent Obstructions. It is unlawful for any person to place, put or maintain any obstruction, other than a temporary obstruction, as defined in subsection B. of this section, in any public street or alley in the City, without obtaining approval for a right-of-way permit from the City Commission by passage of a resolution.

1. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.

2. The applicant shall submit at least the following information in the permitting process in order to allow the City Commission to adequately consider whether to allow the placement of an obstruction and whether any conditions may be attached:

a. Site plan showing right-of-way, utilities, driveways as directed by staff;

b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;

c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);

d. Alternative routes if necessary;

e. Minimizing obstruction area; and

f. Hold harmless/maintenance agreement.

3. If the City Commission adopts a resolution allowing the placement of a permanent obstruction in the right-of-way, the City Engineer shall issue a right-of-way permit with any conditions deemed necessary by the City Commission.

B. Temporary Obstructions.

1. A "temporary obstruction" is defined as an object placed in a public street, road or alley for a period of not more than sixty consecutive days. A "temporary obstruction" includes, but is not limited to, moving containers and debris dumpsters.

2. The City Engineer, or designee, is authorized to grant a permit for a temporary obstruction.

3. The City Engineer shall provide applicants with an application form outlining the minimum submittal requirements.

4. The applicant shall submit, and the City Engineer, or designee, shall consider, at least the following items in the permitting process. Additional information may be required in the discretion of the City Engineer:

a. Site plan showing right-of-way, utilities, driveways as directed by staff;

b. Sight distance per OCMC 10.32, Traffic Sight Obstructions;

c. Traffic control plan including parking per Manual on Uniform Traffic Control Devices (MUTCD);
d. Alternative routes if necessary;
e. Minimizing obstruction area; and
f. Hold harmless/maintenance agreement.

5. In determining whether to issue a right-of-way permit to allow a temporary obstruction, the City Engineer may issue such a permit only after finding that the following criteria have been satisfied:
a. The obstruction will not unreasonably impair the safety of people using the right-of-way and nearby residents;
b. The obstruction will not unreasonably hinder the efficiency of traffic affected by the obstruction;
c. No alternative locations are available that would not require use of the public right-of-way; and
d. Any other factor that the City Engineer deems relevant.

6. The permittee shall post a weatherproof copy of the temporary obstruction permit in plain view from the right-of-way.

C. Fees. The fee for obtaining a right-of-way permit for either a permanent obstruction or a temporary obstruction shall be set by resolution of the City Commission.

Applicant's Response:
The applicant acknowledges the permanent and temporary obstruction provisions of this section.

12.04.150 - Street and alley vacations—Cost.
At the time of filing a petition for vacation of a street, alley or any part thereof, a fee as established by City Commission resolution shall be paid to the City. The City Commission, upon hearing such petition, may grant the same in whole or in part, or may deny the same in whole or in part, or may grant the same with such reservations as would appear to be for the public interest, including reservations pertaining to the maintenance and use of underground public utilities in the portion vacated.

Applicant's Response:
The proposed development does not anticipate the need to vacate streets or alleys.

12.04.170 - Street design—Purpose and general provisions.
All development shall be in conformance with the city's public facility master plans, public works policies, standard drawings and engineering specifications. All streets shall be reviewed and approved by the city engineer prior to construction. All streets and driveway connections to another jurisdiction's facility or right-of-way must be reviewed by the appropriate jurisdiction as a condition of the preliminary plat or site planning and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Applicant's Response:
The applicant acknowledges the street design standards identified in this section.

12.04.270 - Standard construction specifications.

The workmanship and materials for any work performed under permits issued per this chapter shall be in accordance with the current edition of the "Oregon Standard Specifications for Construction" as prepared by the Oregon Department of Transportation (ODOT) and the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City in accordance with this ordinance, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Street Standard Drawings provide other design details, in which case the requirements of this chapter and the Public Works Street Standard Drawings shall control. In the case of work within ODOT or Clackamas County rights-of-way, work shall be in conformance with their respective construction standards.

Applicant's Response:
The applicant acknowledges the standard construction specifications identified in this section.

CHAPTER 12.08 PUBLIC AND STREET TREES

12.08.010 - Purpose.

The purpose of this chapter is to:

A. Develop tree-lined streets to protect the living quality and beautify the city;

B. Establish physical separation between pedestrians and vehicular traffic;

C. Create opportunities for solar shading;

D. Improve air and water quality; and

E. Increase the community tree canopy and resource.

Applicant's Response:
The applicant acknowledges the purpose of this chapter.

12.08.015 Street tree selection, planting and maintenance requirements.
All development shall provide street trees adjacent to all street frontages. Species and locations of trees shall be selected based upon vision clearance requirements, but shall in all cases be selected from the Oregon City Street Tree List, an approved street tree list for a jurisdiction in the Metropolitan region, or be approved by a certified arborist unless otherwise approved pursuant to this section. If a setback sidewalk has already been constructed or the public works department determines that the forthcoming street design shall include a setback sidewalk, then all street trees shall be installed with a planting strip or within tree wells. If existing street design includes a curb-tight sidewalk, then all street trees shall be placed according to OCMC 12.08.035.C.

A. One street tree shall be planted for every thirty-five feet of property frontage. The tree spacing shall be evenly distributed throughout the total development frontage to meet the clearance distances required in subsection B below. The community development director may approve an alternative street tree plan, or accept fee-in-lieu of planting pursuant to OCMC 12.08.035, if site or other constraints prevent meeting the required total number of tree plantings.

B. The following clearance distances shall be maintained when planting trees:

1. Fifteen feet from streetlights;

2. Five feet from fire hydrants;

3. Twenty feet from intersections;

4. Five feet from all public utilities (i.e. sewer, storm and water lines, utility meters, etc.).

C. All street trees planted in conjunction with development shall be a minimum of two inches in caliper at six inches above the root crown and installed to city specifications. Larger caliper size trees may be approved if recommended by a certified arborist or registered landscape architect.

D. All established trees shall be pruned tight to the trunk to a height that provides adequate clearance for street cleaning equipment and ensures ADA complaint clearance for pedestrians.

E. All trees planted within the right-of-way shall be planted with root barriers at least eighteen inches in depth adjacent to the sidewalk and curb to ensure proper root growth and reduce potential damage to sidewalks, curbs and gutters.

F. All trees planted beneath powerlines shall be selected based on what is appropriate for the location. In addition, the tree species shall be approved by the associated franchise powerline utility company.

G. Tree species, spacing and selection for stormwater facilities in the public right-of-way and in storm water facilities shall conform to requirements of OCMC 13.12 and the adopted stormwater and grading design standards and be approved by the city engineer.

H. Any public or street trees planted within the natural resource overlay district shall conform to the applicable requirements of OCMC 17.49, Natural Resources Overlay District (NROD).

Applicant's Response:
The applicant acknowledges the criterion in this section. Please see the proposed street trees shown on the landscape plan, Sht DDP-C1.1.

12.08.025 General tree maintenance
Abutting property owners shall be responsible for the maintenance and replacement of street trees and planting strips. Topping of trees is prohibited, unless under recommendation of a certified arborist. Trees shall be trimmed appropriately. Maintenance shall include watering during dry periods, trimming of established trees to remove dead branches and dangerous limbs and to maintain a minimum eight-foot clearance above all sidewalks, ten-foot clearance in clear vision areas pursuant to OCMC 10.32, and fourteen-foot clearance above the street. Planter strips shall be kept clear of weeds, obstructing vegetation and trash.

Applicant's Response:
The applicant acknowledges the criterion in this section.

12.08.030 Public property tree maintenance.
The city shall have the right to plant, prune, maintain and remove trees, plants and shrubs in all public rights-of-way and public grounds, as may be necessary to ensure public safety or to preserve and enhance the symmetry or other desirable characteristics of such public areas. The public works department and parks and recreation department may recommend to the community development director the removal of any tree or part thereof which is in an unsafe condition or may be injurious to above or below-ground public utilities, structures or other public improvements. Removed trees shall be replaced in accordance with this chapter or the mitigation requirements of the OCMC 17.49, Natural Resources Overlay District (NROD), if the tree to be removed is within the NROD.

Applicant's Response:
The applicant acknowledges the criterion in this section.

12.08.035 Tree removal and replacement.
Existing street trees, trees in the right-of-way, and trees on public property shall be retained and protected during development unless removal is specified as part of a land use approval or in

conjunction with a public capital improvement project, in accordance with OCMC 17.41. Tree removal shall be mitigated by the following:

A. A dead, diseased, or hazardous street tree, as determined by a certified arborist and approved by the city manager or designee, may be removed if replaced with one new tree for each dead, diseased, or hazardous tree that is removed.

   1. Hazardous trees which have raised the adjacent sidewalk in a manner which does not comply with the Americans with Disabilities Act may be removed and replaced without a report from a certified arborist, as defined in OCMC 17.04.082.

   2. All replacement street trees under this section shall have a minimum one and one-half inch caliper trunk measured six inches above the root crown.

B. Removed trees that are not determined to be dead, diseased, or hazardous shall be replaced in accordance with Table 12.08.035. All replaced street trees shall have a minimum one and one-half inch caliper trunk measured six inches above the root crown.

Table 12.08.035

Replacement Schedule for Trees Determined to be Dead, Diseased or Hazardous by a Certified Arborist		Replacement Schedule for Trees Not Determined to be Dead, Diseased or Hazardous by a Certified Arborist	
Diameter of tree to be Removed (Inches of diameter at 4-ft. height)	Number of Replacement Trees to be Planted	Diameter of tree to be Removed (Inches of diameter at 4-ft. height)	Number of Replacement Trees to be Planted
Any Diameter	1 Tree	Less than 6"	1 Tree
		6" to 12"	2 Trees
		13" to 18"	3 Trees
		19" to 24"	4 Trees
		25" to 30"	5 Trees
		31" and over	8 Trees

C. Removed trees shall be replaced by approved tree species:

   1. Within the right-of-way abutting the same frontage; and

   2. Subject to the requirements under OCMC 12.08.015.

D. If an applicant can demonstrate to the satisfaction of the city manager or designee that a sufficient location to replant tree(s) according to subsection C is not available, the city manager or designee may allow:

1. Installation of replacement tree(s) in one of the following alternative locations:

a. Within the right-of-way abutting another property, with abutting property owner approval; or

b. On public property, with city manager or designee approval; or

c. Within ten feet of the right-of-way in the abutting private yard; or

2. As a last resort, a fee in lieu of replacing the tree(s), subject to the following:

a. The applicant must demonstrate, to the satisfaction of the city manager or designee, that none of the alternative replanting options in section D.1 is sufficient for replanting.

b. Is to be placed into a city fund dedicated to obtaining trees, planting trees, and/or tree education in Oregon City.

E. Exceptions:

1. Trees that are listed as invasive non-native, nuisance, prohibited, or noxious vegetation species as defined in OCMC 17.04.605, may be removed without replacement or fee in lieu of replacement.

2. Trees in planter strips three feet or less in width may be removed without replacement or fee in lieu of replacement.

Applicant's Response:
Street trees do not currently exist along the property's Molalla Ave frontage or within the Beavercreek Rd street connection. The 2013 Arborist Report prepared by Walter H. Knapp & Associates, LLC identified overall site tree mitigation based on OCMC 17.41. however, OCMC 12.08.035 governs tree mitigation for public roadways. An update tot eh Arborist Report will be provided together with the project detailed construction plans.

12.08.045 Gifts, fee-in-lieu of planting, and funding.
The city of Oregon City may accept gifts, which are specifically designated for the purpose of planting or maintaining trees within the city. The community development director may allow a fee-in-lieu of planting the tree(s) to be placed into a city fund dedicated to planting trees in Oregon City. The community development director may determine the type, caliper and species of the trees purchased with the fund. The cost of each tree may be adjusted annually based upon current market prices for materials and labor as calculated by the community development director. A separate fund shall be established and maintained for revenues and expenditures created by activities specified in this chapter. The natural resources committee shall have authority on behalf of the city to seek grants and alternative funding for tree projects. Funds from such grant awards shall be administered by the city pursuant to this section.

Applicant's Response:

The applicant acknowledges the criterion in this section.

12.08.050 Violation—Penalty.

The violation of any provision of this chapter shall constitute a civil infraction, subject to code enforcement procedures of OCMC 1.16 and/or OCMC 1.20.

Applicant's Response:

The applicant acknowledges the criterion in this section.

CHAPTER 13.12 STORMWATER MANAGEMENT

13.12.050 - Applicability and exemptions.

This chapter establishes performance standards for stormwater conveyance, quantity and quality. Additional performance standards for erosion prevention and sediment control are established in OCMC 17.47.

A. Stormwater Conveyance. The stormwater conveyance requirements of this chapter shall apply to all stormwater systems constructed with any development activity, except as follows:

1. The conveyance facilities are located entirely on one privately owned parcel;

2. The conveyance facilities are privately maintained; and

3. The conveyance facilities receive no stormwater runoff from outside the parcel's property limits.

Those facilities exempted from the stormwater conveyance requirements by the above subsection will remain subject to the requirements of the Oregon Uniform Plumbing Code. Those exempted facilities shall be reviewed by the Building Official.

Applicant's Response:
The applicant acknowledges the applicability of this chapter.

B. Water Quality and Flow Control. The water quality and flow control requirements of this chapter shall apply to the following proposed uses or developments, unless exempted under subsection C:

1. Activities located wholly or partially within water quality resource areas pursuant to OCMC 17.49 that will result in the creation of more than five hundred square feet of impervious surface within the NROD or will disturb more than one thousand square feet of existing impervious surface within the NROD as part of a commercial or industrial redevelopment project. These square footage measurements will be considered cumulative for any given five-year period; or

2. Activities that create or replace more than five thousand square feet of impervious surface, cumulated over any given five-year period.

Applicant's Response:
The applicant acknowledges the applicability of this section.

C. Exemptions. The following exemptions to subsection B of this section apply:

1. An exemption to the flow control requirements of this chapter will be granted when the development site discharges to the Willamette River, Clackamas River or Abernethy Creek; and either lies within the one hundred-year floodplain or is up to ten feet above the design flood elevation as defined in OCMC 17.42, provided that the following conditions are met:

a. The project site is drained by a conveyance system that is comprised entirely of manmade elements (e.g. pipes, ditches, culverts outfalls, outfall protection, etc.) and extends to the ordinary high water line of the exempt receiving water; and

b. The conveyance system between the project site and the exempt receiving water has sufficient hydraulic capacity and erosion stabilization measures to convey discharges from the proposed conditions of the project site and the existing conditions from non-project areas from which runoff is collected.

2. Projects in the following categories are generally exempt from the water quality and flow control requirements:

a. Stream enhancement or restoration projects approved by the City.

b. Farming practices as defined by ORS 30.960 and farm use as defined in ORS 214.000; except that buildings associated with farm practices and farm use are subject to the requirements of this chapter.

c. Actions by a public utility or any other governmental agency to remove or alleviate an emergency condition.

d. Road and parking area preservation/maintenance projects such as pothole and square cut patching, surface sealing, replacing or overlaying of existing asphalt or concrete pavement, provided the preservation/maintenance activity does not expand the existing area of impervious coverage above the thresholds in subsection B of this section.

e. Pedestrian and bicycle improvements (sidewalks, trails, pathways, and bicycle paths/lands) where no other impervious surfaces are created or replaced, built to direct stormwater runoff to adjacent vegetated areas.

f. Underground utility projects that replace the ground surface with in-kind material or materials with similar runoff characteristics.

g. Maintenance or repair of existing utilities.

Applicant's Response:
The applicant understands that the proposed development is not exempt from the requirements of this chapter and must adhere to applicable provisions of this chapter.

D. Uses Requiring Additional Management Practices. In addition to any other applicable requirements of this chapter, the following uses are subject to additional management practices, as defined in the Public Works Stormwater and Grading Design Standards:

1. Bulk petroleum storage facilities;
2. Above ground storage of liquid materials;
3. Solid waste storage areas, containers, and trash compactors for commercial, industrial, or multi-family uses;
4. Exterior storage of bulk construction materials;
5. Material transfer areas and loading docks;
6. Equipment and/or vehicle washing facilities;
7. Development on land with suspected or known contamination;
8. Covered vehicle parking for commercial or industrial uses;
9. Industrial or commercial uses locating in high traffic areas, defined as average daily count trip of two thousand five hundred or more trips per day; and
10. Land uses subject to DEQ 1200-Z Industrial Stormwater Permit Requirements.

Applicant's Response:
The applicant acknowledges the applicability of this section. Solid waste storage areas associated with Parcel A, B, and D uses will be addressed with their respective Detailed Development Plan and construction plan submittals. Portions of the main on-site subject properties include historic uses that resulted in environmental contamination (former wrecking yard on TL 3200, 3201, & 3300 and former gas station on TL 3400 near Molalla Ave). Environmental cleanup associated with these prior uses will

be addressed with preparation of detailed construction plans for the proposed rough grading of the site. Environmental cleanup will be made in compliance with Oregon Department of Environmental Quality requirements.

13.12.080 - Submittal requirements.
A. Applications subject to stormwater conveyance, water quality, and/or flow control requirements of this chapter shall prepare engineered drainage plans, drainage reports, and design flow calculation reports in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards.

B. Each project site, which may be composed of one or more contiguous parcels of land, shall have a separate valid city approved plan and report before proceeding with construction.

Applicant's Response:
The applicant acknowledges the submittal requirements of this section. A final Stormwater Management Report will accompany the construction plan submittal for the proposed DDP improvements. The proposed stormwater management facility in the vicinity of the southeast corner of Parcel B is designed to treat Parcel A, B, and the proposed public street. When Parcels A and B submit their respective DDP and construction permit applications, they will need to provide documentation showing compliance with the assumptions and calculations in the Masterplan Stormwater Management Report. Parcel D will need to provide their own stormwater management facility that by-passes the main public stormwater facility serving the proposed road and Parcels A and B.

13.12.090 - Approval criteria for engineered drainage plans and drainage report.
An engineered drainage plan and/or drainage report shall be approved only upon making the following findings:
A. The plan and report demonstrate how the proposed development and stormwater facilities will accomplish the purpose statements of this chapter.

B. The plan and report meet the requirements of the Public Works Stormwater and Grading Design Standards adopted by resolution under OCMC 13.12.020.

C. The storm drainage design within the proposed development includes provisions to adequately control runoff from all public and private streets and roof, footing, and area drains and ensures future extension of the current drainage system.

D. Streambank erosion protection is provided where stormwater, directly or indirectly, discharges to open channels or streams.

E. Specific operation and maintenance measures are proposed that ensure that the proposed stormwater quantity control facilities will be properly operated and maintained.

Applicant's Response:
The Preliminary Stormwater Management Report for the proposed General Development Plan and Detailed Development Plan applications is included in Appendix F. This report shows water quality treatment and stormwater detention are provided with calculations based on the Clackamas County Water and Environment Services BMP Sizing Tool. A Final Report will accompany the construction plan submittal and will be review by Public works prior to issuance of construction permits.

13.12.100 - Alternative materials, alternative design and methods of construction.
The provisions of this chapter are not intended to prevent the use of any material, alternate design or method of construction not specifically prescribed by this chapter or the Public Works Stormwater and Grading Design Standards, provided any alternate has been approved and its use authorized by the City Engineer. The City Engineer may approve any such alternate, provided that the City Engineer finds that the proposed design is satisfactory and complies with the intent of this chapter and that the material, method, or work offered is, for the purpose intended, at least the equivalent of that prescribed by this chapter in effectiveness, suitability, strength, durability and safety. The City Engineer shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use. The details of any action granting approval of an alternate shall be recorded and entered in the City files.

Applicant's Response:
Alternative materials, design, or construction methods are not expected; however, final design and construction plan preparation will follow the masterplan land-use review process. In the event alternative materials, design or construction methods are proposed, the applicant (or each of the individual parcels) will follow the city's process for approving same.

13.12.110 - Transfer of engineering responsibility.
Project drainage plans shall always have a project engineer. If the project engineer is changed during the course of the work, the City shall be notified in writing and the work shall be stopped until the replacement engineer has agreed to accept the responsibilities of the project engineer. The new project engineer shall provide written notice of accepting project responsibility to the City within seventy-two hours of accepting the position as project engineer.

Applicant's Response:
The applicant acknowledges the applicability of this section.

13.12.120 - Standard construction specifications.
The workmanship and materials shall be in accordance with the current edition of the "Standard Specifications for Public Works Construction," as prepared by the Oregon Chapter of American Public Works Association (APWA) and as modified and adopted by the City, in effect at the time of application. The exception to this requirement is where this chapter and the Public Works Stormwater and Grading Design Standards provide other design details, in which case the requirements of this chapter and the Public Works Stormwater and Grading Design Standards shall be complied with.

Applicant's Response:
The applicant acknowledges the applicability of this section.

13.12.140 - Maintenance of public stormwater facilities.

A. A stormwater facility that receives stormwater runoff from a public right-of-way shall be a public facility. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those public stormwater facilities. Access for maintenance of the stormwater facilities shall be provided to the City through the granting of a stormwater easement or other means acceptable to the City.

Applicant's Response:
The applicant acknowledges the applicability of this section.

B. Responsibility for maintenance of stormwater facilities including all landscaping, irrigation systems, structures and appurtenances shall remain with the property owner/developer for two years (known as the warranty period). The owner/developer shall provide the City a separate two-year landscaping maintenance surety bond for one hundred ten percent of the landscaping cost. Transfer of maintenance of stormwater conveyance systems shall occur when the City accepts the stormwater conveyance system.

Applicant's Response:
The applicant acknowledges the applicability of this section.

C. The City will perform an inspection of the development's entire publicly maintained stormwater system approximately forty-five days before the two-year warranty period expires. The stormwater system shall be found to be in a clean, functional condition by the City engineer before acceptance of maintenance responsibility by the City.

Applicant's Response:
The applicant acknowledges the applicability of this section.

13.12.145 - Maintenance of private stormwater facilities.

A. An applicant shall submit an operation and maintenance plan for each proposed stormwater facilities, unless exempted in the Public Works Stormwater and Grading Design Standards. The information in the operation and maintenance plan shall satisfy the requirements of the Public Works Stormwater and Grading Design Standards.

B. Private owners are required to inspect and maintain stormwater facilities on their property in accordance with an approved operation and maintenance plan. A maintenance log is required to document facility inspections and specific maintenance activities. The log shall be available to City inspection staff upon request.

C. Failure to operate or maintain a stormwater facility according to the operation and maintenance plan may result in an enforcement action under Section 13.12.150.

Applicant's Response:
The proposed stormwater management facility serves Parcels A, B, and the proposed public street. This facility is a public facility. Parcel D will provide their own private stormwater management

facility within Parcel D and will be required to comply with the criterion in this section. The proposed Masterplan DDP Preliminary Grading and Drainage Plan, Sht DDP-C2.0 shows a separate storm bypass line stubbed to Parcel D that connects to the proposed storm line downstream of the public stormwater management facility.

13.12.170 - Permits from other jurisdictions.

A. The Oregon State Department of Environmental Quality (DEQ) currently issues NPDES 1200-C permits for projects that cover areas of one acre or greater. No permit shall be issued for projects of this size (or any other size as modified by DEQ) without a copy of said DEQ permit being on file with Oregon City. DEQ is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DEQ representatives.

Applicant's Response:
The applicant acknowledges the applicability of this section. Application for NPDES 1200-C permit approval will be part of the projects detailed construction plan preparation.

B. Projects may require Oregon State Division of State Lands (DSL) and/or United States Army Corps of Engineers (USACE) permits. If such permits are required, no permission to construct will be granted until such a time as a copy of such permit is on file with the City or notice is received from those agencies that a permit is not required. DSL/USACE is responsible for enforcing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate DSL/USACE representatives.

Applicant's Response:
The proposed project does not impact any wetlands or Waters of the State and no ODSL or Corps of Engineers permits are expected.

C. Projects may require Oregon State Department of Fish and Wildlife (ODFW) permits. When ODFW permits are required, no work will be authorized until the receipt of a copy of the ODFW permit. ODFW is responsible for policing its own permits; however, if City personnel observe conditions that are believed to be in violation of any such permit, and cannot get corrections made, the City will bring such conditions to the attention of the appropriate ODFW representatives.

Applicant's Response:
The proposed project does not include any activity needing ODFW permits.

CHAPTER 15.48 GRADING, FILLING AND EXCAVATING

15.48.030 Applicability—Grading permit required.

A. A city-issued grading permit shall be required before the commencement of any of the following filling or grading activities:

1. Grading activities in excess of ten cubic yards of earth;

2. Grading activities which may result in the diversion of existing drainage courses, both natural and man-made, from their natural point of entry or exit from the grading site;

3. Grading and paving activities resulting in the creation of impervious surfaces greater than two thousand square feet or more in area;

4. Any excavation beyond the limits of a basement or footing excavation, having an unsupported soil height greater than five feet after the completion of such a structure; or

5. Grading activities involving the clearing or disturbance of one-half acres (twenty-one thousand seven hundred eighty square feet) or more of land.

Applicant's Response:
The applicant acknowledges the applicability of this chapter.

15.48.040 - Grading permit exemptions.

The following filling and grading activities shall not require the issuance of a grading permit:

A. Excavation for utilities, or for wells or tunnels allowed under separate permit by other governmental agencies;

B. An excavation below finished grade for basements and footings of a building, retaining wall or other structure authorized by a valid building permit. The placement of any fill material removed from such an excavation requires a grading permit if:

1. It exceeds fifty cubic yards,

2. More than ten cubic yards are removed from the site, or

3. The fill is placed on the site to a depth greater than one foot;

C. Farming practices as defined in ORS 30.930 and farm uses as defined in ORS 215.203, except that buildings associated with farm practices and farm uses are subject to the requirements of this chapter;

D. Excavation for cemetery graves;

E. Sandbagging, diking, ditching, filling or similar work when done to protect life or property during an emergency;

F. Repaving of existing paved surfaces that does not alter existing drainage patterns;

G. Maintenance work on public roads performed under the direction of the city, Clackamas County or Oregon State Department of Transportation personnel.

Applicant's Response:
The applicant acknowledges the need for a grading permit and is not seeking an exemption for proposed Detailed Development Plan rough grading operations.

15.48.090 Submittal requirements.

An engineered grading plan or an abbreviated grading plan shall be prepared in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards whenever a city approved grading permit is required. In addition, a geotechnical engineering report and/or residential lot grading plan may be required pursuant to the criteria listed below.

A. Abbreviated Grading Plan. The city shall allow the applicant to submit an abbreviated grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards if the following criteria are met:

1. No portion of the proposed site is within the flood management area overlay district pursuant to Chapter 17.42, the unstable soils and hillside constraints overlay district pursuant to Chapter 17.44, or a water quality resource area pursuant to Chapter 17.49; and

2. The proposed filling or grading activity does not involve more than fifty cubic yards of earth.

B. Engineered Grading Plan. The city shall require an engineered grading plan in compliance with the submittal requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer if the proposed activities do not qualify for abbreviated grading plan.

C. Geotechnical Engineering Report. The city shall require a geotechnical engineering report in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer who specializes in geotechnical work when any of the following site conditions may exist in the development area:

1. When any publicly maintained facility (structure, street, pond, utility, park, etc.) will be supported by any engineered fill;

2. When an embankment for a stormwater pond is created by the placement of fill;

3. When, by excavation, the soils remaining in place are greater than three feet high and less than twenty feet wide.

D .Residential Lot Grading Plan. The city shall require a residential lot grading plan in compliance with the minimum report requirements of the Public Works Stormwater and Grading Design Standards to be prepared by a professional engineer for all land divisions creating new residential building lots or where a public improvement project is required to provide access to an existing residential lot.

Applicant's Response:

Please see the Detailed Development Plan Shts DDP-C0.1 through C3.0 for planning level plans that will form the basis of formal construction plans for the proposed grading permit. Final construction Permit plans will utilize these preliminary plans as a basis for our detailed construction plan submittal following the project's Masterplan GDP/DDP decision.

Please see the geotechnical report prepared by Terracon, dated September 22, 2022, in Appendix G. Cypress Equities has acquired the geotechnical report from a previous development application by the Wolff Company LLC and has coordinated with Terracon for a formal update to accompany the proposed construction plans for proposed DDP rough grading. Based on Cypress' coordination with

Terracon, the recommendations for Cypress will be the same as with Wolff (which were the same as previous development attempts on the project). The report includes a description of site conditions, prior geotechnical reports, engineering geology update, seismic considerations, slope stability, geotechnical overview, earthworks, shallow foundations, floor slabs, lateral earth pressures, soldier pile walls, and pavements.

Key recommendations of the geotechnical report include a 35-foot geologic hazard setback from the top of the steep slope as well as specific retaining wall recommendations addressing slope stability vs historical landslides. The geologic hazard setback is included on the proposed GDP and DDP plans. The retaining walls mentioned in the report will be a part of the DDP and construction plans for Parcel B following the current GDP/DDP application.

CHAPTER 16.08 LAND DIVISIONS PROCESS AND STANDARDS

16.08.010 Purpose and general provisions.

A. Applicability. This chapter controls the process and approval standards applicable to land divisions including:

1. Partitions, defined as a single division of land into two or three lots,
2. Subdivisions, defined as a single division of land into four or more lots,
3. Master plans and planned unit developments,
4. Expedited land divisions, and/or
5. Middle housing land divisions.

B. Approval of a land division shall be granted only upon determination by the city that all applicable requirements of this title, ORS Chapter 92, the applicable zoning designation, applicable overlay districts, and OCMC 12.08, 13.12, 15.48, 16.12, 17.41, and 17.50 of the Oregon City Municipal Code are met or can be met with conditions of approval.

C. Minor partitions and subdivisions shall generally follow a Type II process and master plans/planned unit developments shall be processed as a Type III process pursuant to OCMC 17.50. However, if an applicant opts to process a subdivision as an expedited land division or middle housing land division, the city shall follow the decision-making process provided by state law and apply the applicable approval standards set forth in this code and elsewhere.

D. Purpose. The purpose of this chapter is to provide a speedy review and decision-making process with relatively clear and objective criteria indicating little discretion, with little opportunity to deviate from the city's dimensional standards. If an applicant wishes greater flexibility in lot pattern or layout, phasing of development, or relief from dimensional or public improvement standards, the appropriate procedure would be a master plan/planned unit development pursuant to OCMC 17.65 or an additional application for a variance(s) pursuant to OCMC 17.60.

E. Process Overview. Land division review process requires a two-step process: preliminary and final plats. The preliminary plat, reviewed through a Type II process, provides all of the essential information about the proposal, including layout, number and pattern of lots, location of all existing structures and improvements, significant natural features, development schedule and any other required information. The final plat shall be processed as identified in OCMC 16.08.100.

Applicant's Response:

The project proposes a Property Line Adjustment, which is governed by OCMC 16.20. OCMC 16.08 is not applicable to the proposed project. Please see our responses to OCMC 16.20. The main subject property consists of three legal lots. One of the parcels (likely Parcel B) can include the proposed public street and dedicate the proposed public street by deed. The applicant understands the Property Line Adjustment will occur as a separate Type I application and can be completed prior to DDP submittal of Parcels A, B, and D.

CHAPTER 16.12 MINIMUM PUBLIC IMPROVEMENTS AND DESIGN STANDARDS FOR DEVELOPMENT

16.12.010 - Purpose and general provisions.

All development shall be in conformance with the policies and design standards established by this chapter and with applicable standards in the City's public facility master plans and City design standards and specifications. In reviewing applications for development, the City Engineer shall take into consideration any approved development and the remaining development potential of adjacent properties. All street, water, sanitary sewer, storm drainage and utility plans associated with any development shall be reviewed and approved by the City Engineer prior to construction. All streets, driveways or storm drainage connections to another jurisdiction's facility or right-of-way shall be reviewed by the appropriate jurisdiction as a condition of the preliminary plat and when required by law or intergovernmental agreement shall be approved by the appropriate jurisdiction.

Applicant's Response:
The applicant acknowledges the purpose and general provisions of this chapter.

16.12.011 - Applicability.

A. Compliance with this chapter is required for all development including land divisions, site plan and design review, master plan, detailed development plan and conditional use applications and all public improvements. Minor Site Plan and Design Review applications shall not be subject to this chapter unless improvements are proposed within the right-of-way, or as otherwise provided in this chapter.

B. Compliance with this chapter is also required for new construction or additions which exceed fifty percent of the existing square footage of all 3-4 plexes, single and two-family dwellings living space. Garages, carports, sheds, and porches may not be included in the calculation if these spaces are not living spaces. Accessory dwelling units are not subject to compliance with this chapter. All applicable 3-4 plexes, single and two -family dwellings shall provide any necessary dedications, easements or agreements as identified in the transportation system plan and this chapter, subject to constitutional limitations. In addition, the street frontage shall be improved to include the following priorities for improvements:

1. *Improve street pavement, construct curbs, gutters, sidewalks and planter strips; and*
2. *Plant street trees.*

The cost of compliance with the standards identified in 16.12.011.B.1 and 16.12.011.B.2 is calculated based on the square footage valuation from the State of Oregon Building Codes Division and limited to ten percent of the total construction costs. The value of the alterations and improvements is based on the total construction costs for a complete project rather than costs of various project component parts subject to individual building permits. The entire proposed construction project cost includes engineering and consulting fees and construction costs. It does not include permit fees, recording fees, or any work associated with drafting or recording dedications or easements.

Applicant's Response:
The applicant acknowledges the applicability of this chapter.

16.12.012 - Jurisdiction and management of the public rights-of-way.

The City has jurisdiction and exercises regulatory management over all public rights-of-way as defined and outlined within 12.04 of the Oregon City Municipal Code.

Applicant's Response:
The applicant acknowledges the applicability of this section.

16.12.013 - Modifications.
The applicant may request and the review body may consider modification of the standards in this chapter resulting from constitutional limitations restricting the City's ability to require the dedication of property or for any other reason, based upon the criteria listed below and other criteria identified in the standard to be modified. All modifications, except for adjustments approved by the City Engineer for tree preservation purposes pursuant to 16.12.013.A, shall be processed through a Type II Land Use application and may require additional evidence from a transportation engineer or others to verify compliance. Compliance with the following criteria is required:

Applicant's Response:
The project seeks the following street design modifications:

Street Modification #1 - Allow elimination of on-street parking for proposed streets.

A. The modification meets the intent of the standard;

Applicant's Response:
The intent of on-street parking is to provide additional parking for adjacent uses. With this proposed masterplan, each parcel provides adequate parking within their respective parcels and additional on-street parking is not necessary within the site. The site is geometrically limited in its configuration with a relatively narrow north-south dimension. As such, finding uses that will fit within each parcel while still providing the development density to justify the development expense has been challenging. On-street parking widens the roadway by eight feet on each side of the road for a total of sixteen feet. However, for the east-west section along the south side of Parcel D, the impact is a sixteen-foot reduction in north-south dimension because the entire parking width impact would be taken from Parcel D and not shared with another parcel and would reduce the total unit count to the point where multi-family development of Parcel B is not financially viable given the expense of remaining public infrastructure costs. An eight-foot reduction in the north-south direction for Parcel A results in the loss of an entire row of parking and precludes the proposed tenant's interest in the site. Based on our communication with Public Works, we understand Public Works is not supportive of on-street parking for this section of roadway.

On-street parking for the Beavercreek Access through TL 500 from the southeast corner of the site down to the existing Beavercreek Rd signal is not proposed, nor is it recommended. The available right-of-way across TL 500 was established by agreement between the two underlying property owners and the Cypress does not have the ability to alter that alignment. Parking along the

Beavercreek Access through TL 500 would be located away from direct view by either Beavercreek Rd or Molalla Ave and could serve as an opportunity for derelict vehicle abandonment or transient encampment, which presents a potential public safety concern. Based on our communication with Public Works, we understand Public Works is not supportive of on-street parking for this section of roadway.

B. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Applicant's Response:
The response to this modification criterion is similar to Modification #1 but focuses on specific modes of transportation. Impacts of on-street parking relative to vehicular movement of the project's proposed street system involve similar arguments as Modification #1 and are made by reference in this response. On-street parking could have a negative effect on bike and pedestrian movements crossing the proposed street, since parked cars – especially on curves – can hide pedestrians or bicyclists crossing the street at unmarked locations. Avoiding on-street parking reduces the potential vehicle/bike/ped crossing conflict.

C. The modification is consistent with an adopted transportation or utility plan; and

Applicant's Response:
The Transportation System Plan does not identify a collector street through this site or through TL 500. Public Works indicated the proposed street could be a local street in their pre-application conference notes and later changed this to a requirement that the proposed street be a collector street. The applicant objects to this determination but has been able to accommodate the geometry associated with a collector street, subject to these modification requests.

Elimination of on-street parking does not negatively impact the Beavercreek Access Management Plan as access is still proposed for properties south of the subject property, and elimination of on-street parking better accommodates future unknown access locations for these same properties.

Other adopted transportation or utility plans are unaffected by the requested elimination of on-street parking.

D. The modification is complementary with a surrounding street design; or, in the alternative;

Applicant's Response:
The proposed elimination of on-street parking compliments and is compatible with the surrounding street system. The existing large-scale shopping center street design on the west side of the existing Molalla Ave signal consists of a three-lane section for approximately one hundred fifteen (115) feet before encountering a driveway access and does not include on-street parking at all.

The existing large-scale shopping center street design on the south side of the existing Beavercreek Road signal consists of a three-lane section for approximately sixty-four (64) feet before narrowing in width to a two-lane section at the crosswalk within the shopping center and approximately eighty-four (84) feet before encountering a driveway access. This access does not provide any on-street parking. The continuation of this access transitions into a parking lot.

E. If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Applicant's Response:
The applicant does not seek a modification for constitutional reasons.

<u>Street Modification #2 - Allow reduction in number of travel lanes.</u>
The proposed street includes a center left turn lane from Molalla Ave through Parcels A and D and the west driveway of Parcel B, transitioning to two lanes east of the Parcel D southeasterly driveway. This lane modification request applies to the portion of the proposed road east of the Parcel D southeasterly driveway.

A. The modification meets the intent of the standard;

Applicant's Response:
Collector streets include a center left turn lane to help facilitate turning movements into driveways and side streets without impacting the through-traffic on the collector street. While the applicant believes the proposed street is a local street consistent with Public Works initial pre-application conference feedback, Public Works is considering the proposed street as a collector street, resulting in this request for a modification to the street standards. The two-lane portion of the proposed street east of the Parcel D southeasterly driveway is proposed due to the lack of need for a center left turn lane beyond this point. As identified in the project's Traffic Impact Analysis, Appendix D: Left Turn Lane Warrant, a center left turn lane is not warranted for the remainder of the proposed public street east of the Parcel D southeasterly driveway (please see the TIA our Appendix H. Accordingly, operational standards of the proposed street can be met without a center left turn lane as proposed.

B. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Applicant's Response:
Collector streets include a center left turn lane to help facilitate turning movements into driveways and side streets without impacting the through-traffic on the collector street. While the applicant believes the proposed street is a local street consistent with Public Works initial pre-application conference feedback, Public Works is considering the proposed street as a collector street, resulting in this request for a modification to the street standards. The two-lane portion of

the proposed street east of the Parcel D southeasterly driveway is proposed due to the lack of need for a center left turn lane beyond this point. As identified in the project's Traffic Impact Analysis, Appendix D: Left Turn Lane Warrant, a center left turn lane is not warranted for the remainder of the proposed public street east of the Parcel D southeasterly driveway. Accordingly, operational and safety standards of the proposed street can be met without a center left turn lane as proposed.

C. The modification is consistent with an adopted transportation or utility plan; and

Applicant's Response:
The Transportation System Plan does not identify a collector street through this site or through TL 500. Public Works indicated the proposed street could be a local street in their pre-application conference notes and later changed this to a requirement that the proposed street be a collector street. The applicant objects to this determination but has been able to accommodate the geometry associated with a collector street, subject to these modification requests. As proposed, the proposed public street geometry exceeds that required by the adopted TSP.

The Beavercreek Access Management Plan does not identify a need for a center left turn lane within the plan, and elimination of the above-referenced section of center left turn lane does not conflict with this Plan. If more intensive uses are established in the future for adjacent properties, the street can be widened within their respective properties to satisfy any left turn lane warrants that may be necessary by virtue of a future, more intensive use.

Other adopted transportation or utility plans are unaffected by the requested elimination of a portion of the center left turn lane.

D. The modification is complementary with a surrounding street design; or, in the alternative;

Applicant's Response:
Surrounding streets also do not include a center left turn lane unless side traffic warrants a turn lane. As identified in the project's Traffic Impact Analysis, Appendix D: Left Turn Lane Warrant, a center left turn lane is not warranted for the remainder of the proposed public street east of the Parcel D southeasterly driveway.

E. If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Applicant's Response:
The applicant does not seek a modification for constitutional reasons.

Street Modification #3 – Sidewalk Location

The proposed street includes a connection from the main subject property south to the existing Beavercreek Rd signal. This street alignment and width has been set by prior agreement between TL 500 and the site's underlying property owner and the applicant does not have the ability to obtain additional right-of-way to accommodate sidewalks on both sides of this street. Based on coordination with Public Works, the project proposes to provide a 10.5' combined sidewalk/bike path on the east side of the road and place street trees behind the sidewalk where space allows instead of in tree grates within the pathway. Some street trees are proposed on the west side of this road where space allows. This modification request seeks approval for this sidewalk location.

A. The modification meets the intent of the standard;

Applicant's Response:
The intent of the standard requiring sidewalks on both sides of the street is to provide pedestrian connectivity for properties on each side of the street. Future development of TL 500 can provide sidewalks on the east side of the proposed street along with future development of that property. The proposed combined sidewalk/bike path on the east side of the street allows both pedestrians and bicyclists to safely travel this corridor and does not preclude additional sidewalk on the east side of the street in the future.

B. The modification provides safe and efficient movement of pedestrians, motor vehicles, bicyclists and freight;

Applicant's Response:
The intent of the standard requiring sidewalks on both sides of the street is to provide pedestrian connectivity for properties on each side of the street. Future development of TL 500 can provide sidewalks on the east side of the proposed street along with future development of that property. The proposed combine sidewalk/bike path on the east side of the street allows both pedestrians and bicyclists to safely travel this corridor and does not preclude additional sidewalk on the east side of the street in the future.

C. The modification is consistent with an adopted transportation or utility plan; and

Applicant's Response:
The proposed sidewalk/bike path on the east side of the street aligns with the Transportation System Plan pedestrian/bicycle pathway project S28 through this area.

D. The modification is complementary with a surrounding street design; or, in the alternative;

Applicant's Response:
Surrounding streets do not all have wide sidewalks as is proposed with the project's DDP package. With the opportunity to provide a future sidewalk on the east side of the street the entire street system will exceed the widths of pedestrian facilities in the vicinity.

E. If a modification is requested for constitutional reasons, the applicant shall demonstrate the constitutional provision or provisions to be avoided by the modification and propose a modification that complies with the state or federal constitution. The City shall be under no obligation to grant a modification in excess of that which is necessary to meet its constitutional obligations.

Applicant's Response:
The applicant does not seek a modification for constitutional reasons.

16.12.015 - Street design—Generally.
Development shall be required to provide existing or future connections to adjacent sites through the use of vehicular and pedestrian access easements where applicable. Development shall provide any necessary dedications, easements or agreements as identified in the Transportation System Plan, Trails Master Plan, and/or Parks and Recreation Master Plan and this chapter, subject to constitutional limitations. The location, width and grade of street shall be considered in relation to: existing and planned streets, topographical conditions, public convenience and safety for all modes of travel, existing and identified future transit routes and pedestrian/bicycle accessways, overlay districts, and the proposed use of land to be served by the streets. The street system shall assure an adequate traffic circulation system with intersection angles, grades, tangents and curves appropriate for the traffic to be carried considering the terrain. To the extent possible, proposed streets shall connect to all existing or approved stub streets that abut the development site. The arrangement of streets shall either:

A. Provide for the continuation or appropriate projection of existing principal streets in the surrounding area and on adjacent parcels or conform to a plan for the area approved or adopted by the City to meet a particular situation where topographical or other conditions make continuance or conformance to existing streets impractical;

B. Where necessary to give access to or permit a satisfactory future development of adjoining land, streets shall be extended to the boundary of the development and the resulting dead-end street (stub) may be approved with a temporary turnaround as approved by the City Engineer. Notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. Access control in accordance with OCMC 16.12.017 shall be required to preserve the objectives of street extensions.

C. Adequate right-of-way and improvements to streets, pedestrian ways, bike routes and bikeways, and transit facilities shall be provided and be consistent with the City's Transportation System Plan. Consideration shall be given to the need for street widening and other improvements in the area of the proposed development impacted by traffic generated by the proposed development. This shall include, but not be limited to, improvements to the right-of-way, such as installation of lighting, signalization, turn lanes, median and parking strips, traffic islands, paving, curbs and gutters, sidewalks, bikeways, street drainage facilities and other facilities needed because of anticipated vehicular and pedestrian traffic generation.

Applicant's Response:
The project proposes a new public street connecting Molalla Ave with Beavercreek Rd. The project also proposes a pedestrian pathway within the Geologic Hazard setback area to provide a pedestrian trail system along the top of the bluff above Newell Creek Canyon. This trail extends to the vicinity of the project's northeast corner, where it can be extended by others in the future.

16.12.016 - Street design.
All development regulated by this chapter shall provide street improvements in compliance with the standards in Table 16.12.016 depending on the street classification set forth in the Transportation System Plan and the Comprehensive Plan designation of the adjacent property, unless an alternative plan has been adopted. The table implements the adopted Transportation System Plan and illustrates the maximum design standards. These standards may be reduced with an alternative street design which may be approved based on the modification criteria in OCMC 16.12.013. The steps for reducing the street design are found in the Transportation System Plan.

Applicant's Response:
The Transportation System Plan does not identify a collector street through this site or through TL 500. Public Works indicated the proposed street could be a local street in their pre-application conference notes and later changed this to a requirement that the proposed street be a collector street. The applicant objects to this determination but has been able to accommodate the geometry associated with a collector street, subject to the enclosed modification requests in our response to OCMC 16.12.013.

Table 16.12.016 Street Design
Table 16.12.016 Street Design. To read the table select the road classification as identified in the Transportation System Plan and the Comprehensive Plan designation of the adjacent properties to find the maximum design standards for the road cross section. If the Comprehensive Plan designation for lands on either side of the street differs, the wider right-of-way standard shall apply.

Road Classification	***Comprehensive Plan Designation***	***Right-of-Way Width***	***Pavement Width***	***Public Access***	***Sidewalk***	***Landscape Strip***	***Bike Lane***	***Street Parking***	***Travel Lanes***	***Median***
Major Arterial	*Mixed Use, Commercial or Public/Quasi Public*	*116 ft.*	*94 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
	Industrial	*120 ft.*	*88 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*N/A*	*(5) 14 ft. Lanes*	*6 ft.*
	Residential	*126 ft.*	*94 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*

Road Classification	***Comprehensive Plan Designation***	***Right-of-Way Width***	***Pavement Width***	***Public Access***	***Sidewalk***	***Landscape Strip***	***Bike Lane***	***Street Parking***	***Travel Lanes***	***Median***
Minor Arterial	*Mixed Use, Commercial or Public/Quasi Public*	*116 ft.*	*94 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(5) 12 ft. Lanes*	*6 ft.*
	Industrial	*118 ft.*	*86 ft.*	*0.5 ft.*	*5 ft.*	*10.5 ft.*	*6 ft.*	*7 ft.*	*(5) 12 ft. Lanes*	*N/A*

Road Classification	***Comprehensive Plan Designation***	***Right-of-Way Width***	***Pavement Width***	***Public Access***	***Sidewalk***	***Landscape Strip***	***Bike Lane***	***Street Parking***	***Travel Lanes***	***Median***
Collector	*Mixed Use, Commercial or Public/Quasi Public*	*86 ft.*	*64 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(3) 12 ft. Lanes*	*N/A*
	Industrial	*88 ft.*	*62 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 12 ft. Lanes*	*N/A*
	Residential	*85 ft.*	*59 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 11 ft. Lanes*	*N/A*

Road Classification	***Comprehensive Plan Designation***	***Right-of-Way Width***	***Pavement Width***	***Public Access***	***Sidewalk***	***Landscape Strip***	***Bike Lane***	***Street Parking***	***Travel Lanes***	***Median***
Collector	*Mixed Use, Commercial or Public/Quasi Public*	*86 ft.*	*64 ft.*	*0.5 ft.*	*10.5 ft. sidewalk including 5 ft. x 5 ft. tree wells*		*6 ft.*	*8 ft.*	*(3) 12 ft. Lanes*	*N/A*

	Industrial	*88 ft.*	*62 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 12 ft. Lanes*	*N/A*
	Residential	*85 ft.*	*59 ft.*	*0.5 ft.*	*5 ft.*	*7.5 ft.*	*6 ft.*	*7 ft.*	*(3) 11 ft. Lanes*	*N/A*

1. Pavement width includes, bike lane, street parking, travel lanes and median.
2. Public access, sidewalks, landscape strips, bike lanes and on-street parking are required on both sides of the street in all designations. The right-of-way width and pavement widths identified above include the total street section.
3. A 0.5 foot curb is included in landscape strip or sidewalk width.
4. Travel lanes may be through lanes or turn lanes.
5. The 0.5 foot public access provides access to adjacent public improvements.
6. Alleys shall have a minimum right-of-way width of twenty feet and a minimum pavement width of sixteen feet. If alleys are provided, garage access shall be provided from the alley.
7. A raised concrete median or landscape median shall be utilized for roads identified to have access restrictions.

Applicant's Response:
The Transportation System Plan does not identify a collector street through this site or through TL 500. Public Works indicated the proposed street could be a local street in their pre-application conference notes and later changed this to a requirement that the proposed street be a collector street. The applicant objects to this determination but has been able to accommodate the geometry associated with a collector street, subject to the enclosed modification requests in our response to OCMC 16.12.013.

A. Sidewalks. The applicant shall provide for sidewalks on both sides of all public streets, on any private street if so required by the decision-maker, and in any special pedestrian way within the development. Both sidewalks and curbs are to be constructed to City standards and at widths set forth above, and according to plans and specifications provided by the City Engineer. Exceptions to this requirement may be allowed in order to accommodate topography, trees or some similar site constraint. In the case of major or minor arterials, the decision-maker may approve a development without sidewalks where sidewalks are found to be dangerous or otherwise impractical to construct or are not reasonably related to the applicant's development. The decision-maker may require the applicant to provide sidewalks concurrent with the issuance of the initial building permit within the area that is the subject of the development application. Applicants for partitions may be allowed to meet this requirement by providing the City with a financial guarantee per OCMC 16.12.110.

Applicant's Response:
The proposed public street includes sidewalks on both sides of the street except the portion of the street through TL500. Please see our request for Street Modification #3, above.

B. Pedestrian and Bicycle Accessways Routes. If deemed appropriate to extend pedestrian and bicycle routes, existing or planned, the decision-maker may require the installation of separate pedestrian and bicycle facilities.

Applicant's Response:
The proposed street system includes bike lanes on the proposed street within the main subject property and includes a combined pedestrian/bike path on the east side of the proposed public access road from the site to Beavercreek Rd.

C. Street Name Signs and Traffic Control Devices. The applicant shall install street signs and traffic control devices as directed by the City Engineer. Street name signs and traffic control devices shall be in conformance with all applicable city regulations and standards.

Applicant's Response:
The applicant will provide applicable street name signs and traffic control devices as coordinated with Public Works through the construction plan permitting process.

D. Street Lights. The applicant shall install street lights which shall be served from an underground source of supply. Street lights shall be in conformance with all City regulations.

Applicant's Response:
The proposed street plan includes streetlights along Molalla Ave and the proposed public street. Streetlights along Molalla Ave will be decorative in nature, consistent with the city's street lighting plan. Please see Shts DDP-C1.2, C1.3, C1.4, and L2.0.

E. Any new street proposed with a pavement width of less than thirty-two feet shall be processed through OCMC 16.12.013 and meet minimum life safety requirements, which may include fire suppression devices as determined by the Fire Marshall to assure an adequate level of fire and life safety. The modified street shall have no less than a twenty-foot wide unobstructed travel lane.

Applicant's Response:
The minimum width of the proposed public street is 36 feet. Please see Shts DDP-C1.2, C1.3, and C1.4.

F. All development shall include vegetated planter strips that are five feet in width or larger and located between the sidewalk and curb unless otherwise approved pursuant to this chapter. All development shall utilize the vegetated planter strip for the placement of street trees or place street trees in other acceptable locations, as prescribed by OCMC 12.08. Development proposed along a collector, minor arterial, or major arterial roads may place street trees within tree wells within a wider sidewalk in lieu of a planter strip. In addition to street trees per OCMC 12.08, vegetated planter strips shall include ground cover and/or shrubs spaced four feet apart and appropriate for the location. No invasive or nuisance plant species shall be permitted.

Applicant's Response:
The proposed public street includes 10.5' wide sidewalks with street trees in tree wells/grates along both sides of the street within the main development site and a 10.5' wide combined sidewalk/bike

path on the east side of the road through TL 500 with street trees placed behind the sidewalk where space allows instead of in tree grates within the pathway. Some street trees are proposed on the west side of this road where space allows. Please see Shts DDP-C1.2, C1.3, and C1.4.

G. Vehicle and pedestrian access easements may serve in lieu of streets when approved by the decision maker and only where dedication of a street is deemed impracticable.

Applicant's Response:
This application includes public streets and will include right-of-way dedication.

H. Vehicular and pedestrian easements shall allow for public access and shall comply with all applicable pedestrian access requirements.

Applicant's Response:
This application includes public streets and will include right-of-way dedication. The project also proposes a pedestrian pathway within the Geologic Hazard setback area to provide a pedestrian trail system along the top of the bluff above Newell Creek Canyon. This trail extends to the vicinity of the project's northeast corner, where it can be extended by others in the future.

16.12.017 - Street design—Access control.
A. A street which is dedicated to end at the boundary of the development or in the case of half-streets dedicated along a boundary shall have an access control granted to the City as a City controlled plat restriction for the purposes of controlling ingress and egress to the property adjacent to the end of the dedicated street. The access control restriction shall exist until such time as a public street is created, by dedication and accepted, extending the street to the adjacent property.

Applicant's Response:
The proposed project does not include a street stub for future extension. Instead, this project completes street improvements as described herein and include right-of-way that adjoins the project's an extended portion of the project's south property line so that specific access control is not necessary beyond what the city inherently possesses with a public street.

B. The City may grant a permit for the adjoining owner to access through the access control.

Applicant's Response:
The applicant acknowledges the city's ability to control access to the new public street.

C. The plat shall contain the following access control language or similar on the face of the map at the end of each street for which access control is required: "Access Control (See plat restrictions)."

Applicant's Response:
The proposed project does not include a street stub for future extension. Instead, this project completes street improvements as described herein and include right-of-way that adjoins the project's an extended portion of the project's south property line so that specific access control is not

necessary beyond what the city inherently possesses with a public street. Additionally, the project does not contemplate the need for a subdivision plat, so such a statement is not necessary.
D. Said plats shall also contain the following plat restriction note(s): "Access to (name of street or tract) from adjoining tracts (name of deed document number[s]) shall be controlled by the City of Oregon City by the recording of this plat, as shown. These access controls shall be automatically terminated upon the acceptance of a public road dedication or the recording of a plat extending the street to adjacent property that would access through those Access Controls."

Applicant's Response:
The proposed project does not include a street stub for future extension. Instead, this project completes street improvements as described herein and include right-of-way that adjoins the project's an extended portion of the project's south property line so that specific access control is not necessary beyond what the city inherently possesses with a public street. Additionally, the project does not contemplate the need for a subdivision plat, so such a statement is not necessary.

16.12.018 - Street design—Alignment.
The centerline of streets shall be:
A. Aligned with existing streets by continuation of the centerlines; or
B. Offset from the centerline by no more than five feet, provided appropriate mitigation, in the judgment of the City Engineer, is provided to ensure that the offset intersection will not pose a safety hazard.
C. Driveways that are at least twenty-four feet wide shall align with existing or planned streets on adjacent sites.

Applicant's Response:
The centerline of the proposed public street intersects Molalla Ave at the existing signal and aligns with traffic lanes on the west side of the intersection within the standards identified in this section (3.7' offset).

The centerline of the proposed public street intersects Beavercreek Rd at the existing signal at an angle of 83.7° with an offset from corresponding traffic lanes on the south side of the intersection within the standards identified in this section (2.4' offset).

16.12.019 - Traffic sight obstructions.
All new streets shall comply with the Traffic Sight Obstructions in Chapter 10.32.

Applicant's Response:
The proposed public street connects at existing signalized intersections at each end of the street. Both streets are 30 mph streets, requiring 300' of corner sight distance per the Corner Sight Distance Table in OCMC 10.32.020. Both signalized intersections have corner sight distance in excess of 300' from the proposed public street to oncoming vehicles from the left.

16.12.020 - Street design—Intersection angles.
Except where topography requires a lesser angle, streets shall be laid out to intersect at angles as near as possible to right angles. In no case shall the acute angles be less than eighty degrees unless there is a special intersection design. An arterial or collector street intersecting with another street shall have at

least one hundred feet of tangent adjacent to the intersection unless topography requires a lesser distance. Other streets, except alleys, shall have at least fifty feet of tangent adjacent to the intersection unless topography requires a lesser distance. All street intersections shall be provided with a minimum curb return radius of twenty-five feet for local streets. Larger radii shall be required for higher street classifications as determined by the City Engineer. Additional right-of-way shall be required to accommodate curb returns and sidewalks at intersections. Ordinarily, intersections should not have more than two streets at any one point.

Applicant's Response:
The proposed public street intersects Molalla Ave at an angle of approximately 89.9° and intersects Beavercreek Rd at an angle of approximately 83.7°. Please see Shts DDP-C1.2 & DDP-C1.4.

Centerline tangent lengths are also shown on DDP-C1.0. the proposed public street connection at the existing Molalla Ave signal results in a tangent length less than the Collector street standard; however, this shortened tangent length is the result of the location of the existing signal, the existing 50' no-build easement at the northwest corner of the property, and the short north-south distance from the required Molalla Ave connection point to the north property line of the subject property. These three factors severely limit the development opportunity for Parcel A while still complying with other code elements that would conflict with a 100' centerline tangent length (determination that the proposed public street is a Collector street, pedestrian connection without crossing a drive aisle, etc.). topography and the required Molalla Ave connection point are key factors limiting the project's ability to maintain a 100' centerline tangent on the proposed public street. The 100' tangent requirement does not rise to the level of a formal modification request since the criterion includes language indicating a lesser distance could be acceptable due to topographical limits.

16.12.021 - Street design—Grades and curves.
Grades and center line radii shall conform to standards approved by the City Engineer.

Applicant's Response:
Please see Sht DDP-C1.0 for proposed street centerline information and Shts DDP-C1.3 and C1.4 for proposed street profiles. Street centerline radii are as shown on Sht DDP-C1.0. The street centerline radii comply with Street Design Standards City of Oregon City Table 3-2 with speed control as noted on Sht DDP-C1.0.

16.12.022 - Street design—Development abutting arterial or collector street.
Where development abuts or contains an existing or proposed arterial or collector street, the decision maker may require: access control; screen planting or wall contained in an easement or otherwise protected by a restrictive covenant in a form acceptable to the decision maker along the rear or side property line; or such other treatment it deems necessary to adequately protect residential properties or afford separation of through and local traffic. Reverse frontage lots with suitable depth may also be considered an option for residential property that has arterial frontage. Where access for development abuts and connects for vehicular access to another jurisdiction's facility then authorization by that jurisdiction may be required.

Applicant's Response:

Access to each of the parcels is made via the proposed driveways as shown od Sht DDP-C1.0. Access is not proposed from Molalla Ave.

16.12.023 - Street design—Pedestrian and bicycle safety.

Where deemed necessary to ensure public safety, reduce traffic hazards and promote the welfare of pedestrians, bicyclists and residents of the subject area, the decision maker may require that local streets be so designed as to discourage their use by nonlocal automobile traffic.

The City Engineer may require that crosswalks include a large vegetated or sidewalk area which extends into the street pavement as far as practicable to provide safer pedestrian crossing opportunities. These curb extensions can increase the visibility of pedestrians and provide a shorter crosswalk distance as well as encourage motorists to drive slower. The City Engineer may approve an alternative design that achieves the same standard for constrained sites.

Applicant's Response:

The proposed street design does not include on-street parking. Instead, bike lanes are proposed as coordinated with Public Works. Curb extensions are not proposed as providing them would impact the functionality of the proposed bike lanes. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28.

16.12.024 - Street design—Half street.

Half streets, while generally not acceptable, may be approved where essential to the development, when in conformance with all other applicable requirements, and where it will not create a safety hazard. When approving half streets, the decision maker shall first determine that it will be practical to require the dedication of the other half of the street when the adjoining property is divided or developed. Where the decision maker approves a half street, the applicant shall construct a half street with at least twenty feet of pavement width and provide signage prohibiting street parking so as to make the half street safe until such time as the other half is constructed. Whenever a half street is adjacent to property capable of being divided or developed, the other half of the street shall be provided and improved when that adjacent property divides or develops. Access control may be required to preserve the objectives of half streets.

When the remainder of an existing half-street improvement is completed it shall include the following items: dedication of required right-of-way, construction of the remaining portion of the street including pavement, curb and gutter, landscape strip, sidewalk, street trees, lighting and other improvements as required for that particular street. It shall also include at a minimum the pavement replacement to the centerline of the street. Any damage to the existing street shall be repaired in accordance with the City's "Pavement Cut Standards" or as approved by the City Engineer.

Applicant's Response:

The development does not propose half-street improvements.

16.12.025 - Street design—Cul-de-sacs and dead-end streets.

The City discourages the use of cul-de-sacs and permanent dead-end streets except where construction of a through street is found by the decision maker to be impracticable due to topography or some

significant physical constraint such as geologic hazards, wetland, natural or historic resource areas, pre-existing dedicated open space, pre-existing development patterns, arterial access restrictions or similar situation as determined by the decision maker. This section is not intended to preclude the use of curvilinear eyebrow widening of a street where needed.
A. When permitted, access from new cul-de-sacs and permanent dead-end streets shall be limited to a maximum of twenty-five dwelling units.

Applicant's Response:
The development does not propose a cul-de-sac or dead-end street.

B. Cul-de-sacs and permanent dead-end streets shall include pedestrian/bicycle accessways to meet minimum block width standards as prescribed in OCMC 16.12.030.

Applicant's Response:
The development does not propose a cul-de-sac or dead-end street.

C. Cul-de-sacs shall have sufficient radius to provide adequate turn-around for emergency vehicles in accordance with fire district and city adopted street standards.

Applicant's Response:
The development does not propose a cul-de-sac or dead-end street.

D. Permanent dead-end streets shall provide public street right-of-way/easements sufficient to provide a sufficient amount of turn-around space complete with appropriate no-parking signs or markings to accommodate waste disposal, sweepers, emergency and other long vehicles in the form of a hammerhead or other design to be approved by the decision maker.

Applicant's Response:
The development does not propose a dead-end street.

E. In the case of dead-end stub streets that will connect to streets on adjacent sites in the future, notification that the street is planned for future extension shall be posted on the stub street until the street is extended and shall inform the public that the dead-end street may be extended in the future. A dead-end street shall include signage or barricade meeting Manual on Uniform Traffic Control Devices (MUTCD).

Applicant's Response:
The development does not propose a dead-end street.

16.12.026 - Street design—Alleys.
Alleys with public access easements on private property shall be provided in the Park Place and South End concept plan areas for the following districts R-5, R-3.5, R-2, MUC-1, MUC-2 and NC zones unless other permanent provisions for private access to off-street parking and loading facilities are approved by the decision maker. All alleys intended to provide access for emergency vehicles shall be a minimum width of twenty feet. The corners of alley intersections shall have a radius of not less than ten feet and

shall conform to standards approved by the City Engineer. Access easements and maintenance agreements shall be recorded on affected properties.

Applicant's Response:
The development does not propose alleys.

16.12.027 - Street design—Off-site street improvements.
During consideration of the preliminary plan for a development, the decision maker shall determine whether existing streets impacted by, adjacent to, or abutting the development meet the applicable design or dimensional requirements. Where such streets fail to meet these requirements, the decision-maker shall require the applicant to make proportional improvements sufficient to achieve conformance with minimum applicable design standards required to serve the proposed development.

Applicant's Response:
As identified in the Traffic Impact Analysis included with this GDP/DDP application, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 of the TIA, the project is forecast to contribute 55 project trips to the intersection during the PM peak hour. This results in an estimated fee of $22,220 at this location as pro-rata share contribution to the planned improvement project.

The project proposes to modify the existing signals at both Molalla Ave and Beavercreek Rd where the proposed street connects to the existing street system.

16.12.028 - Street design—Transit.
Streets shall be designed and laid out in a manner that promotes pedestrian and bicycle circulation. The applicant shall coordinate with transit agencies where the application impacts transit streets as identified in OCMC 17.04.1310. Pedestrian/bicycle access ways shall be provided as necessary to minimize the travel distance to transit streets and stops and neighborhood activity centers. The decision maker may require provisions, including easements, for transit facilities along transit streets where a need for bus stops, bus pullouts or other transit facilities within or adjacent to the development has been identified.

Applicant's Response:
The project proposes a combination of bike lanes and combined bike/ped pathways on the proposed public street. Additionally, the project proposes moving the existing bus stop immediately south of the Molalla Ave signal to the north side of the signal and construct a bus turnout and bus shelter.

16.12.029 - Excavations—Restoration of pavement.
Whenever any excavation shall have been made in any pavement or other street improvement on any street or alley in the City for any purpose whatsoever under the permit granted by the engineer, it shall

be the duty of the person making the excavation to restore the pavement in accordance with the City of Oregon City Public Works Pavement Cut Standards in effect at the time the permit is granted. The City Commission may adopt and modify the City of Oregon City Public Works Pavement Cut Standards by resolution as necessary to implement the requirements of this chapter.

Applicant's Response:
The applicant acknowledges this criterion. Formal construction plan submittal for the project will include applicable pavement restoration.

16.12.030 - Blocks—Width.
The width of blocks shall ordinarily be sufficient to allow for two tiers of lots with depths consistent with the type of land use proposed. The length, width and shape of blocks shall take into account the need for adequate building site size, convenient motor vehicle, pedestrian, bicycle and transit access, control of traffic circulation, and limitations imposed by topography and other natural features.

All new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted Transportation System Plan. The maximum block spacing between streets is 530 feet and the minimum block spacing between streets is 150 feet as measured between the right-of-way centerlines except in zones GI, CI, MUE, I, and WFDD where determining the appropriate street spacing will be determined by the City Engineer. If the maximum block size is exceeded, pedestrian accessways shall be provided every 330 feet. The spacing standards within this section do not apply to alleys.

Applicant's Response:
Blocks are intended to provide connectivity through a site in multiple directions. The subject property is an in-fill development with existing residential and commercial development north of the site and existing commercial development south of the site. Adjacent properties do not include street stubs to the subject property so existing block separation is not provided. The project's proposed public street adjoins the main parcel's south property line for a large portion of the south property line and provides an access easement for the benefit of TL 700 & 800 near the property's southwest corner. Additionally, the relatively narrow north-south dimension of the west end of main property comprising Parcels A, B, C, & D with the 50' no-build easement encumbering Parcel A, together with the Geologic Hazard area on the east side of Parcel B limit the site's ability to accommodate intersecting streets in the north-south direction while still allowing room for development at a density that makes it economically viable.

As noted above, all new streets shall be designed as local streets unless otherwise designated as arterials and collectors in the current adopted TSP. The Transportation System Plan does not identify a collector street through this site or through TL 500. Public Works indicated the proposed street could be a local street in their pre-application conference notes and later changed this to a requirement that the proposed street be a collector street. The applicant objects to this determination but has been able to accommodate the geometry associated with a collector street, subject to the modification requests in our response to OCMC 16.12.0135. Two of the three modification requests are the result of the city's requirement that the proposed public street be

considered a collector street instead of a local street as identified in the TSP. As proposed, the proposed public street geometry exceeds that required by the adopted TSP.

The applicant has designed the proposed parcel layout to align major access points to each parcel to achieve the maximum block length spacing of 530' that balances this section with the rest of the OCMC code elements (building frontage requirements, driveway spacing, etc.).

The combination of these factors results in a layout that satisfies this criterion.

16.12.031 - Street design—Street names.
Except for extensions of existing streets, no street name shall be used which will duplicate or be confused with the name of an existing street. Street names shall conform to the established standards in the City and shall be subject to the approval of the City.

Applicant's Response:
The applicant acknowledges this criterion. A street name has not yet been chosen for the proposed public street but will be chosen prior to construction plan submittal following the normal street name approval process with the city.

16.12.032 – Public off-street pedestrian and bicycle accessways.
Pedestrian/bicycle accessways are intended to provide direct, safe and convenient connections between residential areas, retail and office areas, institutional facilities, industrial parks, transit streets, neighborhood activity centers, rights-of-way, and pedestrian/bicycle accessways which minimize out-of-direction travel, and transit-orientated developments where public street connections for automobiles, bicycles and pedestrians are unavailable. Pedestrian/bicycle accessways are appropriate in areas where public street options are unavailable, impractical or inappropriate. Pedestrian and bicycle accessways are required through private property or as right-of-way connecting development to the right-of-way at intervals not exceeding 330 feet of frontage; or where the lack of street continuity creates inconvenient or out of direction travel patterns for local pedestrian or bicycle trips.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

A. Entry points shall align with pedestrian crossing points along adjacent streets and with adjacent street intersections.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

B. Accessways shall be free of horizontal obstructions and have a nine foot six inch high vertical clearance to accommodate bicyclists. To safely accommodate both pedestrians and bicycles, accessway right-of-way widths shall be as follows:

1. Accessways shall have a fifteen- foot wide right-of-way with a seven-foot wide paved surface with a minimum four-foot planter strip on either side.

2. If an accessway also provides secondary fire access, the right-of-way width shall be at least twenty- four feet wide with a - sixteen foot paved surface between four-foot planter strips on either side.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

C. Accessways shall be direct with at least one end point of the accessway always visible from any point along the accessway. On-street parking shall be prohibited within fifteen feet of the intersection of the accessway with public streets to preserve safe sight distance and promote safety.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

D. To enhance pedestrian and bicycle safety, accessways shall be lighted with pedestrian-scale lighting. Accessway lighting shall be to a minimum level of one-half-foot-candles, a one and one-half foot-candle average, and a maximum to minimum ratio of seven-to-one and shall be oriented not to shine upon adjacent properties. Street lighting shall be provided at both entrances.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

E. Accessways shall comply with Americans with Disabilities Act (ADA).

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

F. The planter strips on either side of the accessway shall be landscaped along adjacent property by installation of the following:

1. Either an evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average; and
2. Ground cover covering one hundred percent of the exposed ground. No bark mulch shall be allowed except under the canopy of shrubs and within two feet of the base of trees; and
3. A two-inch minimum caliper tree for every thirty-five -feet along the accessway. Trees may be planted on either side of the accessway, provided they are spaced no more than thirty-five feet apart; and
4. In satisfying the requirements of this section, evergreen plant materials that grow over forty-two inches in height shall be avoided. All plant materials shall be selected from the Oregon City Native Plant List.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

G. Accessways shall be designed to prohibit unauthorized motorized traffic. Curbs and removable, lockable bollards are suggested mechanisms to achieve this.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

H. Accessway surfaces shall be paved with all-weather materials as approved by the City. Pervious materials are encouraged. Accessway surfaces shall be designed to drain stormwater runoff to the side or sides of the accessway. Minimum cross slope shall be two percent.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

I. In parks, greenways or other natural resource areas, accessways may be approved with a five-foot wide gravel path with wooden, brick or concrete edgings.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

J. The decision maker may approve an alternative accessway design due to existing site constraints through the modification process set forth in OCMC 16.12.013.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

K. Ownership, liability and maintenance of accessways. To ensure that all pedestrian/bicycle accessways will be adequately maintained over time, the City Engineer shall require one of the following:

1. Dedicate the accessways to the public as public right-of-way prior to the final approval of the development; or

2. The developer incorporates the accessway into a recorded easement or tract that specifically requires the property owner and future property owners to provide for the ownership, liability and maintenance of the accessway.

Applicant's Response:
Bike lanes are included with the proposed public street as coordinated with Public Works. Bike lanes connect with the widened sidewalks at each end of the public street within the main development area and a combined sidewalk and bike path is proposed on the east side of the proposed public street through TL 500 to promote pedestrian & bike safety and aligns with Transportation System Plan pedestrian/bicycle pathway project S28. The proposed pedestrian/bike facilities connect to existing similar facilities in Molalla Ave and Beavercreek Rd. Accordingly, off-site pedestrian and bicycle accessways are not needed, nor are they proposed.

16.12.033 - Mobility standards.

Development shall demonstrate compliance with intersection mobility standards. When evaluating the performance of the transportation system, the City of Oregon City requires all intersections, except for the facilities identified in subsection E below, to be maintained at or below the following mobility standards during the two-hour peak operating conditions. The first hour has the highest weekday traffic volumes and the second hour is the next highest hour before or after the first hour. Except as provided otherwise below, this may require the installation of mobility improvements as set forth in the Transportation System Plan (TSP) or as otherwise identified by the City Engineer.

A. For intersections within the regional center, the following mobility standards apply:

1. During the first hour, a maximum v/c ratio of 1.10 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

3. Intersections located on the Regional Center boundary shall be considered within the Regional Center.

B. For intersections outside of the Regional Center but designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:

1. During the first hour, a maximum v/c ratio of 0.99 shall be maintained. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

2. During the second hour, a maximum v/c ratio of 0.99 shall be maintained at signalized intersections. For signalized intersections, this standard applies to the intersection as a whole. For unsignalized intersections, this standard applies to movements on the major street. There is no performance standard for the minor street approaches.

C. For intersections outside the boundaries of the Regional Center and not designated on the Arterial and Throughway Network, as defined in the Regional Transportation Plan, the following mobility standards apply:

1. For signalized intersections:

a. During the first hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.

b. During the second hour, LOS "D" or better will be required for the intersection as a whole and no approach operating at worse than LOS "E" and a v/c ratio not higher than 1.0 for the sum of the critical movements.

2. For unsignalized intersections outside of the boundaries of the Regional Center:

a. For unsignalized intersections, during the peak hour, all movements serving more than twenty vehicles shall be maintained at LOS "E" or better. LOS "F" will be tolerated at movements serving no more than twenty vehicles during the peak hour.

D. For the intersection of OR 213 & Beavercreek Road, the following mobility standards apply:

1. During the first, second & third hours, a maximum v/c ratio of 1.00 shall be maintained. Calculation of the maximum v/c ratio will be based on an average annual weekday peak hour.

E. Until the City adopts new performance measures that identify alternative mobility targets, the City shall exempt proposed development that is permitted, either conditionally, outright, or through detailed development master plan approval, from compliance with the above-referenced mobility standards for the following state-owned facilities:
I-205/OR 99E Interchange
State intersections located within or on the Regional Center Boundaries

1. In the case of conceptual development approval for a master plan that impacts the above references intersections:

a. The form of mitigation will be determined at the time of the detailed development plan review for subsequent phases utilizing the Code in place at the time the detailed development plan is submitted; and

b. Only those trips approved by a detailed development plan review are vested.

2. Development which does not comply with the mobility standards for the intersections identified in OCMC 16.12.033 shall provide for the improvements identified in the Transportation System Plan (TSP) in an effort to improve intersection mobility as necessary to offset the impact caused by development. Where required by other provisions of the Code, the applicant shall provide a traffic impact study that includes an assessment of the development's impact on the intersections identified in this exemption and shall construct the intersection improvements listed in the TSP or required by the Code.

Applicant's Response:
The Traffic Impact Analysis included with this GDP/DDP application has been prepared in coordination with Oregon City Public Works and Oregon Department of Transportation staff and considers all applicable mobility standards required by the city and ODOT (please see Appendix H). As identified in the TIA, all off-site study intersections are forecast to continue to meet the established v/c thresholds with the addition of project generated traffic.

Based on coordination with City staff, a pro-rata share contribution is required for the TSP project #D95, Beavercreek Road/OR-213 added westbound right turn merge lane. The City has indicated the current rate is $404 per weekday PM peak hour trip. As shown in Table 4 of the TIA, the project is forecast to contribute 55 project trips to the intersection during the PM peak hour. This results in an estimated fee of $22,220 at this location as pro-rata share contribution to the planned improvement project.

The project proposes to modify the existing signals at both Molalla Ave and Beavercreek Rd where the proposed street connects to the existing street system.

16.12.035 - Driveways.
A. All new development and redevelopment shall meet the minimum driveway spacing standards identified in Table 16.12.035.A.
Table 16.12.035.A Minimum Driveway Spacing Standards

Table 16.12.035.A Minimum Driveway Spacing Standards		
Street Functional Classification	***Minimum Driveway Spacing Standards***	***Distance***
Major Arterial Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*175 ft.*
Minor Arterial Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*175 ft.*
Collector Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*100 ft.*
Local Streets	*Minimum distance from a street corner to a driveway for all uses other than detached single and two-family dwellings*	*25 ft.*

The distance from a street corner to a driveway is measured along the right-of-way from the edge of the intersection (on the same side of the road) right-of-way to the nearest portion of the driveway and the distance between driveways is measured at the nearest portions of the driveway at the right-of-way.

Applicant's Response:
All proposed driveways meet the access spacing requirements identified in Table 16.12.035.A, with the exception of the easterly driveway for Parcel A and the westerly driveway for Parcel B. The separation between these two driveways measured at the right-of-way from curb-to-curb on the driveways is approximately 48.3 ft. This driveway separation distance is due to the large-radius curve entering Parcel a so that truck turning movements can occur without impacting oncoming traffic. With the pre-application notes prepared by Public Works indicating the proposed road was a Local

Street, this driveway separation met the minimum 25-ft separation identified in the above table. However, subsequent to the pre-application notes Public Works increased the road classification to a Collector Street, which places the driveway spacing in conflict with Table 16.12.035.A.

The applicant wishes to keep the proposed driveways as shown on the proposed site layout (Shts DDP-C1.0 and GDP-C1.0 for the following reasons:

1. **Oregon Fire Code Appendix D106.2 and D106.3 require two access points for multi-family residential projects having more than 200 units and that they be separated by a distance not less than one-half of the length of the maximum overall diagonal dimension of the property (measured in a straight line between accesses). The maximum diagonal distance of Parcel B is 879 ft, resulting in a minimum driveway spacing of approximately 439 ft.**
2. **Moving the Parcel B westerly driveway further east along the proposed public road to a distance of 439 ft from the easterly driveway results in splitting the current 70-unit building in two, reducing unit count while increasing building construction costs to a point where the multi-family development becomes unviable. Such a new driveway location would place it in the middle of the west diagonal leg of this building (see Sht GDP-C1.0 for building reference).**

B. Nonresidential or multi-family residential driveways that generate high traffic volumes shall be treated as intersections and shall adhere to requirements of OCMC 16.12.020.

Applicant's Response:
Proposed driveways comply with the intersection angles identified in OCMC 16.12.020. Please see Sht DDP-C1.0.

C. One driveway may be allowed per frontage, unless otherwise restricted. In no case shall more than two driveways be allowed for any single-family attached or detached residential property, duplex, 3-4 plex, or property developed with an ADU or internal conversion with multiple frontages, unless otherwise approved by the City Engineer.

Applicant's Response:
Each parcel includes two driveways as shown on Sht DDP-C1.0. see also GDP-C1.0.

D. When a property fronts multiple roads, access shall be provided from the road with the lowest classification in the Transportation System Plan whenever possible to minimize points of access to arterials and collectors. At the discretion of the City Engineer, properties fronting a collector or arterial road may be allowed a second driveway, for the creation of a circulation pattern that eliminates reverse maneuvers for vehicles exiting a property if applied for and granted through procedures in OCMC 16.12.013. All lots proposed with a driveway and lot orientation on a collector or minor arterial shall combine driveways into one joint access per two or more lots unless the City Engineer determines that:

1. No driveway access may be allowed since the driveway(s) would cause a significant traffic safety hazard; or
2. Allowing a single driveway access per lot will not cause a significant traffic safety hazard.

Applicant's Response:
Parcels A & D include frontage on Molalla Ave and Parcel D includes frontage on Beavercreek Way as well. Access to Parcels A & D are proposed to come from the proposed new public street. Access to Parcel B comes from the proposed new public street. Please see Sht DDP-C1.0

E. All driveway approaches shall be limited to the dimensions identified in Table 16.12.035.D.
Table 16.12.035.D Driveway Approach Size Standards

Table 16.12.035.D Driveway Approach Size Standards			
Property Use	***Minimum Driveway Approach Width***		***Maximum Driveway Approach Width***
Single-Family Attached	*10 feet*		*12 feet*
Single-Family Detached in R-5 & R-3.5	*10 feet*		*12 feet*
Single-Family Detached in R-10, R-8, & R-6	*12 feet*		*24 feet*
Duplexes	*12 feet*		*24 feet*
3-4 Plexes	*12 feet*		*24 feet*
Multi-Family	*18 feet*		*30 feet*
Commercial, Industrial, Office, Institutional, Mixed Use, and/or Nonresidential	*One-Way 12 feet*	*Two-Way 20 feet*	*40 feet*

Driveway widths shall match the width of the driveway approach where the driveway meets sidewalk or property line but may be widened onsite (for example between the property line and the entrance to a garage). Groups of more than four parking spaces shall be so located and served by driveways so that their use will not require backing movements or other maneuvering within a street right-of-way other than an alley.

Applicant's Response:
Each of the proposed driveways will be commercial/mixed use driveways. The overall development is considered horizontal mixed-use with a maximum driveway width of 40'. Each of the proposed driveways falls within this maximum width with the exception of the northerly driveway for Parcel D. This driveway width is approximately 45.4' wide at the right-of-way line due to the curved nature of the proposed public street. This driveway tapers into the site to a 24' wide driveway. Making it narrower to satisfy the 40' wide width at the right-of-way line would result in an internal drive aisle width of just over 19' wide, which conflicts with the 24' minimum two-way drive aisle width requirements of OCMC 17.52.030.D. The curve in the public street is the driving factor in making the driveway wider than 40' at the right-of-way line. The centerline curve in the proposed public street exceeds the minimum centerline radius requirement of 185' for a 25-mph curve according to Table 3-2 of the city's street design standards. Adequate sight distance can be achieved at this driveway as shown on Sht DDP-C1.0.

Holding a maximum driveway width of 40' at the right-of-way line could technically accommodate a minimum 25' radius curb return within the right-of-way and transition to a sharper, compound curve beyond the right-of-way. An 18' radius would work just inside the parcel, but doing so could confuse drivers entering this driveway by unnecessarily directing them towards exiting vehicles. We do not recommend this solution.

F. The City Engineer reserves the right to require a reduction in the number and size of driveway approaches as far as practicable for any of the following purposes:

1. *To provide adequate space for on-street parking;*
2. *To facilitate street tree planting requirements;*
3. *To assure pedestrian and vehicular safety by limiting vehicular access points; and*
4. *To assure that adequate sight distance requirements are met.*
    a. *Where the decision maker determines any of these situations exist or may occur due to the approval of a proposed development for non-residential uses or attached or multi-family housing, a shared driveway shall be required and limited to twenty-four feet in width adjacent to the sidewalk or property line.*

Applicant's Response:
The applicant acknowledges the city's ability to limit the number and size of driveways; however, doing so beyond what is proposed puts tenant interest at risk.

G. For all driveways, the following standards apply.
1. Each new or redeveloped curb cut shall have an approved concrete approach or asphalted street connection where there is no concrete curb and a minimum hard surface for at least ten feet back into the property as measured from the current edge of sidewalk or street pavement to provide for controlling gravel tracking onto the public street. The hard surface may be concrete, asphalt, or other surface approved by the City Engineer.

2. Any driveway approach built within public right-of-way shall be built and permitted per City requirements as approved by the City Engineer.

3. No driveway with a slope of greater than fifteen percent shall be permitted without approval of the City Engineer.

Applicant's Response:
Proposed parcel driveways meet the city's commercial driveway standards as described herein and as shown on Sht DDP-C1.0, with minimum curb return radii of 25' (Parcel A's truck access curb return is 40' to accommodate truck movements so they do not impact oncoming traffic). Each of the parcels will provide separate DDP with more detailed access information; however, all driveways are expected to be flatter than 15%.

H. Exceptions. The City Engineer reserves the right to waive these standards or not allow driveway access, if the driveway(s) would cause a significant traffic safety hazard. Narrower driveway widths may be considered where field conditions preclude use of recommended widths. When larger vehicles and trucks will be the predominant users of a particular driveway, turning templates may be utilized to

develop a driveway width that can safely and expeditiously accommodate the prevalent type of ingress and egress traffic.

Applicant's Response:
The applicant acknowledges the exceptions described in this section. The applicant requests an exception to the Parcel A northerly driveway width via this section.

16.12.065 - Building site—Grading.
Grading of building sites shall conform to the State of Oregon Structural Specialty Code, Title 18, any approved grading plan and any approved residential lot grading plan in accordance with the requirements of OCMC 13.12,15.48, 16.12 and the Public Works Stormwater and Grading Design Standards, and the erosion control requirements of OCMC 17.47.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. The proposed rough grading plan will be prepared in conformance to the above-reference sections and standards at the time of detailed construction plan submittal. For detailed grading of Parcels A, B, & D, each of these parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

16.12.085 - Easements.
The following shall govern the location, improvement and layout of easements:
A. Utilities. Utility easements shall be required where necessary as determined by the City Engineer. Insofar as practicable, easements shall be continuous and aligned from block-to-block within the development and with adjoining subdivisions or partitions. Specific utility easements for water, sanitary or storm drainage shall be provided based on approved final engineering plans.

Applicant's Response:
The project proposes a public sanitary sewer easement on the east side of Parcel B for the extension of sanitary sewer service to the project's northeast corner for future extension by others to ultimately abandon the Hilltop Ave sanitary sewer pump station. The exact location of the easement alignment will be confirmed during DDP and detailed construction plan preparation for Parcel D; however, the currently proposed DDP plan proposes a stub to the Parcel B easterly driveway for Parcel B's extension. Parcel B will extend the sanitary sewer to the northeast corner of the property.

B. Unusual Facilities. Easements for unusual facilities such as high voltage electric transmission lines, drainage channels and stormwater detention facilities shall be adequately sized for their intended purpose, including any necessary maintenance roads. These easements shall be shown to scale on the preliminary and final plats or maps. If the easement is for drainage channels, stormwater detention facilities or related purposes, the easement shall comply with the requirements of the Public Works Stormwater and Grading Design Standards.

Applicant's Response:
While unusual easements are not contemplated for the proposed project, if the need arises during detailed design and construction plan preparation. We've coordinated with PGE on a preliminary power service routing that aligns with the project's PUE location. PGE's preliminary layout is included in Appendix I, together with our correspondence with PGE on preliminary power routing and Molalla Ave utility poles.

C. Watercourses. Where a development is traversed or bounded by a watercourse, drainageway, channel or stream, a stormwater easement or drainage right-of-way shall be provided which conforms substantially to the line of such watercourse, drainageway, channel or stream and is of a sufficient width to allow construction, maintenance and control for the purpose as required by the responsible agency. For those subdivisions or partitions which are bounded by a stream of established recreational value, setbacks or easements may be required to prevent impacts to the water resource or to accommodate pedestrian or bicycle paths.

Applicant's Response:
The project does not traverse, nor is it bounded by a watercourse, drainageway, channel or stream. The project's ultimate stormwater point of connection is located at the existing storm line at the low point in the proposed public street near Beavercreek Rd. This existing storm line extends to the east and discharges into the existing drainage channel of a tributary of Newell Creek. The stormwater point of connection lies within proposed public right-of-way.

D. Access. When easements are used to provide vehicular access to lots within a development, the construction standards, but not necessarily width standards, for the easement shall meet City specifications. The minimum width of the easement shall be 20 feet. The easements shall be improved and recorded by the applicant and inspected by the City Engineer. Access easements may also provide for utility placement.

Applicant's Response:
The project proposes an access easement for future access to TL 700 & 800 as identified on the Beavercreek Access Management Plan. This access is an easement only and no physical improvements will be made.

E. Resource Protection. Easements or other protective measures may also be required as the Community Development Director deems necessary to ensure compliance with applicable review criteria protecting any unusual significant natural feature or features of historic significance.

Applicant's Response:
The proposed development does not generate the need for resource protection; however, formal development of Parcel B includes a portion of land within the Geologic Hazard area that the tenant of Parcel B may, or may not, consider setting aside for resource protection. This may be addressed with the Parcel B DDP process.

16.12.090 - Minimum improvements—Procedures.

In addition to other requirements, improvements installed by the applicant either as a requirement of these or other regulations, or at the applicant's option, shall conform to the requirements of this title and be designed to City specifications and standards as set out in the City's facility master plan and Public Works Stormwater and Grading Design Standards. The improvements shall be installed in accordance with the following procedure:

A. Improvement work shall not commence until construction plans have been reviewed and approved by the City Engineer and to the extent that improvements are located in County or State right-of-way, they shall be approved by the responsible authority. To the extent necessary for evaluation of the proposal, the plans may be required before approval of the preliminary plat of a subdivision or partition. Expenses incurred thereby shall be borne by the applicant and paid for prior to final plan review.

Applicant's Response:
The applicant acknowledges the requirement to conform to applicable city requirements.

B. Improvements shall be constructed under the inspection and approval of the City Engineer. Expenses incurred thereby shall be borne by the applicant and paid prior to final approval. Where required by the City Engineer or other City decision-maker, the applicant's project engineer also shall inspect construction.

Applicant's Response:
The applicant acknowledges this criterion.

C. Erosion control or resource protection facilities or measures are required to be installed in accordance with the requirements of OCMC 17.47, 17.49 and the Public Works Erosion and Sediment Control Standards.

Applicant's Response:
The applicant acknowledges this criterion. Detailed construction plans will be prepared following a positive decision of this GDP/DDP application in conformance with the above requirements.

D. Underground utilities, waterlines, sanitary sewers and storm drains installed in streets shall be constructed prior to the surfacing of the streets. Stubs for service connections for underground utilities, such as, storm, water and sanitary sewer shall be placed beyond the ten-foot wide franchise utility easement within private property.

Applicant's Response:
The applicant acknowledges this criterion. Utility stubs to each parcel will extend beyond the 5' PUE where the PUE exists (please see Sht DDP-C1.0, C1.2, and C1.3 for PUE location). In the MUC-2 zone, a 5' PUE is required. The location of the PUE has been coordinated with PGE and alternates from one side of the proposed public street to the other as shown on the above-referenced sheets. Please see Appendix I for the preliminary PGE power plan.

E. As-built construction plans and digital copies of as-built drawings shall be filed with the City Engineer upon completion of the improvements.

Applicant's Response:
The applicant acknowledges the requirement of this section.

F. The City Engineer may regulate the hours of construction and access routes for construction equipment to minimize impacts on adjoining residences or neighborhoods.

Applicant's Response:
The applicant acknowledges the requirement of this section.

16.12.095 - Minimum improvements—Public facilities and services.
The following minimum improvements shall be required of all applicants for a development, unless the decision-maker determines that any such improvement is not proportional to the impact imposed on the City's public systems and facilities:
A. Transportation System. Applicants and all subsequent lot owners shall be responsible for improving the City's planned level of service on all public streets, including alleys within the development and those portions of public streets adjacent to but only partially within development. Applicants are responsible for designing and providing adequate vehicular, bicycle and pedestrian access to their developments and for accommodating future access to neighboring undeveloped properties that are suitably zoned for future development. Storm drainage facilities shall be installed and connected to off-site natural or man-made drainageways. Upon completion of the street improvement survey, the applicant shall reestablish and protect monuments of the type required by ORS 92.060 in monument boxes with covers at every public street intersection and all points or curvature and points of tangency of their center line, and at such other points as directed by the City Engineer.

Applicant's Response:
Please see the proposed street and utility improvement plans included with this DDP application, together with the project's Traffic Impact Analysis. The proposed improvements shown on these plans are the result of coordination with Public Works staff relative to street alignment/configuration. Formal construction plans will follow, pending on the outcome of the masterplan land-use process. Final construction plans will include requirements to preserve existing survey monuments (or replace any that have been damaged) and to include monuments in monument boxes for street centerline monumentation in conformance with this section.

B. Stormwater Drainage System. Applicants shall design and install drainage facilities within a development and shall connect the development's drainage system to the appropriate downstream storm drainage system as a minimum requirement for providing services to the applicant's development. The applicant shall obtain county or state approval when appropriate. Applicants are responsible for extending the appropriate storm drainage system to the development site and for providing for the connection of upgradient properties to that system. The applicant shall design the drainage facilities in accordance with City drainage master plan requirements, OCMC 13.12 and the Public Works Stormwater and Grading Design Standards.

Applicant's Response:
Please see the proposed street and utility improvement plans included with this DDP application, together with the project's Stormwater Management Report. Upgradient properties are already served with stormwater services, so extension of the project's storm system to upgradient properties is not necessary. That said, the grading design is prepared so that proposed grading does not impound stormwater runoff from adjacent properties.

C. Sanitary Sewer System. The applicant shall design and install a sanitary sewer system to serve all lots or parcels within a development in accordance with the City's sanitary sewer design standards and shall connect those lots or parcels to the City's sanitary sewer system, except where connection is required to the county sanitary sewer system as approved by the county. Applicants are responsible for extending the City's sanitary sewer system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development. The applicant shall obtain all required permits and approvals from all affected jurisdictions prior to final approval and prior to commencement of construction. Design shall be approved by the City Engineer before construction begins.

Applicant's Response:
The project proposes a public sanitary sewer easement on the east side of Parcel B for the extension of sanitary sewer service to the project's northeast corner for future extension by others to ultimately abandon the Hilltop Ave sanitary sewer pump station. The exact location of the easement alignment will be confirmed during DDP and detailed construction plan preparation for Parcel D; however, the currently proposed DDP plan proposes a stub to the Parcel B easterly driveway for Parcel B's extension. Parcel B will extend the sanitary sewer to the northeast corner of the property.

D. Water System. The applicant shall design and install a water system to serve all lots or parcels within a development in accordance with the City public works water system design standards and shall connect those lots or parcels to the City's water system. Applicants are responsible for extending the City's water system to the development site and through the applicant's property to allow for the future connection of neighboring undeveloped properties that are suitably zoned for future development.

Applicant's Response:
The project proposes to connect the existing water lines in Beavercreek Rd and Molalla Ave via a 12-inch water line within the proposed public street. The Molalla Ave water connection will be on the west side of Molalla Ave and will not connect to the transmission line on the east side of Molalla Ave.

E. Street Trees. Refer to OCMC 12.08, Street Trees.

Applicant's Response:
Please see our response to OCMC 12.08.

F. Bench Marks. At least one bench mark shall be located within the subdivision boundaries using datum plane specified by the City Engineer.

Applicant's Response:
The applicant acknowledges this requirement and will include the same requirement on the final construction plans.

G. Other Utilities. The applicant shall make all necessary arrangements with utility companies or other affected parties for the installation of underground lines and facilities. Existing and new electrical lines and other wires, including but not limited to communication, street lighting and cable television, shall be placed underground.

Applicant's Response:
The project team has already coordinated with PGE for a preliminary underground utility route through the site. The other dry utilities serving the site will follow PGE via a joint utility trench. The final construction plans will include additional coordination with affected utilities.

H. Oversizing of Facilities. All facilities and improvements shall be designed to City standards as set out in the City's facility master plan, public works design standards, or other City ordinances or regulations. Compliance with facility design standards shall be addressed during final engineering. A development may be required to modify or replace existing offsite systems if necessary to provide adequate public facilities. The City may require oversizing of facilities to meet standards in the City's facility master plan or to allow for orderly and efficient development. Where oversizing is required, the applicant may request reimbursement from the City for oversizing based on the City's reimbursement policy and funds available, or provide for recovery of costs from intervening properties as they develop.

Applicant's Response:
As noted above, the project proposes to connect the existing water lines in Beavercreek Rd and Molalla Ave via a 12-inch water line within the proposed public street. The project is not expected to need a 12-inch water line; however, the water system master plan indicates a 12-inch water line is to route through this site. The applicant may seek recovery for over-sizing this line beyond the needs of the project, subject to water demand calculations at the time of formal construction plan submittal.

I. Erosion Control Plan—Mitigation. The applicant shall be responsible for complying with all applicable provisions of OCMC 17.47 with regard to erosion control.

Applicant's Response:
The applicant acknowledges this criterion.

16.12.100 - Same—Road standards and requirements.
A. The creation of a public street and the resultant separate land parcels shall be in conformance with requirements for subdivisions or partitions and the applicable street design standards of this Chapter. However, the decision-maker may approve the creation of a public street to be established by deed without full compliance with the regulations applicable to subdivisions or partitions where any of the following conditions exist:

1. The establishment of the public street is initiated by the City Commission and is declared essential for the purpose of general traffic circulation and the partitioning of land is an incidental effect rather than the primary objective of the street;

2. The tract in which the street is to be dedicated is within an isolated ownership either not over one acre or of such size and characteristics as to make it impossible to develop building sites for more than three dwelling units.

Applicant's Response:
The applicant acknowledges the requirements of this section. The main subject property includes four parcels, which will be adjusted to result in the geometry of Parcels A, B, C, and D. Parcel C is proposed to be dedicated to the city for public road and utility purposes, together with the public road through TL 500.

B. For any public street created pursuant to subsection A of this section, a copy of a preliminary plan and the proposed deed shall be submitted to the Community Development Director and City Engineer at least ten days prior to any public hearing scheduled for the matter. The plan, deed and any additional information the applicant may submit shall be reviewed by the decision-maker and, if not in conflict with the standards of Title 16 and Title 17, may be approved with appropriate conditions.

Applicant's Response:
The applicant acknowledges this criterion.

16.12.105 - Same—Timing requirements.
A. Prior to applying for final plat approval, the applicant shall either complete construction of all public improvements required as part of the preliminary plat approval or guarantee the construction of those improvements. Whichever option the applicant elects shall be in accordance with OCMC 17.50.140.

Applicant's Response:
The applicant proposes a Property Line Adjustment process rather than a partition plat or subdivision plat. The applicant acknowledges the construction completion or financial guarantee provisions for public improvements in this section

B. Construction. The applicant shall construct the public improvements according to approved final engineering plans and all applicable requirements of this Code, and under the supervision of the City Engineer. Under this option, the improvement shall be complete and accepted by the City Engineer prior to final plat approval.

Applicant's Response:
The applicant acknowledges this criterion.

16.12.110 -Public improvements—Financial guarantees.
A. To ensure construction of required public improvements, the applicant shall provide the City with a performance guarantee in accordance with OCMC 17.50.140.

Applicant's Response:
The applicant acknowledges this criterion.

B. After satisfactory completion of required public improvements and facilities, all public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period as prescribed in OCMC 17.50.141.

Applicant's Response:
The applicant acknowledges this criterion.

16.12.120 Waiver of Remonstrance
The review authority may require a property owner to sign a waiver of remonstrance against the formation of and participation in a local improvement district where it deems such a waiver necessary to provide needed improvements reasonably related to the impacts created by the proposed development. To ensure compliance with this chapter, the review authority may require an applicant to sign or accept a legal and enforceable covenant, contract, dedication, easement, performance guarantee, or other document, which shall be approved in form by the City Attorney.

Applicant's Response:
The applicant acknowledges this criterion.

CHAPTER 16.20 PROPERTY LINE ADJUSTMENTS AND ABANDONMENT PROCESS AND STANDARDS

16.20.010 Purpose and general provisions.
The community development director under the applicable provisions in Chapter 17.50 shall process applications for property line adjustments and abandonments as a Type I decision. Approval shall be granted only upon determination by the community development director that all applicable requirements of this title and ORS Chapter 92 have been met.

16.20.020 Adjustment/abandonment submission requirements.
An application for a property line adjustment or abandonment shall include two copies of the following documents submitted to the Community Development Director:

A. Application requirements as identified in OCMC 17.50.080;

B. A boundary survey prepared by an Oregon professional land surveyor in accordance with ORS 92.060(7) except where the application proposes the relocation of a currently monumented common boundary of a lot in a subdivision or a parcel in a partition when the adjusted property line is a distance of even width along the common boundary. The survey shall include in its title the following: "Proposed Property Line Adjustment Survey," shall identify the city planning file number and approval date immediately below the title block with space for signature and date by the community development director;

C. Legal descriptions of the parent parcels to be adjusted and the resulting parcels to be created;

D. A current preliminary title report or trio for the subject property(ies);

E. A receipt from the county assessor's office indicating that all taxes for the lot or parcels involved are paid in full for the preceding tax year; and

F. Documentation indicating there are not any liens favoring the city on the subject site.

Applicant's Response:
The applicant acknowledges this criterion. The main subject property consists of three legal lots. One of the parcels (likely Parcel B) can include the proposed public street and dedicate the proposed public street by deed. The applicant understands the Property Line Adjustment will occur as a separate Type I application and can be completed prior to DDP submittal of Parcels A, B, and D. Please see Appendix J for the current title report.

16.20.040 Adjustment/abandonment approval standards.
All parcels resulting from a lot line adjustment or abandonment shall conform to the applicable requirements of Title OCMC 16 and 17 including the standards within the zoning designation such as, but not limited to, lot width, depth, lot coverage, subdivision density requirements, setbacks, as well as access and frontage requirements, ORS 92.010 to ORS 92.160, and any other city regulation deemed applicable by the community development director or state law. In no case shall a lot line adjustment result in a parcel that is unbuildable due to the presence of an overlay district or other physical constraint unless the parcel is recorded as a "tract" as defined by OCMC 17.04.1303.

The community development director shall determine if the applicant's submission complies with these standards, and issue to the applicant a notice of decision consistent with OCMC 17.50.120. The

community development Director decision is final and not appealable to any other decision-maker within the city.

Applicant's Response:
The applicant acknowledges this criterion.

CHAPTER 17.29 MUC MIXED USE CORRIDOR DISTRICT

17.29.010 Designated.

The mixed-use corridor (MUC) district is designed to apply along selected sections of transportation corridors such as Molalla Avenue, 7th Street, Beavercreek Road, and along Warner-Milne Road. Land uses are characterized by high-volume establishments such as retail, service, office, multi-family residential, lodging, recreation and meeting facilities, or a similar use as defined by the Community Development Director. A mix of high-density residential, office, and small-scale retail uses are encouraged in this district. Moderate density (MUC-1) and high density (MUC-2) options are available within the MUC zoning district. The area along 7th Street is an example of MUC-1, and the area along Warner-Milne Road is an example of MUC-2.

17.29.020 - Permitted uses—MUC-1 and MUC-2.

A. Banquet, conference facilities and meeting rooms.
B. Bed and breakfast/boarding houses, hotels, motels, and other lodging facilities.
C. Child care centers and/or nursery schools.
D. Indoor entertainment centers and arcades.
E. Health and fitness clubs.
F. Medical and dental clinics, outpatient; infirmary services.
G. Museums, libraries and cultural facilities.
H. Offices, including finance, insurance, real estate and government.
I. Outdoor markets, such as produce stands, craft markets and farmers markets that are operated on the weekends and after six p.m. during the weekday.
J. Postal services.
K. Parks, playgrounds, playfields and community or neighborhood centers.
L. Repair shops, for radio and television, office equipment, bicycles, electronic equipment, shoes and small appliances and equipment.
M. Multi-family residential, triplexes and quadplexes.
N. One or two dwelling units in conjunction with a nonresidential use, provided that the residential use occupies no more than fifty percent of the total square footage of the development.
O. Restaurants, eating and drinking establishments without a drive-through.
P. Services, including personal, professional, educational and financial services; laundry and dry-cleaning.
Q. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores, marijuana, and similar, provided the maximum footprint for a standalone building with a single store or multiple buildings with the same business does not exceed sixty thousand square feet.
R. Seasonal sales.
S. Residential care facilities, assisted living facilities; nursing homes and group homes for over fifteen patients licensed by the state.
T. Studios and galleries, including dance, art, photography, music and other arts.
U. Utilities: Basic and linear facilities, such as water, sewer, power, telephone, cable, electrical and natural gas lines, not including major facilities such as sewage and water treatment plants, pump stations, water tanks, telephone exchanges and cell towers.
V. Veterinary clinics or pet hospitals, pet day care.
W. Home occupations.
X. Research and development activities.

Y. Temporary real estate offices in model dwellings located on and limited to sales of real estate on a single piece of platted property upon which new residential buildings are being constructed.
Z. Transportation facilities.
AA. Live/work dwellings.
BB. Accessory dwelling unit in conjunction with a legally established non-conforming single-family dwelling.
CC. Duplex.
DD. After-hours public parking.

Applicant's Response:
The proposed development uses include multi-family residential (17.29.020.M), retail less than 60,000 sf in building area (17.29.020.Q), and restaurant uses (17.29.020.O). The restaurant use is approved in this zone; however, a drive-through is a conditional use. The conditional use is further described in subsequent responses. Seasonal sales are also a permitted use in this zone, which may arise from time to time on the retail pad.

17.29.030 - Conditional uses—MUC-1 and MUC-2 zones.
The following uses are permitted in this district when authorized and in accordance with the process and standards contained in OCMC 17.56:
A. Drive-through facilities;
B. Emergency service facilities (police and fire), excluding correctional facilities;
C. Gas stations;
D. Outdoor markets that do not meet the criteria of OCMC 17.29.020.I;
E. Public utilities and services including sub-stations (such as buildings, plants and other structures);
F. Public and/or private educational or training facilities;
G. Religious institutions;
H. Retail trade, including gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores and any other use permitted in the neighborhood, historic or limited commercial districts that have a footprint for a standalone building with a single store in excess of sixty thousand square feet in the MUC-1 or MUC-2 zone;
I. Hospitals;
J. Parking not in conjunction with a primary use on private property, excluding after-hours public parking;
K. Passenger terminals, excluding bus stops;
L. Shelters.

Applicant's Response:
Both Parcels A and D include drive-throughs. A drive-through is a conditional use in the MUC-2 zone and will be reviewed by Planning Commission as a part of this project's General Development Plan process. Please see our responses to 17.56 Conditional Use later in this code response.

17.29.040 - Prohibited uses in the MUC-1 and MUC-2 zones.
The following uses are prohibited in the MUC district:
A. Distributing, wholesaling and warehousing;
B. Outdoor storage;

C. Outdoor sales that are not ancillary to a permitted use on the same or abutting property under the same ownership;
D. Correctional facilities;
E. Heavy equipment service, repair, sales, storage or rentals (including but not limited to construction equipment and machinery and farming equipment);
F. Kennels;
G. Motor vehicle and recreational vehicle sales and incidental service;
H. Motor vehicle and recreational vehicle repair/service;
I. Self-service storage facilities;
J. Marijuana production, processing, wholesaling, research, testing, and laboratories;
K. Mobile food units, except with a special event permit.

Applicant's Response:
The proposed uses for this project are either approved outright or will be reviewed as a conditional use, and do not fall within the prohibited uses identified in this section.

17.29.050 - Dimensional standards—MUC-1.
Applicant's Response:
The subject property lies within the MUC-2 zone. Accordingly, this section is not applicable.

17.29.060 - Dimensional standards—MUC-2.
A. Minimum lot area: None.

Applicant's Response:
Acknowledged.

B. Minimum floor area ratio: 0.25.

Applicant's Response:
The project's overall floor area ratio is 0.73, which exceeds the minimum requirement of this zone. Please our response to 17.29.070 for greater detail.

C. Minimum building height: Twenty-five feet or two stories except for accessory structures or buildings under one thousand square feet.

Applicant's Response:
Acknowledged. Each of the parcels will seek Detailed Development Plan approval following this General Development Plan decision and will elaborate more on their respective building heights in those applications; however, each of the buildings will be in compliance with this section.

D. Maximum building height: Sixty feet.

Acknowledged. Each of the parcels will seek Detailed Development Plan approval following this General Development Plan decision and will elaborate more on their respective building heights in those applications; however, each of the buildings will be in compliance with this section.

E. Minimum required setbacks if not abutting a residential zone: None.

Applicant's Response:
The project abuts residential zoning along the property's most northern boundary. Minimum setbacks for the residentially zone properties north of the property will be addressed below. The property abuts an adjacent MUC-2 zoned property at the most northwesterly corner of the site (adjacent Wendy's restaurant). The applicant acknowledges a zero setback along this adjacent property; however, the proposed retail building is located away from this adjacent property.

F. Minimum required interior and rear yard setbacks if abutting a residential zone: Twenty feet, plus one foot additional yard setback for every two feet of building height over thirty-five feet.

Applicant's Response:
The project abuts residential zoning along the property's most northern boundary (R-2 and R-10). Proposed buildings abutting this residentially zone property include Retail and Multi-Family Buildings.

- **Retail - This building is expected to be less than 35 feet tall, so no additional building setback is applied, and the minimum setback is 20 feet. The proposed retail building is located approximately 36 feet south of the northerly property line, which exceeds the minimum setback.**
- **Multi-Family – There are three multi-family buildings proposed on Parcel B, two of which are situated in the northern part of the site, while the third fronts the internal public street. The two northerly buildings are approximately 60 feet tall and result in a minimum building setback of 33 ft (60'-35' = 25'; 25' / 2 = 12.5', or 13'; min setback = 20' + 13' = 33'). These buildings are proposed to be approximately 93 feet south of the northerly property line, which exceeds the minimum setback.**

G. Maximum Allowed Setbacks.
1. Front yard: Five feet.

Applicant's Response:
Maximum building setbacks are exceeded with the Retail building on Parcel A and the Quick Service Restaurant building on Parcel D, which will be addressed via implementation of at least one of the nine design elements described in 17.62.055.D and described in more detail during the Detailed Development Plan applications for each of those parcels. The multi-family building which fronts the proposed internal street is set back slightly further away from the right-of-way to provide adequate sight distance at the entrance drive for the multi-family development. Please see Sht DDP-C1.0 for sight distance information resulting in the need to set the building back further from the right-of-way. This will be further addressed during the Detailed Development Plan application for the multi-family parcel.

2. Interior side yard: None.

Applicant's Response:
Acknowledged. Each of the proposed buildings on the proposed parcels are set back from interior lot lines to reduce impact to adjacent properties.

3. Corner side yard abutting street: Twenty feet.

Applicant's Response:
Parcels A and D both abut Molalla Ave and the proposed public road. Accordingly, this criterion applies to both of these proposed parcels. Both Parcel A and D buildings are set back well beyond the twenty foot setback as can be seen by inspection of the General Development Plan Site Plan (see Sht GDP-C1.0).

4. Rear yard: None.

Applicant's Response:
Acknowledged. Each of the proposed buildings on the proposed parcels are set back from rear lot lines to reduce impact to adjacent properties. Please see our response to 17.29.060.F for further discussion of Multi-Family setback where it abuts a residential zone.

H. Maximum site coverage of building and parking lot: Ninety percent.

Applicant's Response:
Proposed Total Site Coverage for each of the parcels is shown below, subject to Detailed Development Plan approval for each parcel:

Parcel	Tot Parcel Area (sf)	Building & Parking Lot Area (sf)	Site Coverage (%)
A	85,346	74,500	87+/-
B	288,563	185,000	64+/-
D	87,773	55,000	63+/-

These values are approximate and show broad compliance with the criterion; however, each parcel will provide detailed information with their own Detailed Development Plan applications.

I. Minimum landscaping requirement (including parking lot): Ten percent.

Applicant's Response:
Proposed landscaping for each of the parcels is shown below, subject to Detailed Development Plan approval for each parcel:

Parcel	Tot Parcel Area (sf)	Proposed Landscape Area (sf)	Landscape Coverage (%)
A	85,346	11,000	13+/-
B	288,563	108,000	37+/-
D	87,773	34,000	39+/-

These values are approximate and show broad compliance with the criterion; however, each parcel will provide detailed information with their own Detailed Development Plan applications.

J. Residential minimum net density of 17.4 units per acre, except that no minimum net density shall apply to residential uses proposed above nonresidential uses in a mixed-use configuration or to live/work dwellings.

Applicant's Response:
Parcel B includes multi-family residential use with 208 total units. The total area of Parcel B is 288,617 sf. Of that total area, the area east of the geologic hazard area 35-ft setback line, building setback line along the north property line, the area covered by a PUE, and that area included within the proposed public sanitary sewer easement are excluded. The net developable area then becomes 199,641 sf or 4.58 acres, resulting in a net residential density of 45.3 units per acre, which exceeds the minimum density identified in this criterion.

17.29.070 - Floor area ratio (FAR).
Floor area ratios are a tool for regulating the intensity of development. Minimum FARs help to achieve more intensive forms of building development in areas appropriate for larger-scale buildings and higher residential densities.
A. The minimum floor area ratios contained in OCMC 17.29.050 and 17.29.060 apply to all nonresidential and mixed-use building development, except stand-alone commercial buildings less than ten thousand square feet in floor area.
B. Required minimum FARs shall be calculated on a project-by-project basis and may include multiple contiguous blocks. In mixed-use developments, residential floor space will be included in the calculations of floor area ratio to determine conformance with minimum FARs.
C. An individual phase of a project shall be permitted to develop below the required minimum floor area ratio provided the applicant demonstrates, through covenants applied to the remainder of the site or project or through other binding legal mechanism, that the required density for the project will be achieved at project build out.

Applicant's Response:
The minimum FAR for the MUC-2 zone is 0.25 per OCMC 17.29.060.B. The proposed project includes mixed use buildings consisting of multi-family residential, retail (including an in-line quick service restaurant), and a quick-service restaurant. Proposed FAR exceeds the minimum FAR required in this zone. Please see General Development Plan Sht FAR-EXH for FAR as proposed.

17.29.080 – Additional standards for Thimble Creek concept plan area.
A. Applicability. This section applies to all development in the MUC-2 district within the Thimble Creek Concept Plan Area.
B. Relationship of Standards. These standards apply in addition to and supersede the standards of the MUC-2 zone within the Thimble Creek Concept Plan Area. In the event of a conflict, the standards of this section control.
C. Uses.

1. Light industrial uses limited to the design, light manufacturing, processing, assembly, packaging, fabrication and treatment of products made from previously prepared or semi-finished materials are permitted.
2. The following permitted uses, alone or in combination, shall not exceed twenty percent of the total gross floor area of all of the other permitted and conditional uses within the development site. The total gross floor area of two or more buildings may be used, even if the buildings are not all on the same parcel or owned by the same property owner, as long as they are part of the net developable portion of contiguous mixed-use corridor zoned lands.
a. Restaurants, eating and drinking establishments;
b. Services, including personal, professional, educational and financial services; laundry and drycleaning;
c. Retail trade, including grocery, hardware and gift shops, bakeries, delicatessens, florists, pharmacies, specialty stores, marijuana, and similar, provided the maximum footprint for a standalone building with a single store does not exceed twenty thousand square feet; and
d. Grocery stores provided the maximum footprint for a standalone building does not exceed forty thousand square feet.
3. Drive-throughs are prohibited.
4. Gas stations are prohibited.
5. Bed and breakfast and other lodging facilities for up to ten guests per night are a conditional use.
6. Tax Lot 00800, located on Clackamas County Map #32E10C has a special provision to allow the multifamily residential use permitted as of July 31, 2020 as a permitted use. This property may only maintain and expand the current use.

Applicant's Response:
The subject property is not located within the Thimble Creek concept plan area. Accordingly, these criteria are not applicable.

D. Dimensional Standards.
1. Minimum floor area ratio (FAR) shall be 0.35.
2. Maximum allowed setback for corner side yard abutting street shall be five feet.

Applicant's Response:
The subject property is not located within the Thimble Creek concept plan area. Accordingly, these criteria are not applicable.

E. Residential Uses. All residential uses, except live/work units, are limited to upper stories only, and may only be proposed as part of a single development application incorporating nonresidential uses allowed in the MUC-2 district on the ground floor.

Applicant's Response:
The subject property is not located within the Thimble Creek concept plan area. Accordingly, these criteria are not applicable.

CHAPTER 17.41 TREE PROTECTION, PRESERVATION, REMOVAL AND REPLANTING STANDARDS

17.41.010 - Protection of trees—Intent.
The intent of this chapter is to ensure that new development is designed in a manner that preserves trees to the maximum extent practicable. As a requirement of any Type II land use application, the siting of structures, roadways and utility easements, shall provide for the protection of tree resources to the maximum extent practicable. This chapter applies to all land division and site plan and design review applications.

Applicant's Response:
The applicant acknowledges the intent of this chapter.

17.41.020 - Tree protection—Applicability.
A. Applications for development subject to OCMC 16.08 (Land Divisions) or OCMC 17.62 (Site Plan and Design Review) shall demonstrate compliance with these standards as part of the review proceedings for those developments. Compliance with this chapter is required from the date a land use application is filed until a land division is recorded or other development approval is final.

B. For public capital improvement projects, the City engineer shall demonstrate compliance with these standards pursuant to a Type I process.

C. Tree canopy removal greater than twenty-five percent on areas with greater than twenty-five percent slope, unless exempted under OCMC 17.41.040, shall be subject to these standards.

D. A heritage tree or grove which has been designated pursuant to the procedures of OCMC 12.32 shall be subject to the standards of this section.

E. A tree that has been planted pursuant to this section shall remain or shall be replaced with a new tree if removed.

Applicant's Response:
The applicant acknowledges the applicability of this chapter.

17.41.030 - Tree protection—Conflicting code provisions.
Except as otherwise specified in this section, where these standards conflict with adopted city development codes or policies, the provision which provides the greater protection for regulated trees or groves, as defined in OCMC 17.04, shall govern.

Applicant's Response:
The applicant acknowledges the resolution of conflicting elements identified in this section.

17.41.040 - Exemptions.

These regulations are not intended to regulate normal cutting, pruning and maintenance of trees on private property except where trees are located on lots that are undergoing development review or are otherwise protected within the natural resource overlay district (NROD) of OCMC 17.49. These standards are not intended to regulate farm and forest practices as those practices are defined under ORS 30.930, for farm or forestlands. These regulations to not apply to the removal of trees that are considered invasive species. An applicant for development may claim exemption from compliance with these standards if the development site containing the regulated grove or trees was a designated farm or forest use, tree farm, Christmas tree plantation, or other approved timber use within one year prior to development application. "Forest practices" and "forestlands" as used in this subsection shall have the meaning as set out in ORS 30.930. The Community Development Director has the authority to modify or waive compliance in this case.

Applicant's Response:

The applicant acknowledges the exemptions identified in this section. The Arborist Report identifies impacted trees and indicates some of those trees as invasive species. Mitigation of invasive species is exempt from the standards of this chapter as noted in this section.

17.41.050 - Compliance options.

Applicants for review shall comply with these requirements through one or a combination of the following procedures:

A. Option 1—Mitigation. Retention and removal of trees, with subsequent mitigation by replanting pursuant to OCMC 17.41.060.

B. Option 2—Dedicated Tract. Protection of trees or groves by placement in a tract within a new subdivision or partition plat pursuant to OCMC 17.41.080; or

C. Option 3—Restrictive Covenant. Protection of trees or groves by recordation of a permanent restrictive covenant pursuant to OCMC 17.41.110; or

D. Option 4—Cash-in-lieu of planting pursuant to OCMC 17.41.120.

Applicant's Response:

The proposed project seeks mitigation via a combination of Options 1 and 4 as further explained below.

17.41.060 - Tree removal and replanting—Mitigation (Option 1).

A. Applicants for development who select this option shall ensure that all healthy trees shall be preserved outside the construction area as defined in OCMC 17.04 to the extent practicable. Preserved trees are subject to Option 3 of this chapter. Compliance with these standards shall be demonstrated in a tree mitigation plan report prepared by a certified arborist, horticulturalist or forester or other environmental professional with experience and academic credentials in forestry or arboriculture. Tree inventories for the purposes of mitigation calculations may be prepared by a licensed surveyor. At the applicant's expense, the City may require the report to be reviewed by a consulting arborist. The number of

replacement trees required on a development site shall be calculated separately from, and in addition to, any public or street trees in the public right-of-way required under OCMC 12.08, Public and Street Trees, any required tree planting in parking lots, and any trees planted in pedestrian and bicycle accessways.

Applicant's Response:
Please see the 2013 Arborist report prepared by Walter H. Knapp & Associates, LLC, included in Appendix K. Please also see the tree removal plan and accompanying sheets, DDP-L0.1, L0.2, & L0.3.

B. The applicant shall determine the number of trees to be mitigated on the site by counting all of the trees six-inch DBH (minimum four and one-half feet from the ground) or larger on the entire site and either:

1. Trees that are removed outside of the construction area shall be replanted with the number of trees specified in Column 1 of Table 17.41.060-1. Trees that are removed within the construction area shall be replanted with the number of replacement trees required in Column 2; or

2. Dying, diseased or hazardous trees, when the condition is verified by a certified arborist to be consistent with the definitions in OCMC 17.04, may be removed from the tree replacement calculation. Dead trees may also be removed from the calculation, with the condition of the tree verified either by the Community Development Director or by a certified arborist at the applicant's expense, when the Community Development Director cannot make a determination. To the extent that the Community Development Director determines that the dead, dying, hazardous or diseased condition of the tree is the result of intentional action, the removal of that tree shall require mitigation pursuant to Column 2 of Table 17.41.060-1.

Applicant's Response:
The 2013 Arborist Report provides summary tables and mapping showing trees, trees to be removed, and their condition. Please also see DDP-L0.3 for an overlay of the current construction limits onto the Arborist Report exhibit. As shown on DDP-L0.3, some of the trees in the southwest corner of the site do not need to be removed as the current development footprint is slightly smaller than that contemplated with the 2013 plan. The 2013 Arborist Report indicates a total of 332 trees are to be removed, with a total mitigation of 862 replacement trees. An updated Arborist Report will be provided along with construction plan submittal reflecting final construction limits and tree impacts/mitigation/protection. The updated Arborist Report and final construction plans will provide final removal and mitigation totals.

Table 17.41.060-1
Tree Replacement Requirements

Size of tree removed (DBH)	***Number of trees to be planted. (If removed Outside of construction area)***	***Number of trees to be planted. (If removed Within the construction area)***
6 to 12"	*3*	*1*
13 to 18"	*6*	*2*
19 to 24"	*9*	*3*

25 to 30"	*12*	*4*
31 and over"	*15*	*5*

Steps for calculating the number of replacement trees:
1. Count all trees measuring six inches DBH (minimum four and one-half feet from the ground) or larger on the entire development site.

2. Designate the size (DBH) of all trees pursuant to accepted industry standards.

3. Document in a certified arborist report any trees that are currently dead, dying, diseased or hazardous.

4. Subtract the number of dead, dying, diseased or hazardous trees in step 3 from the total number of trees on the development site in step 1. The remaining number is the number of healthy trees on the site. Use this number to determine the number of replacement trees in steps 5 through 8.

5. Identify the construction area (as defined in OCMC 17.04.230).

6. Determine the number and diameter of trees to be removed within the construction area. Based on the size of each tree, use Column 2 to determine the number of replacement trees required.

7. Determine the number and diameter of trees to be removed outside of the construction area. Based on the size of each tree, use Column 1 to determine the number of replacement trees required.

8. Determine the total number of replacement trees from steps 6 and 7.

Applicant's Response:
The 2013 Arborist Report provides summary tables and mapping showing trees, trees to be removed, and their condition. Please also see DDP-L0.3 for an overlay of the current construction limits onto the Arborist Report exhibit. As shown on DDP-L0.3, some of the trees in the southwest corner of the site do not need to be removed as the current development footprint is slightly smaller than that contemplated with the 2013 plan. The 2013 Arborist Report indicates a total of 332 trees are to be removed, with a total mitigation of 862 replacement trees. An updated Arborist Report will be provided along with construction plan submittal reflecting final construction limits and tree impacts/mitigation/protection. The updated Arborist Report and final construction plans will provide final removal and mitigation totals.

Please complete the Table below for trees being removed based on the Tree Replacement Requirements in Table 17.41.060-1

Size of tree removed (DBH)	***Number of Trees Removed Outside of Construction Area***	***Number of Trees Removed Within the Construction area***	***Number of Mitigation Trees Required (See Table 17.41.060-1)***
6 to 12"			

13 to 18"			
19 to 24"			
25 to 30"			
31 and over"			

C. Planting Area Priority for Mitigation. Development applications which opt for removal of trees with subsequent replanting pursuant to OCMC 17.41.050.A shall be required to mitigate for tree cutting by complying with the following priority for replanting standards below:

1. First Priority. Replanting on the development site.

2. Second Priority. Off-site replacement tree planting locations. If the Community Development Director determines that it is not practicable to plant the total number of replacement trees on-site, a suitable off-site planting location for the remainder of the trees may be approved that will reasonably satisfy the objectives of this section. Such locations may include either publicly owned or private land and shall be approved by the Community Development Director.

Applicant's Response:
Mitigation for tree removal is proposed on the east and north sides of Parcel B as shown on Sht DDP-L1.0. In the event there is not enough space within the mitigation areas identified, Mitigation Option $ will be investigated.

D. Replacement tree planting standards.

1. All replacement trees shall be either two-inch caliper deciduous or six-foot high conifer.

Applicant's Response:
The applicant acknowledges the tree planting standards in this section.

2. Replacement tree species shall be approved by a landscape architect or certified arborist or shall be found on the City's Native Plant or Street Tree lists.

Applicant's Response:
The applicant acknowledges the replacement tree species requirement of this section and will engage either a certified arborist or landscape architect in preparing the proposed tree mitigation plan.

3. Due to their diminishing range in the region, Oregon white oak (Quercus garryana) trees, if removed, shall be replaced by the same species.

Applicant's Response:
The applicant acknowledges the requirement to replace any Oregon white oak trees with the same species.

E. All existing tree(s) in the tract shall be protected by a permanent restrictive covenant or easement approved in form by the City.

Applicant's Response:
The applicant acknowledges the requirement for a permanent restrictive covenant or easement for trees that will remain. The applicant also understands that such restrictive covenant or easement does not preclude future tree removal, subject to applicable tree removal/land-use approval processes identified in the Oregon city Municipal Code.

F. Alternative Mitigation Plan. The Community Development Director may, subject to a Type II procedure, approve an alternative mitigation plan that adequately protects habitat pursuant to the standards for the natural resource overlay district alternative mitigation plan in OCMC 17.49.190.

Applicant's Response:
The applicant is open to discussing further the possibility of an alternative mitigation plan that protects habitat. Prior to submittal of construction plans, the applicant and the city will resolve whether an alternative tree mitigation plan is appropriate to pursue.

17.41.080 - Tree preservation within subdivisions and partitions—Dedicated tract (Option 2).
A. An applicant for a new subdivision and partition may delineate and show the regulated trees or groves as either a separate tract or part of a larger tract that meets the requirements of subsection D. of this section. All existing tree(s) in the tract shall be protected by a permanent restrictive covenant or easement approved in form by the City

Applicant's Response:
The proposed project seeks mitigation via a combination of Options 1 and 4

17.41.110 - Tree protection by restrictive covenant (Option 3).
Any regulated tree or grove which cannot be protected in a tract pursuant to Section 17.41.080 above shall be protected with a restrictive covenant in a format to be approved by the Community Development Director. Such covenant shall be recorded against the property deed and shall contain provisions to permanently protect the regulated tree or grove unless such tree or grove, as determined by a certified arborist and approved by the Community Development Director, are determined to be diseased or hazardous.

Applicant's Response:
The proposed project seeks mitigation via a combination of Options 1 and 4

17.41.120 - Cash-in-lieu of planting (Option 4).
The applicant may choose this option in-lieu-of or in addition to Compliance Options 1 through 3. In this case, the Community Development Director may approve the payment of cash-in-lieu into a dedicated fund for the remainder of trees that cannot be replanted in the manner described above.

The cash-in-lieu payment per required mitigation tree shall be as listed on the adopted fee schedule and shall be adjusted annually based on the Consumer Price Index. The price shall include 150% of the cost of materials, transportation and planting.

Applicant's Response:
The proposed project seeks mitigation via a combination of Options 1 and 4

17.41.130 - Regulated tree protection procedures during construction.

A. No permit for any grading or construction of public or private improvements may be released prior to verification by the Community Development Director that regulated trees designated for protection or conservation have been protected according to the following standards. No trees designated for removal shall be removed without prior written approval from the Community Development Director.

B. Tree protection shall be as recommended by a qualified arborist or, as a minimum, to include the following protective measures:

1. Except as otherwise determined by the Community Development Director, all required tree protection measures set forth in this section shall be instituted prior to any development activities, including, but not limited to clearing, grading, excavation or demolition work, and such measures shall be removed only after completion of all construction activity, including necessary landscaping and irrigation installation, and any required plat, tract, conservation easement or restrictive covenant has been recorded.

2. Approved construction fencing, a minimum of four feet tall with steel posts placed no farther than ten feet apart, shall be installed at the edge of the tree protection zone or dripline, whichever is greater. An alternative may be used with the approval of the Community Development Director.

3. Approved signs shall be attached to the fencing stating that inside the fencing is a tree protection zone, not to be disturbed unless prior approval has been obtained from the Community Development Director.

4. No construction activity shall occur within the tree protection zone, including, but not limited to; dumping or storage of materials such as building supplies, soil, waste items; nor passage or parking of vehicles or equipment.

5. The tree protection zone shall remain free of chemically injurious materials and liquids such as paints, thinners, cleaning solutions, petroleum products, and concrete or dry wall excess, construction debris, or run-off.

6. No excavation, trenching, grading, root pruning or other activity shall occur within the tree protection zone unless directed by an arborist present on site and approved by the Community Development Director.

7. No machinery repair or cleaning shall be performed within ten feet of the dripline of any trees identified for protection.

8. Digging a trench for placement of public or private utilities or other structure within the critical root zone of a tree to be protected is prohibited. Boring under or through the tree protection zone may be permitted if approved by the Community Development Director and pursuant to the approved written recommendations and on-site guidance and supervision of a certified arborist.

9. The Community Development Director may require that a certified arborist be present during any construction or grading activities that may affect the dripline of trees to be protected.

10. The Community Development Director may impose conditions to avoid disturbance to tree roots from grading activities and to protect trees and other significant vegetation identified for retention from harm. Such conditions may include, if necessary, the advisory expertise of a qualified consulting arborist or horticulturist both during and after site preparation, and a special maintenance/management program to provide protection to the resource as recommended by the arborist or horticulturist.

Applicant's Response:
The applicant acknowledges the procedural requirements of this section. Design and construction elements of this section will be addressed with construction plan preparation and will be subject to city review prior to approval.

C. Changes in soil hydrology due to soil compaction and site drainage within tree protection areas shall be avoided. Drainage and grading plans shall include provision to ensure that drainage of the site does not conflict with the standards of this section. Excessive site run-off shall be directed to appropriate storm drainage facilities and away from trees designated for conservation or protection.

Applicant's Response:
The applicant acknowledges the requirements of this section. Construction plans will be prepared in coordination with a certified arborist or landscape architect to assure protection of trees to remain.

CHAPTER 17.44 GEOLOGIC HAZARDS

17.44.010 Intent and purpose.
The intent and purpose of the provisions of this chapter are:

A. To ensure that activities in geologic hazard areas are designed based on detailed knowledge of site conditions in order to reduce the risk of private and public losses;

B. To establish standards and requirements for the use of lands within geologic hazard areas;

C. To provide safeguards to prevent undue hazards to property, the environment, and public health, welfare, and safety in connection with use of lands within geologic hazard areas;

D. To mitigate risk associated with geologic hazard areas, not to act as a guarantee that the hazard risk will be eliminated, nor as a guarantee that there is a higher hazard risk at any location. Unless otherwise provided, the geologic hazards regulations are in addition to generally applicable standards provided elsewhere in the Oregon City Municipal Code.

Applicant's Response:
The applicant acknowledges the intent and purpose of this chapter.

17.44.025 When required; regulated activities; permit and approval requirements.
No person shall develop land, construct, reconstruct, structurally alter, relocate or enlarge any building or structure for which a land development, sign, or building permit is required on a property that contains an area mapped within the adopted Oregon City Geologic Hazards Overlay Zone without first obtaining permits or approvals as required by this chapter.

The requirements of this chapter are in addition to other provisions of the Oregon City Municipal Code. Where the provisions of this chapter conflict with other provisions of the Oregon City Municipal Code, the provisions that are the more restrictive of regulated development activity shall govern.

Applicant's Response:
The applicant acknowledges the intent and purpose of this section.

17.44.030 Procedures.
No building or site development permit or other authorization for development shall be issued until the plans and other documents required by this chapter have been reviewed and found by the review authority to comply with the requirements of this chapter.

A. Where the development is part of an application that otherwise requires a Type III procedure, review shall occur in the manner established in Chapter 17.50 for a consolidated Type III review.

B. Where the development is part of an application that otherwise requires a Type II procedure, review shall occur in the manner established in Chapter 17.50 for a consolidated Type II review.

C. For any other proposed development not otherwise subject to review as part of a development proposal that requires land use review, review shall occur in the manner established in Chapter 17.50 for a Type II procedure.

Applicant's Response:

The applicant acknowledges the procedures of this section.

17.44.035 Exemptions.

The following activities, and persons engaging in same, are EXEMPT from the provisions of this chapter.

A. An excavation which is less than two feet in depth, or which involves less than twenty-five cubic yards of volume;

B. A fill which does not exceed two feet in depth or which includes less than twenty-five cubic yards of volume;

C. A combined cut and fill that does not involve more than twenty-five cubic yards of volume.

D. Installation, new construction, addition or structural alteration of any existing structure of less than five hundred square feet in building footprint that does not involve grading as defined in this chapter;

E. Installation, construction, reconstruction, or replacement of public and private utility lines in the hardscape portion of the city right-of-way, existing utility crossings, existing basalt lined drainage channels, or public easement, not including electric substations;

F. Tree removal on slopes twenty-five percent or greater where canopy area removal is less than twenty-five percent of the portion of the lot which contains twenty-five percent or greater slopes. For the purpose of this chapter, "tree" shall be as defined in OCMC 17.04.1315.

G. The removal or control of noxious vegetation;

H. Emergency actions which must be undertaken immediately to prevent an imminent threat to public health or safety, or prevent imminent danger to public or private property. The person undertaking emergency action shall notify the building official on all regulated activities associated with any building permit or city engineer/public works director on all others within one working day following the commencement of the emergency activity. If the city engineer/public works director or building official determine that the action or part of the action taken is beyond the scope of allowed emergency action, enforcement action may be taken.

Applicant's Response:

The improvements associated with the proposed GDP/DDP application do not qualify for any of the exemptions of this section.

17.44.050 Development—Application requirements and review procedures and approvals.

Except as provided by subsection C of this section, an application for a geologic hazards overlay review shall include the following:

A. A geological assessment and geotechnical report that specifically includes, but is not limited to:

1. Comprehensive information and data regarding the nature and distribution of underlying geology, the physical and chemical properties of existing soils and groundwater; an opinion of site geologic stability, and conclusions regarding the effect of geologic conditions on the proposed development. In addition to any field reconnaissance or

subsurface investigation performed for the site, the following resources, as a minimum, shall be reviewed to obtain this information and data:

a. The State of Oregon Department of Geology and Mineral Industries (DOGAMI) in Bulletin 99, Geology and Geological Hazards of North Clackamas County, Oregon (1979), or in any subsequent DOGAMI mapping for the Oregon City area;

b. Portland State University study entitled "Environmental Assessment of Newell Creek Canyon, Oregon City, Oregon" (1992);

c. Portland State University study, "Landslides in the Portland, Oregon, Metropolitan Area Resulting from the Storm of February 1996: Inventory Map, Database and Evaluation" (Burns and others, 1998);

d. DOGAMI Open File Report O-06-27, "Map of Landslide Geomorphology of Oregon City, Oregon, and Vicinity Interpreted from LIDAR Imagery and Aerial Photographs" (Madin and Burns, 2006);

e. "Preliminary Geologic Map of the Oregon City Quadrangle, Clackamas County, Oregon" (Madin, in press);

f. Landslide Hazards Land Use Guide for Oregon Communities (October 2019), prepared by the State of Oregon Department of Geology and Mineral Industries (DOGAMI) and the Oregon Department of Land Conservation and Development (DLCD);

g. Landslide hazard and risk study of northwestern Clackamas County, Oregon: Oregon Department of Geology and Mineral Industries, Open-File Report O-13-08, 74 map plates; Burns, W.J., Mickelson, K.A., Jones, C.B., Pickner, S.G., Hughes, K.L., Sleeter, R., 2013.

h. Mapped landslide data shall be from the city's maps as a minimum but may be supplemented with maps from items a through f above.

2. Information and recommendations regarding existing local drainage, proposed permit activity impacts on local drainage, and mitigation to address adverse impacts;
3. Comprehensive information about site topography;
4. Opinion as to the adequacy of the proposed development from an engineering standpoint;
5. Opinion as to the extent that instability on adjacent properties may adversely affect the project;
6. Description of the field investigation and findings, including logs of subsurface conditions and laboratory testing results;
7. Conclusions regarding the effect of geologic conditions on the proposed development, tree removal, or grading activity;
8. Specific requirements and recommendations for plan modification, corrective grading, and special techniques and systems to facilitate a safe and stable site;

9. Recommendations and types of considerations as appropriate for the type of proposed development:
    a. General earthwork considerations, including recommendations for temporary and permanent cut and fill slopes and placement of structural fill;
    b. Location of residence on lot;
    c. Building setbacks from slopes;
    d. Erosion control techniques applicable to the site;
    e. Surface drainage control to mitigate existing and potential geologic hazards;
    f. Subsurface and/or management of groundwater seepage;
    g. Foundations;
    h. Embedded/retaining walls;
    i. Management of surface water and irrigation water; and
    j. Impact of the development on the slope stability of the lot and the adjacent properties.
    k. Construction phasing and implementation schedule as it relates to foundation excavation, allowance for stockpiles, imported backfill, site subsurface drainage or dewatering, provision for off season site protections;
    l. Stormwater management; and
    m. Construction methods.
10. Scaled drawings that describe topography and proposed site work, including:
    a. Natural physical features, topography at two or ten-foot contour intervals locations of all test excavations or borings, watercourses both perennial and intermittent, ravines and all existing and man-made structures or features all fully dimensioned, trees six-inch caliper or greater measured four feet from ground level, rock outcroppings and drainage facilities;
    b. All of the features and detail required for the site plan above, but reflecting preliminary finished grades and indicating in cubic yards whether and to what extent there will be a net increase or loss of soil.
    c. A cross-section diagram, indicating depth, extent and approximate volume of all excavation and fills.
11. For properties greater than one acre and any property that has any portion of its property existing within a mapped landslide, where the activity is not exempted by Section 17.44.035, a preliminary hydrology report, prepared by a suitably qualified and experienced hydrology expert, addressing the effect upon the watershed in which the proposed development is located; the effect upon the immediate area's stormwater drainage pattern of flow, the impact of the proposed development upon downstream

areas and upon wetlands and water resources; and the effect upon the groundwater supply.

Applicant's Response:
Please see the geotechnical report prepared by Terracon, dated September 22, 2022, in Appendix G. Cypress Equities has acquired the geotechnical report from a previous development application by the Wolff Company LLC and has coordinated with Terracon for a formal update to accompany the proposed construction plans for proposed DDP rough grading. Based on Cypress' coordination with Terracon, the recommendations for Cypress will be the same as with Wolff (which were the same as previous development attempts on the project). The report includes a description of site conditions, prior geotechnical reports, engineering geology update, seismic considerations, slope stability, geotechnical overview, earthworks, shallow foundations, floor slabs, lateral earth pressures, soldier pile walls, and pavements.

Key recommendations of the geotechnical report include a 35-foot geologic hazard setback from the top of the steep slope as well as specific retaining wall recommendations addressing slope stability vs historical landslides. The geologic hazard setback is included on the proposed GDP and DDP plans. The retaining walls mentioned in the report will be a part of the DDP and construction plans for Parcel B following the current GDP/DDP application.

B. Review procedures and approvals require the following:

1. Examination to ensure that:
    a. Required application requirements are completed;
    b. Geologic assessment and geotechnical report procedures and assumptions are generally accepted; and
    c. All conclusions and recommendations are supported and reasonable.
2. Conclusions and recommendations stated in an approved assessment or report shall then be directly incorporated as permit conditions or provide the basis for conditions of approval for the regulated activity.
3. All geologic assessments and geotechnical reports shall be reviewed by an engineer certified for expertise in geology or geologic engineering and geotechnical engineering, respectively, as determined by the city. The city will prepare a list of prequalified consultants for this purpose. The cost of review by independent review shall be paid by the applicant.

C. The city engineer may waive one or more requirements of subsections A and B of this section if the city engineer determines that site conditions, size or type or development of grading requirements do not warrant such detailed information. If one or more requirements are waived, the city engineer shall, in the staff report or decision, identify the waived provision(s), explain the reasons for the waiver, and state that the waiver may be challenged on appeal and may be denied by a subsequent review authority.

Applicant's Response:
The applicant acknowledges the review procedures of this section.

17.44.060 Development standards.

Notwithstanding any contrary dimensional or density requirements of the underlying zone, the following standards shall apply to the review of any development proposal subject to this chapter. Requirements of this chapter are in addition to other provision of the Oregon City Municipal Code. Where provision of this chapter conflict with other provision of the Oregon City Municipal Code, the provisions that are more restrictive of regulated development activity shall govern.

A. All developments shall be designed to avoid unnecessary disturbance of natural topography, vegetation and soils. To the maximum extent practicable as determined by the review authority, tree and ground cover removal and fill and grading for residential development on individual lots shall be confined to building footprints and driveways, to areas required for utility easements and for slope easements for road construction, and to areas of geotechnical remediation.

Applicant's Response:

Key recommendations of the geotechnical report include a 35-foot geologic hazard setback from the top of the steep slope as well as specific retaining wall recommendations addressing slope stability vs historical landslides. The project proposes a pedestrian pathway through this setback area and the remainder of the setback area will be utilized for NROD mitigation and tree removal mitigation.

B. All grading, drainage improvements, or other land disturbances shall only occur from May 1 to October 31. "Land disturbance" is defined as any movement of earth, placement of earth, or movement of heavy trucks on earth, not including the right-of-way. Erosion control measures shall be installed and functional prior to any disturbances. Erosion control measures shall also be functioning and in a winterized stable condition once all land disturbance work has ceased for the year. The city engineer may allow grading, drainage improvements or other land disturbances to begin before May 1 (but no earlier than March 16) and end after October 31 (but no later than November 30), based upon weather conditions and the recommendation and direction of the project's geotechnical engineer. The city engineer may use the expertise of a city contracted geotechnical consultant to make the decision to allow any work before May 1 or after October 31. The city engineer has full authority to not allow any extension of work before May 1 or after October 31. In no case shall the applicant be allowed to begin work before May 1 or complete work after October 31 if the average monthly rainfall in any individual month between September and April is exceeded.

When allowed by the city engineer, the modification of dates shall be the minimum necessary, based upon the evidence provided by the applicant, to accomplish the necessary project goals. Temporary protective fencing shall be established around all trees and vegetation designed for protection prior to the commencement of grading or other soil disturbance.

Applicant's Response:

The applicant acknowledges the construction timing provisions of this section. Pedestrian pathway work within the 35-ft geologic hazard setback can occur within the above construction timeframe. The soldier pile wall recommendation is made to allow fill for Parcel B parking lot construction to occur outside of the geologic hazard impact. The soldier pile wall system was selected to extend into bedrock to provide proper slope stability.

C. Designs shall minimize the number and size of cuts and fills.

D. Cut and fill slopes greater than seven feet in height (as measured vertically) shall be terraced. Faces on a terraced section shall not exceed five feet. Terrace widths shall be a minimum of three feet and shall be vegetated. Total cut and fill slopes shall not exceed a vertical height of fifteen feet. Except in connection with geotechnical remediation plans approved in accordance with the chapter, cuts shall not remove the toe of any slope that contains a known landslide or is greater than twenty-five percent slope. The top of cut or fill slopes not utilizing structural retaining walls shall be located a minimum of one-half the height of the cut slope from the nearest property line.

Applicant's Response:

The proposed retaining wall west of the geologic hazard setback is located outside of the geologic hazard area as shown on the attached GDP/DDP plans, and not subject to the height limitations of this section. The soldier pile wall system was selected to extend into bedrock to provide proper slope stability.

E. Any structural fill shall be designed by a suitably qualified and experienced civil or geotechnical engineer licensed in Oregon in accordance with standard engineering practice. The applicant's engineer shall certify that the fill has been constructed as designed in accordance with the provisions of this chapter. The structural fill design must be provided prior to any fill being placed onsite. The structural fill design must contain the stamp and signature of a professional engineer licensed in the state of Oregon.

F. Retaining walls shall be constructed in accordance with the Oregon Structural Specialty Code adopted by the state of Oregon.

1. Retaining walls that are four feet or greater in height, tiered walls with a total height four feet or greater, and walls on slopes steeper than 2:1 must be designed by a professional engineer licensed in the State of Oregon which includes a stamped and signed set of plans.
2. The construction of the wall must be inspected by the professional engineer responsible for the design and must be certified prior to the structure receiving temporary occupancy. The certification must contain the stamp and signature of a professional engineer licensed in the state of Oregon.
3. All retaining walls required to be designed by a professional engineer shall be reviewed by the city, when expertise exists on staff, or by the city's consultant. When reviewed by the city's consultant, the applicant shall reimburse the city for time spent by the city's consultant to review the design.

Applicant's Response:

The applicant acknowledges the above design requirements. Detailed design will occur following a decision on the proposed GDP/DDP application.

G. Roads shall be the minimum width necessary to provide safe vehicle and emergency access, minimize cut and fill and provide positive drainage control. The review authority may grant a variance from the city's required road standards upon findings that the variance would provide safe vehicle and emergency access and is necessary to comply with the purpose and policy of this chapter.

Applicant's Response:
Roads proposed with this application represent the minimum width necessary to address the elements of this section. Please see the proposed grading, drainage and utility plans, Shts DDP-C1.3, C1.4, C2.0, and C3.0.

H. Density shall be determined as follows:

1. Slope.
    a. For those areas with slopes less than twenty-five percent between grade breaks, the allowed density shall be that permitted by the underlying zoning district, unless further limited by the following code section;
    b. For those areas with slopes of twenty-five to thirty-five percent between grade breaks, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;
    c. For those areas with slopes over thirty-five percent between grade breaks, development shall be prohibited except as otherwise provided in subsection I.4 of this section.
2. Existing landslide (as shown in the geologic hazard overlay zone)
    a. For those areas with historic landslides where the structure or ground disturbance will be located within any portion of the mapped landslide or buffer zone, the density shall not exceed two dwelling units per acre except as otherwise provided in subsection I of this section;

Applicant's Response:
The proposed GDP/DDP application does not propose construction activity in slopes within the geologic hazard area in excess of 25% and does not propose construction activity in existing landslides.

I. For properties with slopes of twenty-five to thirty-five percent between grade breaks or are located within any portion of a mapped landslide and buffer zone:

1. For those portions of the property with slopes of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, the maximum residential density shall be limited to two dwelling units per acre; provided, however, that where the entire site is less than one-half acre in size, a single dwelling shall be allowed on a lot or parcel existing as of January 1, 1994 and meeting the minimum lot size requirements of the underlying zone;
2. An individual lot or parcel with slopes between twenty-five and thirty-five percent or located within any portion of a mapped landslide and buffer zone, shall have no more than fifty percent or four thousand square feet of the surface area, whichever is smaller, graded or stripped of vegetation or covered with structures or impermeable surfaces.
3. No cut into a slope of twenty-five to thirty-five percent or located within any portion of a mapped landslide and buffer zone, for the placement of a housing unit shall exceed a maximum vertical height of fifteen feet for the individual lot or parcel.

4. For those portions of the property with slopes over thirty-five percent between grade breaks:

    a. Notwithstanding any other city land use regulation, development other than roads, utilities, public facilities and geotechnical remediation shall be prohibited; provided, however, that the review authority may allow development upon such portions of land upon demonstration by an applicant that failure to permit development would deprive the property owner of all economically beneficial use of the property. This determination shall be made considering the entire parcel in question and contiguous parcels in common ownership on or after January 1, 1994, not just the portion where development is otherwise prohibited by this chapter. Where this showing can be made on residentially zoned land, development shall be allowed and limited to one single-family residence. Any development approved under this chapter shall be subject to compliance with all other applicable city requirements as well as any applicable state, federal or other requirements;

    b. To the maximum extent practicable as determined by the review authority, the applicant shall avoid locating roads, utilities, and public facilities on or across slopes exceeding thirty-five percent.

Applicant's Response:
The proposed GDP/DDP application does not propose construction activity in slopes within the geologic hazard area in excess of 25% and does not propose construction activity in existing landslides.

J. The geotechnical engineer of record shall review final grading, drainage, and foundation plans and specifications and confirm in writing that they are in conformance with the recommendations provided in their report.

K. At the city's discretion, peer review shall be required for the geotechnical evaluation/investigation report submitted for the development and/or lot plans. The peer reviewer shall be selected by the city. The applicant's geotechnical engineer shall respond to written comments provided by the city's peer reviewer prior to issuance of building permit.

L. The review authority shall determine whether the proposed methods of rendering a known or potential hazard site safe for construction, including proposed geotechnical remediation methods, are feasible and adequate to prevent landslides or damage to property and safety. The review authority shall consult with the city's geotechnical engineer in making this determination. Costs for such consultation shall be paid by the applicant. The review authority may allow development in a known or potential hazard area as provided in this chapter if specific findings are made that the specific provisions in the design of the proposed development will prevent landslides or damage. The review authority may impose any conditions, including limits on type or intensity of land use, which it determines are necessary to assure that landslides or property damage will not occur.

Applicant's Response:
The applicant acknowledges the geotechnical engineer of record's review of the proposed grading, drainage and foundation plans, as well as the city's review authority. This review will be in concert with

construction plan preparation of the proposed improvements prior to initial submittal of the construction plans. Final review by the geotechnical engineer of record will occur prior to final approval of the construction plans.

17.44.070 Access to property.

A. Shared private driveways may be required if the city engineer or principal planner determines that their use will result in safer location of the driveway and lesser amounts of land coverage than would result if separate private driveways are used.
B. Innovations in driveway design and road construction shall be permitted in order to keep grading and cuts or fills to a minimum and to achieve the purpose and policy of this chapter.
C. Points of access to arterials and collectors shall be minimized.
D. The city engineer or principal planner shall verify that adequate emergency services can be provided to the site.

Applicant's Response:
The easterly access to Parcel B occurs well outside the geologic hazard setback. This driveway is necessary to provide a secondary fire department access to the multi-family use. The proposed stormwater management facilities will be lined with impermeable materials as recommended by the geotechnical engineer to avoid introducing water in the vicinity of the top of the slope at the geologic hazard area.

17.44.080 Utilities.
All new utilities (storm sewer, sanitary sewer, potable water, and gas), both on-site and off-site, shall be placed underground and under roadbeds where practicable. All other service utilities (including, but not limited to, electric, telephone, telecom, cable, fiberoptic) shall be placed above ground on existing poles if poles exist. If no poles exist, the service lines shall be placed underground. Every effort shall be made to minimize the impact of utility construction. Underground utilities require the geologic hazards permitting and review prescribed herein when applicable.

Applicant's Response:
Utilities proposed with this GDP/DDP application are not located within the geologic hazard setback. The public sanitary sewer extension through Parcel B lies outside the geologic hazard setback except where it diverts to the northeast corner of the property so it can be extended to the Hilltop Ave sanitary sewer pump station by others in the future. The geotechnical engineer of record will review the sanitary sewer extension through the geologic hazard setback as a part of Parcel B construction plan preparation.

17.44.090 Stormwater drainage.
The applicant shall submit a permanent and complete stormwater control plan. The program shall include, but not be limited to the following items as appropriate: Curbs, gutters, inlets, catch basins, detention facilities and stabilized outfalls. Detention facilities shall be designed to city standards as set out in the city's drainage master plan and design standards. The review authority may impose conditions to ensure that waters are drained from the development so as to limit degradation of water quality

consistent with Oregon City's Title III section of the Oregon City Municipal Code Chapter 17.49 and the Oregon City Stormwater and Grading Design Standards or other adopted standards subsequently adopted by the city commission. The review authority may also impose conditions to limit the volume, velocity, or flow rate of water such that it does not negatively impact the underlying drainageway cross section. Drainage design shall be approved by the city engineer before construction, including grading or other soil disturbance, has begun.

A geotechnical report must include analysis and solutions for infiltration facilities located in areas where these facilities could impact nearby slopes of greater than ten percent. Infiltration shall be minimized as practicable for any site located within a geologic hazard overlay. Infiltration is not allowed for any site located in areas greater than twenty-five percent.

The project's civil or geotechnical engineer shall inspect any stormwater management feature and must certify that the stormwater management feature was constructed per plan and with the recommendations of the geotechnical engineer prior to receiving temporary occupancy. The certification must contain the stamp and signature of a professional engineer licensed in the state of Oregon.

Applicant's Response:

The proposed stormwater management facilities will be lined with impermeable materials as recommended by the geotechnical engineer to avoid introducing water in the vicinity of the top of the slope at the geologic hazard area. The applicant acknowledges the requirement for the geotechnical engineer of record to observe and certify construction of the stormwater management facilities that could impact the geologic hazard area.

17.44.100 Construction standards.

During construction on land subject to this chapter, the following standards shall be implemented by the developer:

A. All development activity shall minimize vegetation removal and soil disturbance and shall provide positive erosion prevention measures in conformance with OCMC Chapter 17.47—Erosion and Sediment Control.

B. No grading, clearing or excavation of any land shall be initiated prior to approval of the grading plan, except that the city engineer shall authorize the site access, brush to be cleared and the location of the test pit digging prior to approval of such plan to the extent needed to complete preliminary and final engineering and surveying. The grading plan shall be approved by the city engineer as part of the city's review under this chapter. The developer shall be responsible for the proper execution of the approved grading plan.

Measures shall be taken to protect against landslides, mudflows, soil slump and erosion. Such measures shall include sediment fences, straw bales, erosion blankets, temporary sedimentation ponds, interceptor dikes and swales, undisturbed buffers, grooving and stair stepping, check dams, etc. The applicant shall comply with the measures described in the Oregon City Public Works Standards for Erosion and Sedimentation Control (Ordinance No. 99-1013). Erosion control measures shall be in place at all times during construction to the maximum extent practicable.

C. All disturbed vegetation shall be replanted with suitable vegetation upon completion of the grading of the steep slope area.

D. Existing vegetative cover shall be maintained to the maximum extent practicable. No grading, compaction or change in ground elevation, soil hydrology and/or site drainage shall be permitted within the drip line of trees designated for protection, unless approved by the city.

E. Existing perennial and intermittent watercourses shall not be disturbed unless specifically authorized by the review authority. This includes physical impacts to the stream course as well as siltation and erosion impacts. The city, at its discretion, is not required to but may request the examination and assessment by other state agencies to determine if impacts are acceptable.

F. All soil erosion and sediment control measures shall be maintained during construction and for one year after development is completed, or until soils are stabilized by revegetation or other measures to the satisfaction of the city engineer. Such maintenance shall be the responsibility of the developer. If erosion or sediment control measures are not being properly maintained or are not functioning properly due to faulty installation or neglect, the city may order work to be stopped.

G. All newly created lots, either by subdivision or partition, shall contain building envelopes with a slope of thirty-five percent or less.

H. The applicant's geotechnical engineer shall provide special inspection during construction to confirm that the subsurface conditions and assumptions made as part of their geotechnical evaluation/investigation are appropriate. This will allow for timely design changes if site conditions are encountered that are different from those anticipated. Inspection is required on a daily basis for any day that earth disturbance is occurring or after any rainfall event of one-half inch or greater.

I. Prior to issuing an occupancy permit, the geotechnical engineer shall prepare a summary letter stating that the soils- and foundation-related project elements were accomplished in substantial conformance with their recommendations. The summary letter must contain the stamp and signature of a professional engineer licensed in the State of Oregon.

Applicant's Response:

The applicant acknowledges the above design requirements. Detailed construction plans for the proposed DDP application will be prepared following the above requirements, as well as other applicable requirements of the OCMC and Public works Design Standards.

17.44.110 Approval of development.

The city engineer shall review the application and verify, based on the applicant's materials and the land use record, whether the proposed development constitutes a hazard to life, property, natural resources or public facilities. If, in the city engineer's opinion, a particular development poses such a hazard, the city engineer shall recommend to the review authority permit conditions designed to reduce or eliminate the hazard. These conditions may include, but are not limited to, prohibitions on construction activities between November 1st and April 30th.

Applicant's Response:

The applicant acknowledges the above review and approval authority.

17.44.120 Liability.
Approval of an application for development on land subject to this chapter shall not imply any liability on the part of the city for any subsequent damage due to earth slides. Prior to the issuance of a building permit, a waiver of damages and an indemnity and hold harmless agreement shall be required which releases the city from all liability for any damages resulting from the development approved by the city's decision. The indemnity and hold harmless agreement shall be recorded on the property and run with the property.

Applicant's Response:
The applicant acknowledges the liability statement of this section.

17.44.130 Compliance.
Nothing contained in this chapter shall relieve the developer of the duty to comply with any other provision of law. In the case of a conflict, the more restrictive regulation shall apply.

Applicant's Response:
The applicant acknowledges the compliance requirements of this section.

17.44.140 Appeal.
The review authority's decision may be appealed in the manner set forth in Chapter 17.50.

Applicant's Response:
The applicant acknowledges the appeal procedure of this section.

CHAPTER 17.47 EROSION AND SEDIMENT CONTROL

17.47.030 - Applicability.

A. This chapter, which may also be referred to as "erosion control" in this Code, applies to development that may cause visible or measurable erosion on any property within the city limits of Oregon City.
B. This chapter does not apply to work necessary to protect, repair, maintain or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies, provided that after the emergency has passed, adverse impacts are mitigated in accordance with applicable standards.

Applicant's Response:
The applicant acknowledges the applicability of this chapter.

17.47.070 - Erosion and sediment control plans.

A. An application for an erosion and sediment control permit shall include an erosion and sediment control plan, which contains methods and interim measures to be used during and following construction to prevent or control erosion prepared in compliance with City of Oregon City public works standards for erosion and sediment control. These standards are incorporated herein and made a part of this title and are on file in the office of the city recorder.

B. Approval Standards. An erosion and sediment control plan shall be approved only upon making the following findings:

1. The erosion and sediment control plan meets the requirements of the City of Oregon City public works standards for erosion and sediment control incorporated by reference as part of this chapter;
2. The erosion and sediment control plan indicates that erosion and sediment control measures will be managed and maintained during and following development. The erosion and sediment control plan indicates that erosion and sediment control measures will remain in place until disturbed soil areas are permanently stabilized by landscaping, grass, approved mulch or other permanent soil stabilizing measures.

C. The erosion and sediment control plan shall be reviewed in conjunction with the requested development approval. If the development does not require additional review, the manager may approve or deny the permit with notice of the decision to the applicant.

D. The city may inspect the development site to determine compliance with the erosion and sediment control plan and permit.

E. Erosion that occurs on a development site that does not have an erosion and sediment control permit, or that results from a failure to comply with the terms of such a permit, constitutes a violation of this chapter.

F. If the manager finds that the facilities and techniques approved in an erosion and sediment control plan and permit are not sufficient to prevent erosion, the manager shall notify the owner or his/her designated representative. Upon receiving notice, the owner or his/her designated representative shall

immediately install interim erosion and sediment control measures as specified in the City of Oregon City public works standards for erosion and sediment control. Within three days from the date of notice, the owner or his/her designated representative shall submit a revised erosion and sediment control plan to the city. Upon approval of the revised plan and issuance of an amended permit, the owner or his/her designated representative shall immediately implement the revised plan.

G. Approval of an erosion and sediment control plan does not constitute an approval of permanent road or drainage design (e.g., size and location of roads, pipes, restrictors, channels, retention facilities, utilities, etc.).

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. A preliminary erosion control plan is included in this DDP plan set that demonstrates general compliance with the city's erosion control requirements; however, this is a planning level document and not intended to be a detailed construction plan. This DDP erosion control plan shows overall site rough grading and indicated general erosion control measures anticipated to be needed such as construction exits/entrances, sediment fences, diversion ditches, sediment ponds, inlet protection and general seeding areas. A detailed erosion control plan will be included with the construction plan submittal.

Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.47.080 - Plan implementation.
An approved erosion control and sediment control plan shall be implemented and maintained as follows:
A. Plan approval, where required, shall be obtained prior to clearing or grading. No grading, clearing or excavation of land requiring a plan shall be undertaken prior to approval of the plan.

B. The erosion and sediment control facilities shall be constructed prior to any clearing and grading activities, and maintained in such a manner as to ensure that sediment laden water does not enter the drainage system or violate applicable water standards.

C. The implementation of an erosion and sediment control plan and the construction, maintenance, replacement, and upgrading of erosion and sediment control facilities is the responsibility of the owner or his/her designated representative until all construction is completed and approved, and vegetation, landscaping or approved finished surfaces is established.

D. The erosion and sediment control facilities herein are the minimum requirements for anticipated site conditions. During the construction period, these erosion and sediment control facilities shall be upgraded as needed for unexpected storm events and to ensure that sediment-laden water does not leave the site.

E. Any observation of visible or measurable erosion, or an observation of more than a ten-percent increase in downstream channel turbidities, will result in an enforcement action by the city.

F. The owner or his/her designated representative shall implement the measures and construct facilities as provided for and according to the implementation schedule in the approved plan. The manager shall be allowed reasonable access to the development site for inspection purposes.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. A preliminary erosion control plan is included in this DDP plan set that demonstrates general compliance with the city's erosion control requirements; however, this is a planning level document and not intended to be a detailed construction plan. This DDP erosion control plan shows overall site rough grading and indicated general erosion control measures anticipated to be needed such as construction exits/entrances, sediment fences, diversion ditches, sediment ponds, inlet protection and general seeding areas. A detailed erosion control plan will be included with the construction plan submittal.

Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.47.090 – Plan performance guarantee and security.
After the plan is approved by the manager and prior to construction or grading, the owner shall provide a financial guarantee. Erosion and sediment control shall be included in the cost estimate for the primary project, such as land division or site plan, and included in that project's performance guarantee.

Applicant's Response:
The applicant acknowledges the financial guarantee provisions of this section.

CHAPTER 17.49 NATURAL RESOURCES OVERLAY DISTRICT

17.49.010 Purpose.
The natural resource overlay district designation provides a framework for protection of Metro Titles 3 and 13 lands, and Statewide Planning Goal 5 resources within Oregon City. The natural resource overlay district (NROD) implements the Oregon City Comprehensive Plan Natural Resource Goals and Policies, as well as Federal Clean Water Act requirements for shading of streams and reduction of water temperatures, and the recommendations of the Metro ESEE Analysis. It is intended to resolve conflicts between development and conservation of habitat, stream corridors, wetlands, and floodplains identified in the city's maps. The NROD contributes to the following functional values:

A. Protect and restore streams and riparian areas for their ecologic functions and as an open space amenity for the community.

B. Protect floodplains and wetlands, and restore them for improved hydrology, flood protection, aquifer recharge, and habitat functions.

C. Protect upland habitats and enhance connections between upland and riparian habitat.

D. Maintain and enhance water quality and control erosion and sedimentation through the revegetation of disturbed sites and by placing limits on construction, impervious surfaces, and pollutant discharges.

E. Conserve scenic, recreational, and educational values of significant natural resources.

The NROD ecological functions listed above are planned for integration with existing neighborhoods, new residential and commercial developments. The long-term goal of the NROD is to restore and enhance stream corridors, wetlands, and forests to more natural vegetated conditions, recognizing that existing homes and other existing uses will continue in the district. This chapter does not regulate the development within the identified water resource. Separate permits from the Division of State Lands and the Army Corp of Engineers may be required for work within a stream or wetland.

Applicant's Response:
The applicant acknowledges the purpose of this chapter.

17.49.015 Natural resources committee.
The applicant is encouraged to contact the Oregon City Natural Resources Committee for input and advice on ways to further the purpose of the natural resources overlay district, whether or not a development application is proposed within the natural resources overlay district. Any advice given by the natural resources committee is non-binding on the applicant and the natural resources committee, and shall not relieve an applicant from compliance with this chapter.

Applicant's Response:
The applicant acknowledges this section.

17.49.020 NROD identifying documents.

A. The NROD protects as one connected system the habitats and associated functions of the streams, riparian corridors, wetlands and the regulated upland habitats found in Oregon City. These habitats and functions are described in the following documents upon which the NROD is based:

1. *The 1999 Oregon City Local Wetland Inventory.*
2. *The Oregon City Water Quality Resource Area Map (Ord. No. 99-1013).*
3. *2004 Oregon City slope data and mapping (LIDAR).*
4. *Metro Regionally Significant Habitat Map (Aerial Photos taken 2002).*
5. *National Wetland Inventory (published 1992).*
6. *Beavercreek Road Concept Plan (adopted September 2008).*
7. *Park Place Concept Plan (adopted April 2008).*
8. *South End Concept Plan (adopted April 2014).*

The NROD provisions apply only to properties within the NROD as shown on the NROD Map, as amended.

The intent of these regulations is to provide applicants the ability to choose a clear and objective review process or a discretionary review process. The NROD provisions do not affect existing uses and development, or the normal maintenance of existing structures, driveways/parking areas, public facilities, farmland and landscaped areas. New public facilities such as recreation trails, planned road and utility line crossings and stormwater facilities, are allowed within the overlay district under prescribed conditions as described in OCMC 17.49.090. In addition, provisions to allow a limited portion of the NROD to be developed on existing lots of record that are entirely or mostly covered by the NROD ("highly constrained") are described in OCMC 17.49.120.

Applicant's Response:

The NROD area affecting the site is limited to a portion of the proposed public street through TL 500 in the vicinity of the stormwater point of connection. An NROD memo was prepared by Environmental Science & Assessment, LLC, dated August 6, 2012, and is included in Appendix L. This report identified an NROD boundary based on a 50' buffer from the water resource within the drainage channel. Langan field verified the wetland and water resource boundaries with this current GDP/DDP application (see Appendix M), and the resource boundaries have essentially remained the same. However, the current version of OCMC Table 17.49.110 indicates that the NROD boundary should begin at the top of bank leading down to the channel, not at the channel itself (ordinary high water mark). This results in a greater NROD buffer impact than shown on the 2012 NROD report. The new NROD buffer location and associated impacts are shown on Sht DDP-C1.3.

The conclusions of the 2012 NROD report and planting recommendations remain valid, though there are increased plantings necessary as a result of the updated NROD buffer boundary.

17.49.030 Map as reference.

1. This chapter applies to all development within the natural resources overlay district as shown on the NROD Map, which is a regulatory boundary mapped ten feet beyond the required vegetated corridor width specified in OCMC 17.49.110. The mapped NROD boundary is based on a GIS-supported application of the adopted documents, plans and maps listed in OCMC 17.49.020.A.1—17.49.020.A.8, however the adopted map may not indicate the true location of protected features.

2. Notwithstanding changing field conditions or updated mapping approved by the City (and processed as a Type I Verification per OCMC 17.49.255), the applicant may choose to either accept the adopted NROD boundary or provide a verifiable delineation of the true location of the natural resource feature pursuant to the Type I or Type II procedure in accordance with this chapter.

3. The NROD boundary shall be shown on all development permit applications.

4. The official NROD map can only be amended by the City commission.

5. Verification of the map shall be processed pursuant to OCMC 17.49.250.

Applicant's Response:
The NROD boundary in the 2012 report was based on a field delineation of the resource, which then determined the NROD boundary, rather than relying on a GIS-based map. As noted above, Langan field verified the wetland and water resource boundaries with this current GDP/DDP application (see Appendix M), and the resource boundaries have essentially remained the same. However, the current version of OCMC Table 17.49.110 indicates that the NROD boundary should begin at the top of bank leading down to the channel, not at the channel itself. This results in a greater NROD buffer impact than shown on the 2012 NROD report. The new NROD buffer location and associated impacts are shown on Sht DDP-C1.3.

17.49.035 Addition of wetlands to map following adoption.
The NROD boundary shall be expanded to include a wetland identified during the course of a development permit review if it is within or partially within the mapped NROD boundary and meets the state of Oregon's definition of a "Locally Significant Wetland." In such cases, the entire wetland and its required vegetated corridor as defined in Table 17.49.110 shall be regulated pursuant to the standards of this chapter. The amended NROD boundary may be relied upon by the Community Development Director for the purposes of subsequent development review.

Applicant's Response:
The proposed development does not impact a wetland. Instead, the public street connection to Beavercreek Rd impacts the NROD buffer as shown on Sht DDP-C1.3.

17.49.040 - NROD permit and review process.
An NROD permit is required for those uses regulated under OCMC 17.49.090, Uses Allowed under Prescribed Conditions. An NROD permit shall be processed under the Type II development permit procedure unless an adjustment of standards pursuant to OCMC 17.49.200 is requested or the application is being processed in conjunction with a concurrent application or action requiring a Type III or Type IV development permit.

Applicant's Response:
The applicant acknowledges this section.

17.49.050 - Emergencies.

The provisions of this chapter do not apply to work necessary to protect, repair, maintain, or replace existing structures, utility facilities, roadways, driveways, accessory uses and exterior improvements in response to emergencies. After the emergency has passed, any disturbed native vegetation areas shall be replanted with similar vegetation found in the Oregon City Native Plant List pursuant to the mitigation standards of OCMC 17.49.180. For purposes of this section emergency shall mean any man-made or natural event or circumstance causing or threatening loss of life, injury to person or property, and includes, but is not limited to fire, explosion, flood, severe weather, drought, earthquake, volcanic activity, spills or releases of oil or hazardous material, contamination, utility or transportation disruptions, and disease.

Applicant's Response:
The proposed Masterplan GDP/DDP application does not constitute an emergency as described in this section.

17.49.060 - Consistency and relationship to other regulations.

A. Where the provisions of the NROD are less restrictive or conflict with comparable provisions of the OCMC, other City requirements, regional, state or federal law, the provisions that provides the greater protection of the resource shall govern.

Applicant's Response:
The applicant acknowledges this section.

B. Compliance with Federal and State Requirements.

1. If the proposed development requires the approval of any other governmental agency, such as the Division of State Lands or the U.S. Army Corps of Engineers, the applicant shall make an application for such approval prior to or simultaneously with the submittal of its development application to the City. The planning division shall coordinate City approvals with those of other agencies to the extent necessary and feasible. Any permit issued by the City pursuant to this chapter shall not become valid until other agency approvals have been obtained or those agencies indicate that such approvals are not required.

Applicant's Response:
The proposed project does not impact a wetland regulated by the Department of State Lands or the US Army Corps of Engineers. The project does impact the NROD buffer area with the proposed road connecting the main site with Beavercreek Rd and mitigation is proposed as required by this chapter.

2. The requirements of this chapter apply only to areas within the NROD and to locally significant wetlands that may be added to the boundary during the course of development review pursuant to OCMC 17.49.035. If, in the course of a development review, evidence suggests that a property outside the NROD may contain a wetland or other protected water resource, the provisions of this chapter shall not be applied to that development review. However, the omission shall not excuse the applicant from satisfying any state and federal wetland requirements which are otherwise applicable. Those requirements apply in addition to, and apart from the requirements of the City's comprehensive plan and this code.

Applicant's Response:
The applicant acknowledges this section.

17.49.070 - Prohibited uses.
The following development and activities are not allowed within the NROD:

A. Any new gardens, lawns, structures, development, other than those allowed outright (exempted) by the NROD or that is part of a regulated use that is approved under prescribed conditions. Note: Gardens and lawns within the NROD that existed prior to the time the overlay district was applied to a subject property are allowed to continue but cannot expand further into the overlay district.

B. New lots that would have their buildable areas for new development within the NROD are prohibited.

C. The dumping of materials of any kind is prohibited except for placement of fill as provided in subsection D. below. The outside storage of materials of any kind is prohibited unless they existed before the overlay district was applied to a subject property. Uncontained areas of hazardous materials as defined by the Oregon Department of Environmental Quality (ORS 466.005) are also prohibited.

D. Grading, the placement of fill in amounts greater than ten cubic yards, or any other activity that results in the removal of more than ten percent of the existing native vegetation on any lot within the NROD is prohibited, unless part of an approved development activity.

Applicant's Response:
The applicant does not propose any of the prohibited uses identified in this section. The proposed NROD buffer impact is made as a part of the proposed Masterplan GDP/DDP application.

17.49.080 - Uses allowed outright (exempted).
The following uses are allowed within the NROD and do not require the issuance of an NROD permit:

A. Stream, wetland, riparian, and upland restoration or enhancement projects as authorized by the City.

B. Farming practices as defined in ORS 215.203 and farm uses, excluding buildings and structures, as defined in ORS 215.203.

C. Utility service using a single utility pole.

D. Boundary and topographic surveys leaving no cut scars greater than three inches in diameter on live parts of native plants listed in the Oregon City Native Plant List.

E. Soil tests, borings, test pits, monitor well installations, and other minor excavations necessary for geotechnical, geological or environmental investigation, provided that disturbed areas are restored to pre-existing conditions as approved by the Community Development Director.

F. Trails meeting all of the following:

1. Construction shall take place between May 1 and October 30 with hand held equipment;
2. Widths shall not exceed forty-eight inches and trail grade shall not exceed twenty percent;
3. Construction shall leave no scars greater than three inches in diameter on live parts of native plants;
4. Located no closer than twenty-five feet to a wetland or the top of banks of a perennial stream, or no closer than ten feet of an intermittent stream;
5. No impervious surfaces; and
6. No native trees greater than one-inch in diameter may be removed or cut, unless replaced with an equal number of native trees of at least two-inch diameter and planted within ten feet of the trail.

G. Land divisions provided they meet the following standards, and indicate the following on the final plat:
1. Lots shall have their building sites (or buildable areas) entirely located at least five feet from the NROD boundary shown on the City's adopted NROD map. For the purpose of this subparagraph, "building site" means an area of at least three thousand five hundred square feet with minimum dimensions of forty feet wide by forty feet deep;
2. All public and private utilities (including water lines, sewer lines or drain fields, and stormwater disposal facilities) are located outside the NROD;
3. Impervious streets, driveways and parking areas shall be located at least ten feet from the NROD; and
4. The NROD portions of all lots are protected by:
a. A conservation easement; or
b. A lot or tract created and dedicated solely for unimproved open space or conservation purposes.

H. Site plan and design review applications where all new construction is located outside of the NROD boundary shown on the City's adopted NROD map, and the NROD area is protected by a conservation easement approved in form by the City.

I. Routine repair and maintenance of existing structures, roadways, driveways and utilities.

J. Replacement, additions, alterations and rehabilitation of existing structures, roadways, utilities, etc., where the ground level impervious surface area is not increased.

K. Measures approved by the City of Oregon City to remove or abate nuisances or hazardous conditions.

L. Tree Removal. The Community Development Director may permit the removal of any tree determined to be a dead, hazardous, or diseased tree as defined in OCMC 17.04. Any tree that is removed in accordance with this subsection L shall be replaced with a new tree of at least one-half-inch caliper or at least six foot overall height. An exception to this requirement may be granted if the applicant demonstrates that a replacement tree has already been planted in anticipation of tree removal, or if the existing site conditions otherwise preclude tree replacement (due to existing dense canopy coverage or other ecological reasons).

The replacement tree(s) shall be located in the general vicinity of the removed tree(s), somewhere within NROD on the property. The replacement tree(s) shall be identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland). The property owner shall ensure that the replacement tree(s) survives at least two years beyond the date of its planting.

M. Planting of native vegetation and the removal of non-native, invasive vegetation (as identified on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland), or as recommended by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, arboriculture, horticulture, wildlife biology, botany, hydrology or forestry), and removal of refuse and fill, provided that:

1. *All work is done using hand-held equipment;*
2. *No existing native vegetation is disturbed or removed; and*
3. *All work occurs outside of wetlands and the top-of-bank of streams.*

N. Activities in which no more than one hundred square feet of ground surface is disturbed outside of the bank-full stage of water bodies and where the disturbed area is restored to the pre-construction conditions, notwithstanding that disturbed areas that are predominantly covered with invasive species shall be required to remove the invasive species from the disturbance area and plant trees and native plants pursuant to this chapter.

O. New fences meeting all of the following:

1. *No taller than three and a half feet and of split rail or similar open design;*
2. *Two feet width on both sides of fence shall be planted or seeded with native grasses, shrubs, herbs, or trees to cover any bare ground;*
3. *Six inches of clearance from ground level;*
4. *Fence posts shall be placed outside the top-of-bank of streams and outside of delineated wetlands.*

P. Gardens, fences and lawns within the NROD that existed prior to the time the overlay district was applied to a subject property are allowed to be maintained but cannot expand further into the overlay district.

Applicant's Response:
The applicant acknowledges the allowed uses identified in this section. The project proposes to construct a public street within the NROD buffer as shown on the enclosed DDP plan sheets, and more specifically Sht DDP-C1.3, which will require NROD permit approval.

17.49.090 - Uses allowed under prescribed conditions.
The following uses within the NROD are subject to the applicable standards listed in OCMC 17.49.100 through 17.49.190 pursuant to a Type II process:

A. Alteration to existing structures within the NROD when not exempted by OCMC 17.49.080, subject to OCMC 17.49.130.

B. A single-family detached residential unit or duplex on a highly constrained vacant lot of record that has less than three thousand square feet of buildable area, with minimum dimensions of fifty feet by fifty

feet, remaining outside the NROD portion of the property, subject to the maximum disturbance allowance prescribed in OCMC 17.49.120.A.

C. A land division that would create a new lot for an existing residence currently within the NROD, subject to OCMC 17.49.160.

D. Land divisions when not exempted by OCMC 17.49.080, subject to the applicable standards of OCMC 17.49.160.

E. Trails/pedestrian paths when not exempted by OCMC 17.49.080, subject to OCMC 17.49.170 (for trails) or OCMC 17.49.150 (for paved pedestrian paths).

F. New roadways, bridges/creek crossings, utilities or alterations to such facilities when not exempted by OCMC 17.49.080.

G. Roads, bridges/creek crossings subject to OCMC 17.49.150.

H. Utility lines subject to OCMC 17.49.140.

I. Stormwater detention or pre-treatment facilities subject to OCMC 17.49.155.

J. Institutional, industrial or commercial development on a vacant lot of record situated in an area designated for such use that has more than seventy-five percent of its area covered by the NROD, subject to OCMC 17.49.120.B.

K. City, county and state capital improvement projects, including sanitary sewer, water and stormwater facilities, water stations, and parks and recreation projects.

L. Non-hazardous tree removal that is not exempted pursuant to OCMC 17.49.080.K.

M. Fences that do not meet the standards for exemption pursuant to OCMC 17.49.080.O.4.

Applicant's Response:
The applicant acknowledges the allowed uses identified in this section. The project proposes to construct a public street and associated utilities, retaining wall, and a guard rail within the NROD buffer as shown on the enclosed DDP plan sheets, and more specifically Sht DDP-C1.3, which will require NROD permit approval.

17.49.100 - General development standards.
The following standards apply to all uses allowed under prescribed conditions within the NROD with the exception of rights-of-way (subject to OCMC 17.49.150), trails (subject to OCMC 17.49.170), utility lines (subject to OCMC 17.49.140), land divisions (subject to OCMC 17.49.160), and mitigation projects (subject to OCMC 17.49.180 or 17.49.190):

A. Native trees shall be preserved unless they are located within ten feet of any proposed structures or within five feet of new driveways, or if deemed not wind-safe by a certified arborist. Trees listed on the Oregon City Nuisance Plant List or Prohibited Plant List are exempt from this standard and may be removed. A protective covenant shall be required for any native trees that remain;

B. The Community Development Director may allow the landscaping requirements of the base zone, other than landscaping required for parking lots, to be met by preserving, restoring and permanently protecting habitat on development sites in the natural resource overlay district;

C. All vegetation planted in the NROD shall be native and listed on the Oregon City Native Plant List or other locally adopted plant list (e.g. Metro or Portland), or as recommended by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, arboriculture, horticulture, wildlife biology, botany, hydrology or forestry);

D. Grading is subject to installation of erosion control measures required by the City;

E. The minimum front, street, or garage setbacks of the base zone may be reduced to any distance between the base zone minimum and zero in order to minimize the disturbance area within the NROD portion of the lot;

F. Any maximum required setback in any zone, such as for multi-family, commercial or institutional development, may be increased to any distance between the maximum and the distance necessary to minimize the disturbance area within the NROD portion of the lot;

G. Fences in compliance with OCMC 17.49.080.N;

H. Exterior lighting shall be placed or shielded so that they do not shine directly into resource areas;

I. If development will occur within the one hundred-year floodplain, the standards of OCMC 17.42 shall be met; and

J. Mitigation of impacts to the regulated buffer is required, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
The project proposes to construct a public street and associated utilities, retaining wall (with fence on top for safety), and a guard rail within the NROD buffer as shown on the enclosed DDP plan sheets, and more specifically Sht DDP-C1.3, which will require NROD permit approval. Construction activity impacting the wetland or water resource is not proposed. The development standards of OCMC 17.49.150 govern the development of the proposed street improvements.

Nonetheless, the following discussion addresses the above concerns so the project can comply with as many of the requirements in this section as possible. The proposed masterplan development does not rely on NROD mitigation for meeting the project's landscape requirements. The project proposes mitigation vegetation both in the temporary impacts area shown on Sht DDP-C1.3 and the larger mitigation area within the Geologic Hazard setback. Erosion control measures are proposed to

protect the NROD resource as should on DDP-C0.1. These erosion control measures will be finalized with the final design and construction plan preparation following GDP/DDP approval. Minimum/maximum setbacks are not applicable with the proposed roadway improvements. The proposed fence on top of the retaining wall is considered a safety fence and is not proposed to be split-rail as indicated in OCMC 17.49.080.O. Street lighting is located on the west side of the proposed road to minimize lighting impacts to the NROD resource while still providing adequate light levels for the street and accompanying sidewalk. If final design indicates shields are necessary to avoid directly shining into the resource area they can be provided if doing so still enables the project to meet required street and pedestrian light levels. Development will not occur within the 100-yr floodplain of this tributary. While the ravine containing the NROD resource does not include a mapped 100-yr floodplain, the lowest level of the proposed retaining wall lies 11'-12' above the resource and the ravine capacity far exceeds the capacity of the storm pipe discharging into the ravine. Mitigation to the NROD buffer is as proposed on the 2012 NROD memo, as modified on Sht DDP-C1.3 to reflect an updated buffer location/impact, and as described in our responses to this chapter.

17.49.110 - Width of vegetated corridor.

A. Calculation of Vegetated Corridor Width within City Limits. The NROD consists of a vegetated corridor measured from the top of bank or edge of a protected habitat or water feature. The minimum required width is the amount of buffer required on each side of a stream, or on all sides of a feature if non-linear. The width of the vegetated corridor necessary to adequately protect the habitat or water feature is specified in Table 17.49.110.

Table 17.49.110

Protected Water Feature Type (see definitions)	***Slope Adjacent to Protected Water Feature***	***Starting Point for Measurements from Water Feature***	***Width of Vegetated Corridor (see Note 1)***
Anadromous fish-bearing streams	*Any slope*	*• Edge of bankfull flow*	*200 feet*
Intermittent streams with slopes less than 25 percent and which drain less than 100 acres	*< 25 percent*	*• Edge of bankfull flow*	*15 feet*
All other protected water features	*< 25 percent*	*•Edge of bankfull flow • Delineated edge of Title 3 wetland*	*50 feet*
	≥25 percent for 150 feet or more (see Note 2)		*200 feet*
	≥25 percent for less than 150 feet (see Note 2)		*Distance from starting point of measurement to top of ravine (break in ≥25 percent slope) (See Note 3) plus 50 feet.*

Notes:

1. Required width (measured horizontally) of vegetated corridor unless reduced pursuant to the provisions of OCMC 17.49.120.
2. Vegetated corridors in excess of fifty feet apply on steep slopes only in the uphill direction from the protected water feature.
3. Where the protected water feature is confined by a ravine or gully, the top of the ravine is the break in the ≥25 percent slope.

Applicant's Response:
Based on the 2012 NROD report, anadromous fish are not present in the immediate downstream drainage. The existing stream channel is not considered intermittent. The existing slope adjacent to the protected wetland/water resource varies in slope with the vast majority of the adjacent slope ≥25 percent for less than 150 feet. The width of the vegetated corridor (NROD Buffer) is governed by Note #3 in Table 17.49.110, which requires a 50-ft buffer outside of the top of the ravine. This is shown on Sht DDP-C1.3

B. Habitat Areas within City Parks. For habitat and water features identified by Metro as regionally significant which are located within city parks, the NROD Boundary shall correspond to the Metro Regionally Significant Habitat Map.

Applicant's Response:
The existing NROD impact area is not located within a city park.

C. Habitat Areas outside City limit/within UGB. For habitat and water features identified by Metro as regionally significant which are located outside of the City limits as of the date of adoption of the ordinance codified in this chapter, the minimum corridor width from any non-anadromous fish bearing stream or wetland shall be fifty feet.

Applicant's Response:
The existing NROD impact area is located within the city limits.

<u>17.49.120 - Maximum disturbance allowance for highly constrained lots of record.</u>
In addition to the General Development Standards of OCMC 17.49.100, the following standards apply to a vacant lot of record that is highly constrained by the NROD, per OCMC 17.49.090.B and 17.49.090.F:

A. Standard for Residential Development. In the NROD where the underlying zone district is zoned Residential (R-10, R-8, R-6, R-5, R-3.5): The maximum disturbance area allowed for new residential development within the NROD area of the lot is three thousand square feet.

Applicant's Response:
The proposed NROD disturbance is not located within the above-referenced residential zones.

B. Standard for all developments not located in R-10, R-8, R-6, R-5, and R-3.5. For all other underlying zone districts, the maximum disturbance area allowed for a vacant, constrained lot of record development within the NROD is that square footage which when added to the square footage of the lot lying outside the NROD portion equals twenty-five percent of the total lot area.

1. Lots that are entirely covered by the NROD will be allowed to develop twenty-five percent of their area.
2. This can be determined by:
a. Multiplying the total square footage of the lot by .25; or
b. Subtracting from that amount the square footage of the lot that is located outside the NROD.
The result is the maximum square footage of disturbance to be allowed in the NROD portion of the lot. If the result is < or = to 0, no disturbance is permitted and the building shall be located outside of the boundary.

Applicant's Response:
While the remainder of TL 500 is vacant, it does not qualify as being highly constrained per OCMC 17.49.090.B or F. Accordingly, this section does not apply.

C. In all areas, the disturbance area of a vacant, highly constrained lot of record within the NROD shall be set back at least fifty feet from the top of bank on Abernethy Creek, Newell Creek, or Livesay Creek or twenty-five feet from the top of bank of any tributary of the aforementioned creeks, other water body or from the delineated edge of a wetland located within the NROD area.

Applicant's Response:
While the remainder of TL 500 is vacant, it does not qualify as being highly constrained per OCMC 17.49.090.B or F. Accordingly, this section does not apply.

D. If the highly constrained lot of record cannot comply with the above standards, a maximum 1,500 square foot disturbance within the NROD area may be allowed.

Applicant's Response:
While the remainder of TL 500 is vacant, it does not qualify as being highly constrained per OCMC 17.49.090.B or F. Accordingly, this section does not apply.

17.49.130 - Existing development standards.
In addition to the General Development Standards of OCMC 17.49.100, the following standards apply to alterations and additions to existing development within the NROD, except for trails, rights of way, utility lines, land divisions and mitigation projects. As of June 1, 2010, applicants for alterations and additions to existing development that are not exempt pursuant to OCMC 17.49.080.J. shall submit a Type II or Type III application pursuant to this section.

Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
TL 500 has been altered over time by various gravel maintenance drives and equipment storage. That prior activity has impacted a portion of the NROD buffer/vegetated corridor. The currently proposed Masterplan development represents formal impact to the NROD buffer by virtue of the proposed masterplan improvements and is being processed as a Type II application.

17.49.140 - Standards for utility lines.
The following standards apply to new utilities, private connections to existing or new utility lines, and upgrades of existing utility lines within the NROD:

A. The disturbance area for private connections to utility lines shall be no greater than ten feet wide;

Applicant's Response:
The project proposes both street and utility improvements, which are governed by OCMC 17.49.150.

B. The disturbance area for the upgrade of existing utility lines shall be no greater than fifteen feet wide;

Applicant's Response:
The project proposes both street and utility improvements, which are governed by OCMC 17.49.150.

C. New utility lines shall be within the right-of-way, unless reviewed under subsection D.

Applicant's Response:
The project proposes both street and utility improvements, which are governed by OCMC 17.49.150. New utilities are located within he proposed right-of-way.

D. New utility lines that cross above or underneath a drainage way, wetland, stream, or ravine within the NROD but outside of a right-of-way shall be processed as a Type III permit pursuant to OCMC 17.49.200, Adjustment from Standards.

Applicant's Response:
The project does not propose to cross or go underneath a drainage way.

E. No fill or excavation is allowed within the ordinary high water mark of a stream without the approval of the Division of State Lands and/or the U.S. Army Corps of Engineers;

Applicant's Response:
The project does not propose cuts or fills within the ordinary high-water mark of the existing channel.

F. The Division of State Lands must approve any work that requires excavation or fill in a wetland;

Applicant's Response:
The project does not propose filling any wetlands.

G. Native trees more than ten inches in diameter shall not be removed unless it is shown that there are no feasible alternatives; and

Applicant's Response:
The project does not propose to remove any native trees within the NROD buffer area.

H. Each six to ten-inch diameter native tree cut shall be replaced at a ratio of three trees for each one removed. Each eleven-inch or greater diameter native tree shall be replaced at a ratio of five trees for each removed. The replacement trees shall be a minimum one-half inch diameter and selected from the Oregon City Native Plant List. All trees shall be planted within the NROD on the subject property. Where a utility line is approximately parallel with the stream channel, at least half of the replacement trees shall be planted between the utility line and the stream channel.

Applicant's Response:
The project does not propose to remove any native trees within the NROD buffer area.

I. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
The project proposes mitigation for roadway and utility impacts to the NROD buffer through a combination of plantings within the temporary impact area shown on DDP-C1.3 and the remainder of the mitigation plantings occurring within the proposed 35' Geologic Hazard setback area on the east side of Parcel B. Please see our responses to OCMC 17.49.180 & 17.49.190. The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource.

17.49.150 - Standards for vehicular or pedestrian paths and roads.
The following standards apply to public rights-of-way and private roads within the NROD, including roads, bridges/stream crossings, driveways and pedestrian paths with impervious surfaces:

A. Stream crossings shall be limited to the minimum number and width necessary to ensure safe and convenient pedestrian, bicycle and vehicle connectivity, and shall cross the stream at an angle as close to perpendicular to the stream channel as practicable. Bridges shall be used instead of culverts wherever practicable.

Applicant's Response:
The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No stream crossing is proposed.

B. Where the right-of-way or private road crosses a stream the crossing shall be by bridge or a bottomless culvert;

Applicant's Response:
The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No stream crossing is proposed.

C. No fill or excavation shall occur within the ordinary high water mark of a stream without the approval of the Division of State Lands and/or the U.S. Army Corps of Engineers;

Applicant's Response:
The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No stream crossing is proposed.

D. If the Oregon Department of State Lands (DSL) has jurisdiction over any work that requires excavation or fill in a wetland, required permits or authorization shall be obtained from DSL prior to release of a grading permit;

Applicant's Response:
The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No wetland impact is proposed.

E. Any work that will take place within the banks of a stream shall be conducted between June 1 and August 31, or shall be approved by the Oregon Department of Fish and Wildlife; and

Applicant's Response:
The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource. No stream impact is proposed.

F. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
The project proposes mitigation for roadway and utility impacts to the NROD buffer through a combination of plantings within the temporary impact area shown on DDP-C1.3 and the remainder of the mitigation plantings occurring within the proposed 35' Geologic Hazard setback area on the east side of Parcel B. Please see our responses to OCMC 17.49.180 & 17.49.190. The proposed roadway impact is limited to the NROD buffer area as shown on DDP-C1.3, and not to the wetland or water resource.

17.49.155 - Standards for stormwater facilities.
Approved facilities that infiltrate stormwater on-site in accordance with public works low-impact development standards, including but not limited to; vegetated swales, rain gardens, vegetated filter strips, and vegetated infiltration basins, and their associated piping, may be placed within the NROD boundary pursuant to the following standards:

A. The forest canopy within the driplines of existing trees shall not be disturbed.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

B. Only vegetation from the Oregon City Native Plant List shall be planted within these facilities.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

C. Mitigation is required, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

D. The stormwater facility may encroach up to one-half the distance of the NROD corridor.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

E. The stormwater facility shall not impact more than one thousand square feet of the NROD. Impacts greater than one thousand square feet shall be processed as a Type III application.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

F. The Community Development Director may allow landscaping requirements of the base zone, other than landscaping required for parking lots, to be met by preserving, restoring and permanently protecting habitat on development sites within the natural resource overlay district.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

G. The design of the stormwater facility shall be subject to OCMC 13.12.

Applicant's Response:
The project does not propose installation of stormwater facilities as described in this criterion. The project's piped stormwater connection point to the existing storm line is located within the proposed public road alignment but no surface stormwater treatment facility is proposed within the NROD boundary or required buffer.

17.49.160 - Standards for land divisions.
Other than those land divisions exempted by OCMC 17.49.070.G., new residential lots created within the NROD shall conform to the following standards:

A. For a lot for an existing residence currently within the NROD. This type of lot is allowed within the NROD for a residence that existed before the NROD was applied to a subject property. A new lot for an existing house may be created through a partition or subdivision process when all of the following are met:

1. There is an existing house on the site that is entirely within the NROD area; and

Applicant's Response:
The project does not propose to create a new residential lot within the NROD boundary or required buffer.

2. The existing house will remain; and

Applicant's Response:
The project does not propose to create a new residential lot within the NROD boundary or required buffer.

3. The new lot is no larger than required to contain the house, minimum required side setbacks, garage, driveway and a twenty-foot deep rear yard, with the remaining NROD area beyond that point protected by a conservation easement, or by dedicating a conservation tract or public open space.

Applicant's Response:
The project does not propose to create a new residential lot within the NROD boundary or required buffer.

B. Protection and ownership of NROD areas in land divisions:

1. New partitions shall delineate the NROD area either as a separate tract or conservation easement that meets the requirements of subsection 2. of this section.

Applicant's Response:
The project does not propose to create a new residential lot within the NROD boundary or required buffer.

2. Prior to final plat approval, ownership and maintenance of the NROD area shall be identified to distinguish it from the buildable areas of the development site. The NROD area may be identified as any one of the following:

a. A tract of private open space held by the homeowners association;
b. For residential land divisions, a tract of private open space held by a homeowner's association subject to an easement conveying stormwater and surface water management rights to the City and preventing the owner of the tract from activities and uses inconsistent with the purpose of this document;
c. Public open space where the tract has been dedicated to the City or other governmental unit;
d. Conservation easement area pursuant to OCMC 17.49.180.G and approved in form by the Community Development Director;
e. Any other ownership proposed by the owner and approved by the Community Development Director; or
f. NROD tracts shall be exempt from minimum frontage requirements, dimensional standards of the zoning designation, street frontage requirements, or flag lot standards pursuant to OCMC 16.08.053.

Applicant's Response:
The project does not propose to create a new residential lot within the NROD boundary or required buffer.

17.49.170 - Standards for trails.
All trails that are not exempt pursuant to OCMC 17.49.80.F shall be processed through a Type II or Type III process pursuant to this chapter; and shall provide mitigation, subject to OCMC 17.49.180 or 17.49.190.

Applicant's Response:
The project does not propose to locate a trail within the NROB boundary or required buffer.

17.49.180 - Mitigation standards.
The following standards (or the alternative standards of OCMC 17.49.190) apply to required mitigation:

A. Mitigation shall occur at a two-to-one ratio of mitigation area to proposed NROD disturbance area. Mitigation of the removal or encroachment of a wetland or stream shall not be part of this chapter and will be reviewed by the Division of State Lands or the Army Corp of Engineers during a separate review process.

Applicant's Response:
As shown on Sht DDP-C1.3 impacts to the NROD buffer are as follow:

- **Temporary Impacts: 790 sf**
- **Permanent Impacts: 3,346 sf**
- **Existing Impacts: 2,040 sf**

The existing impact is excluded from mitigation since it's a pre-existing encroachment into the NROD buffer. As noted in the 2012 NROD report, the applicant does not have access to the remainder of TL 500 for any mitigation other than the temporary mitigation area. This continues to be the case with this application. The 2012 NROD report proposed a 3:1 mitigation ratio, with mitigation to occur within the 35-ft Geologic Hazard setback. This project proposes to maintain that 3:1 mitigation area due to the mitigation area being detached from the NROD resource as identified in the 2012 report. With a 3,346-sf permanent impact, proposed mitigation at a 3:1 ratio results in a mitigation area of 10,038 sf.

B. Mitigation shall occur on the site where the disturbance occurs, pursuant to the following:

1. The mitigation required for disturbance associated with a right-of-way or utility in the right-of way shall be located as close to the impact area as possible within the NROD;

2. If not possible to locate mitigation on the same site, the mitigation shall occur first on the same stream tributary, secondly in the Abernethy, Newell or Livesay Creek or a tributary thereof, or thirdly as close to the impact area as possible within the NROD; and

3. An easement that allows access to the mitigation site for monitoring and maintenance shall be provided as part of the mitigation plan.

Applicant's Response:
As identified in the 2012 NROD report, the area of NROD encroachment cannot be adequately off-set adjacent to the waterway resource within the TL 500 waterway ravine. TL 500 is still highly constrained by steep slopes and the expansion and enhancement of existing NROD buffer area on TL 500 will further constrain access to TL 500 making it more difficult to develop in the future. The 2012 NROD report goes on to say that regardless of current proposed roadway improvements, any future development proposed on TL 500 will have to address existing and proposed NROD encroachment with a mitigation plan. Adding to the NROD area on TL 500 via this project's proposed mitigation further encumbers any future site development options.

C. Mitigation shall occur within the NROD area of a site unless it is demonstrated that this is not feasible because of a lack of available and appropriate area. In such cases, the proposed mitigation area shall be contiguous to the existing NROD area so the NROD boundary can be easily extended in the future to include the new resource site.

Applicant's Response:
The proposed mitigation site is located along the edge of a mature mixed forest of big-leaf maple and Douglas fir that extends down the steep slope to the east, into the adjacent open space parcel (2012 Report, Photo 4). The forest community to the east transitions into a mixed riparian community at the base of the slope and further east, NROD overlays are mapped on tributaries to Newell Creek (2012 Report, Figure 2).

The understory along the edge of the existing forest habitat in the proposed mitigation area has been impacted by past site grading. Fill material has been pushed up to the top of slope, piled into a narrow berm ranging from 2-3 feet high, extending along the entire eastern edge of the site. As a result of this disturbance, invasive weedy species are the dominant understory vegetative cover (2012 Report, Photos 5-6). The geotech consultant recommends a 35-foot setback from the top of bank along the

eastern edge of the site for built structures, so this area would not otherwise be improved with the proposed development (2012 Report, Figure 6).

Mitigation will be provided by pulling out the top 2-3 feet of fill material down to the native soil, which will be more conducive to a native plant community. The existing understory strata of the forest community will be restored by the installation of native tree and shrub plantings seeded with native groundcover species.

While the proposed mitigation area is not directly adjacent to the impacted NROD, the proposed mitigation will achieve a larger habitat enhancement area, providing a 3:1 ratio of mitigation to encroachment. Additionally, the expansion of the riparian forest along the eastern edge of the site will allow for a larger native plant community along the existing forest habitat at that location than would otherwise be completed under the existing site plan (2012 Report, Figure 5).

When looking at NROD mitigation options, it was determined that the area of NROD encroachment from the off-site access cannot be adequately off-set adjacent to the waterway resource within the off-site roadway. The site is currently highly constrained by steep slopes and the expansion and enhancement of existing NROD buffer area on the off-site parcel will further constrain access from Beavercreek to the site and make the site more difficult to develop. Regardless of current proposed roadway improvements, any future development proposed the off-site parcel will have to address existing and proposed NROD encroachment with a mitigation plan. Adding to the NROD area on the off-site lot further encumbers any future site development options.

Therefore, instead of providing NROD mitigation on the off-site parcel, the applicant proposes to provide 10,038 square feet of forested habitat enhancement along the eastern edge of the proposed shopping center development (2012 Report, Figure 6). While the NROD buffer cannot be enhanced or expanded adjacent to the tributary on the off-site parcel, the larger mitigation area habitat enhancement adjacent to the mostly intact, mature forest on site provides additional buffer functions not achievable at the impact location.

All temporary impacts will be mitigated in place. Due to the confined nature of the drainage adjacent to the temporary impacts and that no increase in surface discharge is anticipated from the project there are no detrimental impacts anticipated to the areas designated to be left undisturbed.

Based on the 2012 NROD report, anadromous fish are not present in the immediate downstream drainage. The project does not propose impacts to the stream channel, wetlands or other water bodies. Therefore, no detrimental impact related to the migration, rearing, feeding or spawning of fish are anticipated

D. Invasive and nuisance vegetation shall be removed within the mitigation area;

Applicant's Response:
As noted in the 2012 NROD report, invasive species and nuisance vegetation will be removed in the NROD mitigation area.

E. Required Mitigation Planting. An applicant shall meet Mitigation Planting Option 1 or 2 below, whichever option results in more tree plantings, except that where the disturbance area is one acre or more, Mitigation Option 2 shall be required. All trees, shrubs and ground cover shall be selected from the Oregon City Native Plant List.

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

NOTE: Applications on sites where no trees are present or which are predominantly covered with invasive species shall be required to mitigate the site, remove the invasive species and plant trees and native plants pursuant to Option 2.

1. Mitigation Planting Option 1.

a. Planting Quantity. This option requires mitigation planting based on the number and size of trees that are removed from the site pursuant to Table 17.49.180E.1.a.

Table 17.49.180E.1.a.—Required Planting

Size of Tree to be Removed (DBH)	***Number of Trees and Shrubs to be Replanted***
6 to 12"	*2 trees and 3 shrubs*
13 to 18"	*3 trees and 6 shrubs*
19 to 24"	*5 trees and 12 shrubs*
25 to 30"	*7 trees and 18 shrubs*
Over 30"	*10 trees and 30 shrubs*

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

b. Plant Size. Replacement trees shall be at least one-half inch in caliper on average, measured at six inches above the ground level for field grown trees or above the soil line for container grown trees. Oak, madrone, ash or alder may be one gallon size. Conifers shall be a minimum of six feet in height. Shrubs shall be at least one-gallon container size or the equivalent in ball and burlap and shall be at least twelve inches in height at the time of planting. All other species shall be a minimum of four-inch pots;

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

c. Plant Spacing. Except for the outer edges of mitigation areas, trees and shrubs shall be planted in a non-linear fashion. Plant spacing for new species shall be measured from the driplines of existing trees when present. Trees shall be planted on average between eight

and twelve feet on center, and shrubs shall be planted on average between four and five feet on center, or clustered in single species groups of no more than four plants, with each cluster planted on average between eight and ten feet on center.

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

d. Mulching and Irrigation. Mulch new plantings a minimum of three inches in depth and eighteen inches in diameter. Water new plantings one inch per week from June 30th to September 15th, for the three years following planting.

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

e. Plant Species. Shrubs shall consist of at least two different species. If ten trees or more are planted, no more than one-half of the trees may be of the same genus. Conifers shall be replaced with conifers. Bare ground shall be planted or seeded with native grasses and ground cover species.

Applicant's Response:
The proposed NROD impacts do not remove existing trees. Accordingly, Mitigation Planting Option 2 will be utilized.

2. Mitigation Planting Option 2.

a. Planting Quantity. In this option, the mitigation requirement is calculated based on the size of the disturbance area within the NROD. Native trees and shrubs are required to be planted at a rate of five trees and twenty-five shrubs per every five hundred square feet of disturbance area (calculated by dividing the number of square feet of disturbance area by five hundred, and then multiplying that result times five trees and twenty-five shrubs, and rounding all fractions to the nearest whole number of trees and shrubs; for example, if there will be three hundred thirty square feet of disturbance area, then three hundred thirty divided by five hundred equals .66, and .66 times five equals 3.3, so three trees shall be planted, and .66 times twenty-five equals 16.5, so seventeen shrubs shall be planted). Bare ground shall be planted or seeded with native grasses or herbs. Non-native sterile wheat grass may also be planted or seeded, in equal or lesser proportion to the native grasses or herbs.

Applicant's Response:
To mitigate the impacts for the permanent impacts (3,346 sf) a total of 33 trees and 167 shrubs will be planted within the 10,038 sf area in the Geologic Hazard Area. Within the temporary impact area (790 sf) a total of 7 trees and 39 shrubs will be planted. As identified in the 2012 NROD report, the Enhancement/Mitigation Area will be seeded with the seed mix provided in Table 1. Plantings at the Enhancement/Mitigation Area will be completed using container plant size and plant spacing

identified in Table 2 and 3. The total number of plants have been updated below for the current encroachment areas.

Plant List for Enhancement/NROD Mitigation Area (3346 sf)				
Common Name	**Scientific Name**	**Plant Form/Size[1]**	**Plant Spacing (ft on center)**	**Total Number of Plants**
NROD ENHANCEMENT				
Trees				
Big-leaf maple	*Acer macrophyllum*	1 gal/24”	10 ft. O.C.	11
Bitter cherry	*Prunus emarginata*	1 gal/24”	10 ft. O.C.	11
Douglas fir	*Pseudotsuga menziesii*	1 gal/24”	10 ft. O.C.	11
			Subtotal	**33**
Shrubs				
Nookta rose	*Rosa nutkana*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	34
Mock orange	*Philadelphus lewisii*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Red-flowering currant	*Ribes sanguineum*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Snowberry	*Symphoricarpos albus*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	29
Kinnikinnick	*Arctostaphylos uva-ursi*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	25
Tall Oregon grape	*Mahonia aquifolium*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	29
			Subtotal	**167**
			Total	**200**

[1]Recommended plant form and size. Suitable replacement may be used based on availability.

Plant List for Temporary Impacts/ In Place Mitigation Area (790 sf)				
Common Name	**Scientific Name**	**Plant Form/Size**	**Plant Spacing (ft on center)**	**Total Number of Plants**
NROD ENHANCEMENT				
Trees				
Big-leaf maple	*Acer macrophyllum*	1 gal/24”	10 ft. O.C.	3
Douglas fir	*Pseudotsuga menziesii*	1 gal/24”	10 ft. O.C.	4
			Subtotal	**7**
Shrubs				
Oceanspray	*Holodiscus discolor*	1 gal/18”	8 ft O.C.	9
Red-flowering currant	*Ribes sanguineum*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	9
Snowberry	*Symphoricarpos albus*	1 gal/18”	Clusters of 3-4 plants; 8 ft O.C.	11

Tall Oregon grape	*Mahonia aquifolium*	1 gal/18"	Clusters of 3-4 plants; 8 ft O.C.	10
			Subtotal	**39**
			Total	**46**

[1]Recommended plant form and size. Suitable replacement may be used based on availability.

b. Plant Size. Plantings may vary in size dependent on whether they are live cuttings, bare root stock or container stock, however, no initial plantings may be shorter than twelve inches in height.

Applicant's Response:
See tables above for recommended plant form and size.

c. Plant Spacing. Trees shall be planted at average intervals of seven feet on center. Shrubs may be planted in single-species groups of no more than four plants, with clusters planted on average between eight and ten feet on center.

Applicant's Response:
See tables above for recommended plant spacing.

d. Mulching and Irrigation shall be applied in the amounts necessary to ensure eighty percent survival at the end of the required five-year monitoring period.

Applicant's Response:
The applicant acknowledges this criterion and will address mulching and irrigation on the final construction plans.

e. Plant Diversity. Shrubs shall consist of at least three different species. If twenty trees or more are planted, no more than one-third of the trees may be of the same genus.

Applicant's Response:
The ratio of plantings for each species in the Enhancement/NROD Mitigation Area from the 2012 NROD report was adjusted to ensure no genus of trees accounted for more than one-third of the trees.

F. An alternative planting plan using native plants may be approved in order to create a new wetland area, if it is part of a wetlands mitigation plan that has been approved by the DSL or the U.S. Army Corps of Engineers (USACE) in conjunction with a wetland joint removal/fill permit application.

Applicant's Response:
An alternative planting plan is not proposed for the creation of new wetlands.

G. Monitoring and Maintenance. The mitigation plan shall provide for a five-year monitoring and maintenance plan with annual reports in a form approved by the Community Development Director.

Monitoring of the mitigation site is the on-going responsibility of the property owner, assign, or designee, who shall submit said annual report to the planning division, documenting plant survival rates of shrubs and trees on the mitigation site. Photographs shall accompany the report that indicate the progress of the mitigation. A minimum of eighty percent survival of trees and shrubs of those species planted is required at the end of the five-year maintenance and monitoring period. Any invasive species shall be removed and plants that die shall be replaced in kind to meet the eighty percent survival requirement. Bare spots and areas of invasive vegetation larger than ten square feet that remain at the end the five-year monitoring period shall be replanted or reseeded with native grasses and/or ground cover species.

Applicant's Response:
The applicant acknowledges the monitoring and maintenance requirements of this section.

H. Covenant or Conservation Easement. The applicant shall record a restrictive covenant or conservation easement, in a form provided by the City, requiring the owners and assigns of properties subject to this section to comply with the applicable mitigation requirements of this section. Said covenant shall run with the land, and permit the City to complete mitigation work in the event of default by the responsible party. Costs borne by the City for such mitigation shall be borne by the owner.

Applicant's Response:
The applicant acknowledges the easement requirements of this section.

I. Financial Guarantee. A financial guarantee for establishment of the mitigation area, in a form approved by the City, shall be submitted before development within the NROD disturbance area commences. The City will release the guarantee at the end of the five-year monitoring period, or before, upon its determination that the mitigation plan has been satisfactorily implemented pursuant to this section.

Applicant's Response:
The applicant acknowledges the financial guarantee requirements of this section.

17.49.190 - Alternative mitigation standards.
In lieu of the above mitigation standards of OCMC 17.49.180, the following standards may be used. Compliance with these standards shall be demonstrated in a mitigation plan report prepared by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, wildlife biology, botany, hydrology or forestry. At the applicant's expense, the City may require the report to be reviewed by an environmental consultant.

A. The report shall document the existing condition of the vegetated corridor as one of the following categories:

Good Existing Corridor:	*Combination of trees, shrubs and groundcover are eighty percent present, and there is more than fifty percent tree canopy coverage in the vegetated corridor.*
Marginal Existing Vegetated Corridor:	*Combination of trees, shrubs and groundcover are eighty percent present, and twenty-five to fifty percent canopy coverage in the vegetated corridor.*
Degraded Existing Vegetated Corridor:	*Less vegetation and canopy coverage than marginal vegetated corridors, and/or greater than ten percent surface coverage of any non-native species.*

Applicant's Response:
The applicant does not propose alternate mitigation standards.

B. The proposed mitigation shall occur at a minimum two-to-one ratio of mitigation area to proposed disturbance area;

Applicant's Response:
The applicant does not propose alternate mitigation standards.

C. The proposed mitigation shall result in a significant improvement to good existing condition as determined by a qualified environmental professional;

Applicant's Response:
The applicant does not propose alternate mitigation standards.

D. There shall be no detrimental impact on resources and functional values in the area designated to be left undisturbed;

Applicant's Response:
The applicant does not propose alternate mitigation standards.

E. Where the proposed mitigation includes alteration or replacement of development in a stream channel, wetland, or other water body, there shall be no detrimental impact related to the migration, rearing, feeding or spawning of fish;

Applicant's Response:
The applicant does not propose alternate mitigation standards.

F. Mitigation shall occur on the site of the disturbance to the extent practicable. If the proposed mitigation cannot practically occur on the site of the disturbance, then the applicant shall possess a legal instrument, such as an easement, sufficient to carry out and ensure the success of the mitigation.

Applicant's Response:
The applicant does not propose alternate mitigation standards.

17.49.200 - Adjustment from standards.

If a regulated NROD use cannot meet one or more of the applicable NROD standards then an adjustment may be issued if all of the following criteria are met. Compliance with these criteria shall be demonstrated by the applicant in a written report prepared by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, wildlife biology, botany, hydrology or forestry. At the applicant's expense, the City may require the report to be reviewed by an environmental consultant. Such requests shall be processed under the Type III development permit procedure. The applicant shall demonstrate:

A. There are no feasible alternatives for the proposed use or activity to be located outside the NROD area or to be located inside the NROD area and to be designed in a way that will meet all of the applicable NROD development standards;

Applicant's Response:
The applicant does not seek an adjustment to the NROD standards.

B. The proposal has fewer adverse impacts on significant resources and resource functions found in the local NROD area than actions that would meet the applicable environmental development standards;

Applicant's Response:
The applicant does not seek an adjustment to the NROD standards.

C. The proposed use or activity proposes the minimum intrusion into the NROD area that is necessary to meet development objectives;

Applicant's Response:
The applicant does not seek an adjustment to the NROD standards.

D. Fish and wildlife passage will not be impeded;

Applicant's Response:
While the applicant does not seek an adjustment to the NROD standards, based on the 2012 NROD report, anadromous fish are not present in the immediate downstream drainage. The project does not propose impacts to the stream channel, wetlands or other water bodies. Therefore, no detrimental impact related to the migration, rearing, feeding or spawning of fish are anticipated

E. With the exception of the standard(s) subject to the adjustment request, all other applicable NROD standards can be met; and

Applicant's Response:
The applicant does not seek an adjustment to the NROD standards.

F. The applicant has proposed adequate mitigation to offset the impact of the adjustment.

Applicant's Response:
The applicant does not seek an adjustment to the NROD standards.

17.49.210 - Type II development permit application.
Unless otherwise directed by the NROD standards, proposed development within the NROD shall be processed as a Type II development permit application. All applications shall include the items required for a complete application by OCMC 17.49.220—17.49.230, and 17.50.080 as well as a discussion of how the proposal meets all of the applicable NROD development standards in OCMC 17.49.100—17.49.170.

Applicant's Response:
The applicant acknowledges the required development review process identified in this section.

17.49.220 - Required site plans.
Site plans showing the following required items shall be part of the application:
A. For the entire subject property (NROD and non-NROD areas):
1. The NROD District Boundary. This may be scaled in relation to property lines from the NROD Map;
2. One hundred-year floodplain and floodway boundary (if determined by FEMA);
3. Creeks and other waterbodies;
4. Any wetlands, with the boundary of the wetland that will be adjacent to the proposed development determined in a wetlands delineation report prepared by a professional wetland specialist and following the Oregon Division of State Lands wetlands delineation procedures;
5. Topography shown by contour lines of two or one foot intervals for slopes less than fifteen percent and by ten foot intervals for slopes fifteen percent or greater;
6. Existing improvements such as structures or buildings, utility lines, fences, driveways, parking areas, etc.;
7. Extent of the required vegetated corridor required by Table 17.49.110.

Applicant's Response:
Please see the proposed DDP application plans, specifically Sht DDP-C1.3, which includes the required plan information.

B. Within the NROD area of the subject property:
1. The distribution outline of shrubs and ground covers, with a list of most abundant species;
2. Trees six inches or greater in diameter, identified by species. When trees are located in clusters they may be described by the approximate number of trees, the diameter range, and a listing of dominant species;
3. An outline of the disturbance area that identifies the vegetation that will be removed. All trees to be removed with a diameter of six inches or greater shall be specifically identified as to number, trunk diameters and species;
4. If grading will occur within the NROD, a grading plan showing the proposed alteration of the ground at two foot vertical contours in areas of slopes less than fifteen percent and at five foot vertical contours of slopes fifteen percent or greater.

Applicant's Response:
Please see the Sht DDP-C1.3, which includes the required plan information.

C. A construction management plan including:
1. Location of site access and egress that construction equipment will use;
2. Equipment and material staging and stockpile areas;
3. Erosion control measures that conform to City of Oregon City erosion control standards;
4. Measures to protect trees and other vegetation located outside the disturbance area.

Applicant's Response:
Please see the proposed Preliminary Rough Grading and Erosion Control Plan, Sht DDP-C0.1 showing the requested information. Construction traffic is proposed to enter/exit the project's development area via the Beavercreek Rd access. Equipment and material staging areas will be shown on the final construction plans and will be located within the main site area rather than within the NROD buffer area.

D. A mitigation site plan demonstrating compliance with OCMC 17.49.180 or 17.49.190, including:
1. Dams, weirs or other in-water features;
2. Distribution, species composition, and percent cover of ground covers to be planted or seeded;
3. Distribution, species composition, size, and spacing of shrubs to be planted;
4. Location, species and size of each tree to be planted;
5. Stormwater management features, including retention, infiltration, detention, discharges and outfalls;
6. Water bodies or wetlands to be created, including depth;
7. Water sources to be used for irrigation of plantings or for a water source for a proposed wetland.

Applicant's Response:
The 2012 NROD report includes a mitigation site plan. The current DDP application follows the same mitigation plan but increases the mitigation areas as described herein. Please see the proposed permanent NROD mitigation area on Sht DDP-C1.0 and temporary mitigation area on Sht DDP-C1.3.

17.49.230 - Mitigation plan report.
A mitigation plan report that accompanies the above mitigation site plan is also required. The report shall be prepared by an environmental professional with experience and academic credentials in one or more natural resource areas such as ecology, wildlife biology, botany, hydrology or forestry. The mitigation plan report shall, at a minimum, discuss:

A. Written responses to each applicable mitigation standard in OCMC 17.49.180 or 17.49.190 indicating how the proposed development complies with the mitigation standards;

B. The resources and functional values to be restored, created, or enhanced through the mitigation plan;

C. Documentation of coordination with appropriate local, regional, state and federal regulatory/resource agencies such as the Oregon Department of State Lands (DSL) and the United States Army Corps of Engineers (USACE);

D. Construction timetables;

E. Monitoring and maintenance practices pursuant to OCMC 17.49.230.F and a contingency plan for undertaking remedial actions that might be needed to correct unsuccessful mitigation actions during the first five years of the mitigation area establishment.

Applicant's Response:
The 2012 NROD report, together with our 2025 supplemental information contained in these responses, includes the above information.

17.49.240 - Density transfer.
The NROD allocates urban densities to the non-NROD portions of properties located partially within the NROD, generally resulting in a substantial increase in net development potential.

For lots of record that are located within the NROD, density transfer is allowed, subject to the following provisions:

A. Density may be transferred from the NROD to non-NROD portions of the same property or of contiguous properties within the same development site;

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

B. The residential transfer credit shall be as follows: For new residential partitions and subdivisions, one-third of the area of the NROD tract or conservation easement area may be added to the net developable area outside of the tract or conservation easement area within the boundary of the development site in order to calculate the allowable number of lots.

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

C. Permitted Modifications to Residential Dimensional Standards. In order to allow for a transfer of density pursuant to subsection B above, the dimensional standards of the base zone may be modified in order minimize disturbance to the NROD. The permissible reductions are specified in Tables 17.49.240.A—17.49.240.C.

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

D. The applicant shall demonstrate that the minimum lot size of the underlying zone has been met. The area of the NROD in subsection B. above that is used to transfer density may be included in the calculation of the average minimum lot size.

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

E. The applicant may choose to make the adjustments over as many lots as required.
Table 17.49.240.A: Lot Size reductions allowed for NROD Density Transfers

ZONE	Min. Lot Size (%)	Min. Lot Width	Min. Lot Depth
R-10	5,000 sq. feet	50'	65'
R-8	4,000 sq. feet	45'	60'
R-6	3,500 sq. feet	35'	55'
R-5	3,000 sq. feet	30'	50'
R-3.5	1,800 sq. feet	20'	45'

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

Table 17.49.240.B: Reduced Dimensional Standards for Detached Single-Family Residential Units

Size of Reduced Lot	Front Yard Setback	Rear Yard Setback	Side yard Setback	Corner Side	Lot Coverage
8,000—9,999 sq ft	15 feet	20 feet	7/9 feet	15 feet	40%
6,000—7,999 sq ft	10 feet	15 feet	5/7 feet	15 feet	40%
4,000—5,999 sq ft	10 feet	15 feet	5/5 feet	10 feet	40%
1,800—3,999 sq ft	5 feet	15 feet	5/5 feet	10 feet	55%

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

Table 17.49.240 C: Reduced Dimensional Standards for Single-Family Attached or Two-Family Residential Units

Size of Reduced Lot	Front Yard Setback	Rear Yard Setback	Side yard Setback	Corner Side	Lot Coverage
3,500—7,000 sq ft	10 feet	15 feet	5/0* feet	10 feet	40%
1,800—3,499 sq ft	5 feet	15 feet	5/0* feet	10 feet	55%

**0 foot setback is only allowed on single-family attached units*

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

F. For density transfers on properties zoned Commercial, Institutional, Industrial or Multi-Family, the transfer credit ratio is ten thousand square feet per acre of land within the NROD;

G. The area of land contained in the NROD area may be excluded from the calculations for determining compliance with minimum density requirements of the land division code.

H. The owner of the transferring property shall execute a covenant that records the transfer of density. The covenant shall be found to meet the requirements of this section and be recorded before building permits are issued; and

I. All other applicable development standards, including setbacks, building heights, and maximum lot coverage shall continue to apply when a density transfer occurs.

Applicant's Response:
Density transfers are not needed for the proposed application, nor are they proposed.

17.49.250 - Verification of NROD boundary.
The NROD boundary may have to be verified occasionally to determine the true location of a resource and its functional values on a site. This may be through a site specific environmental survey or a simple site visit in those cases where existing information demonstrates that the NROD significance rating does not apply to a site-specific area. Applications for development on a site located in the NROD area may request a determination that the subject site is not in an NROD area and therefore is not subject to the standards of OCMC 17.49.100. Verifications shall be processed as either a Type I or Type II process.

Applicant's Response:
The applicant acknowledges this section.

17.49.255 - Type I verification.
A. Applicants for a determination under this section shall submit a site plan meeting the requirements of OCMC 17.49.220, as applicable.

B. An applicant may request a Type I Verification determination by the Community Development Director. Such requests may be approved provided that there is evidence substantiating that all the requirements of this chapter relative to the proposed use are satisfied and demonstrates that the property also satisfies the following criteria, as applicable:

1. No soil, vegetation, hydrologic features have been disturbed;
2. No hydrologic features have been changed;
3. There are no man-made drainage features, water marks, swash lines, drift lines present on trees or shrubs, sediment deposits on plants, or any other evidence of sustained inundation.
4. The property does not contain a wetland as identified by the City's Local Wetland Inventory or Water Quality and Flood Management Areas map.

5. There is no evidence of a perennial or intermittent stream system or other protected water feature. This does not include established irrigation ditches currently under active farm use, canals or manmade storm or surface water runoff structures or artificial water collection devices.
6. Evidence of prior land use approvals that conform to the Natural Resource Overlay District, or which conformed to the Water Quality Resources Area Overlay District that was in effect prior to the current adopted NROD (Ord. 99-1013).
7. There is an existing physical barrier between the site and a protected water feature, including:
a. Streets, driveways, alleys, parking lots or other approved impervious areas wider than fifteen feet and which includes drainage improvements that are connected to the City storm sewer system, as approved by the City.
b. Walls, buildings, drainages, culverts, topographic features or other structures which form a physical barrier between the site and the protected water features, as approved by the City.
C. If the City is not able to clearly determine, through the Type I verification process that the applicable criteria subsection B.1.—B.7 above are met, the verification application shall be denied. An applicant may then opt to apply for a verification through the Type II process defined below.

Applicant's Response:
The applicant acknowledges this section. A Type I verification is not being sought at this time.

17.49.260. - Type II verification.
Verifications of the NROD which cannot be determined pursuant to the standards of OCMC 17.49.255 may be processed under the Type II permit procedure.

A. Applicants for a determination under this section shall submit a site plan meeting the requirements of OCMC 17.49.220 as applicable.

B. Such requests may be approved provided that there is evidence that demonstrates in an environmental report prepared by one or more qualified professionals with experience and credentials in natural resource areas, including wildlife biology, ecology, hydrology and forestry, that a resource function(s) and/or land feature(s) does not exist on a site-specific area.

C. Verification to remove a recently developed area from the NROD shall show that all of the following have been met:
1. All approved development in the NROD has been completed;
2. All mitigation required for the approved development, located within the NROD, has been successful; and
3. The previously identified resources and functional values on the developed site no longer exist or have been subject to a significant detrimental impact.

Applicant's Response:
The applicant acknowledges this section. A Type I verification is not being sought at this time, as the existence and extent of the NROD boundary is clear based on the location of the wetland/water resource and the presence of the existing ravine containing the resources.

17.49.265 - Corrections to violations.

For correcting violations, the violator shall submit a remediation plan that meets all of the applicable standards of the NROD. The remediation plan shall be prepared by one or more qualified professionals with experience and credentials in natural resource areas, including wildlife biology, ecology, hydrology and forestry. If one or more of these standards cannot be met, then the applicant's remediation plan shall demonstrate that there will be:

A. No permanent loss of any type of resource or functional value listed in OCMC 17.49.10, as determined by a qualified environmental professional;

Applicant's Response:
The applicant acknowledges this section.

B. A significant improvement of at least one functional value listed in OCMC 17.49.10, as determined by a qualified environmental professional; and

Applicant's Response:
The applicant acknowledges this section.

C. There will be minimal loss of resources and functional values during the remediation action until it is fully established.

Applicant's Response:
The applicant acknowledges this section.

CHAPTER 17.50 ADMINISTRATION AND PROCEDURES

17.50.010 Purpose.

This chapter provides the procedures by which Oregon City reviews and decides upon applications for all permits relating to the use of land authorized by ORS 92, 197 and 227. These permits include all form of land divisions, land use, limited land use and expedited land division and legislative enactments and amendments to the Oregon City Comprehensive Plan and Titles 16 and 17 of this code. Pursuant to ORS 227.175, any applicant may elect to consolidate applications for two or more related permits needed for a single development project. Any grading activity associated with development shall be subject to preliminary review as part of the review process for the underlying development. It is the express policy of the City of Oregon City that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.

Applicant's Response:
The applicant acknowledges the purpose of this chapter.

17.50.030 Summary of the City's decision-making processes.

The following decision-making processes chart shall control the City's review of the indicated permits:
Table 17.50.030 – Permit Approval Process

Permit Type	***I***	***II***	***III***	***IV***	***Expedited Land Division***
Annexation				*X*	
Compatibility review for communication facilities	*X*				
Compatibility review for the Willamette Greenway Overlay District			*X*		
Code Interpretation			*X*		
Master plan/planned unit development - General Development plan			*X*		
Master plan/planned unit development - General Development plan amendment	*X*	*X*	*X*		
Conditional use (excluding shelters)			*X*		
Conditional use for a shelter				*X*	
*Detailed development plan**	*X*	*X*	*X*		
Expedited land division		*X(modified)*			*X*
Extension	*X*				
Final plat	*X*				
Geologic hazards		*X*			
Historic review	*X*		*X*		
Live/Work dwelling review		*X*			
Lot line adjustment and abandonment	*X*				

Manufactured home park review (new or modification)	*X*				
Middle housing land division		*X(modified)*			*X*
Minor partition		*X*			
Modifications of residential design standards		*X*			
Natural resource overlay district exemption	*X*				
Natural resource overlay district review		*X*	*X*		
Nonconforming use, structure and lots review	*X*	*X*			
Placement of a single manufactured home on existing space or lot within a park	*X*				
Plan or code amendment					*X*
Residential design standards review for single-family detached, duplexes, triplexes, quadplexes, townhouses, cottage clusters and accessory dwelling units (uses minor site plan and design review)	*X*				
Revocation					*X*
Site plan and design review	*X*	*X*			
Subdivision		*X*			*X*
Variance		*X*	*X*		
Zone Change				*X*	

**If any provision or element of the master plan/planned unit development requires a deferred Type III procedure, the detailed development plan shall be processed through a Type III procedure.*

A. Type I decisions do not require interpretation or the exercise of policy or legal judgment in evaluating approval criteria. Because no discretion is involved, Type I decisions do not qualify as a land use, or limited land use, decision. The decision-making process requires no notice to any party other than the applicant. The Community Development Director's decision is final and not appealable by any party through the normal city land use process.

B. Type II decisions involve the exercise of limited interpretation and discretion in evaluating approval criteria, similar to the limited land use decision-making process under state law. Applications evaluated through this process are assumed to be allowable in the underlying zone, and the inquiry typically focuses on what form the use will take or how it will look. Notice of application and an invitation to comment is mailed to the applicant, recognized active neighborhood association(s) and property owners within three hundred feet. The Community Development Director accepts comments for a minimum of fourteen days and renders a decision. The Community Development Director's decision is appealable to the City Commission, by any party who submitted comments in writing before the expiration of the comment period. Review by the City Commission shall be on the record pursuant to OCMC 17.50.190 under ORS 197.195(5). The City Commission decision is the City's final decision and is subject to review by the land use board of appeals (LUBA) within twenty-one days of when it becomes final.

C. Type III decisions involve the greatest amount of discretion and evaluation of subjective approval standards, yet are not required to be heard by the City Commission, except upon appeal. In the event that any decision is not classified, it shall be treated as a Type III decision. The process for these land use decisions is controlled by ORS 197.763. Notice of the application and the Planning Commission or the Historic Review Board hearing is published and mailed to the applicant, recognized neighborhood association(s) and property owners within three hundred feet. Notice shall be issued at least twenty days pre-hearing, and the staff report shall be available at least seven days pre-hearing. At the evidentiary hearing held before the Planning Commission or the Historic Review Board, all issues are addressed. The decision of the Planning Commission or Historic Review Board is appealable to the City Commission, on the record pursuant to OCMC 17.50.190. The City Commission decision on appeal from is the City's final decision and is subject to review by LUBA within twenty-one days of when it becomes final, unless otherwise provided by state law.

D. Type IV decisions include only quasi-judicial plan amendments and zone changes. These applications involve the greatest amount of discretion and evaluation of subjective approval standards and shall be heard by the City Commission for final action. The process for these land use decisions is controlled by ORS 197.763. Notice of the application and Planning Commission hearing is published and mailed to the applicant, recognized neighborhood association(s) and property owners within three hundred feet. Notice shall be issued at least twenty days pre-hearing, and the staff report shall be available at least seven days pre-hearing. At the evidentiary hearing held before the Planning Commission, all issues are addressed. If the Planning Commission denies the application, any party with standing (i.e., anyone who appeared before the Planning Commission either in person or in writing within the comment period) may appeal the Planning Commission denial to the City Commission. If the Planning Commission denies the application and no appeal has been received within fourteen days of the issuance of the final decision, then the action of the Planning Commission becomes the final decision of the City. If the Planning Commission votes to approve the application, that decision is forwarded as a recommendation to the City Commission for final consideration. In either case, any review by the City Commission is on the record and only issues raised before the Planning Commission may be raised before the City Commission. The City Commission decision is the City's final decision and is subject to review by LUBA within twenty-one days of when it becomes final.

E. Expedited land divisions and middle housing land divisions are subject to the requirements of OCMC 16.24.The expedited land division (ELD) process is set forth in ORS 197.360 to 197.380.
F. Decisions, completeness reviews, appeals, and notices in this chapter shall be calculated according to OCMC 1.04.070 and shall be based on calendar days, not business days.

Applicant's Response:
The applicant acknowledges the above land-use review processes. This project proposes General Development Plan approval for the overall development and Detailed Development Plan approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.50.040 Development review in overlay districts and for erosion control.
For any development subject to regulation of geologic hazards overlay district under OCMC 17.44; natural resource overlay district under OCMC 17.49; Willamette River Greenway Overlay District under

OCMC 17.48; historic overlay district under OCMC 17.40, and erosion and sediment control under OCMC 17.47, compliance with the requirements of these chapters shall be reviewed as part of the review process required for the underlying development for the site.

Applicant's Response:
The applicant acknowledges the above review responsibility in overlay districts. The proposed project includes Geologic Hazard and NROD overlay districts. A preliminary erosion control plan is included in the proposed DDP plan package. Please see Sht DDP-C0.1. Final Erosion Control Plans will accompany the project's construction plans.

17.50.050 – Pre-application conference.
A. Pre-application Conference. Prior to a Type II – IV or Legislative application, excluding Historic Review, being deemed complete, the applicant shall schedule and attend a pre-application conference with City staff to discuss the proposal, unless waived by the Community Development Director. The purpose of the pre-application conference is to provide an opportunity for staff to provide the applicant with information on the likely impacts, limitations, requirements, approval standards, fees and other information that may affect the proposal.

1. To schedule a pre-application conference, the applicant shall contact the Planning Division, submit the required materials, and pay the appropriate conference fee.
2. At a minimum, an applicant should submit a short narrative describing the proposal and a proposed site plan, drawn to a scale acceptable to the City, which identifies the proposed land uses, traffic circulation, and public rights-of-way and all other required plans.
3. The Planning Division shall provide the applicant(s) with the identity and contact persons for all affected neighborhood associations as well as a written summary of the pre-application conference.

Applicant's Response:
A pre-application conference was conducted April 22, 2025. Notes from the pre-application conference are included in Appendix A.

B. A pre-application conference shall be valid for a period of six months from the date it is held. If no application is filed within six months of the conference or meeting, the applicant shall schedule and attend another conference before the City will accept a permit application. The Community Development Director may waive the pre-application requirement if, in the Director's opinion, the development has not changed significantly and the applicable municipal code or standards have not been significantly amended. In no case shall a pre-application conference be valid for more than one year.

Applicant's Response:
The preapplication conference was conducted April 22, 2025. The Masterplan application was submitted June 27, 2025, less than six months after the pre=application conference.

C. Notwithstanding any representations by City staff at a pre-application conference, staff is not authorized to waive any requirements of this code, and any omission or failure by staff to recite to an

applicant all relevant applicable land use requirements shall not constitute a waiver by the City of any standard or requirement.

Applicant's Response:
The applicant acknowledges this section.

17.50.055 - Neighborhood association meeting.
Neighborhood Association Meeting. The purpose of the meeting with the recognized neighborhood association is to inform the affected neighborhood association about the proposed development and to receive the preliminary responses and suggestions from the neighborhood association and the member residents.
A. Applicants applying for annexations, zone change, comprehensive plan amendments, conditional use, Planning Commission variances, subdivision, or site plan and design review (excluding minor site plan and design review), general development master plans or detailed development plans applications shall schedule and attend a meeting with the City-recognized neighborhood association in whose territory the application is proposed no earlier than one year prior to the date of application. Although not required for other projects than those identified above, a meeting with the neighborhood association is highly recommended.

B. The applicant shall request via email or regular mail a request to meet with the neighborhood association chair where the proposed development is located. The notice shall describe the proposed project. A copy of this notice shall also be provided to the chair of the citizen involvement committee.

C. A meeting shall be scheduled within thirty days of the date that the notice is sent. A meeting may be scheduled later than thirty days if by mutual agreement of the applicant and the neighborhood association. If the neighborhood association does not want to, or cannot meet within thirty days, the applicant shall host a meeting inviting the neighborhood association, citizen involvement committee, and all property owners within three hundred feet to attend. This meeting shall not begin before six p.m. on a weekday or may be held on a weekend and shall occur within the neighborhood association boundaries or at a city facility.

D. If the neighborhood association is not currently recognized by the City, is inactive, or does not exist, the applicant shall request a meeting with the citizen involvement committee.

E. To show compliance with this section, the applicant shall submit a copy of the email or mail notice to the neighborhood association and CIC chair, a sign-in sheet of meeting attendees, and a summary of issues discussed at the meeting. If the applicant held a separately noticed meeting, the applicant shall submit a copy of the meeting flyer, postcard or other correspondence used, and a summary of issues discussed at the meeting and submittal of these materials shall be required for a complete application.

Applicant's Response:
The neighborhood meeting was conducted October 7, 2025, at the joint Hillendale/Vista Towers meeting. Please see Appendix C for the meeting request, acknowledgement of the request, and meeting sign-in sheet. The neighbors who attended the meeting were very cordial and asked general questions about the proposal following a brief presentation by the applicant.

17.50.060 Application requirements.

A permit application may only be initiated by the record property owner or contract purchaser, the City Commission or Planning Commission. If there is more than one record owner, then the City will not complete a Type II—IV application without signed authorization from all record owners. All permit applications shall be submitted on the form provided by the City, along with the appropriate fee and all necessary supporting documentation and information, sufficient to demonstrate compliance with all applicable approval criteria. The applicant has the burden of demonstrating, with evidence, that all applicable approval criteria are, or can be, met.

Applicant's Response:
Please see enclosed land-use application signed by all record property owners and the applicant.

17.50.070 Completeness review and one hundred twenty-day rule.

A. Upon submission, the Community Development Director shall date stamp the application form and verify that all of the appropriate application review fee(s) have been submitted. Upon receipt of all review fees and an application form, the Community Development Director will then review the application and all information submitted with it and evaluate whether the application is complete enough to process. Within thirty days of receipt of the application and all applicable review fees, the Community Development Director shall complete this initial review and issue to the applicant a written statement indicating whether the application is complete enough to process, and if not, what information shall be submitted to make the application complete.

B. The applicant has one hundred eighty days from the date the application was made to submit the missing information or the application shall be rejected and the unused portion of the application fee returned to the applicant. If the applicant submits the requested information within the one hundred eighty-day period, the Community Development Director shall again verify whether the application, as augmented, is complete. Each such review and verification shall follow the procedure in subsection A of this section.

The application will be deemed complete for the purpose of this section upon receipt by the Community Development Director of:

1. All the missing information;
2. Some of the missing information and written notice from the applicant that no other information will be provided; or
3. Written notice from the applicant that none of the missing information will be provided.

C. Once the Community Development Director determines the application is complete enough to process, or the applicant refuses to submit any more information, the City shall declare the application complete. Pursuant to ORS 227.178, the City will reach a final decision on an application within one hundred twenty calendar days from the date that the application is determined to be or deemed complete unless the applicant agrees to suspend the one hundred twenty-calendar-day timeline or unless state law provides otherwise. The one hundred twenty-day period, however, does not apply in the following situations:

1. Any hearing continuance or other process delay requested by the applicant shall be deemed an extension or waiver, as appropriate, of the one hundred twenty-day period.
2. Any delay in the decision-making process necessitated because the applicant provided an incomplete set of mailing labels for the record property owners within three hundred feet of the subject property shall extend the one hundred twenty-day period for the amount of time required to correct the notice defect.
3. The one hundred twenty-day period does not apply to any application for a permit that is not wholly within the City's authority and control.
4. The one hundred twenty-day period does not apply to any application for an amendment to the City's comprehensive plan or land use regulations nor to any application for a permit, the approval of which depends upon a plan amendment.

D. A one hundred day-period applies in place of the one hundred twenty-day period for affordable housing projects where:
1. The project includes five or more residential units, including assisted living facilities or group homes;
2. At least fifty percent of the residential units will be sold or rented to households with incomes equal to or less than sixty percent of the median family income for Clackamas County or for the state, whichever is greater; and
3. Development is subject to a covenant restricting the owner and successive owner from selling or renting any of the affordable units as housing that is not affordable for a period of sixty years from the date of the certificate of occupancy.

E. The one hundred twenty-day period specified in OCMC 17.50.070.C or D may be extended for a specified period of time at the written request of the applicant. The total of all extensions may not exceed two hundred forty-five calendar days.

F. The approval standards that control the City's review and decision on a complete application are those which were in effect on the date the application was first submitted.

Applicant's Response:
The applicant acknowledges the above procedural requirements. An application for Masterplan General Development Plan and Detailed Development Plan, together with Lot Line Adjustment, Geologic Hazard Overlay, Conditional Use, Parking Adjustment, and Natural Resource (NROD) Review, was submitted June 27, 2025. The application was deemed incomplete on July 24, 2025. This land-use application package is submitted in response to the July 24, 2025 incomplete letter.

17.50.080 Complete application—Required information.
Unless stated elsewhere in OCMC 16 or 17, a complete application includes all the materials listed in this subsection. The Community Development Director may waive the submission of any of these materials if not deemed to be applicable to the specific review sought. Likewise, within thirty days of when the application is first submitted, the Community Development Director may require additional information, beyond that listed in this subsection or elsewhere in Titles 12, 14, 15, 16, or 17, such as a traffic study or other report prepared by an appropriate expert. In any event, the applicant is responsible for the completeness and accuracy of the application and all of the supporting documentation, and the City will

not deem the application complete until all information required by the Community Development Director is submitted. At a minimum, the applicant shall submit the following:

A. One copy of a completed application form that includes the following information:
1. An accurate address and tax map and location of all properties that are the subject of the application;
2. Name, address, telephone number and authorization signature of all record property owners or contract owners, and the name, address and telephone number of the applicant, if different from the property owner(s);
B. A complete list of the permit approvals sought by the applicant;
C. A complete and detailed narrative description of the proposed development;
D. A discussion of the approval criteria for all permits required for approval of the development proposal that explains how the criteria are or can be met or are not applicable, and any other information indicated by staff at the pre-application conference as being required;

E. One copy of all architectural drawings and site plans shall be submitted for Type II—IV applications. One paper copy of all application materials shall be submitted for Type I applications;

F. For all Type II—IV applications, the following is required:
1. An electronic copy of all materials.
2. Mailing labels or associated fee for notice to all parties entitled under OCMC 17.50.090 to receive mailed notice of the application. The applicant shall use the names and addresses of property owners within the notice area indicated on the most recent property tax rolls.
3. Documentation indicating there are no liens favoring the City on the subject site.
4. A receipt from the county assessor's office indicating that all taxes for the lot or parcels involved are paid in full for the preceding tax year.
5. A current preliminary title report or trio for the subject property(ies);
G. All required application fees;
H. Annexation agreements, traffic or technical studies (if applicable);
I. Additional documentation, as needed and identified by the Community Development Director.

Applicant's Response:
The applicant acknowledges the application submittal requirements. A completed application form is included with this application, including a list of permit approvals (on the face of the application form). Please see the project narrative and responses to all applicable code criteria. Detailed Development Plan approval for each of the parcels will follow under a separate application. Accordingly, architectural drawings are not included with this application; however, plans and accompanying reports are included to support the Detailed Development Plan application for the proposed public street and utility improvements together with rough grading of Parcels A, B, and D. The applicant understands that the city prepares the mailing labels and sends notice to property owners within 300 ft of the proposed project boundary. Please see the enclosed Title Report indicating no liens favoring the city on the subject parcels (Appendix J). Please see Appendix N for 2024 tax statements for each of the properties indicating all have been paid in full.

17.50.090 - Public notices.
All public notices issued by the City announcing applications or public hearings of quasi-judicial or legislative actions, shall comply with the requirements of this section.

A. Notice of Type II Applications. Once the Community Development Director has deemed a Type II application complete, the City shall prepare and send notice of the application, by first class mail, to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The applicant shall provide or the City shall prepare for a fee an accurate and complete set of mailing labels for these property owners and for posting the subject property with the City-prepared notice in accordance with OCMC 17.50.100. The City's Type II notice shall include the following information:

1. Street address or other easily understood location of the subject property and city-assigned planning file number;
2. A description of the applicant's proposal, along with citations of the approval criteria that the City will use to evaluate the proposal;
3. A statement that any interested party may submit to the City written comments on the application during a fourteen-day comment period prior to the City's deciding the application, along with instructions on where to send the comments and the deadline of the fourteen-day comment period;
4. A statement that any issue which is intended to provide a basis for an appeal shall be raised in writing during the fourteen-day comment period with sufficient specificity to enable the City to respond to the issue;
5. A statement that the application and all supporting materials may be inspected, and copied at cost, at City Hall during normal business hours;
6. The name and telephone number of the planning staff person assigned to the application or is otherwise available to answer questions about the application;
7. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal.

Applicant's Response:
The applicant acknowledges this procedure.

B. Notice of Public Hearing on a Type III or IV Quasi-Judicial Application. Notice for all public hearings concerning a quasi-judicial application shall conform to the requirements of this subsection. At least twenty days prior to the hearing, the City shall prepare and send, by first class mail, notice of the hearing to all record owners of property within three hundred feet of the subject property and to any city-recognized neighborhood association whose territory includes the subject property. The City shall also publish the notice on the City website within the City at least twenty days prior to the hearing. Pursuant to OCMC 17.50.080.H, the applicant is responsible for providing an accurate and complete set of mailing labels for these property owners and for posting the subject property with the City-prepared notice in accordance with OCMC 17.50.100. Notice of the application hearing shall include the following information:

1. The time, date and location of the public hearing;

2. Street address or other easily understood location of the subject property and city-assigned planning file number;
3. A description of the applicant's proposal, along with a list of citations of the approval criteria that the City will use to evaluate the proposal;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing and that a staff report will be prepared and made available to the public at least seven days prior to the hearing;
5. A statement that any issue which is intended to provide a basis for an appeal to the City Commission shall be raised before the close of the public record. Issues must be raised and accompanied by statements or evidence sufficient to afford the City and all parties to respond to the issue;
6. The notice shall state that a city-recognized neighborhood association requesting an appeal fee waiver pursuant to OCMC 17.50.290.C must officially approve the request through a vote of its general membership or board at a duly announced meeting prior to the filing of an appeal;
7. A statement that the application and all supporting materials and evidence submitted in support of the application may be inspected at no charge and that copies may be obtained at reasonable cost at the planning division offices during normal business hours; and
8. The name and telephone number of the planning staff person responsible for the application or is otherwise available to answer questions about the application.

Applicant's Response:
The applicant acknowledges this procedure.

C. Notice of Public Hearing on a Legislative Proposal. At least twenty days prior to a public hearing at which a legislative proposal to amend or adopt the City's land use regulations or comprehensive plan is to be considered, the Community Development Director shall issue a public notice that conforms to the requirements of this subsection. Notice shall be sent to affected governmental entities, special districts, providers of urban services, including Tri-Met, Oregon Department of Transportation and Metro, any affected recognized neighborhood associations and any party who has requested in writing such notice. Notice shall also be published on the City website. Notice issued under this subsection shall include the following information:

1. The time, date and location of the public hearing;
2. The City-assigned planning file number and title of the proposal;
3. A description of the proposal in sufficient detail for people to determine the nature of the change being proposed;
4. A statement that any interested party may testify at the hearing or submit written comments on the proposal at or prior to the hearing; and
5. The name and telephone number of the planning staff person responsible for the proposal and who interested people may contact for further information.

Applicant's Response:
The proposed Detailed Development Plan is not considered a legislative proposal. Accordingly, this criterion is not applicable.

17.50.100 - Notice posting requirements.
Where this chapter requires notice of a pending or proposed permit application or hearing to be posted on the subject property, the requirements of this section shall apply.

A. City Guidance and the Applicant's Responsibility. The City shall supply all of the notices which the applicant is required to post on the subject property and shall specify the dates the notices are to be posted and the earliest date on which they may be removed. The City shall also provide a statement to be signed and returned by the applicant certifying that the notice(s) were posted at the correct time and that if there is any delay in the City's land use process caused by the applicant's failure to correctly post the subject property for the required period of time and in the correct location, the applicant agrees to extend the applicable decision-making time limit in a timely manner.

B. Number and Location. The applicant shall place the notices on each frontage of the subject property. If the property's frontage exceeds six hundred feet, the applicant shall post one copy of the notice for each six hundred feet or fraction thereof. Notices do not have to be posted adjacent to alleys or unconstructed right-of-way. Notices shall be posted within ten feet of the street and shall be visible to pedestrians and motorists. Notices shall not be posted within the public right-of-way or on trees. The applicant shall remove all signs within ten days following the event announced in the notice.

Applicant's Response:
The applicant acknowledges this procedure and will post public notice on the property accordingly.

7.50.110 Assignment of decision-makers.
The following City entity or official shall decide the following types of applications:
A. Type I Decisions. The Community Development Director shall render all Type I decisions. The Community Development Director's decision is the City's final decision on a Type I application.

B. Type II Decisions. The Community Development Director shall render the City's decision on all Type II permit applications, which are then appealable to the City Commission with notice to the Planning Commission. The City's final decision is subject to review by LUBA.

C. Type III Decisions. The Planning Commission or Historic Review Board, as applicable, shall render all Type III decisions. Such decision is appealable to the City Commission, on the record. The City Commission 's decision is the city's final decision and is subject to review by LUBA within twenty-one days of when it becomes final.

D. Type IV Decisions. The Planning Commission shall render the initial decision on all Type IV permit applications. If the Planning Commission denies the Type IV application, that decision is final unless appealed in accordance with OCMC 17.50.190. If the Planning Commission recommends approval of the application, that recommendation is forwarded to the City Commission. The City Commission decision is the City's final decision on a Type IV application and is subject to review LUBA.

E. Expedited Land Division (ELD). The Community Development Director shall render the initial decision on all ELD applications. The Community Development Director's decision is the City's final decision unless

appealed in accordance to ORS 197.375 to a City-appointed hearings referee. The hearings referee decision is the City's final decision which is appealable to the Oregon Court of Appeals.

Applicant's Response:
The applicant acknowledges this assignment of decision-makers, and understands the General Development Plan, Conditional Use (Parcel D) and Maximum Parking Adjustment (Parcels A & D) will be Type III decision, with the proposed Detailed Development Plan, Geologic Hazard Overlay, and NROD Review being Type II decisions.

17.50.120 Quasi-judicial hearing process.
All public hearings pertaining to quasi-judicial permits, whether before the Planning Commission, Historic Review Board, or City Commission, shall comply with the procedures of this section. In addition, all public hearings held pursuant to this chapter shall comply with the Oregon Public Meetings Law, the applicable provisions of ORS 197.763 and any other applicable law.

A. Once the Community Development Director determines that an application for a Type III or IV decision is complete, the planning division shall schedule a hearing before the Planning Commission or Historic Review Board, as applicable. Once the Community Development Director determines that an appeal of a Type II, Type III or Type IV decision has been properly filed under OCMC 17.50.190, the planning division shall schedule a hearing pursuant to OCMC 17.50.190.

B. Notice of the Type III or IV hearing shall be issued at least twenty days prior to the hearing in accordance with OCMC 17.50.090.B.

C. Written notice of an appeal hearing shall be sent by regular mail no later than fourteen days prior to the date of the hearing to the appellant, the applicant if different from the appellant, the property owner(s) of the subject site, all persons who testified either orally or in writing before the hearing body and all persons that requested in writing to be notified.

D. The Community Development Director shall prepare a staff report on the application which lists the applicable approval criteria, describes the application and the applicant's development proposal, summarizes all relevant city department, agency and public comments, describes all other pertinent facts as they relate to the application and the approval criteria and makes a recommendation as to whether each of the approval criteria are met.

E. At the beginning of the initial public hearing at which any quasi-judicial application or appeal is reviewed, a statement describing the following shall be announced to those in attendance:

1. That the hearing will proceed in the following general order: Staff report, applicant's presentation, testimony in favor of the application, testimony in opposition to the application, rebuttal, record closes, commission deliberation and decision;
2. That all testimony and evidence submitted, orally or in writing, shall be directed toward the applicable approval criteria. If any person believes that other criteria apply in addition to those addressed in the staff report, those criteria shall be listed and discussed on the record. The meeting

chairperson may reasonably limit oral presentations in length or content depending upon time constraints. Any party may submit written materials of any length while the public record is open;
3. Failure to raise an issue on the record with sufficient specificity and accompanied by statements or evidence sufficient to afford the City and all parties to respond to the issue, will preclude appeal on that issue to the land use board of appeals;
4. Any party wishing a continuance or to keep open the record shall make that request while the record is still open;
5. That the commission chair shall call for any ex-parte contacts, conflicts of interest or bias before the beginning of each hearing item; and
6. For appeal hearings, only those persons who participated either orally or in writing in the decision or review will be allowed to participate either orally or in writing on the appeal.

F. Requests for continuance and to keep open the record: The hearing may be continued to allow the submission of additional information or for deliberation without additional information. New notice of a continued hearing need not be given so long as a time-certain and location is established for the continued hearing. Similarly, hearing may be closed but the record kept open for the submission of additional written material or other documents and exhibits. The chairperson may limit the factual and legal issues that may be addressed in any continued hearing or open record period.

Applicant's Response:
The applicant acknowledges the quasi-judicial process identified in this section.

17.50.130 Conditions of approval and notice of decision.
A. All City decision-makers have the authority to impose reasonable conditions of approval designed to ensure that all applicable approval standards, including standards set out in city overlay districts, the City's master plans, and City public works design standards, are, or can be met.

B. Failure to comply with any condition of approval shall be grounds for revocation of the permit(s) and grounds for instituting code enforcement proceedings pursuant to OCMC 1.20 of this code and ORS 30.315.

C. Notice of Decision. The City shall send, by first class mail, a notice of all decisions rendered under this chapter to all persons with standing, i.e., the applicant, all others who participated either orally or in writing before the close of the public record and those who specifically requested notice of the decision. The notice of decision shall include the following information:
1. The file number and date of decision;
2. The name of the applicant, owner and appellant (if different);
3. The street address or other easily understood location of the subject property;
4. A brief summary of the decision, and if an approval, a description of the permit approved;
5. A statement that the decision is final unless appealed and description of the requirements for perfecting an appeal;
6. The contact person, address and a telephone number whereby a copy of the final decision may be inspected or copies obtained.

D. Modification of Conditions. Any request to modify a condition of permit approval is to be considered either minor modification or a major modification, unless otherwise authorized. A minor modification shall be processed as a Type I. A major modification shall be processed in the same manner and shall be subject to the same standards as was the original application. However, the decision-maker may at their sole discretion, consider a modification request and limit its review of the approval criteria to those issues or aspects of the application that are proposed to be changed from what was originally approved.

Applicant's Response:
The applicant acknowledges the Decision process, Notice of Decision, and Modification of decision processes of this section.

17.50.140 – Financial guarantees.
When conditions of permit approval require a permitee to construct certain public improvements, the City shall require the permitee to provide financial guarantee for construction of the certain public improvements. Financial guarantees shall be governed by this section.

A. Form of Guarantee. Guarantees shall be in a form approved by the City attorney. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City attorney. The guarantee shall be filed with the City engineer.
B. Performance Guarantees. A permittee shall be required to provide a performance guarantee as follows.

1. After Final Approved Design by the City. The City may request the permittee to submit a performance guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee when prepared for temporary/final occupancy. The guarantee shall be one hundred twenty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer.
2. Before Complete Design Approval and Established Engineered Cost Estimate. The City may request a permittee to submit a performance guarantee for construction of certain public improvements. A permitee may request the option of submitting a performance guarantee before public improvements are designed and completed. The guarantee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City engineer. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer.

C. Release of Guarantee. The guarantee shall remain in effect until the improvement is actually constructed and accepted by the City. Once the City has inspected and accepted the improvement, the City shall release the guarantee to the permittee. If the improvement is not completed to the City's satisfaction within the time limits specified in the permit approval, the City engineer may, at their discretion, draw upon the guarantee and use the proceeds to construct or complete construction of the improvement and for any related administrative and legal costs incurred by the City in completing the construction, including any costs incurred in attempting to have the permittee complete the

improvement. Once constructed and approved by the City, any remaining funds shall be refunded to the permittee. The City shall not allow a permittee to defer construction of improvements by using a performance guarantee, unless the permittee agrees to construct those improvements upon written notification by the City, or at some other mutually agreed-to time. If the permittee fails to commence construction of the required improvements within six months of being instructed to do so, the City may, without further notice, undertake the construction of the improvements and draw upon the permittee's performance guarantee to pay those costs.

D. Fee-in-lieu. When conditions of approval or the City engineer allows a permittee to provide a fee-in-lieu of actual construction of public improvements, the fee shall be one hundred fifty percent of the estimated cost of constructing the public improvements as submitted by the permittee's engineer and approved by the City engineer. The percentage required is to ensure adequate funds for the future work involved in design, bid, contracting, and construction management and contract closeout. The engineer's estimated costs shall be supported by a verified engineering estimate and approved by the City engineer. The fee-in-lieu shall be submitted as cash, certified check, or other negotiable instrument acceptable by the City attorney.

Applicant's Response:
The applicant acknowledges the financial guarantee provisions of this section.

17.50.141 – Public improvements – Warranty
All public improvements not constructed by the City, shall be maintained and under warranty provided by the property owner or developer constructing the facilities until the City accepts the improvements at the end of the warranty period. The warranty is to be used at the discretion of the City engineer or designee to correct deficiencies in materials or maintenance of constructed public infrastructure, or to address any failure of engineering design.

A. Duration of Warranty. Responsibility for maintenance of public improvements shall remain with the property owner or developer for a warranty period of two years.

B. Financial Guarantee. Approvable forms of guarantee include irrevocable standby letters of credit to the benefit of the City issued by a recognized lending institution, bond, certified checks, dedicated bank accounts or allocations of construction loans held in reserve by the lending institution for the benefit of the City. The form of guarantee shall be specified by the City engineer and, prior to execution and acceptance by the City shall be reviewed and approved by the City attorney. The guarantee shall be filed with the City engineer.

C. Amount of Warranty. The amount of the warranty shall be equal to fifteen percent of the estimated cost of construction of all public improvements (including those improvements that will become owned and maintained by the City at the end of the two-year maintenance period), and shall be supported by a verified engineering estimate and approved by the City engineer. Upon expiration of the warranty period and acceptance by the City as described below, the City shall be responsible for maintenance of those improvements.

D. Transfer of Maintenance. The City will perform an inspection of all public improvements approximately forty-five days before the two-year warranty period expires. The public improvements shall be found to be in a clean, functional condition by the City engineer before acceptance of maintenance responsibility by the City. Transfer of maintenance of public improvements shall occur when the City accepts the improvements at the end of the two-year warranty period.

Applicant's Response:
The applicant acknowledges the public improvement warranty provisions of this section.

CHAPTER 17.52 OFF-STREET PARKING AND LOADING

17.52.010 - Applicability.
The construction of a new structure or parking lot, or alterations to the size or use of an existing structure, parking lot or property use shall require site plan review approval and compliance with this chapter. This chapter does not apply to single-family attached, detached residential dwellings, duplexes, townhouses and cottage clusters.

Applicant's Response:
The applicant acknowledges the applicability of 17.52

17.52.015 - Planning commission adjustment of parking standards.
A. Purpose. The purpose of permitting a planning commission adjustment to parking standards is to provide for flexibility in modifying parking standards in all zoning districts, without permitting an adjustment that would adversely impact the surrounding or planned neighborhood. Adjustments provide flexibility to those uses which may be extraordinary, unique, or provide greater flexibility for areas that can accommodate a denser development pattern based on existing infrastructure and ability to access the site by means of walking, biking or transit. An adjustment to a minimum parking standard may be approved based on a determination by the planning commission that the adjustment is consistent with the purpose of this code, and the approval criteria can be met.

B. Procedure. A request for a planning commission parking adjustment shall be initiated by a property owner or authorized agent by filing a land use application. The application shall be accompanied by a site plan, drawn to scale, showing the dimensions and arrangement of the proposed development and parking plan, the extent of the adjustment requested along with findings for each applicable approval criteria. A request for a parking adjustment shall be processed as a Type III application as set forth in Chapter 17.50.

C. Approval criteria for the adjustment are as follows:
1. Documentation: The applicant shall document that the individual project will require an amount of parking that is different from that required after all applicable reductions have been taken.

Applicant's Response:
The applicant acknowledges the purpose and procedure for Planning Commission consideration of parking adjustments. While each parcel will seek their own individual Detailed Development Plan (DDP) approval, this Masterplan application seeks adjustment to the required parking criteria as shown below so that the individual parcel DDP applications will already have received a decision on anticipated parking counts.

Parcel	Proposed Use	Required Parking	Required Criteria	Proposed Parking	Parking Adj Needed?
A	Retail	55 (min); 68 (max)	4.10/1ksf (min); 5.00/1ksf (max)	102 (7.0/1ksf)	Yes
B	Multi-Family Residential	208 (min); 520 (max)	1.00/unit (min); 2.5/unit (max)	320	No
D	Restaurant	20 (min); 25 (max)	4.10/1ksf (min); 5.00/1ksf (max)	58 (11.8/1ksf)	Yes

2. Parking analysis for Surrounding Uses and on-street parking availability: The applicant shall show that there is a continued fifteen percent parking vacancy in the area adjacent to the use during peak parking periods and that the applicant has permission to occupy this area to serve the use pursuant to the procedures set forth by the Community Development Director.

a. For the purposes of demonstrating the availability of on street parking as defined in OCMC 17.52.020.B.3., the applicant shall undertake a parking study during time periods specified by the Community Development Director. The time periods shall include those during which the highest parking demand is anticipated by the proposed use. Multiple observations during multiple days shall be required. Distances are to be calculated as traversed by a pedestrian that utilizes sidewalks and legal crosswalks or an alternative manner as accepted by the Community Development Director.

Applicant's Response:
The above analysis requirement implies a request for a reduction in parking by evaluating surrounding parking availability, including on-street parking. This project's proposed parking adjustments are in excess of maximum required parking, rather than seeking a reduction in parking requirements due to on-street parking or shared parking from another use.

Oregon City Municipal Code (OCMC) Table 17.52.020 identifies parking requirements and groups retail stores, shopping centers, and restaurants in the same category and limits the maximum parking ratio to 5.0 per thousand square feet. It does not differentiate between sizes of uses or different types of uses within the three applicable uses described (for example: retail store vs grocery store or specialty retail; sit-down restaurants vs quick service restaurants that generate higher traffic/parking impacts; or larger regional shopping centers vs neighborhood shopping centers). As such, variations in use can have a significant impact on the number of required parking spaces for a given user that may not fit within the limits of Table 17.52.020.

<u>Parcel A Discussion:</u>
This project's proposed public street does not include on-street parking. Existing uses north of this parcel preclude shared parking by virtue of adjacent limited parking capacity of the existing QSR, and street connectivity to Hilltop Ave. Additionally, counting on-street parking from Hilltop Ave would preclude parking in front of these existing Hilltop uses by those same uses. There is no on-street parking on Molalla Ave. The shopping center on the west side of Molalla Ave is not likely to be utilized by Parcel A customers given the distance from the Parcel A building entrance and the need to cross Molalla Ave.

A maximum parking ratio of 5.0 may work for larger retail or shopping centers, but the proposed retail use is relatively small at 14,600 sf

The applicant seeks an increase in maximum parking as proposed in the above table. Parking ratios have varied between approximately 5.0 – 7.0 in similar combined retail shops/QSR uses. In locations where their parking ratios have been lower, parking has spilled over to adjacent shopping center parking to make up for demand at this retailer. With this project, the retail shops and QSR combination is a stand-alone location without the ability to share parking with another use or shopping center. If the parking ratio is limited to 5.0, customers would attempt to utilize adjacent parking from Parcel B, thereby reducing available parking for adjacent residential use. Customers may also attempt to utilize parking from Parcel D across the street, reducing available parking for Parcel D and creating an unsafe street crossing situation.

<u>Parcel D Discussion:</u>
Required parking for this proposed use is grouped with retail store and shopping center uses and does not recognize the parking demands of a quick service restaurant. Existing development north of the site is comprised of another Quick Service Restaurant (QSR) at the northeast corner of the subject property and single- and multi-family residential, with no connected access to these properties. The adjacent QSR is situated 4'-5' higher in elevation than the subject property and already has limited parking. The adjacent QSR parking ratio is approximately 12.5/1ksf, consistent with the project's requested parking ratio. The adjacent QSR, as with the proposed QSR, is a stand-alone restaurant and not part of a shopping center development where shared parking can occur. Our proposed QSR cannot share parking with other uses without crossing either a major arterial street (Molalla Ave) or our proposed Collector street, thus limiting practical shared parking opportunities. If the parking ratio is limited to 5.0, customers may attempt to utilize parking from Parcels A or B across the street, reducing available parking for these parcels and creating an unsafe street crossing situation.

The applicant seeks an increase in maximum parking as proposed in the above table. Based on other locations for this QSR, parking ratios have varied between approximately 12.6 – 20.0. In locations where their parking ratios have been the highest, parking was shared with adjacent development so identifying the exact parking count is difficult to do. This project does not seek an extreme parking ratio. Instead, it seeks a parking ratio consistent with adjacent uses in similar conditions. If the parking ratio is limited to 5.0, customers would attempt to utilize adjacent parking from Parcel B, thereby reducing available parking for adjacent residential use. Customers may also attempt to utilize parking from Parcel D across the street, reducing available parking for Parcel D and creating an unsafe street crossing situation.

b. The onsite parking requirements may be reduced based on the parking vacancy identified in the parking study. The amount of the reduction in onsite parking shall be calculated as follows:

i. Vacant on-street parking spaces within three hundred feet of the site will reduce onsite parking requirements by 0.5 parking spaces; and

ii. Vacant on-street parking spaces between three hundred and six hundred feet of the site will reduce onsite parking requirements by 0.2 parking spaces.

Applicant's Response:
The applicant does not seek a reduction in the minimum parking criterion. Parcels A and D seek an increase in maximum allowable parking. This criterion is not applicable.

3. Function and Use of Site: The applicant shall demonstrate that modifying the amount of required parking spaces will not significantly impact the use or function of the site and/or adjacent sites.

Applicant's Response:
As noted above, allowing an increase to the maximum allowed parking results in needed customer parking that does not depend on shared parking from adjacent uses that also need parking. Adjustments to the maximum allowable parking are requested for Parcels A and D. Each of these parcels have stand-alone parking lots where shared parking with another on-site use is not possible. Sharing parking with other uses within the proposed masterplan development would involve taking parking from the Parcel B residential use, which is not recommended, or requiring customers to cross a Collector road that separates Parcels A & D. Customers are not likely to park in the Parcel A parking lot, then travel to the Molalla Ave crosswalk then walk to the Parcel D building and vice versa (a travel distance of nearly 600 feet). Allowing an increase in maximum parking will not negatively impact the function and use of the proposed development. In fact, function and use of the development site are both supported by an increase in maximum parking so that customers from Parcels A and/or D do not consume parking from each other or from Parcel B that otherwise needed by those uses.

4. Compatibility: The proposal is compatible with the character, scale and existing or planned uses of the surrounding neighborhood.

Applicant's Response:
The subject property is considered infill development, as surrounding properties are already developed. The proposed increase in maximum allowable parking is compatible with surrounding uses which include comparably-parked adjacent QSR uses and shopping center parking.

5. Safety: The proposal does not significantly impact the safety of adjacent properties and rights-of-way.

Applicant's Response:
The proposed maximum parking adjustment results in a safer development proposal than one in which inadequate parking exists. As noted above, given the stand-alone nature of the subject parcels, any shared parking that may be necessary to satisfy the parking needs of Parcels A & D would result in taking parking away from adjacent residential use or require customers to cross a Collector street or Major Arterial to patron the subject uses.

6. Services: The proposal will not create a significant impact to public services, including fire and emergency services.

Applicant's Response:
The proposed increase to maximum allowable parking will have no negative impact on public services, including fire or emergency services. Additional space created by added parking allows more room for

emergency services access and circulation within Parcels A and D. Public and private utility demands are unaffected by the requested parking increase.

17.52.020 - Number of automobile spaces required.
A. The number of parking spaces shall comply with the minimum and maximum standards listed in Table 17.52.020. The parking requirements are based on spaces per one thousand square feet net leasable area unless otherwise stated.

Table 17.52.020

LAND USE	***PARKING REQUIREMENTS***	
	MINIMUM	*MAXIMUM*
Multi-family Residential	*1 per unit*	*2.5 per unit*
Triplex and quadplex	*2*	*4*
Hotel, Motel	*1 per guest room*	*1.25 per guest room*
Correctional Institution	*1 per 7 beds*	*1 per 5 beds*
Senior housing, including congregate care, residential care and assisted living facilities; nursing homes and other types of group homes	*1 per 7 beds*	*1 per 5 beds*
Hospital	*2*	*4*
Preschool Nursery/Kindergarten	*2*	*3*
Elementary/Middle School	*1 per classroom*	*1 per classroom + 1 per administrative employee + 0.25 per seat in auditorium/assembly room/stadium*
High School, College, Commercial School for Adults	*0.20 per # staff and students*	*0.30 per # staff and students*
Auditorium, Meeting Room, Stadium, Religious Assembly Building, movie theater,	*.25 per seat*	*0.5 per seat*
Retail Store, Shopping Center, Restaurants	*4.10*	*5*
Office	*2.70*	*3.33*
Medical or Dental Clinic	*2.70*	*3.33*
Sports Club, Recreation Facilities	*Case Specific*	*5.40*
Storage Warehouse, Freight Terminal	*0.30*	*0.40*
Manufacturing, Wholesale Establishment	*1.60*	*1.67*
Light Industrial, Industrial Park	*1.3*	*1.60*

1. *Multiple Uses. In the event several uses occupy a single structure or parcel of land, the total requirements for off-street parking shall be the sum of the requirements of the several uses computed separately.*
2. *Requirements for types of buildings and uses not specifically listed herein shall be determined by the community development director, based upon the requirements of comparable uses listed.*
3. *Where calculation in accordance with the above list results in a fractional space, any fraction less than one-half shall be disregarded and any fraction of one-half or more shall require one space.*
4. *Fleet vehicle parking shall be accommodated within the maximum parking ratio, except that in GI, CI, and MUE zones, fleet vehicle parking may be included in a parking lot in addition to the maximum number of permitted parking spaces.*
5. *A change in use within an existing habitable building located in the MUD design district or the Willamette Falls Downtown District is exempt from additional parking requirements. Additions to an existing building and new construction are required to meet the minimum parking requirements for the areas as specified in Table 17.52.020 for the increased square footage.*

Applicant's Response:
The above parking requirements are acknowledged by the applicant, and a request to increase the allowable maximum parking for Parcels A and D are included in this application.

Parcel	Proposed Use	Required Parking	Required Criteria	Proposed Parking	Parking Adj Needed?
A	Retail	55 (min); 68 (max)	4.10/1ksf (min); 5.00/1ksf (max)	102 (7.0/1ksf)	Yes
B	Multi-Family Residential	208 (min); 520 (max)	1.00/unit (min); 2.5/unit (max)	320	No
D	Restaurant	20 (min); 25 (max)	4.10/1ksf (min); 5.00/1ksf (max)	58 (11.8/1ksf)	Yes

B. Parking requirements can be met either on-site, or off-site by meeting one or multiple of the following conditions:

1. Parking may be located on the same site as the associated use which it is supporting.
2. Mixed Uses. If more than one type of land use occupies a single structure or parcel of land, the total requirements for off-street automobile parking shall be the sum of the requirements for all uses, unless it can be shown that the peak parking demands are actually less (e.g. the uses operate on different days or at different times of the day). In that case, the total requirements shall be reduced accordingly, up to a maximum reduction of fifty percent, as determined by the community development director.
3. Shared Parking. Required parking facilities for two or more uses, structures, or parcels of land may be satisfied by the same parking facilities used jointly, to the extent that the owners or operators show that the need for parking facilities does not materially overlay (e.g., uses primarily of a daytime versus nighttime nature), that the shared parking facility is within one thousand feet of the potential uses, and provided that the right of joint use is evidenced by a recorded deed, lease, contract, or similar written instrument authorizing the joint use.

4. On-Street Parking. On-street parking may be counted toward the minimum standards when it is on the street face abutting the subject land use. An on-street parking space shall not obstruct a required clear vision area and it shall not violate any law or street standard. On-street parking for commercial uses shall conform to the following standards:
    a. Dimensions. The following constitutes one on-street parking space:
        1. Parallel parking: Twenty-two feet of uninterrupted and available curb;
        2. Forty-five and/or sixty-degree diagonal parking: Fifteen feet of curb;
        3. Ninety-degree (perpendicular) parking: Twelve feet of curb.
        4. Public Use Required for Credit. On-street parking spaces counted toward meeting the parking requirements of a specific use may not be used exclusively by that use, but shall be available for general public use at all times. Signs or other actions that limit general public use of on-street spaces are prohibited.

Applicant's Response:
Parking requirements are proposed to be met within each of the parcels proposed development area using parking stall geometry consistent with the geometry identified in the code. The Detailed Development Plan application for Parcels A, B, & D will address their individual parking proposals.

C. Reduction of the Number of the Minimum Automobile Spaces Required. Any combination of the reductions below is permitted unless otherwise noted.

1. Downtown Parking Overlay. The minimum required number of parking stalls is reduced within the downtown parking overlay by fifty percent.
2. Transit Oriented Development. For projects not located within the downtown parking overlay district, the minimum required number of parking stalls is reduced up to twenty-five percent when:
    a. In a commercial center (sixty thousand square feet or greater of retail or office use measured cumulatively within a five hundred foot radius);
    b. When adjacent to multi-family development with over eighty units; or
    c. Within one thousand three hundred twenty feet of an existing or planned public transit street and within one thousand three hundred twenty feet of the opposite use (commercial center or multi-family development with over eighty units).
3. Tree Preservation. The community development director may grant an adjustment to any standard of this requirement provided that the adjustment preserves a designated heritage tree or grove so that the reduction in the amount of required pavement can help preserve existing healthy trees in an undisturbed, natural condition.
4. Transportation Demand Management. The community development director shall reduce the required number of parking stalls up to twenty-five percent when a parking-traffic study prepared by a traffic engineer demonstrates alternative modes of transportation, including transit, bicycles, and walking, and/or special characteristics of the customer, client, employee or resident population will reduce expected vehicle use and parking space demand for this development, as compared to standard Institute of Transportation Engineers vehicle trip generation rates and further that the transportation demand management program promotes or achieves parking utilization lower than minimum city parking requirements.

    A transportation demand management (TDM) program shall be developed to include strategies for reducing vehicle use and parking demand generated by the development and will be measured annually. If, at the annual assessment, the city determines the plan is not

successful, the plan may be revised. If the city determines that no good-faith effort has been made to implement the plan, the city may take enforcement actions.

5. The minimum required number of stalls may be reduced by up to ten percent when the subject property is adjacent to an existing or planned fixed public transit route or within one thousand feet of an existing or planned transit stop.

Applicant's Response:
The applicant does not request a reduction in allowable parking for any of the proposed parcels. The Detailed Development Plan application for Parcels A, B, & D will address their individual parking proposals.

17.52.030 - Standards for automobile parking.
A. Access. Ingress and egress locations on public thoroughfares shall be located in the interests of public traffic safety and meet requirements of OCMC 16.12.035. Groups of more than four parking spaces shall be so located and served by driveways so that their use will require no backing movements or other maneuvering within a street right-of-way other than an alley.

Applicant's Response:
As indicated in our response to OCMC 16.12.035, all proposed driveways meet the access spacing requirements identified in Table 16.12.035.A, with the exception of the easterly driveway for Parcel A and the westerly driveway for Parcel B. The separation between these two driveways measured at the right-of-way from curb-to-curb on the driveways is approximately 50.9 ft. With the pre-application notes prepared by Public Works indicating the proposed road was a Local Street, this driveway separation met the minimum 25-ft separation identified in the above table. However, subsequent to the pre-application notes Public Works increased the road classification to a Collector Street, which places the driveway spacing in conflict with Table 16.12.035.A.

The applicant wishes to keep the proposed driveways as shown on the proposed site layout (Shts DDP-C1.0 and GDP-C1.0 for the following reasons:

1. **Oregon Fire Code Appendix D106.2 and D106.3 require two access points for multi-family residential projects having more than 200 units and that they be separated by a distance not less than one-half of the length of the maximum overall diagonal dimension of the property (measured in a straight line between accesses). The maximum diagonal distance of Parcel B is 879 ft, resulting in a minimum driveway spacing of approximately 439 ft.**

2. **Moving the Parcel B westerly driveway further east along the proposed public road to a distance of 439 ft from the easterly driveway results in splitting the current 70-unit building in two, reducing unit count while increasing building construction costs to a point where the multi-family development becomes unviable. Such a new driveway location would place it in the middle of the west diagonal leg of this building (see Sht GDP-C1.0 for building reference).**

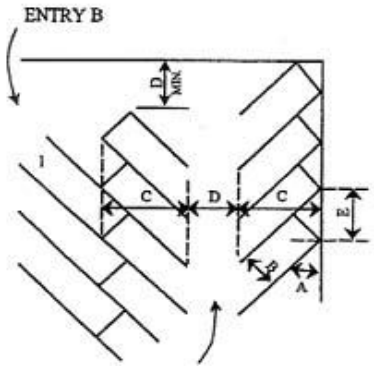
B. Surfacing. Required off-street parking spaces and access aisles shall have paved surfaces adequately maintained. The use of pervious asphalt/concrete and alternative designs that reduce storm water runoff

and improve water quality pursuant to the City's stormwater and low impact development design standards are encouraged.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

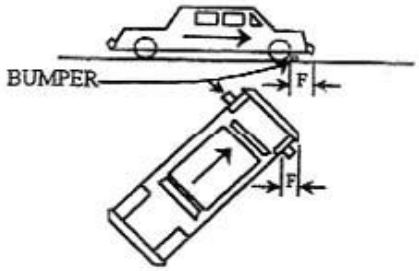
C. Drainage. Drainage shall be designed in accordance with the requirements of OCMC 13.12 and the City public works stormwater and grading design standards.

Applicant's Response:
The applicant acknowledges the drainage design standards for the proposed public street and utility improvements as well as the proposed rough grading associated with this DDP application. Please see the storm report accompanying this application and the Preliminary Civil Grading and Drainage Plan, Sht DDP-C2.0. Each of the parcels will provide their own separate design proposals with their own DDP applications.



D. Dimensional Standards.
1. Requirements for parking developed at varying angles are according to the table included in this section. A parking space shall not be less than seven feet in height when within a building or structure and shall have access by an all-weather surface to a street or alley. Parking stalls in compliance with the American with Disabilities Act may vary in size in order to comply with the building division requirements. Up to thirty-five percent of the minimum required parking may be compact, while the remaining required parking stalls are designed to standard dimensions. The Community Development Director may approve alternative dimensions for parking stalls in excess of the minimum requirement which comply with the intent of this chapter.

PARKING STANDARD / PARKING ANGLE SPACE DIMENSIONS



A ***Parking Angle***		***B*** ***Stall Width***	***C*** ***Stall to Curb***	***D*** ***Aisle Width***	***E*** ***Curb Length***	***F*** ***Overhang***
0 degrees		*8.5*	*9'*	*12'*	*20'*	*0*
30 degrees	*Standard* *Compact*	*9'* *8'*	*17.3'* *14.9'*	*11'* *11'*	*18'* *16'*	
45 degrees	*Standard* *Compact*	*8.5* *8.5*	*19.8'* *17'*	*13'* *13'*	*12.7'* *11.3'*	*1.4*
60 degrees	*Standard* *Compact*	*9'* *8'*	*21'* *17.9'*	*18'* *16'*	*10.4'* *9.2'*	*1.7*
90 degrees	*Standard* *Compact*	*9'* *8'*	*19'* *16'*	*24'* *22'*	*9'* *8'*	*1.5*

All dimensions are to the nearest tenth of a foot.

C:\Users\lterway\AppData\Local\Microsoft\Windows\INetCache\IE\images\17.52.030Typicalparkinglayout.

png
Typical Parking layout Entry A

Note: Space 1 Contingent upon Entry B overhang
Note: Overhang dimensions are intended to indicate possible location from parking area edge for location of bumpers.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. Alternative parking/plan. Any applicant may propose an alternative parking plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. In such situations, the Community Development Director may approve an alternative parking lot plan with variations to parking dimensions of this section. The alternative shall be consistent with the intent of this chapter and shall create a safe space for automobiles and pedestrians while providing landscaping to the quantity and quality found within parking lot landscaping requirements.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. While alternative parking plans are not anticipated on the parcels, each of the parcels will seek their own Detailed Development Plan approval separately

from this masterplan application and will address the site/plan specific elements of this code section at that time.

E. Carpool and Vanpool Parking. New developments with seventy-five or more parking spaces, excluding projects where seventy-five percent or more of the total floor area is residential , and new hospitals, government offices, group homes, nursing and retirement homes, schools and transit park-and-ride facilities with fifty or more parking spaces, shall identify the spaces available for employee, student and commuter parking and designate at least five percent, but not fewer than two, of those spaces for exclusive carpool and vanpool parking. Carpool and vanpool parking spaces shall be located closer to the main employee, student or commuter entrance than all other employee, student or commuter parking spaces with the exception of ADA accessible parking spaces. The carpool/vanpool spaces shall be clearly marked "Reserved - Carpool/Vanpool Only."

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.52.040 - Bicycle parking standards.
A. Purpose-Applicability. To encourage bicycle transportation to help reduce principal reliance on the automobile, and to ensure bicycle safety and security, bicycle parking shall be provided in conjunction with all uses other than exclusively residential use with less than five dwellings on-site (excluding cottage clusters).
B. Number of Bicycle Spaces Required. For any use not specifically mentioned in Table A, the bicycle parking requirements shall be the same as the use which, as determined by the Community Development Director, is most similar to the use not specifically mentioned. Calculation of the number of bicycle parking spaces required shall be determined in the manner established in OCMC 17.52.020 for determining automobile parking space requirements. Modifications to bicycle parking requirements may be made through the site plan and design, conditional use, or master plan review process.

*TABLE A Required Bicycle Parking Spaces**
Where two options for a requirement are provided, the option resulting in more bicycle parking applies. Where a calculation results in a fraction, the result is rounded up to the nearest whole number.

USE	***MINIMUM BICYCLE PARKING***	***MINIMUM BICYCLE PARKING - COVERED - The following percentage of bicycle parking is required to be covered***
Multi-family (five or more units)	*1 per 10 units (min of 2)*	*50% (min of 1)*
Correctional institution	*1 per 15 auto spaces (min of 2)*	*30% (min of 1)*
Nursing home or care facility	*1 per 30 auto spaces (min of 2)*	*30% (min of 1)*

Hospital	*1 per 20 auto spaces (min of 2)*	*30% (min of 1)*
Park-and-ride lot	*1 per 5 auto spaces (min of 2)*	*50% (min of 1)*
Transit center	*1 per 5 auto spaces (min of 2)*	*50% (min of 1)*
Parks and open space	*1 per 10 auto spaces (min of 2)*	*0%*
Public parking lots	*1 per 10 auto spaces (min of 2)*	*50% (min of 1)*
Automobile parking structures	*1 per 10 auto spaces (min of 4)*	*80% (min of 2)*
Religious institutions, movie theater, auditorium or meeting room	*1 per 10 auto spaces (min of 2)*	*30% (min of 1)*
Libraries, museums	*1 per 5 auto spaces (min of 2)*	*30% (min of 1)*
Preschool, nursery, kindergarten	*2 per classroom (min of 2)*	*50% (min of 1)*
Elementary	*4 per classroom (min of 2)*	*50% (min of 1)*
Junior high and High school	*2 per classroom (min of 2)*	*50% (min of 2)*
College, business/commercial schools	*2 per classroom (min of 2)*	*50% (min of 1)*
Swimming pools, gymnasiums, ball courts	*1 per 10 auto spaces (min of 2)*	*30% (min of 1)*
Retail stores and shopping centers	*1 per 20 auto spaces (min of 2)*	*50% (min of 2)*
Retail stores handling exclusively bulky merchandise such as automobile, boat or trailer sales or rental	*1 per 40 auto spaces (min of 2)*	*0%*
Bank, office	*1 per 20 auto spaces (min of 2)*	*50% (min of 1)*
Medical and dental clinic	*1 per 20 auto spaces (min of 2)*	*50% (min of 1)*
Eating and drinking establishment	*1 per 20 auto spaces (min of 2)*	*0%*
Gasoline service station	*1 per 10 auto spaces (min of 2)*	*0%*

** Covered bicycle parking is not required for developments with two or fewer parking stalls.*

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

C. Design Standards.

1. Bicycle parking facilities shall be in the form of a lockable enclosure onsite, secure room in a building onsite, a covered or uncovered rack onsite, or within the adjacent right-of-way.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. Bicycle parking areas shall be clearly marked or visible from on-site buildings or the street. If a bicycle parking area is not plainly visible from the street or main building entrance, a sign shall be posted indicating the location of the bicycle parking area. Indoor bicycle parking areas shall not require stairs to access the space. If sites have more than one building, bicycle parking shall be distributed as appropriate to serve all buildings.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

3. All bicycle racks shall be designed so that:
a. The bicycle frame is supported horizontally at two or more places.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

b. The frame and at least one wheel of the bicycle can be locked to the rack with a standard U-type lock.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

c. The user is not required to lift the bicycle onto the bicycle rack.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

d. Each bicycle parking space is accessible without moving another bicycle.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

e. It is a minimum of thirty inches tall and eighteen inches wide between the two points of contact.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

f. Provides an area of six feet by two feet per bicycle.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

g. All bicycle racks and lockers shall be securely anchored to the ground or to a structure.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.52.060 - Parking lot landscaping.
Purpose. The purpose of this code section includes the following:
1. To enhance and soften the appearance of parking lots;
2. To limit the visual impact of parking lots from sidewalks, streets and particularly from residential areas;
3. To shade and cool parking areas;
4. To reduce air and water pollution;
5. To reduce stormwater impacts and improve water quality; and
6. To establish parking lots that are more inviting to pedestrians and bicyclists.

A. Applicability. Unless otherwise specified, construction of new parking lots and alterations of existing parking lots shall comply with parking lot landscaping standards. Parking lot landscaping requirements

within this section do not apply to parking structures or parking garages, except landscaping as required in OCMC 17.62.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

B. Development Standards.

1. The landscaping shall be located in defined landscaped areas that are uniformly distributed throughout the parking or loading area.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. All areas in a parking lot not used for parking, maneuvering, or circulation shall be landscaped.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

3. Parking lot trees shall be a mix of deciduous shade trees and coniferous trees. The trees shall be evenly distributed throughout the parking lot as both interior and perimeter landscaping.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

4. Required landscaping trees shall be of a minimum two-inch minimum caliper size (though it may not be standard for some tree types to be distinguished by caliper), planted according to American Nurseryman Standards, and selected from the Oregon City Street Tree List or approved by an arborist.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed

Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

5. At maturity, all of the landscaped area shall be planted in ground cover plants, which includes grasses. Mulch (as a ground cover) shall only be allowed underneath plants at full growth and within two feet of the base of a tree and is not a substitute for ground cover.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

6. Landscaped areas shall include irrigation systems unless an alternate plan is submitted, and approved by the Community Development Director, that can demonstrate adequate maintenance;

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

7. All landscaping shall be installed according to accepted planting procedures, according to American Nurseryman Standards.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

C. Perimeter Parking Lot Landscaping and Parking Lot Entryway/Right-of-Way Screening. Parking lots and associated drive aisles shall include a five-foot wide landscaped buffer where the parking lot abuts the right-of-way and/or adjoining properties. In order to provide connectivity between non-single-family sites, the Community Development Director may approve an interruption in the perimeter parking lot landscaping for a single driveway where the parking lot abuts property designated as multi-family, commercial or industrial. Shared driveways and parking aisles that straddle a lot line do not need to meet perimeter landscaping requirements.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

1. The perimeter parking lot are[a] shall include:
a. Trees spaced a maximum of thirty feet apart (minimum of one tree on either side of the entryway is required). When the parking lot is adjacent to a public right-of-way, the parking lot trees shall be offset from the street trees;

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

b. An evergreen hedge screen of thirty to forty-two inches high or shrubs spaced no more than four feet apart on average. The hedge/shrubs shall be parallel to and not nearer than two feet from the right-of-way line. The required screening shall be designed to allow for free access to the site and sidewalk by pedestrians. Visual breaks, no more than five feet in width, shall be provided every thirty feet within evergreen hedges abutting public right-of-ways.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

D. Parking Area/Building Buffer. Except for parking lots with fewer than five parking stalls, parking areas (excluding drive aisles with no adjacent parking) shall be separated from the exterior wall of a structure, exclusive of pedestrian entranceways or loading areas, by one of the following:
1. Minimum five-foot wide landscaped planter strip (excluding areas for pedestrian connection) meeting the standards for perimeter parking lot area landscaping; or:

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. Minimum seven foot sidewalks with shade trees spaced a maximum of thirty feet apart in three-foot by five-foot tree wells.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

E. Interior Parking Lot Landscaping. Surface parking lots with more than five parking stalls shall include at least forty-five square feet of interior parking lot landscaping per parking stall to improve the water quality, reduce storm water runoff, and provide pavement shade. Pedestrian walkways or any impervious surface in the landscaped areas are not to be counted in the percentage. Fractions shall be rounded up when calculating the required number of plantings. Interior parking lot landscaping shall include:

1. A minimum of one tree per four parking spaces.

Applicant's Response: This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. A minimum of 1.5 shrubs per parking space.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

3. No more than eight contiguous parking spaces shall be created without providing an interior landscape strip between them. Landscape strips shall be provided between rows of parking shall be a minimum of six feet in width and a minimum of ten feet in length.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

F. Alternative landscaping plan.
Any applicant may propose an alternative landscaping plan. Such plans are often proposed to address physically constrained or smaller sites, however innovative designs for larger sites may also be considered. Alternative plans may include the use of low impact development techniques and minimized landscaping requirements. In such situations, the Community Development Director may approve variations to the landscaping standards of OCMC 17.52.060 in accordance with 1 and/or 2 below.

1. General Review Standard. The alternative shall meet the standards in OCMC 17.62.015-Modifications that will better meet design review requirements.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. Credit for Pervious/Low Impact Development. The Community Development Director may count up to fifty percent of the square footage of any pervious hardscaped landscape material within a parking lot that is designed and approved pursuant to the City's adopted stormwater and low impact development design standards toward minimum landscaping requirements for the site. (This includes porous pavement detention, open celled block pavers, porous asphalt, porous concrete pavement, porous turf, porous gravel, etc.).

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.52.080 - Maintenance.
The owner, tenant and their agent, if any, shall be jointly and severally responsible for the maintenance of the site including but not limited to the off-street parking and loading spaces, bicycle parking and all landscaping which shall be maintained in good condition so as to present a healthy, neat and orderly appearance and shall be kept free from refuse and debris.
All plant growth in interior landscaped areas shall be controlled by pruning, trimming, or otherwise so that:
A. It will not interfere with the maintenance or repair of any public utility;
B. It will not restrict pedestrian or vehicular access; and
C. It will not constitute a traffic hazard due to reduced visibility.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

17.52.090 - Loading areas.
A. Purpose. The purpose of this section is to provide adequate loading areas for commercial, office, retail and industrial uses that do not interfere with the operation of adjacent streets.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

B. Applicability. OCMC 17.52.090 applies to uses that are expected to have service or delivery truck visits with a forty-foot or longer wheelbase, at a frequency of one or more vehicles per week. The City Engineer and decision maker shall determine through site plan and design review the number, size and location of required loading areas, if any.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

C. Standards.

1. The off-street loading space shall be large enough to accommodate the largest vehicle that is expected to serve the use without obstructing vehicles or pedestrian traffic on adjacent streets and driveways. Applicants are advised to provide complete and accurate information about the potential need for loading spaces because the City Engineer or decision maker may restrict the use of other public right-of-way to ensure efficient loading areas and reduce interference with other uses.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

2. Where parking areas are prohibited between a building and the street, loading areas or drive isles are also prohibited.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

3. The City Engineer and decision maker, through site plan and design review, may approve a loading area adjacent to or within a street right-of-way when all of the following loading and unloading operations conditions are met:

a. Short in duration (i.e., less than one hour);
b. Infrequent (less than three operations daily between 5:00 a.m. and 12:00 a.m. or all operations between 12:00 a.m. and 5:00 a.m. at a location that is not adjacent to a residential zone);
c. Does not obstruct traffic during peak traffic hours;
d. Does not interfere with emergency response services; and
e. Is acceptable to the applicable roadway authority.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed

Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

CHAPTER 17.54 SUPPLEMENTAL ZONING REGULATIONS AND EXCEPTIONS

17.54.010 - Accessory structures and uses.
Accessory structures and uses shall comply with all requirements for the principal use except where specifically modified by this title and shall comply with the following standards:

A. Signs. Signs shall be permitted as provided in Chapter 15.28.
B. Residential Accessory Structures, Not Including Accessory Dwellings Units. The section applies to all accessory structures within the R-10, R-8, R-6, R-5 and R-3.5 zoning districts and accessory structures on properties with a residential use with less than five units within a zoning designation not listed above.

1. Accessory Structures with a Footprint Less than Two Hundred Square Feet:

a. Shall be located behind the front line of the primary structure;
b. Shall comply with the dimensional standards of the zoning designation including height, lot coverage and setbacks unless modified pursuant to subsection c herein; and
c. Side and rear setbacks may be reduced to not less than three feet for the accessory structure and its projections if the height does not exceed seventeen feet as defined in OCMC 17.04.550.

Applicant's Response:
The applicant acknowledges this section relative to signs. This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. As indicated in 17.54.010.B, above, the residential accessory structures requirements in this section are not applicable to the MUC-2 zone based on the proposed multi-family residential density.

2. Accessory Structures with a Footprint from Two Hundred to Six Hundred Square Feet:

a. Shall be located behind the front line of the primary structure;
b. Shall comply with the dimensional standards of the zoning designation, including height, setbacks, and lot coverage unless modified pursuant to subsection c; and
c. Side and rear setbacks may be reduced to not less than three feet for one accessory structure and its projections if the height does not exceed seventeen feet as defined in OCMC 17.04.550.

Applicant's Response:
This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. As indicated in 17.54.010.B, above, the residential accessory structures requirements in this section are not applicable to the MUC-2 zone based on the proposed multi-family residential density.

3. Accessory Structures with a Footprint Over Six Hundred Square Feet:

a. Shall not exceed more than one accessory structure with a footprint in excess of six hundred square feet per parcel;

b. The parcel shall be in excess of twenty thousand square feet;
c. The footprint shall not exceed the footprint of the primary structure;
d. Shall not exceed eight hundred square feet;
e. Shall not exceed the height of the primary structure;
f. Shall be located behind the front line of the primary structure; and
g. Shall comply with the dimensional standards of the zoning designation including height, setbacks, and lot coverage.

Applicant's Response:
This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. As indicated in 17.54.010.B, above, the residential accessory structures requirements in this section are not applicable to the MUC-2 zone based on the proposed multi-family residential density.

4. Prohibited:
a. Cargo containers.
b. Membrane and fabric covered storage areas visible from the adjacent right-of-way.
c. Metal structures within a historic district, or on an individually designated historic property, unless otherwise authorized by OCMC Chapter 17.40.

Applicant's Response:
This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. As indicated in 17.54.010.B, above, the residential accessory structures requirements in this section are not applicable to the MUC-2 zone based on the proposed multi-family residential density.

5. An accessory structure housing a hooved animal shall be located a minimum of twenty-five feet from any property line.
6. Accessory structures constructed prior to January 1, 2017 which are located behind the front building line of the primary structure are exempt from the setback and height requirements in this chapter, except as otherwise limited through an applicable overlay district.
7. Swimming Pools. In-ground and above-ground swimming pools shall be constructed not less than three feet from the side or rear yard lines. Swimming pools shall comply with the front yard setback requirements for the principal structure. A pool shall be surrounded by a fence no less than four feet in height or a suitable alternative such as a locked or electric cover, approved by the building official.

Applicant's Response:
This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. As indicated in 17.54.010.B, above, the residential accessory structures requirements in this section are not applicable to the MUC-2 zone based on the proposed multi-family residential density.

C. Temporary Structures in the Right-of-Way. This section applies to temporary structures associated with permitted events in the right-of-way. Temporary structures:

1. May be constructed of any building material;

2. Shall comply with all provisions of the Americans with Disabilities Act; and

3. Shall be exempt from all sections of Chapters 12.04 (except 12.04.120), 12.08, 16.12, 17.52 and 17.62.

Applicant's Response:
Temporary structures are not proposed in public right-of-way.

17.54.020 - Projections from buildings.
Residential building projections that are cantilevered so that they do not touch the ground (such as cornices, eaves, bay windows, fireplaces, overhangs, canopies, sunshades, gutters, chimneys, flues, sills or similar architectural features) may project into the required setbacks up to twenty-four inches. The projection may be limited by easement restrictions, etc.

Applicant's Response:
This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.54.030 - Setback exceptions.
A. Through lots having a frontage on two streets shall provide the required front yard on each street. The required rear yard setback shall not apply.
B. Structures within the right-of-way are exempt from setback standards.
C. Uncovered decks or porches with a height of less than thirty inches from grade are exempt from setback standards.

Applicant's Response:
Parcels A, B, & C are not through lots having frontage on two streets. Parcels A & B are considered corner lots with 20-ft setbacks along Molalla Ave in conformance with OCMC 17.29.060.G.3. This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.54.100 Fences, Hedges, Walls, and Retaining Walls.
A. A fence, hedge, wall, retaining wall, or combination thereof may be located on real property, not within the right-of-way, subject to all of the following:

1. A fence, hedge, wall, retaining wall, or combination thereof located in front of a building may be up to 3.5-feet in total height as measured from the finished grade at any point on the fence.

2. A fence, hedge, wall, located next to, or behind the forward most building, or within more than forty feet of the right-of-way, whichever is less may be up to:

a. Six feet in total height for residential properties with less than five units as measured from the finished grade at any point on the fence; or

b. Eight feet in total height for all other uses as measured from the finished grade at any point on the fence.

3. A retaining wall or combination of a fence, hedge, wall located next to and behind the forward most building, or within more than forty feet of the right-of-way, whichever is less, may be up to (as measured from the finished grade) 8.5 feet in height from the finished grade.

4. Fences, hedges, and/or walls located within two feet above a retaining wall, as measured on a horizontal plane, shall be measured together for the purposes of determining height.

5. Property owners shall ensure compliance with the Traffic Sight Obstruction requirements in Chapter 10.32 of the Oregon City Municipal Code.

6. Retaining walls completely below the elevation of the right-of-way may be up to six feet in height.

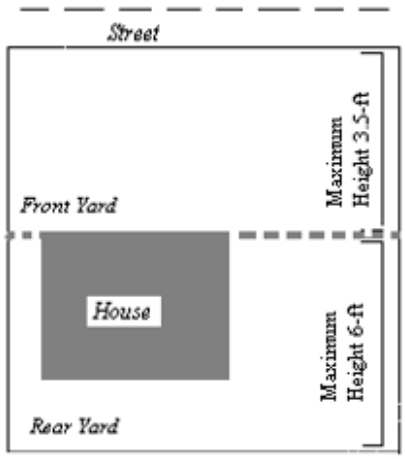
7. Minimum fall protection required by the Building Official, such as railings, is not included in the height of a retaining wall but must comply with the fence height requirements.

Applicant's Response:
Retaining walls are not proposed on the parcels associated with this Detailed Development Plan submittal. This DDP application seeks approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. The proposed public street from the site to Beavercreek Rd includes a retaining wall to minimize impacts to the NROD resource and avoid impacts to an existing wetland. This retaining wall is located within the right-of-way and is shown on Sht DDP-C1.4.

B. When no other practicable alternative exists, the City Engineer may permit a fence, hedge, wall, retaining wall, or combination thereof to be located within the right-of-way subject to all of the following:

1. A Revocable Permanent Obstruction in the Right of Way permit is granted per OCMC 12.04.120;

2. Retaining walls, fences, or hedges comply with OCMC 17.54.100.A, unless determined to be impracticable by the City Engineer.



3. The abutting property owner shall ensure compliance with the Traffic Sight Obstruction requirements in Chapter 10.32 of the Oregon City Municipal Code.

Applicant's Response:
This criterion appears to be applicable to private development's desire to locate a wall within the public right-of-way for the benefit of private development. The retaining wall within the right-of-way of the proposed public road through the NROD area is associated with the public roadway design and supports the roadway, not adjacent private development. It does not impede sight distance and will include a guard rail and fence. Accordingly, we understand this criterion does not apply to this proposed wall.

C. It is unlawful for any person to erect any electric fence or any fence constructed in whole or in part of barbed wire or to use barbed wire, except as erected in connection with security installations at a minimum height of six feet, providing further that prior written approval has been granted by the City Manager.

Applicant's Response:
The applicant acknowledges this criterion and is not proposing an electric fence with this DDP application.

Residential Height Requirements:
Any fence, hedge or wall located in front of may be up to 3.5 feet in total height.
A fence, hedge or wall located next to and behind your home may be up to six feet in total height.

Applicant's Response:
Retaining walls are not proposed on the parcels associated with this Detailed Development Plan submittal. This DDP application seeks approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.54.110 - Marijuana businesses.
For the purpose of zoning regulation pursuant to this section, recreational and medical marijuana facilities are considered the same by Oregon City.

Applicant's Response:
This DDP application does not propose a marijuana business. Accordingly, this criterion is not applicable to this application.

17.54.115 - Mobile Food Units
A. Applicability. The following provisions apply to mobile food units not located within a building. The provisions do not apply to indoor mobile food units or mobile food units allowed pursuant to a special event permit issued by the City.

Applicant's Response:
This DDP application does not propose mobile food units. Accordingly, this criterion is not applicable to this application. This Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

CHAPTER 17.62 SITE PLAN AND DESIGN REVIEW

17.62.010 Purpose.
The purposes of site plan and design review are to: Encourage site planning in advance of construction; protect lives and property from potential adverse impacts of development; consider natural or man-made hazards which may impose limitations on development; conserve the City's natural beauty and visual character and minimize adverse impacts of development on the natural environment as much as is reasonably practicable; assure that development is supported with necessary public facilities and services; ensure that structures and other improvements are properly related to their sites and to surrounding sites and structure; and implement the City's comprehensive plan and land use regulations with respect to development standards and policies.

17.62.015 - Modifications that will better meet design review requirements.
The review body shall consider modification of certain site related development standards of this chapter specified below. These modifications may be approved as part of a Type II design review process.
A. Applicability.

1. This process shall apply to modifications to:
a. Landscaping in OCMC 17.62.050.A;
b. Vehicular connections to adjoining properties in OCMC 17.62.050.B.2;
c. On-site pedestrian circulation in OCMC 17.62.050.C;
d. Onsite utility location OCMC 17.62.050.G;
e. Building location in OCMC 17.62.055.D;
f. Building details in OCMC 17.62.055.I;
g. Windows in OCMC 17.62.055.J;
h. Parking lot landscaping in OCMC 17.52.060.

2. Modifications that are denied through Type II design review may be requested as a variance through the variance process pursuant to OCMC 17.60.020 or master plan adjustment pursuant to OCMC 17.65.070 as applicable.

3. Rather than a modification, applicants may choose to apply for a variance through the variance process pursuant to OCMC 17.60.020 or master plan adjustment pursuant to OCMC 17.65.070 as applicable.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time and may or may not seek modifications to certain development standards.

As shown on Shts DDP-C1.3 and DDP-L1.0, street trees on the proposed public street through TL 500 are shown on the west side of the street where space allows and are located behind the proposed pedestrian/bike path on the east side of the street where space allows. This street tree location allows a 10.5' wide unobstructed path to facilitate both pedestrian and bicycle movement without

obstruction from street trees, as development of TL 500 is not proposed at this time. The existing right-of-way through TL 500 is the result of an agreement between Walmart and the TL 500 property owner and the applicant does not have the ability to increase the width to allow more room for street trees within the sidewalk, which would generate the need for bike lanes on this section of street, which cannot fit within the available right-of-way. The applicant does not believe this rises to the level of a formal modification request via OCMC 16.12.013. Public Works suggested the alternate street tree location, provided the Planning Department approves. This response highlights this request.

B. The review body may approve requested modifications if it finds that the applicant has shown that the following approval criteria are met:

1. The modification will result in a development that better meets the applicable design guidelines; and

Applicant's Response:
Formal design modifications are included in our response to OCMC 16.12.013. As noted above, the applicant believes the alternate street tree location through TL 500 does not rise to the level of a formal modification request. The proposed alternate street tree location maintains the city's requirement to provide street trees.

2. The modification meets the intent of the standard. On balance, the proposal will be consistent with the purpose of the standard for which a modification is requested.

Applicant's Response:
Formal design modifications are included in our response to OCMC 16.12.013. As noted above, the applicant believes the alternate street tree location through TL 500 does not rise to the level of a formal modification request. The proposed alternate street tree location maintains the city's requirement to provide street trees.

17.62.030 - When required.
Site plan and design review shall be required for all development of real property in all zones except the low and medium density residential districts, unless otherwise provided for by this title or as a condition of approval of a permit. Site plan and design review shall also apply to all conditional uses, cluster housing developments, multi-family uses, manufactured home parks, and non-residential uses in all zones. Site Plan and Design Review does not apply to activities occurring within the right-of-way except for communication facilities pursuant to OCMC 17.80.

Site plan and design review is required for a change in use between the uses in Table 17.62.030:

Table 17.62.030

Existing Use	***Proposed Use***
Residential	*Nonresidential use, including but not limited to: commercial, office, industrial, retail, or institutional*
Single-family or duplex	*3 or more dwellings*

Site plan and design review shall not alter the type and category of uses permitted in the underlying zoning districts.

Applicant's Response:
The applicant acknowledges the applicability of Site Plan Review within the Masterplan Detailed Development Plan process. This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time.

Only the standards of OCMC 17.62.035 apply to duplex, triplex, quadplex, cottage cluster, townhouse, single family detached residential unit, live/work dwelling and accessory dwelling unit Type I applications

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time. This masterplan application does not seek Type I Minor Site Plan and Design Review.

17.62.035 - Minor site plan and design review.
This section provides for a minor site plan and design review process. Minor site plan review is a Type I or Type II decision, as described in OCMC 17.62.035.A, subject to administrative proceedings described in OCMC 17.50 and may be utilized as the appropriate review process only when authorized by the Community Development Director. The purpose of this type of review is to expedite design review standards for uses and activities that require only a minimal amount of review, typical of minor modifications and/or changes to existing uses or buildings.

A. Type I Minor Site Plan and Design Review.
1. Applicability. Type I applications involve no discretion and are typically processed concurrently with a building permit application. The Type I process is not applicable for:
a. Any activity which is included with or initiates actions that require Type II—IV review.
b. Any increase in square footage of a conditional or nonconforming use (excluding nonconforming structures).
c. Any proposal in which nonconforming upgrades are required under OCMC 17.58.
d. Any proposal in which modifications are proposed under OCMC 17.62.015.

Applicant's Response:
This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time. This masterplan application does not seek Type I Minor Site Plan and Design Review.

B. Type II Minor Site Plan and Design Review.

1. Type II minor site plan and design review applies to the following uses and activities unless those uses and activities qualify for Type I review per OCMC 17.62.035.A:

a. Modification of an office, commercial, industrial, institutional, public or multi-family structure that does not increase the interior usable space (for example covered walkways or entryways, addition of unoccupied features such as clock tower, etc.).

b. Modification to parking lot layout and landscaping, or the addition of up to five parking spaces.

c. A maximum addition of up to one thousand square feet to a commercial, office, institutional, public, multi-family, or industrial building provided that the addition is not more than thirty-five percent of the original building square footage.

d. Mobile food units in OCMC 17.54.115.

e. Other land uses and activities may be added if the Community Development Director makes written findings that the activity/use will not increase off-site impacts and is consistent with the type and/or scale of activities/uses listed above.

2. Application. The application for the Type II minor site plan and design review shall contain the following elements:

a. The submittal requirements of OCMC 17.50.

b. A narrative explaining all aspects of the proposal in detail and addressing each of the applicable criteria listed in OCMC 17.62.

c. Site plan drawings showing existing conditions/uses and proposed conditions/uses.

d. Architectural drawings, including building elevations and envelopes, if architectural work is proposed.

e. Additional submittal material may be required by the Community Development Director on a case-by-case basis.

Applicant's Response:

This masterplan application seeks Detailed Development Plan approval for the proposed street and utility improvements and site rough grading. Each of the parcels will seek their own Detailed Development Plan approval separately from this masterplan application and will address the site/plan specific elements of this code section at that time. Please see the project narrative, various plans and reports included with this application.

<u>17.62.040 – Items required.</u>

A complete application for site plan and design review shall be submitted. Except as otherwise in subsection I of this section, the application shall include the following:

A. A site plan or plans, to scale, containing the following:

1. Vicinity information showing streets and access points, pedestrian and bicycle pathways, transit stops and utility locations;

2. The site size, dimensions, and zoning, including dimensions and gross area of each lot or parcel and tax lot and assessor map designations for the proposed site and immediately adjoining properties;

3. Contour lines at two-foot contour intervals for grades zero to ten percent, and five-foot intervals for grades over ten percent;

4. The location of natural hazard areas on and within one hundred feet of the boundaries of the site, including:

a. Areas indicated on floodplain maps as being within the one hundred-year floodplain,
b. Unstable slopes, as defined in OCMC 17.44.020,
c. Areas identified on the seismic conditions map in the comprehensive plan as subject to earthquake and seismic conditions;

5. The location of natural resource areas on and within one hundred feet of the boundaries of the site, including fish and wildlife habitat, existing trees (six inches or greater in caliper measured four feet above ground level), wetlands, streams, natural areas, wooded areas, areas of significant trees or vegetation, and areas designated as being within the natural resources overlay district;

6. The location of inventoried historic or cultural resources on and within one hundred feet of the boundaries of the site;

7. The location, dimensions, and setback distances of all existing permanent structures, improvements and utilities on or within twenty five feet of the site, and the current or proposed uses of the structures;

8. The location, dimensions, square footage, building orientation and setback distances of proposed structures, improvements and utilities, and the proposed uses of the structures by square footage;

9. The location, dimension and names, as appropriate, of all existing and platted streets, other public ways, sidewalks, bike routes and bikeways, pedestrian/bicycle accessways and other pedestrian and bicycle ways, transit street and facilities, neighborhood activity centers, and easements on and within two hundred fifty feet of the boundaries of the site;

10. The location, dimension and names, as appropriate, of all proposed streets, other public ways, sidewalks, bike routes and bikeways, pedestrian/bicycle accessways and other pedestrian and bicycle ways, transit streets and facilities, neighborhood activity centers, and easements on and within two hundred feet of the boundaries of the site;

11. All parking, circulation, loading and servicing areas, including the locations of all carpool, vanpool and bicycle parking spaces as required in OCMC 17.52;

12. Site access points for automobiles, pedestrians, bicycles and transit;

13. On-site pedestrian and bicycle circulation;

14. Outdoor common areas proposed as open space;

15. Total impervious surface created (including buildings and hard ground surfaces);

16. The proposed location, dimensions and materials of fences and walls.

B. A landscaping plan, drawn to scale, showing the location and types of existing trees (six inches or greater in caliper measured four feet above ground level) and vegetation proposed to be removed and to be retained on the site, the location and design of landscaped areas, the varieties, sizes and spacings of trees and plant materials to be planted on the site, other pertinent landscape features, and irrigation systems required to maintain plant materials.

C. Architectural drawings or sketches, drawn to scale and showing floor plans, elevations accurately reflected to grade, and exterior materials of all proposed structures and other improvements as they will appear on completion of construction. The name of the adjacent street shall be identified on each applicable building elevation.

D. An electronic materials board clearly depicting all building materials with specifications as to type, color and texture of exterior materials of proposed structures.

E. An erosion/sedimentation control plan, in accordance with the requirements of OCMC 17.47 and the public works erosion and sediment control standards, and a drainage plan developed in accordance with city drainage master plan requirements, OCMC 13.12 and the public works stormwater and grading design standards. The drainage plan shall identify the location of drainage patterns and drainage courses on and within one hundred feet of the boundaries of the site. Where development is proposed within an identified hazard area, these plans shall reflect concerns identified in the hydrological/geological/geotechnical development impact statement.

F. An exterior lighting plan, drawn to scale, showing type, height, and area of illumination.

Applicant's Response:
Please see the various plans and reports included with this application. These plans include a cover sheet, preliminary rough grading and erosion control plan, preliminary tree removal plan, preliminary site plan, preliminary landscape plan, Molalla Ave street plan, proposed Public Street Plan & Profile, preliminary grading plan, and preliminary utility plan. As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. Accordingly, architectural drawings, materials board and exterior lighting beyond proposed street lighting will accompany future DDP applications for the proposed parcels.

G. Archeological Monitoring Recommendation. For all projects that will involve ground disturbance, the applicant shall provide:

1. A letter or email from the Oregon State Historic Preservation Office Archaeological Division indicating the level of recommended archeological monitoring on-site, or demonstrate that the applicant had notified the Oregon State Historic Preservation Office and that the Oregon State Historic Preservation Office had not commented within forty-five days of notification by the applicant; and

2. A letter or email from the applicable tribal cultural resource representative of the Confederated Tribes of the Grand Ronde, Confederated Tribes of the Siletz, Confederated Tribes of the Umatilla,

Confederated Tribes of the Warm Springs and the Confederated Tribes of the Yakama Nation indicating the level of recommended archeological monitoring on-site, or demonstrate that the applicant had notified the applicable tribal cultural resource representative and that the applicable tribal cultural resource representative had not commented within forty-five days of notification by the applicant.

If, after forty-five days' notice from the applicant, the Oregon State Historic Preservation Office or the applicable tribal cultural resource representative fails to provide comment, the City will not require the letter or email as part of the completeness review. For the purpose of this section, ground disturbance is defined as the movement of native soils.

Applicant's Response:
The Oregon State Historic Preservation Office (SHPO) provided a letter, dated September 10, 2025, indicating that SHPO has no records identifying archaeologic objects or sites, and no Native American cairn, burial, human remains, sacred objects of cultural patrimony in or adjacent to the project area and does not have any concerns with the project proceeding as planned. Notice was sent to the above-referenced tribes on September 23, 2025.

We were able to speak with representatives from 2 of the tribes over the phone and received the following feedback:

- **Confederated Tribes of the Grand Ronde - on October 6th, the tribal representative suggested fieldwork be conducted and that they would send an official written response**
    - **Fieldwork was conducted; results were negative**
    - **To date, we have not received a written response.**
- **Confederated Tribes of the Umatilla.**
    - **Tribal representative said she would confer with the other tribal representative**
    - **To date, we have not heard anything else from the tribe**

We have not received anything from the Confederated Tribes of the Siletz, Confederated Tribes of the Warm Springs and the Confederated Tribes of the Yakama Nation. November 7, 2025, marked the end of the 45-day notification period. Please see our Cultural Resources Summary Letter in Appendix O.

H. Such special studies or reports as the Community Development Director may require to obtain information to ensure that the proposed development does not adversely affect the surrounding community or identified natural resource areas or create hazardous conditions for persons or improvements on the site. The Community Development Director shall require an applicant to submit one or more development impact evaluations as may be necessary to establish that the City's traffic safety or capacity standards, natural resource, including geologic hazard and flood plain overlay districts, will be satisfied.

Applicant's Response:
The applicant acknowledges the Community Development Director's ability to require additional information to support the proposed masterplan application.

I. The Community Development Director may waive the submission of information for specific requirements of this section or may require information in addition to that required by a specific provision of this section, as follows:

1. The Community Development Director may waive the submission of information for a specific requirement upon determination either that specific information is not necessary to evaluate the application properly, or that a specific approval standard is not applicable to the application. If submission of information is waived, the Community Development Director shall, in the decision, identify the waived requirements, explain the reasons for the waiver, and state that the waiver may be challenged on appeal and may be denied by a subsequent review authority. If the matter is forwarded to the planning commission for initial review, the information required by this paragraph shall be included in the staff report;

2. The Community Development Director may require information in addition to that required by a specific provision of this section upon determination that the information is needed to evaluate the application properly and that the need can be justified on the basis of a special or unforeseen circumstance as necessary to comply with the applicable standards. If additional information is required, the Community Development Director shall, in the decision, explain the reasons for requiring the additional information.

Applicant's Response:
The applicant acknowledges the Community Development Director's ability to waive certain requirements or may require additional information to support the proposed masterplan application.

J. All new utilities shall be placed underground.

1. Service poles may be allowed on private property when undergrounding service is technically or physically infeasible.

Applicant's Response:
All new utilities within the proposed development will be underground. Overhead utilities along Molalla Ave will be relocated to allow construction of required Molalla Ave improvements but are not planned to be placed underground due to the nature of the existing electrical lines on the existing utility poles.

K. One full-sized copy of all architectural and site plans.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. Accordingly, architectural drawings, materials board and exterior lighting beyond proposed street lighting will accompany future DDP applications for the proposed parcels.

17.62.050 - General Standards

All development shall comply with the following standards:

A. Landscaping.

1. Existing native vegetation is encouraged to be retained to the maximum extent practicable. All plants listed on the Oregon City Nuisance Plant List shall be removed from the site prior to issuance of a final occupancy permit for the building.

Applicant's Response:
The applicant acknowledges this criterion. Each of the parcels will submit their own Detailed Development Plan applications, which will provide more information on planned landscaping.

2. The amount of landscaping required is found in the standards for each underlying zone. Where the underlying zone does not contain a minimum landscaping standard, the minimum site landscaping shall be fifteen percent of the total site area. Except as allowed elsewhere in Title 16 or 17 of this code, all areas to be credited towards landscaping shall be installed with growing plant materials.

Applicant's Response:
The applicant acknowledges this landscape requirement. Please see our response to overall landscaping in our response to OCMC 17.29.060.I.

3. Pursuant to OCMC 17.49, landscaping requirements within the Natural Resource Overlay District, other than landscaping required for parking lots, may be met by preserving, restoring and permanently protecting native vegetation and habitat on development sites.

Applicant's Response:
The applicant acknowledges this landscape requirement. The Detailed Development Plan for Parcel B may, or may not, choose to include a provision for preserving or permanently protecting the forested slope on the easterly edge of Parcel B.

4. A landscaping plan shall be prepared by a registered landscape architect for new or revised landscaped areas and parking lots. Landscape architect approval is not required for tree removal and/or installation if the species are chosen from an approved street tree list. A certified landscape designer, arborist, or nurseryman shall be acceptable in lieu of a landscape architect for projects with less than five hundred square feet of landscaping. All landscape plans shall include a mix of vertical (trees and shrubs) and horizontal elements (grass, groundcover, etc.) that within three years will cover one hundred percent of the landscape area. Plant species listed on the Oregon City Nuisance Plant list are prohibited and native species are encouraged. No mulch, bark chips, or similar materials shall be allowed at the time of landscape installation except under the canopy of shrubs and within two feet of the base of trees.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. Accordingly, landscape plans of parcel site

improvements will accompany future DDP applications for the proposed parcels. This proposed DDP application includes street trees for the proposed roadway improvements, and the final construction plans will include preparation by a licensed landscape architect for proposed street tree planting.

5. Landscaping shall be visible from public thoroughfares to the extent practicable.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. Accordingly, landscape plans of parcel site improvements will accompany future DDP applications for the proposed parcels. This proposed DDP application includes street trees for the proposed roadway improvements.

6. The landscaping in parking areas shall not obstruct lines of sight for safe traffic operation and shall comply with all requirements of OCMC 10.32, Traffic Sight Obstructions.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. Accordingly, landscape plans of parcel site improvements will accompany future DDP applications for the proposed parcels.

B. Vehicular Access and Connectivity.

1. Parking areas shall be located behind the building façade that is closest to the street, below buildings, or on one or both sides of buildings.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the proposed General Development Plan application identifies expected development of each of the parcels, which complies with this criterion.

2. Existing or future connections to adjacent sites through the use of vehicular and pedestrian access easements which provide connection from the right-of-way to the adjoining property shall be provided.

Applicant's Response:
Please see Detailed Development Plan Sht DDP-C1.0 9as well as other DDP plan sheets) showing an access easement along the southern portion of Parcel D for future access to properties south of the site as identified in the Beavercreek Access Management Plan. Additionally, the proposed public street through the site abuts the property's southern border for the remainder of the properties along the project's southern border providing these properties with access to the proposed public street. Additionally, the proposed public road extending to Beavercreek Rd provides a truck access driveway for future connection to the Les Schwab TL 602 parcel and provides access to both TL 500 and 501 (via

TL500 south of the NROD area) to continue to maintain these parcels. Access to TL 500 is located across from the TL 602 access and is designed for truck access to maintain existing truck use on TL 500.

Additionally, a pedestrian pathway is proposed for future trail connectivity from Beavercreek Rd along the proposed public street to the southeast corner of the subject property where the proposed pathway departs from the public street and continues through the subject property to the vicinity of the northeast corner of the site. Please see DDP-C1.0.

3. Parcels larger than three acres shall provide streets as required in OCMC 16.12.

Applicant's Response:
This DDP application includes a proposed public street connecting Molalla Ave and Beavercreek Rd.

4. Parking garage entries shall not be more than half of the streetscape.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

C. A well-marked, continuous and protected on-site pedestrian circulation system meeting the following standards shall be provided:

1. Pathways between all building entrances and the street are required. Pathways between the street and buildings fronting on the street shall be direct and not cross a drive aisle. Exceptions may be allowed by the director where steep slopes, a physically constrained site, or protected natural resources prevent a direct connection or where an indirect route would enhance the design and/or use of a common open space.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes representative layouts that satisfy this criterion, subject to individual parcel DDP approval.

2. The pedestrian circulation system shall connect all main entrances, parking areas, bicycle parking, recreational areas, common outdoor areas, and any pedestrian amenities on the site. For buildings fronting on the street, the sidewalk may be used to meet this standard.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan

accompanying this DDP application includes representative layouts that satisfy this criterion, subject to individual parcel DDP approval.

3. The pedestrian circulation system shall connect the principal building entrance to those of buildings on adjacent sites, except within industrial zoning designations.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes representative layouts that satisfy this criterion, subject to individual parcel DDP approval. Pedestrian connectivity between the proposed parcels includes public sidewalks along the proposed public street.

4. Elevated external stairways or walkways shall not extend beyond the building façade except for external stairways or walkways located in, or facing interior courtyard areas that are not visible from the street or a public access easement. This standard does not apply to sky-bridges or sky-ways.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

5. On-site pedestrian walkways shall be hard surfaced, well drained and at least five feet wide. Surface material shall contrast visually to adjoining surfaces. When bordering parking spaces other than spaces for parallel parking, pedestrian walkways shall be a minimum of seven feet in width unless curb stops are provided. When the pedestrian circulation system is parallel and adjacent to an auto travel lane, the walkway shall be raised or separated from the auto travel lane by a raised curb, bollards, landscaping or other physical barrier.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes representative layouts that satisfy this criterion, subject to individual parcel DDP approval.

D. All development shall maintain continuous compliance with applicable federal, state, and City standards.

Applicant's Response:
The applicant acknowledges this criterion.

E. Adequate public water and sanitary sewer facilities sufficient to serve the proposed or permitted level of development shall be provided pursuant to OCMC 16.12. The applicant shall demonstrate that adequate facilities and services are presently available or can be made available concurrent with development. Service providers shall be presumed correct in the evidence which they submit. All facilities shall be designated to City standards as set out in the City's facility master plans and public works design standards. A development may be required to modify or replace existing off-site systems if necessary to provide adequate public facilities. The City may require over sizing of facilities where necessary to meet standards in the City's facility master plan or to allow for the orderly and efficient provision of public facilities and services. Where oversizing is required, the developer may request reimbursement from the City for over sizing based on the City's reimbursement policy and fund availability or provide for recovery of costs from intervening properties as they develop.

Applicant's Response:
Please see the Preliminary Utility Plan, Sht DDP-C3.0, included with this DDP application. The utilities within the proposed public street will be public. The proposed water line in this street is located in conformance with the city's water system master plan and connects the existing water lines in Molalla Ave with Beavercreek Rd. Additionally, this project will ultimately extend sanitary sewer service to the property's northeast corner for future extension by others to allow the ultimate removal of the Hilltop Ave sanitary sewer pump station.

F. If a transit agency, upon review of an application for an industrial, institutional, retail or office development, recommends that a bus stop, bus turnout lane, bus shelter, accessible bus landing pad, lighting, or transit stop connection be constructed, or that an easement or dedication be provided for one of these uses, consistent with an agency adopted or approved plan at the time of development, the review authority shall require such improvement, using designs supportive of transit use. Improvements at a major transit stop may include intersection or mid-block traffic management improvements to allow for crossings at major transit stops, as identified in the City's transportation system plan.

Applicant's Response:
As shown on Sht DDP-C1.2, a new bus turnout and shelter are proposed north of the existing signal that will replace the existing bus stop on the south side of this signal.

G. Screening of Mechanical Equipment. Commercial, mixed-use, institutional, and multi-family buildings shall include the following measures to screen or block views of mechanical equipment from adjacent streets according to the following requirements:

1. Rooftop mechanical equipment, including HVAC equipment and utility equipment that serves the structure, shall be screened from view from the adjacent street on all new buildings or building additions. Screening shall be accomplished through the use of parapet walls or a sight-obscuring enclosure around the equipment constructed of one of the primary materials used on the primary facades of the structure, and that is an integral part of the building's architectural design. The parapet or screen shall completely surround the rooftop mechanical equipment to an elevation equal to or greater than the highest portion of the rooftop mechanical equipment being screened from adjacent streets, as viewed from the sidewalk or future sidewalk location on the adjacent street at pedestrian level. In the event such parapet wall does not fully screen all rooftop equipment, then the rooftop equipment shall be enclosed by a screen constructed of one of the

primary materials used on the primary facade of the building so as to achieve complete screening. Screening requirements do not apply to new or replacement equipment on existing buildings. New or replacement rooftop mechanical equipment on existing buildings shall be painted or powder-coated.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

2. Wall-mounted mechanical HVAC and air conditioning equipment, and groups of multiple utility meters shall not be placed on the front facade of a building or on a facade that faces a right-ofway. Wall-mounted mechanical equipment, including-air conditioning and groups of multiple utility meters, that extend six inches or more from the outer building wall shall be screened from view from adjacent streets; from residential, public, and institutional properties; and from public areas of the site or adjacent sites through the use of (a) sight-obscuring enclosures constructed of one of the primary materials used on the primary facade of the structure, (b) sight-obscuring fences, or (c) trees or shrubs that block at least eighty percent of the equipment from view or (d) painting the units to match the building. Wall-mounted mechanical equipment that extends six inches or less from the outer building wall shall be designed to blend in with the color and architectural design of the subject building. Vents which extend six inches or less from the outer building wall shall [be] exempt from this standard if painted.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

3. Ground-mounted above-grade mechanical equipment shall be screened by ornamental fences, screening enclosures, trees, or shrubs that block at least eighty percent of the view from the public right of way.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

4. This section shall not apply to the installation of solar energy panels, photovoltaic equipment, wind power generating equipment, dishes/antennas, pipes, vents, and chimneys.

Applicant's Response: As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

H. Building Materials.

1. Prohibited Materials. The following materials shall be prohibited in visible locations from the right-of-way or a public access easement unless an exception is granted by the Community Development Director based on the integration of the material into the overall design of the structure:

a. Vinyl or plywood siding (including T-111 or similar plywood).
b. Glass block or highly tinted, reflected, translucent or mirrored glass (except stained glass) as more than ten percent of the building facade.
c. Corrugated fiberglass.
d. Chain link fencing (except for temporary purposes such as a construction site, gates for a refuse enclosure, stormwater facilities, when excepted by 17.62.050.H.2.g, or when located on properties within the general industrial district).
e. Crushed colored rock/crushed tumbled glass.
f. Non-corrugated and highly reflective sheet metal.
g. Tarps, except for the protection of outside storage.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

2. Special Material Standards. The following materials are allowed if they comply with the requirements found below:

a. Concrete Block. When used for the front façade of any building, concrete blocks shall be split, rock- or ground-faced and shall not be the prominent material of the elevation. Plain concrete block or plain concrete may be used as foundation material if the foundation material is not revealed more than three feet above the finished grade level adjacent to the foundation wall.
b. Metal Siding. Metal siding shall have visible corner moldings and trim and incorporate masonry or other similar durable/permanent material near the ground level (first two feet above ground level) except when used for a temporary structure.
c. Exterior insulation and finish system (EIFS) and similar troweled finishes shall be trimmed in wood, masonry, or other approved materials and shall be sheltered from extreme weather by roof overhangs or other methods.
d. Building surfaces shall be maintained in a clean condition and painted surfaces shall be maintained to prevent or repair peeling, blistered or cracking paint.
e. Membrane or fabric covered storage areas are permitted as temporary structures, excluding the use of tarps.
f. Vinyl or powder coated chain link fencing is permitted for City-owned stormwater management facilities, reservoirs, and other public works facilities such as pump stations, maintenance yards, and storage yards not located within the general industrial district.
g. Chain link fencing is permitted in the following circumstances:
1. Within City-owned parks and recreational facilities.
2. On any property when used for a baseball or softball backstop or dugout, track and field facility, or sports court.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

I. Temporary Structures. Temporary structures are permitted pursuant to the following standards:

1. Structures up to two hundred square feet:

a. Shall not be on a property for more than three consecutive days;
b. Shall not be on a property more than six times per year;
c. Shall comply with the minimum dimensional standards of the zoning designation;
d. Shall be sited so as to leave the minimum number of parking spaces for the primary uses as required by OCMC 17.52 or as otherwise specified in a land use approval;
e. Shall not disturb ingress or egress to the site; and
f. Shall be exempt from all sections of OCMC 12.08, 16.12, 17.52 and 17.62 except subsections 17.62.050.I and J.

2. Temporary structures larger than two hundred square feet may be permitted up to two times per year; and:

a. Structures larger than two hundred square feet up to eight hundred square feet:
i. Shall not be on a property for more than thirty consecutive days;
ii. Shall comply with the minimum dimensional standards of the zoning designation;
iii. Shall be sited so as to leave the minimum number of parking spaces for the primary uses as required by OCMC 17.52 or as otherwise specified in a land use approval;
iv. Shall not disturb ingress or egress to the site; and
v. Shall be exempt from all sections of OCMC 12.08, 16.12, 17.52 and 17.62 except subsections 17.62.050.I and J.
b. Structures larger than eight hundred square feet:
i. Shall not be on a property for more than seven consecutive days;
ii. Shall comply with the minimum dimensional standards of the zoning designation;
iii. Shall be sited so as to leave the minimum number of parking spaces for the primary uses as required by OCMC 17.52 or as otherwise specified in a land use approval;
iv. Shall not disturb ingress or egress to the site; and
v. Shall be exempt from all sections of OCMC 12.08, 16.12, 17.52 and 17.62 except subsections 17.62.050.I and J.

3. Government owned properties are exempt from all sections of OCMC 12.08, 16.12, 17.52 and 17.62 except subsections 17.62.050.H and I and the dimensional standards of the zoning designation.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

J. All new utilities shall be placed underground.

1. Service poles may be allowed on private property when undergrounding service is technically or physically infeasible.

Applicant's Response:
All new utilities are proposed to be placed underground. Overhead utility lines exist on the east side of Molalla Ave that will need to be relocated to accommodate the proposed bus turnout. However, given the nature of these lines, they are not proposed to be placed underground as doing so is broader utility issue beyond the scope of this project.

K. Development shall comply with requirements of the following Oregon City Municipal Code chapters, as applicable, including but not limited to:

1. Chapter 12.04, Streets, Sidewalks and Public Places.
2. Chapter 12.08, Public and Street Trees.
3. Chapter 13.04, Water Service System.
4. Chapter 13.08, Sewer Regulations.
5. Chapter 13.12, Stormwater Management.
6. Chapter 16.12, Minimum Improvements and Design Standards for Development.
7. Chapter 17.20, Residential Design Standards for ADU's, Cluster Housing, Internal Conversions, Live/Work Units, and Manufactured Home Parks.
8. Chapter 17.40, Historic Overlay District.
9. Chapter 17.41, Tree Protection Standards.
10. Chapter 17.42, Flood Management Overlay District.
11. Chapter 17.44, Geologic Hazards.
12. Chapter 17.47, Erosion and Sediment Control.
13. Chapter 17.48, Willamette River Greenway.
14. Chapter 17.49, Natural Resource Overlay District.
15. Chapter 17.50, Administration and Procedures.
16. Chapter 17.52, Off-Street Parking and Loading.
17. Chapter 17.54, Supplemental Zoning Regulations and Exceptions.
18. Chapter 17.58, Lawful Nonconforming Uses, Structures, and Lots.
19. Chapter 17.65, Master Plans and Planned Unit Development.

Applicant's Response:
The applicant acknowledges OCMC chapters applicable to this DDP application. OCMC 12.04, 12.08, 13.12, 16.12, 17.41, 17.44, 17.47, 17.49, 17.50, 17.52, 17.54, 17.65 as well as 17.62 are applicable to this land-use application submittal and are addressed with either this DDP application, the accompanying GDP application, or both. OCMC 13.04 and 13.08 are applicable to the ultimate construction of the site but are focused on construction standards and permitting requirements. These will be satisfied with applicable construction plan preparation/submittal. OCMC 17.20, 17.40, 17.42, 17.48, and 17.58 are not applicable to this masterplan application.

Not listed in the above criterion is OCMC 15.48, which addresses grading filling and excavating. This chapter focuses primarily on construction permitting requirements but has one provision requiring review during eh land-use process. Accordingly, this chapter is also included in this DDP application code response.

17.62.055 –Institutional, office, multi-family, retail, and commercial building standards.
A. Purpose. The primary objective of the regulations contained in this section is to provide a range of design choices that promote creative, functional, and cohesive development that is compatible with surrounding areas. Buildings approved in compliance with these standards are intended to serve multiple tenants over the life of the building and are not intended for a one-time occupant. The standards encourage people to spend time in the area, which also provides safety though informal surveillance. Finally, this section is intended to promote the design of an urban environment that is built to human scale by creating buildings and streets that are attractive to pedestrians, create a sense of enclosure, provide activity and interest at the intersection of the public and private spaces, while also accommodating vehicular movement.

B. Applicability. This section applies to institutional, office, multi-family, retail and commercial buildings except accessory structures less than one thousand square feet and temporary structures.

Applicant's Response:
The applicant acknowledges the applicability of this criterion.

C. Conflicts. With the exception of standards for building orientation and building front setbacks, in the event of a conflict between a design standard in this section and a standard or requirement contained in the underlying zoning district, the standard in the zoning district shall prevail.

Applicant's Response:
The applicant acknowledges the applicability of this criterion.

D. Siting of Structures. On sites with one hundred feet or more of frontage at least sixty percent of the site frontage width shall be occupied by buildings placed within five feet of the property line. For sites with less than one hundred feet of street frontage, at least fifty percent of the site frontage width shall be occupied by buildings placed within five feet of the property. Multi-family developments shall be placed no farther than twenty feet from the front property line. This section does not apply to properties with less than forty feet of frontage.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

A larger front yard setback may be approved through site plan and design review if the setback area incorporates at least one element from the following list for every five feet of increased setback requested:

1. *Tables, benches or other approved seating area.*
2. *Cobbled, patterned or paved stone or enhanced concrete.*
3. *Pedestrian scale lighting.*
4. *Sculpture/public art.*
5. *Fountains/Water feature.*

6. At least twenty square feet of landscaping or planter boxes for each tenant facade fronting on the activity area.
7. Outdoor café.
8. Enhanced landscaping or additional landscaping.
9. Other elements, as approved by the Community Development Director, that can meet the intent of this section.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes representative layouts that satisfy this criterion, subject to individual parcel DDP approval. Please see the accompanying General Development Plan Sht GDP-C1.0, which shows enhanced areas for Parcels A and D buildings that will utilize at least one of the nine elements identified in this criterion for to mitigate increases in the allowable front yard setback. Specific elements use will be addressed with the Detailed Development Plan submittals for these parcels.

E. Building Orientation. All buildings along the street frontage shall face the front most architecturally significant façade toward the street and have a functional primary entrance facing the street. Primary building entrances shall be clearly defined and recessed or framed by a sheltering element such as an awning, arcade or portico in order to provide shelter from the summer sun and winter weather.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes representative layouts that satisfy this criterion with the "street" being the proposed public road, subject to individual parcel DDP approval.

F. Entryways. Entrances shall include a doorway and a minimum of four of the following elements:
1. Display windows; recesses or projections; peaked roof or raised parapet over the door; canopy of at least five feet in depth; porch; distinct materials; architectural details such as tile work and moldings; pedestrian amenities such as benches, planters or planter boxes; landscape treatments integrating arbors, low walls, trellis work; or similar elements. Trellises, canopies and fabric awnings may project up to five feet into front setbacks and public rights-of-way, provided that the base is not less than eight feet at the lowest point and no higher than ten feet above the sidewalk.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

G. Corner Lots. For buildings located at the corner of intersections, the primary entrance of the building shall be located at the corner of the building or within twenty-five feet of the corner of the building. Additionally, one of the following treatments shall be required:

1. Incorporate prominent architectural elements, such as increased building height or massing, cupola, turrets, or pitched roof, at the corner of the building or within twenty-five feet of the corner of the building.

2. Chamfer the corner of the building (i.e. cut the corner at a forty-five degree angle and a minimum of ten feet from the corner) and incorporate extended weather protection (arcade or awning), special paving materials, street furnishings, or plantings in the chamfered area.

3. Standards 1 and 2 above do not apply to vertically attached 3—4 plexes, multi-family buildings or multi-family portions of residential mixed-use buildings.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

H. Variation in Massing. For street facing facades greater than one hundred twenty feet in length a modulation is required which extends through all floors. Decks and roof overhangs may encroach up to three feet per side into the modulation. The modulation shall meet one of the following dimensional requirements:

1. A minimum depth of two percent of the length of the façade and a minimum width of thirty percent of the length of the façade; or

2. A minimum depth of four percent of the length of the façade and a minimum width of twenty percent of the length of the façade.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

I. Building Design Elements.

1. All front and side facades shall provide a design element or architectural feature that add interest and detail such that there are no blank walls of thirty feet in length or more, measured horizontally. Features that can meet this requirement include:

a. Change in building material or texture;
b. Window or door;
c. Balcony; or
d. Pillar or post

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

2. Street facing facades shall include additional design features. For every thirty feet of façade length, three of the following elements are required:

a. Decorative materials on more than ten percent of the total wall area (e.g., brick or stonework, shingles, wainscoting, ornamentation, and similar features);
b. Decorative cornice and/or roof line (e.g., for flat roofs);
c. Roof gable;
d. Recessed entry;
e. Covered canopy entry;
f. Cupola or tower;
g. Dormer;
h. Balcony;
i. Pillars or posts;
j. Repeating pattern of building materials;
k. A change in plane of at least two feet in width and six inches in depth;
l. Bay or oriel window; or
m. An alternative feature providing visual relief and detail as approved by the Community Development Director

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

3. Building Detail Variation. Architectural features shall be varied on different buildings within the same development. At least two of the required features on each street-facing elevation shall be distinct from the street-facing elevations of other buildings within the same development.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

J. Windows.

1. The minimum windows requirements are set forth in Table 17.62.055.J. Windows are measured in lineal fashion between 3.5 feet and six feet from the ground. For example, a one hundred foot long building elevation would be required to have at least sixty feet (sixty percent of one hundred feet) of windows in length between the height of 3.5 feet and six feet from the ground.

Table 17.62.055.J Minimum Windows

Use	***Ground Floor: Front and Street Facing Facades***	***Upper floor(s): Front and Street Facing Facades***	***Ground Floor: Side(s) Facades***	***Upper Floor(s): Side(s) Facades***
Non-Multi-Family (or Portions of Buildings Thereof)	*60%*	*10%*	*30%*	*10%*

Multi-Family (or Portions of Buildings Thereof)	*15%*	*15%*	*10%*	*10%*
Proposed:				

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

2. Reflective, glazed, mirrored or tinted glass is limited to ten percent of the lineal footage of windows on the street facing facade. Highly reflective or glare-producing glass with a reflective factor of one quarter or greater is prohibited on all building facades. Any glazing materials shall have a maximum fifteen percent outside visual light reflectivity value. No exception shall be made for reflective glass styles that appear transparent when internally illuminated.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

3. Side walls that face walkways may include false windows and door openings only when actual doors and windows are not feasible because of the nature of the use of the interior use of the building. False windows located within twenty feet of a right-of-way shall be utilized as display windows with a minimum display depth of thirty-six inches.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

4. Multi-family windows shall incorporate window trim at least four inches in width when surrounded by horizontal or vertical lap siding

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

K. Roof Treatments. The maximum length of any continuous roofline on a street-facing façade shall be seventy five feet without a cross gable or change in height of at least two feet.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

L. Drive-through facilities shall:
1. Be located at the side or rear of the building.
2. Be designed to maximize queue storage on site.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes a representative layout for Parcel D that satisfies this criterion, subject to individual parcel DDP approval. Please see the accompanying General Development Plan Sht GDP-C1.0.

M. Special development standards along transit streets.
1. Purpose. This section is intended to provide direct and convenient pedestrian access to retail, office and institutional buildings from public sidewalks and transit facilities and to promote pedestrian and transit travel to commercial and institutional facilities.
2. Applicability. Except as otherwise provide in this section, the requirements of this section shall apply to the construction of new retail, office and institutional buildings which front on a transit street.
3. Development Standards.
a. All buildings shall have at least one main building entrance oriented towards the transit street. A main building entrance is oriented toward a transit street if it is directly located on the transit street, or if it is linked to the transit street by an on-site pedestrian walkway that does not cross off-street parking or maneuvering areas.
i. If the site has frontage on more than one transit street, or on a transit street and a street intersecting a transit street, the building shall provide one main building entrance oriented to the transit street or to the corner where the two streets intersect.
ii. For building facades over three hundred feet in length on a transit street, two or more main building entrances shall be provided as appropriate and oriented towards the transit street.
b. In the event a requirement of this section conflicts with other requirements in Title 17, the requirements of this section shall control.
4. Exemptions. The following permitted uses are exempted from meeting the requirements of subsection 3. of this section:
a. Heavy equipment sales;
b. Motor vehicle service stations, including convenience stores associated therewith; or
c. Solid waste transfer stations.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel. However, the General Development Plan accompanying this DDP application includes a representative layout for Parcel D that satisfies this criterion, subject to individual parcel DDP approval. Please see the accompanying General Development Plan Sht GDP-C1.0.

17.62.056 - Additional standards for large retail establishments.
Retail building(s) occupying more than ten thousand gross square feet of floor area shall contribute to the establishment or enhancement of community and public spaces by providing at least two of the following:

A. Patio/seating area;
B. Pedestrian plaza with benches;
C. Transportation center;
D. Window shopping walkway;
E. Outdoor playground area;
F. Kiosk area, water feature;
G. Clock tower; or
H. Other such deliberately shaped area and/or a focal feature or amenity that, in the judgment of the appropriate decision maker, adequately enhances such community and public spaces. Any such areas shall have direct access to the public sidewalk network and such features shall not be constructed of materials that are inferior to the principle materials of the building and landscape.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.62.057 - Multifamily Usable Open Space Requirements
A. Intent. Creating areas of usable open space that are easily accessed by residents provides focal points for community recreation and interaction and adds to the overall quality of life for residents. Given the environmental and recreational benefits of common open space, it should be integrated purposefully into the overall design of a development and not merely be residual areas left over after buildings and parking lots are sited.

B. Open Space Required. All new multi-family developments in all zones shall provide usable open space.
1. In residential zones, each development shall provide a minimum of one hundred square feet of open space per dwelling unit.

Applicant's Response:
The subject property is not located in a residential zone. Accordingly, this criterion is not applicable.

2. In non-residential, commercial and mixed-use zones, each development shall provide a minimum of fifty square feet of open space per dwelling unit.

Applicant's Response:
The subject property is located in the MUC-2 zone, resulting in the need for 50 sf of open space per unit. At 208 units, this equates to 10,400 sf of open space. While the Detailed Development Plan for Parcel B will be submitted separately from the current DDP application following a decision on the larger masterplan application, General Development Plan Sht GDP-C1.0 shows approximate open space anticipated to be provided by Parcel B. This includes over 12,000 sf of open space between the two northerly buildings (subject to Parcel B Detailed Development Plan submittal/approval) and over 20,000 sf of open space between the top of the slope and the geologic hazard setback line. A pedestrian pathway is proposed within this geologic hazard setback. Additionally, over 42,000 sf of forested open space lies on the east edge of Parcel B between the property boundary and the top of slope. Though subject to a future DDP process, Parcel B is expected to provide open space far in excess of the minimum required open space.

Note – OCMC 17.65.050.C.8.b identifies a larger open space requirement for master planned development (100 sf per residential unit). This results in an open space requirement of 20,800 square feet. The proposed open space will exceed the criteria identified in both 17.62.057.B.2 and 17.65.050.C.8.b.

3. Required setback areas shall not count toward the open space requirement unless setback areas are incorporated into spaces that meet all other requirements of this section.

Applicant's Response:
The Geologic Hazard setback area is not a setback required by the city. Instead, it is a setback recommended by the geotechnical engineer to protect against long-term slope stability concerns. Accordingly, it is not considered a building setback for the purpose of this section. However, even if the Geologic Hazard setback area is excluded from open space consideration (not likely, since the project is required to provide a pedestrian pathway), the steep slope area east of the top of slope is more than adequate to satisfy the open space requirements.

4. Required open space areas may be counted towards both the open space requirements and the minimum landscaping requirements in OCMC 17.62.050.A, if the spaces meet the requirements of both sections.

Applicant's Response:
While not expected to be necessary, the applicant acknowledges this criterion. Separate Detailed Development Plan applications will be submitted for each of the parcels at a future date and open space compliance will be part of those applications. Open space is not required for the proposed roadway and utility improvements/rough grading Detailed Development Plan application.

C. Usable Open Space Types.

1. Common open spaces shall be accessible to all residents of the development and include landscaped courtyards, decks, gardens with pathways, children's play areas, common rooftop

decks and terraces, and other multipurpose recreational or green spaces. Common open spaces may be used to meet one hundred percent of the usable open space requirement. Design standards:

a. Minimum dimensions for common open space shall be twelve feet with a minimum size of two hundred square feet for developments with twenty units or less, and twenty feet with a minimum size of four hundred square feet for developments with twenty-one or more units.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

b. Common open space shall feature a mix of natural and recreational amenities to make the area more functional and enjoyable for a range of users. Sites with twenty units or less shall provide a minimum of two of the following amenities, and sites with twenty-one units or more shall provide a minimum of three of the following amenities and an additional amenity for every twenty units over forty, rounded up.

i. Landscaping areas.
ii. Community gardening areas.
iii. Large trees expected to reach over eighteen inches dbh at maturity.
iv. Seating.
v. Pedestrian-scaled lighting.
vi. Hard-surfaced pedestrian paths in addition to those required for internal pedestrian circulation.
vii. Paved courtyard or plaza.
viii. Gazebos or other decorative shelters.
ix. Play structures for children.
x. Sports courts.
xi. An alternative amenity as approved by the Community Development Director.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

c. Common open space shall be separated from ground level windows, streets, service areas and parking lots with landscaping, low-level fencing, and/or other treatments as approved by the City that enhance safety and privacy for both the common open space and dwelling units.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

d. Common open space shall be accessible from the dwelling units and, as appropriate, from public streets and sidewalks. The space shall be oriented to encourage activity from local residents.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

2. Private open space that is not open to all residents includes balconies, patios, and other outdoor multi-purpose recreational or green spaces. It may be used to meet up to fifty percent of the usable open space requirement.

a. Minimum dimensions for private open space shall be five feet with a minimum size of forty square feet.

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

3. Indoor recreational space may be used to meet up to twenty-five percent of the usable open space requirement provided the space is:

a. Accessible to all dwelling units.

b. Designed for and includes equipment for a recreational use (e.g., exercise, group functions, etc.).

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.62.058 - Additional public park and open space requirements in Thimble Creek Concept Plan Area—Nonresidential development.

Applicant's Response:
The subject property is not located within the Thimble Creek concept plan area. Accordingly, these criteria are not applicable.

17.62.065 Outdoor lighting.

A. Purpose. The general purpose of this section is to require outdoor lighting that is adequate for safety and convenience; in scale with the activity to be illuminated and its surroundings; directed to the surface or activity to be illuminated; and designed to clearly render people and objects and contribute to a pleasant nighttime environment. Additional specific purposes are to:

1. Provide safety and personal security as well as convenience and utility in areas of public use or traverse, for uses where there is outdoor public activity during hours of darkness;

2. Control glare and excessive brightness to improve visual performance, allow better visibility with relatively less light, and protect residents from nuisance and discomfort;
3. Control trespass light onto neighboring properties to protect inhabitants from the consequences of stray light shining in inhabitants' eyes or onto neighboring properties;
4. Result in cost and energy savings to establishments by carefully directing light at the surface area or activity to be illuminated, using only the amount of light necessary; and
5. Control light pollution to minimize the negative effects of misdirected light and recapture views to the night sky.
6. Encourage energy efficient lighting with new technologies such as light emitting diodes (LED) or similar to reduce ongoing electrical demand and operating costs.

Applicant's Response:
The applicant acknowledges the purpose of this chapter. This DDP application includes street lighting for the proposed street improvements. Outdoor lighting for each of the parcels will be part of their separate DDP applications following the current masterplan process.

B. Applicability.
1. General.
a. All exterior lighting for any type of commercial, mixed-use, industrial, institutional, or multifamily development shall comply with the standards of this section, unless excepted in subsection B.3.
b. The City engineer or public works director shall have the authority to enforce these regulations on private property if any outdoor illumination is determined to present an immediate threat to the public health, safety and welfare.
2. Lighting Plan Requirement. All commercial, industrial, mixed-use, cottage housing and multi-family developments shall submit a proposed exterior lighting plan. The plan shall be submitted concurrently with the site plan. The exterior lighting plan shall include plans and specifications for streetlights, parking lot lights, and exterior building lights. The specifications shall include details of the pole, fixture height and design, lamp type, wattage, and spacing of lights.
3. Excepted Lighting. The following types of lighting are excepted from the requirements of this section:
a. Residential lighting for single-family attached and detached homes, and duplexes.
b. Public street and right-of-way lighting.
c. Temporary decorative seasonal lighting provided that individual lamps have a light output of sixty watts or less.
d. Temporary lighting for emergency or nighttime work and construction.
e. Temporary lighting for theatrical, television, and performance areas, or for special public events.
f. Lighting for a special district, street, or building that, according to an adopted municipal plan or ordinance, is determined to require special lighting aesthetics as part of its physical character.
g. Lighting required and regulated by the Federal Aviation Administration.

Applicant's Response:
The applicant acknowledges the applicability of this chapter. This DDP application includes street lighting for the proposed street improvements, which according to 17.62.065.B.3.b is exempt from these standards. Street lighting will be designed in conformance with Oregon City Public Works requirements. Outdoor lighting for each of the parcels will be part of their separate DDP applications following the current masterplan process.

C. Design and Illumination Standards.

1. Outdoor lighting, if provided, shall be provided in a manner that enhances security, is appropriate for the use, avoids adverse impacts on surrounding properties, and the night sky through appropriate shielding as defined in this section. Glare shall not cause illumination on other properties in excess of a measurement of 0.5 footcandles of light as measured at the property line.

2. Lighting shall be provided in parking lots and vehicular circulation areas.

3. Lighting shall be provided in pedestrian walkways, pedestrian plazas, and pedestrian circulation areas.

4. Lighting shall be provided at all building entrances.

5. With the exception of pedestrian scale lighting, all light sources shall be concealed or shielded with a full cut-off style fixture in order to minimize the potential for glare and unnecessary diffusion on adjacent property.

6. The maximum height of any lighting pole serving a multi-family residential use shall be twenty feet. The maximum height serving any other type of use shall be twenty-five feet, except in parking lots larger than five acres, the maximum height shall be thirty-five feet if the pole is located at least one hundred feet from any residential use.

7. Floodlights shall not be utilized to light all or any portion of a building facade between ten p.m. and six a.m.

8. Lighting on outdoor canopies shall be fully recessed into the canopy and shall not protrude downward beyond the ceiling of the canopy.

9. All outdoor light not necessary for security purposes shall be reduced, activated by motion sensor detectors, or turned off during non-operating hours.

10. Light fixtures used to illuminate flags, statues, or any other objects mounted on a pole, pedestal, or platform shall use a narrow cone beam of light that will not extend beyond the illuminated object.

11. For upward-directed architectural, landscape, and decorative lighting, direct light emissions shall not be visible above the building roofline.

12. No flickering or flashing lights shall be permitted, except for temporary decorative seasonal lighting.

13. Lighting for outdoor recreational uses such as ball fields, playing fields, tennis courts, and similar uses, are allowed a light post height up to eighty feet in height.

14. Main building entrances shall be well lighted and visible from any transit street. The minimum lighting level for building entries fronting on a transit street shall be three foot-candles.

Applicant's Response:
This DDP application includes street lighting for the proposed street improvements, which according to 17.62.065.B.3.b is exempt from these standards. Street lighting will be designed in conformance

with Oregon City Public Works requirements. Outdoor lighting for each of the parcels will be part of their separate DDP applications following the current masterplan process.

17.62.085 Refuse and recycling standards for commercial, industrial, office, institutional, and multi-family developments.

The purpose and intent of these provisions is to provide an efficient, safe and convenient refuse and recycling enclosure for the public as well as the local collection firm. All new development, change in property use, expansions, or exterior alterations to uses, other than single-family detached residential units, duplexes, triplexes, quadplexes, townhouses, cottage clusters or accessory dwelling units (ADUs), shall include a refuse and recycling enclosure. The area(s) shall be:

A. Fully enclosed and visually screened;
B. Located in a manner easily and safely accessible by collection vehicles;
C. Located in a manner so as not to hinder travel lanes, walkways, streets or adjacent properties;
D. On a level, hard surface designed to discharge surface water runoff and avoid ponding;
E. Maintained by the property owner;
F. Used only for purposes of storing solid waste and recyclable materials;
G. Designed in accordance with applicable sections of the Oregon City Municipal Code (including OCMC 8.20, Solid Waste Collection and Disposal) and City adopted policies.

Enclosures are encouraged to be sized appropriately to meet the needs of current and future tenants and designed with sturdy materials which are compatible to the primary structure(s).

Applicant's Response:
As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

17.62.090 Implementation.

A. Applications for site plan and design review shall be reviewed in the manner provided in OCMC 16.12 and 17.50. The building official may issue a certificate of occupancy only after the improvements required by site plan and design review approval have been completed, or a schedule for completion and a bond or other financial guarantee have been accepted by the City.

B. In performing site plan and design review, the review authority shall consider the effect of additional financial burdens imposed by such review on the cost and availability of needed housing types. Consideration of such factors shall not prevent the imposition of conditions of approval found necessary to meet the requirements of this section. The cost of such conditions of approval shall not unduly increase the cost of housing beyond the minimum necessary to achieve the provisions of this title, nor shall such cost prevent the construction of needed housing types.

C. The site plan and design review provisions of this chapter shall not be applied to reduce the density or height of an application for a development project that reserves at least seventy-five percent of the gross floor area for housing where the proposed density or height is at or below what is allowed in the base zone, except in the following situations:

1. Where the reduction in density is required for development subject to historic overlay provision in OCMC 17.40; or
2. Where the reduction in density is necessary to resolve a health, safety or habitability issue, or to comply with the natural resource overlay district regulations of OCMC 17.49, the geologic hazard overlay district regulations of OCMC 17.44, or the floodplain management overlay district regulations of OCMC 17.42 or steep slope regulations.

Applicant's Response:
The applicant acknowledges the provisions of this section. As noted above, this Detailed Development Plan application seeks DDP approval of the proposed street and utility improvements and rough grading of the site. Specific use/layout information will be included with the DDP applications for each parcel.

CHAPTER 17.65 MASTER PLANS AND PLANNED UNIT DEVELOPMENT

17.65.010 Purpose and intent.

It is the intent of this chapter to foster the growth of major institutions, phased residential, commercial or mixed-use development, and other large-scale development, while identifying and mitigating the impacts of such growth on surrounding properties and public infrastructure. The City recognizes the valuable housing options, services and/or employment opportunities that these developments bring to Oregon City residents. The master plan or planned unit development process is intended to facilitate an efficient and flexible review process for major developments, support innovative and creative land development, and to provide long-term assurance to plan for and execute developments in a phased manner. To facilitate this, the master plan process is structured to allow an applicant to address larger development issues, such as adequacy of infrastructure and transportation capacity, and reserve capacity of the infrastructure and transportation system before expenditure of final design costs. The master plan or planned unit development process is further intended to promote efficiency in land development, maintenance, street systems and utility networks while providing site layouts that integrate usable and attractive open spaces, site circulation, and the general wellbeing of site users. For the purposes of this chapter planned unit developments are considered the same as master plans.

Applicant's Response:
The applicant acknowledges the purpose and intent of the masterplan process and chooses to request General Development Plan approval for the overall property and Detailed Development Plan approval for the proposed street improvements and rough grading of the site. Detailed Development Plan approval for Parcels A, B & D will be sought separately from this application.

17.65.020 What is included in a master plan or planned unit development.

A. A master plan or planned unit development is a two-step process that includes a general development plan and a detailed development plan. A general development plan incorporates the entire area where development is planned for up to the next twenty years from the date of final approval, including the identification of one or more development phases. The general development plan may encompass land that is not currently under the applicant's control, but which eventually may be controlled by the applicant during the duration of the master plan. The plan shall have no effect for lands not currently controlled by the applicant. "Controlled" shall be defined as leased or owned by the applicant. A detailed development plan is the phase or phases of the general development plan that are proposed for development within two years.

B. A master plan or planned unit development identifies the current and proposed uses of the development, proposed project boundaries, and proposed public and private infrastructure needed to serve the development. If approved, the general development plan may be used to allow existing legal non-conforming uses. If conditions of approval from a previous land use decision have not been completed, they shall be modified through the general development plan or completed with new development.

C. A master plan or planned unit development identifies future development impacts, thresholds for mitigation and mitigation improvements and implementation schedules. A threshold for mitigation is the point that determines when or where a mitigation improvement will be required. Examples of "thresholds" include vehicle trips, square feet of impervious surface area, water usage measured in gallons per minute, construction of a building within a general development plan and construction of a building within a certain distance of a residential lot.

Mitigation improvements are necessary when a threshold for mitigation is reached. Examples include road dedication, intersection improvement, road widening, construction of a stormwater or water quality facility, installation of vegetative buffering and wetland restoration or enhancement.

Applicant's Response:
The applicant acknowledges the masterplan process.

17.65.030 - Applicability of the Master Plan or Planned Unit Development Regulations.
A. Required for Large Institutional Uses. If the boundaries of an institutional development exceed ten acres in size, the proposed development shall be master planned using the regulations of this chapter. No land use review other than a Type I or II Minor Site Plan and Design Review shall be issued for any institutional development in excess of ten acres in total acreage unless it is accompanied by or preceded by a master plan approval under this chapter. This requirement does not apply to modifications to existing institutional developments unless the modification results in a cumulative square footage increase of over ten thousand total building square feet in an existing institutional development over ten acres.

B. When Required as Part of Previous Land Use Review. The master plan or planned unit development regulations may be used to fulfill a condition of approval from a previous land use decision-requiring master planning for a development.

C. When identified in the Oregon City Comprehensive Plan. The master plan regulations are required for all properties identified for master planning in the land use section of the Oregon City Comprehensive Plan.

D. Voluntarily. An applicant may voluntarily submit a master plan or planned unit development as part of a land use review, including for residential projects.

Applicant's Response:
The applicant voluntarily requests General Development Plan approval for the overall property and Detailed Development Plan approval for the proposed street and utility main improvements and rough grading of the site. Detailed Development Plan approval for Parcels A, B & D will be sought separately from this application.

17.65.040 - Procedure.
A. Preapplication Review. Prior to filing for either general development plan or detailed development plan approval, the applicant shall file a pre-application conference pursuant to OCMC 17.50.030.

Applicant's Response:
A pre-application conference was held April 22, 2025.

B. General Development Plan. An application for a general development plan describing the long-term buildout of the site shall be reviewed through a Type III procedure. An applicant shall have an approved general development plan before any detailed development plan may be approved unless both are approved or amended concurrently. Amendments to an approved general development plan shall be reviewed under a Type III procedure pursuant to OCMC 17.65.080.

Applicant's Response:
An application for Masterplan General Development Plan and Detailed Development Plan, together with Lot Line Adjustment, Geologic Hazard Overlay, Conditional Use, Parking Adjustment, and Natural Resource (NROD) Review, was submitted June 27, 2025. The application was deemed incomplete on July 24, 2025. This land-use application package is submitted in response to the July 24, 2025 incomplete letter.

C. Detailed Development Plan. An application for a detailed development plan, is processed through a Type II procedure, as long as it is in conformance with the approved general development plan. Amendments to an approved detailed development plan shall be processed pursuant to OCMC 17.65.080. Once a development has an approved detailed development plan, OCMC 17.62 Site Plan and Design Review is not required.

Applicant's Response:
The applicant seeks Detailed Development Plan approval for the proposed street improvements and rough grading of the site. Detailed Development Plan approval for Parcels A, B & D will be sought separately from this application.

D. Concurrent Review. An applicant may concurrently apply for a general development plan and a detailed development plan. Such a concurrent application is reviewed through the highest procedure that applies to any element of the combined application.

Applicant's Response:
The applicant requests concurrent General Development Plan approval for the overall property and Detailed Development Plan approval for the proposed street and utility main improvements and rough grading of the site. Detailed Development Plan approval for Parcels A, B & D will be sought separately from this application.

E. Relationship to Other Reviews. It is the express policy of the City that development review not be segmented into discrete parts in a manner that precludes a comprehensive review of the entire development and its cumulative impacts.

Applicant's Response:
The applicant presents the enclosed application packages for comprehensive review of the entire development and its cumulative impacts.

F. Duration of General Development Plan. A general development plan shall involve a planning period of up to twenty years. An approved general development plan shall remain in effect until development allowed by the plan has been completed through the detailed development plan process, the plan is amended or superseded, or the plan expires under its stated expiration date either as stated in the approved master plan or planned unit development application or decision of approval.

Applicant's Response:
The applicant acknowledges the planning period of up to twenty years for the requested masterplan approval.

17.65.050 - General Development Plan.

A. Existing Conditions Submittal Requirements.

1. Narrative Statement. An applicant shall submit a narrative statement that describes the following:

a. Current uses of and development on the site;

b. For institutions, history or background information about the mission and operational characteristics of the institution that may be helpful in the evaluation of the general development plan, and information about current programs or services;

c. A vicinity map showing the location of the general development plan boundary relative to the larger community, along with affected major transportation routes, transit, and parking facilities. At least one copy of the vicinity map shall be eight and one-half inches by eleven inches in size, and black and white reproducible;

d. Land uses that surround the development site. This may also reference submitted maps, diagrams or photographs;

e. Previous land use approvals within the general development plan boundary and related conditions of approval, if applicable;

f. Existing utilization of the site;

g. Site description, including the following items. May also reference submitted maps, diagrams or photographs:

i. Physical characteristics;

ii. Ownership patterns;

iii. Building inventory;

iv. Vehicle/bicycle parking;

v. Landscaping/usable open space;

vi. FAR/lot coverage;

vii. Natural resources that appear on the City's adopted Goal 5 inventory;

viii. Cultural/historic resources that appear on the City's adopted Goal 5 inventory;

ix. Location of existing trees six inches in diameter or greater when measured four feet above the ground. The location of single trees shall be shown. Trees within groves may be clustered together rather than shown individually; and

x. Geologic hazards pursuant to OCMC 17.44.

h. Existing transportation analysis, including the following items. May also reference submitted maps, diagrams or photographs.

i. Existing transportation facilities, including highways, local streets and street classifications, and pedestrian and bicycle access points and ways;

ii. Transit routes, facilities and availability;
iii. Alternative modes utilization, including shuttle buses and carpool programs; and
iv. Baseline parking demand and supply study (may be appended to application or waived if not applicable).

i. Infrastructure facilities and capacity, including the following items:
i. Water;
ii. Sanitary sewer;
iii. Stormwater management; and
iv. Easements.

Applicant's Response:
Please see the narrative included with this application which addresses the above narrative requirements. The narrative includes references to various reports and project plan sheets.

2. Maps and Plans.

a. Existing conditions site plan. Drawn at a minimum scale of one-inch equals one hundred feet (one inch equals one hundred feet) that shows the following items. At least one copy shall be eight and one-half inches x eleven inches in size, and black and white reproducible.
i. Date, north point, and scale of drawing.
ii. Identification of the drawing as an existing conditions site plan.
iii. Proposed development boundary.
iv. All parking, circulation, loading and service areas, including locations of all carpool, vanpool and bicycle parking spaces as required in Chapter 52 of this title.
v. Contour lines at two-foot contour intervals for grades zero to ten percent, and five-foot intervals for grades over ten percent.

b. A site plan or plans, to scale, for the general development plan site and surrounding properties containing the required information identified in OCMC 17.62.040.b, Vicinity map. Depicting the location of the site sufficient to define its location, including identification of nearest cross streets. At least one copy of the vicinity map shall be eight and one-half inches by eleven inches in size, and black and white reproducible.

c. Aerial photo. Depicting the subject site and property within two hundred fifty feet of the proposed development boundaries. At least one copy of the aerial photo shall be eight and one half inches by eleven in size, and black and white reproducible.

Applicant's Response:
Please see the existing conditions plan and proposed General Development Plan maps accompanying this application.

B. Proposed Development Submittal Requirements.

1. Narrative statement. An applicant shall submit a narrative statement that describes the following:

a. The proposed duration of the general development plan.

b. The proposed development boundary. May also reference submitted maps or diagrams.

c. A description, approximate location, and timing of each proposed phase of development, and a statement specifying the phase or phases for which approval is sought under the current application. May also reference submitted maps or diagrams.
d. An explanation of how the proposed development is consistent with the purposes of Section 17.65, the applicable zone district or districts, and any applicable overlay district.
e. A statement describing the impacts of the proposed development on inventoried Goal 5 natural, historic or cultural resources within the development boundary or within two hundred fifty feet of the proposed development boundary.
f. An analysis of the impacts of the proposed development on the surrounding community and neighborhood, including:

i. Transportation impacts as prescribed in subsection g below;
ii. Internal parking and circulation impacts and connectivity to sites adjacent to the development boundary and public right-of-ways within two hundred fifty feet of the development boundary;
iii. Public facilities impacts (sanitary sewer, water and stormwater management) both within the development boundary and on City-wide systems; including a phasing plan for all onsite and off-site public improvements, including but not limited to transportation, schools, parks, open space, trails, sewer, water and stormwater, with an analysis off the capacity and improvements required as a result of fully implementing the plan. This analysis shall reference any adopted parks and recreation, public facilities plans and concept plans and identify specific funding mechanisms to address the adequacy of public facilities.
iv. Neighborhood livability impacts;
v. Natural, cultural and historical resource impacts within the development boundary and within two hundred fifty feet of the development boundary.

g. A summary statement describing the anticipated transportation impacts of the proposed development. This summary shall include a general description of the impact of the entire development on the local street and road network, and shall specify the maximum projected average daily trips, projected AM and PM peak hour traffic and the maximum parking demand associated with build-out each phase of the master plan or planned unit development.
h. In addition to the summary statement of anticipated transportation impacts, an applicant shall provide a traffic impact study as specified by City requirements. The transportation impact study shall either:

i. Address the impacts of the development of the site consistent with all phases of the general development plan; or
ii. Address the impacts of specific phases if the City engineer determines that the traffic impacts of the full development can be adequately evaluated without specifically addressing subsequent phases.

i. If an applicant chooses to pursue option h.1., the applicant may choose among three options for implementing required transportation capacity and safety improvements:

i. The general development plan may include a phasing plan for the proposed interior circulation system and for all on-site and off-site transportation capacity and safety improvements required on the existing street system as a result of fully implementing

the plan. If this option is selected, the transportation phasing plan shall be binding on the applicant.
ii. The applicant may choose to immediately implement all required transportation safety and capacity improvements associated with the fully executed general development plan. If this option is selected, no further transportation improvements will be required from the applicant. However, if a general development plan is later amended in a manner so as to cause the projected average daily trips, the projected a.m. or p.m. peak hour trips, or the peak parking demand of the development to increase over original projections, an additional transportation impact report shall be required to be submitted during the detailed development plan review process for all future phases of the development project and additional improvements may be required.
iii. The applicant may defer implementation of any and all capacity and safety improvements required for any phase until that phase of the development reaches the detailed development plan stage. If this option is selected, the applicant shall submit a table linking required transportation improvements to vehicle trip thresholds for each development phase.

j. For residential and mixed-use projects:
i. Proposed minimum lot area, width, frontage and yard requirements.
ii. Proposed project density in number of units per acre.
iii. Proposed residential types and number of each.

Applicant's Response:
Please see the narrative included with this application which addresses the above narrative requirements. The narrative includes references to various reports and project plan sheets.

2. Maps and Diagrams. The applicant shall submit, in the form of scaled maps or diagrams, as appropriate, the following information:

a. A preliminary site circulation plan showing the approximate location of proposed vehicular, bicycle, and pedestrian access points and circulation patterns, parking and loading areas or, in the alternative, proposed criteria for the location of such facilities to be determined during detailed development plan review.
b. The approximate location of all proposed streets, alleys, other public ways, sidewalks, bicycle and pedestrian access ways and other bicycle and pedestrian ways, transit streets and facilities, neighborhood activity centers and easements on and within two hundred fifty feet of the site. The map shall identify existing subdivisions and development and un-subdivided or unpartitioned land ownerships adjacent to the proposed development site and show how existing streets, alleys, sidewalks, bike routes, pedestrian/bicycle access ways and utilities within two hundred fifty feet may be extended to and/or through the proposed development.
c. The approximate location of all public facilities to serve the proposed development, including water, sanitary sewer, stormwater management facilities.
d. The approximate location, footprint and building square footage of buildings within of each phase of proposed development, and/or proposed lot patterns for each phase of future development.
e. The approximate locations of proposed parks, playgrounds or other outdoor play areas; outdoor common areas and usable open spaces; and natural, historic and cultural resource areas or

features proposed for preservation. This information shall include identification of areas proposed to be dedicated or otherwise preserved for public use and those open areas to be maintained and controlled by the owners of the property and their successors in interest for private use.

Applicant's Response:
Please see the proposed General Development Plan maps accompanying this application.

C. Approval Criteria for a General Development Plan. The Planning Commission may approve an application for general development plan only upon finding that the following approval criteria are met.

1. The proposed General Development Plan is consistent with the purposes of OCMC 17.65.
